- No more than 30 days prior to the first ground-disturbing activities, the project Applicant shall retain a qualified biologist to conduct a preconstruction survey on the project site. The survey shall establish the presence or absence of western burrowing owl and/or habitat features, and evaluate use by owls in accordance with CDFW survey guidelines.
- On the parcel where the activity is proposed, the biologist shall survey the proposed disturbance footprint and a 500-foot radius from the perimeter of the proposed footprint to identify burrows and owls. Adjacent parcels under different land ownership need not be surveyed. The survey shall take place near the sunrise or sunset in accordance with CDFW guidelines. All burrows or burrowing owls shall be identified and mapped. During the breeding season (February 1–August 31), surveys shall document whether burrowing owls are nesting on or directly adjacent to disturbance areas. During the non-breeding season (September 1–January 31), surveys shall document whether burrowing owls are using habitat on or directly adjacent to any disturbance area. Survey results will be valid only for the season during which the survey is conducted.
- If burrowing owls are not discovered, further mitigation is not required. If burrowing owls are observed during the pre-construction surveys, the applicant shall perform the following measures to limit the impact on the burrowing owls:
    1. Avoidance shall include establishment of a 160-foot non-disturbance buffer zone. Construction may occur during the breeding season if a qualified biologist monitors the nest and determines that the birds have not begun egg-laying and incubation, or that the juveniles from the occupied burrows have fledged. During the non-breeding season (September 1–January 31), the project proponent shall avoid the owls and the burrows

they are using, if possible. Avoidance shall include the establishment of a 160-foot non-disturbance buffer zone.

2. If it is not possible to avoid occupied burrows, passive relocation shall be implemented. Owls shall be excluded from burrows in the immediate impact zone and within a 160-foot buffer zone by installing one-way doors in burrow entrances. These doors shall be in place for 48 hours prior to excavation. The project area shall be monitored daily for 1 week to confirm that the owl has abandoned the burrow. Whenever possible, burrows should be excavated using hand tools and refilled to prevent re-occupation. Plastic tubing or a similar structure shall be inserted in the tunnels during excavation to maintain an escape route for any owls inside the burrow.

5.2 - Wildlife Movement Corridors

The project site was evaluated for evidence of a wildlife movement corridor during the reconnaissance-level survey. As discussed in Section 2, the focus of this study was to determine if the change of current land use of the project site has adverse effects on the regional movement of wildlife. These conclusions are based on the information compiled during the literature review, including aerial photographs, USGS topographic maps and resource maps for the vicinity, the field survey conducted, and professional knowledge of desired topography and resource requirements for wildlife potentially utilizing the project site and vicinity.

Given the location of the site, adjacent to US 101 with high traffic volumes, and between existing warehouse and industrial uses, reduces the ability for most species to use the project site as a migratory corridor. No significant impacts to wildlife movement are expected as a result of existing barriers coupled with the lack of suitable habitat due to high levels of disturbance on the project site. No mitigation is recommended at this time.

5.3 - Potential Jurisdictional Features

The project was evaluated for the presence of potential wetland features under both state and federal jurisdiction. There is a cement-lined storm water drainage ditch running along the south edge of the site. The proposed development of the project will not be affected this feature, thus no mitigation measures will be required. If any changes are made to the proposed project plan and the feature will be affected in anyway, several other steps including permitting, additional site visits, and potential delineations may be required.

SECTION 6: CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present data and information required for this biological evaluation, and that the facts, statements, and information presented are true and correct to the best of my knowledge and belief.

Date: August 17, 2018 Signed:

Brian Mayerle, Senior Biologist
FirstCarbon Solutions
1350 Treat Blvd., Suite 380
Walnut Creek, CA 94597

IPaC **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

Monterey County, California

Not for consultation

Local office

Ventura Fish And Wildlife Office

(805) 644-1766
(805) 644-3958

2493 Portola Road, Suite B
Ventura, CA 93003-7726

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population, even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service.

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information.

The following species are potentially affected by activities in this location:

Birds

NAME	STATUS
California Condor Gymnogyps californianus There is a **final** critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/8193	Endangered
Least Bell's Vireo Vireo bellii pusillus There is a **final** critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/5945	Endangered
Southwestern Willow Flycatcher Empidonax traillii extimus There is a **final** critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/6749	Endangered

Amphibians

NAME	STATUS
California Red-legged Frog Rana draytonii There is a **final** critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/2891	Threatened
California Tiger Salamander Ambystoma californiense There is a **final** critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/2076	Threatened
Santa Cruz Long-toed Salamander Ambystoma macrodactylum croceum No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/7405	Endangered

Crustaceans

NAME	STATUS
Vernal Pool Fairy Shrimp Branchinecta lynchi There is a **final** critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/498	Threatened

Flowering Plants

NAME	STATUS
Contra Costa Goldfields Lasthenia conjugens There is a **final** critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/7058	Endangered
Marsh Sandwort Arenaria paludicola No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/2229	Endangered
Monterey Gilia Gilia tenuiflora ssp. arenaria No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/856	Endangered

Monterey Spineflower Chorizanthe pungens var. pungens There is a **final** critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/396	Threatened
Yadon's Piperia Piperia yadonii There is a **final** critical habitat designated for this species. Your location is outside the designated critical habitat. https://ecos.fws.gov/ecp/species/4205	Endangered

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

THERE ARE NO CRITICAL HABITATS AT THIS LOCATION.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any activity that results in the take (to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct) of migratory birds or eagles is prohibited unless authorized by the U.S. Fish and Wildlife Service[3]. There are no provisions for allowing the take of migratory birds that are unintentionally killed or injured.

Any person or organization who plans or conducts activities that may result in the take of migratory birds is responsible for complying with the appropriate regulations and implementing appropriate conservation measures.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Conservation measures for birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Year-round bird occurrence data http://www.birdscanada.org/birdmon/default/datasummaries.jsp

The migratory birds species listed below are species of particular conservation concern (e.g. Birds of Conservation Concern) that may be potentially affected by activities in this location. It is not a list of every bird species you may find in this location, nor a guarantee that all of the bird species on this list will be found on or near this location. Although it is important to try to avoid and minimize impacts to all birds, special attention should be made to avoid and minimize impacts to birds of priority concern. To view available data on other bird species that may occur in your project area, please visit the AKN Histogram Tools and Other Bird Data Resources. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

NAME	SEASON(S)

What does IPaC use to generate the list of migratory bird species potentially occurring in my specified location?

Landbirds:

Migratory birds that are displayed on the IPaC species list are based on ranges in the latest edition of the National Geographic Guide, Birds of North America (6th Edition, 2011 by Jon L. Dunn, and Jonathan Alderfer). Although these ranges are coarse in nature, a number of U.S. Fish and Wildlife Service migratory bird biologists agree that these maps are some of the best range maps to date. These ranges were clipped to a specific Bird Conservation Region (BCR) or USFWS Region/Regions, if it was indicated in the 2008 list of Birds of Conservation Concern (BCC) that a species was a BCC species only in a particular Region/Regions. Additional modifications have been made to some ranges based on more local or refined range information and/or information provided by U.S. Fish and Wildlife Service biologists with species expertise. All migratory birds that show in areas on land in IPaC are those that appear in the 2008 Birds of Conservation Concern report.

Atlantic Seabirds:

Ranges in IPaC for birds off the Atlantic coast are derived from species distribution models developed by the National Oceanic and Atmospheric Association (NOAA) National Centers for Coastal Ocean Science (NCCOS) using the best available seabird survey data for the offshore Atlantic Coastal region to date. NOAANCCOS assisted USFWS in developing seasonal species ranges from their models for specific use in IPaC. Some of these birds are not BCC species but were of interest for inclusion because they may occur in high abundance off the coast at different times throughout the year, which potentially makes them more susceptible to certain types of development and activities taking place in that area. For more refined details about the abundance and richness of bird species within your project area off the Atlantic Coast, see the Northeast Ocean Data Portal. The Portal also offers data and information about other types of taxa that may be helpful in your project review.

About the NOAANCCOS models: the models were developed as part of the NOAANCCOS project: Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf. The models resulting from this project are being used in a number of decision-support/mapping products in order to help guide decision-making on activities off the Atlantic Coast with the goal of reducing impacts to migratory birds. One such product is the Northeast Ocean Data Portal, which can be used to explore details about the relative occurrence and abundance of bird species in a particular area off the Atlantic Coast.

All migratory bird range maps within IPaC are continuously being updated as new and better information becomes available.

Can I get additional information about the levels of occurrence in my project area of specific birds or groups of birds listed in IPaC?

Landbirds:

The Avian Knowledge Network (AKN) provides a tool currently called the "Histogram Tool", which draws from the data within the AKN (latest,survey, point count, citizen science datasets) to create a view of relative abundance of species within a particular location over the course of the year. The results of the tool depict the frequency of detection of a species in survey events, averaged between multiple datasets within AKN in a particular week of the year. You may access the histogram tools through the Migratory Bird Programs AKN Histogram Tools webpage.

The tool is currently available for 4 regions (California, Northeast U.S., Southeast U.S. and Midwest), which encompasses the following 32 states: Alabama, Arkansas, California, Connecticut, Delaware, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New Jersey, New York, North, Carolina, Ohio, Pennsylvania, Rhode Island, South Carolina, Tennessee, Vermont, Virginia, West Virginia, and Wisconsin.

In the near future, there are plans to expand this tool nationwide within the AKN, and allow the graphs produced to appear with the list of trust resources generated by IPaC, providing you with an additional level of detail about the level of occurrence of the species of particular concern potentially occurring in your project area throughout the course of the year.

Atlantic Seabirds:

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAANCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Facilities

Wildlife refuges

Any activity proposed on National Wildlife Refuge lands must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGES AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

THERE ARE NO KNOWN WETLANDS AT THIS LOCATION.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or

classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Appendix B:
Regulatory Framework

THIS PAGE INTENTIONALLY LEFT BLANK

SENSITIVE PLANT AND WILDLIFE SPECIES

Sensitive species are native species that have been accorded special legal or management protection because of concern for their continued existence. There are several categories of protection at both federal and state levels, depending on the magnitude of threat to continued existence and existing knowledge of population levels.

Federal Endangered Species Act

The United States Fish and Wildlife Service (USFWS) administers the Federal Endangered Species Act (ESA). The ESA provides a process for listing species as either threatened or endangered, and methods of protecting listed species. The ESA defines as "endangered" any plant or animal species that is in danger of extinction throughout all or a significant portion of its known geographic range. A "threatened" species is a species that is likely to become endangered. A "proposed" species is one that has been officially proposed by the USFWS for addition to the federal threatened and endangered species list.

According to Section 9 of the ESA, "take" of threatened or endangered species is prohibited. The term "take" means to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in such conduct. Take can include disturbance to habitats used by a threatened or endangered species during any portion of its life history. The presence of any federally threatened or endangered species in a project area generally imposes severe constraints on development, particularly if development would result in "take" of the species or its habitat. Under the regulations of the ESA, the USFWS may authorize "take" when it is incidental to, but not the purpose of, an otherwise lawful act.

California Endangered Species Act

The California Department of Fish and Wildlife (CDFW) administers the California Endangered Species Act (CESA). The State of California considers an "endangered" species one whose prospects of survival and reproduction are in immediate jeopardy. A "threatened" species is one present in such small numbers throughout its range that it is likely to become an endangered species in the near future in the absence of special protection or management. A "rare" species is one present in such small numbers throughout its portion of its known geographic range that it may become endangered if its present environment worsens. The rare species designation applies to California native plants. State threatened and endangered species are fully protected against take, as defined above. The term "species of special concern" is an informal designation used by CDFW for some declining wildlife species that are not state candidates for listing. This designation does not provide legal protection, but signifies that these species are recognized as sensitive by CDFW.

California Native Plant Society

The California Native Plant Society (CNPS) is a California resource conservation organization that has developed and inventory of California's sensitive plant species. This inventory summarizes information on the distribution, rarity, and endangerment of California's vascular plants. The

inventory is divided into four lists based on the rarity of the species. In addition, the CNPS provides an inventory of plant communities that are considered sensitive by the state and federal resource agencies, academic institutions, and various conservation groups. Determination of the level of sensitivity is based on the number and size of remaining occurrences as well as recognized threats.

Migratory Bird Treaty Act

The MBTA protects all common wild birds found in the United States (U.S.) except exotic species identified in the Federal Register. Resident game birds are managed separately by each state. The MBTA makes it unlawful for anyone to kill, capture, collect, possess, buy, sell, trade, ship, import, or export any migratory bird including feathers, parts, nests, or eggs.

California Fish and Game Code—Section 3503 and Section 3511

The CDFW administers the California Fish and Game Code (CFG Code). There are particular sections of the CFG Code that are applicable to natural resource management. For example, Section 3503 of the CFG Code states it is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird that is protected under the MBTA. CFG Code Section 3503.5 further protects all birds in the orders Falconiformes and Strigiformes, birds of prey such as hawks and owls, and their eggs and nests from any form of take. CFG Code Section 3511 lists fully protected bird species where the CDFW is unable to authorize the issuance of permits or licenses to take these species.

Impacts to natural drainage features and wetland areas are regulated by the United States Army Corps of Engineers (USACE), Regional Water Quality Control Board (RWQCB), and CDFW based upon the policies and regulations discussed below.

United States Army Corps of Engineers Regulations

Federal Clean Water Act—Section 404

The USACE administers Section 404 of the federal Clean Water Act (CWA). This section regulates the discharge of dredge and fill material into Waters of the U.S. USACE has established a series of nationwide permits that authorize certain activities in Waters of the U.S., if a proposed activity can demonstrate compliance with standard conditions. Normally, USACE requires an individual permit for an activity that will affect an area equal to or in excess of 0.5 acre of Waters of the U.S. Projects that result in impacts to less than 0.5 acre can normally be conducted pursuant to one of the nationwide permits, if consistent with the standard permit conditions. USACE also has discretionary authority to require an Environmental Impact Statement for projects that result in impacts to an area between 0.1 and 0.5 acre. Use of any nationwide permit is contingent on the activities having no impacts to endangered species.

Waters of the United States

Waters of the U.S., as defined in the Code of Federal Regulations (CFR) Section 328.3, include all waters or tributaries to waters such as lakes, rivers, intermittent and perennial streams, mudflats, sand-flats, natural ponds, wetlands, wet meadows, and other aquatic habitats. Frequently, Waters of the U.S., with at least intermittently flowing water or tidal influences, are demarcated by an ordinary high water mark (OHWM). The OHWM is defined in CFR Section 328.3(e) as the line on the

shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas. In this region, the OHWM is typically indicated by the presence of an incised streambed with defined bank shelving.

In June 2001, the USACE South Pacific Division has issued Guidelines for Jurisdictional Delineations for Waters of the United States in the Arid Southwest. The purpose of this document was to provide background information concerning physical characteristics of dryland drainage systems. These guidelines were reviewed and used to identify jurisdictional drainage features within the project site.

Wetlands

According to the USACE Wetlands Delineation Manual, Technical Report, three criteria must be satisfied to classify an area as a jurisdictional wetland:

1. A predominance of plant life that is adapted to life in wet conditions (hydrophytic vegetation)
2. Soils that saturate, flood, or pond long enough during the growing season to develop anaerobic conditions in the upper part (hydric soils)
3. Permanent or periodic inundation or soils saturation, at least seasonally (wetland hydrology)

Wetland vegetation is characterized by vegetation in which more than 50 percent of the composition of dominant plant species are obligate wetland, facultative wetland, and/or facultative species that occur in wetlands. As a result of the 2001 Solid Waste Agency of North Cook County (SWANCC) case, a wetland must show connectivity to a stream course in order for such a feature to be considered jurisdictional. Although wetland criteria was used to identify if areas were considered wetlands, the exact limits of jurisdiction were not measured based on the standard wetland delineation protocol as described in the 1987 USACE manual.

United States Army Corps of Engineers Regulated Activities

The USACE regulates the discharge of dredged or fill material including, but not limited to, grading, placing of rip-rap for erosion control, pouring concrete, laying sod, and stockpiling excavated material. Activities that generally do not involve a regulated discharge, if performed specifically in a manner to avoid discharges, include driving pilings, drainage channel maintenance, temporary mining and farm/forest roads, and excavating without stockpiling.

Regional Water Quality Control Board Regulations

Clean Water Act—Section 401

As stated in Section 401 of the CWA, “any applicant for a Federal permit for activities that involve a discharge to Waters of the State, shall provide the federal permitting agency a certification from the State in which the discharge is proposed that states that the discharge will comply with the applicable provisions under the Federal Clean Water Act.” Therefore, before the USACE will issue a

Section 404 permit, applicants must apply for and receive a Section 401 water quality certification from the RWQCB.

Porter-Cologne Water Quality Act

The RWQCB regulates actions that would involve "discharging waste, or proposing to discharge waste, within any region that could affect the water of the state" (water code Section 13260(a)), pursuant to provisions of the Porter-Cologne Water Quality Act. "Waters of the State" are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state" (water code Section 13050 (e)).

Regional Water Quality Control Board Regulated Activities

Under Section 401 of the CWA, the RWQCB regulates all activities that are regulated by the USACE. Additionally, under the Porter-Cologne Water Quality Act, the RWQCB regulates all activities, including dredging, filling, or discharge of materials into waters of the state that are not regulated by the USACE, due to a lack of connectivity with a navigable water body and/or lack of an OHWM.

California Department of Fish and Game Regulations

California Fish and Game Code—Section 1600 to Section 1603

The CFG Code mandates that "it is unlawful for any person to substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of any river, stream, or lake designated by the department, or use any material from the streambeds, without first notifying the department of such activity." CDFW jurisdiction includes ephemeral, intermittent, and perennial watercourses, including dry washes, characterized by the presence of hydrophytic vegetation, the location of definable bed and banks, and the presence of existing fish or wildlife resources.

Furthermore, CDFW jurisdiction is often extended to habitats adjacent to watercourses, such as oak woodlands in canyon bottoms or willow woodlands that function as part of the riparian system. Historic court cases have further extended CDFW jurisdiction to include watercourses that seemingly disappear, but re-emerge elsewhere. Under the CDFW definition, a watercourse need not exhibit evidence of an OHWM to be claimed as jurisdiction. However, CDFW does not regulate isolated wetlands; that is, those that are not associated with a river, stream, or lake.

California Department of Fish and Game Regulated Activities

The CDFW regulates activities that involve diversions, obstruction, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake that supports fish or wildlife resources.

MANAGEMENT SUMMARY

At the request of the SyWest Development, FirstCarbon Solutions (FCS) conducted a Phase I Cultural and Paleontological Resources Assessment of the proposed project site located within the City of Salinas, Monterey County, California. The approximately 7.5-acre project site is roughly triangular in shape, and is located within Section 28, Township 14 south, Range 3 East of the USGS Salinas Quadrangle (1984) 7.5-series topographic map. The project is also located within the Nacional Land Grant and is bounded by US 101 (northeast), light industrial buildings (southeast), residential buildings and open space (southwest), and a large public storage facility (northwest).

The purpose of this assessment is to identify the presence or absence of potentially significant cultural resources within the project area and, if impacted by the proposed development, propose recommendations for mitigation. Completion of this investigation fulfills the requirements associated with the California Environmental Quality Act (CEQA). This report follows the California Office of Historic Preservation (OHP) procedures for cultural resource surveys and the OHP's Archaeological Resource Management Report format for archaeological reports.

On June 8, 2017, FCS staff conducted a records search for the project area and a 0.5-mile radius beyond the project boundaries at the Northwest Information Center (NWIC) located at California State University Sonoma. To identify any historic properties or resources, the current inventories of the National Register of Historic Places (NR), the California Register of Historic Resources (CR), the California Historical Landmarks list, the California Points of Historical Interest list, and the California State Historic Resources Inventory were reviewed to determine the existence of previously documented local historical resources. Results from the NWIC indicate that three known resources have been recorded within 0.5 mile of the project area. Of the three resources, none are prehistoric in nature, and none are located within the project area. In addition, 17 area-specific survey reports are on file with the NWIC for the search radius. One of the previous surveys assessed portions of the project location, suggesting the project area has not been previously surveyed for cultural resources. Additionally, an unrecorded transmission line is immediately adjacent to the south side of the project. The line appears on the 1947 U.S. Geologic Survey Salinas, California 7.5' topographic quad, which indicates the line may be eligible for listing on the CR. FCS recommends that the line is recorded and evaluated for its potential eligibility for listing on the CR.

On May 18, 2017, FCS sent a letter to the NAHC in an effort to determine whether any sacred sites are listed on its Sacred Lands File for the project area. A response was received on May 24, 2017 indicating that the Sacred Lands File failed to indicate the presence of Native American cultural resources in the immediate project area. The NAHC included a list of eight tribal representatives who may have additional information regarding cultural resources on or near the project area. A letter containing project information and requesting any additional information was sent to each tribal representative on May 24, 2017. On June 9, 2017, a response was received from Patti Dunton, Tribal Administrator for the Salinan Tribe of Monterey. The letter stated that Administrator Dunton was not aware of any resources at the project location and does not have any concerns, but

requested to be notified should any unknown resources be unearthed by the project. As of this date, no additional correspondence has been received.

On June 13, 2017, FCS Senior Archaeologist Dana DePietro, PhD surveyed the project area for additional unrecorded cultural resources. The survey began in the southwest corner of the project site and moved northeast, inspecting the entire area for cultural resources using transects at standard 15-meter intervals whenever possible. The project area has been subject to extensive development and soil disturbance, including grading, and construction associated with a recreational area built on the site during the 1980s. Soils in sections of poor visibility were intermittently inspected using a hand trowel. Observed soils were largely composed of medium brown soil interspersed with small (5- to 10-centimeter) stones primarily composed of quartz and schist. Survey conditions were documented using digital photographs and field notes. Particular attention was paid to areas of soil disturbance across the site, which were closely inspected for culturally modified soils or other indicators of potential historic or prehistoric resources. No historic or prehistoric cultural resources or raw materials commonly used in the manufacture of tools (e.g., obsidian, Franciscan chert) were found in these areas, nor were any observed elsewhere within the project site.

On May 31, 2017, consulting paleontologist Dr. Ken Finger performed a records search on the University of California Museum of Paleontology (UCMP) database for the San Mateo Central Park project in Santa Clara County. The UCMP database records 473 Rancholabrean vertebrate localities in California, nine of which are located within Monterey County. According to the part of the geologic map by Wagner et al. 2002, the surface of project site is well within an area of Quaternary basin deposits (Qb). All four units shown are Quaternary and are not differentiated as either Holocene or Pleistocene. There are no fossil localities of any kind within a 0.5 mile of the project site.

Based on the results of the records searches, Native American correspondence, and pedestrian survey, FCS considers the potential for the project to have an adverse effect on historic or prehistoric cultural resources to be low. Similarly, considering the disturbed nature of the site and the generally unpredictable occurrence of Pleistocene fossils, the paleontological potential in these areas is typically classified as uncertain or low until a discovery is made.

Neither archaeological nor paleontological monitoring is therefore recommended at this time. Procedures for inadvertent discoveries of human remains, cultural resources, and paleontological resources are provided in section 4.2.

SECTION 1: INTRODUCTION

1.1 - Project Location

The Rodeo Property Project is located at 295 Sun Way, south and west of US 101 in the central part of the City of Salinas, Monterey County, California (Exhibit 1). The approximately 7.5-acre project site is roughly triangular in shape, and is located within Section 28, Township 14 south, Range 3 East of the USGS Salinas Quadrangle (1984) 7.5-series topographic map (Exhibit 2). The project is also located within the Nacional Land Grant.

North and south of the Project site are existing warehouse/light industrial uses. To the north of the Project site is Security Public Storage; to the south at 10 Simas Street is Celebration Church and at 34 Simas Street is a light industrial building containing an ambulance dispatch business and an electrical supply company. To the southwest of the Project at 8 Sun Street is Sun Street Centers Men's Residential Program. Adjacent to and west of the Project is open space; however, there is a mix of land uses further west of the Project, including St. James CME Church located at 285 Calle Cebu, Haciendas Place multi-family residential located at 245 Calle Cebu, and the Rancho Salinas Mobile Park located at 150 Sherwood Drive. The Project site is bounded by Sun Street and Sun Way to the west, US 101 to the east, Security Public Storage to the north, and light industrial uses to the south (Exhibit 3).

1.2 - Project Description

The project is a General Plan amendment and Rezone that would allow development of industrial and commercial uses on a 6.8-acre site located on Sun Street adjacent to US 101. The proposed land use designation would allow the site to be developed at a floor area ratio of 0.4, which would allow for the development of up to 188,600 square feet of industrial floor space. The site is designated in the General Plan as Open Space. Access to the site is provided via Sun Street and its connections to Calle Cebu and E. Market Street.

1.3 - Assessment Team

FCS Senior Archaeologist Dana DePietro, PhD conducted the pedestrian survey and authored this report. Professional qualifications for Dr. DePietro can be found in Appendix C.

SECTION 2: CULTURAL SETTING

Following is a brief overview of the prehistory, ethnography, and historic background, providing a context in which to understand the background and relevance of sites found in the general project area. This section is not intended to be a comprehensive review of the current resources available; rather, it serves as a general overview. Further details can be found in ethnographic studies, mission records, and major published sources.

2.1 - Prehistoric Background

2.1.1 - Early Man

Spanning the period from approximately 17,000 to 9,500 Before Present (BP), archaeological assemblages attributed to the Early Man Period are characterized by large projectile points and scrapers. The limited data available suggests that prehistoric populations focused on hunting and gathering, moving about the region in small nomadic groups. Technologies associated with ocean resource gathering would have likely been utilized, but the sea level during this period was lower than today, meaning that sites on the coast are inundated and unavailable for study. Californians of this period are viewed as populations of big game hunters who were mobile enough to pursue herds. The entirety of California may have been occupied near the beginning of the Holocene epoch, about 11,750 years ago. During the Holocene, sea levels rose about 60 meters between 11,750 and 7,000 years BP, due to melting of the Pleistocene ice sheet in the higher latitudes. Although the sea level was about 120 meters lower off the coast of California roughly 22,000 years ago (Milne et al 2005), sea level stabilization began about 7,000 years ago and only a slight rise has occurred since then.

2.1.2 - Central California Chronologies

Early archaeological investigations in central California were conducted at sites located in the Sacramento-San Joaquin Delta region. The first published account documents investigations in the Lodi and Stockton area (Schenck and Dawson 1929). The initial archaeological reports typically contained descriptive narratives, with more systematic approaches sponsored by Sacramento Junior College in the 1930s. At the same time, University of California at Berkeley excavated several sites in the lower Sacramento Valley and Delta region, which resulted in recognizing archaeological site patterns based on variations of inter-site assemblages. Subsequently, research during the 1930s identified temporal periods in central California prehistory and provided an initial chronological sequence (Lillard and Purves 1936; Lillard, et al. 1939).

Fredrickson revised the chronology in 1973 developing new time periods. From this work Fredrickson defined several broad yet distinct temporal patterns—a general way of life shared within a specific geographical region and supported archaeologically. These patterns include:

- Windmiller Pattern or Early Horizon (3000 to 1000 B.C.)
- Berkeley Pattern or Middle Horizon (1000 B.C. to A.D. 500)
- Augustine Pattern or Late Horizon (A.D. 500 to historic period)

With the establishment of these patterns, or horizons, Central California research has expanded from an emphasis on defining chronological and cultural units to a more comprehensive look at settlement and subsistence systems. This shift is illustrated by the early use of burials to identify mortuary assemblages and more recent research using osteological data to determine the health of prehistoric populations (Dickel et al. 1984). Although debate continues over a single model or sequence for central California, the general framework consisting of three temporal/cultural units is generally accepted, although the identification of regional and local variation is a major goal of current archaeological research.

2.1.3 - Early Horizon

The Early Horizon of Central California emphasized hunting rather than gathering, as evidenced by the abundance of projectile points in relation to plant processing tools. Additionally, atlatl, dart, and spear technologies typically included stemmed projectile points of slate and chert but minimal obsidian. The large variety of projectile point types and faunal remains suggests exploitation of numerous types of terrestrial and aquatic species (Bennyhoff 1950; Ragir 1972). Burials occurred in cemeteries and intra-village graves. These burials typically were ventrally extended, although some dorsal extensions are known with a westerly orientation and a high number of grave goods. Trade networks focused on acquisition of ornamental and ceremonial objects in finished form rather than on raw material. The presence of artifacts made of exotic materials such as quartz, obsidian, and shell indicates an extensive trade network that may represent the arrival of Utian populations into central California. Also indicative of this period are rectangular *Haliotis* and *Olivella* shell beads, and charmstones that usually were perforated.

2.1.4 - Middle Horizon

The Middle Horizon displays considerable changes from the Early Horizon. This period exhibited a strong milling technology represented by minimally shaped cobble mortars and pestles, although metates and manos were still used. Dart and atlatl technologies during this period were characterized by non-stemmed projectile points made primarily of obsidian. Fredrickson (1973) suggests that the Berkeley Pattern marked the eastward expansion of Miwok groups from the San Francisco Bay Area. Compared with the Early Horizon, there is a higher proportion of grinding implements at this time, implying an emphasis on plant resources rather than on hunting. Typical burials occurred within the village with flexed positions, variable cardinal orientation, and some cremations. As noted by Lillard, the practice of spreading ground ochre over the burial was common at this time (Lillard, et al. 1939). Grave goods during this period are generally sparse and typically include only utilitarian items and a few ornamental objects. However, objects such as charmstones, quartz crystals, and bone whistles occasionally were present, which suggest the religious or ceremonial significance of the individual (Hughes 1994). During this period, larger populations are suggested by the number and depth of sites compared with the Windmiller Pattern. According to Fredrickson (1973), the Berkeley Pattern reflects gradual expansion or assimilation of different populations rather than sudden population replacement and a gradual shift in economic emphasis.

2.1.5 - Late Period

The Late Horizon is characterized by a shift in the general subsistence pattern. Changes include the introduction of bow and arrow technology; and most importantly, acorns became the predominant food resource. Trade systems expanded to include raw resources as well as finished products. There are more baked clay artifacts and extensive use of *Haliotis* ornaments of many elaborate shapes and forms. Burial patterns retained the use of flexed burials with variable orientation, but there was a reduction in the use of ochre and widespread evidence of cremation (Moratto 1984). Judging from the number and types of grave goods associated with the two types of burials, cremation seems to have been reserved for individuals of higher status, whereas other individuals were buried in flexed positions.

2.2 - Native American Background

2.2.1 - The Ohlone

At the time of European contact, the Salinas area and surrounding coastal region was occupied by various tribelets that were part of the Ohlone (called by the Spaniards "Coastanoans," or Coast-dwellers) tribe of California Native Americans. Evidence of this group of hunter-gatherers exists from as early as 3,600 B.C. The Ohlone group designates a language family consisting of eight branches of the Ohlone language that are considered too distinct to be dialects, with each being related to its geographically adjacent neighbors. These groups lived in approximately 50 separate and politically autonomous tribelet areas, each with one or more permanent villages, between the North San Francisco Bay and the lower Salinas River (Levy 1978).

The various Ohlone tribes subsisted as hunter-gatherers and relied on local terrestrial and marine flora and fauna for subsistence (Levy 1978). The predominant plant food source was the acorn, but they also exploited a wide range of other plants, including various seeds, buckeye, berries, and roots. Protein sources included grizzly bear, elk, sea lions, antelope, and black-tailed deer as well as smaller mammals such as raccoon, brush rabbit, ground squirrels, and wood rats. Waterfowl, including Canadian geese, mallards, green-winged teal, and American widgeon, were captured in nets using decoys to attract them. Fish also played an important role in the Ohlone diet and included steelhead, salmon, and sturgeon (Jones 2007). The Ohlone constructed watercraft from tule reeds and possessed bow and arrow technology. They fashioned blankets from sea otter pelts, fabricated basketry from twined reeds of various types, and assembled a variety of stone and bone tools in their assemblages. Ohlone villages typically consisted of domed dwelling structures, communal sweathouses, dance enclosures, and assembly houses constructed from thatched tule reeds and a combination of wild grasses, wild alfalfa, and ferns.

The Ohlone were politically organized into autonomous tribelets that had distinct cultural territories. Individual tribelets contained one or more villages with a number of seasonal camps for resource procurement within the tribelet territory. The tribelet chief could be either male or female, and the position was inherited patrilineal, but approval of the community was required. The tribelet chief and council were essentially advisors to the community and were responsible for feeding visitors, directing hunting and fishing expeditions, ceremonial activities, and warfare on neighboring tribelets.

The Gold Rush brought disease to the native inhabitants, decimating the population; by the 1850s, nearly all of the Ohlone had adapted in some way or another to economies based on cash income. Hunting and gathering activities continued to decline and were rapidly replaced with economies based on ranching and farming (Levy 1978).

2.3 - Historical Background

2.3.1 - City of Salinas

Three Spanish expeditions surveying the region for colonization either passed through or very near what is now Salinas, CA. from 1769 to 1776. Life changed profoundly for the Ohlone people with the establishment of a Spanish presidio at Monterey and the Franciscan mission at Carmel in 1770. The later missions at Soledad and Santa Cruz (1791), and San Juan Bautista (1797) brought Spanish religious and political hegemony to the region, through Franciscan missions and the enforcement of their assumed authority by the Spanish military. Disease, forced religious conversion, adoption of farming practices, and intermarriage with other groups lead to the wholesale disintegration of tribal culture (Milliken 1995).

It was not until Mexico gained independence from Spain in 1822 that outside settlers began to arrive in Salinas. Named for a nearby salt marsh, Salinas became the seat of Monterey County in 1872 and was incorporated in 1874. Salinas supported a modest Asian community beginning in the late 1800s and extending to the present day. Chinese immigrants were among its first occupants, many setting their sights on the promise of gold in the Santa Lucia Mountains, only to be driven away by the other miners. Their later efforts focused on fishing, farming, or general labor to make ends meet. Most came from Kwangtung (Guangdong) Province via San Francisco. Upon arrival, the Chinese formed district associations, or *huiguan*, which functioned as fraternal organizations providing mutual aid for members (Farkas 2008).

In the mid-1800s, Salinas's agricultural industry began to grow. In 1867, several local businessmen laid out a town plan and enticed the Southern Pacific Railroad to build its tracks through Salinas City.

Agriculture continued as the area's major industry and by the end of World War I, the "green gold" growing in the fields helped make Salinas one of the wealthiest cities (per capita) in the United States. Today, "The Salad Bowl of the World" fuels a $2 billion agriculture industry that supplies 80 percent of the country's lettuce and artichokes, along with many other crops.

In 1924, Salinas had the highest per capita income of any city in the United States. During the growing seasons of the Great Depression, the volume of telephone and telegraph transmissions originating in Salinas was greater than that of San Francisco. This activity was reflected in a burst of building construction, many employing the streamlined shapes and organic patterns of Art Deco or Art Moderne. Many examples remain, including the NR-listed Monterey County Courthouse and the Salinas Californian newspaper building. Several other notable historic structures are also present in the City, including the Victorian house where John Steinbeck was born. US 101 passes through Salinas on its northward path originate in East Los Angeles, and the scenic highway remains a popular travel route for those traversing the state by automobile (City of Salinas, 2017).

SECTION 3: RESULTS

3.1 - Records Search

3.1.1 - Northwest Information Center Search

On June 8, 2017, FCS staff conducted a records search for the project area and a 0.5-mile radius beyond the project boundaries at the NWIC located at California State University Sonoma. To identify any historic properties or resources, the current inventories of the NR, the CR, the California Historical Landmarks list, the California Points of Historical Interest list, and the California State Historic Resources Inventory were also reviewed to determine the existence of previously documented local historical resources.

Results from the NWIC indicate that three known resources have been recorded within 0.5 mile of the project area (Table 1). Of the three resources, none are prehistoric in nature, and none are located within the project area. In addition, 17 area-specific survey reports are on file with the NWIC for the search radius (Table 2). One of the previous surveys assessed portions of the project location, suggesting the project area has largely not been previously surveyed for cultural resources.

Table 1: Cultural Resources within 0.50 Mile of the Project Area

Site Number	Distance from the Project	Resource Description	CRHR Status
P-27-002322	40 feet northeast	CA-MNT-002050H: El Camino Real California Highway 101 AH07 (Roads/trails/railroad grades); HP37 (Highway/trail)	Partially evaluated: ineligible for NR.
P-27-003234	1,800 feet west	PG&E Moss Landing-Salinas Electrical HP09 (Public utility S-043489 building); HP11 (Engineering structure)	Not evaluated
P-27-003465	2,600 feet southwest	Chinese American Community HP02 (Single family S-047415 property); HP05 (Hotel/motel)—boarding houses; HP06 (1–3 story commercial building); HP16 (Religious building)	Not evaluated

Additionally, an unrecorded transmission line is immediately adjacent to the south side of the project. The line appears on the 1947 U.S. Geologic Survey Salinas, California 7.5' topographic quad, which indicates the line may be eligible for listing on the CR. FCS recommends that the line is recorded and evaluated for its potential eligibility for listing on the CR.

3.1.2 - Native American Heritage Commission and Tribal Correspondence

On May 18, 2017, FCS sent a letter to the NAHC in an effort to determine whether any sacred sites are listed on its Sacred Lands File for the project area. A response was received on May 24, 2017 indicating that the Sacred Lands File failed to indicate the presence of Native American cultural resources in the immediate project area. The NAHC included a list of eight tribal representatives that may have information regarding cultural resources on or near the project area. A letter containing project information and requesting any additional information was sent to each tribal representative on May 24, 2017. On June 9, 2017, a response was received from Patti Dunton, Tribal Administrator for the Salinan Tribe of Monterey. The letter stated that Administrator Dunton was not aware of any resources at the project location and does not have any concerns, but requested to be notified should any unknown resources be unearthed by the project. As of this date, no additional correspondence has been received.

3.2 - Pedestrian Survey

On June 13, 2017, FCS Senior Archaeologist Dana DePietro, PhD surveyed the project area for additional unrecorded cultural resources. The project site is located within the USGS Salinas

Quadrangle (1984) 7.5-series topographic map. The approximately 7.5-acre project site is located in the northeast of the City of Salinas, and is bounded by US 101 (northeast), light industrial buildings (southeast), residential buildings and open space (southwest), and a large public storage facility (northwest). The survey began in the southwest corner of the project site and moved northeast, inspecting the entire area for cultural resources using transects at standard 15-meter intervals whenever possible (Appendix A: Photographs 1–12).

The project area has been subject to extensive development and soil disturbance, including grading, and construction associated with a recreational area built on the site during the 1980s. Structures associated with the recreational area include a baseball diamond, bleachers, lighting, and a cinderblock bathroom facility. All structures were determined to be less than 45 years in age and do not appear to be eligible for inclusion in the NR or CR. Because of the recreational area's field, which covers the majority of the project area, soil visibility was poor across the site, ranging from 15 to 20 percent. Soils in sections of poor visibility were intermittently inspected using a hand trowel. Observed soils were largely composed of medium brown soil interspersed with small (5- to 10-centimeter) stones primarily composed of quartz and schist.

Survey conditions were documented using digital photographs and field notes. During the survey, Dr. DePietro examined all areas of the exposed ground surface for prehistoric artifacts (e.g., fire-affected rock, milling tools, flaked stone tools, tool-making debris, ceramics), soil discoloration and depressions that might indicate the presence of a cultural midden, faunal and human osteological remains, and features indicative of the former presence of structures or buildings (e.g., postholes, standing exterior walls, foundations) or historic debris (e.g., glass, metal, ceramics).

Particular attention was paid to areas of soil disturbance across the site, which were closely inspected for culturally modified soils or other indicators of potential historic or prehistoric resources. No historic or prehistoric cultural resources or raw materials commonly used in the manufacture of tools (e.g., obsidian, Franciscan chert) were found in these areas, nor were any observed elsewhere within the project site.

An unrecorded transmission line is immediately adjacent to the south side of the project. The line appears on the 1947 U.S. Geologic Survey Salinas, California 7.5' topographic quad, which indicates the line may be eligible for listing on the CR. FCS recommends that the line is recorded and evaluated for its potential eligibility for listing on the CR.

3.3 - Paleontological Overview and Records Search Results

To assess the potential for paleontological resources to exist on the project, a literature review was undertaken at the appropriate institution for the region in which the project is located.

On May 31, 2017, consulting paleontologist Dr. Ken Finger performed a records search on the University of California Museum of Paleontology (UCMP) database for the San Mateo Central Park project in Santa Clara County.

3.3.1 - Regional Geologic Setting

The rapid uplift stimulated by active faulting accelerated other physiographic processes that formed major geologic features evident today in Monterey County. Over several tens of millions of years, rapid erosion of the uplifted mountains resulting in deposition and formation of the flat alluvial terrain of the Salinas Valley. During the Pleistocene, sea level fluctuated repeatedly in response to climatic changes that formed and melted glaciers in other parts of the world. As sea level rose, marine sediments were deposited beneath what later became the floor of the Salinas Valley. Fluctuating sea level during the retreat of the sea is evident in the stratigraphic cycling of marine-nonmarine sediments. With the final regression of the sea in the Pleistocene, alluvial deposition formed the surface of the Salinas Valley and it has continued to the present day.

According to the part of the geologic map by Wagner et al. 2002, the surface of project site is well within an area of Quaternary basin deposits (Qb). The four units shown are all Quaternary and not differentiated as either Holocene or Pleistocene. Extending into the 0.5-mile search perimeter are fan deposits (Qfa) from the northwest and southeast, and flood plain deposits (Qfl) from the southwest. Both of these units extend farther in the subsurface of the search perimeter and one or both lie below the basin deposits.

There are no fossil localities of any kind within a half-mile of the project site. The only UCMP vertebrate locality in the Salinas quadrangle is V5576 (Lake Heinz), about 0.25 mile beyond the search perimeter, where a longhorn bison (*Bison latifrons*) skull was recovered from late Pleistocene alluvium. This locality is in the area mapped as flood plain deposits (Qfl). Considering that the occurrence of Pleistocene fossils is generally unpredictable because of the dynamics of the sedimentary regime in which they were transported and deposited, the paleontological potential in these areas is typically classified as uncertain or low until a discovery is made. A copy of Dr. Finger's report may be found in Appendix F.

Paleontological resources may include but are not limited to fossils from mammoths, saber-toothed cats, rodents, reptiles, and birds. In the event that fossils or fossil-bearing deposits are discovered during construction activities, excavations within a 100-foot radius of the find shall be temporarily halted or diverted. The project contractor shall notify a qualified paleontologist to examine the discovery. The Applicant shall include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. The paleontologist shall document the discovery as needed in accordance with Society of Vertebrate Paleontology standards and assess the significance of the find under the criteria set forth in CEQA Guidelines Section 15064.5. The paleontologist shall notify the appropriate agencies to determine procedures that would be followed before construction activities are allowed to resume at the location of the find. If the Applicant determines that avoidance is not feasible, the paleontologist shall prepare an excavation plan for mitigating the effect of construction activities on the discovery. The plan shall be submitted to the City of Salinas for review and approval prior to implementation, and the Applicant shall adhere to the recommendations in the plan.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 4: SUMMARY AND RECOMMENDATIONS

4.1 - Summary

In accordance with CEQA regulations, FCS assessed the effects of development for the proposed project site. Results from the NWIC indicate that three historic resources are on file for the search radius; however, none are located within the project area. In addition, 17 area-specific survey reports are on file with the NWIC for the search radius. One of the previous surveys assessed portions of the project location, suggesting the project area has largely not been previously surveyed for cultural resources. The results of the subsequent field survey were negative for additional cultural resources, as were the results of the NAHC Sacred Lands File search and subsequent correspondence with Native American representatives regarding potential TRCs that may be adversely affected by the proposed project.

An unrecorded transmission line is immediately adjacent to the south side of the project. The line appears on the 1947 U.S. Geologic Survey Salinas, California 7.5' topographic quad, which indicates the line may be eligible for listing on the CR. FCS recommends that the line is recorded and evaluated for its potential eligibility for listing on the CR.

The paleontological report identified the surface of project site as being well within an area of Quaternary basin deposits (Qb) that are not differentiated as either Holocene or Pleistocene. There are no fossil localities of any kind within a half-mile of the project site. The only UCMP vertebrate locality in the Salinas quadrangle is V5576 (Lake Heinz), about 0.25 mile beyond the search perimeter, where a longhorn bison skull was recovered from late Pleistocene alluvium.

4.2 - Recommendations

4.2.1 - Cultural and Paleontological Resource Recommendations

Based on the results of the records searches, Native American correspondence, and pedestrian survey, FCS considers the potential for the project to have an adverse effect on historic or prehistoric resources to be low. Similarly, considering the disturbed nature of the site and the generally unpredictable occurrence of Pleistocene fossils, the paleontological potential in these areas is typically classified as uncertain or low until a discovery is made.

Neither archaeological nor paleontological monitoring is therefore recommended at this time. Procedures for inadvertent discoveries of human remains, cultural resources, and paleontological resources are provided below.

4.2.2 - Inadvertent Discovery of Cultural Resources

It is always possible that ground-disturbing activities during construction may uncover previously unknown, buried cultural resources. In the event that buried cultural resources are discovered during construction, operations shall stop in the immediate vicinity of the find and a qualified archaeologist shall be consulted to determine whether the resource requires further study. The

qualified archeologist and shall make recommendations to the Lead Agency on the measures that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Potentially significant cultural resources consist of but are not limited to stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the project area should be recorded on appropriate Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of CEQA criteria.

If the resources are determined to be unique historic resources as defined under Section 15064.5 of the CEQA Guidelines, mitigation measures shall be identified by the monitor and recommended to the Lead Agency. Appropriate mitigation measures for significant resources could include avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds.

No further grading shall occur in the area of the discovery until the Lead Agency approves the measures to protect these resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the Lead Agency where they would be afforded long-term preservation to allow future scientific study.

4.2.3 - Accidental Discovery of Paleontological Resources

Although not anticipated, sub-surface construction activities associated with the proposed project, such as grading and trenching could result in a significant impact to paleontological resources, if encountered. Paleontological resources may include but are not limited to fossils from mammoths, saber-toothed cats, rodents, reptiles, and birds. In the event that fossils or fossil-bearing deposits are discovered during construction activities, excavations within a 100-foot radius of the find shall be temporarily halted or diverted. The project contractor shall notify a qualified paleontologist to examine the discovery. The Applicant shall include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. The paleontologist shall document the discovery as needed in accordance with Society of Vertebrate Paleontology standards and assess the significance of the find under the criteria set forth in CEQA Guidelines Section 15064.5. The paleontologist shall notify the appropriate agencies to determine procedures that would be followed before construction activities are allowed to resume at the location of the find. If the Applicant determines that avoidance is not feasible, the paleontologist shall prepare an excavation plan for mitigating the effect of construction activities on the discovery. The plan shall be submitted to the City of Salinas for review and approval prior to implementation, and the Applicant shall adhere to the recommendations in the plan.

4.2.4 - Accidental Discovery of Human Remains

There is always the possibility that ground-disturbing activities during construction may uncover previously unknown, buried human remains. Should this occur, Section 7050.5 of the California Health and Safety Code applies, and the following procedures shall be followed.

In the event of an accidental discovery or recognition of any human remains, Public Resource Code (PRC) Section 5097.98 must be followed. In this instance, once project-related earthmoving begins and if there is accidental discovery or recognition of any human remains, the following steps shall be taken:

1. There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the County Coroner is contacted to determine if the remains are Native American and if an investigation of the cause of death is required. If the coroner determines the remains to be Native American, the coroner shall contact the NAHC within 24 hours, and the NAHC shall identify the person or persons it believes to be the "most likely descendant" of the deceased Native American. The most likely descendant may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in PRC Section 5097.98, or
2. Where the following conditions occur, the landowner or his/her authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the most likely descendent or on the project area in a location not subject to further subsurface disturbance:
   - The NAHC is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 48 hours after being notified by the commission;
   - The descendent identified fails to make a recommendation; or
   - The landowner or his authorized representative rejects the recommendation of the descendent, and the mediation by the NAHC fails to provide measures acceptable to the landowner.

Fax:

Email: **lbaskir@fcs-intl.com**

Project Description:

The project will consist of a rezone application that would rezone the Rodeo property on Sun Street from Parks (P) to Industrial - General Commercial (IGC), identical to the zoning of the parcels that surround this property. The project applicant is proposing to construct 85,500 square feet of industrial space in two separate buildings. Each building will be subdivided into individual tenant spaces. Direct access to the buildings will be via Sun Street and a proposed vehicle bridge connecting to Simas Street.

RE: Rodeo Project, Monterey County

Dear Ms. Baskir,

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not preclude the presence of cultural resources in any project area. Other sources for cultural resources should also be contacted for information regarding known and/or recorded sites.

Enclosed is a list of Native Americans tribes who may have knowledge of cultural resources in the project area. I suggest you contact all of those indicated, if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these tribes, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact me at frank.lienert@nahc.ca.gov.

Sincerely,

for Frank Lienert

Subject: Rodeo Property Project, Monterey County, California

Dear Chairperson Cerda,

FirstCarbon Solutions (FCS) is preparing a Cultural Resources Assessment in support of an Initial Study for the Future Development of the Rodeo Property on behalf of the City of Salinas. The project site is located at Sun Street. It is our understanding that the project site is currently vacant.

The project applicant is proposing to construct 85,500 square feet of industrial space in two separate buildings. Each building would be subdivided into individual tenant spaces. The project would include a Rezone and General Plan Amendment. The project would rezone the former Rodeo Property from Parks (P) to Industrial - General Commercial (IGC), identical to the zoning of the parcels that surround this property.

To determine the presence or absence of cultural and historical resources within the proposed project area and a ½ mile radius, FCS will conduct a record search at the Northwest Information Center (NWIC) at Sonoma State University. To identify any historic properties or resources, the current inventories of the National Register of Historic Places (NR), the California Register of Historic Resources (CR), the California Historical Landmarks list (CHL), the California Points of Historical Interest (CPHI) list, and the California State Historic Resources Inventory (HRI) for Alameda County will be reviewed to determine the existence of previously documented local historical resources. An intensive pedestrian survey will also be conducted at the project locations.

If you have any additional information regarding potential historic or cultural resources in proximity or relation to the proposed project area, we would greatly appreciate your input.

Please note that this letter is a request for information pertaining to a cultural resources assessment and is not notification of a project under Senate Bill (SB) 18, Assembly Bill (AB) 52 or Section 106 of the National Historic Preservation Act. Project notification and consultation requirements are being handled by designated lead agencies under CEQA and NEPA. Please feel free to contact me at 925.357.2562 or via email at ddepietro@fcs-intl.com and thank you for your

valuable assistance.

OVERVIEW

- More than 15 Years Experience in Archaeology and Cultural Resource Management

Education

- Ph.D., Near Eastern Art and Archaeology, University of California at Berkeley, 2012
- M.A., Near Eastern Art and Archaeology, University of California at Berkeley, 2005
- B.A., Archaeology and History (double major), University of California at San Diego, 2002

Fellowships and Awards

- Albright Institute Educational and Cultural Affairs Fellowship (2015)
- Katherine Davis Foundation Projects for Peace Prize (2012)
- International House Gateway Fellowship (2011-2012)
- The George Franklin Dales Foundation Fellowship for Archaeological Research (2011)
- CAORC Multi-Country Dissertation Research Fellowship (2010)

Dana DePietro, Ph.D is a Registered Professional Archaeologist who meets the Secretary of Interior's standards for historic preservation programs in archaeology. Dr. DePietro has over 15 years of experience in all aspects of cultural resource management, including prehistoric and historic archaeology, paleontology, materials conservation, history of art and architecture, and community engagement. He has experience in compliance with the National Environmental Policy Act (NEPA), the California Environment Quality Act (CEQA), the National Historic Preseration Act (NHPA), and the Archaeological Resources Protection Act (ARAP). Dr. DePietro has completed cultural resource projects that have involved agency, client, Native American, and subcontractor coordination; treatment plans and research design development; archival research; field reconnaissance; site testing; data recovery excavation; construction monitoring; site recordation; site protection/preservation, mapping/cartography; spatial analysis/ GIS; laboratory analysis; materials conservation; artifact curation and exhibition; and report production. He has completed projects in California within the jurisdiction of the Bureau of Land Management (BLM) and other federal agencies requiring compliance with section 106 of the NHPA. He has also completed projects throughout California under CEQA for state and local governments and municipalities, including the California Department of Transportation (Caltrans) and has worked with clients to insure deliverables meet and exceed the standards set by the State Historic Preservation Office (SHPO).

RELATED EXPERIENCE AND CLIENT SUMMARY

FirstCarbonSolutions

As the Lead Archaeologist/Cultural Resource Specialist for FCS, Dr. DePietro conducts evaluations and performs field documentation of historic and prehistoric cultural resources; prepares environmental impact reports (EIRs), cultural resources assessments (CRAs), DPR forms and Section 106 reports; conducts mapping, GIS analysis, and state and county record searches; leads archaeological surveys and

field monitoring efforts; and coordinates with state, federal and tribal officials and institutions for a variety of FCS projects, including the following:

- Atherton Baptist Homes Master Plan/Phase II, City of Alhambra, Los Angeles County
- Biological and Cultural Resources Assistance 140-Acre Project Site Woodcrest, Riverside County, CA
- Blanchard Road Industrial EIR Project, City of San Jose, Santa Clara County, CA
- Bonadelle Tract 6120 AQ/GHG and Bio Tech Studies, City of Clovis, Fresno County, CA
- CEQA Analysis for Mayhew Way Project, City of Walnut Creek, Contra Costa County
- 2268 El Camino Real, Mountain View - II CEQA Compliance Checklist Project, City of Mountain View, Santa Clara County
- CEQA Documentation for New Science Building, City of Fairfield, Solano County
- CEQA Services for Clover Spring Open Space Preserve Project, City of Cloverdale, Sonoma County
- Chico Walmart Expansion Project, City of Chico, CA
- Cultural Resources Services for Froom Ranch/El Villagio Specific Plan, City of San Luis Obispo, CA
- Cultural Resource & Historic Evaluation for Sacramento Dome Theatre, City of Sacramento, CA
- Cultural Resources Services for Haven Berryessa Block 7 & 8 San Jose Flea Market, San Jose, CA
- Caltrans NEPA/CEQA Documentation and Permitting for the Dogtown Road Bridges Replacement Projects (San Domingo Creek, French Gulch, and Indian Creek), Calaveras County, CA
- Due Diligence for Meadowlark Project in Pleasanton, CA
- Due Diligence Services for the Montalcino Property, Napa County, CA
- Due Diligence Site Review for Parcel APN 68-241-30 located at 260 Bartlett Way Santa Cruz, CA
- Due Diligence Level IA Entitlements for the Boscell Road Osgood Project, City of Fremont, CA
- Trellis Residential Project EIR, City of Walnut Creek, CA
- El Dorado Materials Recovery Facility Remodeling Project, El Dorado County, CA
- Farmstand IS/MND, City of Healdsburg, CA
- La Paloma Winery Demo Project IS/MND, City of Clovis, CA
- Kaiser Dublin Medical Center EIR, City of Dublin, California
- Merced Gateway Master Plan Project EIR, City of Merced, CA
- Phase 1 Cultural Resource Assessment for 44 acres TTM No. 19992, Rancho Cucamonga, CA
- Bonadelle Tract 6120 Cultural Resources Study, City of Clovis, CA
- Professional Services to Support the Development of a Preferred Development Plan and Associated Regulatory Strategies for the Solano 360 Project, Solano County, CA
- Tassajara Parks EIR, Contra Costa County, California

Other Relevant Experience

The Society for Humanitarian Archaeological Research and Exploration

Dr. DePietro is the Founder and Executive Director of The Society for Humanitarian Archaeological Research and Exploration. He manages the projects, staff, and the daily operation of this not-for-profit organization. Dr. DePietro likewise establishes relationships with partner universities and institutions, writes grant proposals, supervises fundraising projects, and maintains accounts, financial records, and the organization's online presence.

University of California at Berkeley

DOUGLAS DE PIETRO, PH.D. – Cultural Resources Lead (North)

Dr. DePietro was a lecturer at the University of California, Berkeley from August 2003 to January 2015. During his tenure, he prepared University-level source and lectures in the history of the modern and ancient Middle East, performed student advising and evaluation, and university administrative duties. Dr. DePietro provided resources and opportunities that empower people to critically engage with other cultures as well as with their own communities.

Penn State University - Tel Akko Total Archaeology Project

Dr. DePietro was the Director of Community Engagement from 2013 to 2014 at the Penn State University for the Tel Akko Total Archaeology Project. He developed and executed a community engagement program, supervised staff and community participants, taught excavation and conservation techniques to groups of young people in Akko, and performed outreach, dialogue, and program developments in partnership[with community leaders.

Harvard University – Leon Levy Expedition to Ashkelon, Israel

Dr. De Pietro was the excavation supervisor during the summers of 2007-2013 for the Harvard University – Leon Levy Expedition to Ashkelon, Israel. He supervised the excavation and stratagraphic interpretation and instructed students in excavation techniques, data collection, photography, analysis, and publication.

Early Iron Age Cemetery Excavation – Dhamar, Yemen

Dr. De Pietro was the Area Supervisor during the summer of 2004 for the Early Iron Age Cemetery Excavation in Dhamar, Yemen. He supervised the excavation and stratagraphic interpretation, taught excavation techniques, strategy and implementation, field conservation, surveying techniques, dtat collection and analysis, and site management.

Journal of Associated Graduates in Near Eastern Studies (JAGNES)

Dr. DePietro was the Associate Editor from August 2003 to May 2012 for the Journal of Associated Graduates in Near Eastern Studiers (JAGNES). He solicited and proofread submissions, fundraising, and advertisements.

"Travel Today: Egypt" Magazine

Dr. De Pietro was an Archaeological Correspondent from December 2002 to February 2005. He wrote magazine articles, conducted relevant interviews and research, and procured photos and images to compliment articles.

Work History

InContext: Cultural Resources Solutions – Fair Oaks, CA 2012-Present
President and Principal Investigator. Responsibilities include administration, business development, financial reporting, and performing all aspects of technical work related to inventories, evaluations, and mitigation measures.

Statistical Research, Inc. – Woodland, CA, 2012
Historical Resources Specialist. Assist regional marketing directors in WA, CA, AZ, NM, and TX with business development throughout the company and throughout the western United States.

ICF International — WA, OR, CA, 2008–2011
Cultural Resources Manager. Directed complex, controversial projects; restructured CA team by hiring, terminating, and moving staff to more suitable positions. Established job descriptions and expectations for cultural staff. Took over troubled projects throughout the company to bring them into budgetary, contractual, and regulatory compliance and mend client relations. Managed Sacramento team; created mentoring and peer review structure for quality control and staff development; developed workload management and projection system in Microsoft Excel; increased morale and productivity. Created standardized regulatory language templates, marketing materials, and presentations; developed and presented educational symposia for environmental and engineering conferences. Initiated client development in WA and OR; prepared or participated in numerous winning proposals. Trained and mentored staff throughout company informally and through formal training programs focused on compliance, writing, and project management.

Trish Fernandez Cultural Resources — Placerville, CA, 2005–2008
Sole Proprietor. Owned and operated private cultural resources consulting company on a part-time basis for three consecutive years. Responsibilities included business development, financial reporting, and performing all aspects of technical work related to inventories, evaluations, and mitigation measures. Created a niche for providing peer review of other consultants' work products and addressing controversial projects.

El Dorado Irrigation District — Placerville, CA, 2004–2008
Environmental Review Specialist. Responsible for all aspects of cultural resources review under CEQA, including research, survey, consultation, and determinations of significance and significant impacts. Responsible for developing and implementing proactive agency program for complying with all state and federal laws related to cultural resources. Responsible for management of cultural resources as part of the FERC Project 184 relicensing process.

Pacific Legacy, Inc. — Cameron Park, CA, 2002–2004
Historical and Local Government Program Director. Responsible for development and quality of historic-period resources and local government compliance program. Directly supervised archaeologists and historians in three different offices. Developed and implemented supervisory and mentoring structure to promote quality, productivity, and personal growth. Directed and conducted all phases of research, excavation, evaluation, and mitigation. Responsible for business development and assisting with management and operations of the Central Sierra office.

Jones & Stokes, Inc. — Sacramento, CA, 1995–2002
Senior Cultural Resources Specialist. Conducted and managed cultural resources studies, including architectural and archaeological inventories, oral histories, and archaeological

SONIA MELANI MILLER

942 West Cliff Drive, Santa Cruz California 95060 Telephone: Cell 831 332 2714*
E-mail sonia.melani.kasa@gmail.com

Environmental and cultural heritage consultant specializing in archaeological investigation and inventories, sustainable urbanism, historic preservation and adaptive re-use of historic structures. Experienced in the management of restoration projects, including field data collection, data management and modeling, planning and design, implementation and supervision of field activities, progress monitoring and reports, CEQA regulation and historic evaluation (DPR523 primary record). OSHA certified and LEED ND accredited. Currently seeking a position to grow in the field of historic preservation, sustainable neighborhoods planning, and in the planning and management of sustainable/historic infrastructures.

SUMMARY OF QUALIFICATIONS

- Archival processing and documentation of historic material (including architectural and photographic material)
- Implementation of programs for the conservation of energy and natural resources
- Production of promotional and educational material including leaflets, brochures, illustration boards
- Management of large pools of data, including the organization of inventories, data processing and storage
- Formulation of survey for the collection of quantitative and qualitative data for academic researches and planning studies
- Categorization of quantitative data in charts, graphs, maps (ArcGIS), and reports
- Interpretation of qualitative data, data coding, and processing
- Construction of BIM virtual models using AutoCAD, Revit Architecture and ArchiCad
- NEASI Certification (Home Energy Audit-HERS) National Energy and Sustainability Institute
- Interpretative, historical, and cultural research for the preparation of DPR523 Primary Record (Description and Statement of Significance) for the documentation and preservation of historical and cultural resources
- Ability to conduct complex literary research in multiple languages (Italian, Spanish, French, and English)
- Categorization of credits for LEED ND projects related to:
    - Historic preservation and reuse and to habitat restoration (Smart Location and Linkage (SLL)

- Restoration of habitat, wetland, and water bodies, Green Infrastructures and Buildings

- GIB-Existing Building Reuse and Historic Resources Preservation and Adaptive Use.

- LEED AP Neighborhood Development (ND) credentialed

PROFESSIONAL HISTORY

June 2015 to Present: SPACES-Saving and Preserving Arts and Cultural Environments
Project Assistant
SPACES is a nonprofit public benefit organization created with an international focus on the study, documentation, and preservation of art environments and self-taught artistic activity. Currently assisting with archival processing of photographic material on folk art sites. Includes planning archival material preservation, establishing directives (and making forms) for the collection, organization and processing of archival data. Providing assistance in the preparation of site documentation for enlisting in the local (State) and National Register of Historic Places. Includes cultural and historic research, site survey for the identification of defining features, and other services needed for the preparation of the DPR523 primary record form.

1999 to present: JM Construction
Sustainable Planning Consultant
Responsible to research and implement cost-saving strategies to reduce the environmental impact of construction projects. Position centering on the development of sustainability policies and the preparation of permit documents for residential construction, erosion control (drainage), interior architecture and landscaping projects. It also involves the fulfillment of some administrative functions and project scheduling (Microsoft Project).

2011 to 2013: City of San Jose
Municipal Green Buildings Program Graduate Intern
Participated in the implementation of the City's *Energy Star Portfolio Manager* for 116 Municipal Facilities, in cooperation with the Energy Officer; and to the development of the LEED EB&OM *Volume Certification Protocol*. Helped managing data related to Municipal Green Buildings and took part in the production of LEED's promotional and educational material for certified buildings.

2002 to 2007: Habitat Restoration International
Project Coordinator
Supported the Biologist in the management of habitat restoration and erosion control projects for federal and state agencies. These included projects for the US Army Corps of Engineers, Santa Clara Water and SMUD. The duties invested in this position included assisting in the preparation of environmental proposals (EIR), the supervision of vegetation installation and vegetation monitoring, the preparation of environmental proposals, reports and other project related documents such as: project timelines and schedules; planning and design of landscaping and erosion control construction plans and as built plans.

OTHER PROFESSIONAL EXPERIENCE

Aux Trois Pommes Language School
Language Teacher (Italian)

Taught language classes to adult at different level of proficiency. The position included the creation of programs and syllabus for specific courses, assistance to advanced-graduate exam preparation, and translation support for Graduate archival research.

SJSU Special Collection Archives
Student Assistant Archivist
Assisted library patrons in the reading room of SJSU Special Collections & Archives with their research needs, web OPAC and reading room policies and procedures. Processed backlog collections and wrote finding aids for collections.

The Harrison Studio
Researcher and Studio Assistant
Conducted environmental and social research for the 2004 "Villaggio d'arte" Environmental Art' project in Southern Italy and assisted in other projects of environmental art.

SELECTED PROJECTS

Architectural Collection (Archival)
Processed for SJSU Special Collections & Archives
This project was processed for SJSU Special Collection & Archives. The collection of architectural drawings comprises architectural plans and renderings documenting the construction of several buildings on the San Jose State College campus, including: San Jose College Central Library Building, Wahlquist Library, and the California State Library Faculty Office Building.

"Il Villaggio dell'Arte," annuale d'arte contemporanea partecipata, PIT Parco regionale del Matese, POR
An initiative promoted by PaeSEsaggio workgroup to stimulate new processes and development and to re-activate sustainable micro-economies through the involvement of the local communities in an area of southern Italy suffering from abandonment. The project followed the principles of the European Convention of Landscape (Paesaggio) of 2000 and of the Conference of State Regions of 2001, promoting the diffusion of information and inducement of participatory processes.

The Climate Clock Initiative
Assisted the Huey-Dewey-Louie finalist team in documenting their residency in occasion of "The Climate Clock Initiative" in San Jose, California- promoting the use of public art and measurement technologies to gather and display climate data.

Guadalupe River Flood Control and Habitat Mitigation Project, Phase I and II
Four "design and built" projects implemented as part a mitigation strategy of a federal flood control project in downtown San Jose, California. The projects comprised the preparation and implementation of a riparian habitat restoration plan that involved the selection, installation and maintenance of over 13,000 native riparian and wetland plants. And it included the development and implementation of a biological monitoring program to evaluate habitat establishment and wildlife use of the project area.

EPA Energy Star Portfolio Manager
Set up a portfolio of 116 municipal facilities for energy benchmarking. Entered and verified facility information (Address, Space Type, Square footage and meter SAID). Facilities were subsequently benchmarked to receive automated data from the energy provider (PG&E).

THIS PAGE INTENTIONALLY LEFT BLANK

Appendix D:
Regulatory Framework

THIS PAGE INTENTIONALLY LEFT BLANK

REGULATORY FRAMEWORK

Government agencies, including federal, state, and local agencies, have developed laws and regulations designed to protect significant cultural resources that may be affected by projects regulated, funded, or undertaken by the agency. Federal and state laws that govern the preservation of historic and archaeological resources of national, state, regional, and local significance include the National Environmental Policy Act (NEPA), the National Historic Preservation Act (NHPA), and the California Environmental Quality Act (CEQA). In addition, laws specific to work conducted on federal lands includes the Archaeological Resources Protection Act (ARPA), the American Antiquities Act, and the Native American Graves Protection and Repatriation Act (NAGPRA).

The following federal or CEQA criteria were used to evaluate the significance of potential impacts on cultural resources for the proposed project. An impact would be considered significant if it would affect a resource eligible for listing in the NR or the CR, or if it is identified as a unique archaeological resource.

Federal-Level Evaluations

Federal agencies are required to consider the effects of their actions on historic properties and afford the Advisory Council on Historic Preservation (ACHP) a reasonable opportunity to comment on such undertakings under NEPA § 106. Federal agencies are responsible for initiating NEPA § 106 review and completing the steps in the process that are outlined in the regulations. They must determine if NHPA § 106 applies to a given project and, if so, initiate review in consultation with the State Historic Preservation Officer (SHPO) and/or Tribal Historic Preservation Officer (THPO). Federal agencies are also responsible for involving the public and other interested parties. Furthermore, NHPA S106 requires that any federal or federally assisted undertaking, or any undertaking requiring federal licensing or permitting, consider the effect of the action on historic properties listed in or eligible for the NRHP. Under the Code of Federal Regulations (CFR), 36 CFR Part 800.8, federal agencies are specifically encouraged to coordinate compliance with NEPA § 106 and the NEPA process. The implementing regulations “Protection of Historic Properties” are found in 36 CFR Part 800. Resource eligibility for listing on the NRHP is detailed in 36 CFR Part 63 and the criteria for resource evaluation are found in 36 CFR Part 60.4 [a-d].

The NHPA established the NRHP as the official federal list for cultural resources that are considered important for their historical significance at the local, state, or national level. To be determined eligible for listing in the NRHP, properties must meet specific criteria for historic significance and possess certain levels of integrity of form, location, and setting. The criteria for listing on the NRHP are significance in American history, architecture, archaeology, engineering, and culture as present in districts, sites, buildings, structures and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association. In addition, a resource must meet one or all of these eligibility criteria:

a.) Is associated with events that have made a significant contribution to the broad patterns of our history.

b.) Is associated with the lives of persons significant in our past.

c.) Embodies the distinctive characteristics of a type, period, or method of construction; represent the work of a master; possess high artistic values, represent a significant and distinguishable entity whose components may lack individual distinction.

d.) That have yielded, or may be likely to yield, information important in prehistory or history.

Criterion D is usually reserved for archaeological resources. Eligible properties must meet at least one of the criteria and exhibit integrity, measured by the degree to which the resource retains its historical properties and conveys its historical character.

Criteria Considerations

Ordinarily cemeteries, birthplaces, graves of historical figures, properties owned by religious institutions or used for religious purposes, buildings that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past 50 years shall not be considered eligible for the NRHP. However, such properties will qualify if they are integral parts of districts that do meet the criteria or if they fall within the following categories:

a.) A religious property deriving primary significance from architectural or artistic distinction or historical importance.

b.) A building or structure removed from its original location but which is primarily significant for architectural value, or which is the surviving structure most importantly associated with a historic person or event.

c.) A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building associated with his or her productive life.

d.) A cemetery that derives its primary importance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events.

e.) A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived.

f.) A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance.

g.) A property achieving significance within the past 50 years if it is of exceptional importance.

Thresholds of Significance

In consultation with the SHPO/THPO and other entities that attach religious and cultural significance to identified historic properties, the Agency shall apply the criteria of adverse effect to historic properties within the Area of Potential Effect (APE). The Agency official shall consider the views of consulting parties and the public when considering adverse effects.

Federal Criteria of Adverse Effects

Under federal regulations, 36 CFR Part 800.5, an adverse effect is found when an undertaking alters, directly or indirectly, any of the characteristics of a historic property that qualifies the property for inclusion in the NRHP in a manner that diminishes the integrity of the property's location, design, setting, materials, workmanship, feeling, or association. Consideration will be given to all qualifying characteristics of a historic property, including those that may have been identified subsequent to the original evaluation of the property's eligibility for listing in the NRHP. Adverse effects may include reasonably foreseeable effects caused by the undertaking that may occur later in time, be farther removed in distance, or be cumulative.

According to 36 CFR Part 800.5, adverse effects on historic properties include but are not limited to those listed below:

- Physical destruction of or damage to all or part of the property.
- Alteration of a property, including restoration, rehabilitation, repair, maintenance, stabilization, hazardous material remediation, and provision of handicapped access, that is not consistent with the U.S. Secretary of the Interior's Standards for the Treatment of Historic Properties per 36 CFR Part 68 and applicable guidelines.
- Removal of the property from its historic location.
- Change of the character of the property's use or of physical features within the property's setting that contribute to its historic significance.
- Introduction of visual, atmospheric, or audible elements that diminish the integrity of the property's significant historic features.
- Neglect of a property that causes its deterioration, except where such neglect and deterioration are recognized qualities of a property of religious and cultural significance to an Indian tribe or Native Hawaiian organization.
- Transfer, lease, or sale of property out of federal ownership or control without adequate and legally enforceable restrictions or conditions to ensure long term preservation of the property's historic significance.

If Adverse Effects Are Found

If adverse effects are found, the agency official shall continue consultation as stipulated at 36 CFR Part 800.6. The agency official shall consult with the SHPO/THPO and other consulting parties to develop alternatives to the undertaking that could avoid, minimize, or mitigate adverse effects to

historic resources. According to 36 CFR Part 800.14(d), if adverse effects cannot be avoided then standard treatments established by the ACHP may be used as a basis for Memorandum of Agreement (MOA).

According to 36 CFR Part 800.11(e), the filing of an approved MOA, and appropriate documentation, concludes the § 106 process. The MOA must be signed by all consulting parties and approved by the ACHP prior to construction activities. If no adverse effects are found and the SHPO/THPO or the ACHP do not object within 30 days of receipt, the agencies' responsibilities under § 106 will be satisfied upon completion of report and documentation as stipulated in 36 CFR Part 800.11. The information must be made available for public review upon request, excluding information covered by confidentiality provisions.

State-Level Evaluation Processes

An archaeological site may be considered an historical resource if it is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military or cultural annals of California per PRC § 5020.1(j) or if it meets the criteria for listing on the CR per California Code of Regulations (CCR) at Title 14 CCR § 4850.

The most recent amendments to the CEQA guidelines direct lead agencies to first evaluate an archaeological site to determine if it meets the criteria for listing in the CR. If an archaeological site is an historical resource, in that it is listed or eligible for listing in the CR, potential adverse impacts to it must be considered as stated in PRC §§ 21084.1 and 21083.2(l). If an archaeological site is considered not to be an historical resource, but meets the definition of a "unique archeological resource" as defined in PRC § 21083.2, then it would be treated in accordance with the provisions of that section.

With reference to PRC § 21083.2, each site found within a project area will be evaluated to determine if it is a unique archaeological resource. A unique archaeological resource is described as an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets one or more of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

As used in this report, "non-unique archaeological resource" means an archaeological artifact, object, or site that does not meet the criteria for eligibility for listing on the CR, as noted in subdivision (g) of PRC § 21083.2. A non-unique archaeological resource requires no further consideration, other than simple recording of its components and features. Isolated artifacts are

typically considered non-unique archaeological resources. Historic structures that have had their superstructures demolished or removed can be considered historic archaeological sites and are evaluated following the processes used for prehistoric sites. Finally, OHP recognizes an age threshold of 45 years. Cultural resources built less than 45 years ago may qualify for consideration, but only under the most extraordinary circumstances.

Title 14, CCR, Chapter 3 § 15064.5 is associated with determining the significance of impacts to archaeological and historical resources. Here, the term historical resource includes the following:

1. A resource listed in, or determined eligible by the State Historical Resources Commission, for listing in the CR (PRC § 5024.1; Title 14 CCR, § 4850 et seq.).
2. A resource included in a local register of historical resources, as defined in PRC § 5020.1(k) or identified as significant in an historical resource survey meeting the PRC § 5024.1(g) requirements, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
3. Any object, building, structure, site, area, place, record, or manuscript, which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be historically significant if the resource meets the criteria for listing on the California Register of Historical Resources (PRC § 5024.1; Title 14 CCR § 4852) including the following:
   A. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
   B. Is associated with the lives of persons important in our past.
   C. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
   D. Has yielded, or may be likely to yield, information important in prehistory or history.

Typically, archaeological sites exhibiting significant features qualify for the CR under Criterion D because such features have information important to the prehistory of California. A lead agency may determine that a resource may be a historical resource as defined in PRC §§ 5020.1(j) or 5024.1 even if it is:

- Not listed in or determined to be eligible for listing in the CR.
- Not included in a local register of historical resources pursuant to PRC § 5020.1(k).
- Identified in an historical resources survey per PRC § 5024.1(g).

Threshold of Significance

If a project will have a significant impact on a cultural resource, several steps must be taken to determine if the cultural resource is a "unique archaeological resource" under CEQA. If analysis and/or testing determine that the resource is a unique archaeological resource and therefore subject to mitigation prior to development, a threshold of significance should be developed. The threshold of significance is a point where the qualities of significance are defined and the resource is determined to be unique under CEQA. A significant impact is regarded as the physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of the resource will be reduced to a point that it no longer meets the significance criteria. Should analysis indicate that project development will destroy the unique elements of a resource; the resource must be mitigated for under CEQA regulations. The preferred form of mitigation is to preserve the resource in-place, in an undisturbed state. However, as that is not always possible or feasible, appropriate mitigation measures may include but are not limited to:

1. Planning construction to avoid the resource.
2. Deeding conservation easements.
3. Capping the site prior to construction.

If a resource is determined to be a "non-unique archaeological resource," no further consideration of the resource by the lead agency is necessary.

Tribal Consultation

The following serves as an overview of the procedures and timeframes for the Tribal Consultation process. For the complete Tribal Consultation Guidelines, please refer to the State of California Office of Planning and Research website.

Prior to the amendment or adoption of general or specific plans, local governments must notify the appropriate tribes of the opportunity to conduct consultation for the purpose of preserving or mitigating impacts to cultural places located on land within the local government's jurisdiction that is affected by the plan adoption or amendment. The tribal contacts for this list are maintained by the NAHC and is distinct from the Most Likely Descendent (MLD) list. It is suggested that local governments send written notice by certified mail with return receipt requested. The tribes have 90 days from the date they receive notification to request consultation. In addition, prior to adoption or amendment of a general or specific plan, local government must refer the proposed action to tribes on the NAHC list that have traditional lands located within the city's or county's jurisdiction. Notice must be sent regardless of prior consultation. The referral must allow a 45-day comment period.

In brief, notices from government to the tribes should include:

- A clear statement of purpose
- A description of the proposed general or specific plan, the reason for the proposal, and the specific geographic areas affected

- Detailed maps to accompany the description
- Deadline date for the tribes to respond
- Government representative(s) contact information
- Contact information for project proponent/applicant, if applicable

The basic schedule for this process is:

- 30 days: time NAHC has to provide tribal contact information to the local government; this is recommended not mandatory.
- 90 days: time tribe has to respond indication whether or not they want to consult. Note: tribes can agree to a shorter timeframe. In addition, consultation does not begin until/unless requested by the tribe within 90 days of receiving notice of the opportunity to consult. The consultation period, if requested, is open-ended. The tribes and local governments can discuss issues for as long as necessary, or productive, and need not result in agreement.
- 45 days: time local government has to refer proposed action, such as adoption or amendment to a general plan or specific plan, to agencies, including the tribes. Referral required even if there has been prior consultation. This opens the 45-day comment period.
- 10 days: time local government has to provide tribes of notice of public hearing.

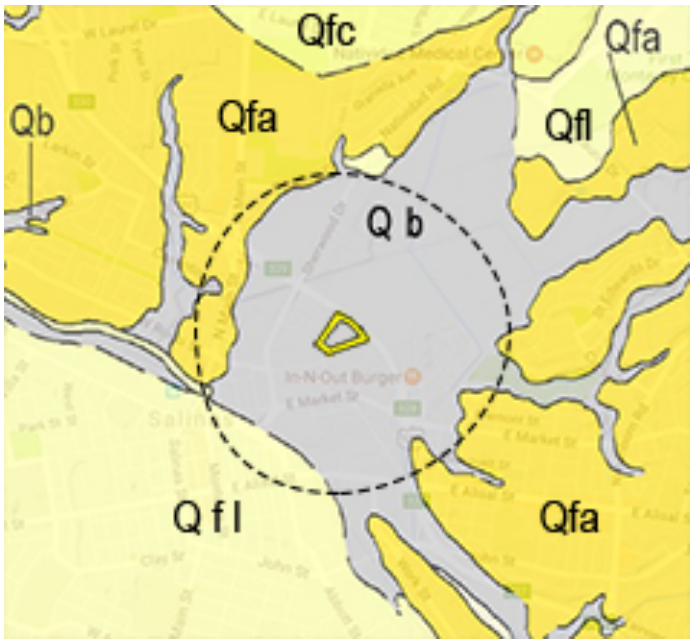
Re: Paleontological Records Search: Rodeo Project (3911.0007), Salinas, Monterey County

Dear Dr. DePietro:

As per your request, I have performed a records search on the University of California Museum of Paleontology (UCMP) database for the San Mateo Central Park project in Santa Clara County. The project site is Pepsi Park, a sports park situated on the northwest side of Sun Street and on the southwest side of Veterans Memorial Highway (Hwy 101). This flat terrain has included athletic field and is therefore heavily disturbed. It is located in SE¼, SW¼, Sec. 28, T14S, R3E, Salinas quadrangle (1947 USGS 7.5-series topographic map, photorevised 1984). The entire surface of its flat terrain has been disturbed by the development and usage of the park.

Geologic Units

According to the part of geologic map of Wagner et al. (2002) shown here, the surface of project site (at center) is well within an area of Quaternary basin deposits (Qb). The four units shown here are all Quaternary and not differentiated as either Holocene or Pleistocene. Extending into the half-mile search perimeter (dashed outline) are fan deposits (Qfa) from the northwest and southeast, and flood plain deposits (Qfl) from the southwest. Both of these units extend farther in the subsurface of the search perimeter and one or both lie below the basin deposits.



Map Legend

Qb	Basin deposits
Qfa	Fan deposits of Antioch
Qfc	Fan deposits of Chualar
Qfl	Flood plain deposits

UCMP Records Search

I performed a records search on the University of California Museum of Paleontology that was focused on the Salinas quadrangle. There are no fossil localities of any kind within a half-mile of the project site. The only UCMP vertebrate locality in the Salinas quadrangle is V5576 (Lake Heinz), about a quarter-mile beyond the search perimeter, where a *Bison latifrons* (longhorn bison) skull was recovered from late Pleistocene alluvium. This locality is in the area mapped as flood plain deposits (Qfl).

Remarks and Recommendations

A paleontological walkover survey of the site prior to construction is not warranted because the surface has been disturbed. Because the geologic units in the area are of undifferntiated Quaternary age, it prudent to treat all of them as Pleistocene and paleontologically sensitive. Monitoring of project-related excavations is recommended because Pleistocene deposits throughout California have yielded a wealth of significant fossils. Considering that the occurrence of Pleistocene fossils is generally unpredictable due to the dynamics of the sedimentary regime in which they were transported and deposited, the paleontological potential in these areas is typically classified as uncertain or low until a discovery is made.

If any bones, teeth, or unusual concentrations of other fossils are encountered during this project, all construction activities should be diverted from the find until the cultural resources monitor has inspected the find and, if deemed significant, salvaged it for deposition in an appropriate repository for the benefit of scientific education and research. At the monitor's discretion, a professional paleontologist may be brought onto the site to assist in evaluating and recovering the find. Collected fossils should be deposited in an accredited repository such as the UCMP, where they will be properly curated and made available for present and future research.

Sincerely,

SECTION 1: EXECUTIVE SUMMARY

1.1 - Purpose and Methods of Analysis

The following analysis was prepared to evaluate whether the Project would cause significant greenhouse gas impacts. This assessment follows the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.). The methodology follows Monterey Bay Air Resources District (MBARD) recommendations for quantification of emissions and evaluation of air quality impacts.

Greenhouse gas emissions are evaluated in comparison to targets for local governments suggested in the California Air Resources Board's (ARB) Assembly Bill (AB) 32 Scoping Plan (the Scoping Plan). The analysis will demonstrate consistency with AB 32 reduction targets.

1.2 - Project Summary

1.2.1 - Site Location

The Rodeo Property Project is located at 295 Sun Way, south and west of US 101 in the central part of the City of Salinas, Monterey County, California (see Exhibit 1). North and south of the Project site are existing warehouse/light industrial uses. To the north of the Project site is Security Public Storage; to the south at 10 Simas Street is Celebration Church and at 34 Simas Street is a light industrial building containing an ambulance dispatch business and an electrical supply company. To the southwest of the Project at 8 Sun Street is Sun Street Centers Men's Residential Program. Adjacent to and west of the Project is open space; however, there is a mix of land uses further west of the Project, including St. James CME Church located at 285 Calle Cebu, Haciendas Place multi-family residential located at 245 Calle Cebu, and the Rancho Salinas Mobile Park located at 150 Sherwood Drive. The Project site is bounded by Sun Street and Sun Way to the west, US 101 to the east, Security Public Storage to the north, and light industrial uses to the south (see Exhibit 2).

1.2.2 - Project Description

The project is a General Plan amendment and Rezone that would allow development of industrial and commercial uses on a 6.8-acre site located on Sun Street adjacent to US 101. The proposed land use designation would allow the site to be developed at a floor area ratio of 0.4, which would allow for the development of up to 118,600 square feet (sq.ft.) of industrial floor space. For purpose of this analysis, 4 percent of the floor space (4,700 sq.ft.) was assumed to be occupied by support office space which is categorized as general office space. The remaining floor area (113,900 sq.ft.) was modeled as light industrial space. The site is designated in the General Plan as Open Space. Access to the site is provided via Sun Street and its connections to Calle Cebu and E. Market Street.

1.3 - Summary of Analysis Results

Impact GHG-1: The Project would not generate direct and indirect greenhouse gas emissions that would result in a significant impact on the environment.

Less than significant impact.

Impact GHG-2: The Project would not conflict with any applicable plan, policy or regulation of an agency adopted to reduce the emissions of greenhouse gases.

Less than significant impact.

SECTION 2: CLIMATE CHANGE SETTING

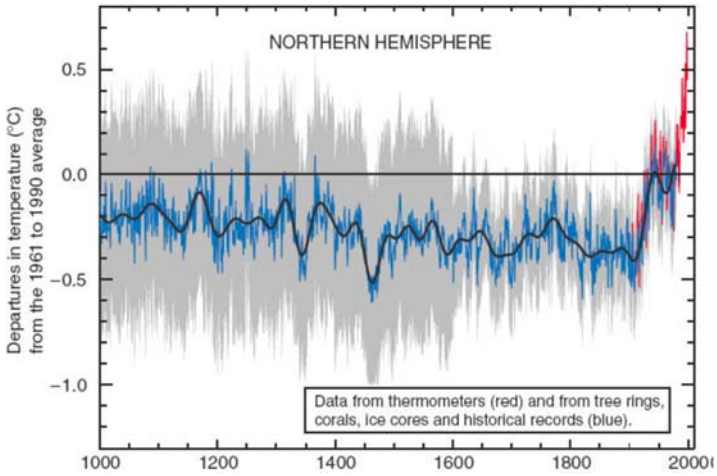
2.1 - Climate Change

Climate change is a change in the average weather of the earth that is measured by alterations in wind patterns, storms, precipitation, and temperature. These changes are assessed using historical records of temperature changes occurring in the past, such as during previous ice ages. Many of the concerns regarding climate change use this data to extrapolate a level of statistical significance specifically focusing on temperature records from the last 150 years (the Industrial Age) that differ from previous climate changes in rate and magnitude.

The United Nations Intergovernmental Panel on Climate Change (IPCC) constructed several emission trajectories of greenhouse gases (GHGs) needed to stabilize global temperatures and climate change impacts. In its Fourth Assessment Report, the IPCC predicted that the global mean temperature change from 1990 to 2100, given six scenarios, could range from 1.1 degrees Celsius (°C) to 6.4°C. Regardless of analytical methodology, global average temperatures and sea levels are expected to rise under all scenarios (IPCC 2007a). The report also concluded that "[w]arming of the climate system is unequivocal," and that "[m]ost of the observed increase in global average temperatures since the mid-20th century is very likely due to the observed increase in anthropogenic greenhouse gas concentrations."

Some question the validity of the temperature graph used by the IPCC in some form in the Third and Fourth Assessment Reports (see Figure 1). The figure shows that temperatures are relatively stable until 1900, when the temperature increases rapidly. Some scientists have had trouble duplicating the data used for the graph (McIntyre and McKitrick 2003) and indicated that if the data are correctly handled, then it "shows the 20th century climate to be unexceptional compared to earlier centuries" (McKitrick 2005). Hans von Storch, a German climate scientist, claimed that the methods used by Mann et al. probably underestimated the temperature fluctuations in the past by a factor of two or more (Von Storch et al. 2004).

Figure 1: Historical Temperature Changes



Consequences of Climate Change in California

In California, climate change may result in consequences such as the following (CCCC 2006; Moser et al. 2009):

- **A reduction in the quality and supply of water from the Sierra snowpack.** If heat-trapping emissions continue unabated, more precipitation will fall as rain instead of snow, and the snow that does fall will melt earlier, reducing the Sierra Nevada spring snowpack by as much as 70 to 90 percent. This can lead to challenges in securing adequate water supplies. It can also lead to a potential reduction in hydropower.
- **Increased risk of large wildfires.** If rain increases as temperatures rise, wildfires in the grasslands and chaparral ecosystems of southern California are estimated to increase by approximately 30 percent toward the end of the 21st century because more winter rain will stimulate the growth of more plant "fuel" available to burn in the fall. In contrast, a hotter, drier climate could promote up to 90 percent more northern California fires by the end of the century by drying out and increasing the flammability of forest vegetation.
- **Reductions in the quality and quantity of certain agricultural products.** The crops and products likely to be adversely affected include wine grapes, fruit, nuts, and milk.
- **Exacerbation of air quality problems.** If temperatures rise to the medium warming range, there could be 75 to 85 percent more days with weather conducive to ozone formation in Los Angeles and the San Joaquin Valley, relative to today's conditions. This is more than twice the increase expected if rising temperatures remain in the lower warming range. This increase in air quality problems could result in an increase in asthma and other health-related problems.
- **A rise in sea levels resulting in the displacement of coastal businesses and residences.** During the past century, sea levels along California's coast have risen about seven inches. If emissions continue unabated and temperatures rise into the higher anticipated warming range, sea level is expected to rise an additional 22 to 35 inches by the end of the century. Elevations of this magnitude would inundate coastal areas with salt water, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats.
- **An increase temperature and extreme weather events.** Climate change is expected to lead to increases in the frequency, intensity, and duration of extreme heat events and heat waves in California. More heat waves can exacerbate chronic disease or heat-related illness.
- **A decrease in the health and productivity of California's forests.** Climate change can cause an increase in wildfires, an enhanced insect population, and establishment of non-native species.

2.2 - Greenhouse Gases

Gases that trap heat in the atmosphere are GHGs. The effect is analogous to the way a greenhouse retains heat. Common GHGs include water vapor, carbon dioxide (CO_2), methane (CH_4), nitrous

oxides (N_2O), chlorofluorocarbons, hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, ozone, and aerosols. Natural processes and human activities emit GHGs. The presence of GHGs in the atmosphere affects the earth's temperature. Emissions from human activities, such as electricity production and vehicle use, have likely elevated the concentration of some of these gases in the atmosphere beyond the level of naturally occurring concentrations.

Climate change is driven by forcings and feedbacks. Radiative forcing is the difference between the incoming energy and outgoing energy in the climate system. Positive forcing tends to warm the surface while negative forcing tends to cool it. Radiative forcing values are typically expressed in watts per square meter. A feedback is a climate process that can strengthen or weaken a forcing. For example, when ice or snow melts, it reveals darker land underneath which absorbs more radiation and causes more warming.

The global warming potential is the potential of a gas or aerosol to trap heat in the atmosphere. Individual GHG compounds have varying global warming potential and atmospheric lifetimes. The global warming potential of a GHG is a measure of how much a given mass of a GHG contributes to global warming. Essentially, the global warming potential of a GHG is a measurement of the radiative forcing of that GHG compared with the reference gas, CO_2. Carbon dioxide has a global warming potential of one.

To describe how much global warming a given type and amount of GHG may cause, the carbon dioxide equivalent (CO_2e) is used. The calculation of the CO_2e is a consistent methodology for comparing GHG emissions since it normalizes various GHG emissions to a consistent reference gas (carbon dioxide). For example, methane's warming potential of 21 indicates that CH_4 has 21 times greater warming affect than CO_2 on a molecule per molecule basis. A CO_2e is a mass emission of an individual GHG multiplied by its global warming potential.

Greenhouse gases defined by AB 32 (see the Climate Change Regulatory Environment section for a description) include CO_2, CH_4, N_2O, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. They are described in Table 1.

Table 1: Description of Greenhouse Gases

Greenhouse Gas	Description and Physical Properties	Sources
Nitrous oxide (N_2O)	Nitrous oxide is a colorless GHG. It has a lifetime of 114 years. Its global warming potential is 310.	Microbial processes in soil and water, fuel combustion, and industrial processes.
Methane (CH_4)	Methane is a flammable gas and is the main component of natural gas. It has a lifetime of 12 years. Its global warming potential is 21.	Methane is extracted from geological deposits (natural gas fields). Other sources are landfills, fermentation of manure, and decay of organic matter.

Table 1 (cont.): Description of Greenhouse Gases

Greenhouse Gas	Description and Physical Properties	Sources
Carbon dioxide (CO_2)	Carbon dioxide is an odorless, colorless, natural GHG. Carbon dioxide's global warming potential is 1. The concentration in 2005 was 379 parts per million (ppm), which is an increase of about 1.4 ppm per year since 1960.	Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood.
Chlorofluorocarbons	These are gases formed synthetically by replacing all hydrogen atoms in CH_4 or ethane with chlorine and/or fluorine atoms. They are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). Global warming potentials range from 3,800 to 8,100.	Chlorofluorocarbons were synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. They destroy stratospheric ozone. The 1987 Montreal Protocol on Substances that Deplete the Ozone Layer prohibited their production.
Hydrofluorocarbons	Hydrofluorocarbons are a group of GHGs containing carbon, chlorine, and at least one hydrogen atom. Global warming potentials range from 140 to 11,700.	Hydrofluorocarbons are synthetic manmade chemicals used as a substitute for chlorofluorocarbons in applications such as automobile air conditioners and refrigerants.
Perfluorocarbons	Perfluorocarbons have stable molecular structures and only break down by ultraviolet rays about 60 kilometers above Earth's surface. Because of this, they have long lifetimes, between 10,000 and 50,000 years. Global warming potentials range from 6,500 to 9,200.	Two main sources of perfluorocarbons are primary aluminum production and semiconductor manufacturing.
Sulfur hexafluoride	Sulfur hexafluoride is an inorganic, odorless, colorless, and nontoxic, nonflammable gas. It has a lifetime of 3,200 years. It has a high global warming potential, 23,900.	This gas is manmade and used for insulation in electric power transmission equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas.
Sources: Compiled from a variety of sources, primarily IPCC 2007a and 2007b.		

Other GHGs include water vapor, ozone, and aerosols. Water vapor is an important component of our climate system and is not regulated. Ozone and aerosols are short-lived GHGs; global warming potentials for short-lived GHGs are not defined by the IPCC. Aerosols can remain suspended in the atmosphere for about a week, and can warm the atmosphere by absorbing heat and cool the atmosphere by reflecting light.

Black carbon is formed by incomplete combustion of fossil fuels, biofuels, and biomass. Sources of black carbon within a jurisdiction may include exhaust from diesel trucks, vehicles, and equipment, as well as smoke from biogenic combustion. Biogenic combustion sources of black carbon include the burning of biofuels used for transportation, the burning of biomass for electricity generation and heating, prescribed burning of agricultural residue, and natural and unnatural wildfires. Black carbon is not a gas but an aerosol—particles or liquid droplets suspended in air. Black carbon only remains in the atmosphere for days to weeks, as opposed to other GHGs that can remain in the atmosphere for years. When black carbon deposits on snow it absorbs sunlight, reduces sunlight reflectivity, and hastens snowmelt. Direct effects include absorbing incoming and outgoing radiation; indirectly, black carbon can also affect cloud reflectivity, precipitation, and surface dimming (cooling).

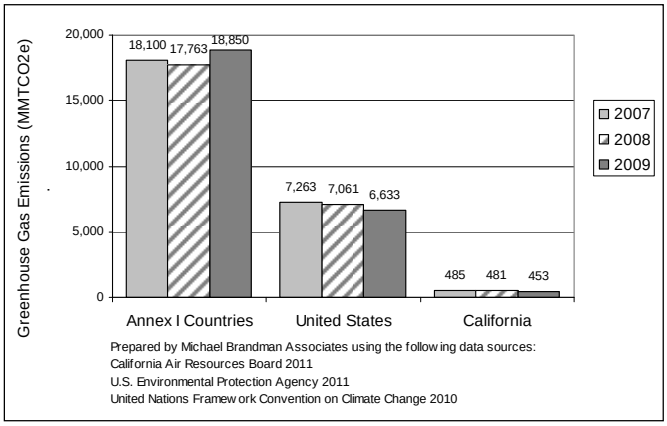
The Project would emit black carbon through emissions of diesel particulate matter (DPM) during construction. However, procedures to quantify changes due to black carbon emissions have not been widely accepted or thoroughly researched (IPCC 2007; Wilson and Walters 2012). Therefore, impacts to climate change from black carbon are speculative at this time and no further discussion is necessary.

Although there could be health effects resulting from changes in the climate and the consequences that it can bring about, inhalation of GHGs at levels currently in the atmosphere would not result in adverse health effects, with the exception of ozone and aerosols (particulate matter). The potential health effects of ozone and particulate matter are discussed in criteria pollutant analyses. At very high indoor concentrations (not at levels existing outside), CO_2, CH_4, sulfur hexafluoride, and some chlorofluorocarbons can cause suffocation as the gases can displace oxygen (Center for Disease Control 2010; Occupational Safety and Health Administration 2003).

2.3 - Emissions Inventories

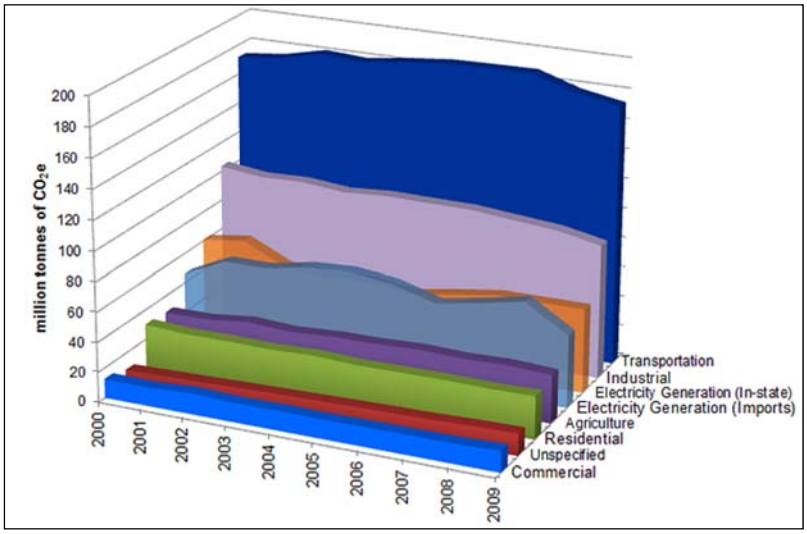
Emissions worldwide were approximately 49,000 million metric tons of carbon dioxide equivalents (MMT CO_2e) in 2004 (IPCC 2007b). Greenhouse gas emissions in 2007, 2008, and 2009 are shown in Figure 2. Annex I parties refer to countries that joined the United Nations Framework Convention on Climate Change.

Figure 2: Greenhouse Gas Emissions Trends



As shown in Figure 3, the main contribution of GHG emissions in California between the years 2000 and 2009 was transportation. The second highest sector was industrial, which includes sources from refineries, general fuel use, oil and gas extraction, cement plants, and cogeneration heat output.

Figure 3: Greenhouse Gas Emission Trends by Sector in California



Source: ARB 2011a.

2.4 - Regulatory Setting

2.4.1 - International

Climate change is a global issue involving GHG emissions from all around the world; therefore, countries such as the ones discussed below have made an effort to reduce GHGs.

Intergovernmental Panel on Climate Change. In 1988, the United Nations and the World Meteorological Organization established the IPCC to assess the scientific, technical and socio-economic information relevant to understanding the scientific basis of risk of human-induced climate change, its potential impacts, and options for adaptation and mitigation.

United Nations Framework Convention on Climate Change (Convention). On March 21, 1994, the United States joined a number of countries around the world in signing the Convention. Under the Convention, governments gather and share information on GHG emissions, national policies, and best practices; launch national strategies for addressing GHG emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

Kyoto Protocol. The Kyoto Protocol is an international agreement linked to the United Nations Framework Convention on Climate Change. The major feature of the Kyoto Protocol is that it sets binding targets for 37 industrialized countries and the European community for reducing GHG emissions at average of 5 percent against 1990 levels over the five-year period 2008-2012. The Convention (as discussed above) encouraged industrialized countries to stabilize emissions; however, the Protocol commits them to do so. Developed countries have contributed more emissions over

the last 150 years; therefore, the Protocol places a heavier burden on developed nations under the principle of "common but differentiated responsibilities."

The United States has not entered into force of the Kyoto Protocol. However, other countries have entered, such as Australia, Canada, China, the European Union (Belgium, Denmark, Germany, the Hellenic Republic, Spain, France, Ireland, Italy, Luxembourg, Netherlands, Austria, Portugal, Finland, Sweden, Great Britain, and Northern Ireland), Japan, Mexico, and New Zealand.

In 2001, President George W. Bush indicated that he would not submit the treaty to the U.S. Senate for ratification, which effectively ended American involvement in the Kyoto Protocol. In December 2009, international leaders met in Copenhagen to address the future of international climate change commitments post-Kyoto. No binding agreement was reached in Copenhagen; however, the Committee identified the long-term goal of limiting the maximum global average temperature increase to no more than 2°C above pre-industrial levels, subject to a review in 2015. The United Nations Climate Change Committee held additional meetings in Durban, South Africa in November 2011; Doha, Qatar in November 2012; and Warsaw, Poland in November 2013. The meetings are gradually gaining consensus among participants on individual climate change issues.

2.4.2 - National

Prior to the last decade, there have been no concrete federal regulations of GHGs or major planning for climate change adaptation. The following are actions regarding the federal government, GHGs, and fuel efficiency.

Greenhouse Gas Endangerment. *Massachusetts v. EPA* (Supreme Court Case 05-1120) was argued before the United States (U.S.) Supreme Court on November 29, 2006, in which it was petitioned that the Environmental Protection Agency (EPA) regulate four GHGs, including carbon dioxide, under Section 202(a)(1) of the Clean Air Act (CAA). A decision was made on April 2, 2007, in which the Supreme Court found that GHGs are air pollutants covered by the CAA. The Court held that the Administrator must determine whether emissions of GHGs from new motor vehicles cause or contribute to air pollution, which may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. On December 7, 2009, the EPA Administrator signed two distinct findings regarding GHGs under section 202(a) of the CAA:

- Endangerment Finding: The Administrator finds that the current and projected concentrations of the six key well-mixed greenhouse gases—CO_2, CH_4, N_2O, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride—in the atmosphere threaten the public health and welfare of current and future generations; and
- Cause or Contribute Finding: The Administrator finds that the combined emissions of these well-mixed greenhouse gases from new motor vehicles and new motor vehicle engines contribute to the greenhouse gas pollution, which threatens public health and welfare.

These findings do not impose requirements on industry or other entities. However, this was a prerequisite for implementing GHG emissions standards for vehicles, as discussed in the section "Clean Vehicles" below.

The EPA denied ten petitions for Reconsideration of the Endangerment and Cause or Contribute Findings in 2010. Some of the petitioners included the Ohio Coal Association, Peabody Energy Company, and the State of Texas.

In September 2011, the EPA Office of Inspector General evaluated the EPA's compliance with established policy and procedures in the development of the endangerment finding, including processes for ensuring information quality. The evaluation concluded that the technical support document should have had more rigorous EPA peer review.

In June 2012, a federal appeals court rejected a lawsuit by thirteen states against the EPA. The suit alleged that the EPA violated the law by relying almost exclusively on data from the United Nations IPCC rather than doing its own research or testing data according to federal standards. The states include Virginia, Texas, Alabama, Florida, Hawaii, Indiana, Kentucky, Louisiana, Mississippi, Nebraska, North Dakota, Oklahoma, South Carolina, South Dakota, and Utah. Virginia intends to petition the Supreme Court to review the case.

Clean Vehicles. Congress first passed the Corporate Average Fuel Economy law in 1975 to increase the fuel economy of cars and light duty trucks. The law has become more stringent over time. On May 19, 2009, President Obama put in motion a new national policy to increase fuel economy for all new cars and trucks sold in the United States. On April 1, 2010, the EPA and the Department of Transportation's National Highway Traffic Safety Administration (NHTSA) announced a joint final rule establishing a national program that would reduce GHG emissions and improve fuel economy for new cars and trucks sold in the United States.

The first phase of the national program would apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles, covering model years 2012 through 2016. They require these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide per mile, equivalent to 35.5 miles per gallon if the automobile industry were to meet this CO_2 level solely through fuel economy improvements. Together, these standards would cut CO_2 emissions by an estimated 960 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2012-2016). On August 28, 2012, EPA and NHTSA issued a joint Final Rulemaking to extend the National Program of harmonized GHG and fuel economy standards to model year 2017 through 2025 passenger vehicles. Over the lifetime of the model years 2017-2025 standards, this program is projected to save approximately 4 billion barrels of oil and 2 billion metric tons of GHG emissions, with net benefits up to $451 billion.

On October 25, 2010, the EPA and the U.S. Department of Transportation proposed the first national standards to reduce GHG emissions and improve fuel efficiency of *heavy-duty trucks and buses*. For combination tractors, the agencies are proposing engine and vehicle standards that begin in the 2014 model year and achieve up to a 20-percent reduction in carbon dioxide emissions and fuel consumption by the 2018 model year. For heavy-duty pickup trucks and vans, the agencies are proposing separate gasoline and diesel truck standards, which phase in starting in the 2014 model year and achieve up to a 10-percent reduction for gasoline vehicles and 15-percent reduction for diesel vehicles by 2018 model year (12 and 17 percent respectively if accounting for air conditioning leakage). Lastly, for vocational vehicles, the agencies are proposing engine and vehicle standards

starting in the 2014 model year, which would achieve up to a 10-percent reduction in fuel consumption and carbon dioxide emissions by 2018 model year.

Cap and Trade. Cap and trade refers to a policy tool where emissions are limited to a certain amount and can be traded, or provides flexibility on how the emitter can comply. Successful examples in the United States include the Acid Rain Program and the NO_x (oxides of nitrogen) Budget Trading Program in the northeast. There is no federal cap and trade program currently; however, some states have joined to create initiatives to provide a mechanism for cap and trade.

The Regional Greenhouse Gas Initiative is an effort to reduce GHGs among the states of Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New York, Rhode Island, and Vermont. Each state caps CO_2 emissions from power plants, auctions CO_2 emission allowances, and invests the proceeds in strategic energy programs that further reduce emissions, save consumers money, create jobs, and build a clean energy economy. The Initiative began in 2008.

The Western Climate Initiative partner jurisdictions have developed a comprehensive initiative to reduce regional GHG emissions to 15 percent below 2005 levels by 2020. The partners are California, British Columbia, Manitoba, Ontario, and Quebec. Its cap and trade program is estimated to be fully implemented in 2015.

2.4.3 - California

Executive Order S-3-05. Former California Governor Arnold Schwarzenegger announced on June 1, 2005, through Executive Order S-3-05, the following reduction targets for GHG emissions:

- By 2010, reduce greenhouse gas emissions to 2000 levels;
- By 2020, reduce greenhouse gas emissions to 1990 levels; and
- By 2050, reduce greenhouse gas emissions to 80 percent below 1990 levels.

The 2050 reduction goal represents what scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal established an aggressive, but achievable, mid-term target. Because this is an executive order, the goals are not legally enforceable for local governments or the private sector.

AB 32. The California State Legislature enacted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires that GHGs emitted in California be reduced to 1990 levels by the year 2020. "Greenhouse gases" as defined under AB 32 include CO_2, CH_4, N_2O, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. ARB is the state agency charged with monitoring and regulating sources of GHGs. AB 32 states the following:

> Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an

increase in the incidences of infectious diseases, asthma, and other human health-related problems.

The ARB Board approved the 1990 GHG emissions level of 427 MMT CO_2e on December 6, 2007 (ARB 2007). Therefore, emissions generated in California in 2020 are required to be equal to or less than 427 MMT CO_2e. Emissions in 2020 in a "business as usual" scenario were previously estimated to be 596 MMT CO_2e. However, the most recent estimate for year 2020 business as usual is 545 MMT CO_2e (ARB 2010). Therefore, a 21.7-percent reduction from the year 2020 business as usual forecast is required to achieve the year 1990 emissions target.

Under AB 32, the ARB published its Final Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California. Discrete early action measures are currently underway or are enforceable by January 1, 2010. The ARB has 44 early action measures that apply to the transportation, commercial, forestry, agriculture, cement, oil and gas, fire suppression, fuels, education, energy efficiency, electricity, and waste sectors. Of these early action measures, nine are discrete early action measures, as they are regulatory and enforceable by January 1, 2010. The ARB estimates that the 44 recommendations will result in reductions of at least 42 MMT CO_2e by 2020.

The Scoping Plan contains measures designed to reduce the State's emissions to 1990 levels by the year 2020 (ARB 2008). The Scoping Plan identifies recommended measures for multiple GHG emission sectors and the associated emission reductions needed to achieve the year 2020 emissions target.

In addition, the Scoping Plan differentiates between "capped" and "uncapped" strategies. Capped strategies are subject to the proposed cap-and-trade program. The Scoping Plan states that the inclusion of these emissions within the cap-and trade program will help ensure that the year 2020 emission targets are met despite some degree of uncertainty in the emission reduction estimates for any individual measure. Implementation of the capped strategies is calculated to achieve a sufficient amount of reductions by 2020 to achieve the emission target contained in AB 32. Uncapped strategies that will not be subject to the cap-and-trade emissions caps and requirements are provided as a margin of safety by accounting for additional GHG emission reductions.[1]

On May 22, 2014 the ARB approved the First Update to the Scoping Plan. The update builds upon the Initial Scoping Plan with new strategies and recommendations.

Pavley Regulations and Fuel Efficiency Standards. California AB 1493, enacted on July 22, 2002, required the ARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. The regulation was stalled by automaker lawsuits and by the EPA's denial of an implementation waiver. On January 21, 2009, the ARB requested that the EPA reconsider its

[1] On March 17, 2011, the San Francisco Superior Court issued a final decision in *Association of Irritated Residents v. California Air Resources Board* (Case No. CPF-09-509562). While the Court upheld the validity of the ARB Scoping Plan for the implementation of AB 32, the Court enjoined ARB from further rulemaking under AB 32 until ARB amends its CEQA environmental review of the Scoping Plan to address the flaws identified by the Court. On May 23, 2011, ARB filed an appeal. On June 24, 2011, the Court of Appeal granted ARB's petition staying the trail court's order pending consideration of the appeal. In the interest of informed decision-making, on June 13, 2011, ARB released the expanded alternatives analysis in a draft Supplement to the AB 32 Scoping Plan Functional Equivalent Document. The ARB Board approved the Scoping Plan and the CEQA document on August 24, 2011.

previous waiver denial. On January 26, 2009, President Obama directed that the EPA assess whether the denial of the waiver was appropriate. On June 30, 2009, the EPA granted the waiver request. On September 8, 2009, the U.S. Chamber of Commerce and the National Automobile Dealers Association sued EPA to challenge its granting of the waiver to California for its standards. California assisted EPA in defending the waiver decision. The U.S. District Court for the District of Columbia denied the Chamber's petition on April 29, 2011.

The Pavley I standards are phased in during the 2009 through 2016 model years. When fully phased in, the near-term (2009–2012) standards will result in about a 22-percent reduction compared with the 2002 fleet, and the mid-term (2013–2016) standards will result in about a 30-percent reduction. Several technologies stand out as providing significant reductions in emissions at favorable costs. These include discrete variable valve lift or camless valve actuation to optimize valve operation rather than relying on fixed valve timing and lift as has historically been done; turbocharging to boost power and allow for engine downsizing; improved multi-speed transmissions; and improved air conditioning systems that operate optimally, leak less, and/or use an alternative refrigerant. Pavley II was incorporated into Amendments to the Low-Emission Vehicle Program referred to as Low Emissions Vehicles (LEV) III. The amendments, effective August 7, 2012, apply to vehicles for model years 2017 through 2025. The regulation will reduce GHGs from new cars by 34 percent from 2016 levels by 2025.

Low Carbon Fuel Standard—Executive Order S-01-07. The Governor signed Executive Order S-01-07 on January 18, 2007. The order mandates a statewide goal established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. In particular, the executive order established a Low Carbon Fuel Standard and directed the Secretary for Environmental Protection to coordinate the actions of the California Energy Commission (CEC), the ARB, the University of California, and other agencies to develop and propose protocols for measuring the "life-cycle carbon intensity" of transportation fuels. This analysis supporting development of the protocols was included in the State Implementation Plan (SIP) for alternative fuels (State Alternative Fuels Plan adopted by CEC on December 24, 2007) and was submitted to ARB for consideration as an "early action" item under AB 32. The ARB adopted the Low Carbon Fuel Standard on April 23, 2009. The Low Carbon Fuel Standard was challenged in the United States District Court in Fresno in 2011. The court's ruling issued on December 29, 2011 included a preliminary injunction against ARB's implementation of the rule. The Ninth Circuit Court of Appeals stayed the injunction on April 23, 2012 pending final ruling on appeal, allowing the ARB to continue to implement and enforce the regulation. The Renewable Fuels Association and Growth Energy filed a petition to the US Supreme Court on March 20, 2014 challenging the Court of Appeals decision.

SB 1368. In 2006, the State Legislature adopted Senate Bill (SB) 1368, subsequently signed into law by the Governor. SB 1368 directs the California Public Utilities Commission to adopt a performance standard for GHG emissions for the future power purchases of California utilities. SB 1368 seeks to limit carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than 5 years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant. Because of the carbon content of its fuel source, a coal-fired plant cannot meet this standard because such plants emit roughly twice as much carbon as natural gas, combined-cycle plants. Accordingly, the new law will effectively prevent

California's utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the State. Thus, SB 1368 will dramatically lower GHG emissions associated with California's energy demand, as SB 1368 will effectively prohibit California utilities from purchasing power from out-of-state producers that cannot satisfy the performance standard for GHG emissions required by SB 1368. The California Public Utilities Commission adopted the regulations required by SB 1368 on August 29, 2007.

Renewable Electricity Standards. On September 12, 2002, Governor Gray Davis signed SB 1078 requiring California to generate 20 percent of its electricity from renewable energy by 2017. SB 107 changed the due date to 2010 instead of 2017. On November 17, 2008, Governor Arnold Schwarzenegger signed Executive Order S-14-08, which established a Renewable Portfolio Standard target for California requiring that all retail sellers of electricity serve 33 percent of their load with renewable energy by 2020. Governor Schwarzenegger also directed the ARB (Executive Order S-21-09) to adopt a regulation by July 31, 2010, requiring the state's load serving entities to meet a 33 percent renewable energy target by 2020. The ARB Board approved the Renewable Electricity Standard on September 23, 2010 by Resolution 10-23.

Title 24. During operation, the project is required to comply with Title 24 of the California Code of Regulations (CCR) established by the Energy Commission regarding energy conservation standards. Although these regulations do not specifically reduce GHGs, they increase energy efficiency for new buildings, thus indirectly reducing GHG emissions. CCR Title 24 Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings, was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions.

The current version of Title 24 (2016 Title 24 Standards) became effective on January 1, 2017. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. According to the California Energy Commission, single-family homes built to the 2016 standards will use about 28 percent less energy for lighting, heating, cooling, ventilation, and water heating than those built to the 2013 standards. In 30 years, California will have saved enough energy to power 2.2 million homes, reducing the need to build 12 additional power plants.

Title 20. CCR, Title 20: Division 2, Chapter 4, Article 4, Sections 1601-1608: Appliance Efficiency Regulations regulates the sale of appliances in California. The Appliance Efficiency Regulations include standards for both federally regulated appliances and non-federally regulated appliances. Twenty-three categories of appliances are included in the scope of these regulations. The standards within these regulations apply to appliances that are sold, or offered for sale in California, except those sold wholesale in California for final retail sale outside the state and those designed and sold exclusively for use in recreational vehicles or other mobile equipment (CEC 2012).

California Green Building Standards. The Project is also required to comply with the California Green Building Standards, which is Part 11 of Title 24 of the California Code of Regulations. The

most recent 2016 Green Building Standards Code went into effect on January 1, 2017. The Code is a comprehensive and uniform regulatory code for all residential, commercial and school buildings.

The California Green Building Standards Code does not prevent a local jurisdiction from adopting a more stringent code as state law provides methods for local enhancements. The Code recognizes that many jurisdictions have developed existing construction and demolition ordinances, and defers to them as the ruling guidance provided they provide a minimum 50-percent diversion requirement. The code also provides exemptions for areas not served by construction and demolition recycling infrastructure. State building code provides the minimum standard, which buildings need to meet in order to be certified for occupancy. Enforcement is generally through the local building official.

The California Green Building Standards Code (code section in parentheses) requires:

- Construction waste. A minimum 65-percent diversion of construction and demolition waste from landfills. All (100 percent) of trees, stumps, rocks and associated vegetation and soils resulting from land clearing shall be reused or recycled;
- Water Efficiency and Conservation [Indoor Water Use (4.303.1)]. Fixtures and fixture fittings reducing the overall use of potable water within the building by at least 20 percent shall be provided. The 20-percent reduction shall be demonstrated by one of the following methods:
  1. Prescriptive Method: Showerheads (≤ 2.0 gallons per minute [gpm] @ 80 pounds per square inch [psi]); Residential Lavatory Faucets (≤ 1.2 gpm @ 60 psi); Nonresidential Lavatory Faucets (≤ 0.5 gpm @ 60 psi); Kitchen Faucets (≤ 1.8 gpm @ 60 psi); Toilets (≤ 1.28 gallons/flush); floor-mounted urinals (≤ 0.5 gallons/flush); wall-mounted urinals ≤ 0.125 gallons/flush) and
  2. Performance Method: Provide a calculation demonstrating a 20% reduction of indoor potable water using the baseline values set forth in Table 4.303.1. The calculation will be limited to the total water usage of showerheads, lavatory faucets, water closets and urinals within the dwelling.
- Water Efficiency and Conservation [Outdoor Water Use (4.304.1)]. After December 1, 2015, new residential developments with an aggregate landscape area equal to or greater than 500 square feet must either comply with a local water efficient landscape ordinance or the current California Department of Water Resources' Model Water Efficient Landscape Ordinance (MWELO), whichever is more stringent; or, projects with aggregate landscape areas of less than 2,500 square feet may comply with the MWELO's Appendix D Prescriptive Compliance Option.
- Materials pollution control. Low-pollutant emitting interior finish materials such as paints, carpet, vinyl flooring and particleboard; and
- Building commissioning. Mandatory inspections of energy systems (e.g., heat furnace, air conditioner, mechanical equipment) are required for nonresidential buildings over 10,000 square feet to ensure that all are working at their maximum capacity according to their design efficiencies.

Cap-and-Trade. California's Cap-and-Trade Regulation (Regulation) took effect on January 1, 2012, with amendments to the Regulation effective September 1, 2012. The enforceable compliance obligation began on January 1, 2013. Cap-and-trade is a market-based regulation designed to reduce GHGs from multiple sources. Cap-and-trade sets a firm limit or "cap" on GHGs and minimize the compliance costs of achieving AB 32 goals. The cap will decline approximately 3 percent each year beginning in 2013. Trading creates incentives to reduce GHGs below allowable levels through investments in clean technologies. With a carbon market, a price on carbon is established for GHGs. Market forces spur technological innovation and investments in clean energy.

SB 375. SB 375 passed the Senate on August 30, 2008 and signed by the Governor on September 30, 2008. According to SB 375, the transportation sector is the largest contributor of GHG emissions, which emits over 40 percent of the total GHG emissions in California. SB 375 states, "Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32." SB 375 does the following: (1) requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies.

Concerning CEQA, SB 375, section 21159.28 states that CEQA findings determinations for certain projects are not required to reference, describe, or discuss (1) growth inducing impacts or (2) any project-specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional transportation network if the project:

- Is in an area with an approved sustainable community's strategy, or an alternative planning strategy, that the ARB accepts as achieving the GHG reduction targets;
- Is consistent with that strategy (in designation, density, building intensity, and applicable policies); and
- Incorporates the mitigation measures required by an applicable prior environmental document.

SB 97 and the CEQA Guidelines Update. Passed in August 2007, SB 97 added Section 21083.05 to the Public Resources Code. The code states "(a) On or before July 1, 2009, the Office of Planning and Research shall prepare, develop, and transmit to the Resources Agency guidelines for the mitigation of GHG emissions or the effects of GHG emissions as required by this division, including, but not limited to, effects associated with transportation or energy consumption. (b) On or before January 1, 2010, the Resources Agency shall certify and adopt guidelines prepared and developed by the Office of Planning and Research pursuant to subdivision (a)." On February 16, 2010, the Office of Administrative Law approved the Amendments, and filed them with the Secretary of State for inclusion in the California Code of Regulations. The Amendments became effective on March 18, 2010.

Executive Order S-13-08. Executive Order S-13-08 indicates that "climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California's economy, to the health and welfare of

its population and to its natural resources." Pursuant to the requirements in the order, the 2009 California Climate Adaptation Strategy (California Natural Resources Agency 2009) was adopted, which is the " . . . first statewide, multi-sector, region-specific, and information-based climate change adaptation strategy in the United States." Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order B-30-15. Executive Order B-30-15 established an interim year GHG emissions reduction target of 40 percent below 1990 levels by year 2030. The reduction target provides a mid-term goal between the original AB 32 target (achieve 1990 levels by year 2020) and the Executive Order S-03-05 target (achieve 80 percent below 1990 levels by year 2020)**.** ARB's second update of the AB 32 Scoping Plan is focused on achieving Executive Order B-30-15 through a more intensive framework of policies, regulations, planning efforts, and infrastructure investments.

SB 32. The Governor signed SB 32 in September of 2016, giving ARB the statutory responsibility to include the 2030 target previously contained in Executive Order B-30-15 in the 2017 Scoping Plan Update. SB 32 states that "In adopting rules and regulations to achieve the maximum technologically feasible and cost-effective greenhouse gas emissions reductions authorized by this division, the state [air resources] board shall ensure that statewide greenhouse gas emissions are reduced to at least 40 percent below the statewide greenhouse gas emissions limit no later than December 31, 2030." The 2017 Climate Change Scoping Plan Update addressing the SB 32 targets was adopted on December 14, 2017. The major elements of the framework proposed to achieve the 2030 target are as follows:

1. SB 350
   - Achieve 50 percent Renewables Portfolio Standard (RPS) by 2030.
   - Doubling of energy efficiency savings by 2030.
2. Low Carbon Fuel Standard (LCFS)
   - Increased stringency (reducing carbon intensity 18 percent by 2030, up from 10 percent in 2020).
3. Mobile Source Strategy (Cleaner Technology and Fuels Scenario)
   - Maintaining existing GHG standards for light- and heavy-duty vehicles.
   - Put 4.2 million zero-emission vehicles (ZEVs) on the roads.
   - Increase ZEV buses, delivery and other trucks.
4. Sustainable Freight Action Plan
   - Improve freight system efficiency.
   - Maximize use of near-zero emission vehicles and equipment powered by renewable energy.
   - Deploy over 100,000 zero-emission trucks and equipment by 2030.
5. Short-Lived Climate Pollutant (SLCP) Reduction Strategy
   - Reduce emissions of methane and hydrofluorocarbons 40 percent below 2013 levels by 2030.
   - Reduce emissions of black carbon 50 percent below 2013 levels by 2030.

6. SB 375 Sustainable Communities Strategies
   - Increased stringency of 2035 targets.
7. Post-2020 Cap-and-Trade Program
   - Declining caps, continued linkage with Québec, and linkage to Ontario, Canada.
   - ARB will look for opportunities to strengthen the program to support more air quality co-benefits, including specific program design elements. In Fall 2016, ARB staff described potential future amendments including reducing the offset usage limit, redesigning the allocation strategy to reduce free allocation to support increased technology and energy investment at covered entities and reducing allocation if the covered entity increases criteria or toxics emissions over some baseline.
8. 20 percent reduction in GHG emissions from the refinery sector.
9. By 2018, develop Integrated Natural and Working Lands Action Plan to secure California's land base as a net carbon sink.

2.4.4 - Monterey Bay Air Resources District

CEQA Greenhouse Gas Guidance

The Monterey Bay Air Resources District (MBARD) 2008 CEQA Guidelines do not define the amount of GHG emissions that would result in a significant impact on the environment. On February 6, 2014, the MBARD held a meeting to present the MBARD GHG threshold development to the MBARD Advisory Committee. This meeting is recorded as Agenda Item No. 10. During the meeting, the following thresholds were under consideration for adoption:

- Stationary Sources: 10,000 metric tons (MT) of CO_{2e} per year.
- Land-use projects apply one of the following:
  - Bright line of 2,000 MT CO_{2e} per year or
  - Incorporate mitigation measures to reduce GHG emissions by 16%, or
  - Compliance with adopted Climate Action Plan
  - A threshold of 2,000 MT CO_{2e} per year corresponds to a residential project with approximately 130 single family homes.

The MBARD's goal has been to strike a balance between (1) the unique economic viability of our area; (2) differences in land-use development between inland and coastal cities; and (3) achieving statewide goals to reduce GHG emissions.

During the discussion, it mentioned that the bright-line threshold of 2,000 metric tons of carbon dioxide equivalent (MT CO_2e) per year for small land use projects might increase additional costs to prepare an EIR or incorporate additional mitigation measures to address significance GHG emissions. Although the MBARD has not formally adopted any GHG emission related thresholds, the 2,000 MT CO_2e per year is the only standard the MBARD has proposed and is the most region-specific threshold available at the time of this analysis.

2.4.5 - The Association of Monterey Bay Area Governments

2040 Metropolitan Transportation Plan/Sustainable Communities Strategy

The Association of Monterey Bay Area Governments (AMBAG) is the federally designated Metropolitan Planning Organization (MPO) for the tri-county Monterey Bay Region, including Monterey County. AMBAG works with several organizations, including the Transportation Agency for Monterey County, Monterey Salinas Transit, the MBARD, and state and federal governments to develop transportation planning and programming for the region. The AMBAG Board of Directors adopted the Final 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) on June 13, 2018.

2.4.6 - Local

The City of Salinas has not adopted any GHG reduction plan or Climate Action Plan.

The County of Monterey drafted a Monterey County Municipal Climate Action Plan (CAP) in April 2013. The draft CAP aims to provide a description of the steps being taken by the County to reduce GHG emissions associated with its municipal operations, describe three potential paths towards the County's goal of reducing GHG emissions to a level that is 15 percent below the 2005 emissions level before 2020, and serve as one component of the County's larger, community-wide CAP, which addresses GHG emissions from the community at large. The draft CAP was prepared in response to the ARB's AB 32 Scoping Plan recommendation of establishing GHG reduction goals for both their municipal operations and the community to be consistent with those of the state. Three GHG reduction scenarios were provided in the CAP, and each scenario estimated the total GHG reduction by the year 2020. The draft CAP assumed the County will implement scenario 3 and provided an implementation plan to help achieve the GHG emission reduction goal. When estimating GHG emission reductions, several sectors were included in the CAP. The emission reduction measures that related to the proposed Project are listed below:

- Energy use—Buildings and Facilities: BM-1 Building Energy Management Systems at Major Facilities
- Vehicle fleet & Employee commute
  - S-4 Other Vehicle Fuel Efficiency Measures

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 3: MODELING PARAMETERS AND ASSUMPTIONS

3.1 - Model Selection and Guidance

The California Emissions Estimator Model (CalEEMod) version 2016.3.2 was used to estimate the project's construction and operation-related GHG emissions. CalEEMod was developed in cooperation with air districts throughout the State. CalEEMod is designed as a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential GHG emissions associated with construction and operation from a variety of land uses.

3.2 - Construction

Construction-related GHG emissions can vary substantially from day to day, depending on the level of activity, and the specific type of operation. Construction emissions result from on-site and off-site activities. On-site GHG emissions principally consist of exhaust emissions from heavy-duty construction equipment. Off-site GHG emissions would occur from motor vehicle exhaust from material delivery vehicles and construction worker traffic.

The construction equipment assumed for the project is shown in the CalEEMod output contained in Appendix A. The CalEEMod default construction equipment fleet mix was used in the analysis.

3.3 - Operation

Operational emissions are those emissions that occur during operation of the project. The major sources are summarized below.

3.3.1 - Motor Vehicles

Motor vehicle emissions refer to exhaust emissions from the automobiles that would travel to and from the project site. Rodeo property general plan amendment & rezoning traffic impact analysis prepared by Mott Macdonald (April 2018) utilized the trip rates from the Institute of Transportation Engineers (ITE) publication Trip Generation Manual, 10th Edition.

The vehicle fleet mix is the mix of motor vehicle classes that are associated with the project's daily operational trip. Emission factors from ARB's EMFAC model are assigned to the expected vehicle mix that account for the vehicles' vehicle class, speed, and fuel use (gasoline and diesel-powered vehicles). The vehicle fleet mix for light industrial traffic was a combination of CalEEMod default assumption and study of Fontana trip generation rates and truck percentage for industrial and warehouse uses (Fontana 2003). The CalEEMod default vehicle fleet mix was used for trips generated by the general office operation.

3.3.2 - Landscape Equipment

The landscaping equipment (leaf blowers, chain saws, mowers) would generate GHG emissions as a result of fuel combustion assumptions in the CalEEMod model.

3.3.3 - Electricity

Pacific Gas & Electric (PG&E) provides estimates of its emission factor per megawatt hour of electricity delivered to its customers. PG&E emissions factor for 2020 for CO_2 is provided below. The rates for methane and nitrous oxide are based on compliance with the Renewable Portfolio Standard. The factors listed below were applied in estimating project emissions for the year 2020.

- Carbon dioxide: 491.65 lbs./MWh
- Methane: 0.022 lb/MWh
- Nitrous oxide: 0.005 lb/MWh

3.3.4 - Title 24

CalEEMod has three categories for electricity consumption: electricity that is impacted by Title 24 regulations; non-Title 24 electricity; and lighting. The Title 24 uses are defined as the major building envelope systems covered by California's Building Code Title 24 Part 6, such as space heating, space cooling, water heating, and ventilation. Lighting is separate since it can be both part and not part of Title 24. Since lighting is not part of the building envelope energy budget, CalEEMod does not consider lighting to have any further association with Title 24 references in the program. Non-Title 24 includes everything else such as appliances and electronics. To properly divide the total electricity consumption into the three categories, the percentage for each category is determined by using percentages derived from the CalEEMod default electricity intensity. The percentages are applied to the electricity consumption to obtain the values used in the analysis.

In addition, the 2016 Title 24 standards became effective on January 1, 2017. Default values from the 2016 version of CalEEMod were used.

3.3.5 - Natural Gas

There would be emissions from the combustion of natural gas used for the project (water heaters, heat, etc.). CalEEMod has two categories for natural gas consumption: Title 24 and non-Title 24. CalEEMod default natural gas consumption rates were used, based on the proposed land use types.

3.3.6 - Water and Wastewater

There would be GHG emissions from the use of electricity to pump potable water to the project and to treat wastewater. CalEEMod defaults were used for these sources.

3.3.7 - Solid Waste

Greenhouse gas emissions would be generated from the decomposition of solid waste generated by the project. CalEEMod was used to estimate the GHG emissions from this source. The CalEEMod default solid waste generation rates were used, based on the proposed land use types.

SECTION 4: THRESHOLDS OF SIGNIFICANCE

As described above, although the MBARD has not formally adopted any GHG emission thresholds of significance, the bright line thresholds proposed during the Agenda Item No. 10 meeting is the latest and most applicable threshold for the MBARD. Therefore, this analysis was developed by using the MBARD's project-level land use bright line operational GHG emission thresholds.

For construction-related GHG emissions, Agenda Item No. 10 does not provide any standards. Therefore, for the purposes of a conservative analysis, the Project's construction GHG emissions are amortized over an assumed project lifetime of 30 years and are included in the operational emissions to compare against the threshold.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 5: GREENHOUSE GAS IMPACT ANALYSIS

5.1 - CEQA Guidelines

CEQA Guidelines define a significant effect on the environment as "a substantial, or potentially substantial, adverse change in the environment." To determine if a project would have a significant impact on GHGs, the type, level, and impact of emissions generated by the project must be evaluated.

The following GHG significance thresholds are contained in Appendix G of the CEQA Guidelines, which were amendments adopted into the Guidelines on March 18, 2010, pursuant to SB 97. A significant impact would occur if the project would:

(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or

(b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

5.2 - Impact Analysis

5.2.1 - Greenhouse Gas Inventory

Impact GHG-1:	**The project would generate direct and indirect greenhouse gas emissions; however, these emissions would not result in a significant impact on the environment.**

Impact Analysis

Construction Emissions

The Project would generate GHG emissions during construction activities resulting from emission sources such as construction equipment, haul trucks, and construction worker vehicles. Although these emissions would be temporary and short-term in nature, they could represent a substantial contribution of GHG emissions. Construction emissions were modeled using CalEEMod and the assumptions described above in Section 3 (Modeling Parameters and Assumptions). See Appendix A for detailed CalEEMod outputs and assumptions.

Table 2 presents the project's total construction emissions, which are amortized over the assumed lifetime of the project and added with annual operational emissions.

Table 2: Estimated Construction-Related Greenhouse Gas Emissions

Construction Phase	Total Emissions MT CO_2e
Demolition	37

Table 2 (cont.): Estimated Construction-Related Greenhouse Gas Emissions

Construction Phase	Total Emissions MT CO_2e
Site Preparation	18
Grading	29
Building Construction	538
Asphalt Paving	22
Architectural Coating	5
Total Construction Emissions	648
Amortized over 30 years[1]	22

Notes:
MT CO_2e = metric tons of carbon dioxide equivalent
Totals may not appear to sum exactly due to rounding.
[1] Construction GHG emissions are amortized over the 30-year lifetime of the project.
Source: CalEEMod Output (see Appendix A).

Operational Emissions

Following construction of the project, long-term operational emissions would be generated by the sources described in Section 3 (Modeling Parameters and Assumptions). Table 3 presents the estimated annual GHG emissions from the project's operational activities.

Table 3: Estimated Operational Greenhouse Gas Emissions

Source	Total Emissions MT CO_2e
Area	<1
Energy	395
Mobile	1087
Waste	73
Water	70
Amortized Construction	22
Total	1,647
Threshold of Significance	2,000
Exceed thresholds?	No

Notes:
MT CO_2e = metric tons of carbon dioxide equivalent
Source of thresholds: MBARD "Receive a Presentation on District GHG Thresholds Development." Feb. 2014.
CalEEMod output file. See Appendix.

Conclusions

As shown in Table 3, the project's amortized construction and annual operational GHG emissions would not exceed the applicable threshold of significance. Thus, the project's construction and operational GHG emissions would not result in a significant impact on climate change.

Level of Significance Before Mitigation

Less than significant impact.

Mitigation Measures

None.

Level of Significance After Mitigation

Less than significant impact.

5.2.2 - Greenhouse Gas Reduction Plans

Impact GHG-2	**The project would not conflict with any applicable plan, policy or regulation of an agency adopted to reduce the emissions of greenhouse gases.**

Impact Analysis

The Monterey County has an adopted a Municipal Climate Action Plan (MCAP) that was approved by the County Council in April 2013. Projects that are consistent with the adopted MCAP would have a less than significant impact related to GHG emissions. However, the MCAP has been developed primarily with recommended programs for the City to implement, rather than measures, strategies, and requirements for individual land use development projects. Thus, this analysis attempts to evaluate the recommended MCAP programs with which the project is consistent, but it also evaluates the project's consistency with the statewide AB 32 Scoping Plan and AMBAG's 2040 MTP/SCS.

With respect to the MCAP's recommended measures, the Project would be consistent with Energy Use-Buildings and Facilities: BM-1 Building Energy Management Systems at Major Facilities which would reduce the GHG emissions from area source and energy source. Although it is not clear if the proposed Project would install any on-site renewable energy production systems at this time, the building would be constructed to meet the most current Title 24 standards.

AB 32 Scoping Plan

The ARB's adopted AB 32 Scoping Plan (Scoping Plan) states, "The 2020 goal was established to be an aggressive, but achievable, mid-term target, and the 2050 GHG emissions reduction goal represents the level scientists believe is necessary to reach levels that would stabilize climate" (ARB 2009). The year 2020 GHG emission reduction goal of AB 32 corresponds with the mid-term target established by Executive Order S-3-05, which aims to reduce California's fair-share contribution of GHGs in 2050 to levels that would stabilize the climate.

The Scoping Plan identifies recommended measures for multiple GHG emission sectors and the associated emission reductions needed to achieve the year 2020 emissions target—each sector has a different emission reduction target. Most of the measures target the transportation and electricity sectors. The following analysis in Table 4 evaluates the AB 32 Scoping Plan emission reduction measures with the Project's design features to determine consistency with the applicable GHG reduction plan.

Table 4: Scoping Plan Measures Consistency Analysis

Scoping Plan Reduction Measure	Project Consistency
1. California Cap-and-Trade Program Linked to Western Climate Initiative. Implement a broad-based California Cap-and-Trade program to provide a firm limit on emissions. Link the California cap-and-trade program with other Western Climate Initiative Partner programs to create a regional market system to achieve greater environmental and economic benefits for California. Ensure California's program meets all applicable AB 32 requirements for market-based mechanisms.	**Not applicable.** Although the cap-and-trade system has begun, the project is not one targeted by the cap-and-trade system regulations and therefore this measure does not apply to the project.
2. California Light-Duty Vehicle Greenhouse Gas Standards. Implement adopted standards and planned second phase of the program. Align zero-emission vehicle, alternative and renewable fuel and vehicle technology programs with long-term climate change goals.	**Not applicable.** This is a statewide measure that cannot be implemented by a project applicant or lead agency. However, the standards would be applicable to the light-duty vehicles that access the project site.
3. Energy Efficiency. Maximize energy efficiency building and appliance standards; pursue additional efficiency including new technologies, policy, and implementation mechanisms. Pursue comparable investment in energy efficiency from all retail providers of electricity in California.	**Consistent.** This is a measure for the State to increase its energy efficiency standards in new buildings. The Project is required to build to the new standards and would increase its energy efficiency through compliance.
4. Renewable Portfolio Standard. Achieve 33 percent renewable energy mix statewide. Renewable energy sources include (but are not limited to) wind, solar, geothermal, small hydroelectric, biomass, anaerobic digestion, and landfill gas.	**Not applicable.** This is a statewide measure that cannot be implemented by a project applicant or lead agency. Pacific Gas & Electric is required to increase its percent of power supply from renewable sources to 33 percent by the year 2020 pursuant to various regulations. The Project would purchase power that comprises a greater amount of renewable sources and could install renewable solar power systems that will assist the utility in achieving the mandate.
5. Low Carbon Fuel Standard. Develop and adopt the Low Carbon Fuel Standard.	**Not applicable.** This is a statewide measure that cannot be implemented by a project applicant or lead agency. All fuel consumption associated with the project's construction and operational activities would use fuel that meets these standards.

Table 4 (cont.): Scoping Plan Measures Consistency Analysis

Scoping Plan Reduction Measure	Project Consistency
6. Regional Transportation-Related Greenhouse Gas Targets. Develop regional greenhouse gas emissions reduction targets for passenger vehicles. This measure refers to SB 375.	**Not applicable.** The Project is not related to developing GHG emission reduction targets.
7. Vehicle Efficiency Measures. Implement light-duty vehicle efficiency measures.	**Not applicable.** When this measure is initiated, the standards would be applicable to the light-duty vehicles that would access the project site.
8. Goods Movement. Implement adopted regulations for the use of shore power for ships at berth. Improve efficiency in goods movement activities.	**Not applicable.** The Project does not propose any changes to maritime, rail, or intermodal facilities or forms of transportation.
9. Million Solar Roofs Program. Install 3,000 MW of solar-electric capacity under California's existing solar programs.	**Consistent.** This measure is to increase solar throughout California, which is being done by various electricity providers and existing solar programs. The Project would comply with Title 24, which requires new buildings to be "solar ready." The Project would not preclude the implementation of this strategy.
10. Medium/Heavy-Duty Vehicles. Adopt medium and heavy-duty vehicle efficiency measures.	**Not applicable.** This is a statewide measure that cannot be implemented by a project applicant or lead agency.
11. Industrial Emissions. Require assessment of large industrial sources to determine whether individual sources within a facility can cost-effectively reduce greenhouse gas emissions and provide other pollution reduction co-benefits. Reduce greenhouse gas emissions from fugitive emissions from oil and gas extraction and gas transmission. Adopt and implement regulations to control fugitive CH_4 emissions and reduce flaring at refineries.	**Not applicable.** This measure would apply to the direct GHG emissions at major industrial facilities emitting more than 500,000 $MTCO_2e$ per year. The Project is a small industrial land use that would generate less than 2,000 MT CO_2e per year.
12. High Speed Rail. Support implementation of a high-speed rail system.	**Not applicable.** This is a statewide measure that cannot be implemented by a project applicant or lead agency. The proposed Project would not preclude the implementation of this strategy.
13. Green Building Strategy. Expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings.	**Consistent.** The Project would comply with the California Energy Code and thus incorporate applicable energy efficiency features designed to reduce project energy consumption.
14. High Global Warming Potential Gases. Adopt measures to reduce high global warming potential gases.	**Consistent.** This measure is applicable to the high global warming potential gases that would be used by sources with large equipment (such as in air conditioning and commercial refrigerators). The Project would include refrigeration or air conditioning equipment and would be required to comply with all ARB requirements for the Stationary Equipment Refrigerant Management Program.

Greenhouse Gas Impact Analysis

Table 4 (cont.): Scoping Plan Measures Consistency Analysis

Scoping Plan Reduction Measure	Project Consistency
15. Recycling and Waste. Reduce CH_4 emissions at landfills. Increase waste diversion, composting, and commercial recycling. Move toward zero waste.	**Consistent**. The Project would utilize City of Salinas recycling services.
16. Sustainable Forests. Preserve forest sequestration and encourage the use of forest biomass for sustainable energy generation.	**Not applicable.** The Project site is not forested; therefore, no preservation is possible.
17. Water. Continue efficiency programs and use cleaner energy sources to move and treat water.	**Consistent.** The Project would comply with the California Energy Code and the California Updated Model Landscape Ordinance. With adherence to these regulations, the Project will consume energy and water in an efficient manner.
18. Agriculture. In the near-term, encourage investment in manure digesters and at the five-year Scoping Plan update determine if the program should be made mandatory by 2020.	**Not applicable.** The Project site is not designated or in use for agriculture purposes. No grazing, feedlot, or other agricultural activities that generate manure occur on-site or are proposed to be implemented by the Project.

2040 Metropolitan Transportation Plan/Sustainable Communities Strategy

The 2040 MTP/SCS is a planning document that contains a compilation of the projects proposed in the regional transportation plans for the tri-county Monterey Bay Region (including the regional plan prepared by the Transportation Agency for Monterey County) and a SCS, pursuant to the requirements of SB 375. SB 375 includes the following primary findings related to the MTP/SCS development process:

- ARB developed regional GHG emission reduction targets for cars and light trucks for each of the 18 MPOs in California, including AMBAG. The ARB-approved target for AMBAG is a per capita reduction in GHG emissions from passenger vehicle travel of zero percent by 2020 and five percent by 2035 relative to 2005 levels. Relative to 2005 levels, the 2040 MTP/SCS achieves a three percent per capita reduction for 2020 and a six percent per capita reduction for 2040.
- AMBAG is required to prepare an SCS that specifies how the GHG emission reduction target set by ARB will be achieved. If the target cannot be met through the SCS, then an Alternative Planning Strategy (APS) shall be prepared. Chapter 4 of the 2040 MTP/SCS includes the SCS, which demonstrates how the region will meet or exceed the GHG emission reduction targets set forth by ARB.
- Streamlines CEQA requirements for qualifying development projects that meet statutory criteria and are consistent with the 2040 MTP/SCS.

The 2040 MTP/SCS envisions an increase in development density via infill development and mixed use in existing commercial corridors. Increased density, accessible transit, and complete streets would encourage fewer and shorter trips and more trips by transit, walking, and bicycling. The GHG emission reduction targets adopted to comply with SB 375 and implemented through the 2040 MTP/SCS only consider GHG emissions from passenger cars and light-duty trucks. Furthermore, 2040 MTP/SCS was based on a Regional Growth Forecast based on data from the 2010 Census, data from the California Employment Development Department and InfoUSA, as well as updated 2015 population and household data from the California Department of Finance. As discussed in the 2040 MTP/SCS, the Regional Growth Forecast was further refined through meetings with local jurisdictions. The City of Salinas is expected to experience an eighteen percent increase in employment from 2015 to 2040 and a sixteen percent increase in population over the same time period. Therefore, the Project would provide infill development in an existing commercial corridor that is reasonably consistent with the growth projections in the 2040 MTP/SCS. The Project is not within an SCS priority area and so is not subject to requirements applicable to those areas. Considering this information, the Project would not conflict with the 2040 MTP/SCS.

Summary

As shown in Table 4, the project is consistent with the strategies, or the strategies are not applicable to the Project. Therefore, the Project is consistent with the applicable strategies and would not conflict with the recommendations of AB 32 in achieving a statewide reduction in GHG emissions. Furthermore, the Project would not conflict with the MCAP or the 2040 MTP/SCS. In addition, as shown in Table 3, the Project's construction and operational GHG emissions would not exceed the recommended thresholds of significance, which are developed as allowable limits so they do not impede the region from achieving GHG reduction goals. Therefore, the Project would not conflict with any applicable plan, policy or regulation of an agency adopted to reduce GHG emissions. The impact would be less than significant.

Level of Significance Before Mitigation

Less than significant impact.

Mitigation Measures

None.

1 Report Summary

The project is a General Plan amendment and Rezone change that would allow development of industrial and commercial uses on a 6.8-acre site located on Sun Street adjacent to US 101. The proposed land use designation would allow site to be developed at a floor area ratio 0.4, which would allow for up to 118,600 square feet of industrial floor space. For purposes of this traffic study, 4 percent of the floor space (4,700 square feet) was assumed to be occupied by support office space and this space was modeled as general office space. The remaining floor area (113,900 square feet) was modeled as light industrial space.

The site is designated in the General Plan as Open Space. Access to the site is provided via Sun Street and its connection to Calle Cebu and E. Market Street.

This report summarizes the potential traffic circulation impacts associated with the proposed Rodeo Property General Plan Amendment (GPA) and Rezoning in Salinas, California. Vehicular, pedestrian and bicycle circulation issues were evaluated at the project site and the surrounding street network in Salinas. The project site is located on Sun Street between US 101 and East Market Street. Access to the site is provided via Sun Street and its connection to Calle Cebu and E. Market Street.

This report concludes that the identified traffic impacts can be mitigated and that there are no significant and unavoidable traffic impacts with the Implementation of the proposed mitigation measures. The Applicants payment of TFO fees or the funding of required mitigation measures as described in this report shall occur after the Applicants future submittal of a project specific plan and the City Staff evaluation of the actual impacts. This report utilized the maximum allowable FAR of .40 as consistent with the proposed zoning and general plan changes, it is anticipated that the future project specific application may include a lower FAR.

Study Network

The AM and PM peak periods were analyzed at the following intersections:

1. Natividad Road / East Laurel Drive;
2. Sherwood Drive - Natividad Road / East Bernal Drive – La Posada Way;
3. North Main Street / Bernal Drive;
4. Sherwood Drive / Sherwood Place;
5. North Main Street (State Route 183) / Rossi Street;
6. Sherwood Drive / East Rossi Street – Calle Cebu;
7. Kern Street / US 101 Northbound Ramps – Mobray Way;
8. East Market Street – Front Street / East Market Street;
9. East Market Street – Sherwood Drive / Market Place – East Market Street;
10. Sun Street / East Market Street;
11. Griffin Street – Simas Street / East Market Street;
12. US 101 Southbound Offramp – Merced Street / East Market Street;
13. US 101 Southbound Onramp / East Market Street;
14. Kern Street / East Market Street;
15. Front Street / East Alisal Street; and

Traffic operations for the Existing, Existing Plus Project, Background, Background Plus Project, Cumulative (General Plan Buildout) Without Project and Cumulative (General Plan Buildout) Plus Project development scenarios were analyzed.

1.1 Existing Conditions

The intersection turning movement counts were collected during the AM (7:00 – 9:00 AM) and PM (4:00 – 6:00) peak hours on Friday, June 2 and Monday, June 5, 2017. As the intersection traffic volumes were collected on atypical days of the week and when Salinas area schools were not in session, the collected intersection traffic volumes were adjusted to be consistent with available historical volumes when schools were in session.

Although most of the study intersections currently operate at or better than their respective level of service standards under Existing conditions, the following five intersections currently operate below their standards:

1. Natividad Road / E Laurel Drive: LOS E (AM and PM)
2. Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way: LOS E (AM), LOS F (PM)
5. N Main Street (SR 183) / Rossi Street: LOS D (PM)
10. Sun Street / E Market Street: Side-street approach LOS F (PM)
12. US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS F (PM), Side-street approach LOS F (AM and PM)

A review of the traffic counts found that there is a low to moderate level of pedestrian activity near the project site. Pedestrian activity is highest near the residential and commercial areas on Sherwood Drive and E Market Street, especially during the PM peak hour (compared to the AM peak hour).

A review of the traffic counts found that there is relatively little bicycle activity in the study network, including near the project site.

1.2 Existing Plus Project Conditions

The project is a General Plan amendment and Rezone change that would allow development of industrial and commercial uses on a 6.8-acre site located on Sun Street adjacent to US 101. The proposed land use designation would allow site to be developed at a floor area ratio 0.4, which would allow for up to 118,600 square feet of industrial floor space. For purposes of this traffic study, 4 percent of the floor space (4,700 square feet) was assumed to be occupied by support office space and this space was modeled as general office space. The remaining floor area (113,900 square feet) was modeled as light industrial space. A specific development project is not proposed for the site at this time.

The site is designated in the General Plan as Open Space. Access to the site is provided via Sun Street and its connection to Calle Cebu and E. Market Street.

Project Trip Generation

The estimate was derived using trip rates from the Institute of Transportation Engineers (ITE) publication *Trip Generation Manual,* 10th Edition, 2017. Note that trip generation estimates for the industrial and office components of the project have been separately calculated.

In total, the project is estimated to generate 611 daily trips, with 85 trips (74 in, 11 out) during the AM peak hour and 77 trips (10 in, 67 out) during the PM peak hour.

Vehicle Circulation

Although most of the study intersections would continue operate at or better than their respective level of service (LOS) standards, the following five intersections that currently operate below acceptable LOS would be significantly impacted by the proposed project based upon the significance criteria utilized for this study:

1. Natividad Road / E Laurel Drive: LOS E (AM and PM)
2. Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way: LOS E (AM), LOS F (PM)
5. N Main Street (SR 183) / Rossi Street: LOS D (PM)
10. Sun Street / E Market Street: Side-street approach LOS F (PM)
12. US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS F (PM), Side-street approach LOS F (AM and PM).

Figure ES-1 shows the levels of service with and without the project at each of the significantly impacted intersections for the Existing Plus Project Condition. **Figure ES-1** also shows the contribution of the project to the intersection deficiency and project's percentage of total overall intersection delay.

See **Figure ES-4** for the recommended improvements at these intersections for the Existing Condition. Implementation of these improvements would reduce the project's impact contribution at these intersections to less-than-significant. The impact and the recommended mitigation measure at each intersection is described below.

- **Intersection #1 – Natividad Road / E Laurel Drive:**
  This intersection would operate at a deficient LOS E during the AM and PM peak hours, unchanged from Existing Conditions. The project would add 16 AM peak hour and 17 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection that operates at a deficient level without the project.

  Mitigation: Add a third northbound and third southbound lane to Natividad Road through this intersection. Intersection operations would improve during the AM and PM peak hour to LOS D.

  Salinas TFO Project: This improvement is included in the City of Salinas TFO (Project 61).

  Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #2 – Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way:**
  This intersection would operate at a deficient LOS E (AM) and F (PM), unchanged from Existing Conditions. The project would add 16 AM peak hour and 17 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection that operates at a deficient level without the project.

  Mitigation: Convert the signal phasing on the east and west intersection approaches from concurrent phasing to split phasing. Intersection operations would improve during the AM and PM peak hour to LOS D.

Project Responsibility: To ensure that the intersection of Sherwood Drive – Natividad Road / E. Bernal Drive-La Posada Way will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Fee Ordinance to include the signal modifications at this intersection as one of the improvements that is funded by the TFO, or (2) if the signal modifications at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for modifying the signal phasing and ensure that the signal modification is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits and modify the signal phasing ensuring that the signal modification is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #5 – N Main Street (SR 183) / Rossi Street:**
  This intersection, which is under Caltrans jurisdiction, would operate at a deficient LOS D during the PM peak hour, unchanged from Existing Conditions. The project would add 6 trips to this intersection during the PM peak hour and increase the PM peak hour delay by 0.1 seconds.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay during the PM peak hour by at least 0.1 seconds.

  Mitigation: Add a third northbound and third southbound lane on N. Main Street through this intersection. Intersection operations would improve during the PM peak hour to LOS C.

  Salinas TFO Project: This improvement is included in the City of Salinas TFO (Project 31).

  Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #10 – Sun Street / E Market Street:**
  Side-street operations at this intersection (the southbound Sun Street approach) would operate at a deficient LOS F during the PM peak hour, unchanged from Existing Conditions. The project would add 31 trips to this approach during the PM peak hour.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection whose southbound approach operates at LOS F without the Project.

  Mitigation: Signalize the intersection. The intersection would operate at LOS A during the AM and PM peak hours with signalization.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

  Project Responsibility: To ensure that the intersection of Sun Street and East Market Street will operate at acceptable levels of service, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits for,

and installation of, a traffic signal that will be operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #12 – US 101 Southbound Offramp – Merced Street / E Market Street:**
  This intersection would operate at a deficient LOS F during the PM peak hour, while side-street operations (the southbound US 101 Southbound Offramp approach) would operate at a deficient LOS F during the AM and PM peak hours, unchanged from Existing Conditions. The project would add 30 AM peak hour and 27 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay during the AM and PM peak hours by at least 0.1 seconds.

  Mitigation: Signalize the intersection. Intersection operations would improve during the AM and PM peak hours to LOS B.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

  Project Responsibility: To ensure that the intersection of U.S. 101 Southbound Offramp – Merced Street/East Market Street will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Fee Ordinance to include a traffic signal at this intersection as one of the improvements that is funded by the TFO, or (2) if the traffic signal at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits and install the traffic signal ensuring that the signal is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

Pedestrian Circulation

Pedestrian traffic that is generated by development of the project site would likely be traveling from areas easily reached on foot from the project site, such as adjacent neighborhoods and bus stops. It is anticipated that the complete sidewalk and crosswalk network in the greater study area would facilitate pedestrian access from these areas. However, potential pedestrian impacts should be assessed at the time the project site is proposed to be developed by a specific project.

Bicycle Circulation

Development on the project site is anticipated to generate little bicycle traffic. As with the pedestrian traffic, the bicycle traffic that would be generated by the project would be traveling to areas easily reached on bike from the project site, such as residential areas that are more than a 10-minute bike ride from the project site. Although there are few bike facilities in the study area nearest the project site, the small level of bicycle traffic will be low enough to minimize any effects on existing vehicle traffic. Potential bicycle traffic impacts should be assessed at the time the project site is proposed to be developed by a specific project.

Transit Circulation

Development on the project site is anticipated to generate little transit usage. The transit usage that would be generated by the project would likely be walking to and from the bust stops within a 10-minute walk from the project site (as enumerated in Section 2.4). The small level of transit usage generated by the project would be low enough to minimize any effects on existing transit demand for bus routes in the area. Potential transit traffic impacts should be assessed at the time the project site is proposed to be developed by a specific project.

Impact Fees

The future development project constructed on the project site would be responsible for payment of the City of Salinas TFO and the Transportation Agency for Monterey County (TAMC) Regional Development Impact fees.

1.3 Background Conditions

Traffic volumes under Background conditions were derived by applying growth factors to the existing volumes on the study corridors in this analysis. More specifically, the corridors and their associated growth factors are the following:

1. E Laurel Drive – 2% (AM), 3% (PM)
2. Natividad Road – 2% (AM), 3% (PM)
3. Sherwood Drive – 2% (AM), 3% (PM)
4. E Rossi Street and W Rossi Street – 2% (AM), 3% (PM)
5. N Main Street:
    a. North of US 101 – 2% (AM), 3% (PM)
    b. South of US 101 – 10% (AM), 15% (PM)
6. E Market Street – 2% (AM), 3% (PM)
7. Front Street – 2% (AM), 3% (PM)
8. E Alisal Street – 2% (AM), 3% (PM)
9. Kern Street – 2% (AM), 3% (PM)
10. US 101 Onramps and Offramps – 2% (AM), 3% (PM)

The growth factors were primarily applied to the mainline traffic on each corridor. The lower of the two growth factors on intersecting streets was applied to the turning movements between those streets. The growth factors used are consistent with the net increase in traffic on these corridors attributable to approved projects in past traffic analyses in the study area.

Vehicle Circulation

Although most of the study intersections would continue to operate at or better than their respective level of service standards under Background conditions, the following six intersections would operate below their standards:

1. Natividad Road / E Laurel Drive: LOS E (AM and PM)
2. Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way: LOS E (AM), LOS F (PM)
5. N. Main Street (SR 183) / Rossi Street: LOS D (AM and PM)
7. Kern Street / US 101 Northbound Ramps – Mobray Way: Side Street approach LOS F (PM)

10. Sun Street / E Market Street: Side-street approach LOS F (PM)
12. US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS F (PM), Side-street approach LOS F (AM and PM)

1.4 Background Plus Project Conditions

Vehicle Circulation

The same five intersections significantly impacted under Existing Conditions would be significantly impacted by the project under Background Conditions:

1. Natividad Road / E Laurel Drive: LOS E (AM and PM)
2. Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way: LOS E (AM), LOS F (PM)
5. N. Main Street (SR 183) / Rossi Street: LOS D (PM)
10. Sun Street / E Market Street: Side-street approach LOS F (PM)
12. US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS F (PM), Side-street approach LOS F (AM and PM).

Figure ES-2 shows the levels of service with and without the project at each of the significantly impacted intersections for the Background Plus Project Condition. **Figure ES-2** also shows the contribution of the project to the intersection deficiency and project's percentage of total overall intersection delay.

See **Figure ES-4** for the recommended improvements at these intersections under Background Conditions. Implementation of these improvements would reduce the project's impact at these intersections to less-than-significant. The impact and the recommended mitigation measure at each intersection is described below.

- **Intersection #1 – Natividad Road / E Laurel Drive:**
  This intersection would operate at a deficient LOS E during the AM and PM peak hours, unchanged from Background Conditions. The project would add 16 AM peak hour and 17 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection that operates at a deficient level without the project.

  Mitigation: Add a third northbound and third southbound lane to Natividad Road through this intersection. Intersection operations would improve during the AM and PM peak hour to LOS D.

  Salinas TFO Project: This improvement is included in the City of Salinas TFO (Project 61).

  Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #2 – Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way:**
  This intersection would operate at a deficient LOS E (AM) and F (PM), unchanged from Background Conditions. The project would add 16 AM peak hour and 17 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection that operates at a deficient level without the project.

Mitigation: Convert the signal phasing on the east and west intersection approaches from concurrent phasing to split phasing. Intersection operations would improve during the AM and PM peak hour to LOS D.

Project Responsibility: To ensure that the intersection of Sherwood Drive – Natividad Road / E. Bernal Drive-La Posada Way will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Fee Ordinance to include the signal modifications at this intersection as one of the improvements that is funded by the TFO, or (2) if the signal modifications at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for modifying the signal phasing and ensure that the signal modification is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits and modify the signal phasing ensuring that the signal modification is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #5 – N Main Street (SR 183) / Rossi Street:**
  This intersection, which is under Caltrans jurisdiction, would operate at a deficient LOS D during the AM and PM peak hours, unchanged from Background Conditions. The project would add 17 trips to this intersection during the AM peak hour and 15 trips to this intersection during the PM peak hour. The trips added by the Project would not increase the average vehicle delay during the AM peak hour, but would increase the PM peak hour vehicle delay by 0.1 seconds.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay during the PM peak hour by at least 0.1 seconds.

  Mitigation: Add a third northbound and third southbound lane on N. Main Street through this intersection. Intersection operations would improve during the PM peak hour to LOS C.

  Salinas TFO Project: This improvement is included in the City of Salinas TFO (Project 31).

  Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #10 – Sun Street / E Market Street:**
  Side-street operations at this intersection (the southbound Sun Street approach) would operate at a deficient LOS F during the PM peak hour, unchanged from Background Conditions. The project would add 31 trips to this approach during the PM peak hour.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection whose southbound approach operates at LOS F without the Project.

  Mitigation: Signalize the intersection. The intersection would operate at LOS A during the AM and PM peak hours with signalization.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

Project Responsibility: To ensure that the intersection of Sun Street and East Market Street will operate at acceptable levels of service, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits for and installation of a traffic signal that will be operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #12 – US 101 Southbound Offramp – Merced Street / E Market Street:**
  This intersection would operate at a deficient LOS F during the PM peak hour, while side-street operations (the southbound US 101 Southbound Offramp approach) would operate at a deficient LOS F during the AM and PM peak hours, unchanged from Background Conditions. The project would add 30 AM peak hour and 27 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay on the southbound off-ramp approach during the AM and PM peak hours by at least 0.1 seconds.

  Mitigation: Signalize the intersection. Intersection operations would improve during the AM and PM peak hours to LOS B.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

  Project Responsibility: To ensure that the intersection of U.S. 101 Southbound Offramp – Merced Street/East Market Street will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Fee Ordinance to include a traffic signal at this intersection as one of the improvements that is funded by the TFO, or (2) if the traffic signal at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits and install the traffic signal ensuring that the signal is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

1.5 Cumulative Without Project Conditions

The Cumulative Without Project condition traffic volumes are primarily on traffic forecasts documented in the City of Salinas General Plan Circulation Study prepared by Higgins Associates in 2002. Traffic forecasts documented in the following reports were also referenced:

1. Monterey County Jail Housing Addition Traffic Impact Analysis, Hatch Mott MacDonald, April 29, 2014.
2. Haciendas Phase III/IV Traffic Impact Analysis, Hatch Mott MacDonald, April 8, 2014.

3. Sun Street Solid Waste Transfer Station Access Plan Traffic Impact Analysis, Higgins Associates, August 27, 2007.
4. Tynan Village Mixed Use Development Traffic Impact Study Report, Higgins Associates, November 22, 2004.
5. Salinas Sphere of Influence Amendment and Annexation Supplemental TIA, Fehr & Peers, November 14, 2007.

The Cumulative Condition traffic volume forecasts reflect new road links and the level of service calculations for the Cumulative Condition include intersection improvements that are included in the City of Salinas Traffic Fee Ordinance and are planned for implementation in conjunction with buildout of the city's General Plan. These improvements include the following:

1. TFO Project No. 30: Rossi Street Widening – widen to four lanes between Main Street and Sherwood Drive.
2. TFO Project No. 31: Main Street Widening – widen from a four to six-lane arterial between Casentini Street and Market Street.
3. TFO Project No. 33A: Bernal Drive Extension – extend as a four-lane arterial from Sherwood Drive/Natividad Road intersection to Kern Street.
4. TFO Project No. 33B: Bernal Drive Widening – widen, construct sidewalk and retaining wall on north side between Main Street and Rosarita Drive.
5. TFO Project No. 34: Constitution Boulevard Extension – extend from Laurel Drive to Bernal Drive Extension.
6. TFO Project No. 45: Laurel Drive Widening – widen to six lanes between Natividad and Constitution. Add left turn channelization east of Constitution.
7. TFO Project No. 46: Main Street Widening – widen to six lanes between Market Street and Bernal by eliminating on-street parking and widening UP Structure north of Market Street.
8. TFO Project No. 61: Natividad Road/Laurel Drive Intersection – widen the Natividad Road north and south intersection legs to provide the following lane configuration on the intersection approaches:
    a. Northbound approach – 1 left turn lane, 3 through lanes, 1 right turn lane
    b. Southbound approach – 2 left turn lanes, 2 through lanes, 1 through/right turn lane.
    c. Eastbound approach – 1 left turn lane, 2 through lanes, 1 right turn lane.
    d. Westbound approach – 2 left turn lanes, 2 through lanes, 1 right turn lane.

Vehicle Circulation

Although some of the study intersections would operate at or better than their respective level of service standards under Cumulative Without Project conditions, the following intersections would operate below their standards:

#5: N Main Street (SR 183) / Rossi Street: LOS D (PM)

#7: Kern Street / US 101 Northbound Ramps – Mobray Way: Overall LOS F, Side Street approach LOS F (PM)

#10: Sun Street / E Market Street: Side-street approach LOS F (PM)

#12: US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS E (AM) and LOS F (PM), Side-street approach LOS F (AM and PM)

#14: Kern Street / E Market Street: LOS F (PM)

1.6 Cumulative Plus Project Conditions

Vehicle Circulation

Although some of the study intersections would operate at or better than their respective level of service standards under Cumulative Plus Project conditions, the following intersections would operate below their standards and the project would contribute to the cumulative impact:

#5: N Main Street (SR 183) / Rossi Street: LOS D (PM)

#7: Kern Street / US 101 Northbound Ramps – Mobray Way: Overall LOS F, Side Street approach LOS F (PM)

#10: Sun Street / E Market Street: Side-street approach LOS F (PM)

#12: US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS E (AM) and LOS F (PM), Side-street approach LOS F (AM and PM)

#14: Kern Street / E Market Street: LOS F (PM)

Figure ES-3 shows the levels of service with and without the project at each of the significantly impacted intersections for the Cumulative Plus Project Condition. **Figure ES-3** also shows the contribution of the project to the intersection deficiency and project's percentage of total overall intersection delay.

See **Figure ES-4** for the recommended improvements at these intersections under Cumulative Conditions. Implementation of these improvements would reduce the project's impact at these intersections to less-than-significant. The impact and the recommended mitigation measure at each intersection is described below.

- **Intersection #5 – N Main Street (SR 183) / Rossi Street:**
  This intersection, which is under Caltrans jurisdiction, would operate at LOS C during the AM peak hour and a deficient LOS D during the PM peak hour unchanged from Cumulative Conditions. The project would add 17 trips to this intersection during the AM peak hour and 15 trips to this intersection during the PM peak hour. The trips added by the Project would not increase the average vehicle delay during the PM peak hour vehicle delay by 0.1 seconds.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay during the PM peak hour by at least 0.1 seconds. The Project's impact to this intersection is significant under Existing and Background Conditions.

  Mitigation:
  1) Add a third northbound through lane and third southbound through lane to N. Main Street at this intersection. The improvement would be achieved by converting the existing right turn lanes on northbound and southbound N. Main Street to through/right turn lanes.
  2) Add a second left turn lane on the westbound Rossi Street approach. TFO Project 30 would widen Rossi Street to a four-lane divided arterial within a right of way of 106 feet.

  With the second left turn lane included in the mitigation, the PM peak hour delay would be 41.8 seconds, which would be lower than the Cumulative Condition without project PM peak hour delay of 42.5 seconds. Therefore, the Project's cumulative impact would be mitigated.

  Salinas TFO Project: Projects 30 and 31. The City would need to modify Project 30 to include the second left turn lane on the westbound Rossi Street approach to N. Main Street.

Salinas TFO Project: Salinas TFO Project 30 and Project 31.

Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #7 – Kern Street / US 101 Northbound Ramps – Mobray Way:**
  This intersection would operate at an overall LOS F with side-street operations (the eastbound US 101 Northbound Ramps approach) of LOS F during the PM peak hour, unchanged from Cumulative Without Project Conditions. The project would add 2 trips to the eastbound off-ramp approach during the PM peak hour. The project by itself would not significantly impact the intersection, but the project would contribute to the cumulative operating deficiency at the intersection. Traffic diversions associated with the Bernal Avenue Extension and the Constitution Boulevard Extension will contribute to the deficient operations at this intersection under Cumulative Conditions.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay on the eastbound off-ramp approach during the PM peak hour by at least 0.1 seconds.

  Mitigation: Signalize the intersection. Intersection operations would improve during the AM peak hour to LOS B and to LOS C during the PM peak hour.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO. It is recommended that this improvement be added to Salinas TFO Project 33A (Bernal Avenue Extension) and 34 (Constitution Boulevard Extension). Traffic diversions associated with the extensions of Bernal Avenue and Constitution Boulevard will create new turning movement patterns at the Kern Avenue/Northbound US 101 ramps intersection and these new turning patterns will necessitate modification of the existing intersection traffic control. For this reason, the costs for the new intersection traffic control should be included in the TFO.

  Project Responsibility: This improvement is not currently included in the City's Capital Improvement Program nor the TFO. To mitigate the Project's cumulative impact, a mechanism would need to be in place that ensures the ultimate full funding and completion of the improvement. This could be accomplished by adding the improvement to the City TFO or Capital Improvement Program. The Project's cumulative impact would be mitigated by the following:
  Alternative 1: Add the improvement to the TFO and pay the TFO fee.
  Alternative 2: Include the improvement in the Capital Improvement Program and pay a pro-rata contribution toward implementation of the project that would be combined with future development impact fees to fully fund implementation of the improvement. The pro-rata contribution would be based upon the project's share of cumulative traffic growth, where cumulative traffic growth equals Cumulative With Project volumes minus Existing volumes. The equitable share contribution calculation is based on the average of AM and PM peak hour volumes. The project's equitable share of cumulative traffic growth is 1 percent (1%).

- **Intersection #10 – Sun Street / E Market Street:**
  Side-street operations at this intersection (the southbound Sun Street approach) would operate at a deficient LOS F during the PM peak hour, unchanged from Cumulative Conditions. The project would add 31 trips to this approach during the PM peak hour. The Project's impact to this intersection is significant under Existing and Background Conditions.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection whose southbound approach operates at LOS F without the Project.

Mitigation: Signalize the intersection. The intersection would operate at LOS A during the AM and PM peak hours with signalization.

Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

Project Responsibility: The Project's impact to this intersection was identified as significant under Existing and Background Conditions. The mitigation required for Cumulative Conditions (signalization) is the same as the mitigation recommended for Existing and Background Conditions. Therefore, the Project's responsibility to mitigate cumulative impacts is the same as the responsibility identified for the Existing and Background Conditions, which is as follows: To ensure that the intersection of Sun Street and East Market Street will operate at acceptable levels of service, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits for installation of a traffic signal that will be operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #12 – US 101 Southbound Off-ramp – Merced Street / E Market Street:**
  This intersection would operate at a deficient LOS E during the AM peak hour and LOS F during the PM peak hour, while side-street operations (the southbound US 101 Southbound Off-ramp approach) would operate at a deficient LOS F during the AM and PM peak hours, unchanged from Cumulative Conditions. The project would add 30 AM peak hour and 27 PM peak hour trips to this intersection. The Project's impact to this intersection is significant under Existing and Background Conditions.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay on the southbound off-ramp approach during the AM and PM peak hours by at least 0.1 seconds.

  Mitigation: Signalize the intersection. Intersection operations would improve during the AM and PM peak hours to LOS B.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

  Project Responsibility: The Project's impact to this intersection was identified as significant under Existing and Background Conditions. The mitigation required for Cumulative Conditions (signalization) is the same as the mitigation recommended for Existing and Background Conditions. Therefore, the Project's responsibility to mitigate cumulative impacts is the same as the responsibility identified for the Existing and Background Conditions, which is as follows: To ensure that the intersection of U.S. 101 Southbound Off-ramp – Merced Street/East Market Street will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Fee Ordinance to include a traffic signal at this intersection as one of the improvements that is funded by the TFO, or (2) if the traffic signal at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits

and install the traffic signal ensuring that the signal is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #14 – Kern Street / E Market Street:**
  This intersection would operate at a deficient LOS F during the PM peak hour, unchanged from Cumulative without Project Conditions. The project would add 17 PM peak hour trips to this intersection. The project by itself would not significantly impact the intersection, but the project would contribute to the cumulative operating deficiency at the intersection. Traffic diversions associated with the Bernal Avenue Extension and the Constitution Boulevard Extension will contribute to the deficient operations at this intersection under Cumulative Conditions.

  Impact: The impact of the Project to the intersection is significant because the Project will add trips to the intersection that operates at a deficient level without the project.

  Mitigation: Restripe the westbound E. Market Street approach as one exclusive left turn lane, one through lane and one exclusive right turn lane. With this improvement, the intersection would operate at LOS C during the AM peak hour and LOS D during the PM peak hour.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO. It is recommended that this improvement be added to Salinas TFO Project 33A (Bernal Avenue Extension) and 34 (Constitution Boulevard Extension). Traffic diversions associated with the extensions of Bernal Avenue and Constitution Boulevard will create new turning movement patterns at the Kern Avenue/E. Market Street intersection and these new turning patterns, including an increase in the volume of traffic turning right from westbound E. Market Street to northbound Kern Avenue, will necessitate modification of the existing intersection lane configuration. For this reason, the costs for the new intersection configuration should be included in the TFO.

  Project Responsibility: This improvement is not currently included in the City's Capital Improvement Program nor the TFO. To mitigate the Project's cumulative impact, a mechanism would need to be in place that ensures the ultimate full funding and completion of the improvement. This could be accomplished by adding the improvement to the City TFO or Capital Improvement Program. The Project's cumulative impact would be mitigated by the following:

  Alternative 1: If the improvement is added to the TFO, pay the TFO fee.
  Alternative 2: Include the improvement in the Capital Improvement Program and pay a pro-rata contribution toward implementation of the project that would be combined with future development impact fees to fully fund implementation of the improvement. The pro-rata contribution would be based upon the project's share of cumulative traffic growth, where cumulative traffic growth equals Cumulative With Project volumes minus Existing volumes. The equitable share contribution calculation is based on the average of the AM and PM peak hour volumes. The project's share of cumulative traffic growth is three percent (3%).

Table ES-1: Existing Plus Project Condition Intersection Levels of Service With Project's Percentage Share of Deficiency at Significantly Impacted Intersections

	N-S Street	E-W Street	Existing Intersection Control	LOS Stnd.	Peak Hour	Existing Conditions		Existing Plus Project Conditions		Intersection - Average of All Movements					Unsignalized Intersection Side Street Approach					Project Contribution to Total Intersection Volume

Notes:

1. LOS Stnd. = Level of Service Standard.
2. XX (YY) = Overall (Side Street).
3. Analysis performed using 2010 Highway Capacity Manual methodologies.
4. Overall level of service standard for the City of Salinas is LOS D.
   Maximum delay for LOS D at a signalized intersection = 55.0 sec per vehicle
   Maximum delay for LOS D at an unsignalized intersection = 35.0 sec per vehicle
5. Overall level of service standard for the Caltrans is the transition between LOS C and LOS D (LOS C/D).
   Maximum delay for LOS C at a signalized intersection = 35.0 sec per vehicle
   Maximum delay for LOS C at an unsignalized intersection = 25.0 sec per vehicle
6. Worst approach level of service standard is generally LOS E. Level of service "F" is the level of service at which improvements would normally be required.
   Maximum delay for LOS E at an unsignalized intersection approach = 50.0 sec per vehicle
7. * : Delay exceeds 300 seconds per vehicle. Percentage of delay deficiency calculation not shown for conditions when the delay is greater than 300 seconds per vehicle due to the problematic nature of the delay calculation at high levels of saturation.

Table ES-2: Background Plus Project Condition Intersection Levels of Service With Project's Percentage Share of Deficiency at Significantly Impacted Intersections

	N-S Street	E-W Street	Existing Intersection Control	LOS Stnd.	Peak Hour	Background Conditions		Background Plus Project Conditions		Intersection - Average of All Movements					Unsignalized Intersection Side Street Approach					Project Contribution to Total Intersection Volume

Notes:

1. LOS Stnd. = Level of Service Standard.
2. XX (YY) = Overall (Side Street).
3. Analysis performed using 2010 Highway Capacity Manual methodologies.
4. Overall level of service standard for the City of Salinas is LOS D.
   Maximum delay for LOS D at a signalized intersection = 55.0 sec per vehicle
   Maximum delay for LOS D at an unsignalized intersection = 35.0 sec per vehicle
5. Overall level of service standard for the Caltrans is the transition between LOS C and LOS D (LOS C/D).
   Maximum delay for LOS C at a signalized intersection = 35.0 sec per vehicle
   Maximum delay for LOS C at an unsignalized intersection = 25.0 sec per vehicle
6. Worst approach level of service standard is generally LOS E. Level of service "F" is the level of service at which improvements would normally be required.
   Maximum delay for LOS E at an unsignalized intersection approach = 50.0 sec per vehicle
7. * : Delay exceeds 300 seconds per vehicle. Percentage of delay deficiency calculation not shown for conditions when the delay is greater than 300 seconds per vehicle due to the problematic nature of the delay calculation at high levels of saturation.

Table ES-3: Cumulative Plus Project Condition Intersection Levels of Service With Project's Percentage Share of Deficiency at Significantly Impacted Intersections

	N-S Street	E-W Street	Existing Intersection Control	LOS Stnd.	Peak Hour	Cumulative Conditions		Cumulative Plus Project Conditions		Intersection - Average of All Movements					Unsignalized Intersection Side Street Approach					Project Contribution to Total Intersection Volume

2 Introduction

This report summarizes the potential traffic circulation issues associated with the proposed Rodeo Property General Plan Amendment (GPA) and Rezoning in Salinas, California Vehicular, pedestrian and bicycle circulation issues were evaluated at the project site and the surrounding street network in Salinas, along with site access and internal circulation. The project site is located on Sun Street between US 101 and East Market Street. The location of the project site with respect to the area road network is indicated on **Figure 1**. **Figure 2** shows the project parcel. Access to the site is provided via Sun Street and its connection to Calle Cebu and E. Market Street.

2.1 Scope of Work

A specific development to be constructed on the project is not proposed at this time. Developed at a 0.4 Floor Area Ratio, the GPA Amendment and Rezoning would allow for the development of up to 118,600 square feet of floor space on the project site. For this study, the transportation impacts associated with the development of 118,600 square feet of floor space were analyzed. For purposes of this traffic study, 4 percent of the floor space (4,700 square feet) was assumed to be occupied by support office space and this space was modeled as general office space. The remaining floor area (113,900 square feet) was modeled as light industrial space.

This report addresses the following:

- Existing vehicular, pedestrian, bicycle and transit circulation at the project site and the surrounding street network.
- Assessment of potential direct impacts to vehicular, pedestrian, bicycle and transit circulation due to the GPA, and recommendations to minimize or alleviate those impacts.
- Assessment of potential cumulative traffic impacts.
- Potential site access issues.

2.2 Study Network

The AM and PM peak periods were analyzed at the following intersections:

1. Natividad Road / East Laurel Drive;
2. Sherwood Drive - Natividad Road / East Bernal Drive – La Posada Way;
3. North Main Street / Bernal Drive;
4. Sherwood Drive / Sherwood Place;
5. North Main Street (State Route 183) / Rossi Street;
6. Sherwood Drive / East Rossi Street – Calle Cebu;
7. Kern Street / US 101 Northbound Ramps – Mobray Way;
8. East Market Street – Front Street / East Market Street;
9. East Market Street – Sherwood Drive / Market Place – East Market Street;
10. Sun Street / East Market Street;
11. Griffin Street – Simas Street / East Market Street;
12. US 101 Southbound Offramp – Merced Street / East Market Street;
13. US 101 Southbound Onramp / East Market Street;
14. Kern Street / East Market Street; and
15. Front Street / East Alisal Street.

Figure 3 shows the existing traffic controls and lane configurations at the study intersections.

Traffic operations for the Existing, Existing Plus Project, Background, Background Plus Project, Cumulative Without Project and Cumulative Plus Project development scenarios were analyzed. Improvements recommended to address project and cumulative impacts are recommended where warranted.

2.3 Level of Service Standard

Intersection traffic operations were evaluated based upon the level of service (LOS) concept. LOS is a qualitative description of an intersection's operations, ranging from LOS A to LOS F. Level of Service "A" represents free flow uncongested traffic conditions. Level of Service "F" represents highly congested traffic conditions with unacceptable delay to vehicles at intersections. The intermediate levels of service represent incremental levels of congestion and delay between these two extremes. The analysis was performed using both the *2000* and *2010 Highway Capacity Manual* methodologies. A LOS description is included as **Appendix A**.

The study area includes intersections under the jurisdictions of the City of Salinas and Caltrans. The City of Salinas has an overall level of service (LOS) standard of LOS D, which applies to Intersections #1-4, 6, 8-11, and 14-15. The Caltrans' overall level of service standard is generally the transition from LOS C to LOS D (abbreviated as LOS C/D in this document), which applies to Intersections #5, 7, 12 and 13. According to the *Caltrans Guide for the Preparation of Traffic Impact Studies,* the existing measure of effectiveness should be maintained when an existing State highway facility is operating at less than the appropriate target level of service.

2.4 Analysis Methodology

The Synchro 9 software was used for analysis of intersection delays and associated levels of service.

Note: The traffic signal at Intersection #3 – N Main Street / Bernal Drive – is controlled by the InSync adaptive traffic control system, which optimizes traffic throughput through this intersection and to other corridor intersections to the north N Main Street. There is currently no analysis methodology that fully models the exact operations of an InSync system. For that reason, the analysis results for this intersection should be considered conservative.

2.5 Significance Criteria

According to the California Environmental Quality Act (CEQA) guidelines, a project may have a significant effect on the environment if it would cause an increase in traffic that is substantial in relation to the existing traffic load and capacity of the street system. The following significance criteria has been used within this study, based upon the jurisdiction of each study intersection:

2.5.1 City of Salinas

The City of Salinas impact criteria for transportation-related impacts is used in this study. It is as follows:

Signalized Intersection (Intersections #1-3, 6, 8-9, 11, and 14-15)

A significant impact at a **signalized study intersection** is defined to occur under either of the following two conditions:

- The addition of project traffic causes operations to deteriorate from an acceptable level (LOS D or better) to an unacceptable level (LOS E or LOS F); or
- The addition of project traffic adds one vehicle trip to intersections already operating at LOS E or LOS F.

One- or Two-Way Stop-Controlled Intersection (Intersections #4 and 10)

A significant impact at a **one- or two-way stop-controlled study intersection** is defined to occur under either of the following two conditions:

- The addition of project traffic causes overall operations to deteriorate from an acceptable level (LOS D or better) to an unacceptable level (LOS E or LOS F); or

- The addition of project traffic adds one vehicle trip to intersections whose side-street operations are already operating at LOS F.

2.5.2 Caltrans

The following significance criteria have been used within this study at intersections under the jurisdiction of Caltrans:

Signalized Intersection (LOS C/D Standard) (Intersection #5)

A significant impact at a **signalized study intersection** is defined to occur under either of the following two conditions:

- A significant impact would occur if an intersection operating at LOS A, B or C degrades to D, E or F; or
- For intersections already operating at unacceptable levels D, E or F, a significant impact would occur if the project would cause overall delay to increase by at least 0.1 seconds.

A significant impact is satisfactorily mitigated when mitigation measures are implemented that would restore the intersection level of service to the pre-project condition or better.

One- or Two-Way Stop-Controlled Intersection (Intersections #7, 12, 13)

A significant impact at a **one- or two-way stop-controlled study intersection** is defined to occur under either of the following two conditions:

- A significant impact would occur if any traffic movement operating at LOS A, B, C, D or E degrades to F; or
- For traffic movements already operating at unacceptable level F, a significant impact would occur if the project would cause delay for the movement operating at LOS F to increase by at least 0.1 seconds.

A significant impact is satisfactorily mitigated when mitigation measures are implemented that would restore the intersection level of service to the pre-project condition or better.

2.6 Funding for Transportation Improvements

2.6.1 City of Salinas Traffic Impact Fee

The City of Salinas adopted the first Salinas Traffic Fee Ordinance (TFO) program in August 1987. The fee program links increases in traffic generated by new development to the cost of transportation improvements that would be required to mitigate the traffic impacts caused by the new development. Projects such as schools are exempt from payment of this fee.

The City of Salinas Traffic Improvement Program, Wood Rodgers, March 2010, identifies the roadway improvements currently funded by the TFO. These improvements are cited as potential improvement methods to offset project and cumulative impacts. New development constructed on the project site would be subject to payment of traffic impact fees according to the requirements of the TFO.

2.6.2 TAMC Regional Development Impact Fee

The Transportation Agency for Monterey County (TAMC) and its member jurisdictions have adopted a county-wide, regional development impact fee to cover the costs for studies and construction of many improvements throughout Monterey County. This impact fee, which went into effect on August 27, 2008, is applied to all new development within Monterey County. As with the Salinas TFO, projects such as schools are exempt from payment of the TAMC fee.

The governing document for the fee is the *Regional Impact Fee Nexus Study Update* (March 26, 2008) prepared by Kimley-Horn Associates, Inc. *The Regional Impact Fee Nexus Study Update* was updated again in June 2013 by Wood Rodgers. New development constructed on the project site would be subject to payment of the TAMC fee.

3 Existing Conditions

This chapter of the report evaluates Existing traffic conditions and includes a description of the project setting.

3.1 Existing Road Network

The project site is located off Sun Street in the central portion of Salinas, northeast of the downtown central business district (i.e., Downtown). The site is surrounded by US 101 to the north and industrial and commercial uses to the east, south and west.

The site would be directly accessible via Sun Street and indirectly accessible from Calle Cebu (via Sun Street); see Chapter 3, Existing Plus Project Conditions, for more information about the project access points. Sun Street connects to East Market Street, while Calle Cebu connects to Sherwood Drive. Regional access to the project site is provided by US 101, East Market Street, Sherwood Drive, Natividad Road, North Main Street and Front Street. Other streets in the area include East Laurel Drive, Bernal Drive, La Posada Way, Sherwood Place, Rossi Street, Kern Street, Mobray Way, Market Way, Griffin Street, Merced Street and East Alisal Street. Each street is discussed below, in alphabetical order.

East Alisal Street is a four-lane major arterial running in an east-west direction though central Salinas. The speed limit on Alisal Street is 35 miles per hour (mph) east of Front Street and 25 mph west of Front Street.

East Bernal Drive is a three-lane (one lane eastbound and two lanes westbound) major arterial that runs between North Main Street and Sherwood Drive. The roadway continues as a two-lane roadway (West Bernal Drive) west of North Main Street. The speed limit on East Bernal Drive is 35 mph, while the speed limit on West Bernal Drive is 25 mph.

Calle Cebu is a two-lane east-west local street that runs between Sherwood Drive and Sun Street, east of Sherwood Drive. On-street parking is allowed on both sides of the street. Calle Cebu becomes Rossi Street west of Sherwood Drive. The speed limit on Calle Cebu is 25 mph.

Front Street is a four-lane north-south major arterial that runs between East Market Street and John Street. It provides access to commercial and residential land uses. Front Street has a posted speed limit of 25 mph north of East Alisal Street and 35 mph south of East Alisal Street.

Griffin Street is a minor arterial in central Salinas providing access to the commercial and industrial areas between Downtown and US 101. The speed limit on Griffin Street is 25 mph.

Kern Street is a minor arterial in eastern Salinas that connects the northbound US 101 ramps to E. Market Street. It provides access to commercial and residential uses directly east of US 101. There are no speed limit signs on Kern Street; thus, the speed limit is presumed to be 30 mph.

La Posada Way is a local street in northern Salinas that provides access to a residential neighborhood. The speed limit on La Posada Way is 25 mph.

East Laurel Drive is an east/west four-lane major arterial that extends between North Davis Road on the west and Williams Road on east, where it terminates. East Laurel Drive has a posted speed limit of 35 mph west of Natividad Road and 45 mph east of Natividad Road.

North Main Street is a four- to six-lane north-south major arterial in central and northern Salinas. It provides primary access to the Downtown from the north, as well as to northbound and southbound US 101 approximately one-half mile north of Rossi Street. Commercial and

residential land uses line North Main Street. South of US 101, North Main Street is also State Route 183, which continues south then west towards Castroville. The speed limit on North Main Street is 40 miles per hour in the vicinity of the project site.

East Market Street is a four-lane east-west major arterial in the vicinity of the project site, connecting the Downtown with eastern Salinas. It provides access primarily to commercial land uses along its frontage. It also provides direct access to and from southbound US 101 and access to and from northbound US 101 via Kern Street. The speed limit on East Market Street is 25 mph west of Sherwood Drive and 35 mph east of Sherwood Drive.

Market Way is two-lane collector street providing access to the Chinatown neighborhood north of Downtown. The speed limit on Market Way is 25 mph.

Merced Street is a two-lane local street just west of US 101, providing access to commercial and residential land uses south of East Market Street. The speed limit on Merced Street is 25 mph.

Mobray Way is a private road that provides access to the Sherwood Lake Mobile Home Park.

Natividad Road begins as a continuation of Sherwood Drive. Between East Bernal Drive and East Laurel Drive, Natividad Road is a four-lane major arterial. Natividad Road is a six-lane divided major arterial between East Laurel Drive and Boronda Road. Natividad Road is a two-lane rural roadway north of Boronda Road to Old Stage Road. Natividad Road has a posted speed limit of 45 mph.

Rossi Street is a two-lane east-west minor arterial west of Sherwood Drive. It provides access to residential and commercial land uses. The posted speed limit on Rossi Street is 40 mph west of North Main Street and 25 mph east of North Main Street.

Sherwood Drive is a four-lane north-south major arterial that runs from East Market Street to East Bernal Drive, where its name changes to Natividad Road. It provides access to commercial and residential land uses. The posted speed limit on Sherwood Drive is 45 mph between East Bernal Drive and Sherwood Place and 35 mph between Sherwood Place and East Market Street.

Sherwood Place is a two-lane local street off of Sherwood Drive, providing access to the Salinas Education Center, a collection of schools and offices operate by the Salinas Unified High School District (SUHSD). The speed limit on Sherwood Place is 25 mph.

Simas Street is a two-lane local street north of East Market Street. It provides access to both commercial and industrial land uses. The speed limit on Simas Street is 25 mph.

Sun Street is a two-lane local street in central Salinas, east of Downtown. It provides access to commercial, industrial, and residential areas. The speed limit on Sun Street is 25 mph.

US 101 is a four-lane freeway in Salinas, extending south to San Luis Obispo and Los Angeles and north to San Jose and San Francisco. The speed limit on US 101 is 65 mph.

3.2 Existing Pedestrian Network

Sidewalks are present along both sides of Sun Street and Calle Cebu, extending to the study project site at the north end of Sun Street. These sidewalks are continuous onto intersecting streets, such as East Market Street, Sherwood Drive, North Market Street and Front Street. Although the sidewalks also continue onto Natividad Road, there is a gap in the sidewalk network along southbound Natividad Road between Sorrentini Drive and East Bernal Drive.

3.3 Existing Bicycle Network

The City of Salinas has adopted a Master Bikeway Plan that designates routes along roadways that can be used by bicycling commuters and recreational riders for safe access to major employers, shopping centers and schools. Consistent with State and Federal designations, there are three basic types of bicycle facilities in Salinas. Each bike facility type is described below:

- Bike path (Class I) - A separate right-of-way designed for the exclusive use of cyclists and pedestrians, with minimal crossings for motorists.
- Bike lane (Class II) - A lane on a regular roadway, separated from the motorized vehicle right-of-way by paint striping, designated for the exclusive or semi-exclusive use of bicycles. Bike lanes allow one-way bike travel. Through travel by motor vehicles or pedestrians is prohibited, but crossing by pedestrians and motorists is permitted.
- Bike route (Class III) - Provides shared use of the roadway with motorists, designated by signs or permanent markings.

There are no dedicated bicycle facilities (Class I bicycle paths) near the project site.

Class II bike lanes are currently provided on Rossi Street and Sherwood Drive near the project site.

There are no designated bike routes (Class III) in the project vicinity.

Appendix B illustrates the City of Salinas bicycle facilities.

3.4 Existing Transit Network

Public transit service in the County of Monterey and City of Salinas is provided by Monterey-Salinas Transit (MST). MST focuses on improving operational conditions through established bus routes and schedules that efficiently meet travel demands, reduce travel times, improve service reliability, and encourage bike-and-ride initiatives. All MST buses are wheelchair accessible and equipped with bike racks. The following MST routes serve the immediate project area:

- Route 45 – Northridge – Salinas
- Route 46 – Salinas - Natividad

Appendix C illustrates the existing transit routes in the vicinity of the project site.

The nearest bus stops to the project site are located at the following locations:

- Eastbound East Market Street, east of Peach Street (Line 45);
- Eastbound East Market Street, east of Griffin Street (Line 45);
- Westbound East Market Street, west of Simas Street (Line 45);
- Northbound Sherwood Drive, north of Calle Cebu (Line 46);
- Westbound East Rossi Street, west of Sherwood Drive (Line 46).

These bus stops are located within a 10-minute walk from the project site.

Note: Although Lines 82 and 86 also travel along East Market Street, neither line stops at any of the bus stops on East Market Street near the project site.

3.5 Existing Condition Traffic Circulation

3.5.1 Vehicle Circulation

The intersection turning movement counts were collected during the AM (7:00 – 9:00 AM) and PM (4:00 – 6:00) peak hours on Friday, June 2 and Monday, June 5, 2017. Traffic data was collected for cars, trucks, buses, bicyclists, and pedestrians. From these counts, the AM and PM peak hour volumes were derived. The intersection traffic volumes were collected on atypical days of the week and when Salinas area schools were not in session. Therefore, the collected intersection traffic volumes were adjusted to be consistent with available historical volumes when schools were in session.

Appendix D contains the traffic count data at the study intersections, including a table summarizing when each intersection volume was collected. **Appendix L** provides a comparison of the traffic volumes utilized for this study and traffic counts collected for previous traffic studies and traffic counts collected by the City at selected intersections. The tables contained in Appendix L show the adjustments that were made for each study intersection. The tables in Appendix L also include existing AM and PM peak hour traffic volumes that were utilized in previously prepared traffic studies. These studies are as follows:

1. Haciendas Phase III/IV Traffic Impact Analysis, Hatch Mott MacDonald, April 8, 2014.
2. Sun Street Solid Waste Transfer Station, Hatch Mott MacDonald memorandum to Jose Gamboa, August 17, 2011.
3. Proposed New City of Salinas Police Station Traffic Impact Report, Crane Associates, September 6, 2017. Traffic counts collected July 2017.

Traffic counts collected by the City of Salinas within the last two-year period that are available on the city's website are also included in the tables for comparison.

Because Sherwood Place provides access to a school, peak hour turning movement volumes from the Haciendas Phase III/IV traffic impact study at the Sherwood Drive/Sherwood Place intersection were used for this study. The Haciendas Phase III/IV traffic volumes were collected when Salinas schools were in session.

Figure 4 depicts the peak turning movement volumes for the study intersections under Existing Conditions.

The intersection levels of service for the Exiting Condition are summarized in **Table 2**. Although most of the study intersections currently operate at or better than their respective level of service standards under Existing conditions, the following five intersections currently operate below their standards:

1. Natividad Road / E Laurel Drive: LOS E (AM and PM)
2. Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way: LOS E (AM), LOS F (PM)
5. N Main Street (SR 183) / Rossi Street: LOS D (PM)
10. Sun Street / E Market Street: Side-street approach LOS F (PM)
12. US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS F (PM), Side-street approach LOS F (AM and PM)

See **Appendix E** for the level of service calculations under Existing Conditions.

Figure 4: Existing Conditions – AM and PM Peak Hour Volumes

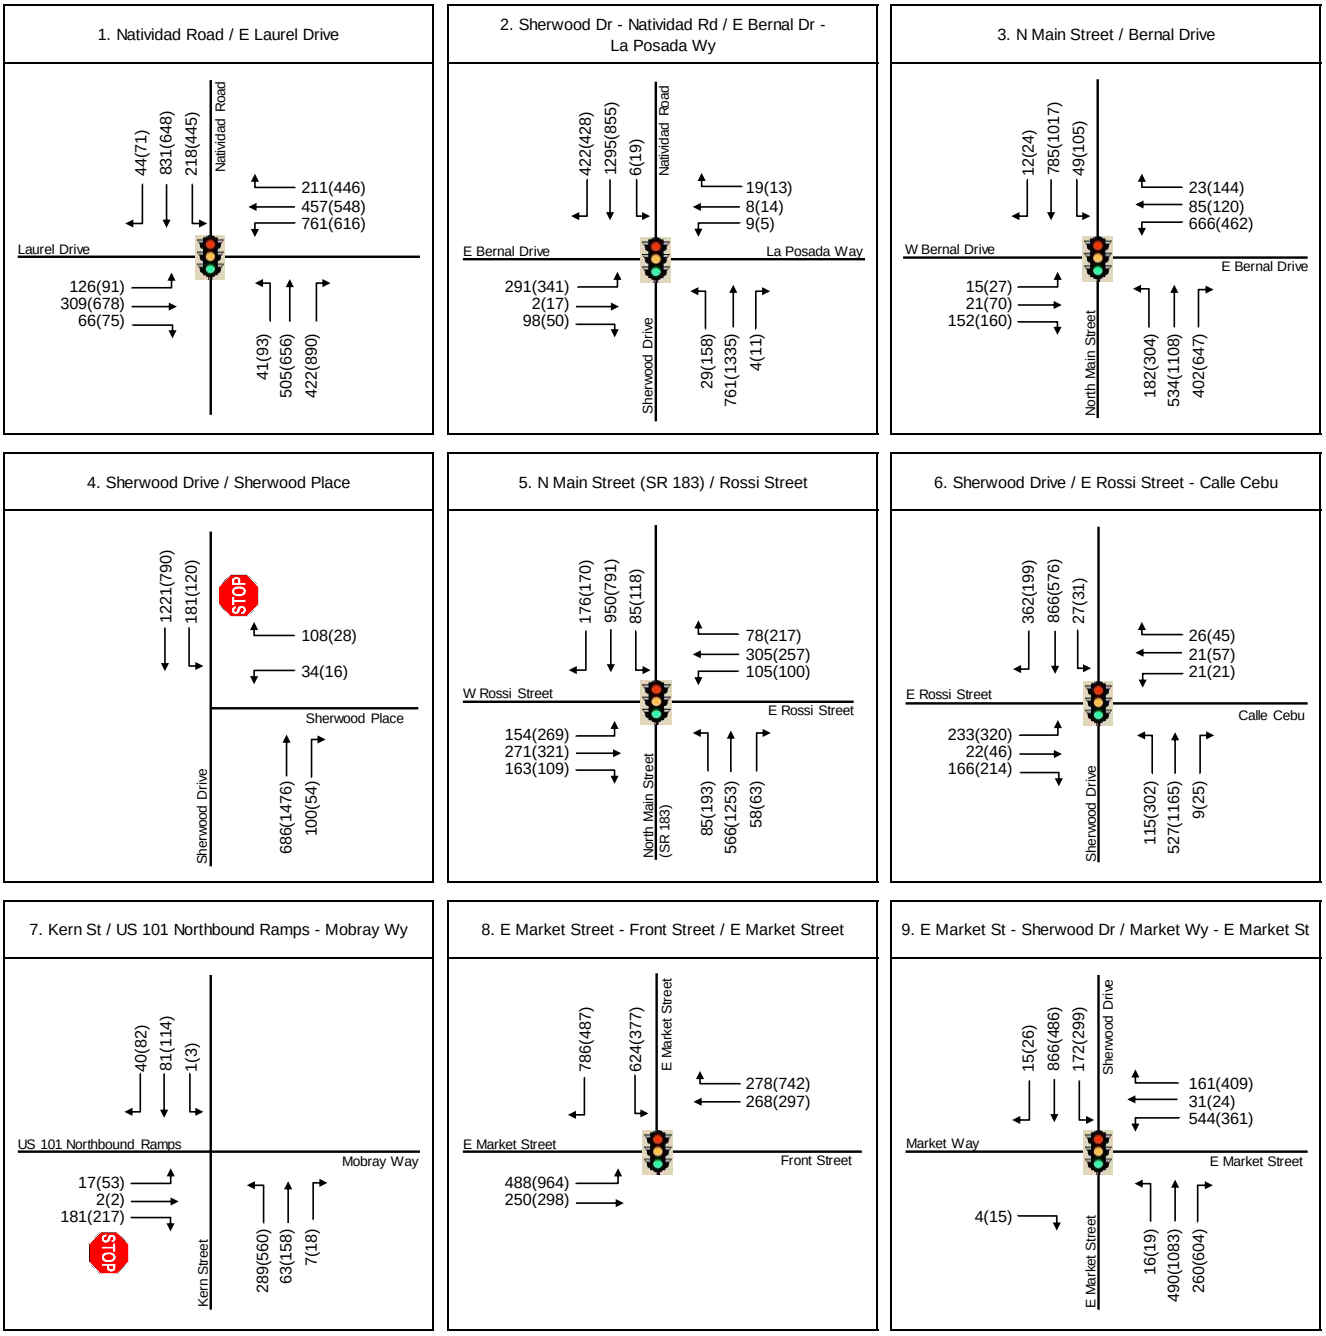

Figure 4: Existing Conditions – AM and PM Peak Hour Volumes (Continued)

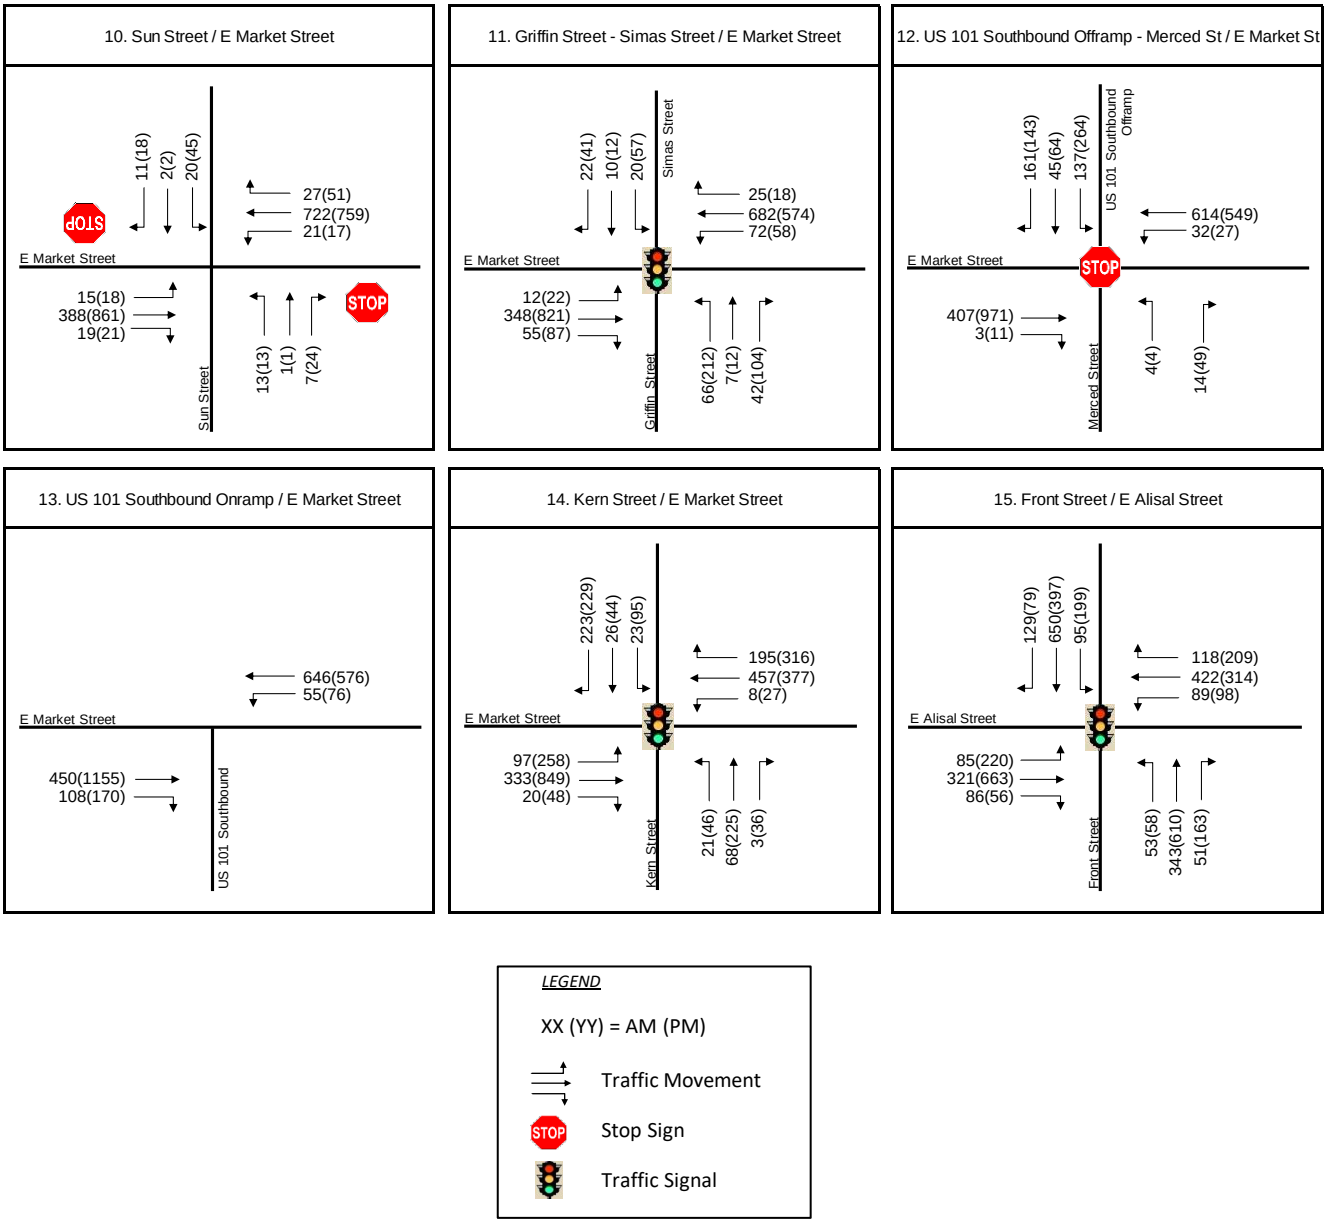

Source: Mott MacDonald

3.5.2 Pedestrian Circulation

A review of the traffic counts found that there is a low to moderate level of pedestrian activity near the project site. Pedestrian activity is highest near the residential and commercial areas on Sherwood Drive and E Market Street, especially during the PM peak hour (compared to the AM peak hour).

3.5.3 Bicycle Circulation

A review of the traffic counts found that there is relatively little bicycle activity in the study network, including near the project site.

4 Existing Plus Project Conditions

This chapter describes the analysis of the transportation impacts under Existing Plus Project traffic conditions.

4.1 Project Description

The project is a General Plan amendment and Rezone change that would allow development of industrial and commercial uses on a 6.8-acre site located on Sun Street adjacent to US 101. The proposed land use designation would allow site to be developed at a floor area ratio 0.4, which would allow for up to 118,600 square feet of industrial floor space. For purposes of this traffic study, 4 percent of the floor space (4,700 square feet) was assumed to be occupied by support office space and this space was modeled as general office space. The remaining floor area (113,900 square feet) was modeled as light industrial space.

The site is designated in the General Plan as Open Space. Access to the site is provided via Sun Street and its connection to Calle Cebu and E. Market Street.

4.2 Project Trip Generation

Table 1 contains the trip generation estimate for the project. The estimate was derived using trip rates from the Institute of Transportation Engineers (ITE) publication *Trip Generation Manual,* 10th Edition, 2017. Note that trip generation estimates for the industrial and office components of the project have been separately calculated.

In total, the project is estimated to generate 611 daily trips, with 85 trips (74 in, 11 out) during the AM peak hour and 77 trips (10 in, 67 out) during the PM peak hour.

Table 1: Project Trip Generation

			AM PEAK HOUR				PM PEAK HOUR			
TRIP GENERATION RATES	ITE LAND USE CODE	DAILY TRIP RATE	PEAK HOUR RATE	% OF ADT	% IN	% OUT	PEAK HOUR RATE	% OF ADT	% IN	% OUT
General Light Industrial (per 1,000 sq. ft.)	110	4.96	0.70	14%	88%	12%	0.63	13%	13%	87%
General Office	710	9.74	1.16	12%	86%	14%	1.15	12%	16%	84%

			AM PEAK HOUR				AM PEAK HOUR			
GENERATED TRIPS	PROJECT SITE	DAILY TRIPS	PEAK HOUR TRIPS	% OF ADT	TRIPS IN	TRIPS OUT	PEAK HOUR TRIPS	% OF ADT	TRIPS IN	TRIPS OUT
Industrial	113,900 sq. ft.	565	80	14%	70	10	72	13%	9	63
Office	4,700 sq. ft.	46	5	11%	4	1	5	11%	1	4
Total:	118,600 sq. ft.	611	85		74	11	77		10	67

Notes:

1. Trip generation rates from Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, 2017, unless otherwise noted.
2. "sq. ft." = square feet.

Source: Mott MacDonald

4.3 Project Trip Distribution and Assignment

Figure 5 depicts the trip distribution for the project. This distribution was derived based upon adjacent complementary uses in the greater Salinas area. Note that this distribution was previously included in *Rodeo Property Preliminary Traffic Assessment, Salinas California,* Mott MacDonald, December 15, 2016. The trip distribution was combined with the trip generation to derive the project trip assignment depicted on **Figure 6**. The trip assignment was added to the existing traffic volumes to create the Existing Plus Project volumes depicted in **Figure 7**.

4.4 Existing Plus Project Condition Traffic Circulation

4.4.1 Vehicle Circulation

Table 2 summarizes the levels of service at the study intersections under Existing and Existing Plus Project conditions. Although most of the study intersections would operate at or better than their respective level of service standards, the following five intersections that currently operate below acceptable LOS would be significantly impacted by the project based upon the significance criteria utilized for this study:

1. Natividad Road / E Laurel Drive: LOS E (AM and PM)
2. Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way: LOS E (AM), LOS F (PM)
5. N Main Street (SR 183) / Rossi Street: LOS D (PM)
10. Sun Street / E Market Street: Side-street approach LOS F (PM)
12. US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS F (PM), Side-street approach LOS F (AM and PM)

See **Appendix F** for the level of service calculations under Existing Plus Project Conditions.

Below is a discussion of deficient operations and recommended improvements at the study intersections under Existing Plus Project conditions. Recommended improvements are summarized in **Table 3**.

- **Intersection #1 – Natividad Road / E Laurel Drive:**
  This intersection would operate at a deficient LOS E during the AM and PM peak hours, unchanged from Existing Conditions. The project would add 16 AM peak hour and 17 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection that operates at a deficient level without the project.

  Mitigation: Add a third northbound and third southbound lane to Natividad Road through this intersection. Intersection operations would improve during the AM and PM peak hour to LOS D.

  Salinas TFO Project: This improvement is included in the City of Salinas TFO (Project 61).

  Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #2 – Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way:**
  This intersection would operate at a deficient LOS E (AM) and F (PM), unchanged from Existing Conditions. The project would add 16 AM peak hour and 17 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection that operates at a deficient level without the project.

  Mitigation: Convert the signal phasing on the east and west intersection approaches from concurrent phasing to split phasing. Intersection operations would improve during the AM and PM peak hour to LOS D.

  Project Responsibility: To ensure that the intersection of Sherwood Drive – Natividad Road / E. Bernal Drive-La Posada Way will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Fee Ordinance to include the signal modifications at this intersection as one of the improvements that is funded by the TFO, or (2) if the signal modifications at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for modifying the signal phasing and ensure that the signal modification is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits and modify the signal phasing ensuring that the signal modification is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #5 – N Main Street (SR 183) / Rossi Street:**
  This intersection, which is under Caltrans jurisdiction, would operate at a deficient LOS D during the PM peak hour, unchanged from Existing Conditions. The project would add 6 trips to this intersection during the PM peak hour and increase the PM peak hour delay by 0.1 seconds.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay during the PM peak hour by at least 0.1 seconds.

  Mitigation: Add a third northbound and third southbound lane on N. Main Street through this intersection. Intersection operations would improve during the PM peak hour to LOS C.

  Salinas TFO Project: This improvement is included in the City of Salinas TFO (Project 31).

  Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #10 – Sun Street / E Market Street:**
  Side-street operations at this intersection (the southbound Sun Street approach) would operate at a deficient LOS F during the PM peak hour, unchanged from Existing Conditions. The project would add 31 trips to this approach during the PM peak hour.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection whose southbound approach operates at LOS F without the Project.

Mitigation: Signalize the intersection. The intersection would operate at LOS A during the AM and PM peak hours with signalization.

Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

Project Responsibility: To ensure that the intersection of Sun Street and East Market Street will operate at acceptable levels of service, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits for installation of a traffic signal that will be operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #12 – US 101 Southbound Offramp – Merced Street / E Market Street:**
  This intersection would operate at a deficient LOS F during the PM peak hour, while side-street operations (the southbound US 101 Southbound Offramp approach) would operate at a deficient LOS F during the AM and PM peak hours, unchanged from Existing Conditions. The project would add 30 AM peak hour and 27 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay during the AM and PM peak hours by at least 0.1 seconds.

  Mitigation: Signalize the intersection. Intersection operations would improve during the AM and PM peak hours to LOS B.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

  Project Responsibility: To ensure that the intersection of U.S. 101 Southbound Offramp – Merced Street/East Market Street will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Fee Ordinance to include a traffic signal at this intersection as one of the improvements that is funded by the TFO, or (2) if the traffic signal at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits and install the traffic signal ensuring that the signal is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

4.4.2 Pedestrian Circulation

Pedestrian traffic that is generated by development of the project site would likely be traveling from areas easily reached on foot from the project site, such as adjacent neighborhoods and bus stops. It is anticipated that the complete sidewalk and crosswalk network in the greater study area would facilitate pedestrian access from these areas. However, potential pedestrian impacts should be assessed at the time the project site is proposed to be developed by a specific project.

4.4.3 Bicycle Circulation

Development on the project site is anticipated to generate little bicycle traffic. As with the pedestrian traffic, the bicycle traffic that would be generated by the project would be traveling to areas easily reached on bike from the project site, such as residential areas that are more than a 10-minute bike ride from the project site. Although there are few bike facilities in the study area nearest the project site, the small level of bicycle traffic will be low enough to minimize any effects on existing vehicle traffic. Potential bicycle traffic impacts should be assessed at the time the project site is proposed to be developed by a specific project.

4.4.4 Transit Circulation

Development on the project site is anticipated to generate little transit usage. The transit usage that would be generated by the project would likely be walking to and from the bust stops within a 10-minute walk from the project site (as enumerated in Section 2.4). The small level of transit usage generated by the project would be low enough to minimize any effects on existing transit demand for bus routes in the area. Potential transit traffic impacts should be assessed at the time the project site is proposed to be developed by a specific project.

4.5 City of Salinas Traffic Fee Ordinance

A development project constructed on the project site would be responsible for payment of the City of Salinas Traffic Fee Ordinance (TFO) traffic impact fee, which would represent the development's contribution towards citywide roadway improvements funded by the fee program.

4.6 TAMC Regional Development Impact Fee

A development project constructed on the project site would be responsible for payment of the TAMC Regional Development Impact Fee, which would represent the project's contribution towards countywide roadway improvements funded by the fee program.

					PM	47.4	D	47.4	D

Notes:

1. LOS Stnd. = Level of Service Standard
2. XX (YY) = Overall (Side Street).
3. Analysis performed using *2000* and *2010 Highway Capacity Manual* methodologies.
4. Overall level of service standard for the City of Salinas is LOS D. Overall level of service standard for Caltrans is the transition between LOS C and LOS D (LOS C/D).
5. Worst approach level of service standard is generally LOS E. Level of service "F" is the level of service at which improvements would normally be required.
6. Above delays and levels of service are summarized from calculations in **Appendices E through J**.
7. Items in **bold** represent significant impacts.
8. *: Delay is greater than 300 seconds per vehicle.

Table 3: Recommended Intersection Improvements

	N-S Street	E-W Street	Existing Intersection Control	Existing Plus Project Mitigation	Background Plus Project Mitigation	Cumulative Plus Project Mitigation
1	Natividad Road	East Laurel Drive	Signal	Add 3rd NB T, 3rd SB T (TFO Project No. 61)	Same as Existing Plus Project.	-
2	Sherwood Drive - Natividad Road	East Bernal Drive - La Posada Way	Signal	Change E Bernal - La Posada Signal Phasing to Split Phasing. (Not currently included in the Salinas TFO.)	Same as Existing Plus Project.	-
5	North Main Street (SR 183)	Rossi Street	Signal	Add 3rd NB T, 3rd SB T. (TFO Project 31)	Same as Existing Plus Project.	1. Add 3rd NB T & 3rd SB T: TFO Project 31 2. Provide a second left turn lane on the westbound Rossi Street approach to N. Main. (TFO Project 30, modified by the City to include a second westbound left turn lane on Rossi within the 106 foot right of way planned by TFO Project 30.)
7	Kern Street	US 101 Northbound Ramps - Mobray Way	One-Way Stop	-	-	Signalize intersection.
10	Sun Street	East Market Street	Two-Way Stop	Signalize intersection.	Same as Existing Plus Project.	Same as Existing Plus Project.
12	US 101 Southbound Offramp - Merced Street	East Market Street	Two-Way Stop	Signalize Intersection	Same as Existing Plus Project.	Same as Existing Plus Project.
14	Kern Street	East Market Street	Signal	-	-	Restripe westbound E. Market approach to provide left turn lane, 1 through lane and 1 right turn lane.

Notes:
1. LOS Stnd. = Level of Service Standard
2. L, T, R, EB, WB, NB, SB, RTO = Left, Through, Right, Eastbound, Westbound, Southbound, Northbound, Right Turn Overlap signal phase.

Source: Mott MacDonald

5 Background Conditions

This chapter describes Background Conditions, which represents traffic operations approximately five years into the future (i.e., the Year 2022). Note that this scenario does not include trips from the study project.

5.1 Background Traffic Volumes

Traffic volumes under Background conditions were derived by applying growth factors to the existing volumes on the study corridors in this analysis. More specifically, the corridors and their associated growth factors are the following:

1. E Laurel Drive – 2% (AM), 3% (PM)
2. Natividad Road – 2% (AM), 3% (PM)
3. Sherwood Drive – 2% (AM), 3% (PM)
4. E Rossi Street and W Rossi Street – 2% (AM), 3% (PM)
5. N Main Street:
    a. North of US 101 – 2% (AM), 3% (PM)
    b. South of US 101 – 10% (AM), 15% (PM)
6. E Market Street – 2% (AM), 3% (PM)
7. Front Street – 2% (AM), 3% (PM)
8. E Alisal Street – 2% (AM), 3% (PM)
9. Kern Street – 2% (AM), 3% (PM)
10. US 101 Onramps and Offramps – 2% (AM), 3% (PM)

The growth factors were primarily applied to the mainline traffic on each corridor. The lower of the two growth factors on intersecting streets was applied to the turning movements between those streets. The growth factors used are consistent with the net increase in traffic on these corridors attributable to approved projects in past traffic analyses in the study area.

The resulting traffic growth attributable to approved projects includes trips generated by the approved Police Station and the Salinas Ag Industrial Center, with the one exception the assignment of approved trips at the Front Street / Alisal Street intersection. The traffic assignment for the police station that is documented in the Police Station TIA was included in the Background Condition volumes because of the magnitude of trips that the Police Station is forecast to add at this intersection.

The Background Condition traffic volumes are depicted in **Figure 8.**

5.2 Background Condition Traffic Circulation

The intersection levels of service for the Background Condition are summarized in **Table 4**. The analysis of Background Conditions includes one modification to the road network. The westbound

Although most of the study intersections would operate at or better than their respective level of service standards under Background conditions, the following six intersections would operate below their standards:

1. Natividad Road / E Laurel Drive: LOS E (AM and PM)
2. Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way: LOS E (AM), LOS F (PM)
5. N. Main Street (SR 183) / Rossi Street: LOS D (AM and PM)
7. Kern Street / US 101 Northbound Ramps – Mobray Way: Side Street approach LOS F (PM)
10. Sun Street / E Market Street: Side-street approach LOS F (PM)
12. US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS F (PM), Side-street approach LOS F (AM and PM)

See **Appendix G** for the level of service calculations under Background Conditions.

Figure 8: Background Conditions – AM and PM Peak Hour Volumes

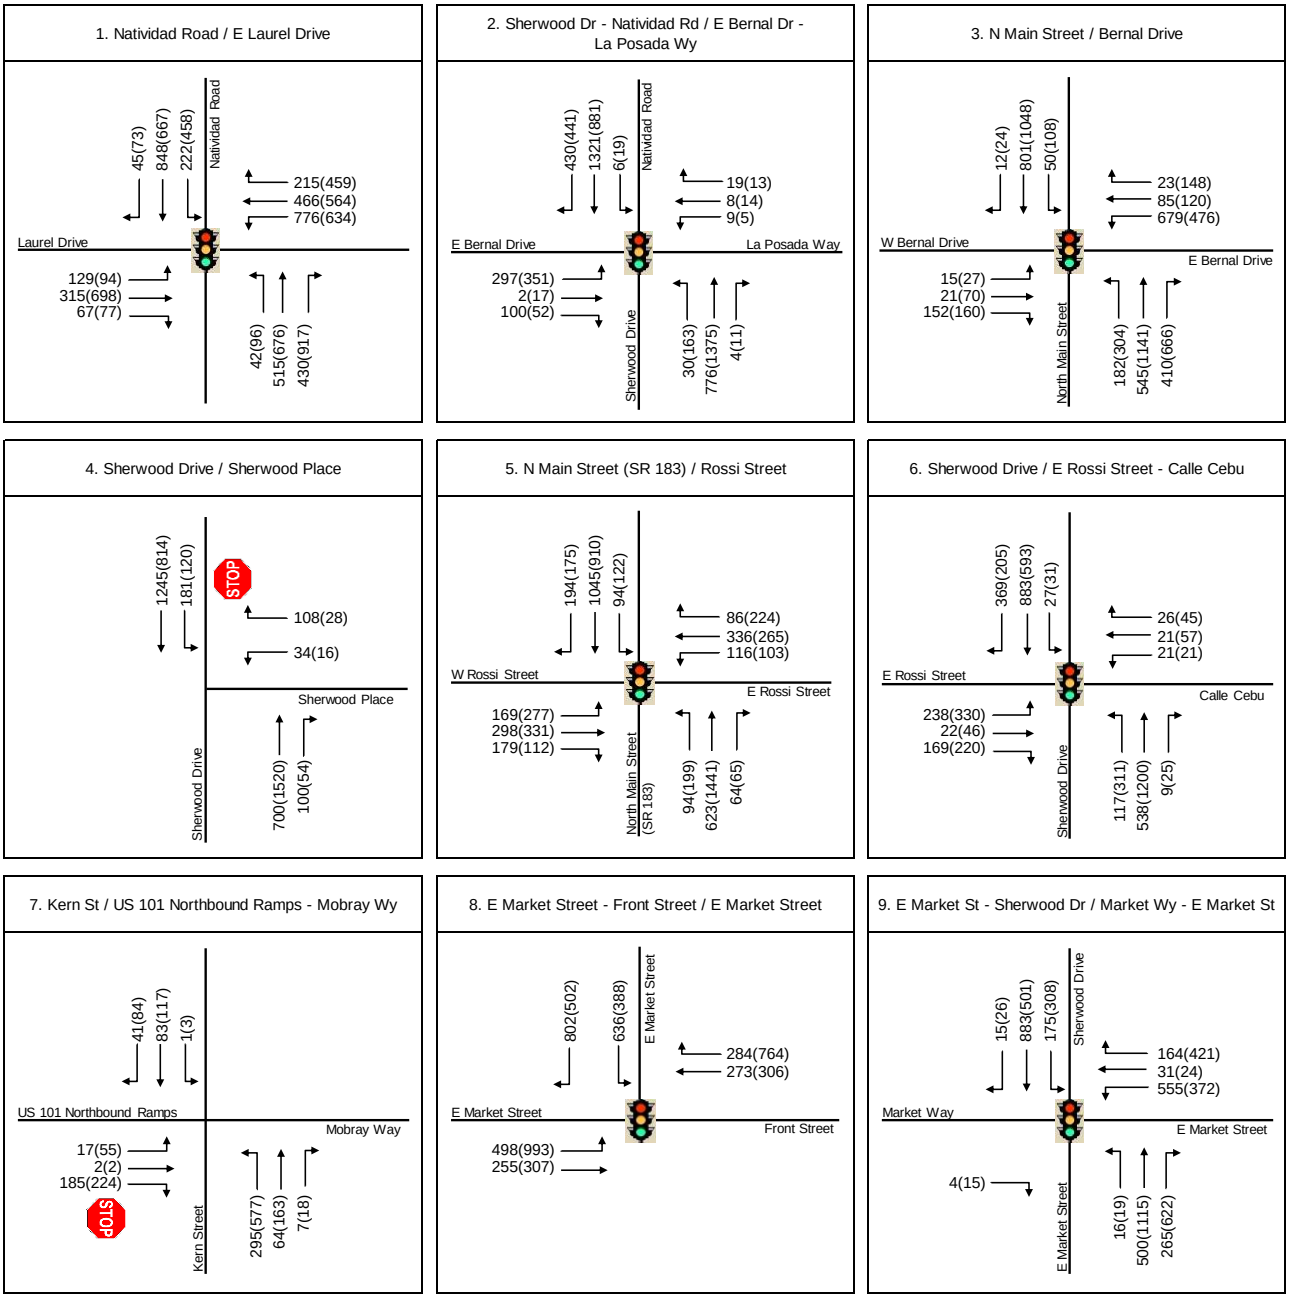

Figure 8: Background Conditions – AM and PM Peak Hour Volumes (Continued)

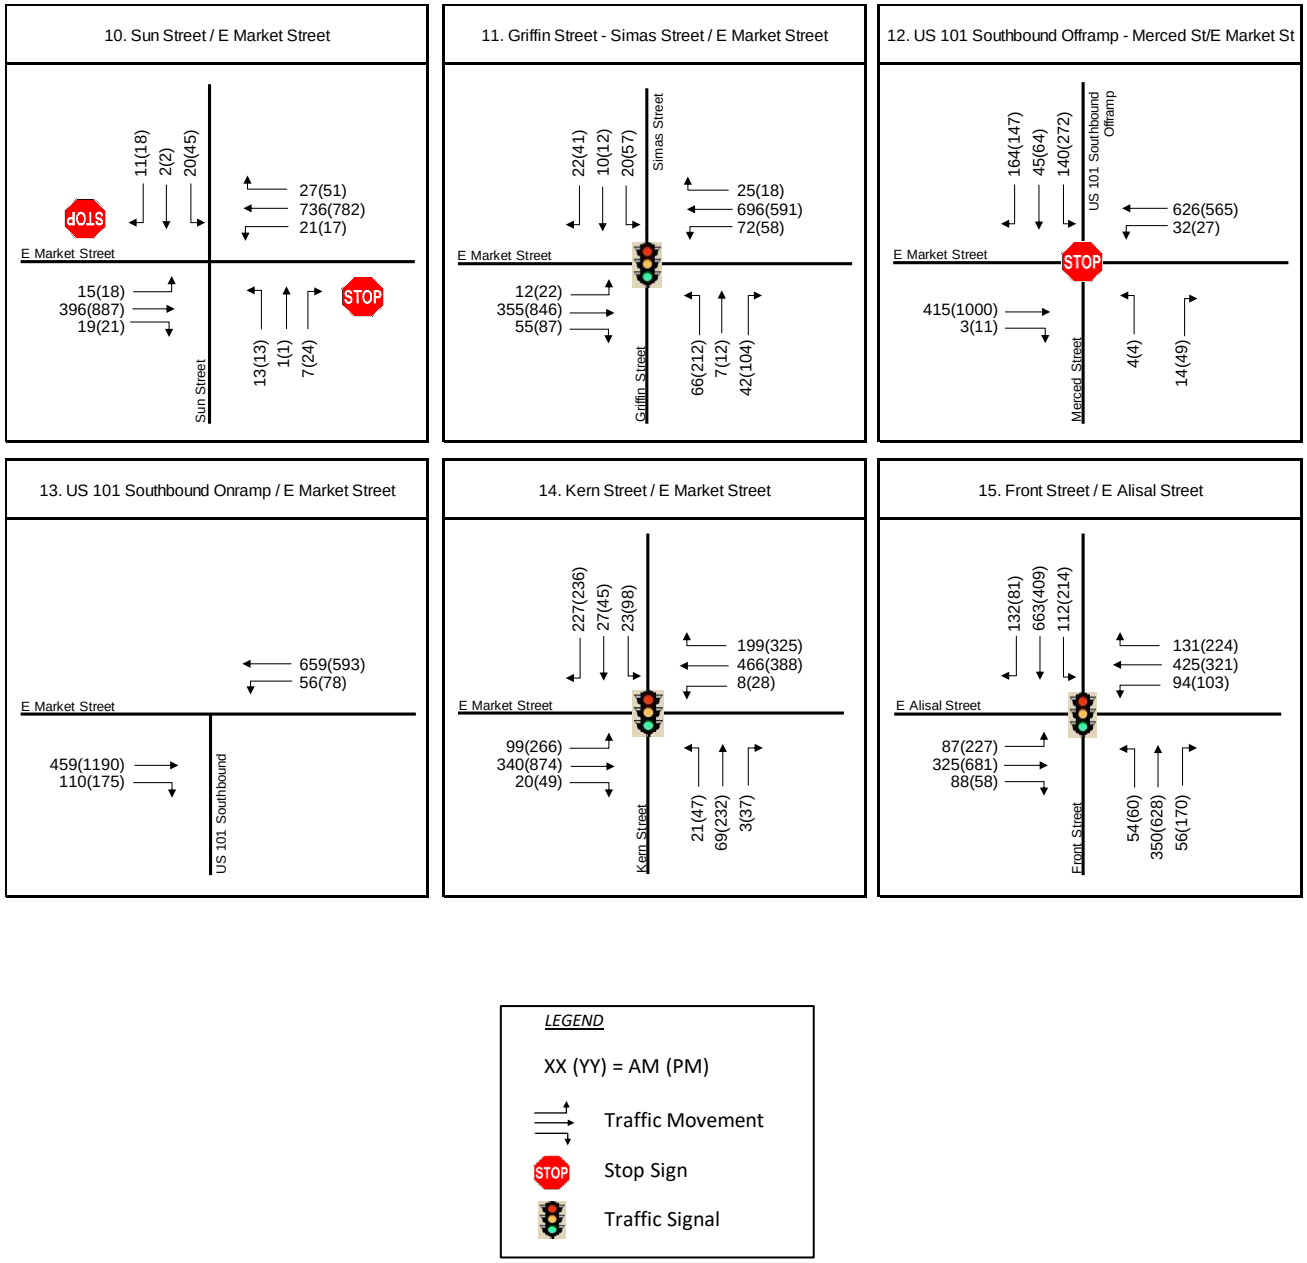

Source: Mott MacDonald

6 Background Plus Project Conditions

This chapter provides a description of the analysis under Background Plus Project traffic conditions, which analyzes Background Conditions plus anticipated traffic from the proposed project.

6.1 Background Plus Project Traffic Volumes

The project trip assignment (**Figure 6**) was added to the Background Condition volumes (**Figure 8)** to create the Background Plus Project Condition volumes shown in **Figure 9**.

6.2 Background Plus Project Conditions Traffic Circulation

6.2.1 Vehicle Circulation

Table 4 summarizes the levels of service at the study intersections under Background and Background Plus Project conditions. The following intersections would operate below their level of service standards and would be significantly impacted be the project based upon the significance criteria utilized for this study:

1. Natividad Road / E Laurel Drive: LOS E (AM and PM)
2. Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way: LOS E (AM), LOS F (PM)
5. N Main Street (SR 183) / Rossi Street: LOS D (PM)
10. Sun Street / E Market Street: Side-street approach LOS F (PM)
12. US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS F (PM), Side-street approach LOS F (AM and PM)

See **Appendix H** for the level of service calculations under Background Plus Project Conditions.

Below is a discussion of deficient operations and recommended improvements at the study intersections under Background Plus Project conditions. Recommended improvements are summarized in **Table 3**. The same intersections that are significantly impacted by the Project under Existing Conditions are significantly impacted under Background Conditions. No additional intersections are significantly impacted by the Project under Background Conditions and the mitigation measures recommended for Existing Conditions remain unchanged for Background Conditions.

- **Intersection #1 – Natividad Road / E Laurel Drive:**
  This intersection would operate at a deficient LOS E during the AM and PM peak hours, unchanged from Background Conditions. The project would add 16 AM peak hour and 17 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection that operates at a deficient level without the project.

  Mitigation: Add a third northbound and third southbound lane to Natividad Road through this intersection. Intersection operations would improve during the AM and PM peak hour to LOS D.

  Salinas TFO Project: This improvement is included in the City of Salinas TFO (Project 61).

Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #2 – Sherwood Drive – Natividad Road / E Bernal Drive – La Posada Way:**
  This intersection would operate at a deficient LOS E (AM) and F (PM), unchanged from Background Conditions. The project would add 16 AM peak hour and 17 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection that operates at a deficient level without the project.

  Mitigation: Convert the signal phasing on the east and west intersection approaches from concurrent phasing to split phasing. Intersection operations would improve during the AM and PM peak hour to LOS D.

  Project Responsibility: To ensure that the intersection of Sherwood Drive – Natividad Road / E. Bernal Drive-La Posada Way will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Fee Ordinance to include the signal modifications at this intersection as one of the improvements that is funded by the TFO, or (2) if the signal modifications at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for modifying the signal phasing and ensure that the signal modification is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits and modify the signal phasing ensuring that the signal modification is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #5 – N Main Street (SR 183) / Rossi Street:**
  This intersection, which is under Caltrans jurisdiction, would operate at a deficient LOS D during the AM and PM peak hours, unchanged from Background Conditions. The project would add 17 trips to this intersection during the AM peak hour and 15 trips to this intersection during the PM peak hour. The trips added by the Project would not increase the average vehicle delay during the AM peak hour, but would increase the PM peak hour vehicle delay by 0.1 seconds.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay during the PM peak hour by at least 0.1 seconds.

  Mitigation: Add a third northbound and third southbound lane on N. Main Street through this intersection. Intersection operations would improve during the PM peak hour to LOS C.

  Salinas TFO Project: This improvement is included in the City of Salinas TFO (Project 31).

  Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #10 – Sun Street / E Market Street:**
  Side-street operations at this intersection (the southbound Sun Street approach) would operate at a deficient LOS F during the PM peak hour, unchanged from Background Conditions. The project would add 31 trips to this approach during the PM peak hour.

Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection whose southbound approach operates at LOS F without the Project.

Mitigation: Signalize the intersection. The intersection would operate at LOS A during the AM and PM peak hours with signalization.

Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

Project Responsibility: To ensure that the intersection of Sun Street and East Market Street will operate at acceptable levels of service, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits for installation of a traffic signal that will be operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #12 – US 101 Southbound Offramp – Merced Street / E Market Street:**
  This intersection would operate at a deficient LOS F during the PM peak hour, while side-street operations (the southbound US 101 Southbound Offramp approach) would operate at a deficient LOS F during the AM and PM peak hours, unchanged from Background Conditions. The project would add 30 AM peak hour and 27 PM peak hour trips to this intersection.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay on the southbound off-ramp approach during the AM and PM peak hours by at least 0.1 seconds.

  Mitigation: Signalize the intersection. Intersection operations would improve during the AM and PM peak hours to LOS B.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

  Project Responsibility: To ensure that the intersection of U.S. 101 Southbound Offramp – Merced Street/East Market Street will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Fee Ordinance to include a traffic signal at this intersection as one of the improvements that is funded by the TFO, or (2) if the traffic signal at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits and install the traffic signal ensuring that the signal is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

7 Cumulative Without Project Conditions

This chapter describes the analysis results under Cumulative conditions without the study project developed. The Cumulative Without Project traffic condition is defined as buildout of the current City of Salinas General Plan. Note that this analysis scenario does not include traffic from the study project.

7.1 Derivation of Cumulative Without Project Condition Volumes

The Cumulative Without Project condition volumes in **Figure 10** are primarily on traffic forecasts documented in the City of Salinas General Plan Circulation Study prepared by Higgins Associates in 2002. Traffic forecasts documented in the following reports were also referenced:

1. Monterey County Jail Housing Addition Traffic Impact Analysis, Hatch Mott MacDonald, April 29, 2014.
2. Haciendas Phase III/IV Traffic Impact Analysis, Hatch Mott MacDonald, April 8, 2014.
3. Sun Street Solid Waste Transfer Station Access Plan Traffic Impact Analysis, Higgins Associates, August 27, 2007.
4. Tynan Village Mixed Use Development Traffic Impact Study Report, Higgins Associates, November 22, 2004.
5. Salinas Sphere of Influence Amendment and Annexation Supplemental TIA, Fehr & Peers, November 14, 2007.

The traffic volume forecasts shown on **Figure 10** reflect new road links and the level of service calculations include intersection improvements that are included in the City of Salinas Traffic Fee Ordinance and are planned for implementation in conjunction with buildout of the city's General Plan. These improvements include the following:

1. TFO Project No. 30: Rossi Street Widening – widen to four lanes between Main Street and Sherwood Drive.
2. TFO Project No. 31: Main Street Widening – widen from a four to six-lane arterial between Casentini Street and Market Street.
3. TFO Project No. 33A: Bernal Drive Extension – extend as a four-lane arterial from Sherwood Drive/Natividad Road intersection to Kern Street.
4. TFO Project No. 33B: Bernal Drive Widening – widen, construct sidewalk and retaining wall on north side between Main Street and Rosarita Drive.
5. TFO Project No. 34: Constitution Boulevard Extension – extend from Laurel Drive to Bernal Drive Extension.
6. TFO Project No. 45: Laurel Drive Widening – widen to six lanes between Natividad and Constitution. Add left turn channelization east of Constitution.
7. TFO Project No. 46: Main Street Widening – widen to six lanes between Market Street and Bernal by eliminating on-street parking and widening UP Structure north of Market Street.

8. TFO Project No. 61: Natividad Road/Laurel Drive Intersection – widen the Natividad Road north and south intersection legs to provide the following lane configuration on the intersection approaches:
    a. Northbound approach – 1 left turn lane, 3 through lanes, 1 right turn lane
    b. Southbound approach – 2 left turn lanes, 2 through lanes, 1 through/right turn lane.
    c. Eastbound approach – 1 left turn lane, 2 through lanes, 1 right turn lane.
    d. Westbound approach – 2 left turn lanes, 2 through lanes, 1 right turn lane.

7.2 Cumulative Without Project Condition Traffic Circulation

7.2.1 Vehicle Circulation

The intersection levels of service for the Cumulative Condition are summarized in **Table 5**. The following intersections would operate below their level of service standards:

#5: N Main Street (SR 183) / Rossi Street: LOS D (PM)

#7: Kern Street / US 101 Northbound Ramps – Mobray Way: Overall LOS F, Side Street approach LOS F (PM)

#10: Sun Street / E Market Street: Side-street approach LOS F (PM)

#12: US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS E (AM) and LOS F (PM), Side-street approach LOS F (AM and PM)

#14: Kern Street / E Market Street: LOS F (PM)

#15: Front Street / Alisal Street: LOS E (AM and PM)

See **Appendix I** for the level of service calculations under Cumulative Without Project Conditions.

Figure 10: Cumulative Without Project Conditions – AM and PM Peak Hour Volumes

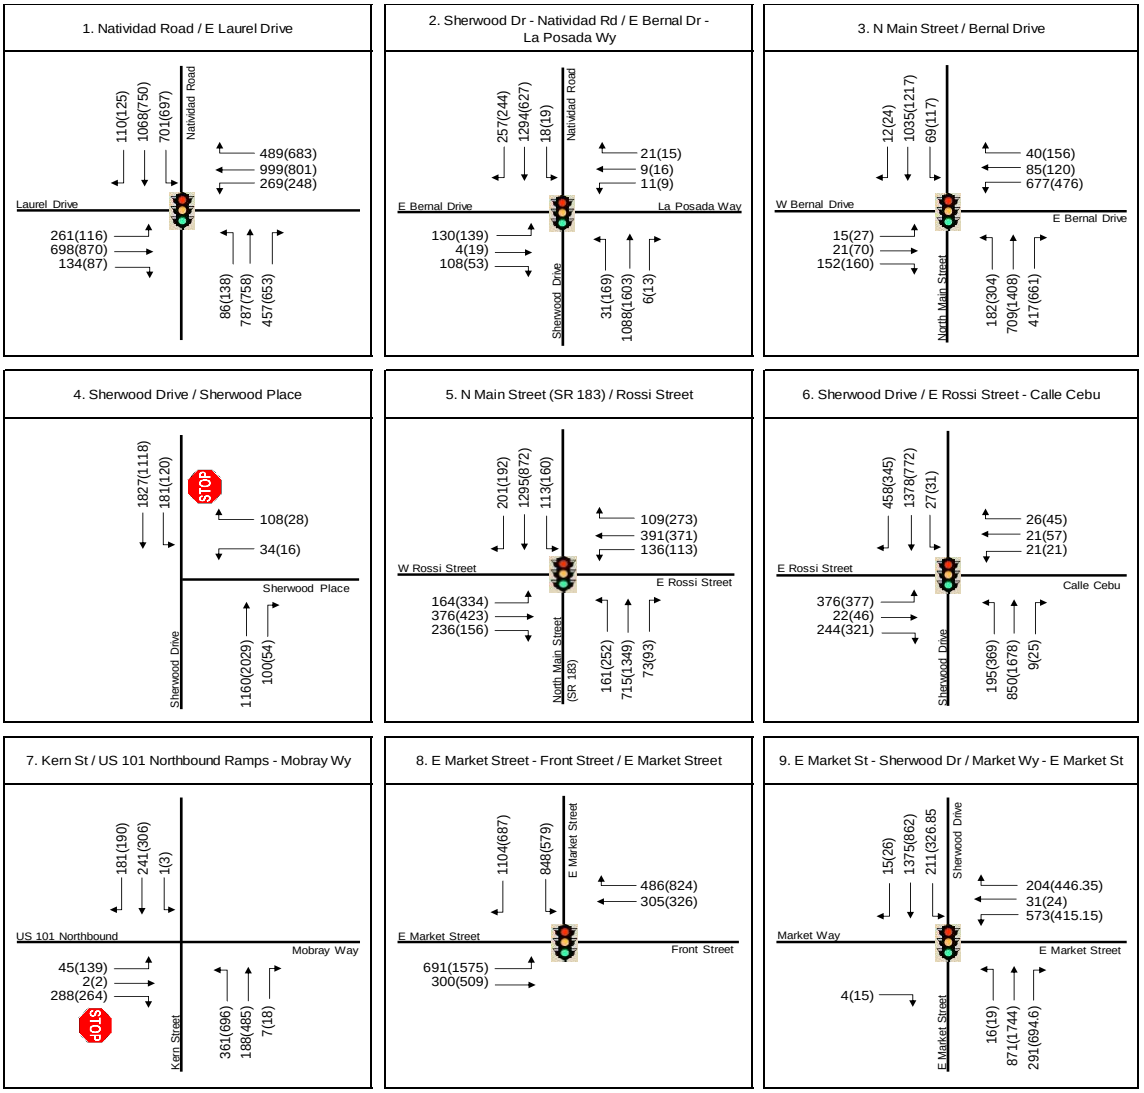

Figure 10: Cumulative Without Project Conditions – AM and PM Peak Hour Volumes (Continued)

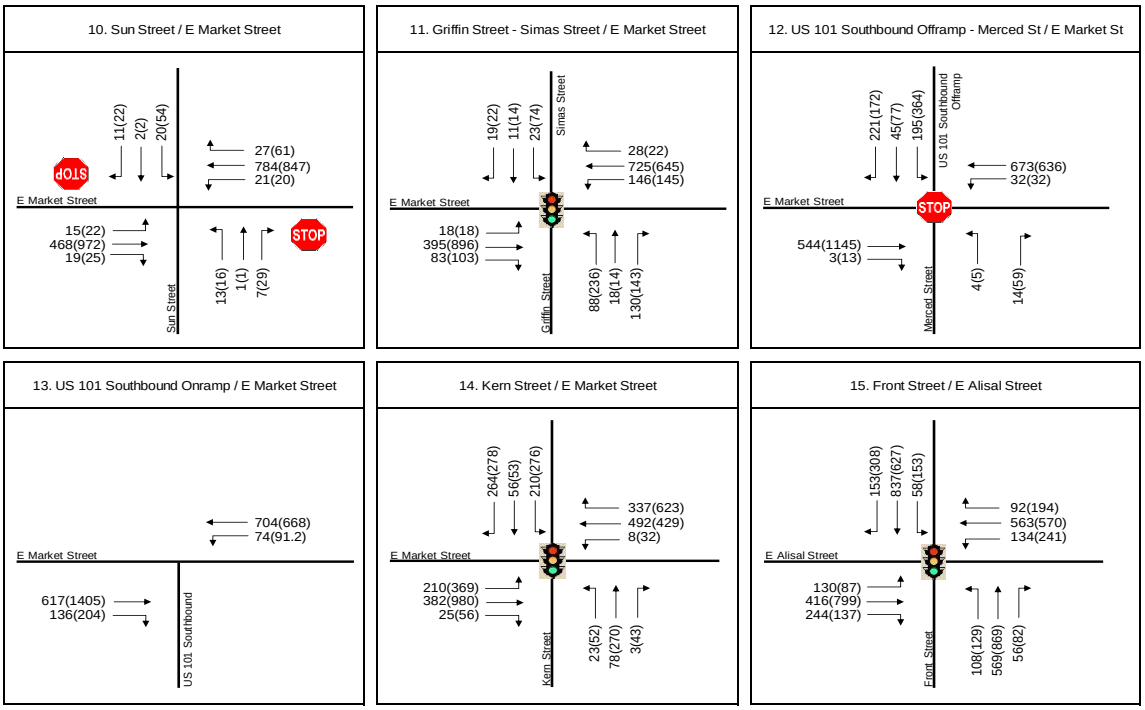
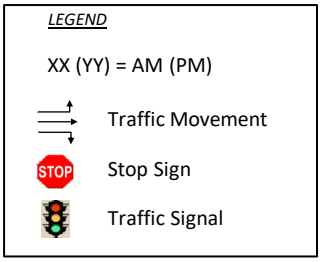


Source: Mott MacDonald



8 Cumulative Plus Project Conditions

This chapter describes Cumulative Plus Project conditions, which represent traffic conditions with General Plan Buildout including the proposed GPA and Rezoning.

8.1 Derivation of Cumulative Plus Project Condition Volumes

The project trip assignment volumes Cumulative (**Figure 6**) were added to the Cumulative Without Project Condition volumes (**Figure 10**) to create the Cumulative Plus Project Condition volumes depicted in **Figure 11**.

8.2 Cumulative Plus Project Condition Traffic Circulation

8.2.1 Vehicle Circulation

Table 5 summarizes the levels of service at the study intersections under Cumulative Plus Project conditions. Although some of the study intersections would operate at or better than their respective level of service standards under Cumulative Plus Project conditions, the following intersections would continue to operate below their standard and the project would contribute to the cumulative impact:

#5: N Main Street (SR 183) / Rossi Street: LOS D (PM)

#7: Kern Street / US 101 Northbound Ramps – Mobray Way: Overall LOS F, Side Street approach LOS F (PM)

#10: Sun Street / E Market Street: Side-street approach LOS F (PM)

#12: US 101 Southbound Offramp – Merced Street / E Market Street: Overall LOS E (AM) and LOS F (PM), Side-street approach LOS F (AM and PM)

#14: Kern Street / E Market Street: LOS F (PM)

#15: Front Street / Alisal Street: LOS E (AM and PM)

See **Appendix J** for the level of service calculations under Cumulative Plus Project Conditions.

Below is a discussion of the deficient operations and recommended improvements at the study intersections under Cumulative Plus Project conditions. Recommended improvements are summarized in **Table 3**.

- **Intersection #5 – N Main Street (SR 183) / Rossi Street:**
  This intersection, which is under Caltrans jurisdiction, would operate at LOS C during the AM peak hour and a deficient LOS D during the PM peak hour unchanged from Cumulative Conditions. The project would add 17 trips to this intersection during the AM peak hour and 15 trips to this intersection during the PM peak hour. The trips added by the Project would not increase the average vehicle delay during the PM peak hour vehicle delay by 0.1 seconds.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay during the PM peak hour by at least 0.1 seconds. The Project's impact to this intersection is significant under Existing and Background Conditions.

  Mitigation:
  1) Add a third northbound through lane and third southbound through lane to N. Main Street at this intersection. The improvement would be achieved by converting the existing right turn lanes on northbound and southbound N. Main Street to through/right turn lanes.

2) Add a second left turn lane on the westbound Rossi Street approach. TFO Project 30 would widen Rossi Street to a four-lane divided arterial within a right of way of 106 feet.

With the second left turn lane included in the mitigation, the PM peak hour delay would be 41.8 seconds, which would be lower than the Cumulative Condition without project PM peak hour delay of 42.5 seconds. Therefore, the Project's cumulative impact would be mitigated.

Salinas TFO Project: Projects 30 and 31. The City would need to modify Project 30 to include the second left turn lane on the westbound Rossi Street approach to N. Main Street.

Salinas TFO Project: Salinas TFO Project 30 and Project 31.

Project Responsibility: Pay the Salinas traffic impact fees, which would represent the project's fair-share contribution of this improvement.

- **Intersection #7 – Kern Street / US 101 Northbound Ramps – Mobray Way:**
This intersection would operate at an overall LOS F with side-street operations (the eastbound US 101 Northbound Ramps approach) of LOS F during the PM peak hour, unchanged from Cumulative Without Project Conditions. The project would add 2 trips to the eastbound off-ramp approach during the PM peak hour. The project by itself would not significantly impact the intersection, but the project would contribute to the cumulative operating deficiency at the intersection. Traffic diversions associated with the Bernal Avenue Extension and the Constitution Boulevard Extension will contribute to the deficient operations at this intersection under Cumulative Conditions.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay on the eastbound off-ramp approach during the PM peak hour by at least 0.1 seconds.

  Mitigation: Signalize the intersection. Intersection operations would improve during the AM peak hour to LOS B and to LOS C during the PM peak hour.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO. It is recommended that this improvement be added to Salinas TFO Project 33A (Bernal Avenue Extension) and 34 (Constitution Boulevard Extension). Traffic diversions associated with the extensions of Bernal Avenue and Constitution Boulevard will create new turning movement patterns at the Kern Avenue/Northbound US 101 ramps intersection and these new turning patterns will necessitate modification of the existing intersection traffic control. For this reason, the costs for the new intersection traffic control should be included in the TFO.

  Project Responsibility: This improvement is not currently included in the City's Capital Improvement Program nor the TFO. To mitigate the Project's cumulative impact, a mechanism would need to be in place that ensures the ultimate full funding and completion of the improvement. This could be accomplished by adding the improvement to the City TFO or Capital Improvement Program. The Project's cumulative impact would be mitigated by the following:

  Alternative 1: Add the improvement to the TFO and pay the TFO fee.
  Alternative 2: Include the improvement in the Capital Improvement Program and pay a pro-rata contribution toward implementation of the project that would be combined with future development impact fees to fully fund implementation of the improvement. The pro-rata contribution would be based upon the project's share of cumulative traffic growth, where cumulative traffic growth equals Cumulative With Project volumes minus Existing volumes. The equitable share contribution calculation is based on the average of AM and PM peak hour volumes. The project's equitable share of cumulative traffic growth is 1 percent (1%).

- **Intersection #10 – Sun Street / E Market Street:**
  Side-street operations at this intersection (the southbound Sun Street approach) would operate at a deficient LOS F during the PM peak hour, unchanged from Cumulative Conditions. The project would add 31 trips to this approach during the PM peak hour. The Project's impact to this intersection is significant under Existing and Background Conditions.

  Impact: The impact of the Project to the intersection is significant because the Project will add peak hour trips to the intersection whose southbound approach operates at LOS F without the Project.

  Mitigation: Signalize the intersection. The intersection would operate at LOS A during the AM and PM peak hours with signalization.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

  Project Responsibility: The Project's impact to this intersection was identified as significant under Existing and Background Conditions. The mitigation required for Cumulative Conditions (signalization) is the same as the mitigation recommended for Existing and Background Conditions. Therefore, the Project's responsibility to mitigate cumulative impacts is the same as the responsibility identified for the Existing and Background Conditions, which is as follows: To ensure that the intersection of Sun Street and East Market Street will operate at acceptable levels of service, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits for installation of a traffic signal that will be operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #12 – US 101 Southbound Offramp – Merced Street / E Market Street:**
  This intersection would operate at a deficient LOS E during the AM peak hour and LOS F during the PM peak hour, while side-street operations (the southbound US 101 Southbound Offramp approach) would operate at a deficient LOS F during the AM and PM peak hours, unchanged from Cumulative Conditions. The project would add 30 AM peak hour and 27 PM peak hour trips to this intersection. The Project's impact to this intersection is significant under Existing and Background Conditions.

  Impact: The impact of the Project to the intersection is significant because the Project will increase the average vehicle delay on the southbound off-ramp approach during the AM and PM peak hours by at least 0.1 seconds.

  Mitigation: Signalize the intersection. Intersection operations would improve during the AM and PM peak hours to LOS B.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO.

  Project Responsibility: The Project's impact to this intersection was identified as significant under Existing and Background Conditions. The mitigation required for Cumulative Conditions (signalization) is the same as the mitigation recommended for Existing and Background Conditions. Therefore, the Project's responsibility to mitigate cumulative impacts is the same as the responsibility identified for the Existing and Background Conditions, which is as follows: To ensure that the intersection of U.S. 101 Southbound Offramp – Merced Street/East Market Street will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its

Traffic Fee Ordinance to include a traffic signal at this intersection as one of the improvements that is funded by the TFO, or (2) if the traffic signal at this intersection has not been included in the TFO, the applicant shall be responsible for either: (a) Fund the improvements and obtain the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or (b) Concurrent with the issuance of the first grading permit for a specific development project at project site, deposit funds with the City in order for the City to obtain the requisite permits and install the traffic signal ensuring that the signal is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

- **Intersection #14 – Kern Street / E Market Street:**
  This intersection would operate at a deficient LOS F during the PM peak hour, unchanged from Cumulative without Project Conditions. The project would add 17 PM peak hour trips to this intersection. The project by itself would not significantly impact the intersection, but the project would contribute to the cumulative operating deficiency at the intersection. Traffic diversions associated with the Bernal Avenue Extension and the Constitution Boulevard Extension will contribute to the deficient operations at this intersection under Cumulative Conditions.

  Impact: The impact of the Project to the intersection is significant because the Project will add trips to the intersection that operates at a deficient level without the project.

  Mitigation: Restripe the westbound E. Market Street approach as one exclusive left turn lane, one through lane and one exclusive right turn lane. With this improvement, the intersection would operate at LOS C during the AM peak hour and LOS D during the PM peak hour.

  Salinas TFO Project: This improvement is not included in the City of Salinas TFO. It is recommended that this improvement be added to Salinas TFO Project 33A (Bernal Avenue Extension) and 34 (Constitution Boulevard Extension). Traffic diversions associated with the extensions of Bernal Avenue and Constitution Boulevard will create new turning movement patterns at the Kern Avenue/E. Market Street intersection and these new turning patterns, including an increase in the volume of traffic turning right from westbound E. Market Street to northbound Kern Avenue, will necessitate modification of the existing intersection lane configuration. For this reason, the costs for the new intersection configuration should be included in the TFO.

  Project Responsibility: This improvement is not currently included in the City's Capital Improvement Program nor the TFO. To mitigate the Project's cumulative impact, a mechanism would need to be in place that ensures the ultimate full funding and completion of the improvement. This could be accomplished by adding the improvement to the City TFO or Capital Improvement Program. The Project's cumulative impact would be mitigated by the following:

  Alternative 1: If the improvement is added to the TFO, pay the TFO fee.
  Alternative 2: Include the improvement in the Capital Improvement Program and pay a pro-rata contribution toward implementation of the project that would be combined with future development impact fees to fully fund implementation of the improvement. The pro-rata contribution would be based upon the project's share of cumulative traffic growth, where cumulative traffic growth equals Cumulative With Project volumes minus Existing volumes. The equitable share contribution calculation is based on the average of the AM and PM peak hour volumes. The project's share of cumulative traffic growth is three percent (3%).

A. Level of Service Descriptions

APPENDIX A1

LEVEL OF SERVICE (LOS) DESCRIPTION
SIGNALIZED INTERSECTIONS

The capacity of an urban street is related primarily to the signal timing and the geometric characteristics of the facility as well as to the composition of traffic on the facility. Geometrics are a fixed characteristic of a facility. Thus, while traffic composition may vary somewhat over time, the capacity of a facility is generally a stable value that can be significantly improved only by initiating geometric improvements. A traffic signal essentially allocates time among conflicting traffic movements that seek to use the same space. The way in which time is allocated significantly affects the operation and the capacity of the intersection and its approaches.

The methodology for signalized intersection is designed to consider individual intersection approaches and individual lane groups within approaches. A lane group consists of one or more lanes on an intersection approach. The outputs from application of the method described in the HCM 2000 and 2010 are reported on the basis of each lane. For a given lane group at a signalized intersection, three indications are displayed: green, yellow and red. The red indication may include a short period during which all indications are red, referred to as an all-red interval and the yellow indication forms the change and clearance interval between two green phases.

The methodology for analyzing the capacity and level of service must consider a wide variety of prevailing conditions, including the amount and distribution of traffic movements, traffic composition, geometric characteristics, and details of intersection signalization. The methodology addresses the capacity, LOS, and other performance measures for lane groups and the intersection approaches and the LOS for the intersection as a whole.

Capacity is evaluated in terms of the ratio of demand flow rate to capacity (v/c ratio), whereas LOS is evaluated on the basis of control delay per vehicle (in seconds per vehicle). The methodology does not take into account the potential impact of downstream congestion on intersection operation, nor does the methodology detect and adjust for the impacts of turn-pocket overflows on through traffic and intersection operation.

LEVEL OF SERVICE (LOS) CRITERIA FOR SIGNALIZED INTERSECTIONS

(Reference 2000 and 2010 Highway Capacity Manuals)

Level of Service	Control Delay (seconds / vehicle)
A	**<10**
B	**>10 - 20**
C	**>20 - 35**
D	**>35 - 55**
E	**>55 - 80**
F	**>80**

APPENDIX A2

LEVEL OF SERVICE (LOS) DESCRIPTION
UNSIGNALIZED INTERSECTIONS WITH ALL-WAY STOP CONTROL (AWSC)

AWSC intersections require every vehicle to stop at the intersection before proceeding. Since each driver must stop, the judgement as to whether to proceed into the intersection is a function of traffic conditions on the other approaches. While giving priority to the driver on the right is a recognized rule in some areas, it is not a good descriptor of actual intersection operations. What happens is the development of a consensus of right-of-way that alternates between the drivers on the intersection approaches, a consensus that depends primarily on the intersection geometry and the arrival patterns at the stop line.

If no traffic is present on the other approaches, a driver can proceed immediately after the stop is made. If there is traffic on one or more of the other approaches, a driver proceeds only after determining that there are no vehicles currently in the intersection and that it is the driver's turn to proceed. Since no traffic signal controls the stream movement or allocates the right-of-way to each conflicting stream, the rate of departure is controlled by the interaction between the traffic streams themselves.

For AWSC intersections, the average control delay (in seconds per vehicle) is used as the primary measure of performance. Control delay is the increased time of travel for a vehicle approaching and passing through an AWSC intersection, compared with a free-flow vehicle if it were not required to slow down or stop at the intersection.

The criteria for AWSC intersections have different threshold values than do those for signalized intersections, primarily because drivers expect different levels of performance from different kinds of traffic control devices (i.e., traffic signals, two way stop or all way stop, etc.). The expectation is that a signalized intersection is designed to carry higher traffic volumes than an AWSC intersection and a higher level of control delay is acceptable at a signalized intersection for the same LOS.

For AWSC analysis using the HCM 2010 method, the LOS shown reflects the weighted average of the delay on each of the approaches.

LEVEL OF SERVICE (LOS) CRITERIA FOR AWSC INTERSECTIONS
(Reference 2010 Highway Capacity Manual)

Level of Service	Control Delay (seconds / vehicle)
A	**0 - 10**
B	**>10 - 15**
C	**>15 - 25**
D	**>25 - 35**
E	**>35 - 50**
F	**>50**

APPENDIX A3

LEVEL OF SERVICE (LOS) DESCRIPTION
UNSIGNALIZED INTERSECTIONS WITH TWO-WAY STOP CONTROL (TWSC)

TWSC intersections are widely used and stop signs are used to control vehicle movements at such intersections. At TWSC intersections, the stop-controlled approaches are referred to as the minor street approaches; they can be either public streets or private driveways. The intersection approaches that are not controlled by stop signs are referred to as the major street approaches. A three-leg intersection is considered to be a standard type of TWSC intersection if the single minor street approach (i.e. the stem of the T configuration) is controlled by a stop sign. Three-leg intersections where two of the three approaches are controlled by stop signs are a special form of unsignalized intersection control.

At TWSC intersections, drivers on the controlled approaches are required to select gaps in the major street flow through which to execute crossing or turning maneuvers on the basis of judgment. In the presence of a queue, each driver on the controlled approach must use some time to move into the front-of-queue position and prepare to evaluate gaps in the major street flow. Capacity analysis at TWSC intersections depends on a clear description and understanding of the interaction of drivers on the minor or stop-controlled approach with drivers on the major street. Both gap acceptance and empirical models have been developed to describe this interaction.

Thus, the capacity of the controlled legs is based on three factors:

- the distribution of gaps in the major street traffic stream;
- driver judgment in selecting gaps through which to execute the desired maneuvers; and
- the follow-up time required by each driver in a queue.

The delay experienced by a motorist is made up of a number of factors that relate to control, geometrics, traffic and incidents. Total delay is the difference between the travel time actually experienced and the reference travel time that would result during base conditions, in the absence of incident, control, traffic or geometric delay. Average control delay for any particular minor movement is a function of the capacity of the approach and the degree of saturation and referred to as level of service.

LEVEL OF SERVICE (LOS) CRITERIA FOR TWSC INTERSECTIONS

(Reference 2010 Highway Capacity Manuals)

Level of Service	Control Delay (seconds / vehicle)
A	**0 - 10**
B	**>10 - 15**
C	**>15 - 25**
D	**>25 - 35**
E	**>35 - 50**
F	**>50**

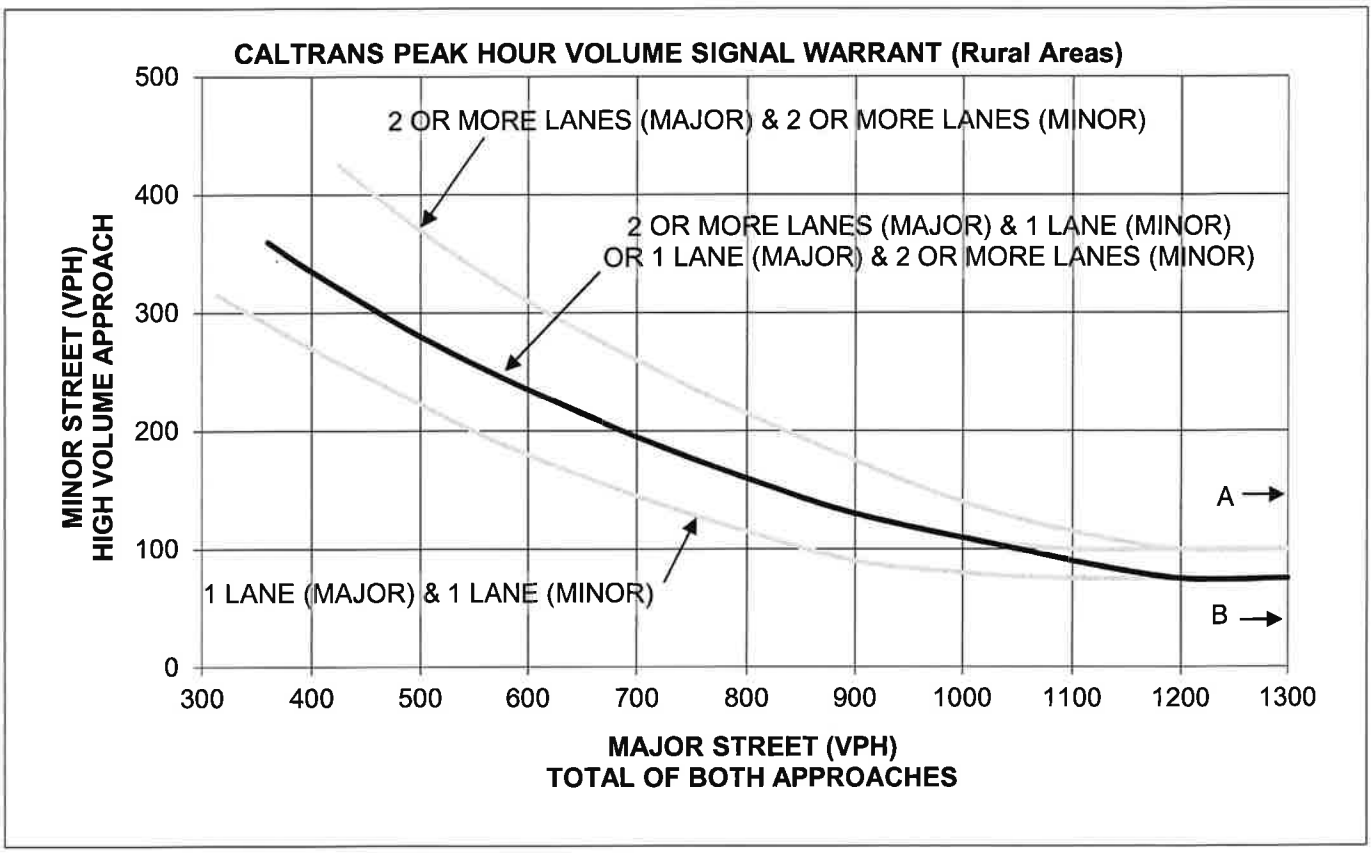
K. Warrant Worksheets

Warrant 3A - Peak Hour Warrant

Intersection #4 - Sherwood Drive / Sherwood Place



Scenario	Sherwood North/South	Sherwood East/West	Warrant Met?
A. Cum+Pro AM	3285	142	Yes
B. Cum+Pro PM	3337	44	No

Notes:

1. 100 VPH applies as the lower threshold volume for a minor street approach with two or more lanes and 75 VPH applies as the lower threshold volume for a minor street approaching with one lane.
2. Bold line applies to intersection geometry.
3. Northbound and Westbound right turn movement have been excluded from this analysis, as they are free right turns and would not be controlled by a potential signal at this location.

Warrant 3 (Part B) - Peak Hour Delay
#4 - Sherwood Drive / Sherwood Place

Number of Approaches to Intersection: 3 approaches **Minimum Entering Vehicles:** **650**

Total Entering Volumes: Cum+Pro AM: 3,486 vehicles
Cum+Pro PM: 3,491 vehicles

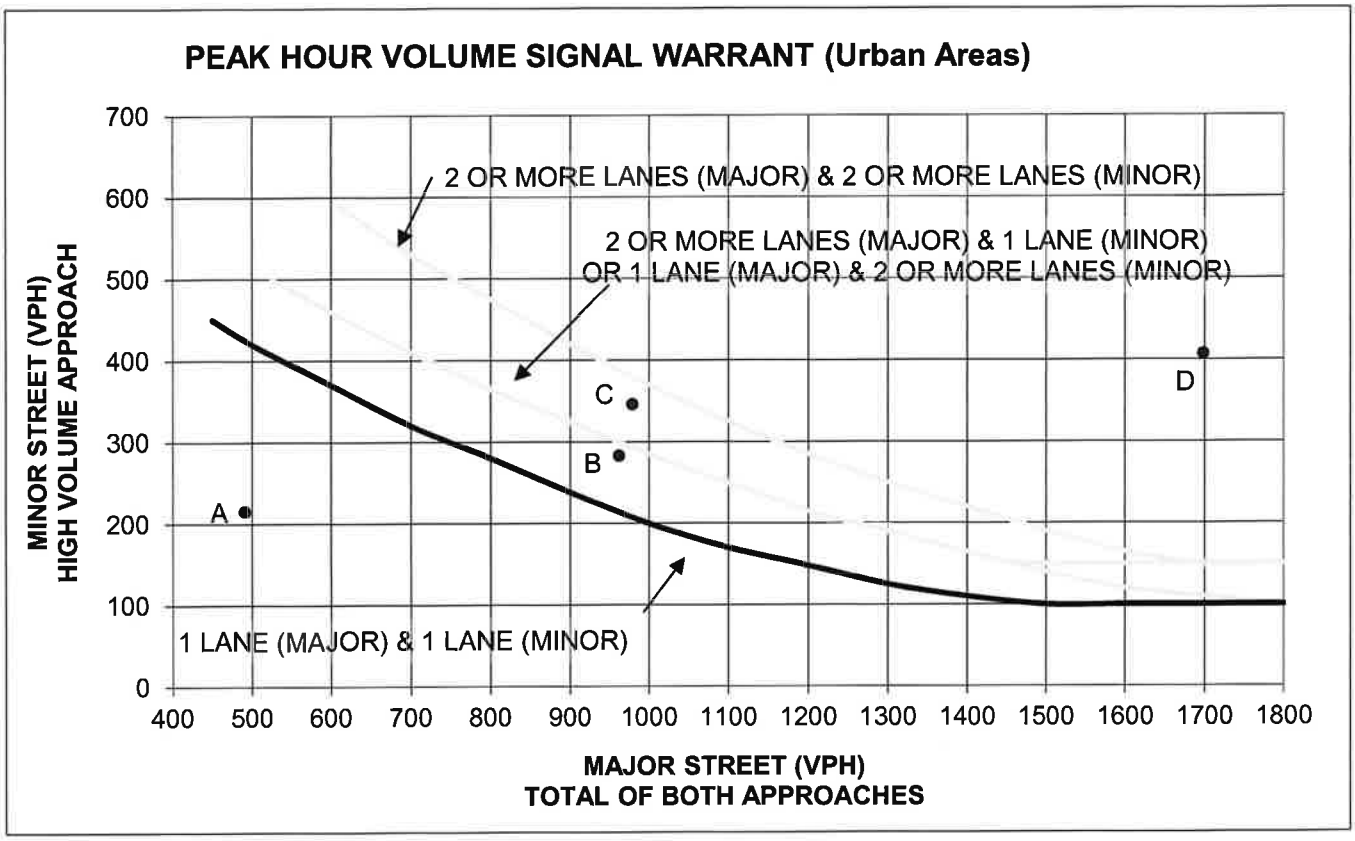
Street	Direction	Scenario	Peak Hour	No. of Stopped Vehicles	Average Vehicle Delay (sec)	Total Vehicle Delay (sec)	Total Delay (hours)	Min. 4 Veh-Hrs of Delay? (Approach)	At least 100 Veh? (Approach)	At least 650 Veh? (Intersection)	Warrant Met?
Sherwood Place	WB	Cum+Pro	AM	142	37.6	5,339	1.48	NO	Yes	Yes	**NO**
Sherwood Place	WB	Cum+Pro	PM	44	49.1	2,160	0.60	NO	NO	Yes	**NO**

Notes:
1. Warrant based on level of service calculations.
2. NB, SB, EB, WB = Northbound, Southbound, Eastbound, Westbound.
3. Cum+Pro = Cumulative Plus Project.

Warrant 3A - Peak Hour Warrant

Intersection #7 -

Kern Street / US 101 Northbound Ramps - Mobray Way



Scenario	Kern North/South	US 101 NB East/West	Warrant Met?
A. Bk+Pro AM	491	215	No
B. Bk+Pro PM	962	283	Yes
C. Cum+Pro AM	979	346	Yes
D. Cum+Pro PM	1698	407	Yes

Notes:

1. 150 VPH applies as the lower threshold volume for a minor street approach with two or more lanes and 100 VPH applies as the lower threshold volume for a minor street approaching with one lane.
2. Bold line applies to intersection geometry.

Warrant 3 (Part B) - Peak Hour Delay
#7 - Kern Street / US 101 Northbound Ramps - Mobray Way

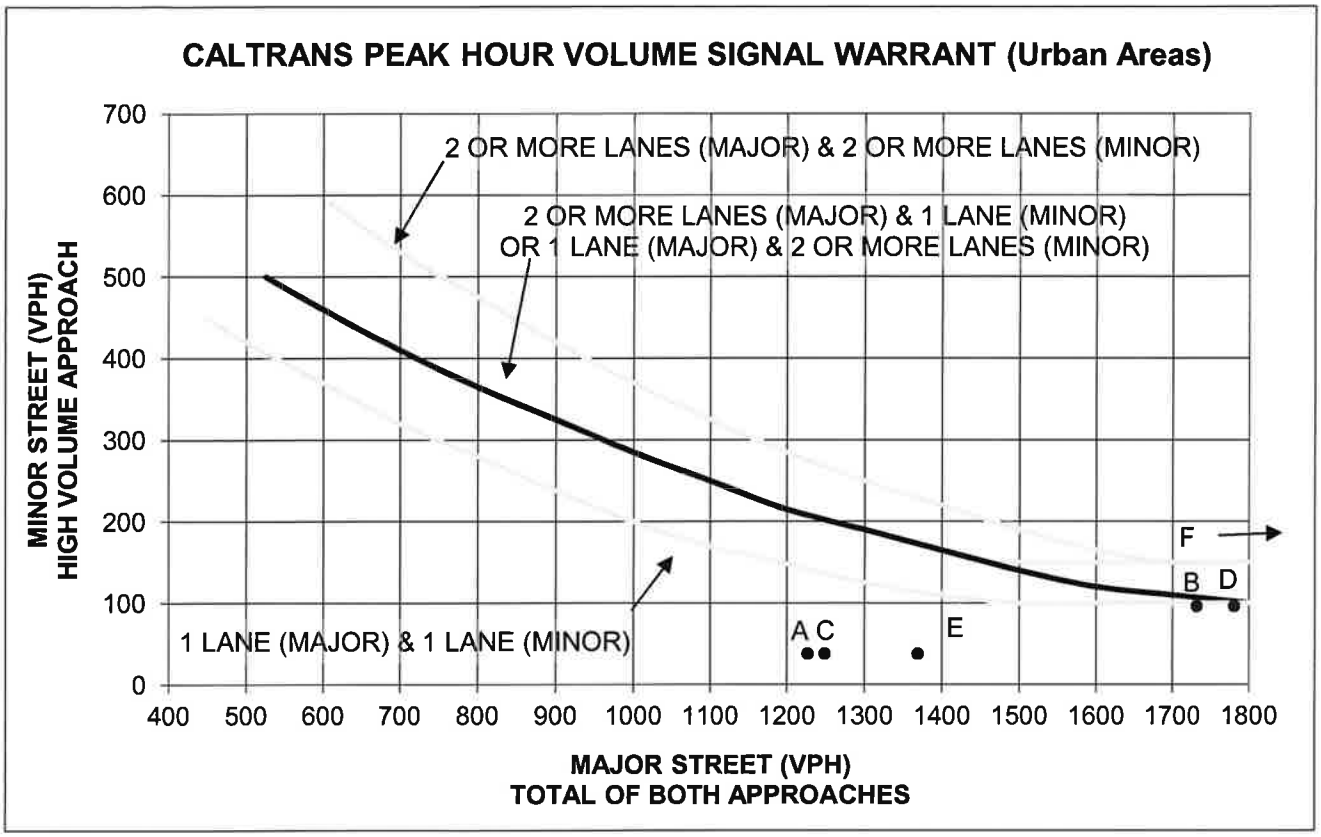
Number of Approaches to Intersection:		4 approaches	**Minimum Entering Vehicles:**	**800 vehicles**
Total Entering Volumes:	Bk+Pro AM:	706 vehicles		
	Bk+Pro PM:	1,248 vehicles		
	Cum+Pro AM:	910 vehicles		
	Cum+Pro PM:	1,676 vehicles		

Street	Direction	Scenario	Peak Hour	No. of Stopped Vehicles	Average Vehicle Delay (sec)	Total Vehicle Delay (sec)	Total Delay (hours)	Min. 4 Veh-Hrs of Delay? (Approach)	At least 100 Veh? (Approach)	At least 800 Veh? (Intersection)	Warrant Met?
US 101 NB	EB	Bk+Pro	AM	215	11.0	2,365.0	0.66	NO	Yes	NO	**NO**
US 101 NB	EB	Bk+Pro	PM	283	71.2	20,149.6	5.60	Yes	Yes	Yes	**Yes**
US 101 NB	EB	Cum+Pro	AM	346	21.3	7,369.8	2.05	NO	Yes	Yes	**NO**
US 101 NB	EB	Cum+Pro	PM	407	266.5	108,465.5	30.13	Yes	Yes	Yes	**Yes**

Notes:
1. Warrant based on level of service calculations.
2. NB, SB, EB, WB = Northbound, Southbound, Eastbound, Westbound.
3. Bk+Pro, Cum+Pro = Background Plus Project, Cumulative Plus Project

Warrant 3A - Peak-Hour Warrant

Intersection #10 - Sun Street - E Market Street



Scenario	E Market East/West	Sun North/South	Warrant Met?
A. Ex+Pro AM	1227	38	No
B. Ex+Pro PM	1732	96	No
C. Bk+Pro AM	1249	38	No
D. Bk+Pro PM	1781	96	No
E. Cum+Pro AM	1369	38	No
F. Cum+Pro PM	1952	109	Yes

Notes:

1. 150 VPH applies as the lower threshold volume for a minor street approach with two or more lanes and 100 VPH applies as the lower threshold volume for a minor street approaching with one lane.

2. Bold line applies to intersection geometry.

Warrant 3 (Part B) - Peak Hour Delay
#10 - Sun Street / E Market Street

Number of Approaches to Intersection: 4 approaches **Minimum Entering Vehicles: 800**

Total Entering Volumes:

Ex+Pro AM:	1,284 vehicles	Cum+Pro AM:	1,470 vehicles
Ex+Pro PM:	1,875 vehicles	Cum+Pro PM:	2,058 vehicles

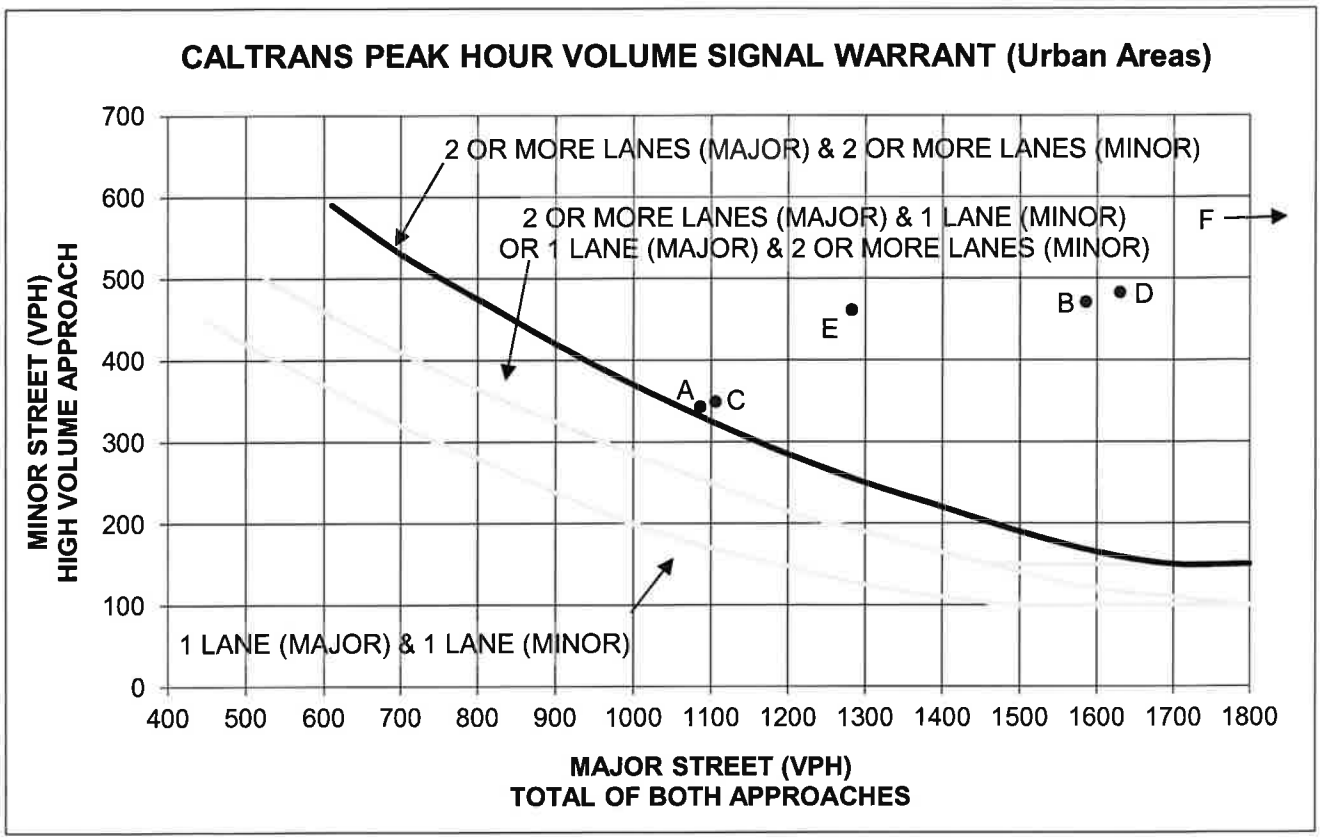
Notes:
1. Warrant based on level of service calculations.
2. NB, SB, EB, WB = Northbound, Southbound, Eastbound, Westbound.
3. Ex+Pro, Bk+Pro, Cum+Pro = Existing Plus Project, Background Plus Project, Cumulative Plus Project

Warrant 3A - Peak-Hour Warrant

Intersection #12 - Merced Street - US 101 Southbound Offramp / E Market Street



Scenario	E Market East/West	Merced North/South	Warrant Met?
A. Ex+Pro AM	1086	343	Yes
B. Ex+Pro PM	1585	471	Yes
C. Bk+Pro AM	1106	349	Yes
D. Bk+Pro PM	1630	483	Yes
E. Cum+Pro AM	1282	461	Yes
F. Cum+Pro PM	1853	613	Yes

Notes:

1. 150 VPH applies as the lower threshold volume for a minor street approach with two or more lanes and 100 VPH applies as the lower threshold volume for a minor street approaching with one lane.

2. Bold line applies to intersection geometry.

Warrant 3 (Part B) - Peak Hour Delay
#12 - Merced Street / US 101 Southbound Offramp / E Market Street

Number of Approaches to Intersection: 4 approaches **Minimum Entering Vehicles: 800**

Total Entering Volumes:

Ex+Pro AM:	1,450 vehicles	Cum+Pro AM:	1,737 vehicles
Ex+Pro PM:	2,116 vehicles	Cum+Pro PM:	2,536 vehicles
Bk+Pro AM:	1,476 vehicles		
Bk+Pro PM:	2,173 vehicles

Re:	Peer Review of the Rodeo Property Project Revised Technical Reports

In June 2018, Rincon peer reviewed the following technical reports for the 295 Sun Way Project in Salinas, Monterey County, California:

- Air Quality Impact Analysis
- Greenhouse Gas Impact Analysis
- Biological Resources Assessment
- Phase I Cultural and Paleontological Resources Assessment

All reports were revised by FirstCarbon Solutions in August 2018. Per request by the City, Rincon has reviewed the revised reports. The findings of this second review are presented below.

Air Quality Impact Analysis/Greenhouse Gas Impact Analysis

Most comments provided in Rincon's June 20, 2018 peer review memo were addressed in the revised Air Quality Impact Analysis and the revised Greenhouse Gas Impact Analysis (First Carbon Solutions August 2018). The following two comments were not addressed:

- The emissions results for the various construction activities presented in Table 12 of the Air Quality Impact Analysis do not match the CalEEMod results.
- The mobile emissions reported exclusively include emissions from CH_4 and CO_2, as CalEEMod does not calculate mobile N_2O emissions.

Rincon continues to recommend that the N_2O emissions be calculated and added to Table 3 of the GHG Study. However, Rincon does not question the overall findings of the revised report.

Biological Resources Assessment

All comments provided in Rincon's June 29, 2018 peer review memo were addressed in the revised Biological Resources Assessment (First Carbon Solutions August 2018). However, Rincon offers the following comments on the revised analysis:

- Despite the expansion to a nine-quad search, the California Native Plant Society (CNPS) search only returned four plants. This appears low and should be verified.
- Although additional detail is provided regarding the regulatory background of tree removal, the report does not clearly indicate if any tree removal is required. Additionally, the methods section states that that "species listed in any applicable ordinances identified on-site were noted, and their locations were recorded using a handheld GPS unit and were identified on a topographic map." However, a map is not included showing this information.
- Analysis and supporting discussion for California red-legged frog (CRLF), California tiger salamander (CTS), and burrowing owl (BUOW) does not consider connectivity or existing use/setting. In addition, the potential to occur table has not been revised to include all species from the nine-quad search.
- The special status plant species discussion is limited to one species (Congdon's tarplant) based on the results of a reconnaissance survey. Additional species cannot be excluded without full botanical surveys; however, impacts to non-listed species are unlikely to be considered significant under CEQA given the site conditions, and this just needs to be discussed. In addition, the report does not include a discussion of potential impacts or significance under CEQA.
- New measures for BUOW include passive exclusion measure. This species cannot be excluded during the nesting season, and consultation with CDFW would be required. This should be acknowledged in the measure.

Clarifying the above points would be preferable and recommended for legal defensibility. However, Rincon does not question the overall findings of the revised report.

Phase I Cultural and Paleontological Resources Assessment Report

All comments related to paleontological resources and most comments pertaining to cultural resources in Rincon's June 20, 2018 peer review memo were addressed in the revised Phase I Cultural and Paleontological Resources Assessment Report (First Carbon Solutions August 2018). However, Rincon offers the following comments on the revised analysis:

- The revised report notes that a historic transmission line is immediately adjacent to the south side of the project site and recommends that the line be recorded and evaluated for its potential significance. It is not clear if the authors are recommending that the line should be recorded and evaluated simply because it is historic in age or if it is because the project has the potential to indirectly impact the resource. If the intent of the report is to provide information for a CEQA-level analysis of the proposed project, we recommend discussion about whether the project has the potential to impact the transmission line. If there is a potential, then the historic period resource should be recorded and evaluated as part of the cultural assessment. If the transmission line will not be impacted by the project, no further edits would be recommended.

Although Rincon does not question the findings of the revised report, addressing the above comment would be strengthen the analysis and defensibility.

Re: 295 Sun Way Project and 10 Simas Street, Salinas, CA - General Plan Amendments– As stated
General Plan Amendment
AB52 and SB18 – 90 Days consultation period

Saleki Atsa,

Ohlone/Costanoan-Esselen Nation is an historically documented previously recognized tribe. OCEN is the legal tribal government representative for over 600 enrolled members of Esselen, Carmeleno, Monterey Band, Rumsen, Chalon, Soledad Mission, San Carlos Mission and/or Costanoan Mission Indian descent of Monterey County. Though other indigenous people may have lived in the area, the area is the indigenous homeland of our people. Included with this letter please find a territorial map by Taylor 1856; Levy 1973; and Milliken 1990, indentifying Tribal areas.

Ohlone/Costanoan-Esselen Nation objects to all excavation in known cultural lands, even when they are described as previously disturbed, and of no significant archaeological value. Please be advised that it is our first priority that our ancestor's remains be protected and undisturbed. We desire that all sacred burial items be left with our ancestors on site or as culturally determined by OCEN. All cultural items returned to Ohlone/Costanoan-Esselen Nation. We ask for the respect that is afforded all of our current day deceased, by no other word these burial sites are cemeteries, respect for our ancestors as you would expect respect for your deceased family members in today's cemeteries. **Our definition of respect is no disturbance.**

OCEN's Tribal leadership desires to be provided with:

Archaeological reports/surveys, including subsurface testing, and presence/absence testing.
OCEN request to be included in mitigation and recovery programs,
Reburial of any of our ancestral remains,
Placement of all cultural items, and that
A Native American Monitor of Ohlone/Costanoan-Esselen Nation, approved by the OCEN Tribal Council is used within our aboriginal territory.
Cultural and Tribal sections to reflect Tribal request.

Projects affecting the General Plan allow for 90 days response according to SB18. We ask that a sacred lands search with the Northwest Information Center, Sonoma State University and the Native American Heritage Commission. Please feel free to contact me at (408) 629-5189. Nimasianexelpasaleki. Thank you

Sincerely and Respectfully Yours,

Louise J. Miranda Ramirez, Chairperson
Ohlone/Costanoan-Esselen Nation

RESOLUTION NO. 8514 (N.C.S.)

BE IT RESOLVED BY THE COUNCIL OF SALINAS that the Mayor of Salinas be and he is hereby authorized and directed, for and on behalf of the City of Salinas and as its act and deed, to execute the attached agreement between California Rodeo Association, a corporation, and Salinas, a municipal corporation.

PASSED AND ADOPTED this 10th day of June, 1974, by the following vote:

AYES: Councilmen James B. Barnes, Ed Norris, John C. Vondracek, R. C. Wherritt, Henry Hibino (Mayor)

NOES: None

ABSENT: None

Henry Hibino
Mayor

ATTEST:

Evelyn Reynolds
City Clerk

A G R E E M E N T

THIS AGREEMENT, made and entered into this 10th day of June, 1974, between CALIFORNIA RODEO ASSOCIATION, a corporation, hereinafter called "Association," and SALINAS, a municipal corporation, hereinafter called "City,"

W I T N E S S E T H:

WHEREAS, the Association is the owner of certain lands shown on the attached map marked Exhibit "A" which is used for a period of three weeks each year as an exposition site and carnival grounds in connection with the California Rodeo, and during the remainder of the entire year has no need to use said grounds, and

WHEREAS, it has been necessary for the Association to expend substantial sums of money for the development and improvement of said grounds as an exposition site as listed in the attached letter of May 30, 1974, from the co-chairman of the exposition site committee of the Association, attached hereto and marked Exhibit "B", and

WHEREAS, the Association has offered to lease said exposition site to the City for a term of 25 years at the nominal rent of one dollar per year, for use by City as a public park and recreation area, reserving use of the grounds for its own purposes during the three-week period at rodeo time in June, provided the City is willing to advance the sum of $55,000.00 to the Association to assist in financing the cost of said capital improvements and services, such advance to be repaid to City with interest as hereinafter set forth, and will also undertake the care, maintenance and management of the park during the term of such lease, and

WHEREAS, City has a present need for park and recreation facilities in this area and is willing to enter into such lease upon said terms and conditions,

NOW, THEREFORE, in consideration of the mutual promises and covenants herein contained, the parties do agree as follows:

1. Association agrees to execute as lessor a lease to City as lessee for a term of 25 years commencing in July 1974 for the lands in the area of Sherwood Drive, East Lake Street, and U.S. Highway 101, known as the California Rodeo Exposition Site, upon the terms and conditions contained in a draft of lease which is in course of preparation and has been reviewed by the parties and is acceptable to them.

2. City agrees to execute as lessee the lease above referred to.

3. City agrees to advance to Association at this time the sum of $55,000.00 to assist in the financing of the expenses and improvements incurred and to be incurred by Association in the development and use of the exposition site, including the items listed on Exhibit "B" attached hereto.

4. Association agrees to repay to City said advance of $55,000.00 by payment of the sum of $5,500.00 per year plus interest on all unpaid principal balances from the date of the advance to the date of repayment at the rate of 7% per annum, the first principal payment of $5,500.00 and interest to be paid on January 1, 1975, and annually thereafter on the first day of January of each year until the entire amount of principal and interest has been repaid to City.

5. Association agrees to complete with all due speed and diligence, and in a good and workmanlike manner, all of the work and improvements which are necessary and proper to put the grounds in reasonably suitable condition for use as an exposition site, and a park and recreation area, including the items listed on Exhibit "B" attached hereto, all as heretofore discussed and understood by the parties hereto.

6. This agreement shall bind and inure to the benefit of the successors in interest and assigns of the parties hereto.

IN WITNESS WHEREOF, the parties hereto have caused this agreement to be executed as of the day and year first above written.

Mr. Warren Lynch
City Attorney
City Hall
200 Lincoln Ave.
Salinas, Calif. 93901

Dear Warren,

Listed below is a summary of the remaining work to be performed at the California Rodeo Exposition Site:

1.	Entrance from Lake Street (install sidewalk on west side).	1,000.00
2.	Complete seal coat in areas designated as C and B (entrance roads and parking area).	13,000.00
3.	Electroliers in area designated as B (parking area)	5,000.00
4.	Restroom and storage area	9,000.00
5.	Install a complete sprinkler system and turf area in the areas designated as A(Exposition Site) and D (P.G.&E. property)	22,000.00
6.	Policing of carnival	2,996.86
7.	Fire Protection - Rodeo Grounds	881.94
		53,878.80

The above estimated figures I am sure might change by the time bids are submitted and returned to the City of Salinas for confirmation. It would appear that we are working with an approximate cost of $55,000.00.

With prices continually increasing it is most important that we finalize the bidding and complete the unfinished projects as soon as possible.

Sincerely,

Woody

SUBJECT: **Comments on the Initial Study/Mitigated Negative Declaration of the General Plan Amendment (GPA 2017-001) and Rezoning (2017-002) for 295 Sun Way**

Dear Mr. Latino:

The Transportation Agency for Monterey County (TAMC) is the Regional Transportation Planning and Congestion Management Agency for Monterey County. TAMC staff have reviewed the Initial Study and Mitigated Negative Declaration for the General Plan Amendment 2017-001 (GPA 2017-001) to change a 7.67-acre site from Park to Central Commercial/Light Industrial its rezoning (RZ 2017-002). Transportation Agency staff offers the following comment:

1. The mitigation measures included in the Initial Study for transportation impacts should include efforts to maintain or improve bike and pedestrian facilities while increasing capacity. For example:
    - Consider adding a bike lane between the right turn lane and through-lane on Natividad at East Laurel Drive, and
    - Consider providing median pedestrian refuge for longer crosswalks, especially where a third lane is added.

Thank you for the opportunity to comment on the proposal. If you have any questions, please contact Madilyn Jacobsen of my staff at 831-775-4402 or madilyn@tamcmonterey.org.

Sincerely,

Debra L. Hale
Executive Director

General Plan Amendment 2017-002; Rezone 2017-001; and Conditional Use Permit 2017-019 located at 10 Simas Street in the IGC-F (Industrial-General Commercial - Flood Plain Overlay) Zoning District

Adopt an Ordinance for Rezone 2017-001. (Second Reading)

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **DECEMBER 3, 2019**

DEPARTMENT: **COMMUNITY DEVELOPMENT DEPARTMENT**

FROM: **MEGAN HUNTER, COMMUNITY DEVELOPMENT DIRECTOR**

THROUGH: **COURTNEY GROSSMAN, PLANNING MANAGER**

BY: **BOBBY LATINO, ASSOCIATE PLANNER**

TITLE: **GENERAL PLAN AMENDMENT 2017-002 (GPA 2017-002); REZONE 2017-001 (RZ 2017-001); AND CONDITIONAL USE PERMIT (CUP 2017-019) LOCATED AT 10 SIMAS STREET IN THE IGC-F (INDUSTRIAL-GENERAL COMMERCIAL – FLOOD PLAIN OVERLAY) ZONING DISTRICT**

RECOMMENDED MOTION:

A motion to adopt the proposed Mitigated Negative Declaration, approve a Resolution for General Plan Amendment 2017-002, adopt an Ordinance for Rezone 2017-001, and approve a Resolution for Conditional Use Permit 2017-019.

RECOMMENDATION:

Staff recommends that the City Council affirm the findings and adopt the proposed Mitigated Negative Declaration in accordance with the California Environmental Quality Act, approve a Resolution for General Plan Amendment 2017-002, adopt an Ordinance for Rezone 2017-001, and approve a Resolution for Conditional Use Permit 2017-019.

EXECUTIVE SUMMARY:

Simas-East Market Street LLC, Applicant and Property Owner, is requesting approval of a General Plan Amendment 2017-002 (GPA 2017-002) to change the General Plan designation of 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from General Commercial/Light Industrial to Arterial Frontage, Rezone 2017-001 (RZ 2017-001) to change the Zoning designation of 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from Industrial-General Commercial to Mixed Arterial Frontage, and a Conditional Use Permit (CUP 2017-019) to establish and operate a religious assembly use in an existing 18,150 square foot building.

BACKGROUND:

A nonconforming religious assembly use has been operating at the subject site within an existing 18,150 square foot building (former seven-plex indoor movie theater) for approximately nine

years. Temporary Use of Land Permit 2010-045 initially approved the temporary use of religious assembly and Building Permit No. B10-0314 approved the tenant improvement. The building is part of a larger Industrial Complex that was approved by Conditional Use Permit (CUP 1987-028). The proposed CUP will modify CUP 1987-028 to replace the indoor theater with the religious assembly use. Religious Assembly uses are not permitted in the underlying base Zoning District of IGC but is conditionally allowed in the Mixed Arterial Frontage (MAF) District. The subject site is located immediately adjacent to a MAF zoned parcel and consistent with this zoning designation that has been established along Market Way. Thus, the proposed zone change to MAF zoning for a portion of the parcel nearest to Market Way is appropriate. Simas-East Market Street LLC has applied for the requested permits to achieve long term zoning compliance with the religious assembly use.

DISCUSSION:

On November 6, 2019, the Salinas Planning Commission voted 7-0, to recommended that the City Council adopt the proposed Mitigated Negative Declaration, approve General Plan Amendment 2017-002, adopt Rezone 2017-001, and approve Conditional Use Permit 2017-019 (See attached Planning Commission Resolution 2019-16 and November 6, 2019 minutes). During the public hearing, ten people spoke in favor of the proposal. However, one member of the public expressed concern that the zone change would create a "spot zone". Staff clarified to the Planning Commission that the proposed "Arterial Frontage" land use designation is not a "spot zone" and would be consistent with the adjacent lots to the west, which are designated the same "Arterial Frontage". Although the parcel has a split zone designation, this type of zoning is fairly common with large parcels, which front busy streets as is the case with the subject property.

The proposed Amendment and Rezone is consistent with Salinas General Plan Policies. The proposed zoning amendment will not create an unrelated zoning district because the rezoning would extend the boundary of the existing and contiguous MAF base zoning district to include the proposed portion of the lot located at 10 Simas Street. The rezone results in an extension of the existing MAF zone to the west of the site.

Consistent with Land use Policy LU-3.7, the Amendment and Rezone allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable and compliant use. The infill development of establishing the religious assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development in conformance with Community Design Policy CD-2.3.

Upon the effective date of the General Plan Amendment and Rezone, a religious assembly use would be subject to a Conditional Use Permit in the proposed MAF Zoning District per Section 37-30.240, Table 37-30.110. This CUP will modify CUP 1987-028 to replace the subject 18,150 square foot theater with a religious assembly use and modify select conditions related to the former theater.

CEQA CONSIDERATION:

The environmental impacts of the project have been analyzed in accordance with the California Environmental Quality Act (CEQA). An Initial Study was prepared to evaluate the potential impacts associated with the project. Based upon review of the Initial Study, the proposed project will not have a significant effect on the environment because the mitigation measures outlined in the proposed Mitigation Monitoring Program have been included in the project (see attached Initial Study and Mitigated Negative Declaration). The Initial Study and Mitigated Negative Declaration were routed to responsible agencies and posted at the County Clerk's Office on September 26, 2019; the deadline for comments was October 16, 2019. Action on the environmental document should precede any action on the requested permits. Monterey County Planning Department provided "No Comments" on the Mitigated Negative Declaration during the review period.

STRATEGIC PLAN INITIATIVE:

The proposed General Plan Amendment, Rezone, and Conditional Use Permit will assist the City Council's goal of Economic Diversity and Prosperity and Well Planned City and Excellent Infrastructure by facilitating an appropriate change of Land Use and Zoning designation to bring a nonconforming use into conformity and keeping a formally vacant theater building occupied with a conforming use.

DEPARTMENTAL COORDINATION:

The Current Planning Division of the Community Development Department was the lead project manager for the proposed General Plan Amendment, Rezone, and Conditional Use Permit. The Legal Department was instrumental in the review of the proposed Resolutions and Ordinance and provided support to the Planning Commission.

FISCAL AND SUSTAINABILITY IMPACT:

No significant impacts to the City's General Fund are anticipated with the application.

ORDINANCE NO. _____ (N.C.S.)

AN ORDINANCE AMENDING THE ZONING MAP BY RECLASSIFYING A 94,235 SQUARE FEET (2.16 ACRES) OF A 401,197 (9.21 ACRES) LOT FROM "INDUSTRIAL-GENERAL COMMERCIAL" TO "MIXED ARTERIAL FRONTAGE" (RELATED TO GPA 2017-002)

WHEREAS, on December 3, 2019, the Salinas City Council, at the request of the City of Salinas, Applicant/Property Owner, held a duly noticed public hearing to consider Rezone 2017-001 to change the Zoning designation of 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from "Industrial-General Commercial" to "Mixed Arterial Frontage" located at 10 Simas Street (APN: 003-091-011-000); and

WHEREAS, on November 6, 2019, the Salinas Planning Commission, held a duly noticed public hearing to consider Rezone 2017-002; and

WHEREAS, the Planning Commission considered a Mitigated Negative Declaration prepared for this project and independently determined that all impacts were adequately addressed in accordance with the California Environmental Quality Act; and

WHEREAS, on November 6, 2019, the Salinas Planning Commission weighed the evidence presented at said public hearing, considered the staff report, determined that positive findings could be made for approval of the project, adopted Resolution No. 2019-016 recommending adoption of the related Mitigated Negative Declaration and approval of Rezone 2017-001; and

WHEREAS, the City Council weighed the evidence presented at said public hearing, including the Staff Report which is on file at the Community Development Department together with the record of environmental review; and

WHEREAS, the City Council has reviewed and considered the information contained in the Initial Study and related environmental documents including the Mitigated Negative Declaration; and

WHEREAS, by Resolution adopted by the City Council on December 3, 2019, the City Council adopted the Mitigated Negative Declaration prepared for Rezone 2017-001.

NOW, THEREFORE, BE IT RESOLVED by the Salinas City Council that the Council approve Rezone 2017-002, and adopts the following findings as the basis for its determination, and that the foregoing recitations are true and correct, and are included herein by reference as findings:

Rezone 2017-001:

1. **The amendment is consistent with the Salinas general plan, any applicable specific plan, and other plans and policies adopted by the Salinas city council;**

The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Land use Policy LU-3.7, the Amendment allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable compliant use. The infill development of establishing the religious assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development on-site and conforms to Community Design Policy CD-2.3. The proposed "Arterial Frontage" land use designation is not expected to result in negative impacts or conflict with surrounding properties, because the adjacent lots to the west are designated the same "Arterial Frontage".

2. The amendment will not have the effect of reversing the policies of the Salinas general plan, any applicable specific plan, and other plans and policies adopted by the Salinas city council;

There are no policies within the Salinas General Plan that would be reversed as a result of this amendment. There are no Specific Plans or Precise Plans applicable to the site.

3. The amendment would not create an isolated district unrelated to adjacent zoning districts;

The proposed zoning amendment will not create an unrelated zoning district because the rezoning would extend the boundary of the existing and contiguous MAF base zoning district to include the proposed portion of the lot located at 10 Simas Street. The rezone results in an extension of the existing MAF zone to the west of the site.

4. The city has the capability to provide public utilities, roads, and services to serve the uses allowed by the proposed amendment.

Salinas is an urbanized area and public infrastructure is presently in place to serve most uses. The proposed Rezoning would not create the need for additional infrastructure.

NOW, THEREFORE, THE SALINAS CITY COUNCIL HEREBY ORDAINS AS FOLLOWS:

SECTION 1. The City of Salinas's Zoning Map, a copy of which is on file with the City Clerk of the City of Salinas and which copy constitutes the original record, is hereby amended to reflect the following:

That certain real property located in the City of Salinas, County of Monterey, State of California, and shown and designated on that certain map attached hereto as Exhibit 1 and made a part hereof, entitled "Rezone Map – Rezone 2017-001" and which real property,

approximately 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot (APN: APN: 003-091-011-000) located at 10 Simas Street and now classified in the Industrial-General Commercial (IGC) Zoning District, is hereby reclassified as shown on the attached "Rezone Map – Rezone 2017-001" into the Mixed Arterial Frontage (MAF) Zoning District.

SECTION 2. The aforesaid map and all notations, references and other information shown thereon shall be as much a part of this ordinance as if the matters and information shown on said map were fully described herein.

SECTION 3. This ordinance shall take effect and be in force thirty days from and after its adoption.

SECTION 4. The Salinas City Clerk is hereby directed to cause the following summary of the ordinance to be published by one insertion in the *Californian*, a newspaper of general circulation published and circulated in the City of Salinas and hereby designated for that general purpose by the Salinas City Council:

> "The City of Salinas's Zoning Map has been amended by reclassifying approximately 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from the Industrial-General Commercial (IGC) Zoning District to the Mixed Arterial Frontage (MAF) Zoning District on property located at 10 Simas Street. This Ordinance goes into effect 30 days after adoption. For additional detail concerning this amendment, contact Community Development Department, 65 West Alisal Street, Salinas, CA 93901."

This ordinance was introduced and read December 3, 2019 and passed and adopted on December 17, 2019, by the following vote:

REZONE 2017-001

(Related to General Plan Amendment 2017-002)

Project Description: Change 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from Industrial-General Commercial to Mixed Arterial Frontage.

\\SalSvr44\DeptPvt\ComDev\robertl\Documents\10 Simas Street\GPA 2017-002 and RZ 2017-001\RZ 2017-001 Map Exhibit.docx

RESOLUTION NO. _____(N.C.S.)

RESOLUTION APPROVING AN AMENDMENT TO THE SALINAS GENERAL PLAN TO CHANGE THE GENERAL PLAN DESIGNATION OF OF 94,235 SQUARE FEET (2.16 ACRES) OF A 401,197 (9.21 ACRES) LOT LOCATED AT 10 SIMAS STREET (RELATED TO RZ 2017-001)

WHEREAS, on December 3, 2019, the Salinas City Council, at the request of the City of Salinas, Applicant/Property Owner, held a duly noticed public hearing to consider General Plan Amendment 2017-002 to change the General Plan designation of 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from General Commercial/Light Industrial to Arterial Frontage located at 10 Simas Street (APN: 003-091-011-000); and

WHEREAS, on November 6, 2019, the Salinas Planning Commission, held a duly noticed public hearing to consider General Plan Amendment 2017-001; and

WHEREAS, the Planning Commission considered a Mitigated Negative Declaration prepared for this project and independently determined that all impacts were adequately addressed in accordance with the California Environmental Quality Act; and

WHEREAS, on November 6, 2019, the Salinas Planning Commission weighed the evidence presented at said public hearing, considered the staff report, determined that positive findings could be made for approval of the project, adopted Resolution No. 2019-__ recommending adoption of the related Mitigated Negative Declaration and approval of General Plan Amendment 2017-002; and

WHEREAS, the City Council weighed the evidence presented at said public hearing, including the Staff Report which is on file at the Community Development Department together with the record of environmental review; and

WHEREAS, the City Council has reviewed and considered the information contained in the Initial Study and related environmental documents including the Mitigated Negative Declaration; and

WHEREAS, by Resolution adopted by the City Council on December 3, 2019, the City Council adopted the Mitigated Negative Declaration prepared for General Plan Amendment 2017-002.

NOW, THEREFORE, BE IT RESOLVED by the Salinas City Council that the Council approve General Plan Amendment 2017-002, and adopts the following findings as the basis for its determination, and that the foregoing recitations are true and correct, and are included herein by reference as findings:

General Plan Amendment 2017-001:

1. ***The proposed general plan amendment is consistent with all other goals, policies, programs, and land uses of applicable elements of the general plan;***

   The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Land use Policy LU-3.7, the Amendment allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable compliant use. The infill development of establishing the religious assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development on-site and conforms to Community Design Policy CD-2.3. The proposed "Arterial Frontage" land use designation is not expected to result in negative impacts or conflict with surrounding properties, because the adjacent lots to the west are designated "Arterial Frontage" and there is an existing 6-foot high fence with two abutting landscape planters that separate the proposed area for designation from an existing retail use and a vacant lot.

2. ***The proposed general plan amendment promotes the public necessity, convenience, and general welfare.***

   The General Plan Amendment promotes the public necessity, convenience and general welfare because the proposal will create a General Plan and Zoning designation to allow for the continuation of religious assembly use that took over a vacant building.

RESOLUTION NO. _____

RESOLUTION APPROVING CONDITIONAL USE PERMIT TO TO ESTABLISH AND OPERATE A RELIGIOUS ASSEMBLY USE IN AN EXISTING 18,150 SQUARE FOOT BUILDING LOCATED AT 10 SIMAS STREET (RELATED TO GPA 2017-002 AND RZ 2017-001)

WHEREAS, on December 3, 2019, the Salinas City Council, at the request of the City of Salinas, Applicant/Property Owner, held a duly noticed public hearing to consider Conditional Use Permit 2017-019 to establish and operate a religious assembly use in an existing 18,150 square foot building located at 10 Simas Street (APN: 003-091-011-000); and

WHEREAS, on November 6, 2019, the Salinas Planning Commission, held a duly noticed public hearing to consider Conditional Use Permit 2017-019; and

WHEREAS, the Planning Commission considered a Mitigated Negative Declaration prepared for this project and independently determined that all impacts were adequately addressed in accordance with the California Environmental Quality Act; and

WHEREAS, on November 6, 2019, the Salinas Planning Commission weighed the evidence presented at said public hearing, considered the staff report, determined that positive findings could be made for approval of the project, adopted Resolution No. 2019-__ recommending adoption of the related Mitigated Negative Declaration and approval of Conditional use Permit 2017-019; and

WHEREAS, the City Council weighed the evidence presented at said public hearing, including the Staff Report which is on file at the Community Development Department together with the record of environmental review; and

WHEREAS, the City Council has reviewed and considered the information contained in the Initial Study and related environmental documents including the Mitigated Negative Declaration; and

WHEREAS, by Resolution adopted by the City Council on December 3, 2019, the City Council adopted the Mitigated Negative Declaration prepared for Conditional Use Permit 2017-019.

NOW, THEREFORE, BE IT RESOLVED by the Salinas City Council that the Council approve Conditional Use Permit 2017-019, and adopts the following findings as the basis for its determination, and that the foregoing recitations are true and correct, and are included herein by reference as findings:

Conditional Use Permit 2017-019:

1. ***The proposed location of the use is in accordance with the objectives of the Salinas General Plan, this Zoning Code and the purposes of the district in which the site is located;***

   The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Land use Policy LU-3.7, the Amendment allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable compliant use. The infill development of establishing the religious assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development on-site and conforms to Community Design Policy CD-2.3. The proposed "Arterial Frontage" land use designation is not expected to result in negative impacts or conflict with surrounding properties, because the adjacent lots to the west are designated "Arterial Frontage" and there is an existing 6-foot high fence with two abutting landscape planters that separate the proposed area for designation from an existing retail use and a vacant lot.

   Upon a successful General Plan Amendment and Rezone, a religious assembly use is subject to a Conditional Use Permit in the MAF Zoning District per Section 37-30.240, Table 37-30.110. Per Section 37-30.230(e)(1) the purpose of the MAF District is to provide a combination of uses along certain areas on East Market Street. Per Section 37-60.505 non-administrative Conditional Use Permits are subject to the review and approval of the Planning Commission; Non-administrative Conditional Use Permits apply to development review proposals that the City Planner has determined are not statutorily or categorically exempt from the California Environmental Quality Act.

2. ***The proposed location of the conditional use and the proposed conditions under which it would be operated or maintained are consistent with the Salinas General Plan and will not be detrimental to the public health, safety, or welfare of persons residing or working in or adjacent to the neighborhood of such use, nor detrimental to properties or improvements in the vicinity or the general welfare of the City of Salinas; and***

   The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Land use Policy LU-3.7, the Amendment allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable compliant use. The infill development of establishing the religious assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development on-site and conforms to Community Design Policy CD-2.3. The proposed "Arterial Frontage" land use

designation is not expected to result in negative impacts or conflict with surrounding properties, because the adjacent lots to the west are designated "Arterial Frontage" and there is an existing 6-foot high fence with two abutting landscape planters that separate the proposed area for designation from an existing retail use and a vacant lot.

It is the continued operation of a nonconforming use in an existing building. The proposed establishment and operation of a Religious Assembly use would not be detrimental to the public health, safety and general welfare of the people of the City. A six-foot high fence and abutting landscape planters separate the subject portion of the lot from adjacent uses on other lots. The project provides adequate off-street parking and meets the recycling and trash recycling provisions of the Zoning Code.

3. The proposed conditional use will comply with the provisions of the Salinas Zoning Code, including any specific conditions required for the proposed use.

Conditions have been recommended for this permit to ensure that, when implemented, the project will conform and comply with the provisions of the Salinas Zoning Code. For example, a condition requires all environmental mitigation measures contained in the Mitigation Monitoring and Reporting Plan (MMRP) shall be conditions of approval incorporated herein by reference.

Title of Document

CONDITIONAL USE PERMIT NO. 2017-019
City of Salinas
Community Development Department
(Amends Conditional Use Permit 1987-023)

WHEREAS, the Salinas City Council, at a public hearing duly noticed and held on December 3, 2019, found that the proposed location of the use and structure is in accord with the objectives of the Salinas Zoning Code and the purposes of the zoning district in which the site is located; that the location of the use and structure and the proposed conditions under which it would be operated and maintained will be consistent with the Salinas General Plan and will not be detrimental to the public health, safety, or welfare of persons residing or working in or adjacent to the neighborhood of such use, nor detrimental to properties or improvements in the vicinity or the general welfare of the City of Salinas; that the use and structure will comply with the provisions of the Salinas Zoning Code, including the specific conditions required for the proposed use and structure; and that this conditional use has been evaluated in accordance with the California Environmental Quality Act, as amended; and that the Salinas City Council has reviewed and considered an Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program.

NOW, THEREFORE, the Salinas City Council hereby grants and issues Conditional Use Permit No. 2017-019 pursuant to *Article VI, Division 8: Conditional Use Permits*, of Chapter 37 of the Salinas City Code and upon the following terms and conditions and not otherwise, to wit:

ISSUED TO PROPERTY OWNER: Simas-East Market Street LLC

FOR USE: Establish and operate a religious assembly use in an existing 18,150 square foot building.

ON PROPERTY LOCATED AT: 10 Simas Street

ASSESSOR'S PARCEL NO.: 003-091-011-000

ZONING DISTRICT: MAF -F (Mixed Arterial Frontage – Flood Plain Overlay)

ENVIRONMENTAL REVIEW ACTION & DATE: The environmental impacts of the project have been analyzed in accordance with the California Environmental Quality Act (CEQA) on December 3, 2019. An Initial Study was prepared to evaluate the potential impacts associated with the project. Based upon review of the Initial Study, a Mitigated Negative Declaration was adopted that identified that the proposed project will not have a significant effect on the environment because the mitigation measures outlined in the proposed Mitigation Monitoring Program have been included in the project

EXPIRATION DATE: None, once properly established, unless the subject religious assembly use ceases operation for a continuous period of six (6) months or more.

RIGHT TO OPERATE/DEVELOP

1. The Permittee shall have the right to establish and operate a religious assembly use in an existing 18,150 square foot building on the above-described property in accordance with the following exhibits incorporated herein by reference and made a part of this Permit:

Exhibit "A" Vicinity Map
Exhibit "B" Engineer's Report, dated May 15, 2018
Exhibit "C" Existing Site Plan with Proposed General Plan Amendment and Rezone
Exhibit "D" Existing Floor Plan (Sheet A101)
Exhibit "E" Revised Floor Plan for Sanctuary (Sheet A101B)
Exhibit "F" Mitigated Negative Declaration, Mitigation Monitoring Program, and Initial Study

LIMITATIONS ON USE

1. "For Use" Section of CUP 1987-028 shall be revised to reflect the following changes (changes shown in strikethrough/underline format):

~~Seven-plex indoor theater~~Religious Assembly use in 18,150 sq. ft building
79,570 sq. ft commercial service/
Industrial space

2. Condition No. 1 of CUP 1987-028 shall be revised to reflect the following changes (changes shown in strikethrough/underline format):

The permittee shall have the right to construct and operate a ~~seven-plex theater~~Religious Assembly use (totaling 18,150 sq. ft.) and four commercial

service/industrial buildings totaling 79,570 square feet on the above-described property in accordance with the following exhibits attached hereto and made part of this permit:
Exhibit “A” – Site Plan
Exhibit “B” – Building Elevations and material Sample Boards
Exhibit “C” – Landscape Plan
Exhibit “D” – Master Sign Plan 2017-003
Exhibit “E” – Public works Memo dated 10/17/89
Exhibit “F” – Fire Department Memo dated 10/6/89
Exhibit “G” – Use List

3. Condition No. 4 of CUP 1987-028 shall be deleted in its entirety.

4. All remaining terms, requirements, and conditions of Conditional Use Permit 1987-028 remain in full force and effect.

5. The City Planner may conduct a review of this Permit after inauguration, and may require modifications, if appropriate. The City Planner may also schedule a review by the Salinas Planning Commission, at a public hearing, if considered necessary. In the event that a public hearing is necessary, the Permittee shall reimburse the City of Salinas for all costs and expenses required to prepare for and conduct said hearing.

6. If the subject religious assembly use ceases operation for a continuous period of six (6) months or more, this Conditional Use Permit shall become null and void.

7. This Permit shall not be effective until the effective date of the related Rezone 2017-001 and General Plan Amendment 2017-002. All provisions of the Rezone and General Plan Amendment adopted by action of the Salinas City Council shall be incorporated herein as conditions of approval into this Conditional Use Permit.

ENVIRONMENTAL MITIGATIONS

8. All environmental mitigation measures contained in the Mitigation Monitoring and Reporting Plan (MMRP), attached as Exhibit “F,” shall be conditions of approval incorporated herein by reference.

FIRE PROTECTION REQUIREMENTS

9. If required, all fire sprinkler apparatus shall be incorporated into the overall site plan and building design. Such apparatus shall be located within building interiors, garages, stairwells, utility areas, trash areas and/or other areas substantially out of the public view. Fire Department connection pipes shall be painted to match the adjacent building.

PARKING REQUIREMENTS

10. All off-street parking and loading areas shall be graded, paved, drained, landscaped, striped, and maintained in accordance with *Article V, Division 2: Parking, Loading, and Outdoor Lighting* of the Salinas City Code.

SIGNS

11. A Sign Permit issued in accordance with *Article V, Division 3: Signs* of the Salinas City Code, shall be required for all signs.

12. No canvas signs, banners, pennants, flags, streamers, balloons or other temporary or wind signs; no mobile, A-frame, or portable signs; no roof or canopy signs extending above a building roof; no signs that resemble any official marker erected by the city, state or any governmental agency, or that by reason of position, shape, color or illumination would conflict with the proper functioning of any traffic sign or signal or would be a hazard to vehicular or pedestrian traffic; no signs which produce odor, sound, smoke, fire or other such emissions; and no animated, flashing, moving or rotating signs shall be permitted unless permitted in accordance with *Article 5, Division 3: Signs* of the Salinas Zoning Code, as may be amended from time to time.

OUTDOOR LIGHTING

13. Exterior lighting may be installed in accordance with Zoning Code Section 37-50.480 under the following limitations:

    a. No floodlighting will be allowed on any structure.
    b. Parking lot lighting shall be shielded to confine light spread to within the site boundaries and shall not exceed 25 feet in height.
    c. Prior to the issuance of a Building Permit, the applicant shall submit a detailed lighting plan for review and approval by the Community Development Department.

MAINTENANCE

14. All parking areas, driveways, other paved surfaces, accessways and grounds shall be regularly maintained and kept free of weeds, litter, and debris. All traffic signs and pavement markings shall be clear and legible at all times. All landscaped areas shall be maintained free of weeds, trash, and debris, and all plant material shall be continuously maintained in a healthy, growing condition. All exterior building and wall surfaces shall be regularly maintained, and any damage caused by weathering, vandalism, or other factors shall be repaired in conformance with the terms and

conditions of this Permit.

PUBLIC IMPROVEMENTS

15. All existing damaged and hazardous sidewalks, and unused driveways shall be reconstructed to City standards prior to issuance of a Certificate of Occupancy.

16. Public improvements to serve the development shall be reviewed and approved by the City Engineer and shall be installed in accordance with City standards. All utilities shall be installed underground with details to be included on the final improvement plans.

UTILITIES/EQUIPMENT SCREENING

17. All new utility lines shall be placed underground and all new power transformers shall be placed underground where permitted by the utility company. Where transformers must be pad-mounted above ground, they shall be located away from the general public view or shall be effectively concealed by landscaping or a screen fence of a design approved by the utility company and the City Planner.

18. All new mechanical equipment and appurtenances (i.e. gas, water meters, electrical boxes, HVAC systems, refrigeration equipment, etc.), building or ground mounted, shall be screened from public view and adjacent properties. Roof vents shall be painted to blend with roof materials. Details shall be shown on the final construction and/or land plans and are subject to the approval of the City Planner.

19. The Applicant, or successor-in-interest shall eradicate graffiti painted or marked on the facility within seventy-two (72) hours of occurrence pursuant to Municipal Code Section 5-03.19(a)(4).

PERMIT NOT TO SUPERSEDE OTHER REQUIRED LICENSING OR PERMITS

20. The issuance of this Permit shall not relieve the Permittee of any requirement to obtain permits or licensing from any county, regional, state or federal agencies. If applicable, a City Business License shall be obtained prior to commencement of use.

21. This Permit may be subject to water and sanitary sewer allocations. The Permittee will proceed at their own risk as water and sanitary sewer allocation may not be available at the time requested.

MODIFICATION OF APPROVED USE AND PLANS

22. Any modification to the terms and conditions of this Permit are subject to the issuance of a new Permit. The City Planner may approve minor modifications to this Permit if the City Planner finds the modification to be in substantial compliance with the original approval.

VIOLATION; REVOCATION

23. Use of the property shall be conducted in such a way that it does not constitute a nuisance to the use and enjoyment of surrounding properties or the City. Any permittee, person, firm, corporation, whether as principal, agent, employee or otherwise, violating, causing or maintaining the violation of any of the provision of this Permit shall be guilty of a misdemeanor or an infraction, as charged. Alternatively, any violation of this Permit may be prosecuted administratively pursuant to the City's Administrative Remedies Ordinance and/or other applicable laws, regulations or codes. Upon determination by the City Planner that there are reasonable grounds for revocation of this Permit, a revocation hearing shall be set to be heard before the Salinas Planning Commission in accordance with *Article VI, Division 18: Enforcement and Penalties* of the Salinas Zoning Code or such codes as may be subsequently adopted.

SUBSTANTIAL ACTION TIME LIMIT

24. This Permit shall expire one year after its effective date unless:

    a. The use is established in conformance with the provisions of the Zoning Code; or
    b. The City Planner determines that substantial action has commenced to carry out the terms and intent of the Conditional Use Permit.

PERMIT VALIDATION

25. Pursuant to Zoning Code Section 37-60.530, this Permit shall be null and void and all terms and conditions shall have no force or effect unless this Permit is signed by the Permittee(s) and returned to City of Salinas Community Development Department within 90 days of approval. ***It is the applicant's responsibility to track the 90-day expiration date. No notice will be sent.***

STANDARD CONDITIONS

26. Pursuant to **Salinas City Code Section 1-8.1: Civil action enforcement**, and **Section 1-8.2: Liability for costs**, permittee shall reimburse the City of Salinas for all costs and expenses (including but not limited to fees and

charges of architects, engineers, attorneys, and other professionals, and court costs) incurred by the City in enforcing the provisions of this Permit.

27. The applicant(s) shall defend, indemnify, and hold harmless the City of Salinas or any of its boards, commissions, agents, officers, and employees from any claim, action or proceeding against the City, its boards, commissions, agents, officers, or employees to attack, set aside, void, or annul, the approval of this use. The City shall promptly notify the applicant(s) of any such claim, action, or proceeding. The City shall cooperate in the defense. Nothing contained in this condition shall prohibit the City from participation in a defense of any claim, action, or proceeding if the City bears its own attorney's fees and costs, and the City defends the action in good faith.

28. Notwithstanding any of the provisions in this permit, all improvements and uses shall comply with all other ordinances and regulations of the City of Salinas and all local, state and federal laws and regulations.

29. No further development other than that shown on this permit or attached exhibits shall be allowed unless or until an amendment to this permit has been approved. Requests for a minor modification of an approved permit may be granted by the City Planner provided the modification is substantially in compliance with the original approval and conditions.

NOTICE OF CHALLENGE LIMITATIONS

30. Code of Civil Procedure Section 1094.6 requires all Court challenges to the decision to grant this Permit be initiated within 90 days of the final decision of the City in this matter.

EXECUTIONS

THIS CONDITIONAL USE PERMIT *was approved by action of the Salinas City Council on December 17, 2019, and shall become effective:*

BY: Bobby Latino, Associate Planner

SUBJECT: GENERAL PLAN AMENDMENT 2017-002 (GPA 2017-002); REZONE 2017-001 (RZ 2017-001); AND CONDITIONAL USE PERMIT (CUP 2017-019) LOCATED AT 10 SIMAS STREET IN THE IGC-F (INDUSTRIAL-GENERAL COMMERCIAL – FLOOD PLAIN OVERLAY) ZONING DISTRICT

RECOMMENDATION

Staff recommends that the Planning Commission affirm the findings and approve the attached Resolution recommending that the City Council adopt the proposed Mitigated Negative Declaration, approve General Plan Amendment 2017-002, adopt Rezone 2017-001, and approve CUP 2017-019.

BACKGROUND

Simas-East Market Street LLC, property owner and applicant, is requesting approval of a General Plan Amendment 2017-002 (GPA 2017-002) to change the General Plan designation of 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from General Commercial/Light Industrial to Arterial Frontage, Rezone 2017-001 (RZ 2017-001) to change the Zoning designation of 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from Industrial-General Commercial to Mixed Arterial Frontage, and a Conditional Use Permit (CUP 2017-019) to establish and operate a religious assembly use in an existing 18,150 square foot building.

A nonconforming religious assembly use has been operating at the

subject site within an existing 18,150 square foot building (former seven-plex indoor movie theater) for approximately nine years. Temporary Use of Land Permit 2010-045 initially approved the temporary use of religious assembly and Building Permit No. B10-0314 approved the tenant improvement. The building is part of a larger Industrial Complex that was approved by Conditional Use Permit (CUP 1987-028). The proposed CUP will modify CUP 1987-028 to replace the indoor theater with the religious assembly use. Religious Assembly uses are not permitted in the underlying base Zoning District of IGC, but is conditionally allowed in the Mixed Arterial Frontage District. Simas-East Market Street LLC has applied for the requested permits to achieve long term zoning compliance with the religious assembly use.

The property is located in the Industrial-General Commercial (IGC) base District and Floodplain Overlay (F) overlay District. The following provides an overview of the land uses and zoning districts adjacent to the project site:

North: Park/P (Parks)
South: Minor Vehicle Repair, Vehicle Sales, and Vehicle-related Retail Sales and Services uses/IGC-F (Industrial-General Commercial – Flood Plain Overlay)
East: Building Materials and Service use/IGC-F (Industrial-General Commercial – Flood Plain Overlay)
West: Retail Sales/MAF-F (Mixed Arterial Frontage – Flood Plain Overlay)

ANALYSIS

General Plan Amendment and Rezone

The proposed Amendment and Rezone is consistent with Salinas General Plan Policies. Consistent with Land use Policy LU-3.7, the Amendment and Rezone allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable and compliant use. The infill development of establishing the religious assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development in conformance with Community Design Policy CD-2.3.

Conditional Use Permit

Upon the effective date of the General Plan Amendment and Rezone, a religious assembly use would be subject to a Conditional Use Permit in the proposed MAF Zoning District per Section 37-30.240, Table 37-30.110. This CUP will modify CUP 1987-028 to replace the subject 18,150 square foot theater with a religious assembly use and modify select conditions related to the former theater.

ENVIRONMENTAL REVIEW

The environmental impacts of the project have been analyzed in accordance with the California Environmental Quality Act (CEQA). An Initial Study was prepared to evaluate the potential impacts associated with the project. Based upon review of the Initial Study, the proposed project will not have a significant effect on the environment because the mitigation measures outlined in the proposed Mitigation Monitoring Program have been included in the project (see attached Initial Study and Mitigated Negative Declaration). The Initial Study and Mitigated Negative Declaration were routed to responsible agencies and posted at the County Clerk's Office on September 26, 2019; the deadline for comments was October 16, 2019. Action on the environmental document should precede any action on the requested permits. Monterey County Planning Department provided "No Comments" on the Mitigated Negative Declaration during the review period.

FINDINGS

Mitigated Negative Declaration:

Prior to recommending approval to the Council of the requested General Plan Amendment, Rezone, and Conditional Use Permit, the Planning Commission will need to confirm that the proposed environmental document is adequate for the proposed project by establishing the finding set forth in the attached Planning Commission Resolution.

General Plan Amendment/Rezone:

The Planning Commission may recommend approval of a General Plan Amendment and Rezone if all of the findings set forth in the attached Planning Commission Resolution are established. Per Zoning Code Section 37-60.920(d)(2), an affirmative vote of a majority (no less than four (4) votes) of the Planning Commission is required for the Commission to make a recommendation of the General Plan Amendment to the City Council.

Conditional Use Permit:

Per Section 37-60.505, the Planning Commission may recommend approval of an application for Conditional Use Permit to the Council, if all of the findings set forth in the attached proposed Planning Commission Resolution are established.

TIME CONSIDERATION

The proposed project includes requests for a General Plan Amendment and a Rezone, which are both legislative acts and are not subject to the Permit Streamlining Act (PSA).

ALTERNATIVES AVAILABLE TO THE COMMISSION

The Planning Commission has the following alternatives:

1. Affirm the findings set forth in the attached Resolution, recommending that the City Council adopt the Mitigated Negative Declaration, approve General Plan Amendment 2017-002, introduce and adopt Rezone 2017-001, and approve Conditional Use Permit 2017-019 with modifications; or

2. Find that the proposal applications are not appropriate and establish findings at the public hearing recommending that the City Council deny General Plan Amendment 2017-002, Rezone 2017-001, and Conditional Use Permit 2017-019.

CONCLUSION

The proposed General Plan Amendment, Rezone, and Conditional Use Permit will be consistent with General Plan and Zoning Code policies. The proposed applications would allow for a religious assembly use in a former vacant theater building with no negative impacts to surrounding properties. The Initial Study and Mitigated Negative Declaration did not identify significant environmental impacts.

SALINAS PLANNING COMMISSION
RESOLUTION NO. 2019-16

Resolution Recommending that City Council Approve a General Plan Amendment, Rezone, and Conditional Use Permit to Establish and Operate a Religious Assembly Use Located at 10 Simas Street (GPA 2017-002, RZ 2017-001, and CUP 2017-019)

WHEREAS, on November 6, 2019, the Salinas Planning Commission, at the request of the Applicant/Property Owner, Simas-East Market Street LLC, held a duly noticed public hearing to consider General Plan Amendment 2017-002 (GPA 2017-002) to change the General Plan designation of 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from General Commercial/Light Industrial to Arterial Frontage, Rezone 2017-001 (RZ 2017-001) to change the Zoning designation of 94,235 square feet (2.16 acres) of a 401,197 (9.21 acres) lot from Industrial-General Commercial to Mixed Arterial Frontage, and Conditional Use Permit (CUP 2017-019) to establish and operate a religious assembly use in an existing 18,150 square foot building (Assessor's Parcel Number 003-091-011-000); and

WHEREAS, the Planning Commission weighed the evidence presented at said public hearing, including the Staff Report which is on file at the Community Development Department together with the record of environmental review; and

WHEREAS, the Planning Commission has reviewed and considered the information contained in the Initial Study and related environmental documents including the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program.

NOW, THEREFORE, BE IT RESOLVED by the Salinas Planning Commission that it recommends that the City Council adopt the proposed Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program and approve General Plan Amendment 2017-002, Rezone 2017-001, and Conditional Use Permit 2017-019 and adopts the following findings as the basis for its determination, and that the foregoing recitations are true and correct, and are included herein by reference as findings:

For the Mitigated Negative Declaration:

The Planning Commission hereby finds that a Mitigated Negative Declaration (MND) has been prepared with respect to the project in compliance with the California Environmental Quality Act (CEQA) of 1970, as amended, and the guidelines promulgated thereunder. Further, this Commission has independently reviewed and considered the information contained in the Initial Study and related environmental documents, together with the comments received during the public review process. On the basis of the whole record before it, the Commission finds that, with the conditions of approval and the proposed mitigation measures, there is no substantial evidence that the project will have a significant effect on the environment and that the MND reflects the Commission's independent judgment and analysis. On this basis, the Commission adopts the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program.

The environmental impacts of the project have been analyzed in

accordance with the California Environmental Quality Act (CEQA). An Initial Study was prepared to evaluate the potential impacts associated with the project. Based upon review of the Initial Study, the proposed project will not have a significant effect on the environment because the mitigation measures outlined in the proposed Mitigation Monitoring Program have been included in the. The Initial Study and Mitigated Negative Declaration were routed to responsible agencies and posted at the County Clerk's Office on September 26, 2019; the deadline for comments was October 16, 2019. Monterey County Planning Department provided "No Comments" on the Mitigated Negative Declaration during the review period.

For the General Plan Amendment:

1. ***The proposed general plan amendment is consistent with all other goals, policies, programs, and land uses of applicable elements of the general plan;***

   The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Land use Policy LU-3.7, the Amendment allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable compliant use. The infill development of establishing the religious assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development on-site and conforms to Community Design Policy CD-2.3. The proposed "Arterial Frontage" land use designation is not expected to result in negative impacts or conflict with surrounding properties.

2. ***The proposed general plan amendment promotes the public necessity, convenience, and general welfare.***

   The General Plan Amendment promotes the public necessity, convenience and general welfare because the project would result in conforming zoning for the continuation of an existing religious assembly use.

For the Rezone:

1. ***The amendment is consistent with the Salinas general plan, any applicable specific plan, and other plans and policies adopted by the Salinas city council;***

   The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Land use Policy LU-3.7, the Amendment allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable compliant use. The infill development of establishing the religious

assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development on-site and conforms to Community Design Policy CD-2.3. The proposed "Arterial Frontage" land use designation is not expected to result in negative impacts or conflict with surrounding properties.

2. ***The amendment will not have the effect of reversing the policies of the Salinas general plan, any applicable specific plan, and other plans and policies adopted by the Salinas city council;***

   There are no policies within the Salinas General Plan that would be reversed as a result of this amendment. There are no Specific Plans or Precise Plans applicable to the site.

3. ***The amendment would not create an isolated district unrelated to adjacent zoning districts;***

   The proposed rezone will not create an unrelated zoning district because the rezoning would extend the boundary of the existing and contiguous MAF base zoning district to include the proposed portion of the lot located at 10 Simas Street.

4. ***The city has the capability to provide public utilities, roads, and services to serve the uses allowed by the proposed amendment.***

   Salinas is an urbanized area and public infrastructure is presently in place to serve most uses. The proposed Rezoning would not create the need for additional infrastructure.

For the Conditional Use Permit:

1. ***The proposed location of the use is in accordance with the objectives of the Salinas General Plan, this Zoning Code and the purposes of the district in which the site is located;***

   The proposed Amendment to the existing Conditional Use Permit is consistent with Salinas General Plan Policies. Consistent with Land use Policy LU-3.7, the Amendment allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable compliant use. The infill development of establishing the religious assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development on-site and conforms to Community Design Policy CD-2.3. The project is not expected to result in negative impacts or conflict with surrounding

properties, because the adjacent lots to the west are designated "Arterial Frontage" and an existing 6-foot high fence with two abutting landscape planters that separate the site from an existing retail use and a vacant lot.

Upon a successful General Plan Amendment and Rezone, a religious assembly use would be subject to a Conditional Use Permit in the MAF Zoning District per Section 37-30.240, Table 37-30.110. Per Section 37-30.230(e)(1) the purpose of the MAF District is to provide a combination of uses along certain areas on East Market Street.

2. ***The proposed location of the conditional use and the proposed conditions under which it would be operated or maintained are consistent with the Salinas General Plan and will not be detrimental to the public health, safety, or welfare of persons residing or working in or adjacent to the neighborhood of such use, nor detrimental to properties or improvements in the vicinity or the general welfare of the City of Salinas; and***

The proposed Amendment to the existing Conditional Use Permit is consistent with Salinas General Plan Policies. Consistent with Land use Policy LU-3.7, the Amendment allows for a formerly vacant 18,150 square foot theater building to be revitalized into a viable compliant use. The infill development of establishing the religious assembly use in the former vacant theater building with no proposed exterior modifications is consistent with scale and character of the existing Industrial Complex development on-site and conforms to Community Design Policy CD-2.3. The project is not expected to result in negative impacts or conflict with surrounding properties, because the adjacent lots to the west are designated "Arterial Frontage" and an existing 6-foot high fence with two abutting landscape planters separate the site from an existing retail use and a vacant lot.

The proposed establishment and operation of a Religious Assembly use would not be detrimental to the public health, safety and general welfare of the people of the City. A six-foot high fence and abutting landscape planters separate the subject portion of the lot from adjacent uses on other lots. The project provides adequate off-street parking and meets the recycling and trash recycling provisions of the Zoning Code.

3. ***The proposed conditional use will comply with the provisions of the Salinas Zoning Code, including any specific conditions required for the proposed use.***

Conditions have been recommended for this permit to ensure that, when implemented, the project will conform and comply with the provisions of the Salinas Zoning Code. For example, a condition requires all environmental

mitigation measures contained in the Mitigation Monitoring and Reporting Plan (MMRP) shall be conditions of approval incorporated herein by reference.

PASSED AND ADOPTED this 6th day of November 2019, by the following vote:

AYES: Chairperson Griffin, Vice Chairperson Meeks, Commissioners Anzo, Hernandez, Nohr, Ottone, and Rocamora

NOES: None

ABSTAIN: None

ABSENT: None

THIS IS TO CERTIFY that the foregoing is a full, true, and correct copy of a Resolution of the Planning Commission of the City of Salinas, that said Resolution was passed and adopted by the affirmative and majority vote of said Planning Commission at a meeting held on November 6, 2019, and that said Resolution has not been modified, amended, or rescinded, and is now in full force and effect.

(MITIGATED) NEGATIVE DECLARATION

The project described below has been reviewed in accordance with the California Environmental Quality Act (CEQA) and has been determined to have a less than significant impact upon the environment.

Project's Common Name/Description:	General Plan Amendment 2017-002 (GPA 2017-002) from General Commercial/Light Industrial to Arterial Frontage; and Rezone 2017-001 (RZ 2017-001) from Industrial-General Commercial to Mixed Arterial Frontage; Conditional Use Permit (CUP 2017-019) to establish and operate religious assembly use within an existing 18,150 square foot building.
File Nos.:	GPA 2017-002; RZ 2017-001; CUP 2017-019
Project Applicant:	Simas -East Market LLC
Project Location:	10 Simas Street in the IGC-F (Industrial-General Commercial – Flood Plain Overlay) Zoning District (APN 003-091-011-000)

Determination: The attached Initial Study has been prepared for the above project in accordance with the California Environmental Quality Act and procedures established in the *CEQA Guidelines* adopted by the City of Salinas. On the basis of the Initial Study, the City of Salinas makes the following determination:

☐ The above project will not have a significant effect on the environment, and a NEGATIVE DECLARATION is hereby approved.

☒ The above project could have a significant effect on the environment, but WILL NOT have a significant effect in this case because the attached mitigation measures have been made by or agreed to by the applicant which will avoid the effects or mitigate the effects to a point where clearly no significant effects will occur. Furthermore, there is no substantial evidence before the City of Salinas that the proposed project, as revised, may have a significant effect on the environment. A (MITIGATED) NEGATIVE DECLARATION is hereby approved.

Mitigation measures, if any, included in the project to avoid potentially significant effects are found in the attached Mitigation Monitoring Program. Further information about this project and about its probable environmental impact will be on file in the Community Development Department, 65 West Alisal Street, Salinas, CA 93901.

UNOFFICIAL MINUTES
OF THE
SALINAS PLANNING COMMISSION

November 6, 2019

The meeting was called to order at 3:30 p.m. in the City Council Chamber Rotunda.

PLEDGE OF ALLEGIENCE

ROLL CALL

WELCOME AND STAFF INTRODUCTIONS

PRESENT: Chairperson Griffin, Commissioners, Anzo, Hernandez, Meeks, Nohr, Ottone (Arrived at 3:55 p.m.), and Rocamora.

ABSENT: None

STAFF: Community Development Director, Megan Hunter; City Attorney, Chris A. Callihan; Planning Manager, Courtney Grossman; Senior Planner, Jill Miller; Associate Planner, Bobby Latino; and Administrative Aide, Maira Flores

COMMENTS FROM THE PUBLIC FOR ITEMS NOT ON THE AGENDA

Chairperson Griffin opened for public comment at 3:32 p.m.

No public comment received.

Chairperson Griffin closed for public comment at 3:32 p.m.

APPROVAL OF THE MINUTES: October 16, 2019

Upon motion by Commissioner Meeks, second by Commissioner Anzo, the minutes of October 16, 2019 were approved. The motion carried by the following vote:

AYES: Chairperson Griffin, Commissioners, Anzo, Meeks, and Nohr.

NOES: None

ABSTAIN: Commissioner Hernandez and Rocamora

ABSENT: Commissioner Ottone (Arrived at 3:55 p.m.)

CONSIDERATIONS

None

PUBLIC HEARINGS

Bobby Latino, Associate Planner, presented a PowerPoint Presentation regarding Variance 2019-001; a request to vary fence height at 1072 Industrial Street. This presentation is on file at the Community Development Department.

Commissioner Meeks inquired if there would be any major changes to the building structure to ensure compliance with commercial cannabis regulations. Bobby Latino indicated that compliance with regulations and building code would be secured through the Commercial Cannabis Business Permit process.

Commissioner Nohr requested clarification on the protest letter received for the project as it referenced concerns with the homeless population on the railroad right of way as opposed to the use of the site. Bobby Latino clarified that the use was previously established through a Site Plan Review and that the Variance was strictly to vary the fence height.

Chairperson Griffin opened for public comment at 3:39 p.m.

No public comment received.

Chairperson Griffin closed for public comment at 3:40 p.m.

Commissioner Meeks provided comments on the homeless camp referenced in the protest letter.

Commissioner Meeks motioned to adopt the resolution approving Variance 2019-001; A request to vary fence height at 1072 Industrial Street. Commissioner Nohr seconded this motion. The motion carried by the following vote:

AYES:	Chairperson Griffin, Commissioners Anzo, Hernandez, Meeks, Nohr, and Rocamora
NOES:	None
ABSTAIN:	None
ABSENT:	Commissioner Ottone (Arrived at 3:55 p.m.)

Bobby Latino, Associate Planner, presented a PowerPoint Presentation regarding General Plan Amendment 2017-001; a request to change a 7.67-acre site from Park to General Commercial/Light Industrial and Rezone 2017-002; a request to change a 7.67-acre site from

Parks to Industrial – General Commercial located at 295 Sun Way. This presentation is on file at the Community Development Department.

Commissioner Hernandez indicated that residents of Rancho Salinas Mobile Home Park are concerned with the rezone as they viewed this location as a recreational resource. Megan Hunter, Community Development Director, informed commissioners that the City determined not to continue to lease this privately-owned property for recreational use. Instead, the City's Master Park Plan will focus on maintenance and making capital improvements to existing parks; hence, the rezone for 295 Sun Way.

Commissioner Rocamora inquired if there was any information on the proposed use for the rezoned area since there's currently a need for housing. Ms. Hunter responded that due to the location of the site's proximity to the freeway and most of the surrounding areas being zoned as Industrial – General Commercial, this site would not be ideal for housing. Ms. Hunter also informed that as part of the Chinatown's Revitalization Plan, the City will continue to expand areas and identify opportunity sites for housing.

Robert Atkinson, Syufy Enterprises - Applicant, made a statement regarding the current use of the property and spoke in support of the project.

Chairperson Griffin opened for public comment at 3:54 p.m.

No public comment received.

Chairperson Griffin closed for public comment at 3:54 p.m.

Commissioner Hernandez motioned to approve the resolution recommending that City Council adopt the proposed Mitigated Negative Declaration, approved General Plan Amendment 2017-001, and introduce then adopt Rezone 2017-002. Commissioner Anzo seconded this motion. The motion carried by the following vote:

AYES:	Chairperson Griffin, Commissioners Anzo, Hernandez, Meeks, Nohr, and Rocamora
NOES:	None
ABSTAIN:	Commissioner Ottone (Arrived at 3:55 p.m.)
ABSENT:	None

Bobby Latino, Associate Planner, presented a PowerPoint Presentation regarding General Plan Amendment 2017-002; a request to change the General Plan designation of 94,235 square feet of a 401,197 lot from General Commercial/Light Industrial to Arterial Frontage, Rezone 2017-001; a request to change the Zoning designation of 94,235 square feet of a 401,197 lot from Industrial-General Commercial to Mixed Arterial Frontage, and Conditional Use Permit 2017-019; a request to establish and operate a religious assembly use in a an existing 18,150 square foot building located at 10 Simas Street. This presentation is on file at the Community Development Department.

Commissioner Nohr requested clarification regarding the buildings on the parcel that would be impacted by the project. Mr. Latino provided clarification.

Robert Atkinson, Syufy Enterprises - Applicant, made a statement regarding the current use of the property and spoke in support of the project.

Chairperson Griffin opened for public comment at 4:06 p.m.

David Mack, Salinas Resident, expressed a concern that the project may imply spot zoning.

Terry Green, Lead Pastor of Celebration Church, provided public comment in support of the project.

Karen Green, Lead Pastor of Celebration Church, provided public comment in support of the project.

Rosanna Guerrero, Congregation Member of Celebration Church, provided public comment in support of the project.

Jason Green, Youth Pastor of Celebration Church, provided public comment in support of the project.

John and Lily Martin, Congregation Members of Celebration Church, provided public comment in support of the project.

Shara Green Pena, Associate Pastor of Celebration Church, provided public comment in support of the project.

Luis Ortiz Jr., Local Mortician, provided public comment in support of the project.

Jesse, Congregation Member of Celebration Church, provided public comment in support of the project.

Echo Grijalva, Youth Mentor of Celebration Church, provided public comment in support of the project.

Received public comment in support of the project from two other unidentified Congregation Member of Celebration Church.

Chairperson Griffin closed for public comment at 4:32 p.m.

Commissioner Meeks inquired if there were any other areas in which spot zoning exists. Ms. Hunter informed the commissioners that this project was not considered spot zoning and it was not uncommon to have parcels with split zoning.

Commissioner Hernandez spoke in support of the project and commended the work of Celebration Church.

Commissioner Meeks motioned to approve the resolution recommending that City Council adopt the proposed Mitigated Negative Declaration, approved General Plan Amendment 2017-002, and introduce then adopt Rezone 2017-001 and approve Conditional Use Permit 2017-019. Commissioner Hernandez seconded this motion. The motion carried by the following vote:

AYES:	Chairperson Griffin, Commissioners Anzo, Hernandez, Meeks, Nohr, Ottone and Rocamora
NOES:	None
ABSTAIN:	None
ABSENT:	None

OTHER BUSINESS

Jill Miller, Senior Planner, presented a PowerPoint regarding the Study Session: West Area Specific Plan. This presentation is on file at the Community Development Department.

Commissioner Meeks inquired if it had been determined who would pay for sewage connections of Bolsa Knolls residences that could potentially result because of the project. Jill Miller informed that this would be determined by Monterey County regulations and not the City. Ms. Miller indicated she would research and present more information regarding this inquiry when the project returns to the Planning Commission for formal consideration.

Commissioner Ottone inquired when the Final Environmental Impact Report would be available for review. Courtney Grossman, Planning Manager, anticipated these documents would be available no later than Friday, November 15, 2019, (for consideration at the November 20, 2019 Planning Commission meeting), or as required by CEQA regulations.

Commissioner Ottone also inquired if action on the Development Agreement would be required from the Planning Commission. Christopher A. Callihan, City Attorney, responded

that only City Council would be required to action on the Development Agreement; however, it would be part of the package presented for consideration to the Planning Commission.

Commissioner Nohr, asked how Assembly Bill 68 and other senate bills impact the West Area Specific Plan. Jill Miller, Senior Plan, indicated that the plan currently meets municipal code; however, changes would be made as necessary to ensure compliance with the state law.

Chairperson Griffin opened for public comment at 4:53 p.m.

David Mack, resident of Salinas, stated concerns regarding potential impacts and sewer connections that could arise with the project.

Natalie Vaughn, California State University of Monterey Bay, provided public comment.

Chairperson Griffin closed for public comment at 4:58 p.m. No action is required with the study session.

Megan Hunter, Community Development Director, spoke regarding the need for an advisory Design Review Board to assist in providing applicants with review and feedback on project design. Ms. Hunter asked if the Planning Commissioners had any input or ideas for the layout and structure of such committee.

Courtney Grossman, Planning Manager, provided examples of previous advisory committees.

Commissioner Nohr agreed with the need for a Design Review Board and provided feedback.

Chairperson Griffin asked if documentation of the structure to follow of previous existing boards that assisted in similar functions could be referenced when considering the design of the committee.

Commissioner Ottone suggested consideration on expanding membership of the Ad Hoc Review Committee to subject matter experts of neighboring cities.

FOLLOW UP REPORTS

Megan Hunter, Community Development Director, apprised the Planning Commission that a second reading at City Council was held on November 5, 2019 to approve the Zoning Code Amendments that were recommended for approval by the Planning Commission on October 2, 2019 as well as the approval of the Alisal Vibrancy Plan presented on October 16, 2019. Both projects were approved.

Ms. Hunter also provided information regarding the report to City Council on November 5, 2019 by Joseph DeSante, Permit Center Manager and Building Official. As of September 30, 2019, over 1,800 Building Permits have been issued.

Additionally, Ms. Hunter informed that the City Council will be establishing a Business Development Committee which will serve as an advisory committee for building permitting improvements. Planning Commissioners should contact Ms. Hunter if interested.

FUTURE AGENDA ITEMS

The West Area Specific Plan and the Mitigated Negative Declaration for the Airport Lease Project located at 1341 Mercer Way are expected to be presented to the Planning Commission on November 20, 2019. Public works is also expected to present a Mitigated Negative Declaration for East Laurel Drive on this date.

The Chinatown Revitalization Project is expected for presentation to the Planning Commission on either December 4, 2019 or December 18, 2019.

Planning Commissioner attendance for November 20, 2019 was confirmed.

ADJOURNMENT

The meeting was adjourned at 5:20 p.m.

FLOOR PLAN KEYNOTES

No.	Description
1	Existing concrete masonry exterior wall (No Change)
2	Existing storefront entry door to remain (No Change)
3	Existing storefront glazing to remain (No Change)
4	Existing sloped floor (1:12 max slope) to remain (No Change)
5	Existing steps to be filled–in with concrete – Refer to Structural Drawings for detailed requirements
6	Existing interior door to remain (No Change)
7	Existing interior door to remain as exit only (No hardare on pull–side of door)
8	Existing multi–accomodation restrooms with new fixtures – Refer to Plumbing Drawings for detailed requirements
9	Existing exterior door to be permanently locked.
10	Shading indicates new fixed chair layout (Self–rising seats) – Re–use existing chairs where possible
11	New movable seating / Refer to spacing requirements this sheet
12	Occupancy capacity sign stating "MAXIMUM BUILDING OCCUPANCY 1176"
13	Occupancy capacity sign stating "MAXIMUM OCCUPANCY THIS ROOM 728"
14	Fire Department approved Key Box. (See General Notes / Sheet TS1)
15	Existing CMU wall and pilaster to be removed – Refer to Structural Drawings
16	New interior door (Solid Core) / Match existing – Refer to Door Schedule, Sheet A301
17	New Hi/Low wall mounted drinking fountains – Refer to Plumbing Drawings
18	Existing exterior hollow metal door to remain (No Change)
19	New sign over door w/1" high letters stating: "THIS DOOR TO REMAIN UNLOCKED WHENEVER THE BUILDING IS OCCUPIED"
20	6" x 6" Square International Symbol of Accessibility at primary entrance. – mount @ 60" a.f.f to c/l
21	New base & upper cabinets – Refer to detail 5/A301
22	New Base Cabinet & Counter – Refer to detail 6/A301
23	New Single–Accomodation restroom – Refer to enlarged plan on sheet A102
24	Existing stairs to 2nd floor storage mezzanine – No Change
25	New ramp to Platform / 1:12 max slope w/handrails each side – Refer to details on Sheets DA2 & S402
26	New stairs to platform / 7" Risers (Max) & 11" Treads (Min) w/Handrails each side of stairs / Refer to details on Sheets DA2 & S402
27	New steel frame column – Refer to structural drawings
28	Location of existing fire sprinkler riser – No Change
29	Provide handrails each side of ramp – Refer to details on Sheets DA2 & DA3
30	New 6'–4" Wide x 7'–2" High opening in existing CMU wall – Refer to detail B/S401
31	New 3'–4" Wide x 7'–2" High opening in existing CMU wall – Refer to detail B/S401
32	48"x66" Clear floor space of wheelchair seating (7 locations provided) – Readily removable seats may be provided in these locations when such spaces are not required to accommodate wheelchair users. (CBC Section 1104B.3.7)
33	Existing hollow metal door to be removed & re–installed at interior finished floor elevation – Cut existing wall and provide new opening so that door may be re–installed at new interior finished floor height – Refer to detail 15/S402
34	Existing hollow metal door to be removed & re–installed at interior finished floor elevation – Cut existing wall and provide new opening so that door may be re–installed at new interior finished floor height – Door to be welded shut from inside – Refer to detail 15/S402
35	"H" – Indicates aisle seat with no arm rest on aisle side. – Each seat shall be identified by sign or marker with International Symbol of Accessibility

MOVABLE SEATING REQUIREMENTS

CLEAR WIDTH BETWEEN CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.1 "WHEN SEATING ROWS HAVE 14 OR LESS SEATS, THE MINIMUM CLEAR WIDTH BETWEEN ROWS SHALL NOT BE LESS THAN 12 INCHES MEASURED AS THE CLEAR HORIZONTAL DISTANCE FROM THE BACK OF THE ROW AHEAD AND THE NEAREST PROJECTION OF THE ROW BEHIND."

CLEAR WIDTH BETWEEN CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.1 "FOR ROWS OF SEATING SERVED BY AISLES OR DOORWAYS AT BOTH ENDS.... THE MINIMUM CLEAR WIDTH OF 12 INCHES BETWEEN ROWS SHALL BE INCREASED BY 0.3 INCH FOR EVERY ADDITIONAL SEAT BEYOND 14..."
– ALL OTHER ROWS REQUIRE MIN 12" CLR. SPACE

BONDING OF CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.2 "LOOSE CHAIRS THAT ARE NOT FIXED TO THE FLOOR SHALL BE BONDED TOGETHER IN GROUPS OF 3 OR MORE."
EXCEPTIONS
1. WHEN NOT MORE THAN 300 SEATS ARE PROVIDED, BONDING IS NOT REQUIRED.
2. THE BONDING OF CHAIRS IS NOT REQUIRED WHEN TABLES ARE PROVIDED, AS WHEN THE OCCUPANCY IS USED FOR DINING OR SIMILAR PURPOSES.

READILY REMOVABLE SEATS WHERE SHOWN, SHALL NOT BE FIXED TO THE GROUND IN ORDER TO ALLOW REMOVAL TO ACCOMMODATE FOR WHEELCHAIR USERS.

ASSISTIVE LISTENING SYSTEM

AN ASSISTIVE LISTENING SYSTEM IS REQUIRED FOR THE SANCTUARY AREA OF THIS TENANT.
– PROVIDE RECEIVERS FOR A MINIMUM OF 4% OF TOTAL SEATING (21 REQUIRED)
– SYSTEM MUST BE IN PLACE AND OPERATIONAL AT TIME OF FINAL INSPECTION
– REFER TO SHEET DA3 FOR REQUIRED SIGNAGE

(MITIGATED) NEGATIVE DECLARATION

The project described below has been reviewed in accordance with the California Environmental Quality Act (CEQA) and has been determined to have a less than significant impact upon the environment.

Project's Common Name/Description: General Plan Amendment 2017-002 (GPA 2017-002) from General Commercial/Light Industrial to Arterial Frontage; and Rezone 2017-001 (RZ 2017-001) from Industrial-General Commercial to Mixed Arterial Frontage; Conditional Use Permit (CUP 2017-019) to establish and operate religious assembly use within an existing 18,150 square foot building.

File Nos.: GPA 2017-002; RZ 2017-001; CUP 2017-019

Project Applicant: Simas -East Market LLC

Project Location: 10 Simas Street in the IGC-F (Industrial-General Commercial – Flood Plain Overlay) Zoning District (APN 003-091-011-000)

Determination: The attached Initial Study has been prepared for the above project in accordance with the California Environmental Quality Act and procedures established in the *CEQA Guidelines* adopted by the City of Salinas. On the basis of the Initial Study, the City of Salinas makes the following determination:

☐ The above project will not have a significant effect on the environment, and a NEGATIVE DECLARATION is hereby approved.

☒ The above project could have a significant effect on the environment, but WILL NOT have a significant effect in this case because the attached mitigation measures have been made by or agreed to by the applicant which will avoid the effects or mitigate the effects to a point where clearly no significant effects will occur. Furthermore, there is no substantial evidence before the City of Salinas that the proposed project, as revised, may have a significant effect on the environment. A (MITIGATED) NEGATIVE DECLARATION is hereby approved.

Mitigation measures, if any, included in the project to avoid potentially significant effects are found in the attached Mitigation Monitoring Program. Further information about this project and about its probable environmental impact will be on file in the Community Development Department, 65 West Alisal Street, Salinas, CA 93901.

1. BACKGROUND

Project Name: General Plan Amendment 2017-002 (GPA 2017-002); Rezone 2017-001 (RZ 2017-001); and Conditional Use Permit (CUP 2017-019)

Project Location: 10 Simas Street in the IGC-F (Industrial-General Commercial – Flood Plain Overlay) Zoning District

Assessor Parcel Number: 003-091-011-000

☒ **See Attached Vicinity Map**

Current Land Use: Nonconforming Religious Assembly use within an existing 18,150 square foot building in an existing Industrial Complex

Surrounding Land Uses/Zoning Districts:

North:	Park/P (Parks)
South:	Minor Vehicle Repair, Vehicle Sales, and Vehicle-related Retail Sales and Services uses/IGC-F (Industrial-General Commercial – Flood Plain Overlay)
East:	Building Materials and Service use/IGC-F (Industrial-General Commercial – Flood Plain Overlay)
West:	Retail Sales/MAF-F (Mixed Arterial Frontage – Flood Plain Overlay)

Lead Agency Contact Person: Bobby Latino, Associate Planner

Telephone: (831) 758-7206

Location and Existing Setting: City of Salinas / Existing Industrial Complex

Project Description: General Plan Amendment 2017-002 (GPA 2017-002) to change the General Plan designation from General Commercial/Light Industrial to Arterial Frontage, Rezone 2017-001 (RZ 2017-001) the Zoning designation from Industrial-General Commercial to Mixed Arterial Frontage, and Conditional Use Permit (CUP 2017-

019) to establish and operate a religious assembly use in an existing 18,150 square foot building.

Environmental Factors Potentially Affected:

☐ Aesthetics	☐ Agricultural Resources	☐ Air Quality
☐ Biological Resources	☒ Cultural Resources	☐ Energy
☐ Geology/Soils	☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use/Planning	☐ Mineral Resources
☐ Noise	☐ Population/Housing	☐ Public Services
☐ Recreation	☐ Transportation	☒ Tribal Cultural Resources
☐ Utilities/Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

2. CHECKLIST

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
1. AESTHETICS. Except as provided in Public Resources Code Section 21099, *would the proposal:*	☒	☐	☐	☐	A1, A2, N1
(a) Affect a scenic vista or scenic highway?	☒	☐	☐	☐	
(b) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that area experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with					

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
applicable zoning and other regulations governing scenic quality?					
(c) Substantially degrade the existing visual character or quality of the site and its surroundings?	☒	☐	☐	☐	
(d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☒	☐	☐	☐	

Discussion

(a-b) The site is in an urbanized area and would not be located adjacent to or near a scenic vista or a scenic highway.

(c) The proposed project would not degrade the existing visual character or quality of the site and its surroundings.

(d) The proposed project would not create a new source of substantial light or glare. If required or proposed, new lighting would be subject to the City of Salinas Zoning Code outdoor lighting ordinance.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
2. AGRICULTURAL RESOURCES. *Would the proposal:*					A1, A2, N1
(a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☒	☐	☐	☐	
(b) Conflict with existing zoning for agricultural use or a Williamson Act contract?	☒	☐	☐	☐	
(c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☒	☐	☐	☐	
(d) Result in the loss of forest land or conversion of forest land to non-forest use?	☒	☐	☐	☐	
(e) Involve other changes in the existing environment which, due to their location or nature, could	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?					

Discussion

(a-e) The site is located on an in-fill property within the IGC-F (Industrial-General Commercial – Flood Plain Overlay) Zoning District. Farming activities and forest land are not located on the site.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
3. AIR QUALITY. *Would the proposal:*					A1, A2, A3, F1, F2
(a) Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐	
(b) Result in cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
standard?					
(c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐	
(d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☒	☐	☐	☐	

Discussion

(a-c) Salinas lies within the North Central Coast Air Basin, which meets the federal standard for ozone levels but falls short of the higher State standards for ozone and PM10. Ozone is the primary constituent of smog and is formed in the atmosphere via a chemical reaction involving nitrogen oxides (NOx), volatile organic gases (VOC), and sunlight. The primary sources are motor vehicles, organic solvents, pesticides, and industry. The Monterey Bay Air Resources District (MBARD) oversees various air quality regulations and programs.

MBARD Board of Directors adopted the 2012-2015 Air Quality Management Plan in March 2017, which represents the latest edition of the 2012 Triennial Plan, which addresses NOx and reactive organic gasses (ROG) emissions as precursors to ozone. The air quality impact generated by the project is expected to be less than significant, because it will create only occasional vehicle trips.

The revised CEQA Air Quality Guidelines prepared by the Monterey Bay Air Resources District, dated February 2008, stipulate maximum thresholds for air quality as follows:

a) Emit less than 137 lb/day of VOC's or NOx;
b) Directly emit less than 550 lb/day of CO or will not cause a violation of CO ambient air quality standards (AAQS) at existing or reasonably foreseeable receptors;
c) Not significantly impact traffic levels of service or will not cause a violation of CO or contribute 550 lb/day to an existing or projected violation at existing

or reasonably foreseeable receptors;

d) Directly emit less than 82 lb/day of PM10 on-site or will not cause a violation of particulate matter, ten micron diameter (PM10) AAQS or contribute 82 lb/day to an existing or projected violation at existing or reasonably foreseeable receptors;

e) Not indirectly generate PM10 along unpaved roads or will not cause a violation of PM10 AAQS or contribute 82 lb/day to an existing projected violation at existing or reasonably foreseeable receptors;

f) Directly emit less than 150 lb/day of sulfur oxide (SOx) or will not cause a violation of sulfur dioxide (SO2) AAQS at existing or reasonably foreseeable receptors.

The project does not entail construction; therefore, impacts to air quality are not expected to be significant.

(d) Objectionable odors are unlikely to be produced because no odor generating activities occur with the religious assembly use.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
4. BIOLOGICAL RESOURCES. *Would the proposal result in impacts to:*					A1, A2, A3 A4, A7, M1, N1
(a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
Wildlife Service?					
(b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service	☒	☐	☐	☐	
(c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☒	☐	☐	☐	
(d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☒	☐	☐	☐	
(e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☒	☐	☐	☐	
(f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
local, regional, or state habitat conservation plan?					

Discussion

(a-f) The site is located on an in-fill property within the IGC-F (Industrial-General Commercial – Flood Plain Overlay) Zoning District. There is no native flora or fauna on the project site. It is not located within a wetland habitat, riparian woodland or vernal pool, nor is it located near any sensitive habitat areas. It will not conflict with a Habitat Conservation Plan, or other habitat plan.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
5. CULTURAL RESOURCES. *Would the proposal:*					A1, A2, A3, Q3
(a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5	☒	☐	☐	☐	
(b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☒	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
(c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐	

Discussion

(a) The subject site was not included in either of the City of Salinas 1989 or 2016 City Historic and Architectural Surveys.

(b-c) Per Section 5.8 (Cultural Resources) of the Final Environmental Impact Report for the Salinas General Plan (Source A1), little archaeological investigation has occurred in the City of Salinas or in Monterey County. No construction is proposed with this project. However, there is always the potential to encounter subsurface materials during grading and construction. Therefore, pursuant to the Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With this requirement, there is little potential for a significant impact on the environment.

On October 12, 2017, pursuant to Public Resources Code Section 21080.3.1, subd. (d), Assembly Bill 52 (AB52), and California Senate Bill 18 (SB18), City of Salinas staff sent via certified mail, a consultation request on the proposed project within 30-days of the date of the letter to all applicable California Native American Tribes whose geographic area of traditional and cultural affiliation lands boundary includes the City of Salinas as specified by the Native American Heritage Foundation.

On December 18, 2017, the Ohlone /Costanoan-Esselen Nation (OCEN) provided a response letter stating concern with the proposed project site and recommending that an OCEN Tribal Monitor be located on-site during construction (see Attachment 7). The proposed project site has previously been disturbed through the grading and construction in connection with the existing building in 1991. While no construction is proposed with this project, mitigation is proposed. Per Mitigation

Measure CU-1 below, pursuant to Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With this requirement, there is little potential for a significant impact on the cultural resources and this will address OCEN's comments.

Mitigation

CU-1 In the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find pursuant to Public Resources Code Section 21083.2.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
6. ENERGY. *Would the proposal:*					A1, A2, G1
(a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐	
(b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐	

Discussion

(a) The project does not involve construction. No permanent, long-term, or substantial energy consumption would occur during or as a result of the project. Therefore, impacts related to wasteful, inefficient, or unnecessary consumption of energy resources would be less than significant.

(b) The City of Salinas is part of Monterey Bay Community Power Authority (MBCP), a regional Community Choice Energy project. MBCP was formed to provide locally-controlled, carbon-free electricity to residents and businesses in

Monterey, San Benito, and Santa Cruz counties (MBCP 2019). The goals of MBCP are to increase utilization of renewable power, create local and sustainable energy sources, and create green jobs.

The project involves a reuse of an existing use located in an existing building. No permanent, long-term, or substantial energy consumption would occur during or as a result of the project. Due to the limited duration and scope of energy-consuming activity, substantial use of energy would not occur. Therefore, the project would not conflict with the goals of MBCP, and impacts would be less than significant.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
7. GEOLOGY/SOILS. *Would the proposal result in or expose people to potential impacts involving:*					A1, A2, A3, A4, A7, M1, N1
(a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:	☒	☐	☐	☐	
(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
(ii) Strong seismic ground shaking?	☒	☐	☐	☐	
(iii) Seismic-related ground failure, including liquefaction?	☒	☐	☐	☐	
(iv) Landslides?	☒	☐	☐	☐	
(b) Result in substantial soil erosion or the loss of topsoil?	☒	☐	☐	☐	
(c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☒	☐	☐	☐	
(d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☒	☐	☐	☐	
(e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☒	☐	☐	☐	
(f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☒	☐	☐	☐	

Discussion

a (i-iv) All structures located in Salinas are required to be designed to at least Seismic Design Category D in accordance with Section 1613 of the 2010 California Building Code. As shown on the Seismic Hazards Map for the Greater Salinas Planning Area (Figure 5.10-1 of the Salinas General Plan Final EIR), the project site is located within the Moderately High Seismic Hazard Zone. Any future development on the site will be subject to the most recent, adopted edition of the California Building Code as a part of the building permit process to ensure that adequate seismic design is provided.

(b-d) No construction will happen on the project site; therefore, it will not induce substantial changes to the topography or to the soil conditions with a result of excavation or grading. The project site was developed as an Industrial Complex. Any future development would be subject to the most recent version of the California Building Code, and related Codes, as a part of the building permit process to ensure adequate seismic safety. The project site is currently developed and is basically flat.

(e) The subject property is currently served by the City's sewer system. The proposed project would not involve the use of septic systems or alternative waste water disposal systems.

(f) No proposed construction is proposed with this project. No paleontological resources or unique geological features are evident on the subject property. The Monterey County General Plan EIR indicates that fossils are found throughout the County because of widespread distribution of marine deposits. Per Exhibit 4.10.1 of the Monterey County General Plan EIR, no sites of significant scientific value were located in the vicinity of the City of Salinas. However, pursuant to Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated in accordance with Mitigation Measure CU-1. The proposed project is subject to all local, state, and federal laws relative to discovery of paleontological resources during any construction. With this requirement, there is little potential for a significant impact on the environment.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
8. GREENHOUSE GAS EMISSIONS. *Would the project:*					A1, A2, A3
(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐	
(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐	

Discussion

(a) The proposed project will not generate, either directly or indirectly, greenhouse gas emissions causing a significant impact on the environment.

(b) The proposed project will not conflict with any other applicable plans, policies, or regulations adopted for the purposes of reducing the emissions of greenhouse gases including:

- Assembly Bill 32, which requires the state board to adopt a statewide greenhouse gas emissions limit equivalent to the statewide greenhouse gas emissions levels in 1990 to be achieved by 2020.

- Senate Bill 375, which requires the state board, working in consultation with the metropolitan planning organizations, to provide each affected region with greenhouse gas emission reduction targets for the automobile and light truck sector for 2020 and 2035 by September 30, 2010.

- City of Salinas General Plan 2002, at the time, the issue of greenhouse gas emissions and the need to combat it in general plans had not risen to a critical level of concern. Nevertheless, the City adopted numerous goals and policies with the intent of improving development sustainability. These goals and policies have both direct and indirect benefits in terms of reducing GHG

emissions. Important overall land use/urban design related themes in the General Plan that serve this purpose include:

i. Increasing density and intensity of development to promote more compact development and reuse/revitalization,
ii. Facilitating in-fill development as a means to promote compact development, and
iii. Promoting mixed-use development and a compact city core, emphasizing Traditional Neighborhood Development (TND) design, walkable neighborhoods, and transit-oriented development, especially in new growth areas.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
9. HAZARDS & HAZARDOUS MATERIALS. *Would the proposal:*					A1, A2, A3, M1, N1
(a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☒	☐	☐	☐	
(b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☒	☐	☐	☐	
(c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
(d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☒	☐	☐	☐	
(e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☒	☐	☐	☐	
(f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☒	☐	☐	☐	
(g) Expose people or structures, either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?	☒	☐	☐	☐	

(a-b) The project will not create a significant hazard to the public or the environment through the routine transport, use, or disposal of materials. Compliance with local, state, and federal requirements would ensure that the hazards to the public are reduced to a level of insignificance.

(c) The proposed project will not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an

existing or proposed school. The closest school is Mt. Toro High School (10 Sherwood Dr.), which is approximately 1,484 feet away (measured from parcel to parcel) [(see also above discussion (a-b)].

(d) The site is not known to be included on a list of hazardous materials sites.

(e) The site is not located within an airport land use plan area nor located within the Airport Area of Influence per Figure LU-11 of the Salinas General Plan. The site is located approximately 9,450 feet away (over a mile and half away) miles from the end of the runway (8-26) of the Salinas Municipal Airport and would not create a hazard to persons residing or working in the project area.

(f) The project will not interfere with an adopted emergency response plan or emergency evacuation plan.

(g) The project will not expose people or structures to risk of loss, injury or death involving wildland fires, because the site is an infill property and no wildlands are located nearby.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
10. HYDROLOGY AND WATER QUALITY. *Would the proposal:*					A1, A2, A3, A4, A7,
(a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☒	☐	☐	☐	
(b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
sustainable groundwater management of the basin?					
(c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces in a manner which would:					
i. result in substantial erosion or siltation on- or off-site;	☒	☐	☐	☐	
ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite:	☒	☐	☐	☐	
iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☒	☐	☐	☐	
iv. impede or redirect floor flows?	☒	☐	☐	☐	
(d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☒	☐	☐	☐	
(e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
management plans?					
(f) With regards to NPDES compliance:					
(i) Potential impact of project construction on storm water runoff?	☒	☐	☐	☐	
(ii) Potential impact of project post-construction activity on storm water runoff?	☒	☐	☐	☐	
(iii) Potential for discharge of storm water from material storage areas, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?	☒	☐	☐	☐	
(iv) Potential for discharge of storm water to impair the beneficial uses of the receiving waters or areas that provide water quality benefit?	☒	☐	☐	☐	
(v) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and water bodies?	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
(vi) Potential for significant changes in the flow velocity or volume of storm water runoff that can cause environmental harm?					
(vii) Potential for significant increases in erosion of the project site or surrounding areas?					
(viii) Could this proposed project result in an increase in pollutant discharges to receiving waters? Consider water quality parameters such as temperature, dissolved oxygen, turbidity, and other typical Stormwater pollutants (e.g., heavy metals, pathogens, petroleum derivatives, synthetic organics, sediment, nutrients, oxygen-demanding substances, and trash).	☒	☐	☐	☐	
(ix) Could the proposed project result in a decrease in treatment and retention capacity for the site's Stormwater run-on?	☒	☐	☐	☐	
(x) Could the proposed project result in significant alteration of					

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
receiving water quality during or following construction?					
(xi) Could the proposed project result in increased impervious surfaces and associated increased urban runoff?	☒	☐	☐	☐	
(xii) Could the proposed project create a significant adverse environmental impact to drainage patterns due to changes in urban runoff flow rates and/or volumes?	☒	☐	☐	☐	
(xiii) Could the proposed project result in increased erosion downstream?	☒	☐	☐	☐	
(xiv) Could the proposed project alter the natural ranges of sediment supply and transport to receiving waters?	☒	☐	☐	☐	
(xv) Is the project tributary to an already impaired water body, as listed on the CWA Section 303(d) list? If so, can it result in an increase in any pollutant for which the water body is already impaired?	☒	☐	☐	☐	
(xvi) Could the proposed project have a potentially significant	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
environmental impact on surface water quality, to either marine, fresh, or wetland waters?					
(xvii) Could the proposed project result in decreased baseflow quantities to receiving surface waterbodies?	☒	☐	☐	☐	
(xviii) Could the proposed project cause of contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?	☒	☐	☐	☐	
	☒	☐	☐	☐	
(xix) Does the proposed project adversely impact the hydrologic or water quality function of the 100-year floodplain area?					
(xx) Does the proposed project site layout adhere to the Permittee's waterbody setback requirements?	☒	☐	☐	☐	
(xxi) Can the proposed project impact aquatic, wetland, or riparian habitat?	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
	☒	☐	☐	☐	

Discussion

(a) The site is presently developed with an existing building and parking lot and would not create any new impervious surface.

(b) The project does not include any new water connections. Thus, the project would not substantially deplete groundwater supplies and would not interfere substantially with the direction or rate of flow of groundwater.

(c) The project site is basically flat and is currently developed with structures, pavement and associated site improvements. There are no rivers or streams on or near the site.

(d) Although the site is located within a 100-year flood area, the project includes the reuse of an existing building. Inundation by seiche, tsunami, or mudflow is unlikely because the site is located a considerable distance from the ocean and is relatively flat thereby negating a potential mudflow.

(e -f)(i – xxi) (see "a" above)

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
11. LAND USE AND PLANNING. *Would the proposal:*					A1, A2, A3 M1, N1
(a) Physically divide an established community?	☒	☐	☐	☐	
(b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐	

Discussion

(a) The project does not have the potential to disrupt or divide the physical arrangement of the community. Existing and planned adjacent uses will not be disrupted or divided as a result of the project.

(b) The proposed project includes a General Plan Amendment from General Commercial/Light Industrial to Arterial Frontage and Rezone from Industrial-General Commercial to Mixed Arterial Frontage (MAF). In the MAF Zoning District, a religious assembly use may be considered subject to a Conditional Use Permit. The proposed use would be consistent with the proposed MAF District regulations; therefore, significant environmental impacts are not expected.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
12. MINERAL RESOURCES. *Would the proposal:*					A1, A2, A3
(a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☒	☐	☐	☐	
(b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☒	☐	☐	☐	

Discussion

(a-b) The project will not result in the loss of availability of a known mineral resource that would be of value to the region or the residents of the state.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
13. NOISE. *Would the proposal result in:*					A1, A2, A3, M1
(a) Generation of a substantial temporary or permanent increase in ambient noise	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?					
(b) Generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐	
(c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☒	☐	☐	☐	

Discussion

(a) No substantial permanent, or temporary or periodic, increases in the ambient noise level are expected with the project. According to the General Plan Master Environmental Assessment Section 9.2, ambient noise is defined as the "all encompassing noise associated with a given environment, being a composite of sounds from many sources, near and far."

(b) The site is located within the 60 CNEL contour as shown on *Figure 5.3-1 Noise Contours (CNEL)* of the Salinas General Plan, Final Environmental Impact Report, 2002. The Future Noise Contours as shown on Figure 5.3-4 of the Salinas General Plan, Final Environmental Impact Report, 2002, shows the project site as located within the 70 CNEL contour. Traffic generates the main source of noise for the depicted 70 CNEL contour.

Groundborne vibration or groundborne noise levels generated by any future

proposed uses on the project site are not expected to be excessive. The Zoning Code Standards regarding noise are expected to reduce noise impacts to a level of insignificance.

(c) The site is located approximately 1.86 miles from the Salinas Municipal Airport and is located within the 55 CNEL contour as shown on *Figure 5.3-2: Salinas Airport Future Noise Contours)* of the Salinas General Plan, Final Environmental Impact Report, 2002. Noise impacts from airport operations will not have an adverse impact on the site.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
14. POPULATION AND HOUSING. *Would the proposal:*					
(a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly *(for example, through extension of roads or other infrastructure)*?	☒	☐	☐	☐	A1, A2, A3, M1, N1
(b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☒	☐	☐	☐	

Discussion

(a-b) The proposed project does not include a residential component. It will not induce substantial growth, and it will not displace housing units or people. The subject site is an existing developed in-fill site.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
15. PUBLIC SERVICES. *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*					A1, A2, A3, M1, N1
(a) Fire protection?	☒	☐	☐	☐	
(b) Police protection?	☒	☐	☐	☐	
(c) Schools?	☒	☐	☐	☐	
(d) Parks?	☒	☐	☐	☐	
(e) Other public facilities?	☒	☐	☐	☐	

Discussion

(a-e) The site is located on an in-fill site presently developed as a theater with a nonconforming Religious Assembly use. Police and Fire services are currently available to serve the site. No schoolchildren will be generated by the project. East Market Street and Simas Street have been designed and constructed to accommodate the demands of this project. No other government services are expected to be impacted by the project.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
16. RECREATION. *Would the proposal:*					A1, A2, A3, M1, N1
(a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☒	☐	☐	☐	
(b) Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☒	☐	☐	☐	

Discussion

(a-b) The proposed project will not increase the use in park facilities because it does not include residential development. The proposed project does not include recreational facilities.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
17. TRANSPORTATION. *Would the project:*					A1, A2 A3, A4, A7, M1, N1
(a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☒	☐	☐	☐	
(b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, Subdivision (b)?	☒	☐	☐	☐	
(c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐	
(d) Result in inadequate emergency access?	☒	☐	☐	☐	

Discussion

(a-b) The proposed project is not expected to generate significant traffic trips. Any future development is required to pay all applicable traffic impact fees as determined by the City Engineer at the time of building permit issuance. Payment of traffic fees will ensure that potential traffic impacts are reduced to a level of insignificance.

The proposed project will not result in substantial impacts resulting from increased trip generation. The proposed project will not exceed 2,500 Average Daily Trips (ADT) and is not subject to the Vehicle Trip Reduction provisions of the Salinas Zoning Code (Section 37-50.330).

(c-d) The project will not substantially increase hazards due to design features or incompatible uses. The proposal will not result in inadequate emergency access.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
18. TRIBAL CULTURAL RESOURCES. *Would the project:*					A5, A6, Q3
(a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a Californian Native American tribe, and that is:					
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k); or	☒	☐	☐	☐	
ii. A resource determined by the Lead Agency, in its discretion and supported by substantial evidence,	☐	☒	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1 In applying the criteria set forth in Subdivision (c) of Public Resource Code 5024.1, the Lead Agency shall consider the significance of the resource to a California Native American tribe.					

(a)(i) The subject site was not included in either of the City of Salinas 1989 or 2016 City Historic and Architectural Surveys. Furthermore, the building is less than 50 years old.

(a)(ii) Per Section 5.8 (Cultural Resources) of the Final Environmental Impact Report for the Salinas General Plan (Source A1), little archaeological investigation has occurred in the City of Salinas or in Monterey County. However, there is always the potential to encounter subsurface materials during grading and construction. Therefore, pursuant to the Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With this requirement, there is little potential for a significant impact on the environment.

On October 12, 2017, pursuant to Public Resources Code Section 21080.3.1, subd. (d), Assembly Bill 52 (AB52), and California Senate Bill 18 (SB18), City of Salinas staff sent via certified mail, a consultation request regarding the proposed project. Within 30-days of the date of the letter to all applicable California Native American Tribes whose geographic area of traditional and cultural affiliation lands boundary includes the City of Salinas as specified by the Native American Heritage Foundation.

On December 18, 2017, the Ohlone /Costanoan-Esselen Nation (OCEN) provided a response letter stating concern with the proposed project site and recommending that an OCEN Tribal Monitor be located on-site during construction (see Attachment 7). The proposed project site has previously been disturbed through the grading and construction in connection with the existing building in 1991. While no construction is proposed with this project, mitigation is proposed. Per Mitigation Measure TCR-1 below, pursuant to Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With this requirement, there is little potential for a significant impact on the cultural resources and this will address OCEN's comments.

Mitigation

TCR-1 In the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find pursuant to Public Resources Code Section 21083.2.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
19. UTILITIES & SERVICE SYSTEMS. *Would the project:*					A1, A2, A3, A7, M1
(a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effect?	☒	☐	☐	☐	
(b) Have sufficient water supplies available to serve	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
the project and reasonably foreseeable future development during normal, dry, and multiple dry years?		☐	☐	☐	
(c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has the adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☒	☐	☐	☐	
(d) Generate solid waste in excess of State or Local standards, or in excess of the capacity of local infrastructure, or otherwise impact the attainment of solid waste reduction goals?	☒	☐	☐	☐	
(e) Comply with federal, state, and local management and reduction statues and regulations related to solid waste?	☒				

Discussion

(a) The project does not include construction.

(b-c) No construction is proposed; therefore, the project does not include new water connections. The religious assembly use is not a heavy water user. Furthermore, it will not discharge significant quantities of water into the wastewater treatment plant (also see Hydrology and Water Quality above).

(d-e) The project will not generate significant solid waste because there are no products produced. Disposal of waste generated by the project is not expected to be significant and it will be required to comply with federal, state, and local reduction statutes related to solid waste.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
20. WILDFIRE. *If located in or near State responsibility areas or lands classified as very high fire hazard severity zones, would the project:*					A1, A2, M1, N1
(a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☒	☐	☐	☐	
(b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☒	☐	☐	☐	
(c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☒	☐	☐	☐	
(d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☒	☐	☐	☐	

Discussion

(a-d) The City of Salinas is not located in or near State responsible areas or lands classified at very high fire hazard severity zones.

Mitigation

No mitigation is required.

Mandatory Findings of Significance	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigated	Potentially Significant Impact
1. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
2. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? *("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects).*	☒	☐	☐	☐
3. Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

4. DETERMINATION

On the basis of this Initial Study:

☐ I find that the proposed project ***COULD NOT*** have a significant effect on the environment, and a ***NEGATIVE DECLARATION*** will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there ***WILL NOT*** be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A ***MITIGATED NEGATIVE DECLARATION*** will be prepared.

☐ I find that the proposed project ***MAY*** have a significant effect on the environment, and an ***ENVIRONMENTAL IMPACT REPORT*** is required.

☐ I find that the proposed project ***MAY*** have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect:

(a) Has been adequately analyzed in *(Reference document)* pursuant to applicable legal standards; and

(b) Has been addressed by mitigation measures based on the earlier analysis as described in *Section 2: Checklist*, if the effect is a "Potentially Significant Impact" or a Negative Declaration: "Potentially Significant Unless Mitigation Incorporated".

An ***ENVIRONMENTAL IMPACT REPORT*** is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects:

(a) Have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and;

(b) Have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project.

NOTHING FURTHER IS REQUIRED.

CITY OF SALINAS

DEVELOPMENT ENGINEERING, *A division of the Public Works Department*
65 West Alisal Street | Salinas, CA 93901 | 831-758-7251 | *www.ci.salinas.ca.us*

ENGINEER'S REPORT

PURPOSE: CUP2017-019 **DATE:** 5/15/2018
LOCATION: 10 Simas St **PLANNER:** Bobby Latino
OWNER/APPLICANT: Simas-East Markert LLC/SyWest Development

DEVELOPMENT PROPOSAL: A proposal to establish religious assembly at old movie theater.

RECOMMENDATION: Approve with Conditions
SWDS THRESHOLD: N/A

DEVELOPMENT REVIEW: *Development Review Submittal prepared by JWF Architecture and BKF, dated 11/16/2017.*

CONDITION OF APPROVAL

1. FEMA Compliance – Applicant shall provide documentation for cost of all improvements that converted the use of the facility along with an appraisal indicating the market value the structure.
2. Fees – Based on CUP1987-028, the existing theater had 1200 seats. Trips associated with the theater use exceeds the proposed religious use. Therefore, no traffic impact fees are assessed for this change in land use.

Notice: The Conditions of Approval for this Site Plan Review include certain fees and development requirements. Pursuant to Government Code Section 66020 (d)(1), this hereby constitutes written notice stating the amount of said fees, and describing the development requirements. The applicant is hereby notified that the 90-day appeal period in which he/she/they may protest these fees and development requirements, pursuant to Government Code Section 66020 (a), begins on the date the office land use permit is approved. If applicant files a written protest within this 90-day period complying with all requirements of Section 66020, he/she/they will be legally barred from challenging such fees and/or requirements at a later date.

MOVABLE SEATING REQUIREMENTS

CLEAR WIDTH BETWEEN CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.1 "WHEN SEATING ROWS HAVE 14 OR LESS SEATS, THE MINIMUM CLEAR WIDTH BETWEEN ROWS SHALL NOT BE LESS THAN 12 INCHES MEASURED AS THE CLEAR HORIZONTAL DISTANCE FROM THE BACK OF THE ROW AHEAD AND THE NEAREST PROJECTION OF THE ROW BEHIND."

CLEAR WIDTH BETWEEN CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.1 "FOR ROWS OF SEATING SERVED BY AISLES OR DOORWAYS AT BOTH ENDS, THE MINIMUM CLEAR WIDTH OF 12 INCHES BETWEEN ROWS SHALL BE INCREASED BY 0.3 INCH FOR EVERY ADDITIONAL SEAT BEYOND 14."
- ALL OTHER ROWS REQUIRE MIN 12" CLR. SPACE

BONDING OF CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.3 "LOOSE CHAIRS THAT ARE NOT FIXED TO THE FLOOR SHALL BE BONDED TOGETHER IN GROUPS OF 3 OR MORE."
EXCEPTIONS:
1. WHEN NOT MORE THAN 200 SEATS ARE PROVIDED, BONDING IS NOT REQUIRED.
2. THE BONDING OF CHAIRS IS NOT REQUIRED WHEN TABLES ARE PROVIDED, AS WHEN USE OCCUPANCY AS LOOSE TABLES AND CHAIRS OR SIMILAR PURPOSES.

READILY REMOVABLE SEATS WHERE SHOWN, SHALL NOT BE FIXED TO THE GROUND IN ORDER TO ALLOW REMOVAL TO ACCOMMODATE FOR WHEELCHAIR USERS.

ASSISTIVE LISTENING SYSTEM

AN ASSISTIVE LISTENING SYSTEM IS REQUIRED FOR THE SANCTUARY AREA OF THIS TENANT.
- PROVIDE RECEIVERS FOR A MINIMUM OF 4% OF TOTAL SEATING (21 REQUIRED)
- SYSTEM MUST BE IN PLACE AND OPERATIONAL AT TIME OF FINAL INSPECTION
- REFER TO SHEET DA3 FOR REQUIRED SIGNAGE

FLOOR PLAN KEYNOTES

No.	Description
1	Existing concrete masonry exterior wall (No Change)
2	Existing storefront entry door to remain (No Change)
3	Existing storefront glazing to remain (No Change)
4	Existing sloped floor (1:12 max slope) to remain (No Change)
5	Existing steps to be filled-in with concrete -- Refer to Structural Drawings for detailed requirements
6	Existing interior door to remain (No Change)
7	Existing interior door to remain as exit only (No hardare on pull-side of door)
8	Existing multi-accomodation restrooms with new fixtures -- Refer to Plumbing Drawings for detailed requirements
9	Existing exterior door to be permanently locked.
10	Shading indicates new fixed chair layout (Self-rising seats) -- Re-use existing chairs where possible
11	New movable seating / Refer to spacing requirements this sheet
12	Occupancy capacity sign stating "MAXIMUM BUILDING OCCUPANCY 1176"
13	Occupancy capacity sign stating "MAXIMUM OCCUPANCY THIS ROOM 728"
14	Fire Department approved Key Box. (See General Notes / Sheet T51)
15	Existing CMU wall and pilaster to be removed -- Refer to Structural Drawings
16	New interior door (Solid Core) / Match existing -- Refer to Door Schedule, Sheet A301
17	New HI/Lo wall mounted drinking fountains -- Refer to Plumbing Drawings
18	Existing exterior hollow metal door to remain (No Change)
19	New sign over door 9"/1" high letters stating "THIS DOOR TO REMAIN UNLOCKED WHENEVER THE BUILDING IS OCCUPIED"
20	6" x 6" Square International Symbol of Accessibility at primary entrance. -- mount @ 60" a.f.f to c/l
21	New base & upper cabinets -- Refer to detail 6/A301
22	New Base Cabinet & Counter -- Refer to detail 6/A301
23	New Single-Accomodation restroom -- Refer to enlarged plan on sheet A102
24	Existing stairs to 2nd floor storage mezzanine -- No Change
25	New ramp to Platform / 1:12 max slope w/handrails each side -- Refer to details on Sheets DA2 & S402
26	New stairs to platform / 7" Risers (Max) & 11" Treads (Min) w/Handrails each side of stairs / Refer to details on Sheets DA2 & S402
27	New steel frame column -- Refer to structural drawings
28	Location of existing fire sprinkler riser -- No Change
29	Provide handrails each side of ramp -- Refer to details on Sheets DA2 & DA3
30	New 3'-4" Wide x 7'-2" High opening in existing CMU wall -- Refer to detail 8/S401
31	New 3'-4" Wide x 7'-2" High opening in existing CMU wall -- Refer to detail 8/S401
32	48"x66" Clear floor space at wheelchair seating (7 locations provided) -- Readily removable seats may be provided in these locations when such spaces are not required to accommodate wheelchair users. (CBC Section 1104B.3.7)
33	Existing hollow metal door to be removed & re-installed at interior finished floor elevation -- Cut existing wall and provide new opening so that door may be re-installed at new interior finished floor height -- Refer to detail 13/S402
34	Existing hollow metal door to be removed & re-installed at interior finished floor elevation -- Cut existing wall and provide new opening so that door may be re-installed at new interior finished floor height -- Door to be welded shut from inside -- Refer to detail 13/S402
35	"P" -- Indicates stage seat sign on arm rest on aisle side -- Each seat shall be identified by sign or marker with International Symbol of Accessibility

MOVABLE SEATING REQUIREMENTS

CLEAR WIDTH BETWEEN CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.1
"WHEN SEATING ROWS HAVE 14 OR LESS SEATS, THE MINIMUM CLEAR WIDTH BETWEEN ROWS SHALL NOT BE LESS THAN 12 INCHES MEASURED AS THE CLEAR HORIZONTAL DISTANCE FROM THE BACK OF THE ROW AHEAD AND THE NEAREST PROJECTION OF THE ROW BEHIND."

CLEAR WIDTH BETWEEN CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.1
"FOR ROWS OF SEATING SERVED BY AISLES OR DOORWAYS AT BOTH ENDS..... THE MINIMUM CLEAR WIDTH OF 12 INCHES BETWEEN ROWS SHALL BE INCREASED BY 0.3 INCH FOR EVERY ADDITIONAL SEAT BEYOND 14."
- ALL OTHER ROWS REQUIRE MIN 12" CLR. SPACE

BONDING OF CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.3
"LOOSE CHAIRS THAT ARE NOT FIXED TO THE FLOOR SHALL BE BONDED TOGETHER IN GROUPS OF 3 OR MORE."
EXCEPTIONS
1. WHEN NOT MORE THAN 300 SEATS ARE PROVIDED, BONDING IS NOT REQUIRED.
2. THE BONDING OF CHAIRS IS NOT REQUIRED WHEN TABLES ARE PROVIDED, AS WHEN THE OCCUPANCY IS USED FOR DINING OR SIMILAR PURPOSES.

READILY REMOVABLE SEATS WHERE SHOWN, SHALL NOT BE FIXED TO THE GROUND IN ORDER TO ALLOW REMOVAL TO ACCOMMODATE FOR WHEELCHAIR USERS.

ASSISTIVE LISTENING SYSTEM

AN ASSISTIVE LISTENING SYSTEM IS REQUIRED FOR THE SANCTUARY AREA OF THIS TENANT.
- PROVIDE RECEIVERS FOR A MINIMUM OF 4% OF TOTAL SEATING (27 REQUIRED)
- SYSTEM MUST BE IN PLACE AND OPERATIONAL AT TIME OF FINAL INSPECTION
- REFER TO SHEET DA3 FOR REQUIRED SIGNAGE

Re: 295 Sun Way Project and 10 Simas Street, Salinas, CA - General Plan Amendments– As stated General Plan Amendment
AB52 and SB18 – 90 Days consultation period

Saleki Atsa,

Ohlone/Costanoan-Esselen Nation is an historically documented previously recognized tribe. OCEN is the legal tribal government representative for over 600 enrolled members of Esselen, Carmeleno, Monterey Band, Rumsen, Chalon, Soledad Mission, San Carlos Mission and/or Costanoan Mission Indian descent of Monterey County. Though other indigenous people may have lived in the area, the area is the indigenous homeland of our people. Included with this letter please find a territorial map by Taylor 1856; Levy 1973; and Milliken 1990, indentifying Tribal areas.

Ohlone/Costanoan-Esselen Nation objects to all excavation in known cultural lands, even when they are described as previously disturbed, and of no significant archaeological value. Please be advised that it is our first priority that our ancestor's remains be protected and undisturbed. We desire that all sacred burial items be left with our ancestors on site or as culturally determined by OCEN. All cultural items returned to Ohlone/Costanoan-Esselen Nation. We ask for the respect that is afforded all of our current day deceased, by no other word these burial sites are cemeteries, respect for our ancestors as you would expect respect for your deceased family members in today's cemeteries. **Our definition of respect is no disturbance.**

OCEN's Tribal leadership desires to be provided with:

Archaeological reports/surveys, including subsurface testing, and presence/absence testing.
OCEN request to be included in mitigation and recovery programs,
Reburial of any of our ancestral remains,
Placement of all cultural items, and that
A Native American Monitor of Ohlone/Costanoan-Esselen Nation, approved by the OCEN Tribal Council is used within our aboriginal territory.
Cultural and Tribal sections to reflect Tribal request.

Projects affecting the General Plan allow for 90 days response according to SB18. We ask that a sacred lands search with the Northwest Information Center, Sonoma State University and the Native American Heritage Commission. Please feel free to contact me at (408) 629-5189. Nimasianexelpasaleki. Thank you

Sincerely and Respectfully Yours,

Louise J. Miranda Ramirez, Chairperson
Ohlone/Costanoan-Esselen Nation
(408) 629-5189

1. BACKGROUND

Project Name: General Plan Amendment 2017-002 (GPA 2017-002); Rezone 2017-001 (RZ 2017-001); and Conditional Use Permit (CUP 2017-019)

Project Location: 10 Simas Street in the IGC-F (Industrial-General Commercial – Flood Plain Overlay) Zoning District

Assessor Parcel Number: 003-091-011-000

☒ **See Attached Vicinity Map**

Current Land Use: Nonconforming Religious Assembly use within an existing 18,150 square foot building in an existing Industrial Complex

Surrounding Land Uses/Zoning Districts:

North:	Park/P (Parks)
South:	Minor Vehicle Repair, Vehicle Sales, and Vehicle-related Retail Sales and Services uses/IGC-F (Industrial-General Commercial – Flood Plain Overlay)
East:	Building Materials and Service use/IGC-F (Industrial-General Commercial – Flood Plain Overlay)
West:	Retail Sales/MAF-F (Mixed Arterial Frontage – Flood Plain Overlay)

Lead Agency Contact Person: Bobby Latino, Associate Planner

Telephone: (831) 758-7206

Location and Existing Setting: City of Salinas / Existing Industrial Complex

Project Description: General Plan Amendment 2017-002 (GPA 2017-002) to change the General Plan designation from General Commercial/Light Industrial to Arterial Frontage, Rezone 2017-001 (RZ 2017-001) the Zoning designation from Industrial-General Commercial to Mixed Arterial Frontage, and Conditional Use Permit (CUP 2017-

019) to establish and operate a religious assembly use in an existing 18,150 square foot building.

Environmental Factors Potentially Affected:

☐ Aesthetics	☐ Agricultural Resources	☐ Air Quality
☐ Biological Resources	☒ Cultural Resources	☐ Energy
☐ Geology/Soils	☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology/Water Quality	☐ Land Use/Planning	☐ Mineral Resources
☐ Noise	☐ Population/Housing	☐ Public Services
☐ Recreation	☐ Transportation	☒ Tribal Cultural Resources
☐ Utilities/Service Systems	☐ Wildfire	☐ Mandatory Findings of Significance

2. CHECKLIST

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
1. AESTHETICS. Except as provided in Public Resources Code Section 21099, *would the proposal:*	☒	☐	☐	☐	A1, A2, N1
(a) Affect a scenic vista or scenic highway?	☒	☐	☐	☐	
(b) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that area experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with					

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
applicable zoning and other regulations governing scenic quality?					
(c) Substantially degrade the existing visual character or quality of the site and its surroundings?	☒	☐	☐	☐	
(d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☒	☐	☐	☐	

Discussion

(a-b) The site is in an urbanized area and would not be located adjacent to or near a scenic vista or a scenic highway.

(c) The proposed project would not degrade the existing visual character or quality of the site and its surroundings.

(d) The proposed project would not create a new source of substantial light or glare. If required or proposed, new lighting would be subject to the City of Salinas Zoning Code outdoor lighting ordinance.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
2. AGRICULTURAL RESOURCES. *Would the proposal:*					A1, A2, N1
(a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☒	☐	☐	☐	
(b) Conflict with existing zoning for agricultural use or a Williamson Act contract?	☒	☐	☐	☐	
(c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☒	☐	☐	☐	
(d) Result in the loss of forest land or conversion of forest land to non-forest use?	☒	☐	☐	☐	
(e) Involve other changes in the existing environment which, due to their location or nature, could	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?					

Discussion

(a-e) The site is located on an in-fill property within the IGC-F (Industrial-General Commercial – Flood Plain Overlay) Zoning District. Farming activities and forest land are not located on the site.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
3. AIR QUALITY. *Would the proposal:*					A1, A2, A3, F1, F2
(a) Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐	
(b) Result in cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
standard?					
(c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐	
(d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☒	☐	☐	☐	

Discussion

(a-c) Salinas lies within the North Central Coast Air Basin, which meets the federal standard for ozone levels but falls short of the higher State standards for ozone and PM10. Ozone is the primary constituent of smog and is formed in the atmosphere via a chemical reaction involving nitrogen oxides (NOx), volatile organic gases (VOC), and sunlight. The primary sources are motor vehicles, organic solvents, pesticides, and industry. The Monterey Bay Air Resources District (MBARD) oversees various air quality regulations and programs.

MBARD Board of Directors adopted the 2012-2015 Air Quality Management Plan in March 2017, which represents the latest edition of the 2012 Triennial Plan, which addresses NOx and reactive organic gasses (ROG) emissions as precursors to ozone. The air quality impact generated by the project is expected to be less than significant, because it will create only occasional vehicle trips.

The revised CEQA Air Quality Guidelines prepared by the Monterey Bay Air Resources District, dated February 2008, stipulate maximum thresholds for air quality as follows:

a) Emit less than 137 lb/day of VOC's or NOx;
b) Directly emit less than 550 lb/day of CO or will not cause a violation of CO ambient air quality standards (AAQS) at existing or reasonably foreseeable receptors;
c) Not significantly impact traffic levels of service or will not cause a violation of CO or contribute 550 lb/day to an existing or projected violation at existing

or reasonably foreseeable receptors;

d) Directly emit less than 82 lb/day of PM10 on-site or will not cause a violation of particulate matter, ten micron diameter (PM10) AAQS or contribute 82 lb/day to an existing or projected violation at existing or reasonably foreseeable receptors;

e) Not indirectly generate PM10 along unpaved roads or will not cause a violation of PM10 AAQS or contribute 82 lb/day to an existing projected violation at existing or reasonably foreseeable receptors;

f) Directly emit less than 150 lb/day of sulfur oxide (SOx) or will not cause a violation of sulfur dioxide (SO2) AAQS at existing or reasonably foreseeable receptors.

The project does not entail construction; therefore, impacts to air quality are not expected to be significant.

(d) Objectionable odors are unlikely to be produced because no odor generating activities occur with the religious assembly use.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
4. BIOLOGICAL RESOURCES. *Would the proposal result in impacts to:*					A1, A2, A3 A4, A7, M1, N1
(a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
Wildlife Service?					
(b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service	☒	☐	☐	☐	
(c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☒	☐	☐	☐	
(d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☒	☐	☐	☐	
(e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☒	☐	☐	☐	
(f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
local, regional, or state habitat conservation plan?					

Discussion

(a-f) The site is located on an in-fill property within the IGC-F (Industrial-General Commercial – Flood Plain Overlay) Zoning District. There is no native flora or fauna on the project site. It is not located within a wetland habitat, riparian woodland or vernal pool, nor is it located near any sensitive habitat areas. It will not conflict with a Habitat Conservation Plan, or other habitat plan.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
5. CULTURAL RESOURCES. *Would the proposal:*					A1, A2, A3, Q3
(a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5	☒	☐	☐	☐	
(b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☒	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
(c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐	

Discussion

(a) The subject site was not included in either of the City of Salinas 1989 or 2016 City Historic and Architectural Surveys.

(b-c) Per Section 5.8 (Cultural Resources) of the Final Environmental Impact Report for the Salinas General Plan (Source A1), little archaeological investigation has occurred in the City of Salinas or in Monterey County. No construction is proposed with this project. However, there is always the potential to encounter subsurface materials during grading and construction. Therefore, pursuant to the Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With this requirement, there is little potential for a significant impact on the environment.

On October 12, 2017, pursuant to Public Resources Code Section 21080.3.1, subd. (d), Assembly Bill 52 (AB52), and California Senate Bill 18 (SB18), City of Salinas staff sent via certified mail, a consultation request on the proposed project within 30-days of the date of the letter to all applicable California Native American Tribes whose geographic area of traditional and cultural affiliation lands boundary includes the City of Salinas as specified by the Native American Heritage Foundation.

On December 18, 2017, the Ohlone /Costanoan-Esselen Nation (OCEN) provided a response letter stating concern with the proposed project site and recommending that an OCEN Tribal Monitor be located on-site during construction (see Attachment 7). The proposed project site has previously been disturbed through the grading and construction in connection with the existing building in 1991. While no construction is proposed with this project, mitigation is proposed. Per Mitigation

Measure CU-1 below, pursuant to Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With this requirement, there is little potential for a significant impact on the cultural resources and this will address OCEN's comments.

Mitigation

CU-1 In the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find pursuant to Public Resources Code Section 21083.2.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
6. ENERGY. *Would the proposal:*					A1, A2, G1
(a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐	
(b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐	

Discussion

(a) The project does not involve construction. No permanent, long-term, or substantial energy consumption would occur during or as a result of the project. Therefore, impacts related to wasteful, inefficient, or unnecessary consumption of energy resources would be less than significant.

(b) The City of Salinas is part of Monterey Bay Community Power Authority (MBCP), a regional Community Choice Energy project. MBCP was formed to provide locally-controlled, carbon-free electricity to residents and businesses in

Monterey, San Benito, and Santa Cruz counties (MBCP 2019). The goals of MBCP are to increase utilization of renewable power, create local and sustainable energy sources, and create green jobs.

The project involves a reuse of an existing use located in an existing building. No permanent, long-term, or substantial energy consumption would occur during or as a result of the project. Due to the limited duration and scope of energy-consuming activity, substantial use of energy would not occur. Therefore, the project would not conflict with the goals of MBCP, and impacts would be less than significant.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
7. GEOLOGY/SOILS. *Would the proposal result in or expose people to potential impacts involving:*					A1, A2, A3, A4, A7, M1, N1
(a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:	☒	☐	☐	☐	
(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
(ii) Strong seismic ground shaking?	☒	☐	☐	☐	
(iii) Seismic-related ground failure, including liquefaction?	☒	☐	☐	☐	
(iv) Landslides?	☒	☐	☐	☐	
(b) Result in substantial soil erosion or the loss of topsoil?	☒	☐	☐	☐	
(c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☒	☐	☐	☐	
(d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☒	☐	☐	☐	
(e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☒	☐	☐	☐	
(f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☒	☐	☐	☐	

Discussion

a (i-iv) All structures located in Salinas are required to be designed to at least Seismic Design Category D in accordance with Section 1613 of the 2010 California Building Code. As shown on the Seismic Hazards Map for the Greater Salinas Planning Area (Figure 5.10-1 of the Salinas General Plan Final EIR), the project site is located within the Moderately High Seismic Hazard Zone. Any future development on the site will be subject to the most recent, adopted edition of the California Building Code as a part of the building permit process to ensure that adequate seismic design is provided.

(b-d) No construction will happen on the project site; therefore, it will not induce substantial changes to the topography or to the soil conditions with a result of excavation or grading. The project site was developed as an Industrial Complex. Any future development would be subject to the most recent version of the California Building Code, and related Codes, as a part of the building permit process to ensure adequate seismic safety. The project site is currently developed and is basically flat.

(e) The subject property is currently served by the City's sewer system. The proposed project would not involve the use of septic systems or alternative waste water disposal systems.

(f) No proposed construction is proposed with this project. No paleontological resources or unique geological features are evident on the subject property. The Monterey County General Plan EIR indicates that fossils are found throughout the County because of widespread distribution of marine deposits. Per Exhibit 4.10.1 of the Monterey County General Plan EIR, no sites of significant scientific value were located in the vicinity of the City of Salinas. However, pursuant to Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated in accordance with Mitigation Measure CU-1. The proposed project is subject to all local, state, and federal laws relative to discovery of paleontological resources during any construction. With this requirement, there is little potential for a significant impact on the environment.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
8. GREENHOUSE GAS EMISSIONS. *Would the project:*					A1, A2, A3
(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐	
(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐	

Discussion

(a) The proposed project will not generate, either directly or indirectly, greenhouse gas emissions causing a significant impact on the environment.

(b) The proposed project will not conflict with any other applicable plans, policies, or regulations adopted for the purposes of reducing the emissions of greenhouse gases including:

- Assembly Bill 32, which requires the state board to adopt a statewide greenhouse gas emissions limit equivalent to the statewide greenhouse gas emissions levels in 1990 to be achieved by 2020.

- Senate Bill 375, which requires the state board, working in consultation with the metropolitan planning organizations, to provide each affected region with greenhouse gas emission reduction targets for the automobile and light truck sector for 2020 and 2035 by September 30, 2010.

- City of Salinas General Plan 2002, at the time, the issue of greenhouse gas emissions and the need to combat it in general plans had not risen to a critical level of concern. Nevertheless, the City adopted numerous goals and policies with the intent of improving development sustainability. These goals and policies have both direct and indirect benefits in terms of reducing GHG

emissions. Important overall land use/urban design related themes in the General Plan that serve this purpose include:

i. Increasing density and intensity of development to promote more compact development and reuse/revitalization,
ii. Facilitating in-fill development as a means to promote compact development, and
iii. Promoting mixed-use development and a compact city core, emphasizing Traditional Neighborhood Development (TND) design, walkable neighborhoods, and transit-oriented development, especially in new growth areas.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
9. HAZARDS & HAZARDOUS MATERIALS. *Would the proposal:*					A1, A2, A3, M1, N1
(a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☒	☐	☐	☐	
(b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☒	☐	☐	☐	
(c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
(d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☒	☐	☐	☐	
(e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☒	☐	☐	☐	
(f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☒	☐	☐	☐	
(g) Expose people or structures, either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?	☒	☐	☐	☐	

(a-b) The project will not create a significant hazard to the public or the environment through the routine transport, use, or disposal of materials. Compliance with local, state, and federal requirements would ensure that the hazards to the public are reduced to a level of insignificance.

(c) The proposed project will not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an

existing or proposed school. The closest school is Mt. Toro High School (10 Sherwood Dr.), which is approximately 1,484 feet away (measured from parcel to parcel) [(see also above discussion (a-b)].

(d) The site is not known to be included on a list of hazardous materials sites.

(e) The site is not located within an airport land use plan area nor located within the Airport Area of Influence per Figure LU-11 of the Salinas General Plan. The site is located approximately 9,450 feet away (over a mile and half away) miles from the end of the runway (8-26) of the Salinas Municipal Airport and would not create a hazard to persons residing or working in the project area.

(f) The project will not interfere with an adopted emergency response plan or emergency evacuation plan.

(g) The project will not expose people or structures to risk of loss, injury or death involving wildland fires, because the site is an infill property and no wildlands are located nearby.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
10. HYDROLOGY AND WATER QUALITY. *Would the proposal:*					A1, A2, A3, A4, A7,
(a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☒	☐	☐	☐	
(b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
sustainable groundwater management of the basin?					
(c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces in a manner which would:					
i. result in substantial erosion or siltation on- or off-site;	☒	☐	☐	☐	
ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite:	☒	☐	☐	☐	
iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☒	☐	☐	☐	
iv. impede or redirect floor flows?	☒	☐	☐	☐	
(d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☒	☐	☐	☐	
(e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
management plans?					
(f) With regards to NPDES compliance:					
(i) Potential impact of project construction on storm water runoff?	☒	☐	☐	☐	
(ii) Potential impact of project post-construction activity on storm water runoff?	☒	☐	☐	☐	
(iii) Potential for discharge of storm water from material storage areas, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?	☒	☐	☐	☐	
(iv) Potential for discharge of storm water to impair the beneficial uses of the receiving waters or areas that provide water quality benefit?	☒	☐	☐	☐	
(v) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and water bodies?	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
(vi) Potential for significant changes in the flow velocity or volume of storm water runoff that can cause environmental harm?					
(vii) Potential for significant increases in erosion of the project site or surrounding areas?					
(viii) Could this proposed project result in an increase in pollutant discharges to receiving waters? Consider water quality parameters such as temperature, dissolved oxygen, turbidity, and other typical Stormwater pollutants (e.g., heavy metals, pathogens, petroleum derivatives, synthetic organics, sediment, nutrients, oxygen-demanding substances, and trash).	☒	☐	☐	☐	
(ix) Could the proposed project result in a decrease in treatment and retention capacity for the site's Stormwater run-on?	☒	☐	☐	☐	
(x) Could the proposed project result in significant alteration of					

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
receiving water quality during or following construction?					
(xi) Could the proposed project result in increased impervious surfaces and associated increased urban runoff?	☒	☐	☐	☐	
(xii) Could the proposed project create a significant adverse environmental impact to drainage patterns due to changes in urban runoff flow rates and/or volumes?	☒	☐	☐	☐	
(xiii) Could the proposed project result in increased erosion downstream?	☒	☐	☐	☐	
(xiv) Could the proposed project alter the natural ranges of sediment supply and transport to receiving waters?	☒	☐	☐	☐	
(xv) Is the project tributary to an already impaired water body, as listed on the CWA Section 303(d) list? If so, can it result in an increase in any pollutant for which the water body is already impaired?	☒	☐	☐	☐	
(xvi) Could the proposed project have a potentially significant	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
environmental impact on surface water quality, to either marine, fresh, or wetland waters?					
(xvii) Could the proposed project result in decreased baseflow quantities to receiving surface waterbodies?	☒	☐	☐	☐	
(xviii) Could the proposed project cause of contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?	☒	☐	☐	☐	
	☒	☐	☐	☐	
(xix) Does the proposed project adversely impact the hydrologic or water quality function of the 100-year floodplain area?					
(xx) Does the proposed project site layout adhere to the Permittee's waterbody setback requirements?	☒	☐	☐	☐	
(xxi) Can the proposed project impact aquatic, wetland, or riparian habitat?	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
	☒	☐	☐	☐	

Discussion

(a) The site is presently developed with an existing building and parking lot and would not create any new impervious surface.

(b) The project does not include any new water connections. Thus, the project would not substantially deplete groundwater supplies and would not interfere substantially with the direction or rate of flow of groundwater.

(c) The project site is basically flat and is currently developed with structures, pavement and associated site improvements. There are no rivers or streams on or near the site.

(d) Although the site is located within a 100-year flood area, the project includes the reuse of an existing building. Inundation by seiche, tsunami, or mudflow is unlikely because the site is located a considerable distance from the ocean and is relatively flat thereby negating a potential mudflow.

(e -f)(i – xxi) (see "a" above)

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
11. LAND USE AND PLANNING. *Would the proposal:*					A1, A2, A3 M1, N1
(a) Physically divide an established community?	☒	☐	☐	☐	
(b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐	

Discussion

(a) The project does not have the potential to disrupt or divide the physical arrangement of the community. Existing and planned adjacent uses will not be disrupted or divided as a result of the project.

(b) The proposed project includes a General Plan Amendment from General Commercial/Light Industrial to Arterial Frontage and Rezone from Industrial-General Commercial to Mixed Arterial Frontage (MAF). In the MAF Zoning District, a religious assembly use may be considered subject to a Conditional Use Permit. The proposed use would be consistent with the proposed MAF District regulations; therefore, significant environmental impacts are not expected.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
12. MINERAL RESOURCES. *Would the proposal:*					A1, A2, A3
(a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☒	☐	☐	☐	
(b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☒	☐	☐	☐	

Discussion

(a-b) The project will not result in the loss of availability of a known mineral resource that would be of value to the region or the residents of the state.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
13. NOISE. *Would the proposal result in:*					A1, A2, A3, M1
(a) Generation of a substantial temporary or permanent increase in ambient noise	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?					
(b) Generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐	
(c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☒	☐	☐	☐	

Discussion

(a) No substantial permanent, or temporary or periodic, increases in the ambient noise level are expected with the project. According to the General Plan Master Environmental Assessment Section 9.2, ambient noise is defined as the "all encompassing noise associated with a given environment, being a composite of sounds from many sources, near and far."

(b) The site is located within the 60 CNEL contour as shown on *Figure 5.3-1 Noise Contours (CNEL)* of the Salinas General Plan, Final Environmental Impact Report, 2002. The Future Noise Contours as shown on Figure 5.3-4 of the Salinas General Plan, Final Environmental Impact Report, 2002, shows the project site as located within the 70 CNEL contour. Traffic generates the main source of noise for the depicted 70 CNEL contour.

Groundborne vibration or groundborne noise levels generated by any future

proposed uses on the project site are not expected to be excessive. The Zoning Code Standards regarding noise are expected to reduce noise impacts to a level of insignificance.

(c) The site is located approximately 1.86 miles from the Salinas Municipal Airport and is located within the 55 CNEL contour as shown on *Figure 5.3-2: Salinas Airport Future Noise Contours)* of the Salinas General Plan, Final Environmental Impact Report, 2002. Noise impacts from airport operations will not have an adverse impact on the site.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
14. POPULATION AND HOUSING. *Would the proposal:*					
(a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly *(for example, through extension of roads or other infrastructure)*?	☒	☐	☐	☐	A1, A2, A3, M1, N1
(b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☒	☐	☐	☐	

Discussion

(a-b) The proposed project does not include a residential component. It will not induce substantial growth, and it will not displace housing units or people. The subject site is an existing developed in-fill site.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
15. PUBLIC SERVICES. *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*					A1, A2, A3, M1, N1
(a) Fire protection?	☒	☐	☐	☐	
(b) Police protection?	☒	☐	☐	☐	
(c) Schools?	☒	☐	☐	☐	
(d) Parks?	☒	☐	☐	☐	
(e) Other public facilities?	☒	☐	☐	☐	

Discussion

(a-e) The site is located on an in-fill site presently developed as a theater with a nonconforming Religious Assembly use. Police and Fire services are currently available to serve the site. No schoolchildren will be generated by the project. East Market Street and Simas Street have been designed and constructed to accommodate the demands of this project. No other government services are expected to be impacted by the project.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
16. RECREATION. *Would the proposal:*					A1, A2, A3, M1, N1
(a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☒	☐	☐	☐	
(b) Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☒	☐	☐	☐	

Discussion

(a-b) The proposed project will not increase the use in park facilities because it does not include residential development. The proposed project does not include recreational facilities.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
17. TRANSPORTATION. *Would the project:*					A1, A2 A3, A4, A7, M1, N1
(a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☒	☐	☐	☐	
(b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, Subdivision (b)?	☒	☐	☐	☐	
(c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐	
(d) Result in inadequate emergency access?	☒	☐	☐	☐	

Discussion

(a-b) The proposed project is not expected to generate significant traffic trips. Any future development is required to pay all applicable traffic impact fees as determined by the City Engineer at the time of building permit issuance. Payment of traffic fees will ensure that potential traffic impacts are reduced to a level of insignificance.

The proposed project will not result in substantial impacts resulting from increased trip generation. The proposed project will not exceed 2,500 Average Daily Trips (ADT) and is not subject to the Vehicle Trip Reduction provisions of the Salinas Zoning Code (Section 37-50.330).

(c-d) The project will not substantially increase hazards due to design features or incompatible uses. The proposal will not result in inadequate emergency access.

Mitigation

No mitigation is required.

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
18. TRIBAL CULTURAL RESOURCES. *Would the project:*					A5, A6, Q3
(a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a Californian Native American tribe, and that is:					
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k); or	☒	☐	☐	☐	
ii. A resource determined by the Lead Agency, in its discretion and supported by substantial evidence,	☐	☒	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1 In applying the criteria set forth in Subdivision (c) of Public Resource Code 5024.1, the Lead Agency shall consider the significance of the resource to a California Native American tribe.					

(a)(i) The subject site was not included in either of the City of Salinas 1989 or 2016 City Historic and Architectural Surveys. Furthermore, the building is less than 50 years old.

(a)(ii) Per Section 5.8 (Cultural Resources) of the Final Environmental Impact Report for the Salinas General Plan (Source A1), little archaeological investigation has occurred in the City of Salinas or in Monterey County. However, there is always the potential to encounter subsurface materials during grading and construction. Therefore, pursuant to the Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With this requirement, there is little potential for a significant impact on the environment.

On October 12, 2017, pursuant to Public Resources Code Section 21080.3.1, subd. (d), Assembly Bill 52 (AB52), and California Senate Bill 18 (SB18), City of Salinas staff sent via certified mail, a consultation request regarding the proposed project. Within 30-days of the date of the letter to all applicable California Native American Tribes whose geographic area of traditional and cultural affiliation lands boundary includes the City of Salinas as specified by the Native American Heritage Foundation.

On December 18, 2017, the Ohlone /Costanoan-Esselen Nation (OCEN) provided a response letter stating concern with the proposed project site and recommending that an OCEN Tribal Monitor be located on-site during construction (see Attachment 7). The proposed project site has previously been disturbed through the grading and construction in connection with the existing building in 1991. While no construction is proposed with this project, mitigation is proposed. Per Mitigation Measure TCR-1 below, pursuant to Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With this requirement, there is little potential for a significant impact on the cultural resources and this will address OCEN's comments.

Mitigation

TCR-1 In the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find pursuant to Public Resources Code Section 21083.2.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
19. UTILITIES & SERVICE SYSTEMS. *Would the project:*					A1, A2, A3, A7, M1
(a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effect?	☒	☐	☐	☐	
(b) Have sufficient water supplies available to serve	☒	☐	☐	☐	

Issue	Impact				Source (Refer to Section 3: Source List)
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
the project and reasonably foreseeable future development during normal, dry, and multiple dry years?		☐	☐	☐	
(c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has the adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☒	☐	☐	☐	
(d) Generate solid waste in excess of State or Local standards, or in excess of the capacity of local infrastructure, or otherwise impact the attainment of solid waste reduction goals?	☒	☐	☐	☐	
(e) Comply with federal, state, and local management and reduction statues and regulations related to solid waste?	☒				

Discussion

(a) The project does not include construction.

(b-c) No construction is proposed; therefore, the project does not include new water connections. The religious assembly use is not a heavy water user. Furthermore, it will not discharge significant quantities of water into the wastewater treatment plant (also see Hydrology and Water Quality above).

(d-e) The project will not generate significant solid waste because there are no products produced. Disposal of waste generated by the project is not expected to be significant and it will be required to comply with federal, state, and local reduction statutes related to solid waste.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
20. WILDFIRE. *If located in or near State responsibility areas or lands classified as very high fire hazard severity zones, would the project:*					A1, A2, M1, N1
(a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☒	☐	☐	☐	
(b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☒	☐	☐	☐	
(c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☒	☐	☐	☐	
(d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☒	☐	☐	☐	

Discussion

(a-d) The City of Salinas is not located in or near State responsible areas or lands classified at very high fire hazard severity zones.

Mitigation

No mitigation is required.

Mandatory Findings of Significance	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigated	Potentially Significant Impact
1. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
2. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)? *("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects).*	☒	☐	☐	☐
3. Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

4. DETERMINATION

On the basis of this Initial Study:

☐ I find that the proposed project ***COULD NOT*** have a significant effect on the environment, and a ***NEGATIVE DECLARATION*** will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there ***WILL NOT*** be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A ***MITIGATED NEGATIVE DECLARATION*** will be prepared.

☐ I find that the proposed project ***MAY*** have a significant effect on the environment, and an ***ENVIRONMENTAL IMPACT REPORT*** is required.

☐ I find that the proposed project ***MAY*** have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect:

(a) Has been adequately analyzed in *(Reference document)* pursuant to applicable legal standards; and

(b) Has been addressed by mitigation measures based on the earlier analysis as described in *Section 2: Checklist*, if the effect is a "Potentially Significant Impact" or a Negative Declaration: "Potentially Significant Unless Mitigation Incorporated".

An ***ENVIRONMENTAL IMPACT REPORT*** is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects:

(a) Have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and;

(b) Have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project.

NOTHING FURTHER IS REQUIRED.

CITY OF SALINAS

DEVELOPMENT ENGINEERING, *A division of the Public Works Department*
65 West Alisal Street | Salinas, CA 93901 | 831-758-7251 | *www.ci.salinas.ca.us*

ENGINEER'S REPORT

PURPOSE: CUP2017-019 **DATE:** 5/15/2018
LOCATION: 10 Simas St **PLANNER:** Bobby Latino
OWNER/APPLICANT: Simas-East Markert LLC/SyWest Development

DEVELOPMENT PROPOSAL: A proposal to establish religious assembly at old movie theater.

RECOMMENDATION: Approve with Conditions
SWDS THRESHOLD: N/A

DEVELOPMENT REVIEW: *Development Review Submittal prepared by JWF Architecture and BKF, dated 11/16/2017.*

CONDITION OF APPROVAL

1. FEMA Compliance – Applicant shall provide documentation for cost of all improvements that converted the use of the facility along with an appraisal indicating the market value the structure.
2. Fees – Based on CUP1987-028, the existing theater had 1200 seats. Trips associated with the theater use exceeds the proposed religious use. Therefore, no traffic impact fees are assessed for this change in land use.

Notice: The Conditions of Approval for this Site Plan Review include certain fees and development requirements. Pursuant to Government Code Section 66020 (d)(1), this hereby constitutes written notice stating the amount of said fees, and describing the development requirements. The applicant is hereby notified that the 90-day appeal period in which he/she/they may protest these fees and development requirements, pursuant to Government Code Section 66020 (a), begins on the date the office land use permit is approved. If applicant files a written protest within this 90-day period complying with all requirements of Section 66020, he/she/they will be legally barred from challenging such fees and/or requirements at a later date.

MOVABLE SEATING REQUIREMENTS

CLEAR WIDTH BETWEEN CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.1 "WHEN SEATING ROWS HAVE 14 OR LESS SEATS, THE MINIMUM CLEAR WIDTH BETWEEN ROWS SHALL NOT BE LESS THAN 12 INCHES MEASURED AS THE CLEAR HORIZONTAL DISTANCE FROM THE BACK OF THE ROW AHEAD AND THE NEAREST PROJECTION OF THE ROW BEHIND."

CLEAR WIDTH BETWEEN CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.1 "FOR ROWS OF SEATING SERVED BY AISLES OR DOORWAYS AT BOTH ENDS, THE MINIMUM CLEAR WIDTH OF 12 INCHES BETWEEN ROWS SHALL BE INCREASED BY 0.3 INCH FOR EVERY ADDITIONAL SEAT BEYOND 14."
- ALL OTHER ROWS REQUIRE MIN 12" CLR. SPACE

BONDING OF CHAIRS PER CALIFORNIA FIRE CODE SECTION 2501.10.3 "LOOSE CHAIRS THAT ARE NOT FIXED TO THE FLOOR SHALL BE BONDED TOGETHER IN GROUPS OF 3 OR MORE."
EXCEPTIONS:
1. WHEN NOT MORE THAN 200 SEATS ARE PROVIDED, BONDING IS NOT REQUIRED.
2. THE BONDING OF CHAIRS IS NOT REQUIRED WHEN TABLES ARE PROVIDED, AS WHEN USE OCCUPANCY AS LOOSE TABLES AND CHAIRS OR SIMILAR PURPOSES.

READILY REMOVABLE SEATS WHERE SHOWN, SHALL NOT BE FIXED TO THE GROUND IN ORDER TO ALLOW REMOVAL TO ACCOMMODATE FOR WHEELCHAIR USERS.

ASSISTIVE LISTENING SYSTEM

AN ASSISTIVE LISTENING SYSTEM IS REQUIRED FOR THE SANCTUARY AREA OF THIS TENANT.
- PROVIDE RECEIVERS FOR A MINIMUM OF 4% OF TOTAL SEATING (21 REQUIRED)
- SYSTEM MUST BE IN PLACE AND OPERATIONAL AT TIME OF FINAL INSPECTION
- REFER TO SHEET DA3 FOR REQUIRED SIGNAGE

FLOOR PLAN KEYNOTES

No.	Description
1	Existing concrete masonry exterior wall (No Change)
2	Existing storefront entry door to remain (No Change)
3	Existing storefront glazing to remain (No Change)
4	Existing sloped floor (1:12 max slope) to remain (No Change)
5	Existing steps to be filled-in with concrete -- Refer to Structural Drawings for detailed requirements
6	Existing interior door to remain (No Change)
7	Existing interior door to remain as exit only (No hardare on pull-side of door)
8	Existing multi-accomodation restrooms with new fixtures -- Refer to Plumbing Drawings for detailed requirements
9	Existing exterior door to be permanently locked.
10	Shading indicates new fixed chair layout (Self-rising seats) -- Re-use existing chairs where possible
11	New movable seating / Refer to spacing requirements this sheet
12	Occupancy capacity sign stating "MAXIMUM BUILDING OCCUPANCY 1176"
13	Occupancy capacity sign stating "MAXIMUM OCCUPANCY THIS ROOM 728"
14	Fire Department approved Key Box. (See General Notes / Sheet T51)
15	Existing CMU wall and pilaster to be removed -- Refer to Structural Drawings
16	New interior door (Solid Core) / Match existing -- Refer to Door Schedule, Sheet A301
17	New HI/Lo wall mounted drinking fountains -- Refer to Plumbing Drawings
18	Existing exterior hollow metal door to remain (No Change)
19	New sign over door 9"/1" high letters stating "THIS DOOR TO REMAIN UNLOCKED WHENEVER THE BUILDING IS OCCUPIED"
20	6" x 6" Square International Symbol of Accessibility at primary entrance. -- mount @ 60" a.f.f to c/l
21	New base & upper cabinets -- Refer to detail 6/A301
22	New Base Cabinet & Counter -- Refer to detail 6/A301
23	New Single-Accomodation restroom -- Refer to enlarged plan on sheet A102
24	Existing stairs to 2nd floor storage mezzanine -- No Change
25	New ramp to Platform / 1:12 max slope w/handrails each side -- Refer to details on Sheets DA2 & S402
26	New stairs to platform / 7" Risers (Max) & 11" Treads (Min) w/Handrails each side of stairs / Refer to details on Sheets DA2 & S402
27	New steel frame column -- Refer to structural drawings
28	Location of existing fire sprinkler riser -- No Change
29	Provide handrails each side of ramp -- Refer to details on Sheets DA2 & DA3
30	New 3'-4" Wide x 7'-2" High opening in existing CMU wall -- Refer to detail 8/S401
31	New 3'-4" Wide x 7'-2" High opening in existing CMU wall -- Refer to detail 8/S401
32	48"x66" Clear floor space at wheelchair seating (7 locations provided) -- Readily removable seats may be provided in these locations when such spaces are not required to accommodate wheelchair users. (CBC Section 1104B.3.7)
33	Existing hollow metal door to be removed & re-installed at interior finished floor elevation -- Cut existing wall and provide new opening so that door may be re-installed at new interior finished floor height -- Refer to detail 13/S402
34	Existing hollow metal door to be removed & re-installed at interior finished floor elevation -- Cut existing wall and provide new opening so that door may be re-installed at new interior finished floor height -- Door to be welded shut from inside -- Refer to detail 13/S402
35	"P" -- Indicates stage seat sign on arm rest on aisle side -- Each seat shall be identified by sign or marker with International Symbol of Accessibility

Re: 295 Sun Way Project and 10 Simas Street, Salinas, CA - General Plan Amendments– As stated General Plan Amendment
AB52 and SB18 – 90 Days consultation period

Saleki Atsa,

Ohlone/Costanoan-Esselen Nation is an historically documented previously recognized tribe. OCEN is the legal tribal government representative for over 600 enrolled members of Esselen, Carmeleno, Monterey Band, Rumsen, Chalon, Soledad Mission, San Carlos Mission and/or Costanoan Mission Indian descent of Monterey County. Though other indigenous people may have lived in the area, the area is the indigenous homeland of our people. Included with this letter please find a territorial map by Taylor 1856; Levy 1973; and Milliken 1990, indentifying Tribal areas.

Ohlone/Costanoan-Esselen Nation objects to all excavation in known cultural lands, even when they are described as previously disturbed, and of no significant archaeological value. Please be advised that it is our first priority that our ancestor's remains be protected and undisturbed. We desire that all sacred burial items be left with our ancestors on site or as culturally determined by OCEN. All cultural items returned to Ohlone/Costanoan-Esselen Nation. We ask for the respect that is afforded all of our current day deceased, by no other word these burial sites are cemeteries, respect for our ancestors as you would expect respect for your deceased family members in today's cemeteries. **Our definition of respect is no disturbance.**

OCEN's Tribal leadership desires to be provided with:

Archaeological reports/surveys, including subsurface testing, and presence/absence testing.
OCEN request to be included in mitigation and recovery programs,
Reburial of any of our ancestral remains,
Placement of all cultural items, and that
A Native American Monitor of Ohlone/Costanoan-Esselen Nation, approved by the OCEN Tribal Council is used within our aboriginal territory.
Cultural and Tribal sections to reflect Tribal request.

Projects affecting the General Plan allow for 90 days response according to SB18. We ask that a sacred lands search with the Northwest Information Center, Sonoma State University and the Native American Heritage Commission. Please feel free to contact me at (408) 629-5189. Nimasianexelpasaleki. Thank you

Sincerely and Respectfully Yours,

Louise J. Miranda Ramirez, Chairperson
Ohlone/Costanoan-Esselen Nation

Ordinance Regarding Commercial Cannabis Business License Tax Rates

Adopt an Ordinance amending Salinas Municipal Code (SMC) Sec. 19A.10.070 repealing the scheduled automatic business license tax increase for Commercial Cannabis Businesses. (Second Reading)

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **NOVEMBER 19, 2019**

DEPARTMENT: **FINANCE DEPARTMENT**

FROM: **MATT N. PRESSEY, CPA, FINANCE DIRECTOR**

BY: **KELLY MILLER, PLANNING CONSULTANT (RINCON CONSULTANTS)**

TITLE: **ORDINANCE REGARDING COMMERCIAL CANNABIS BUSINESS LICENSE TAX RATES**

RECOMMENDED MOTION:

A motion to adopt an ordinance amending Salinas Municipal Code (SMC) Sec. 19A.10.070 repealing the scheduled automatic business license tax increase for commercial cannabis businesses (CCBs).

RECOMMENDATION:

Staff recommends that the City Council adopt an ordinance amending Salinas Municipal Code (SMC) Sec. 19A.10.070 repealing the scheduled automatic business license tax increase for CCB.

EXECUTIVE SUMMARY:

The current tax rate for CCB is scheduled to automatically increase on January 1, 2019. Staff is requesting the City Council repeal the scheduled tax increase because it may jeopardize what the City currently receives.

DISCUSSION:

Current and Scheduled Tax Rates for Commercial Cannabis Businesses

The City of Salinas collects a business license tax from the City's permitted CCBs. The following CCB types are taxed: cultivation, dispensary, delivery, and manufacturing.

Tax rates on CCBs were approved by Salinas Voters via Measure L on November 8, 2016. A "NO" vote was a vote against imposing a business tax on commercial cannabis businesses. A "YES" vote was a vote for establishing initial tax rates along with a scheduled increase after three years. Measure L passed with 74.18 percent "YES" votes. The measure was codified as Chapter 19A of the Salinas Municipal Code.

Pursuant to Section 19A.10.070, the City's current cannabis business tax rates are as follows:

Cultivation:	$15 per square foot of canopy area
Dispensary/ Delivery/ Manufacturing:	5% of gross receipts

The code has a scheduled automatically increase, which would be applied beginning January 1, 2020 and would establish the following increased rates:

Cultivation:	$25 per square foot of canopy area, then automatically adjusted, and adjusted annually, based on the Consumer Price Index
Dispensary/ Delivery/ Manufacturing:	10% of gross receipts

Considerations Regarding the Scheduled Tax Rate Increase

The commercial cannabis industry has grown steadily but slowly in Salinas throughout the past several years. Taxes and other industry-specific expenses are obstacles to entry and sustainability for prospective and operational CCB permit-holders. Industry-specific taxes and expenses for CCBs in Salinas include the following:

- 15% State excise tax
- State license fee (varies)
- Local taxes (described above)
- Application fee for a new permit: $3,144.75
- Annual permit renewal fee: $1,443.25
- Annual monitoring fees: between $16,000 and $27,000 (varies based on business type)

The expenses listed above are unique to the cannabis industry and are in addition to the normal expenses that any business faces, as well as other unique expenses such as the high level of product monitoring and security that is required of CCBs.

Staff has observed that the financial and regulatory challenges for CCBs have delayed the ability of some permitted businesses to commence commercial operations, and have challenged the ability of operational businesses to maintain viability. Furthermore, it is generally believed that throughout California the expenses associated with operating a legally compliant CCB have resulted in high product prices, which in turn sustains the illegal/black market despite the maturation of the legal adult-use (recreational) market.

While a substantial amount of regulatory expenses and taxes is inherent in the commercial cannabis industry, reasonable limits to these expenses should be maintained. Therefore, a repeal of the scheduled tax increase should be considered. As described below under Fiscal and Sustainability Impact, substantial tax revenue is already being collected at the current rates,

whereas a rate increase could potentially result in tax revenue reduction if some businesses are no longer able to remain compliant and profitable.

There is local precedent for adjusting tax rates to reduce the financial burden on CCBs. On July 24, 2018, Monterey County reduced the rate on cannabis cultivation per square foot of canopy area from $15 to $5 (for greenhouse grows) or $8 (for indoor grows). Scheduled rate increases will reach a maximum of $15 per square foot of canopy area. The County's rates for other cannabis business types currently range from three percent to four and a half percent, with scheduled incremental increases.

CEQA CONSIDERATION:

The proposed actions are not projects as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines section 15378).

DEPARTMENT COORDINATION:

The Finance Department coordinated with the Community Development Department and the City Attorney's Office on this report and recommendation.

STRATEGIC PLAN INITIATIVE:

The Commercial Cannabis pertains to the following City Council goals: 1: Economic Diversity and Prosperity; Goal 2: Safe, Livable Community; and Goal 3: Effective, Sustainable Government.

FISCAL AND SUSTAINABILITY IMPACT:

The table below shows tax revenue collected during 2018 and the first two quarters of 2019. Total revenue for 2019 is projected by doubling revenue collected during Quarter 1 (Q1) and Q2.

Commercial Cannabis Business Tax Collected 2018-19

Q1 2018	Q2 2018	Q3 2018	Q4 2018	Q1 2019	Q2 2019
120,736.87	143,838.70	328,894.12	276,979.18	332,421.50	352,270.40

2018 Total Tax Revenue: $870,448.87

2019 Projected Total Tax Revenue: $1,369,383.80

Taxes collected to date are all from dispensary, delivery, and manufacturing businesses, at the current rate of five percent of gross receipts[1]. Based on the total projected tax revenue for 2019, the scheduled rate increase (to ten percent) would collect an additional $1.3 million annually.

[1] Permits for cultivation have been issued but no cultivation business has commenced business operations as of the writing of this report

However, as described above, the rate increase could also have a reverse effect by impacting the viability of some operational businesses, and by preventing new applicants from pursuing business or successfully opening for business in the City. If the tax increase resulted in the closure of businesses that are paying the current rates, the rate increase could result in a net loss of tax revenue.

Salinas Municipal Code Description of Cannabis Tax Authority

City Council is authorized to amend or repeal the City's cannabis business tax. City Council may also, later, restore the rate of tax to any level not exceeding that described in Section 19A of the Salinas Municipal Code. Amendment and repeal of the City's cannabis business tax is governed by Section 19A.10.330, as follows:

> This chapter may be repealed or amended by the City Council without a vote of the people. However, as required by Chapter XIIIC of the California Constitution, voter approval is required for any amendment provision that would increase the rate of any tax levied pursuant to this chapter. The voters of the city affirm that the following actions shall not constitute an increase of the rate of a tax:
>
> a) The restoration of the rate of the tax to a rate that is no higher than that set by this chapter, if the City Council has acted to reduce the rate of the tax;
>
> b) An action that interprets or clarifies the methodology of the tax, or any definition applicable to the tax, so long as interpretation or clarification (even if contrary to some prior interpretation or clarification) is not consistent with the language of this chapter;
>
> c) The establishment of a class or person that is exempt or excepted from the tax or the discontinuation of any such exemption or exception (other than the discontinuation of an exemption or exception specifically set forth in this chapter); or
>
> d) The collection of the tax imposed by this chapter, even if the city had, for some period, failed to collect the tax.

1. Ordinance

ORDINANCE NO. _____ (N.C.S.)

AN ORDINANCE AMENDING THE MUNICIPAL CODE REGARDING THE COLLECTION OF ASSESSMENTS FOR THE SALINAS UNITED BUSINESS ASSOCIATION (SUBA) BUSINESS IMPROVEMENT AREA

BE IT ORDAINED BY THE COUNCIL OF SALINAS as follows:

SECTION 1. Section 19A.10.070 of the Salinas Municipal Code is hereby amended as follows:

"19A.10.070. Amount of cannabis business tax owed.

(a) Every person whether it is a "not for profit", "a nonprofit" or a "non-profit organization" as defined in this section, or a for-profit entity who is engaged in a Commercial Cannabis Cultivation business in the city shall pay an annual cannabis business tax on medical marijuana and non-medical marijuana where it is permissible by both state and local law. The tax shall be set at a rate of fifteen dollars per square foot of canopy space utilized in connection with cultivation of marijuana. The tax rate may be increased by Resolution of the City Council up to twenty- five dollars per square foot. Beginning on January 1, 2021, and each succeeding year thereafter, the amount of each tax imposed by this section may be adjusted by Resolution of the City Council up to the equivalent to the most recent change in the annual average of the Consumer Price Index ("CPI") for all urban consumers in the San Francisco-Oakland-San Jose areas as published by the United States Government Bureau of Labor Statistics; however, no such adjustment shall decrease any tax imposed by this section.

The tax set forth in this subsection shall be applicable to all portions of a cultivation operation except nursery operations. Every person whether it is a "not for profit" or a "non-profit organization" as defined in this section, or a for-profit entity who is engaged in a commercial cannabis business in the city that is dedicated exclusively to a nursery operation shall pay an annual cannabis business tax on medical marijuana and non-medical marijuana, where it is permissible by both state and local law. Nursery operations shall be taxed at the rate of two dollars per square foot of canopy space utilized in connection with cultivation of marijuana. The tax rate may be increased by Resolution of the City Council up to five dollars per square foot. Beginning on January 1, 2021, and each succeeding year thereafter, the amount of each tax imposed by this section may be adjusted by Resolution of the City Council up to the equivalent to the most recent change in the annual average of the Consumer Price Index ("CPI") for all urban consumers in the San Francisco-Oakland-San Jose areas as published by the United States Government Bureau of Labor Statistics; however, no such adjustment shall decrease any tax imposed by this section. The city must be notified immediately if any portion designated as a nursery is converted to another use. If a subsequent inspection by the city or its representatives discovers that an area designated as nursery is in fact being used for other cultivation purposes, the cultivation business shall be responsible to pay the tax rates described in this section back to the previous city inspection, including any penalties and interest.

(b) Every person whether it is a "not for profit", "a nonprofit" or a non-profit organization" as defined in this section, or a for-profit entity who is engaged in business as a dispensary, delivery

service, or manufacturer of commercial Cannabis in the city shall pay an annual cannabis business tax on medical marijuana and non-medical marijuana where permissible by both state and local law. The tax shall be set at five percent of the gross receipts annually. The tax rate may be increased by Resolution of the City Council up to ten percent of the annual gross receipts."

SECTION 2. Severability. If any section, subsection, sentence, clause, or phrase of this ordinance is for any reason held to be invalid or unconstitutional by a decision of any court of any competent jurisdiction, such decision shall not affect the validity of the remaining portions of this ordinance. The Salinas City Council hereby declares that it would have passed this ordinance, and each and every section, subsection, clause, and phase thereof not declared invalid or unconstitutional without regard to whether any portion of the ordinance would be subsequently declared invalid or unconstitutional.

SECTION 4. Effective Date. This Ordinance will take effect thirty (30) days from and after its adoption.

SECTION 4. California Environmental Quality Act. This ordinance is categorically exempt from the California Environmental Quality Act (CEQA) pursuant to Guidelines section 15061(b)(3). This exemption is allowed when the activity, in this case the recommendation of adoption of the ordinance, does not have the potential for causing a significant effect on the environment.
