Meeting Agenda - Final

Tuesday, December 17, 2019

4:00 PM

SALINAS ROTUNDA

City Council

Mayor Joe Gunter
Councilmembers:
Scott Davis, District 1 - Tony Barrera, District 2
Steve McShane, District 3 - Gloria De La Rosa, District 4
Christie Cromeenes, District 5 - John "Tony" Villegas, District 6

Ray E. Corpuz, Jr., City Manager
Christopher A. Callihan, City Attorney
City Clerk's Office: (831) 758-7381

PLEDGE OF ALLEGIANCE

ROLL CALL

SPECIAL PROCLAMATION

PUBLIC COMMENT TIME RESTRICTIONS

Public comments generally are limited to two minutes per speaker; the Mayor may further limit the time for public comments depending on the agenda schedule.

GENERAL PUBLIC COMMENTS

Receive public communications from the audience on items that are not on the agenda and that are in the City of Salinas' subject matter jurisdiction. Comments on Consent, Consideration, and Closed session items should be held until the items are reached. The public may request that the legislative body consider adding an item for consideration on a future agenda. The public may comment on scheduled agenda items, including closed session items, as they are considered. In order to be respectful of all speakers' views and to avoid disruption of the meeting, the audience shall refrain from applauding or jeering speakers who have been recognized by the Mayor.

CONSIDERATION

ID#19-664 **Chinatown Revitalization Plan**

Recommendation: Approve Resolution accepting Chinatown Revitalization Plan as a key strategic plan document.

PUBLIC HEARING

ID#19-678 **West Area Specific Plan Project**

Recommendation: Approve a Resolution certifying the West Area Specific Plan Final Program Environmental Impact Report (ER 2018-003); Approve a Resolution adopting the CEQA Findings of Fact, a Statement of Overriding Considerations, and a Mitigation Monitoring and Reporting Program for the West Area Specific Plan (SPEC 2013-002); Approve a Resolution for the West Area Specific Plan (SPEC 2013-002), including the incorporation of minor text and figure modifications (the Specific Plan Errata); Adopt an Ordinance approving a Rezone (RZ 2019-001) and amending the City of Salinas Zoning Map accordingly for approximately 797 acres of land located within the West Area Specific Plan Project Area; and Adopt an Ordinance approving a Development Agreement (DA 2019-001) between the City of Salinas and property owners and developers related to the West Area Specific Plan Project Area. The West Area Specific Plan Project Area is bounded by East Boronda Road on the south, San Juan Grade Road on the west, Natividad Road on the east, and Rogge Road and the future extension of Russell Road on the north and will include approximately 4,340 dwelling units, a Village Center with up to 571,500 square feet of mixed-use commercial floor area, eleven parks, up to five schools, open space, and well sites.

CONSENT AGENDA

All matters listed under Consent Agenda may be enacted by one motion unless a member of the Council or the public requests discussion or a separate vote.

ID#19-676 **Minutes**

Recommendation: Approve minutes of December 3, 2019.

ID#19-686 **Financial Claims**

Recommendation: Approve financial claims report.

ID#19-644 **2019 Engineering and Traffic Survey for Speed Limits**

Recommendation: Approve a Resolution to establish speed limits as recommended by the 2019 Engineering and Traffic Survey for speed limits.

ID#19-653 **Parking for the Collision Reporting Center**

Recommendation: Approve a Resolution establishing three "No Parking Tow-Away, Except Police" parking stalls along the frontage of 215 Lincoln Avenue in support of the Salinas Collision Reporting Center.

ID#19-657 **Transfer of Certain Real Property and Facility Lease Agreement with Northern Salinas Valley Mosquito Abatement District - 342 Airport Boulevard**

Recommendation: Approve a Resolution approving a facility lease for 342 Airport Blvd., between the City of Salinas and the Northern Salinas Valley Mosquito Abatement District at the Salinas Municipal Airport; and accept the Quitclaim for 342 Airport Blvd. transferring the rights, title, and interest in and to 342 Airport Blvd. to the City of Salinas.

ID#19-659 **Purchase of one 2019 F-250 Utility Body Truck**

Recommendation: Approve a Resolution authorizing the direct purchase of one Ford F-250 Utility Truck from Salinas Valley Ford Truck Company in Salinas at a total cost of $38,583.24.

ID#19-681 **Audited Basic Financial Statements and Single Audit Report - June 30, 2019**

Recommendation: Accept the audited Basic Financial Statements and Single Audit Report on federal funded programs for fiscal year ended June 30, 2019.

ID#19-683 **Modification to the Classification - Salary Schedule**

Recommendation: Approve a Resolution to amend the Classification - Salary Schedule for the adjustment of temporary employee salaries to comply with the state minimum wage pursuant to SB 3 and adjust impacted classifications in the series.

ID#19-623 **General Plan Amendment 2017-001 and Rezone 2017-002 located at 295 Sun Way in the P-F (Parks - Flood Plain Overlay) Zoning District**

Recommendation: Adopt an Ordinance for Rezone 2017-002. (Second Reading)

ID#19-624 **General Plan Amendment 2017-002; Rezone 2017-001; and Conditional Use Permit 2017-019 located at 10 Simas Street in the IGC-F (Industrial-General Commercial - Flood Plain Overlay) Zoning District**

Recommendation: Adopt an Ordinance for Rezone 2017-001. (Second Reading)

ID#19-606 **Ordinance Regarding Commercial Cannabis Business License Tax Rates**

Recommendation: Adopt an Ordinance amending Salinas Municipal Code (SMC) Sec. 19A.10.070 repealing the scheduled automatic business license tax increase for Commercial Cannabis Businesses. (Second Reading)

COUNCILMEMBERS' REPORTS, APPOINTMENTS AND FUTURE AGENDA ITEMS

Receive communication from Councilmembers on reports, appointments and future agenda items. Councilmember comments are generally limited to three minutes.

ADJOURNMENT

Patricia M. Barajas, City Clerk

AGENDA MATERIAL / ADDENDUM

Any addendums will be posted within 72 hours of regular meetings or 24 hours of special meetings, unless otherwise allowed under the Brown Act. City Council reports may be viewed at the Salinas City Clerk's Office, 200 Lincoln Avenue, Salinas, and are posted on the City's website at www.cityofsalinas.org. The City Council may take action that is different than the proposed action reflected on the agenda.

Disability-related modification or accommodation, including auxiliary aids or services, may be requested by any person with a disability who requires a modification or accommodation in order to participate in the meeting. Requests should be referred to the City Clerk's Office At 200 Lincoln Avenue, Salinas, 758-7381, as soon as possible but by no later than 5 p.m. of the last business day prior to the meeting. Hearing impaired or TTY/TDD text telephone users may contact the city by dialing 711 for the California Relay Service (CRS) or by telephoning any other service providers' CRS telephone number.

PUBLIC NOTIFICATION

This agenda was posted on Friday, December 13, 2019 at the City Clerk's Office, in the Council Rotunda, and the City's website.

Meetings are streamed live at https://salinas.legistar.com/Calendar.aspx and televised live on Channel 25 at 4 p.m. on the date of the regularly scheduled meeting and will be broadcast throughout the day on the Wednesday, Friday, Saturday and Monday following the meeting. For the most up-to-the-minute Broadcast Schedule for The Salinas Channel on Comcast 25, please visit or subscribe to our Google Calendar located at http://tinyurl.com/salinas25. Recent City Council meetings may also be viewed on the Salinas Channel on YouTube at http://www.youtube.com/thesalinaschannel.

File #: ID#19-664, **Version:** 1

Chinatown Revitalization Plan

Approve Resolution accepting Chinatown Revitalization Plan as a key strategic plan document.

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **DECEMBER 17, 2019**

DEPARTMENT: **COMMUNITY DEVELOPMENT**

FROM: **MEGAN HUNTER, DIRECTOR**

BY: **LISA BRINTON, PLANNING MANAGER**

TITLE: **CHINATOWN REVITALIZATION PLAN**

RECOMMENDED MOTION:

Approve a resolution accepting the Chinatown Revitalization Plan as a key strategic planning document.

RECOMMENDATION:

It is recommended that the City Council approve the attached resolution accepting the Chinatown Revitalization Plan (Exhibit "A" to the resolution) as a key strategic planning document.

EXECUTIVE SUMMARY:

The Chinatown Revitalization Plan ("Revitalization Plan" or "Plan") represents nearly three years of extensive work guided by dedicated Chinatown stakeholders. Inclusivity was at the center of the Chinatown community engagement process to ensure that Plan content was reflective of and equitable for all stakeholders. To achieve this objective, the Plan's robust engagement process not only involved residents, business owners, housing developers, social service providers, and cultural and faith-based organizations, it also included activities targeted to individuals experiencing homelessness. In addition, the planning process was intentionally paused to ensure that future residents of Dai-Ichi Village and Hikari affordable housing developments, built by the Housing Authority of the County of Monterey Development Corporation (HDC), were provided the opportunity to be part of the planning process. Community recommendations, which evolved into goals, policies and actions are the "heart" of the Revitalization Plan and will inform the update of the City's General Plan, anticipated to begin early 2020.

BACKGROUND

This Plan is not the first community planning effort undertaken to stimulate Chinatown's revitalization. The 2007 Chinatown Renewal and 2010 Chinatown Rebound community plans sought to revitalize Chinatown and restore its unique historical and cultural identity through proposed solutions that addressed identified challenges. However, since these plans were developed, the primary plan implementor, the Salinas Redevelopment Agency, was dissolved in

2012, necessitating the development of a new plan that was more reflective of the existing community needs and visions for the future.

Through the planning process, Chinatown stakeholders revisited recommendations of these past plans, many of which were incorporated into the 2019 Revitalization Plan. However, there has been a shift in community perspective regarding the previously proposed Chinatown Health and Human Services Campus concept for the neighborhood. While many Chinatown stakeholders advocate for the inclusion of services and housing to assist individuals experiencing homelessness in Chinatown, they do not support concentrating homeless services in Chinatown, a small geographic area that is physically isolated from other parts of the City by the railroad, major arterial roadways, and restricted circulation. Focusing social services for those experiencing homelessness into one geographic area is no longer considered a best practice; these services should be distributed evenly across the City and Monterey County. Thus, the 2019 Revitalization Plan endeavors to balance the need for homeless services with the desire to transcend Chinatown's reputation as ground zero for the unsheltered. This Plan outlines policies and actions that support Chinatown becoming a more complete community with a diversity of businesses, housing opportunities, and community programs and amenities.

The plan study area of past planning efforts and the initial plan study area for the Revitalization Plan was bounded by Market Street to the south, Sherwood Drive to the east, Rossi Street to the north, and Main Street to the west. This plan study area, referred to as the "Chinatown Core" was expanded twice throughout this planning process.

Through the community engagement process, the initial study area boundary was extended eastward along Market Street, north of Sherwood Drive, Sun Street and the US 101. The decision to expand the plan study area boundaries was driven by the desire to include the Filipino Community – Salinas Valley Center as a cultural resource along with the Buddhist Temple of Salinas and the Chinese Association of Salinas, and to connect residents of the Housing Authority of Monterey's Haciendas Place Phase I and II to the Dai-Ichi Village and Hikari apartments which are located within the Chinatown Core. By integrating these three affordable housing developments and three cultural centers into a single planning area, the City is in a better position to leverage significant housing investment to transform the surrounding built environment. Staff and stakeholders alike felt that this expanded plan study area would be a stabilizing force and would improve the likelihood of securing future grant funding opportunities.

The plan study area boundary was expanded a second time as a result of the City's continued work with neighborhood businesses, property owners and residents. Recognizing the need to include a broader planning area for employment generating and open space uses, the boundary was extended to the west along Simas Street and the US 101. This expansion provided more industrially zoned parcels and potential areas for future compact urban open spaces for the neighborhood. Chinatown's stakeholders understood that further diversifying the Plan area's land uses would help transform Chinatown into a thriving community inclusive of all uses, residents, businesses and property owners.

Context with other Plans

The Salinas General Plan states the City's vision for the community's future and outlines goals, polices, and implementation measures to achieve its vision. Since its adoption in 2002, the City

has updated the Housing Element (2015), added a new Economic Development Element (2017) and undertaken multiple plans and planning efforts; some addressing regional and citywide topics, while others focusing on geographical areas in the City. Regional and citywide plans include:

1. Consolidated Five-Year Action Plan (2015)
2. Regional Farmworker Housing Study and Action Plan (July 2018)
3. Regional Analysis of Impediments to Fair Housing Choice (2019)
4. Parks, Recreation and Libraries Master Plan (July 2019), and
5. Public Art Master Plan (currently underway– anticipated late 2019).

Area specific plans include:

1. Alisal Housing and Neighborhood Revitalization Strategy (2015)
2. Downtown Vibrancy Plan (2015)
3. East Alisal Street Corridor Plan (January 2019), and
4. Alisal Vibrancy Plan (November 2019).

All plans are available on the City's website.

Community Outreach and Engagement

The Chinatown Revitalization Plan outreach strategy was developed with inclusivity at the center and the objective of engaging members of groups that have previously been excluded from governmental processes and/or resources. The engagement strategy was based in the principles of transparency, inclusion, relevance, fairness and collaboration and included a range of activities to encourage the participation of all stakeholders to help the City obtain a broad base of community input to identify the most relevant issues facing the Chinatown planning area and prioritize improvements to be addressed in the Revitalization Plan.

This planning process was managed by City staff with support of the MIG consultant team and the Institute of Urban Initiatives. The City organized and conducted meetings with individual advisory groups to provide feedback and direction at each stage of the planning process. Between January 2017 and May 2019, staff convened Working Groups comprised of non-technical stakeholders from four distinct interest groups in Chinatown: Asian community-based organizations, business and property owners, homeless individuals and service providers, and housing developers and residents interested in a more sustained level of engagement. Meetings were interactive and designed to gather input on key themes and issues, promote outreach activities, and brainstorm opportunities for community participation.

During this same time period, a Technical Advisory Committee (TAC) comprised of working professionals from the public, private, and nonprofit sectors met six times to evaluate the feasibility of Working Group and community recommendations and identify needs for further analysis based on technical studies and/or planning. TAC members had subject expertise in key topics and themes of the Plan, such as transportation, economic development, social services, and health and safety.

In addition to TAC and Working Group meetings, the City convened nine (9) large community meetings, including two (2) implementation workshops and a final draft Plan Open House, and nine (9) pop-up events, all of which were open to all members of the public. Staff facilitated

activities pertaining to the key themes of the Revitalization Plan at pop-up stations during community events, such as the Asian Festival, Obon Festival, ACE Pop-up Museum, Ciclovía, and City Council meetings. To collect the input of key interest groups and hard-to-reach populations, the City also participated in various meetings and events not explicitly tied to the Revitalization Plan.

Visit the Chinatown website https://www.visionsalinas.org/chinatown for more details regarding the community engagement process, Technical Advisory Committee and Working Group agendas and minutes, community meeting materials and summaries, draft studies and planning documents and the public review draft of the Chinatown Revitalization Plan.

Planning Commission Review

On December 4, 2019, the Planning Commission received a presentation and heard public comment on the public review draft Chinatown Revitalization Plan. Three members of the public spoke in support of the Plan and the Commission unanimously approved a resolution recommending City Council acceptance of the Plan as a key strategic planning document.

DISCUSSION

The Chinatown Revitalization Plan is organized into the following ten chapters:

1. Community Vision and Introduction
2. Community Overview
3. Community Engagement
4. Land Use and Design
5. Housing and Neighborhood
6. Economic Development
7. Community Health and Safety
8. Transportation and Infrastructure
9. Arts, Youth, Programming and Community Facilities
10. Next Steps and Implementation

Chapter 1 states the community's vision for Chinatown and offers a broad overview of the Plan's purpose and policy context. Chapter 2 provides community background, historical context, and a summary of existing conditions. Chapter 3 provides a summary of community engagement that occurred throughout the planning process and led to the vision, goals, policies and implementation actions in this plan.

The subsequent six chapters (Chapters 4 through 9) provide context and recommendations in six key topic areas: land use and design; housing and neighborhoods; economic and workforce development; community health and safety; transportation and infrastructure; and arts, youth and programming and community facilities. Each topic chapter begins with a brief introduction to the chapter topic, a summary of topic goals, and their connection to the Visión Salinas Guiding Principles. An assessment of related assets and opportunities provides the context for the goals, policies and implementation actions recommended by the Technical Advisory Committee, Working Groups and community members. Each goal is discussed followed by an implementation matrix of action items. Most of the goals, policies and actions come directly from the community.

Staff, technical professionals and the consultant team did add a few policies and actions that either did not come up in community conversations, incorporate best practices, or provide for a more comprehensive approach to achieving the community's desired outcome.

The Chinatown Revitalization Plan is action driven and contains efforts that could span 10 to 15 years. Residents, community stakeholders, and the City are to revisit implementation progress and priorities annually. Chapter 10: Next Steps and Plan Implementation provides the planning and California Environmental Quality Act (CEQA), summarizes emerging implementation priorities for each topic chapter, as defined by the community, and describes the priorities that capitalize on current strengths and opportunities to move the community's vision towards implementation. This chapter also identifies potential government funding sources for implementation and acknowledges that it is through strong partnerships between the City, County, other local government agencies, philanthropy, businesses, community stakeholders and residents that the community's vision can be implemented.

Community Vision Statement

The Vision Statement crafted for Chinatown is the product of an iterative process based upon extensive community input. In Spring 2019, the City and its chosen consultant, MIG, Inc. (MIG), drafted a preliminary statement that was based on input provided at past public workshops, meetings, and other outreach events. The City continued to collaborate with the community to refine this draft statement at events, such as the Chinatown Asian Festival, Revitalization Plan Implementation Workshop, and during several community meetings. This feedback was then used to inform subsequent revisions of the statement, ultimately resulting in a vision that embodies and reflects the community's desired future for the neighborhood.

> *Chinatown is envisioned as a thriving, affordable, safe, walkable, healthy, and well-connected community that serves as a cultural center for the arts and a vibrant tourist destination for the City and the region. To support the needs of its existing and growing population, Chinatown will include diverse new land uses that create a more balanced neighborhood, including affordable and market-rate housing, health and social services, healthy and multicultural food establishments, open spaces, and employment options for all residents. Culturally relevant urban design, coupled with the rehabilitation of existing historic buildings, will help ensure that future development serves to complement and preserve the neighborhood's rich cultural fabric.*

Overarching Themes

The policies and implementation actions in the Plan establish the conceptual and regulatory groundwork for comprehensive neighborhood transformation based on principles of social equity, inclusivity, prosperity, and sustainability. The Revitalization Plan is to guide both future private, public, and social investment. Short and long-term strategies identify priorities that support City staff and partners in proactive management neighborhood land uses and resources.

A top priority and overarching theme of the planning process is addressing Chinatown's current physical condition which is unclean, unsafe, includes contaminated properties and blighted buildings, and is isolated from the rest of the City. While the transformation of Chinatown into a

cultural center for the arts was highlighted by stakeholders, it was recognized that this goal cannot be achieved unless the encampments are addressed, and the safety and cleanliness of the neighborhood is restored and maintained. Policies and actions focus on improving safety and cleanliness of the neighborhood, and the maintenance and appearance of public spaces including streets, sidewalks and open spaces, reconnecting Chinatown with the Downtown, Intermodal Transportation Center and the rest of the community, and the need for the diversification of housing options and opportunities for all. Additional priorities include increased access to education, training and employment resources, rehabilitation of historic properties, increased recreational programs and open space for residents, improved mental, physical, and social health services to house individuals experiencing homelessness, and the improvement of underground and above ground infrastructure. Attachment 2 provides a summary by topic of top community concerns and recommendations and Attachment 3 provides a goal summary for each topic chapter area.

As stated above, Chapter 10: Next Steps and Plan Implementation describes the priorities that capitalize on the current strengths and opportunities to move the community's vision towards implementation.

Draft Plan Comments

On November 26, 2019, the Community Development Block Grant/Housing Committee received a Revitalization Plan update. The next day, November 27, 2019, staff released the public review draft Chinatown Revitalization Plan. The Plan was posted on the City and Chinatown Revitalization Plan websites with hard copies made available at City Hall, the Permit Center, John Steinbeck Library, Chinatown Navigation Center and the California State University - Monterey Bay Chinatown Student Learning Center.

Since the release of the public review document, staff have continued to edit the Plan correcting spelling and grammatical errors and refining content, figures and images. No substantive changes were made to the public review document. The only content addition is included in the attached Errata Table. The revised document is Exhibit "A" to the resolution and has been uploaded to the City and Chinatown websites. An email notification was also sent to the Chinatown participants informing them of the updated plan document.

CEQA CONSIDERATION:

The Chinatown Revitalization Plan is a strategic planning document. The proposed action is not a project as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines section 15378). If recommended policies or actions progress to a "project" level further CEQA analysis will be required to address potential environmental impacts of the proposed project.

STRATEGIC PLAN INITIATIVE:

The preparation and development of the Chinatown Revitalization Plan is a key objective under Economic Diversity and Prosperity. Topic areas covered in the Plan also include recommended policies and actions that address the initiatives of a Safe, Livable Community, Effective, Sustainable Government, Well- Planned City and Excellent Infrastructure and Quality of Life.

DEPARTMENTAL COORDINATION:

The Community Development Department's Plan and Project Implementation and Housing and Divisions led the planning process and prepared the public review draft Plan with consultant support. Staff from other Community Development Department Divisions and City departments including Library and Community Services, Public Works, Police, and Fire participated in or assisted with the facilitation of community workshops, working group meetings and/or pop up events. Multiple departments provided valuable input into the Revitalization Plan.

FISCAL AND SUSTAINABILITY IMPACT:

The City Council budgeted for the preparation of the Chinatown Revitalization Plan by creating a Capital Improvement Project (CIP) account (9070) funded through the sale of 100 Main Street (Steinbeck Center - $197,000) and the General Fund ($31,920). In November 2016 and April 2019, the City entered into Professional Services Agreements with MIG to prepare the Revitalization Plan for total amount not to exceed $192,349. Staff's time working on the preparation of the Plan is included in the City's annual budget.

The Chinatown Revitalization Plan is intended to be the foundation for ongoing collaboration between the City, other agencies, residents, and community stakeholders. The Plan contains efforts that could span 10 to 15 years. It is expected that the City Council will use the Revitalization Plan to inform the budgetary process in future fiscal years and establish new CIPs for core infrastructure projects. As part of the 2020-2021 budget process, staff will present recommendations for the funding of priority policy and action items based on emerging priorities identified in Chapter 10.

It should be noted that many of the Plan's actions would be implemented by partners and therefore would not necessarily require City funding other than staff support.

RESOLUTION NO. _____ (N.C.S.)

RESOLUTION ACCEPTING THE DRAFT CHINATOWN REVITALIZATION PLAN AS A KEY STRATEGIC PLANNING DOCUMENT

WHEREAS, Chinatown's past reflects a legacy of history, culture, heritage and ethnic diversity as a thriving, multicultural, mixed-use neighborhood which welcomed immigrants; and

WHEREAS, due to an increase in criminal activity, centralization of homeless services, and closed connection to the Downtown and Intermodal Transportation Center, a pattern of decline and disinvestment in the neighborhood emerged in the second half of the 20th century; and

WHEREAS, the Chinatown Revitalization Plan is not the first community planning effort undertaken to stimulate Chinatown's revitalization. The 2007 Chinatown Renewal Project and 2010 Chinatown Rebound community planning efforts also sought to restore Chinatown's unique historical and cultural identity through proposed solutions that addressed identified challenges; and

WHEREAS, since these plans were developed, the primary plan implementor, the Salinas Redevelopment Agency, was dissolved (2012), necessitating the development of a new planning effort; and

WHEREAS, several of the City's Economic Development Element's (2017) goals, policies and action items specifically call for the preparation of a community-driven plan to guide the revitalization and enhancement of the economic, social, and cultural fabric of the Chinatown neighborhood; and

WHEREAS, the aim of the 2019 Chinatown Revitalization Plan is to alleviate and reverse the neglect and underinvestment that Chinatown has faced by creating a more vibrant, equitable, and healthy community that builds upon its social and cultural wealth; and

WHEREAS, inclusivity was at the center of the Chinatown planning process to ensure that Plan content was reflective of and equitable for all stakeholders and focused on Chinatown's specific needs and special character; and

WHEREAS to achieve this objective, the Plan's robust engagement process not only involved residents, business and property owners, housing developers, social service providers, and cultural and faith-based organizations, but also included individuals experiencing homelessness and future residents of Dai-Ichi Village and Hikari affordable housing developments; and

WHEREAS over 3,000 residents and community stakeholders participated in the community-led engagement process that resulted in more than 200 recommended strategies that evolved into goals, policies and actions that are the "heart" of the Revitalization Plan; and

WHEREAS, the aforementioned goals, policies and actions provide the framework for the residents, community stakeholders and organizations, and the City and other governmental agencies to work collaboratively to implement specific action steps toward realizing the community's vision; and

WHEREAS, a public review document was released on November 27, 2019 and hard copies made available on December 4, 2019 at City Hall, the Permit Center, the John Steinbeck Library, the Chinatown Navigation Center, and the California State University - Monterey Bay Chinatown Student Learning Center; and

WHEREAS, the Community Development Block Grant/Housing Committee received a Plan update on November 26, 2019; and

WHEREAS, on December 4, 2019, the Planning Commission received a presentation and heard public comment on the public review draft Chinatown Revitalization Plan; and

WHEREAS, the Planning Commission unanimously approved a resolution recommending that the City Council accept the Chinatown Revitalization Plan as a key strategic planning document; and

WHEREAS, at its December 17, 2019 meeting the City Council received the Planning Commission's recommendation, were provided a summary of written public comments received and heard public testimony at the meeting; and

WHEREAS, the proposed action is not a project as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines section 15378). If recommended policies or actions progress to a "project" level further CEQA analysis will be required to address potential environmental impacts of the proposed project.

NOW, THEREFORE, BE IT RESOLVED that the Salinas City Council hereby finds and determines the following:

1. The foregoing recitals and Attachments are true and correct and are included herein by reference as findings.

2. The proposed Chinatown Revitalization Plan supports the Core Value and eight Vision Salinas Guiding Principles accepted by City Council and meant to guide city planning documents.

3. Chinatown Revitalization Plan goals, policies, and actions will inform the General Plan update anticipated to begin in 2020.

NOW, THEREFORE, BE IT FURTHER RESOLVED that the Salinas City Council hereby accepts the Chinatown Revitalization Plan (Exhibit "A") as a key strategic planning document for the City of Salinas; and

NOW, THEREFORE, BE IT FURTHER RESOLVED that the City Manager direct the implementation of the Plan as soon as possible, and seek funding for the recommended capital improvements, policy changes and operating budgets for the Fiscal Year 2020-2021 and in subsequent years.

PASSED AND APPROVED this 17th day of December 2019, by the following vote:

Community Vision and Introduction

Community Vision

Chinatown is envisioned as a thriving, affordable, safe, walkable, healthy, and well-connected community that serves as a cultural center for the arts and a vibrant tourist destination for the City and the region. To support the needs of its existing and growing population, Chinatown will include diverse land uses that create a more balanced neighborhood, including affordable and market-rate housing, health and social services, healthy and multicultural food establishments, open spaces, and employment options for all residents. Culturally relevant urban design, coupled with the rehabilitation of existing historic buildings, will help ensure that future development serves to complement and preserve the neighborhood's rich cultural fabric.

The community's vision for the Chinatown Revitalization Plan is forward thinking and aspirational, building upon the history and cultural uniqueness of this Downtown adjacent neighborhood. Although Chinatown today suffers from past disinvestment, blight, and substantial homelessness, significant housing development offers new opportunity and hope. Past plans incorporated a concept of a Service Campus Model within the Core of Chinatown. Yet through widespread community engagement, it became clear that Chinatown stakeholders envision a more balanced neighborhood home to a variety of different residents including those without shelter, artists in live/work units, and urban professionals in market rate housing. Chinatown is also seen as a hub for arts and culture and a place where existing business can be nurtured, and new businesses can grow. The 2019 Chinatown Revitalization Plan is an action oriented, comprehensive strategy to achieve this vision.

1.1 PURPOSE

Planning History

This Plan is not the first community planning effort undertaken to stimulate Chinatown's revitalization. The 2007 Chinatown Renewal and 2010 Chinatown Rebound community plans sought to revitalize Chinatown and restore its unique historical and cultural identity through proposed solutions that addressed identified challenges. Many of the recommendations of these past plans have been re-incorporated into the 2019 plan. However, since these plans were developed, the primary plan implementor, the Salinas Redevelopment Agency, was dissolved in 2012, therefore necessitating the development of a new plan that was more reflective of the existing community needs and visions for the future.

By revisiting these past plans, many community stakeholders expressed concern regarding the Chinatown Health and Human Services Campus concept. While many Chinatown stakeholders advocated for the inclusion of services and housing to assist residents living in nearby encampments, they did not support concentrating homeless services in Chinatown, a small geographic area that is physically isolated from other parts of the City. Focusing social services for those experiencing homelessness into one geographic area is no longer considered a best practice. Thus, the 2019 Chinatown Revitalization Plan endeavors to balance the need for homeless services with the desire to transcend its reputation as ground zero for the unsheltered. Instead the emphasis of this Plan is on becoming a more complete community with diversified of businesses, housing opportunities, and residents as highlighted in the vision statement.

The Chinatown Revitalization Plan represents nearly three years of extensive work guided by dedicated Chinatown stakeholders who helped develop its content including many specific actions and policies. As with all of Salinas' planning efforts, public input was critical and participation from a broad stakeholder base including residents, business owners, housing developers, social service providers, cultural and faith-based organizations, and individuals experiencing homelessness was vital in ensuring this process was reflective and inclusive of the community. The resulting plan communicates the collective community vision. Community recommendations, which evolved into Goals, Policies and Actions are the "heart" of the Revitalization Plan and will inform the update of the City's General Plan, anticipated to begin early 2020.

The policies and implementation actions in the Plan establish the conceptual and regulatory groundwork for a comprehensive neighborhood transformation based on principles of social equity, inclusivity, prosperity, and sustainability. The Plan will guide future private, public, and social investment. Short and long-term strategies will help identify priorities that will support City staff and partners in effectively targeting limited resources to actions most important to community stakeholders.

The intent of the 2019 Revitalization Plan is to reflect and celebrate Chinatown's unique identity, providing focused planning guidance that is driven by the community and focused on its particular needs and special character. The Plan aims to alleviate and reverse the neglect and underinvestment that the community has faced by creating a more vibrant, equitable, and healthy community in a way that builds upon the social and cultural wealth of Chinatown.

1.2 STRUCTURE AND PLAN OVERVIEW

The Chinatown Revitalization Plan is organized into the following ten chapters:

1. Community Vision and Introduction
2. Community Overview
3. Community Engagement
4. Land Use and Design
5. Housing and Neighborhoods
6. Economic Development
7. Community Health and Safety
8. Transportation and Infrastructure
9. Art, Youth, Programing and Community Facilities
10. Next Steps and Implementation

This introduction (Chapter 1) offers a broad overview of the Plan's purpose and policy context. Chapter 2 provides community background, historical context, and a summary of existing conditions. Chapter 3 provides a summary of community engagement that occurred throughout the planning process and led to the vision, goals, policies and implementation actions in this Plan.

The subsequent six chapters (Chapters 4 through 9) provide context and recommendations in six key topic areas: land use and design; housing and neighborhoods; economic development; community health and safety; transportation and infrastructure; and art, youth, community facilities, and programming. Each topic chapter provides the community's aspirational vision and topic connection to the Visión Salinas Guiding Principles, an assessment of related assets and challenges, and goals, policies, and implementation actions. Specific policy ideas and implementation actions recommended by the Technical Advisory Committee, working groups, and community members and stakeholders who participated in the planning process, are summarized in an Implementation

New development will aim to complement and preserve the neighborhood's rich cultural fabric.

The Buddhist Temple of Salinas during the Obon Festival.

matrix.

Each chapter starts with a brief summary of the chapter's goals and follows the format below.

Guiding Principles Connection

This section describes how the chapter's goals, policies, and actions relate to and further Visión Salinas' eight guiding principles further discussed in Section 1.5 of this chapter.

Introduction

A brief summary of the objectives and content in the chapter.

Assets and Challenges

This section describes assets and challenges related to the chapter's topic, with supporting data, background information, and community member input.

Goals, Policies, and Implementation Matrix

Each chapter contains goals and policies to achieve the community's vision. These are intended to provide clear direction for how the City and community partners will work collaboratively to implement the overall vision of this plan. Many of these goals and policies come directly from the community though the community engagement process described in Chapter 3. This section contains:

- Goals. A visionary statement identifying the community context and objective.
- Policies. A description of the recommendation, including the policy's context, purpose and intent.

Within an implementation matrix, a brief summary of goals and policies for each along with more specific actions for policy implementation. The implementation matrix includes:

- Implementation Action. A brief statement and detailed description of the action.
- Department/Organization Lead. Identification of the City, partner agencies, and/or community partners

Lion dance performed at the Asian Festival. Cultural events and institutions are prominent assets the Plan seeks to build on.

FIGURE 1.1 CHINATOWN PLANNING AREA

that will lead the implementation of the action.

- Timeframe. An estimated timeframe organized into the following categories:
  - Ongoing – already started and continuing into the future
  - Immediate – within a year
  - Short – 1-3 years
  - Medium – 4-6 years
  - Long – 6-10 years

Although most of plan content as described above came directly from the community, staff and the consultant team did add some goals, policies, and actions to incorporate best practices or provide for a more comprehensive approach to achieving the community's desired outcome.

Emerging Priorities

Each chapter includes dozens of actions. The emerging priorities section describes the top implementation priorities for the chapter, as identified by the Technical Advisory Committee, and Draft Plan Open House attendees. The community, City staff, and the City Council will revisit these priority actions annually.

Chapter 10 Next Steps and Plan Implementation describes the more immediate actions that capitalize on current strengths and opportunities to move the community's vision forward over the next one-to-two years. This chapter also identifies potential government funding sources for implementation and acknowledges that it is through strong partnerships between the City, County, other local government agencies, residents and other community stakeholders that the community's vision can be implemented.

1.3 PROJECT LOCATION

Chinatown is centrally located within Salinas and proximate to several key destinations, amenities, and institutions. It lies immediately north of the City's Downtown, immediately east of the Salinas Intermodal Transportation Center (ITC), and within approximately three miles of the emerging Future Growth Area to the north east of the City. The City's Alisal Vibrancy Plan and the Carr Lake Project by Big Sur Land Trust are two other recent planning projects and are located within two miles from the Chinatown planning area, which is 104 acres and an area of 17 square blocks.

Boundary Expansion

The original project study area has evolved twice throughout this planning process, which started in December of 2016. The original planning area was bounded by Market Street to the south, Sherwood Drive to the east, Rossi Street to the north, and Monterey Street to the west. This planning area is comprised of approximately 32 acres and 9 square blocks. The original plan area is referred throughout this planning effort as the "Chinatown Core."

As a result of the community engagement process, the original study area boundary was extended eastward along Market Street, north of Sherwood Drive, Sun Street and the US 101. This expansion area is comprised of approximately 48 acres and five square blocks. The decision to expand the boundaries was driven by the desire to include the Filipino Community – Salinas Valley Community Center and the Haciendas Development (Phase 1 and II) into the plan area boundaries.

The Filipino Community Center has had a long cultural and historical connection to Chinatown and along with the Buddhist Temple of Salinas and the Chinese Association of Salinas, represents the

historic populations of Chinatown. Along Calle Cebu, across from the Filipino Community Center, the Haciendas Development was constructed and is managed by the Housing Authority of the County of Monterey (HACM). Two other recently developed HACM projects, Dai-Ichi Village and Hikari Apartments are located within the original planning area. By integrating all three of these affordable housing developments into a single planning area, the City is in a better position to leverage significant housing investment to transform the surrounding built environment. Staff and stakeholders alike felt that this expanded area would be a stabilizing force and would improve the likelihood of securing grant funding.

The planning area boundary was expanded again as a result of the City's continued work with neighborhood business and property owners, and residents.

Recognizing the need to include a broader area for employment, the boundary was extended to the west along Simas Street and the US 101. This expansion is approximately 24 acres and 3 square blocks. This expansion provides more industrially zoned parcels and potential areas for parks and open space. Chinatown's stakeholders understood that further diversifying the plan area's land uses would help transform Chinatown into a thriving community inclusive of all uses residents, business and property owners.

1.4 CONTEXT WITH PREVIOUS PLANNING EFFORTS AND OTHER PLANS

The 2019 Chinatown Revitalization Plan re-evaluates the proposed recommendations stemming from Chinatown's 2007 and 2010 plans. In 2007, the Salinas Redevelopment Agency (SRA) along with the California Local Government Commission (LGC), CSUMB, Walkable Communities and other partners convened a series of community charrettes to advance a vision for Chinatown's economic and cultural resurgence. The input from these charrettes was used in the development of the "Chinatown Renewal Project Plan". Proposed high-level recommendations included preserving cultural heritage, improving housing quality and supply, strengthening access to social services, and creating complete streets that prioritize the

The Alisal Vibrancy Plan and Parks, Rec and Libraries Masterplan are two other Visión Salinas plans accepted in 2019.

safety and comfort of all users.

In 2010, SRA, LGC and its partners then produced an Implementation Strategy – "Chinatown Rebound" – that created a blueprint to translate 2007 planning effort goals and strategies into action. This implementation strategy focused on addressing concerns expressed in the 2007 planning effort, especially around housing densities, connections to the Downtown and to the nearby Intermodal Transportation Center and the lack of open space. The Chinatown Rebound planning effort proposed the transformation of Soledad Street as the "anchor" of new development in the form of housing and retail projects, the relocation of conflicting land uses to other areas, the creation of a Service Campus Model for Service Providers along Bridge Street, the redevelopment of the Housing Authority sites along E. Rossi Street and the return of all streets in Chinatown to two-way traffic. With the economic impacts of the 2008 economic recession still lingering and dissolution of California Redevelopment Agencies in 2012, many of the implementation strategies that were developed as part of the 2007 and 2010 planning efforts could not be realized.

As the City's Economic Development Element (accepted in 2014, adopted in 2017) to the General Plan was being finalized, Chinatown was identified as a key Economic Opportunity Area. As a result of this distinction, a new planning effort for Chinatown was started on December of 2016. Since then, City staff have completed three other reports to inform this planning effort:

1. Homelessness in Chinatown: 2017 Count, Survey and Findings;
2. Local Economics Advisory Program (LEAP) Report (April 2018); and
3. Salinas Chinatown Slum and Blight Designation Report (October 2018)

The first of these reports, Homelessness in Chinatown: 2017 Count, Survey and Findings, was conducted in February of 2017 in conjunction with the Institute of Urban Initiatives (UI). City staff collaborated with Joe Colletti, PhD, Chief Executive Officer of UI and Sophia Herrera, PhD, Director of Research, Planning, & Policy, to develop and conduct this report that counted, surveyed, and documented findings of the homeless population that lives in Chinatown.

The second report was the Local Economics Advisory Program (LEAP) Report conducted by the California Association for Local Economic Development (CALED). This report was completed in April 2018. The report was based upon stakeholder interviews conducted by a five person team composed of Wes Ervin, LEAP Program Manager; Constantine Baranoff, Attorney at Law; Denise Malvetti, Senior Project Manager at the City of Sacramento; Diana Sasser, Director of Economic Development Finance Programs at the National Development Council; Michelle Stephens, Program Manager at CALED; and Paul Wisniewski, Project Manager, SCS Engineers. The purpose of this report was to provide strategies to boost the local economy of Chinatown by recommending a short term (1-3 years) set of actions to catalyze redevelopment, revitalization, and economic activity in the neighborhood.

The third report was the Salinas Chinatown Slum and Blight Designation Report. This report was submitted to the U.S. Department of Housing and Urban Development (HUD) on July 2017 and it was accepted on May of 2019. The designation of Chinatown as a Slum and Blight Area

became effective July 1, 2017 with a term of ten years. With this designation, the City will have more flexibility in allocating Community Development Block Grant (CDBG) funds, particularly around blight by providing financial assistance to property and businesses owners to upgrade and rehabilitate their properties.

In addition to these specific Chinatown planning efforts, the area has been guided by Salinas' General Plan, which more broadly states the City's vision for its future and outlines goals, polices, and implementation measures to achieve this vision. Since its adoption in 2002, the City has updated the Housing Element (2015), added a new Economic Development Element and undertaken multiple plans and planning efforts; some addressing citywide topics, with others focusing on geographical areas. City wide plans include the Consolidated Five-Year Action Plan (2015), Regional Farmworker Housing Study and Action Plan (July 2018), Regional Analysis of Impediments to Fair Housing Choice (2019), Parks, Recreation and Libraries Master Plan (July 2019), and Public Art Master Plan (anticipated late 2019). Area specific plans include the Alisal Housing and Neighborhood Revitalization Strategy (2015), Downtown Vibrancy Plan (2015), East Alisal Corridor Plan (ACP-January 2019), and the Alisal Vibrancy Plan (November 2019). All plans are available on the City's website.

Due to multiple planning efforts occurring at once, the City formed "Visión Salinas" (2017) to coordinate the public outreach efforts of the Alisal Vibrancy Plan, the Chinatown Revitalization Plan and the Parks, Recreation and Libraries Masterplan, to develop "Guiding Principles" to inform the preparation of the three plans, and to ensure policy consistency across documents . It is intended that recommended land use policies and actions from these plans will inform the update of the City's General Plan, anticipated to begin early 2020.

1.5 VISIÓN SALINAS GUIDING PRINCIPLES

As stated in the previous section, one of the primary purposes of Visión Salinas was to develop "Guiding Principles" to inform the preparation of the three plans and the subsequent update of the City's General Plan. The Guiding Principles are intended to be aspirational in nature and reflect the community's values and vision for the future.

The City began drafting the Guiding Principles based on the prior public input received from the community as part of the initial Visión Salinas outreach process in 2017, other current City planning efforts (the Alisal Vibrancy and Corridor Plans; Chinatown Revitalization Plan; Library, Parks and Recreation Master Plan, etc.), and recently adopted City documents (the Housing and Economic Development Elements, Downtown Vibrancy Plan, etc). To ensure the draft Guiding Principles accurately reflected the community's values and vision, the City undertook an extensive bilingual public engagement process between May and August of 2018 to obtain feedback. This engagement process included stakeholder meetings, 9 pop-up events and an online survey, which was sent to approximately 1,200 community members. Over 500 members of the community were ultimately engaged as part of this process, with the majority of community members indicating strong support for the draft Guiding Principles. The comments that were received from the public and stakeholders during the engagement process were incorporated into the draft document.

The Asian Cultural Experience (ACE) was one of the stakeholder groups that specifically reviewed and commented on the draft Guiding Principles. ACE's mission is to preserve, promote, and enrich the history and multicultural identity of Salinas' Chinatown. ACE's comments focused on ensuring the eight principles promote equity and inclusivity across Salinas and positively shape the future Chinatown. This plan utilizes the Guiding Principles to inform the unique goals for the Chinatown community that align with the overall vision for a better Salinas.

Core Value

The City of Salinas has adopted the following Core Value to guide the vision process: ***An Inclusive, Diverse, and Welcoming City where all Persons can Thrive.***

Salinas believes that an inclusive, diverse and welcoming environment is essential to developing and sustaining a livable City, which is working as a community to ensure that all members have equitable access to opportunities to advance their well-being regardless of their circumstances.

The City's decisions, policies and practices are rooted in the principles of social equity and sustainability so that the fundamental needs of all people are met regardless of their race, color, ethnicity, age, religion or beliefs, income or where they live, language, marital status, gender identity or sexual orientation, place of birth, citizenship status, health or disability. This Overarching Core Value is embedded in each of the following Guiding Principles:

The Chinatown Revitalization Plan relates to and builds from the guiding principles identified for Visión Salinas.

GUIDING PRINCIPLES

Economic Prosperity, Equity and Diversity - A City where all persons have equitable access to prosperity through a diversified economy, jobs and educational/ training opportunities:

- Attract emerging industries and support entrepreneurship, innovation and creativity, while continuing to promote Salinas as the premier center for agricultural productivity and AgTech.
- Promote the image of the City as a desirable, safe, and vital location for businesses to locate and people to live, work, and visit.
- Embrace underserved populations and provide them the resources to succeed into different sectors of the economy.
- Foster small business development and ensure that existing businesses gain access to the capital, resources and services that they need to succeed, expand and stay in the City.
- Create a workforce prepared for the future by providing educational and training pathways in specific industries to increase job opportunities and earning power.

Nursing students' graduation at Hartnell College in Salinas

Housing Opportunities for All – A City with a diversity of housing types and affordability levels for its residents:

- Facilitate the development of a variety of innovative housing types throughout the City that meet the diverse needs and income levels of the community, are energy efficient and promote healthy living.
- Ensure that affordable housing options exist for underserved populations such as seniors, the homeless, disabled persons and farmworkers.
- Remove unfair or inappropriate barriers to housing and minimize housing displacement.
- Ensure existing housing and neighborhoods are well-maintained to improve safety, reduce overcrowding, encourage social interaction and bolster community pride.
- Promote higher density mixed-use residential and transit-oriented development near public transportation, bike facilities and along major corridors.

Affordable multi-family units at El Tresor in northern Salinas

Healthy and Safe Community – A City which strives to protect and improve the personal safety, health and welfare of the people who live, work, and visit:

- Build a trusting dialogue between the community and public safety to reduce violence and ensure people feel safe going about their daily activities.
- Address the root causes of violence through investment in strategies that support safe neighborhoods, youth, and families.
- Emphasize crime prevention through the design of the built environment.
- Partner with health providers and organizations to improve the mental and physical health of the community, reduce health inequities, and provide access to health care.
- Promote equitable access to healthy food, parks, recreation and other desired amenities to encourage healthier lifestyle choices.
- Ensure the protection and sustainable use of the City's air, water, land, and natural resources.
- Cultivate the preparedness of our most vulnerable population, improve the resiliency of the City's hard infrastructure, and reduce greenhouse gas emissions to ensure a better response to climate change and natural disasters.

Youth are the Future – A City where youth flourish and have equitable access to education, recreation and a healthy urban environment:

- Develop innovative and culturally relevant collaborations to end childhood poverty, improve literacy and prevent youth violence.
- Ensure all youth have access to quality preschools, schools, afterschool programs, libraries and recreational opportunities.
- Support educational and training pathways and opportunities for all youth so they can gain skills that will help them improve their well-being, upward mobility, secure employment and allow them to remain in the community.
- Foster access to family support services to help parents, families and caregivers fulfill their roles and provide a safe, caring and healthy atmosphere where youth can thrive and achieve their full potential.

"Horsies" race at the California Rodeo, Salinas

Collaborative, Inclusive and Engaged Decision-Making – A transparent and responsive City Government driven by the voices of a participatory community:

- Ensure City policies promote racial equity, align with the Overarching Core Value, Guiding Principle and the General Plan.
- Encourage and engage all people (especially youth) to have an active role in driving City decisions, policies and practices.
- Form community partnerships in the City that foster transparency, effective communication, and lead to tangible outcomes.
- Catalyze and invest in community problem solving and neighborhood improvement efforts by building the capacity of, residents, partners and community groups to create change, bolster community pride, and maximize the impact of limited resources.

Popup event at Ciclovía, 2018

Livable and Sustainable Community – A well-planned City with a thriving community core and commercial corridors, excellent infrastructure (streets, sewers, parks, trees and open spaces, libraries, and community facilities, etc.) that meet the unique and changing needs of the community:

- Promote livability by focusing on sustainable land use planning, targeted circulation and infrastructure improvements that provide equitable access and the efficient use of resources.
- Encourage vibrant and active community gathering spaces such as libraries, community facilities, performance venues, open spaces, parks, and plazas.
- Ensure the City's infrastructure is well-maintained, has sufficient capacity, is accessible for disabled persons, and is adaptable to emerging development patterns, changing land uses, technological advances and lifestyles.
- Work cooperatively with the community members and others to maintain properties, promote volunteerism, ensure effective code enforcement, preserve natural and architectural assets, revitalize disinvested commercial and residential corridors and promote greening and beautification of the City.

Connectivity, Access and Mobility – An active City with a well-connected, eco-friendly network of multi-modal streets, bikeways, greenways and trails, and effective public transportation options:

- Facilitate community interaction by removing physical barriers and improving connectivity.
- Create a modern, safe, sustainable and connected transportation network that provides a variety of mobility choices for all.
- Improve access and connect pedestrian and bicycle linkages and public transit from all neighborhoods to schools, parks, open space, shopping and services, employment centers, downtown and other community core areas to promote connectivity.
- Emphasize walking, biking, and public transit when considering new development or revitalizing existing neighborhoods.

A free Monterey-Salinas Transit (MST) bus ride on New Years Day, 2019

A Community to Celebrate – A City that celebrates, promotes, preserves and honors the diversity, history, art, and culture of its community:

- Promote the rich diversity and culture in Salinas through art, music, festivals, parades and other community events.
- Celebrate the City's history, the architecture of its buildings, the diverse cultures of its people, and its rich immigrant history.
- Foster a sense of place by encouraging community driven transformation, initiating themed districts, and by building upon existing neighborhood identity.

Ciclovía—an entirely youth-led event

The Chinatown Revitalization Plan builds upon and adapts these Guiding Principles to respond to the unique challenges facing the Chinatown community. It elucidates the path toward a safer, more active, and more vibrant Chinatown community through a broad range of actions that include, but are not limited to:

- improving housing quality and affordability
- supporting commercial vitality
- strengthening public infrastructure
- maintaining safe and clean sidewalks
- reconnecting streets

These physical improvements will be accompanied by equally important programmatic considerations, including:

- improving health and social services for the most vulnerable individuals experiencing homelessness
- collaborating with community-based organizations to create new community events
- commissioning the development of public art installations
- launching vocational training and education workshops
- youth programming

Community Overview

2.1 INTRODUCTION

This chapter describes the historic, socioeconomic, cultural, and physical conditions of present-day Chinatown. It creates the foundation for the Revitalization Plan's goals, policies, and actions by summarizing the current conditions of the neighborhood and identifying opportunities to transform and revitalize Chinatown.

2.2 COMMUNITY HISTORY

Established by Chinese merchants on Soledad Street in 1893, Chinatown is one of the oldest and historically and culturally rich neighborhoods in the Salinas. An important crossroads in California immigrant history, it is the largest, active Chinatown between San Francisco and Los Angeles.

Chinatown's past reflects a legacy of multiculturalism and ethnic diversity born out of discrimination. The City of Salinas was incorporated in 1874, and growth in the region's agricultural industry around that time created significant demand for low-cost labor, drawing large numbers of Chinese workers to Salinas. However, the Chinese Exclusion Act of 1882 prohibited Chinese immigrants from living in established city neighborhoods, including Downtown. As a result, many agricultural

workers settled on the outskirts of town just north of the railroad tracks – the core of today's Chinatown.

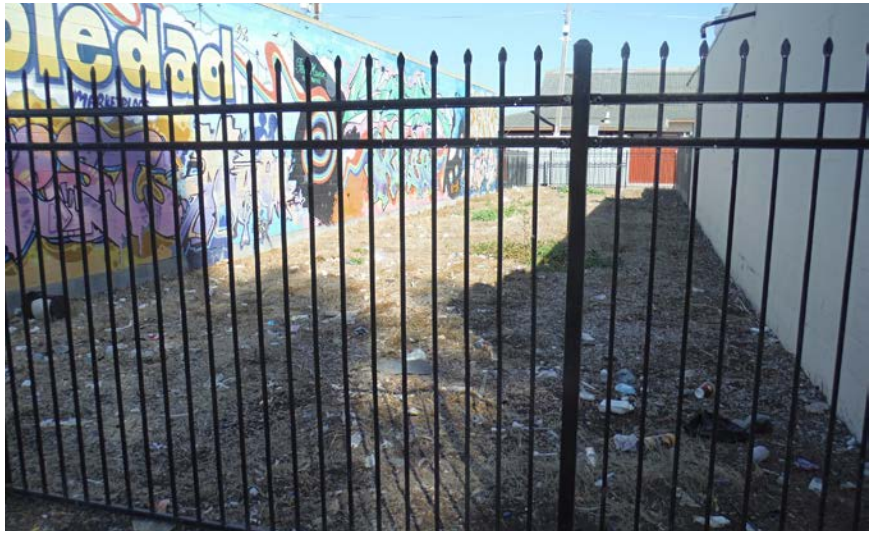
Because they were not welcome in other neighborhoods, migrants from other nations continued to settle in Chinatown in the decades that followed. Japanese farmworkers came to Chinatown in the 1890s, followed by Filipinos in the 1920s, and Mexican "braceros" in the 1940s. These new residents created an authentic and culturally diverse community with a mix of housing, hotels, retail, restaurants, bars, and religious institutions. Well into the 20th century, Chinatown was a thriving, multicultural, mixed-use neighborhood which welcomed immigrants and was a place of refuge for non-white residents.

Despite these vibrant origins, a pattern of decline and disinvestment emerged in the second half of the 20th century. By the 1950s and 1960s, the neighborhood had become well known for its bars, bordellos and gambling houses. Many establishments closed by the 1980s, weakening the once-thriving neighborhood's economic base and paving the way for increased criminal activity including drug dealing and prostitution. Concurrent with these events was the relocation of several homeless community services providers to Chinatown, particularly along Soledad Street.

This deterioration of Chinatown's socioeconomic fabric is exacerbated by its physical isolation from surrounding communities. For many decades, Chinatown was accessible from Downtown Salinas and integrated with other neighborhoods. At-grade railroad crossings at Bridge., Soledad, and California Streets allowed traffic to flow from Downtown into Chinatown. As the neighborhood experienced increases in crime, connections between Chinatown and Downtown were removed. The three at-grade railroad crossings were closed and fenced, and Chinatown was completely cut off from Downtown. Connectivity to the north was closed at Bridge St. when a wall was constructed to create a barrier between the new Housing Authority of Monterey County properties on E. Rossi St., Dai-Ichi Village and Hikari Apartments and the illegal activities of drug dealing and prostitution that was occurring in the Chinatown core.

This separation worsened as Chinatown was cut off by the surrounding arterials including E. Market, Sherwood, E. Rossi, and North Main Streets (State Highway 183). In an effort to curtail criminal activity, many internal neighborhood streets were converted to one-way traffic. However, these changes actually worsened Chinatown's isolation by cutting off access within the neighborhood and discouraging vehicle traffic from other neighborhoods. The area no longer had ethnic restaurants, bars, or other reasons for people to come to the neighborhood.

These deliberate acts of segregation-by-design have reinforced and aggravated the blight, disinvestment and isolation that persist to this day. The lively and vibrant establishments that once anchored this mixed-use neighborhood have long vanished. Remaining businesses, housing and churches in the community have also been marginalized through minimal public and private investment in businesses, infrastructure, and public right of way over time. Today, parts of the neighborhood are dominated by homeless encampments, abandoned buildings, vacant properties, contaminated parcels, dilapidated infrastructure, and recurrent illegal and unwanted activities such as prostitution, drug dealing, and illegal dumping, among others. Despite these challenges, Salinas' Chinatown is a historically, physically



Soil contamination in the historic core of Chinatown creates challenges for land improvement.

Slum and blight are elements of Chinatown's built environment.

and socially distinct neighborhood that is at a turning point in its revitalization efforts, and with this Plan has strategies for encouraging new investment and renewed vitality.

2.3 EXISTING CONDITIONS

This section provides an overview of the existing conditions of the Chinatown planning area and includes demographic information (such as population, income, and race/ethnicity) and a summary of Chinatown's current physical setting and character that describes existing land use and built environment. The data provided in this chapter is inclusive of the entire plan area for the Revitalization Plan, which is bounded Main Street to the west, Rossi Street to the north, Highway 101 to the east, and Market Street/Way to the south. Demographic information that follows is based on American Community Survey 2015 5-year estimates and does not include the new residents of Haciendas Place Phase I and II, Hikari, and Dai-Ichi Village housing developments, nor does it include the future residents of Moon Gate Plaza.

In comparison, Chinatown's population is younger, more ethnically diverse, and has lower levels of educational attainment than Salinas as a whole. It is a predominately low-income community, with families comprising the majority of households. The number of individuals living on the streets in Chinatown has dramatically increased over the years. Individuals experiencing homelessness camp and store personal belonging on public sidewalks throughout the area, including directly in front of and inside vacant properties, a physical condition that it impossible to

avoid or ignore.

As a result of isolation and lack of investment, the physical condition of Chinatown is in a general state of deterioration and meets the federal definition of Slum and Blight where at least 25% of properties and or infrastructure throughout the area experience physical deterioration of buildings, contamination and/or abandonment of properties, and significant declines in property values.

In terms of land use, commercial and light industrial uses predominate in the historic core of Chinatown, however, due to the homeless encampments, there are few active businesses. While single- and multi-family residential structures encompass much of the area east of Sherwood Drive, in recent years, new affordable multi-family, senior and permanent supportive housing units have been constructed immediately adjacent to and within the Chinatown Core, bringing more residents to the neighborhood.

Demographics

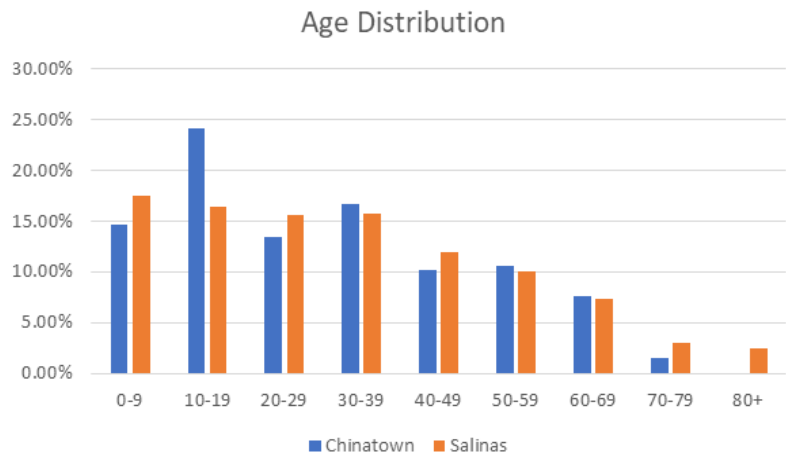
Population

The City of Salinas is home to 157,596 people, 1,886 of whom live in Chinatown. While the population of Salinas as a whole increased by 5.4% in the period between 2000-2010, Chinatown's population decreased by 1.8%. This trend is shifting as recent affordable housing developments constructed and operated by the Housing Authority of Monterey County provide 191 units for seniors and low-income households and Mid-Peninsula Housing's Moon Gate Plaza will soon provide 90 units for extremely low-income and formerly homeless individuals.

Age Distribution

Chinatown is home to a large population of young people. Over half (52%) of Chinatown residents are under the age of 30 and the median age is 28.6 – 1.4 years younger the citywide median (30.0) and 6.1 years younger than the countywide median (34.7). The

FIGURE 2.1 AGE DISTRIBUTION



Source: American Community Survey, 2017 5-Year Estimates

proportion of residents ages 0 to 19 is also higher in Chinatown (38.8%) relative to Salinas as a whole (33.9%). Over a quarter of Chinatown's population (26.9%) is between the ages of 30 and 49, and only 19.7% is over the age of 50.

Household Size and Type

Families are the predominate household type in Chinatown, comprising more than 75% of all households. The vast majority (86.1%) of all families are headed by married couples, with the remaining 13.9% headed by a single-female householder. Single-

parent households are often more socioeconomically vulnerable and therefore may require special assistance in the areas of affordable housing, nearby and low-cost day care, health care, and other supportive services.

Race/Ethnicity and Language

Chinatown's racial and ethnic composition has experienced a dramatic shift since its early days. Although Chinese, Japanese, and Filipino immigrants initially comprised Chinatown's dominant ethnic groups, almost 95% of today's population in the neighborhood identifies as Hispanic or Latino, with over 70% speaking Spanish at home. Only 2.9% of the population identifies as Non-Hispanic White, and even fewer identify as Black (1.1%), Asian, (1.1%), or other groups (0.9%).

Spanish	71.6%	60%
Asian and Pacific Island Languages	7.8%	5.2%

Source: American Community Survey, 2015 5-Year Estimates

Educational Attainment

Given the legacy of disinvestment in the community, it is unsurprising that Chinatown is still more disadvantaged than Salinas as a whole. Approximately 65% of all residents possess neither a high school diploma nor GED credential, which has severely hampered their ability to secure well-paying positions in the job market. As Table 2.2 indicates, the average education level is lower than those of both Salinas and Monterey County.

TABLE 2.2 EDUCATIONAL ATTAINMENT

Homeless Population

The combination of physical isolation, public disinvestment, and the over-concentration of shelters and social service providers in Chinatown are among some of the factors that have contributed to the sustained presence of unregulated homeless encampments that compromise the public health and safety of the neighborhood. Many individuals residing in these encampments suffer from severe mental health issues – much of which stems from past domestic violence or trauma exposure – while others suffer from depression, alcohol and drug use, physical disability, chronic health problem among many other health conditions. Recent estimates have counted as many as 200 homeless individuals living on the streets in the Chinatown area.

Setting

Planning Context

Chinatown is adjacent to Salinas' Downtown, and is primed to take advantage of this strategic location. Downtown is beginning to undergo its own renaissance. In 2015, the City accepted the Salinas Downtown Vibrancy Plan which establishes the guiding framework to stimulate development activity, improve multimodal circulation, and create social hubs to enhance the downtown experience. This planning effort has already led to two streetscape design projects – the Main Streetscape Project and Downtown Complete Streets Project – that are currently underway.

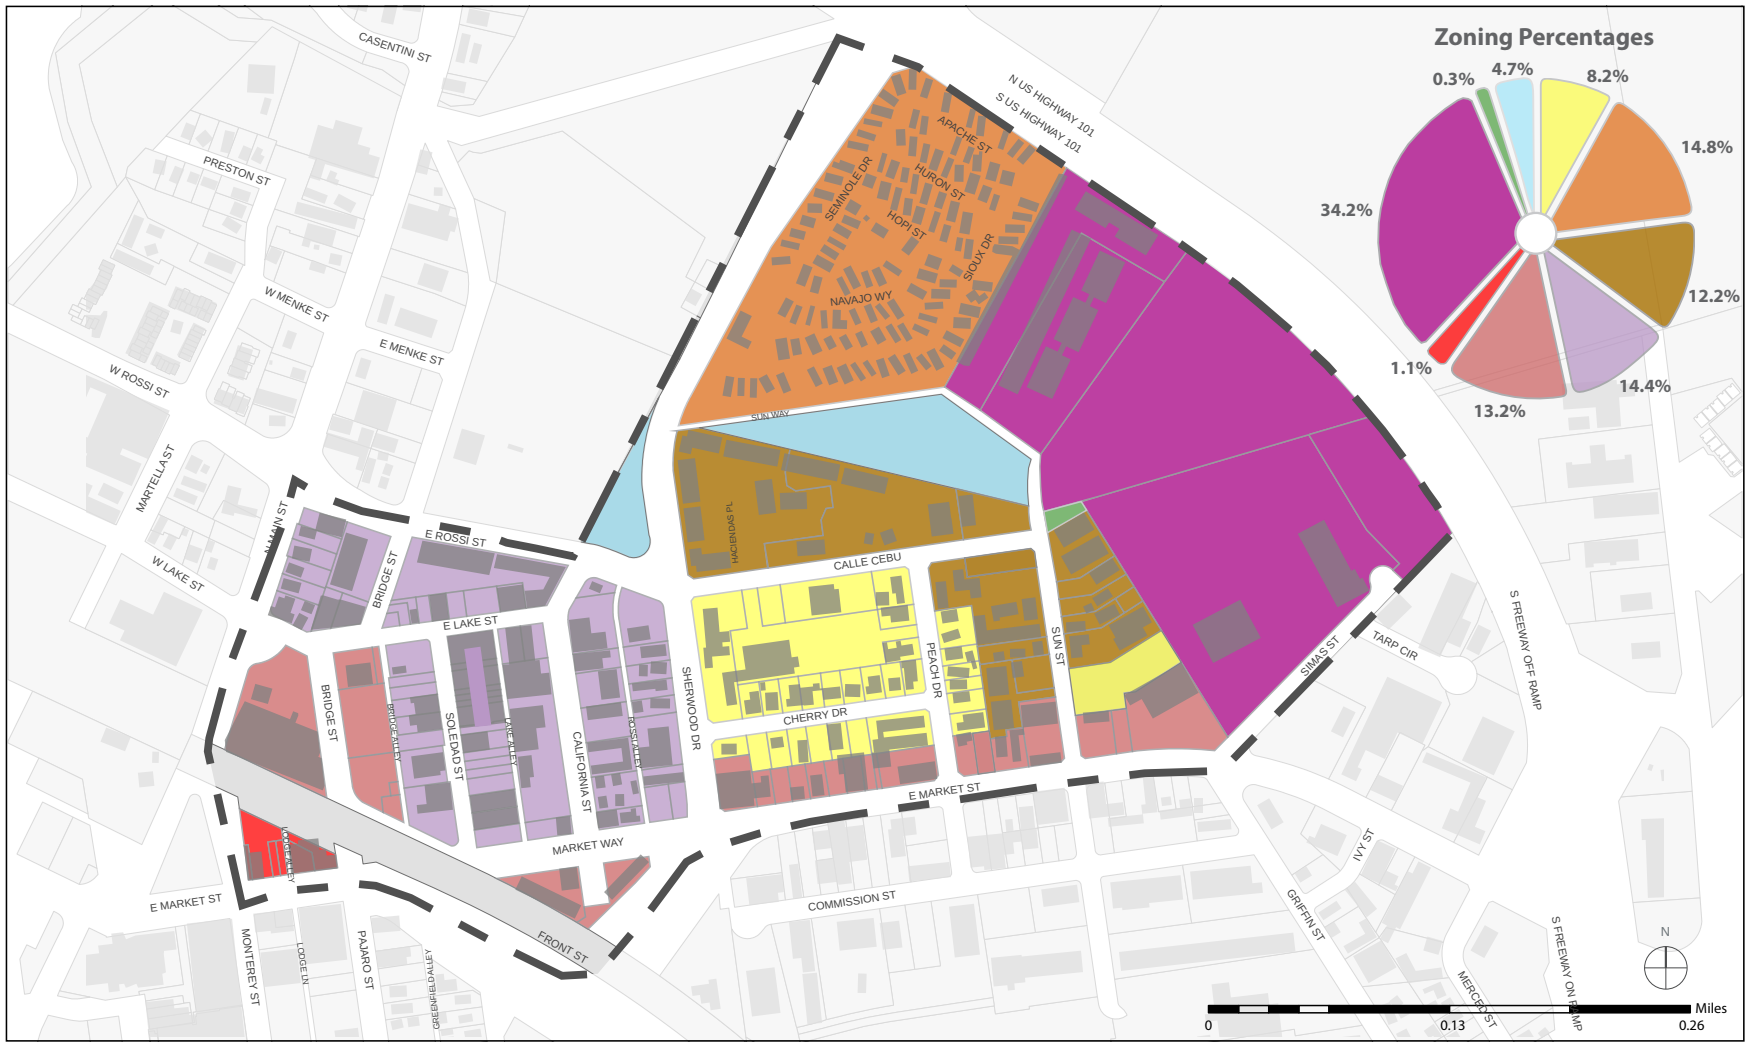
Another related project currently underway is Phase I of the Monterey County Rail Extension project. This project will ultimately extend passenger rail service from Santa Clara County south to Salinas. As part of this transportation project the Transportation Agency of Monterey County (TAMC) has received funding to improve the Salinas Intermodal Transportation Center (ITC) by implementing a range of infrastructure improvements including a new signalized access point to Downtown, a six-bay bus transfer area, bike lanes and lockers, safe pedestrian crossings and sidewalks, and commuter parking that will provide passenger services to the disadvantaged communities of Salinas, Pajaro and Castroville. These improvements to the ITC create an opportunity to explore ways to better connect Chinatown residents to employment and services within the City and region.

Land Use and Zoning

In 2006 Chinatown Core zoning designations were changed from Commercial to Mixed-Use to further the City's General Plan goals of encouraging more compact and dense infill development to provide more housing and promote compatibility of uses. As a result of this change, Chinatown's existing automotive and light industrial uses do not reflect those intended in a mixed-use district. The neighborhood is home to a wide range of light industrial operations, including autobody shops, mechanics, glass repair stores, upholsterers, window/door dealers, and various other manufacturing facilities, and because these businesses no longer conform with land use regulations, they are categorized as legal non-conforming, and are therefore unable to expand and grow their businesses.

Today, over 30% of the study area is zoned to accommodate light industrial uses. The General Industrial (GI) designation accommodates a broad range of manufacturing and service uses, while Mixed Arterial Frontage (MAF) encourages mixed commercial and non-nuisance industries along major corridors. These zones apply mostly to the commercial corridor along Market Street, Market

FIGURE 2.4 CHINATOWN ZONING MAP



Way, and Bridge Street.

The remainder of the planning area consists primarily of residential and other neighborhood-serving uses. Approximately 35% of the neighborhood is zoned for residential uses at different scales and intensities. Mixed-uses that combine neighborhood retail and housing, as well as other public and institutional uses, comprise the remaining 25%.

There is no public and open space in Chinatown. Chinatown's only community garden was displaced with the development of the Moon Gate Plaza. Soil contamination in the historic core of Chinatown creates challenges for land dedication and improvement for public use.

Built Environment

The history and character of Chinatown's build environment provide an eclectic and unique atmosphere, with physical remnants of a vibrant and culturally rich past. The average lot size in the neighborhood is 0.22 acres, and of the non-vacant lots, average lot coverage is approximately 70%. Over 40 % of Chinatown's parcels contain structures that are more than 40 years old. Most buildings are one to two stories tall, with the exception of recent housing developments which are 4 and 5 stories. The architecture reflects a mix of style, including Asian, industrial and small-scale cottage residential structures. See the Slum and Blight section below for more discussion regarding additional conditions and constraints impacting Chinatown Core's built environment.

TABLE 2.3 MEDIAN RENT

	CHINATOWN	SALINAS	MONTEREY COUNTY
Median Rent	$865	$1,465	$1,221

Source: American Community Survey, 2015 5-Year Estimates

Housing

The historic core of Chinatown has a modest yet diverse housing stock. Single-family homes and townhouses are clustered around California Street and Sherwood Drive and a small handful are also peripherally located along N. Main Street approaching E. Lake Street. The housing stock becomes even more diverse east of Sherwood Drive with single-family homes, townhomes, and apartment complexes along Peach Drive, Cherry Drive, Calle Cebu, and Sun Street.

The neighborhood includes several new affordable rental housing developments and with coordinated efforts to house chronically homeless people, provide a strong foundation for neighborhood revitalization. These developments bring new residents,

TABLE 2.4 HOUSING CHARACTERISTICS

	CHINATOWN	SALINAS	MONTEREY COUNTY
Owner-Occupied	46%	44%	51%

Multi-Unit	51%	36%	27%
Mobile Home	12%	4%	4%

Source: American Community Survey, 2015 5-Year Estimates

community spaces and active ground-floor uses to the neighborhood, offering the opportunity to alter the social dynamics and physical conditions of Chinatown.

With recent new development, multifamily structures now comprise over half of the planning area's housing stock. The three housing developments managed by the Housing Authority of the County of Monterey include: Haciendas Place Phase I and II, Hikari, and Dai-Ichi Village provide 191 affordable units, 14,016 square feet (SF) of open space, 7,500 SF of community space, and other resident amenities. Moon Gate Plaza, a 90-unit permanent supportive housing development by MidPen Housing is currently under construction. This development is mixed-use and will provide new apartments for low- and extremely low- income households, including the formerly homeless, with a restaurant, artist working and exhibition space, and city services on the ground floor. Free onsite support services, combined with affordable housing, will provide the foundation for Moon Gate Plaza residents to improve their lives.

The neighborhood's housing units are predominately renter occupied. As Table 2.3 indicates, median rent in Chinatown is almost half that of Salinas as a whole – an unsurprising figure given the significant investment in affordable housing. The rate of homeownership is almost equal to the citywide figure.

The neighborhood's housing units are predominately renter occupied. As Table 2.3 indicates, median rent in Chinatown is almost half that of Salinas as a whole – an unsurprising figure given the significant investment in affordable housing. The rate of homeownership is almost equal to the citywide figure.

Economic Base

Successful revitalization will require significant diversification of Chinatown's economy. The neighborhood is currently home to approximately 45 existing business operations the majority of which are auto-related with loyal and stable clientele. However, most business are located at the edge of the neighborhood. The range of commercial operations existing in Chinatown include the following:

Imperiouz Auto Body and Suspension mechanic shop along Market Street.

Single family home across along Calle Cebu.

- Auto repair shops and mechanics
- Upholstering services
- A glass repair shop
- A window and door dealer
- A produce wholesaler
- A liquor store and small grocery store
- Bakeries
- Restaurants

Though the cost of land in Chinatown is comparatively less expensive than in other neighborhoods across Salinas, several factors contribute to a high cost of development that discourages private investment. These include:

- Crime and public safety
- Homeless encampments
- Zoning limitations
- Dilapidated building conditions
- Environmental contamination
- Constrained tax base

For these reasons, no major business expansion or new business activity has occurred in Chinatown for several decades.

Neighborhood Character

The neighborhood's rich multicultural heritage, its primary asset, is embodied in its architecture style and further promoted through annual events such as the Asian and Obon Festivals provided by key community religious and cultural institutions. Some of the existing architecture recalls the neighborhood's Asian heritage through tile roofs, upturned roof eaves, detailed balcony railings, and the iconic "Chop Suey" sign in front of the Republic Café. This building is the only one in Chinatown currently on the National Register of Historic Places. Though a thorough historic survey of the neighborhood has not yet been conducted, past research indicates that additional structures may be eligible to become designated as historic properties at the local, state and/or national level.

Chinatown's intrinsic cultural value poises it to reemerge as a regional destination to be celebrated, with historic buildings, distinctive Asian-style and modern architecture, community-sponsored cultural events, and public art. Chinatown's location within the City

Gutierrez Drive In, one of the active businesses at the edge of the neighborhood.

Obon Festival decorations at the Buddhist Temple of Salinas.

is another asset - it is adjacent to the City's Downtown as well as the Intermodal Transportation Center (ITC). In addition to these assets, approximately $109 million of public and private investment through multiple affordable housing projects has started to transform and create a positive image and perception of Chinatown. These developments not only have provided much needed affordable housing but have also strengthened the neighborhood's mix of uses offering a range of residential options.

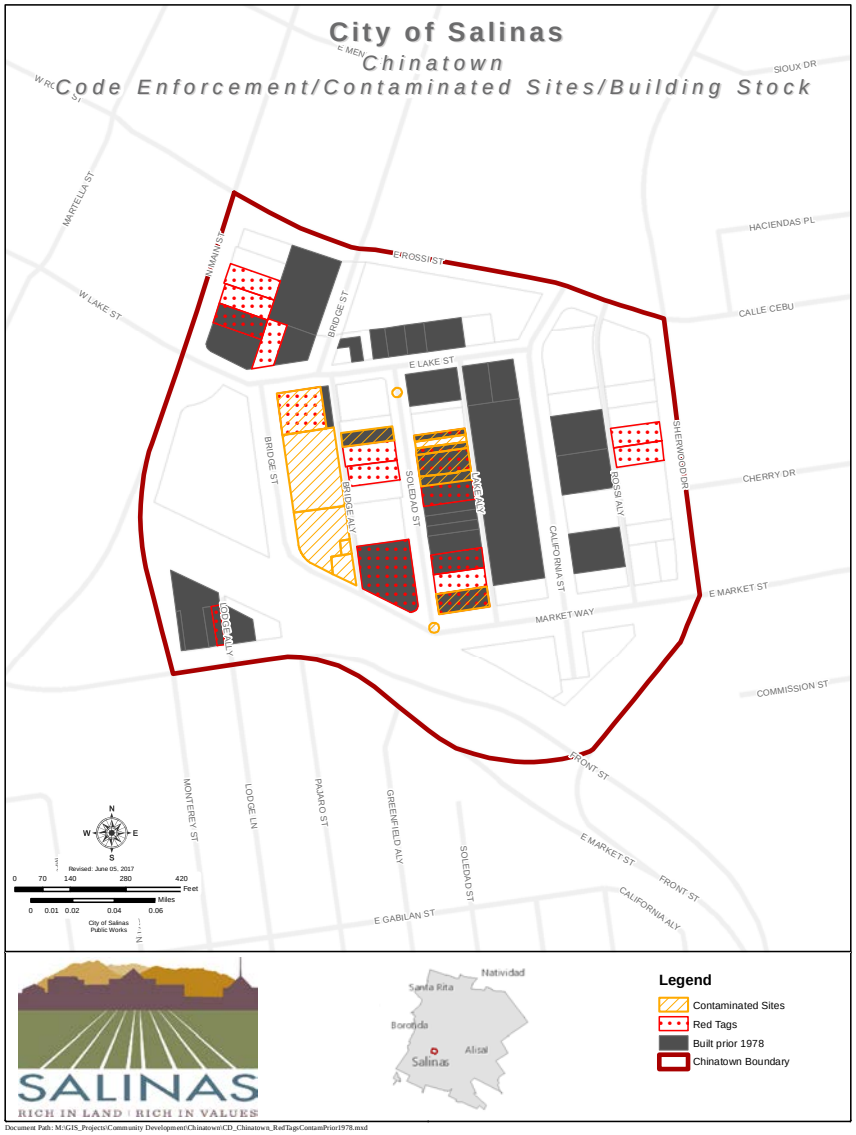
Slum and Blight

Although recent investment through multiple housing projects has helped revamp Chinatown, widespread blight and environmental contamination still plagues the area. The historic core of Chinatown has been designated a "Slum and Blight Area" in accordance with the Department of Housing and Urban Development (HUD) definitions and the California Health and Safety Code.

This designation is associated with several issues that pose environmental health risks for the neighborhood. Between 2000 and 2015, the soils on 27% of all parcels in Chinatown's Core were found to be contaminated with lead, asbestos, petroleum, and/or other toxic pollutants. Approximately 43% of parcels in that same area contain structures built prior to 1978, indicating a potential presence of lead-based paints. Many parcels in Chinatown's Core are also vacant or have abandoned buildings, leaving gaps in the built fabric that create an uninviting pedestrian environment contributing to the existing blight seen today. Figure 2.4 highlights contaminated and red-tagged sites Chinatown over the past 10 years.

As noted above, dozens of people regularly camp in Chinatown

FIGURE 2.5 CHINATOWN SLUM AND BLIGHT MAP (CODE ENFORCEMENT/ CONTAMINATED SITES AND BUILDING STOCK)



Examples of vacant lots and blighted buildings in the Plan area.

Desinvestment and deterioration is visible in Chinatown's built environment.

with limited sanitation facilities. Sanitation issues are compounded by illegal dumping, storage of personal property, and tents pitched in public spaces.

Criminal activity in Chinatown has also been an issue for decades. In recent years, the neighborhood has seen an increase in violent crime and shootings, likely associated with the drug trade. The Salinas Police Department is actively engaged in a focused effort to reduce crime in Chinatown and is coordinating with local businesses, service providers, and other City staff to improve neighborhood safety.

Community Landmarks and Institutions

Chinatown is home to landmarks and resources that provide a variety of services, add cultural and historic value to the neighborhood, and serve as community gathering places. Religious and cultural institutions provide a strong foundation for community gatherings and activities. The Buddhist Temple contains a gymnasium, which is used for athletic events, community classes, and religious and cultural celebrations. Both the Confucius and Filipino United Community-Salinas Valley Community Centers provide classes and religious and cultural events for the neighborhood. The Asian Cultural Experience (ACE) partners with each of these cultural institutions to actively preserve and promote the diverse identity of Chinatown.

Social service organizations also deliver important resources for the community. Dorothy's Place provides services for people experiencing homelessness, including free meals, a drop-in center for basic needs, and a transitional living program for women. Victory Mission provides meals, lodging, and basic services for homeless men that includes a "Life-Change Recovery" program. CSUMB's Chinatown Community Learning Center provides free and public computers and internet, as well as an educational facility for residents to learn job skills, computer literacy, nutrition education, and conflict resolution. Together, this mix of supportive services and cultural spaces serve to strengthen the community and reinforce its unique cultural identity.

Community Engagement

3.1 INTRODUCTION

The Chinatown Revitalization Plan was developed with inclusivity as the center of its community engagement strategy. Inclusivity is defined as "the quality of trying to include many different types of people and treat them all fairly and equally." For members of groups that have been excluded from governmental process and/or resources, inclusivity may involve non-traditional approaches to engagement and providing greater resources to compensate for prior exclusion and discrimination. It is the City's goal to be inclusive of all residents and stakeholders in this planning effort.

To achieve this objective, the Plan's robust engagement process not only involved residents, business owners, housing developers, social service providers, cultural and faith-based organizations, it also included activities targeted to individuals experiencing homelessness, low income families, and monolingual speakers (Spanish). In addition, the planning process was intentionally paused to ensure that future residents of Dai-Ichi and Hikari developments were provided the opportunity to participate in the planning process.

Early in the community engagement process it was agreed that a Chinatown Revitalization Plan with inclusivity and equity at the center will:

1. Be stewarded by Chinatown residents

and stakeholders.

2. Build on and activate the social and cultural wealth of Chinatown residents and community organizations.

3. Include policies and provisions that connect individuals experiencing homelessness with resources and maintain a clean, safe and attractive environment for all.

4. Address structural and systemic problems that contribute to heath inequities through clear solutions developed by residents.

5. Include pathways to implement the plan including staff and financial resource and the policy/procedural changes to remove barriers to progress.

The Chinatown Revitalization Plan is not the first time that the City and Chinatown stakeholders are collaborating to create a shared vision for Chinatown. The Revitalization Plan builds off of two past plans and articulates a collective vision for Chinatown that includes bold, transformative strategies and action steps that build upon its cultural wealth to improve the quality of life for all Chinatown stakeholders.

This chapter details the process by which the plan was formulated and underscores the importance of community involvement not only in developing the plan but implementing it.

Stakeholders had a variety of opportunities to participate in the planning process.

3.2 COMMUNITY ENGAGEMENT STRATEGY

This planning process was managed by City staff with support of the MIG consultant team and the Institute of Urban Initiatives. To ensure an effective engagement strategy that maximized community participation, the City worked with participants to establish the following set of engagement principles to guide its outreach efforts:

- Transparency
- Inclusion
- Relevance
- Fairness
- Collaboration

These principles were thoughtfully integrated in all facets of the engagement strategy, helping the City leverage a broad base of community input to identify the most relevant issues facing Chinatown and the priority improvements to be addressed in the Revitalization Plan. The table on the following page summarizes how the City actualized these five principles throughout the planning process:

Including Hard-to-Reach Populations

To collect the input of key interest groups and hard-to-reach populations, the City also participated in various meetings and events not explicitly tied to the Revitalization Plan. These supplemental efforts included:

- Hosting pop-up booths at community events such as the Asian Festival, Obon Festival, ACE Pop-up Museum at Star Market, City Council, and Founder's Day.
- Attending the "Cafecito" meetings held at Dai-Ichi Village to invite the seniors to our meetings, keep-up to date with the planning efforts, and listen to their ideas and needs as residents of Chinatown.
- Participating in Chinatown Townhall Meetings hosted by CSUMB to engage and prompt discussion with the homeless population on preferred housing models, identify barriers to housing, and better target social services to house more individuals experiencing homelessness.
- Attending meetings held by the Asian

The vision for Chinatown was developed with diverse stakeholder input.

Transparency	▪ Clearly and explicitly communicated all components of the planning process with stakeholder groups. ▪ Established a shared base of understanding among meeting participants by reviewing the planning process and input to date at each event. ▪ Maintained an "Open Door" policy for stakeholders to provide input at each phase of the planning process.
Inclusion	▪ Provided Spanish-language translation services at all evening meetings and workshops. ▪ Proactively reached out to target audiences including the local property owners, business owners, residents of the extended planning area, residents of Haciendas Place, Dai-Ichi Village, and Hikari, service providers, local foundations, area volunteers and individuals experiencing homelessness.
Relevance	▪ Prioritized culturally relevant solutions to existing problems in the neighborhood. ▪ Emphasized the need to identify and address the core issues facing Chinatown residents and business owners. ▪ Acknowledged residents and stakeholders as experts of their neighborhood.
Fairness	▪ Conducted hard-copy and face-to-face outreach to ensure opportunity for all to participate regardless of internet access. ▪ Scheduled recurrent public meetings at accessible locations (Buddhist Temple of Salinas, Filipino Community-Salinas ValleyCenter) at convenient times for the community (5-8 PM). ▪ Organized a Chinatown Block Party to build community ties and connect the homeless population to important social services. The event includes free food, live music, and youth activities and relied on the active participation of neighborhood-based organizations.
Collaboration	• Created authentic partnerships between the City and active neighborhood-based organizations in Chinatown to help carry out equitable planning processes and implement community-driven solutions. • Participated in the Asian Festival as well as attended the meetings for different groups/service providers in the neighborhood: Asian Cultural Experience, Salinas Downtown Community Board, Chinatown Homeless Action Team (CHAT), CSUMB Townhall meetings, among many others.

Cultural Experience (ACE) at the Republic Café, Salinas Downtown Community Board, Chinatown Homeless Action Team (CHAT) to inform the community of the planning process and notify them of upcoming meetings.

- Hosting a Transportation Walking Tour through Chinatown to better understand the transportation and mobility needs to residents, businesses and the community in general.
- Conducting a homeless count and survey for Chinatown and Downtown area in conjunction with Urban Initiatives and other local organizations and non-profits in 2018.
- Holding a LEAP Event in 2018, which included two days of interviews with residents, businesses owners, community leaders, homeless service providers, Monterey County and City staff to understand the local economics of Chinatown in conjunction with California Association for Local Economic Development (CALED).
- Organizing the Chinatown Block Party in partnership with community volunteers, non-profit partners, and service providers.
- Discussing the potential of an on-grade crossing or bridges over the train tracks from Chinatown into Downtown with Union Pacific personnel.

3.3 COMMUNITY ENGAGEMENT STRUCTURE

The City also organized and conducted meetings with individual advisory groups to provide feedback and direction at each stage of the planning process. These groups included a wide range of stakeholders to appropriately reflect the diversity of the Chinatown community and were tasked to provide input on a range of specific themes and issues. These advisory groups are defined below in greater detail.

Working Group Meetings

Staff convened non-technical stakeholders from four distinct interest groups in Chinatown: the Asian community, business and property owners, homeless individuals and service providers, and housing developers and residents interested in a more sustained level of engagement. Meetings were interactive and designed to allow representatives to provide input on key themes and issues, promote outreach activities, and brainstorm opportunities for community participation.

A total of nine Working Group meetings were held between Winter of 2016 through May of 2019.

Technical Advisory Committee Meetings

The Technical Advisory Committee (TAC) convened working professionals from the public, private, and nonprofit sectors with

Technical Advisory Committee meeting at Dai Ichi Village.

subject expertise on key themes of the Plan, such as transportation, economic development, social services, and health and safety. In addition to providing their own unique recommendations, TAC members evaluated the feasibility of Working Group and community recommendations and identified needs for further analysis based on technical studies and/or planning.

A total of six TAC meetings were held between Winter 2016 through April 2019. This engagement series included a joint walking tour in March 2018 with the Working Groups to survey Chinatown and highlight key challenges and priority improvements in the neighborhood.

Combined Technical Advisory Committee and Working Group Meetings

When planning efforts were restarted In April of 2019, City and MIG staff merged the TAC and Working Group meetings to complete the Revitalization Plan by the end of 2019. Members from the Working Groups and TAC were invited to these meetings. A total of 3 TAC/Working Group Meetings were held between April 2019 through May 2019.

Technical Advisory Committee meeting at the Chinatown Navigation Center.

3.4 COMMUNITY ENGAGEMENT TOOLS AND OUTCOMES

Community Meetings, Implementation Workshops, and Pop-Up Events

The City convened a total of 6 community meetings, 2 implementation workshops, and 1 final draft open house, and 9 pop-up events open to all members of the public. Meetings, workshops and events were facilitated in English and included Spanish language translation services and materials. As previously indicated, the City also staffed pop-up stations at community events, such as the Asian Festival, Obon Festival, Ciclovía, ACE Pop-up Museum, and at City Council and facilitated activities pertaining to the key themes of the Revitalization Plan.

Chinatown Block Party

City of Salinas in conjunction with Monterey County, community based-organizations and non-profit partners

created the Chinatown Block Party. This event brings services and resources to individuals experiencing homelessness and includes activities for families with children that represent a large segment of the population within the neighborhood as demonstrated with Chinatown's young median age of 28.6 years. Now in its third year, this event has grown in number of participants and support and volunteers from non-profit and community-based organizations.

Chinatown Community Survey

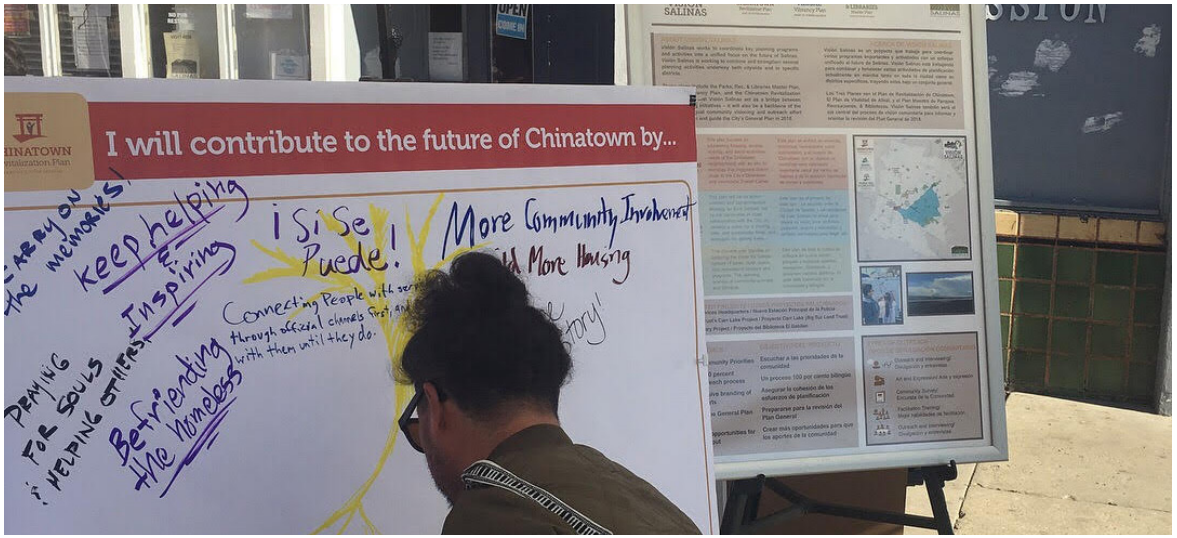
The Chinatown Community Survey's purpose was to collect ideas about the community's current perception and vision for Chinatown. The survey was available in an online version on the Chinatown Revitalization Plan project website. Paper versions were also made available to Chinatown community members who may not have access to the internet. A total of 635 people completed the survey.

Project Website, E-mail, and Mail Campaigns

To raise awareness around the planning process, and as part of the Vision Salinas platform, the City launched an online outreach campaign that featured a Chinatown Revitalization Plan website, which defined and described the planning process, included meeting summaries and public documents, advertised all outreach events, and provided project updates at key intervals. The City further augmented its outreach through letters mailed to property and business owners and residents, articles in the City Manager newsletters and on the City's website, door to door canvassing, e-mail blasts through Constant Contact, social media posts in the City's Facebook and Twitter accounts, and mail campaigns directed to Chinatown residents and other stakeholder groups through Vision Salinas.

3.5 VISION STATEMENT DEVELOPMENT

The Vision Statement at the beginning of Chapter 1 is the product of an iterative process that leveraged extensive community input. In Spring 2019, the City and its chosen consultant, MIG, Inc. (MIG), drafted a preliminary statement that was based on input provided at past public workshops, meetings, and other outreach events. The City continued to collaborate with the community to refine this draft statement at events, such as the Chinatown Asian Festival, Revitalization Plan Implementation Workshop, and throughout several community meetings.



Pop-up activity at the Chinatown Block Party.

This feedback was then used to inform subsequent revisions of the statement, ultimately resulting in an authentic grassroots vision that embodies and reflects the community's desired future for the neighborhood.

3.6 WHAT WE HEARD

The following opportunities and challenges presented below are a high-level summary of key points raised by community members, property owners, businesses owners, service providers, and community-based organizations. Key points are organized by topic:

Land Use

- Currently, there are land-use conflicts between the new mixed-use zoning and the current light industrial and automotive uses that are legal non-conforming.
- The neighborhood lacks parks, urban plazas, and open space within the planning area.
- Zoning changes integrated into the 2006 Zoning Map made several types of current active uses in Chinatown legal non-conforming uses (e.g., auto repair, light industrial uses, etc.), and this prevents business owners from growing or expanding their business.
- Vacant and abandoned properties as well as physical separation from Downtown and the Intermodal Transportation Center have contributed to the current blight and an uninviting pedestrian environment.

Housing and Neighborhoods

- There is strong community interest in diversifying the housing stock in Chinatown by adding workforce and market rate housing alongside the current affordable developments.
- Housing for homeless individuals and very-low income (0%-30 AMI) households is a key community priority.
- Residents and stakeholders would like to have a mixed-income neighborhood.

Homelessness

- Chinatown should no longer be the epicenter of homeless encampments and social services for homeless individuals. Social services should be distributed across the City and Monterey County.

Haciendas Place Phase I and II affordable housing development completed in 2014.

Homeless encampments in Chinatown along Market Way.

- Residents, business and property owners, as well as stakeholders, have expressed that it is of critical importance to reduce encampments in Chinatown to revitalize the neighborhood.
- Homeless individuals in Chinatown indicated that they would prefer to be housed with friends and live-in single-family homes or in a permanent supportive housing complexes like the Moon Gate Plaza project.
- There is support for improved mental health and homeless services.
- Despite Chinatown's bad reputation, it has always been a welcoming place for minorities and the least fortunate.

Health and Safety

- Safety is one of the top priorities for all stakeholders. Crime, illegal dumping, prostitution, and most critically the open drug market, need to be addressed.
- Clean and well-maintained streets, sidewalks, public spaces, and buildings are critical to Chinatown's revitalization.
- Finding a relocation site for the community garden, which was replaced by Moon Gate Plaza development, is a big community priority.
- Businesses feel blamed for the lack of neighborhood cleanliness, though in reality, they are doing plenty of maintenance and would like assistance from the City.

Economic Development

- Crime, homelessness, and blight are considered some of the biggest obstacles to private investment in Chinatown. In other parts of Salinas, there is resistance to reconnecting Chinatown to other neighborhoods due to negative perceptions and safety concerns.

The community expressed high interest in finding a new location for a community garden.

- The existing local art scene in Chinatown should be leveraged to catalyze economic development and transform the neighborhood into a cultural center for the arts.
- Soledad Street should be transformed into a vibrant "Main Street" like corridor with retail storefronts on the ground floor and a diverse array of amenities and businesses for the neighborhood.
- People will visit Chinatown more often if there were more shopping or community activities in the neighborhood.

Transportation and Infrastructure

- There continues to be extensive support for conversion of Chinatown back to two-way streets as recommended in past plans.
- A direct connection/crossing point over the Union Pacific Rail Lines into Downtown and the Intermodal Transit Center is of great importance to reconnecting Chinatown.
- Sidewalks in Chinatown have deteriorated and require significant improvement.
- Improving above and below-ground

A sidewalk in Chinatown in need of serious repairs.

Events like the Obon Festival bring people to Salinas and Chinatown.

infrastructure along with streetscape improvements that promote human scale, engage the public realm, and ensure pedestrian safety are much needed.

Arts, Programing and Community Facilities

- There is strong community interest in additional arts and cultural spaces and programs as Chinatown revitalizes and becomes an arts district.
- Events including food festivals, performing arts and cultural events would help make Chinatown a destination not only for City residents, but also for tourists.
- Public art programming can transform Chinatown into a cultural center for the arts.
- For partnerships with existing community facilities to expand programming and to develop new social and cultural events for the community.

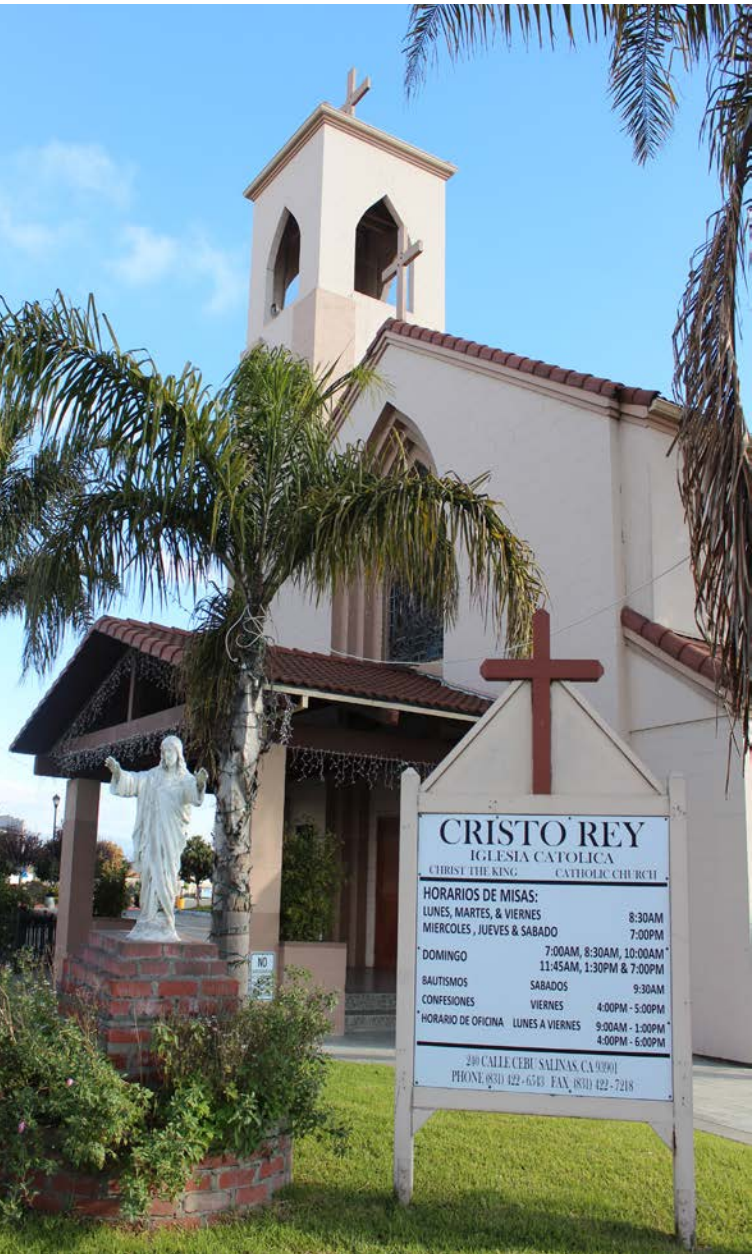
Implementation Through Engagement

Successfully implementing the community's vision, goals, and aspirations for the neighborhood depends on a careful and sustained level of coordination between all levels of government, private and nonprofit partners and residents. In the coming years, the City will continue to engage the public on all planning and development initiatives – both major and minor – to ensure that the community, together, is empowered and enabled to determine how Chinatown will continue to grow and transform. While there is significant work to be done to revitalize Chinatown, the community's relentless pride, commitment, and spirit of engagement keep the neighborhood's unique history and cultural identity alive. It is precisely this sense of community that will help ensure that this Plan's vision becomes reality.

Land Use and Design

Chinatown's physical layout including its centralized location within the City and adjacency to Downtown and the Intermodal Transportation Center (ITC) provide the ideal foundation to foster desired land uses and attractive design. Given these attributes and concentration of opportunity sites, Chinatown has unmatched potential for attracting new investment. However, Chinatown as it exists today has uses that do not align with the zoning districts and result in on the ground land use conflicts that in some instances lead to blighted conditions. Further challenges to investment include deteriorated public infrastructure, contaminated soils, and concentration of encampments leading to sanitation problems.

Chinatown's future land uses are envisioned to complement each other to both provide adequate protection from potential nuisance uses and to form unique and desirable places to live, work, and shop. The Plan recognizes historic Soledad Street as the center of Chinatown and includes goals and policies to reinforce the existing mixed-use zoning, along with preservation and reuse of some of the most important historic structures. In the Chinatown Core including Soledad Street, it is recommended that the mixed-use zoning is coupled with an Arts Overlay District to intensify development and to facilitate the development of live/work opportunities, flexible commercial spaces, and the development of compact urban open spaces.



4.1 INTRODUCTION

The Land Use Chapter seeks to facilitate desired development to address the shopping, neighborhood service, housing, and employment needs of its growing population. As the physical landscape of Chinatown changes with the addition of more mixed-use development, land use conflicts that create nuisances must be addressed while minimizing negative impacts to long-standing businesses. Chinatown has a long history that is reflected in its unique architecture. Rehabilitating these historic assets and incorporating these design features into new development is vital to preserving and enhancing Chinatown's identity.

Chinatown still requires significant development in its infrastructure. Vacant and underutilized parcels that create gaps in the existing build environment must be redeveloped. Despite the current encampments, property disinvestment, and parcel contamination, these vacant and underutilized properties serve as promising opportunities to revitalize Chinatown by assembling larger sites for redevelopment. Ultimately, the land use vision outlined in this Chapter will be implemented through the General Plan Update, which will begin in early 2020.

Guiding Principle Icon Key

- Economic Prosperity, Equity and Diversity
- Collaborative, Inclusive, and Engaged Decision-Making
- Housing Opportunities for All
- Liveable and Sustainable Community
- Healthy and Safe Community
- Connectivity, Access and Mobility
- Youth Are the Future
- A Community to Celebrate

Goal Summary

LUD 1. Preserve the Character of Traditional Neighborhoods While Adding New Housing Units.

Preservation of existing low-and-medium-density housing characterized as more traditional single-family and small multi-family apartments in the expanded study area is important to balance the new high-density projects within the Chinatown core. Allowing low-density areas to intensify their land use through the incorporation of accessory dwelling units (ADUs), duplexes, and triplexes, will open opportunities for the creation of more housing that complements the existing character of the neighborhood.

LUD 2. Expand Mixed-Use Development to Increase Capacity for New Businesses, Services, and Housing

Chinatown is a neighborhood in transformation and the consolidation of parcels to support development of new compact mixed-use projects as well as the rehabilitation of vacant historic buildings will help support the creation of a healthy, vibrant and walkable neighborhood. Vacant buildings and underutilized properties in Chinatown's Core have the potential to be redeveloped as mixed-use projects that include residential units and introduce new and important neighborhood-serving amenities such as retail stores, restaurants, libraries, artist studios, and compact urban open spaces, among other complementary uses.

LUD 3. Provide Employment and Commercial Oriented Land Uses in Appropriate Locations to Advance the Economic Diversity of Chinatown.

Currently, Chinatown is home to a modest range of automotive, light industrial, and manufacturing establishments that comprise much of the neighborhood's economic base. Co-locating these uses within zoning designations that allow them to grow and expand is crucial to diversifying and growing Chinatown's economy. This will also protect the mixed-use and residential areas from adverse impacts created by incompatible land uses and encourage the redevelopment of underutilized parcels into new and diverse commercial and employment-oriented development.

LUD 4. Promote and Preserve and the Culture, Art, Identity, and History of Chinatown Through Context and Place-Sensitive Design.

Preserving Chinatown's historic architecture and multicultural heritage is a community priority for revitalization. The City can implement new development standards and design guidelines through the establishment of an Arts Overlay District to encourage new development to embrace a more cohesive and culturally appropriate architectural style. Commissioning public art that reflects Chinatown's unique and multicultural heritage will to strengthen neighborhood identity.

Guiding Principle Connection

Economic Prosperity, Equity and Diversity

To attract private investment, the City needs to create a business-friendly regulatory environment in Chinatown. Existing land use policies have the potential to be modified to provide more flexibility for commercial and residential uses and development standards, which will help attract a diversity of businesses, services, and housing to serve the daily needs of Chinatown's residential community.

Healthy and Safe Community

Establishing the right mix of land uses across Chinatown that conforms to its existing zoning designations can help bolster economic prosperity, public health, safety and cleanliness of the neighborhood. Implementing neighborhood-serving retail and services brings more "eyes on the street," while creating new compact urban open spaces.

Housing Opportunities for All

Land use regulations directly impact housing development types. Upzoning for higher-density development and streamlining the permitting processes can help expand overall housing types and supply in Chinatown. Policies supporting the production of additional permanent supportive housing must be undertaken to house those who are experiencing homelessness in Chinatown.

Youth Are the Future

Ensuring adequate access to childcare, recreational and educational programming, open spaces, and other community facilities is essential to early childhood and youth development. Supporting land use policies that promote the development of these facilities and community amenities is vital to increasing access to education, recreation and a healthy environment for Chinatown's youth.

Collaborative, Inclusive and Engaged Decision-Making

Implementation of Chinatown's plan requires continuous collaboration and engagement with the community across all stakeholder and age groups. Collaboration is imperative at scales both large and small, from updating the General Plan and Zoning Code to working with developers on community features at specific sites. The formation of an Advisory Committee ensures that stakeholders are an active part of decision-making around land uses.

Connectivity, Access and Mobility

Land use and transportation development decisions are interconnected because a specific land use type could decrease or increase pedestrian and vehicle traffic within the neighborhood. High-intensity development should be located along well-served and easily accessible corridors. Reconnecting Chinatown to Downtown and the Intermodal Transportation Center is a plan priority that could attract new businesses and services.

Livable and Sustainable Community

Forward-thinking, land use policies can facilitate compact urban development patterns, which promote a walkable, pedestrian-friendly, and environmentally friendly environment for Chinatown residents. New housing developments within the planning area exemplify livable and sustainable development integrating community facilities and services, open spaces, and pedestrian orientation including features that promote energy efficiency.

A Community to Celebrate

A thoughtful set of new design guidelines and development standards will ensure that Chinatown's multicultural heritage is reflected in the built environment of a thriving Chinatown. Incorporating public spaces into new developments will provide locations for festivals, performances, and other celebrations that are culturally relevant to the neighborhood.

ADAPTIVE REUSE ORDINANCE

In 2018, the City of Salinas passed an Adaptive Reuse Ordinance which reduces regulatory obstacles by allowing the reuse of existing non-residential buildings for housing without requiring strict compliance with zoning standards. This Ordinance applies to either 1) buildings at least 50 years old in the Central City Overlay District or 2) a historically significant building anywhere in the City.

4.2 COMMUNITY ASSETS AND OPPORTUNITIES

Opportunity Sites for Redevelopment.

Chinatown's planning area has seventeen (17) vacant and underutilized parcels where new mixed-use buildings, housing projects, live-work units, businesses and compact urban open spaces could be developed. While these current gaps in the built environment along with property disinvestment, environmental contamination and encampments contribute to the existing blight and uninviting pedestrian environment of the neighborhood, they also represent a prime opportunity for new infill development and open space that are very much needed to create positive change in the neighborhood.

Development of priority sites along Soledad Street can transform the corridor with culturally relevant shops and restaurants, neighborhood services, and residential units that are into the heart of a vibrant arts and cultural district. The preservation, restoration and reuse of historical buildings including the Chop Suey Republic Café, Suey Sing, and Arres Pool buildings is part of this vision for Soledad Street. Other opportunity sites within the planning area are located along E. Lake Street, Bridge Street, Market Way, E. Market Street, Calle Cebu and Sun Street. These opportunity sites have the potential to introduce new mixed-use development and where feasible adaptive reuse, urban open spaces, and compatible light industrial uses that will provide for the needs of existing and new residents and businesses alike.

Chinatown Centralized Location and Street Grid.

Chinatown's centralized location within the City and its adjacency to Downtown and the Intermodal Transportation Center (ITC) are key assets for attracting new investment. Chinatown's regular street grid is also a plus for the consolidation of smaller parcels to support the development of larger infill projects. To capitalize on its physical layout, critical upgrades must be made to Chinatown's deteriorated street infrastructure to create a walkable and safe neighborhood. Re-establishing direct vehicular and/or pedestrian connection across the Union Pacific train tracks would reconnect the neighborhood and residents to other parts of the City, ITC and Downtown.

Chinatown's Architectural Style.

Chinatown's architectural style is an emblem of its multicultural heritage. Existing historic buildings display an Asian and Spanish influenced architecture such as upturned roof eaves, tile roofs, and detailed balcony railings. The more recent development, Dai-Ichi, Hikari, Haciendas Place I and II, as well as the Moon Gate Plaza project have added a modern twist to the architectural character of the neighborhood while incorporating culturally relevant Asian motifs. This architectural hybridization should be embraced by new developments and significant redevelopment projects to establish an interconnected and culturally relevant architectural style that embodies Chinatown's diverse multicultural heritage. This can be achieved though the development of specific design guidelines and standards as part of the proposed Arts Overlay District for Chinatown.

4.3 GOALS, POLICIES, AND ACTIONS

The vision, goals, and recommendations contained within this Revitalization Plan were developed through an intensive community engagement process over the past three years. Each of the six primary topic areas were generated collective through the interaction and collaboration of the four Working Groups (WG) and the Technical Advisory Committee (TAC). The content generated in these meetings was collected, evaluated and refined residents, business owners, property owners and community stakeholders, and subsequently presented at a series of public Implementation Workshops. These results then evolved into the Goals, Policies and Actions found in this Land Use and Design chapter.

This section contains two parts. The first is a narrative describing each of the Land Use and Design goals and policies – providing context, rationale, and framing for why certain policies or programs are important. The matrix that follows the narrative includes actions necessary to implement the goals and policies along with other, more detailed recommendations including the responsible entity(ies) or organization(s) and the timeframe of these actions for implementation.

LUD 1. Preserve the Character of Traditional Neighborhoods While Adding New Housing Units.

Established residential neighborhoods provide a high quality of life for residents, which is one of the objectives of the Chinatown Revitalization Plan. Traditional neighborhoods featuring single-family homes, ample private open space, personal parking, and quieter surroundings complemented by supporting uses such as schools and places of worship represent a housing type that typically many residents desire. As housing supply has become more limited and prices less attainable, there is a recognition that subtle increases in density can help alleviate the housing crisis while preserving character of traditional neighborhoods.

As revitalization occurs, new housing development in Chinatown should seek to be compatible, respect and balance the character of established residential neighborhoods along with the new high-density projects within its planning area. Instead of up zoning the low-and-medium-density district within the neighborhood to allow high-density development, the City should use a context-sensitive approach that accounts for and protects the neighborhood's unique character. In lower-density areas, this can involve streamlining the permitting processes for accessory dwelling units (ADUs), providing development incentives for "missing middle" housing (e.g., duplexes, triplexes, townhomes), and requiring new projects to contribute toward supportive neighborhood amenities such as compact urban spaces, schools, and other public spaces. These tools can help expand housing diversity and supply across Chinatown while keeping and maintaining the character of established neighborhoods.

LUD 2. Expand Mixed-Use Development to Increase Capacity for New Businesses, Services, and Housing

Land use and development patterns shape the social, economic, and environmental health of a community. Chinatown is a neighborhood that is undergoing transformation and the consolidation of parcels opens opportunities for future infill developments with live/work units. New mixed-used developments as well as the rehabilitation and reuse of vacant historic buildings help support the creation of a

LIVE/WORK UNIT

A live/work unit is defined as a single unit (e.g., studio, loft or one bedroom) consisting of both a commercial/office and a residential component that is occupied by the same resident.

healthy, vibrant and walkable community. Neighborhoods that co-locate housing along with a diverse range of neighborhood-serving amenities – such as restaurants, neighborhood serving retail, artist studios, exhibitions and compact urban open spaces – create pedestrian-friendly environments that activate publicspaces and build a sense of community for the neighborhood. In addition, this diversification of land use increases pedestrian traffic throughout the neighborhood and creates positive economic "spillover effects" that benefit local retail and service establishments.

Chinatown has the real potential to become a vibrant mixed-use community. Vacant and underutilized parcels in the neighborhood's historic core – particularly along Soledad Street – represent opportunity sites for catalytic infill development, with multi-family housing stacked atop socially and economically active ground-floor uses. The City can encourage mixed-use development through new direct regulatory incentives, relaxed development standards for parking and open space requirements, and financial assistance for rehabilitation of historic structures.

LUD 3. Provide Employment and Commercial Oriented Land Uses in Appropriate Locations to Advance the Economic Diversity of Chinatown.

Light industrial, automotive and manufacturing facilities currently constitute Chinatown's predominate land uses. These commercial operations are clustered in two main areas: the historic core – particularly along Bridge Street, Market Way; and the expansion area – particularly along Market Street. While it is important to recognize the value of Chinatown's light industrial base and ensure its continued growth in the future, these uses need to be compatible with adjacent uses so that they do not pose a barrier to the urban-style mixed-uses envisioned in Chinatown's historic core and other residential areas. See figures 4.1 and 4.2 on pages 66 and 67 for a visual representation of these land use conflicts by looking at the City's General Plan Land Uses and the Existing Land Uses in the neighborhood.

Mural at the Salinas Exposition Grounds.

Creating a truly livable community in Chinatown will therefore require significant re-organization of these uses. Specifically, the Revitalization Plan proposes to co-locate and consolidate existing light industrial and manufacturing uses along Bridge Street, Market Way, Market Street and Simas Street. Encouraging co-location of these uses in the Mixed Arterial Frontage and/or Industrial General Commercial zoning districts will allow them to grow and expand and therefore help maintain and diversify Chinatown's local economy. The City is committed to working closely with business owners in the area to facilitate a smooth and efficient transition. Concentrating these uses in the correct zoning districts will also, in turn, open new opportunities for infill redevelopment in areas envisioned for higher intensity mixed-use, such as Soledad Street, California Street and Sherwood Drive.

LUD 4. Promote and Preserve and the Culture, Art, Identity, and History of Chinatown Through Context and Place-Sensitive Design.

In Chinatown, new development should celebrate the neighborhood's rich heritage by complementing the already existing cultural and aesthetic character of the neighborhood and preserving its historic buildings whenever possible. The district has a rich cultural history that is still reflected in parts of the built environment, from the Asian-style architecture of both the Buddhist Temple and Confucius Church to the historic Republic Café. New design guidelines and development standards should be devised through the formation of an Arts Overlay District. Standard Guidelines will draw on and reinforce this unique multicultural identity through building articulation, massing, and the use of culturally appropriate colors and materials. In addition, the community stakeholders collaborating with the Public Arts Commission can contract local artists to produce murals, statues, and commemorative plaques that both invigorate the built environment and tell the story of the Chinatown community.

Cultural characters at Dai-Ichi Village Senior Apartment Complex.

LUD 1. PRESERVE THE CHARACTER OF TRADITIONAL NEIGHBORHOODS WHILE ADDING NEW HOUSING UNITS.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
LUD 1.1 – Promote appropriate intensification of land use in low-and-medium-density neighborhoods.	**LUD 1.1.a – Increase density in low-density residential areas.** Allow more medium-density building types (duplex, triplex, etc.,) in low density residential areas to increase housing supply and encourage the diversification of a mixed-income neighborhood.	Community Development Department (CDD), Property Owners	Medium
	LUD 1.1.b – Streamline production of accessory dwelling units. Streamline the processing and approval of accessory dwelling unit (ADU) applications within the appropriate low-density residential areas.	CDD	Medium
	LUD 1.1.c – Identify regulatory barriers. Identify regulatory barriers to building more units and modify the Zoning Code based on design and character instead of strict development standards like density.	CDD	Short
	LUD 1.1.d – Identify underutilized sites. Identify underutilized sites and work with property owners to redevelop sites to increase housing units.	CDD	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
LUD 1.2 – Encourage supporting uses such as schools, urban spaces, community facilities that complement the neighborhood.	**LUD 1.2.a – Co-locate urban public spaces within new developments.** Incentivize the provision of cooperative green and urban public spaces in new housing development to satisfy open space and stormwater requirements.	CDD, Housing Developers	Medium
	LUD 1.2.b - Convert small undevelopable parcels into public space. Evaluate small or remnant parcels for conversion to public space.	CDD, Residents, Property Owners	Short
	LUD 1.2.c – Activate ground floor with community facilities. Work with housing developers to create new community facilities and/or childcare centers on the ground floor.	CDD, Housing Developers	Short
	LUD 1.2.d – Add new community facilities and/or open spaces in private properties. Support the provision of new community facilities and/or open spaces through partnership with private property owners on underutilized portions of their lots.	CDD, Housing Developers, Property Owners	Medium

LUD 2. EXPAND MIXED-USE DEVELOPMENT TO INCREASE CAPACITY FOR NEW BUSINESSES, SERVICES, AND HOUSING.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
LUD 2.1 – Encourage the development of mixed-use projects that activate the ground-floor and incorporate urban open spaces.	**LUD 2.1.a – Create higher-density development zoning incentives for mixed-use zoning.** Devise and implement new zoning incentives that encourage higher-density development in mixed-use zoning. Promote the use of the new state density bonus provisions to increase affordable housing.	CDD, Housing Developers	Medium
	LUD 2.1.b – Reduce parking and or open space requirements. Consider further reductions in parking and/or open space requirements for mixed-use projects that dedicate at least 25% of the ground floor to non-residential public uses.	CDD	Short
	LUD 2.1.c – Increase allowable Floor Area Ratio in mixed-use development. Increase allowable Floor Area Ratio (FAR) for mixed-use projects along designated activity corridors, including Soledad, California, Bridge and E. Lake Streets.	CDD	Medium
	LUD 2.1.d – Evaluate density transfers. Consider density transfer to vacant sites to allow for increased average density across the district.	CDD	Medium
	LUD 2.1.e – Expand the adaptive reuse ordinance to the Chinatown Core. Expand the adaptive reuse ordinance in effect in Salinas' Downtown to also include the Chinatown Core.	CDD, Property Owners, Business Owners	Short
	LUD 2.1.f – Identify and eliminate regulatory barriers for live/work units. Reduce unit size and/or commercial floor area minimums, and other discovered barriers to stimulate their production.	CDD	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
LUD 2.2 – Rehabilitate and reprogram vacant, abandoned, underutilized, and historic buildings in the Chinatown Core.	**LUD 2.2.a - Create an inventory of vacant and historic buildings.** Evaluate the level of remediation required for adaptive reuse of identified buildings.	CDD, Business Owners, Property Owners	Short
	LUD 2.2.b – Research and pursue potential funding opportunities. Look for funding through Federal and State Agencies as well as Community Foundations to assist owners with rehabilitating historic buildings.	CDD	Short-Medium
	LUD 2.2.c – Connect property owners to financial assistance. Identify resources or incentives to encourage the rehabilitation and reuse of buildings.	CDD, Business Owners, Property Owners	Short-Medium
	LUD 2.2.d – Advocate for the allocation of CDBG funds. Include identified projects in Assist property owners in the rehabilitation of their blighted buildings and properties with CDBG funds.	CDD, Business Owners, Property Owners	Short-Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
LUD 2.3 – Identify and promote opportunity sites inthe Chinatown Core to catalyze a mix of commercial, retail, housing and urban open space.	**LUD 2.3.a – Bundle vacant and underutilized parcels.** Focus on remediation, assemblage, and redevelopment of vacant and underutilized parcels to support higher density development in the Chinatown core, especially along Soledad Street.	CDD, Business Owners, Property Owners	Long
	LUD 2.3.b – Identify locations for mixed-use projects. Evaluate vacant properties along Soledad and East Lake Streets for housing and mixed-use projects. (See ED 3.2)	CDD, Property Owners	Short-Medium
	LUD 2.3.c – Make it easier to establish neighborhood serving uses. Eliminate regulatory barriers and create land use incentives to attract neighborhood serving retail and services such as a grocery store, gym, barbershop, pharmacy, laundromat, restaurants, and art studios in the Chinatown core. (See ED 3.1)	CDD	Medium

LUD 3. PROVIDE EMPLOYMENT AND COMMERCIAL ORIENTED LAND USES IN APPROPRIATE LOCATIONS TO ADVANCE THE ECONOMIC DIVERSITY OF CHINATOWN.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
LUD 3.1 – Support existing and new commercial and industrial uses through appropriate zoning and elimination of regulatory barriers.	**LUD 3.1.a – Concentrate light industrial uses on edge of plan area.** Support and encourage light industrial, manufacturing and warehouse distribution uses to be organized and concentrated within or near areas of complementary use around the periphery of the plan area.	CDD	Medium
	LUD 3.1.b – Support the relocation of automotive uses outside of Chinatown's Core. Work with automotive businesses to identify appropriate locations in Chinatown and help secure financial resources in order to facilitate relocation outside of mixed-use zoning. Evaluate the feasibility of possible development of an auto-oriented business park.	CDD, Business Owners, Property Owners	Short-Medium
	LUD 3.1.c - Advocate for coordination of parking, security, and other resources. Facilitate collaboration between businesses and surrounding property owners on shared security and parking, maintenance of vacant lots and public right of way, code enforcement, and blight elimination.	CDD, Property Owners, Business Owners	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
LUD 3.2 - Protect residential areas from the adverse impacts of adjacent incompatible land uses.	**LUD 3.2.a – Prevent the expansion of incompatible neighborhood uses.** Continue regulations that prevent the expansion of incompatible and nuisance uses in residential areas.	CDD, Property Owners, Business Owners	Ongoing
	LUD 3.2.b - Buffer appropriate land uses. Establish appropriate buffers, landscaping, screening, and open space where possible, to mitigate land use conflicts and enhance the overall attractiveness and pedestrian environment.	CDD, Property Owners	Ongoing
	LUD 3.2.c – Regulate the development of undesired neighborhood uses. Strictly regulate the development of undesired uses, such as new liquor stores in the neighborhood.	CDD	Ongoing
LUD 3.3 – Encourage redevelopment of underutilized parcels, brownfield sites, and vacant properties into commercial and employment-oriented development.	**LUD 3.3.a – Streamline the approval process of redevelopment projects for brownfield sites.** Conduct site assessments of all brownfield and vacant properties in Chinatown and submit grants to fund remediation efforts.	CDD, Public Works Department (PW), National Development Council (NDC), Environmental Protection Agency (EPA), Property Owners	Short-Medium
	LUD 3.3.b – Consolidate brownfield sites. Encourage the consolidation of vacant and brownfield sites to facilitate larger infill projects for employment uses.	CDD, PW, Property Owners, Developers	Medium-Long
	LUD 3.3.c - Evaluate opportunities for the PG&E Site on Bridge Street. Possibilities include consolidation of light industrial and automotive uses, development of a cooperative industrial maker space, or a parking structure for the businesses in Chinatown and Downtown. Explore the development of an urban plaza as a temporary use.	CDD, PG&E	Short

LUD 4. PROMOTE AND PRESERVE AND THE CULTURE, ART, IDENTITY, AND HISTORY OF CHINATOWN THROUGH CONTEXT AND PLACE-SENSITIVE DESIGN.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
LUD 4.1 – Establish design guidelines and development standards unique to Chinatown through the development of an Arts Overlay District to be integrated as part of the General Plan Update.	**LUD 4.1.a – Consider an Arts Overlay District.** Evaluate the current Focus Growth Overlay (FGO) in Chinatown and explore the possibility of revising the provisions to create an Arts Overlay District.	City Departments, Property Owners, Business Owners, Community-Based Organizations (CBOs)	Short
	LUD 4.1.b – Evaluate FGO boundaries. Consider the existing FGO and determine if the boundaries should be amended for the new Arts Overlay District.	CDD, Property Owners, Business Owners, CBOs	Short
	LUD 4.1.c – Develop regulatory language for the Arts Overlay District. Work with stakeholders and City departments to develop new district goals, purpose statement, applicability, land use classifications, development regulations and design standards**.**	CDD, Property Owners, Business Owners, CBOs	Short
	LUD 4.1.d – Update Zoning Code and General Plan to integrate the Arts Overlay District. Integrate the new Arts Overlay District into Zoning Code and General Plan during the update process**.**	CDD, Property Owners, Business Owners, CBOs	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
LUD 4.2 – Encourage new developments and significant redevelopment projects to conform to a cohesive and culturally appropriate architectural style that embodies Chinatown's diverse multicultural heritage.	**LUD 4.2.a – Develop Chinatown-specific design guidelines.** Work with stakeholders to develop Chinatown-specific design guidelines for new developments within the planning area. Use these design guidelines for the new Arts Overlay District.	CDD, For-Profit and Non-Profit Developers, CBOs, Property Owners, Business Owners	Medium
	LUD 4.2.b – Encourage culturally-relevant design in new developments. Encourage new buildings in Chinatown to incorporate artistic elements outlined in the design guidelines such as culturally significant colors and/or murals, to contribute to a vibrant urban environment.	CDD, For-Profit and Non-Profit Developers, Property Owners, Business Owners	Ongoing
LUD 4.3 – Identify, preserve and protect historic buildings.	**LUD 4.3.a – Create an inventory of potentially historic buildings.** Work with stakeholders to establish the histories of buildings in the Chinatown core and determine those that could qualify for protections.	CDD, Property Owners, CBOs	Short
	LUD 4.3.b – Use Mills Act to protect historic buildings. Utilize inventory to preserve and protect existing historic buildings by encouraging individual property owners to designate structures as historic and apply for the Mills Act.	CDD, Property Owners, CBOs	Short
	LUD 4.3.c – Pursue Historic or Cultural District designation for Chinatown. Evaluate the designation of Chinatown as either a Historic or Cultural District to preserve historic buildings and the neighborhood's cultural identity.	CDD, Property Owners, Business Owners, CBOs	Medium

Housing and Neighborhoods

Chinatown has experienced remarkable investment in affordable housing development – two hundred and eighty (280) units in less than a decade. Not only have these units provided critically needed housing to the City, but they have physically and demographically transformed Chinatown with many new residents. In the shadow of these developments, significant homeless encampments remain, highlighting the urgent priority for affordable housing, not only in Chinatown, but citywide. However, it is necessary to diversify Chinatown's housing stock including high-quality and fair-priced housing at all income levels – market-rate, workforce, and low-income to ensure a balanced and healthy neighborhood. New housing should be woven into the community through mixed-use projects located around community assets and urban spaces.

5.1 INTRODUCTION

This chapter outlines a comprehensive set of housing strategies that aim not only to tackle the housing affordability crisis, but to support the creation of new housing types and assist those most vulnerable – such as the homeless – transition into stable, permanent housing. Goals and policies focus on producing a diversity of new housing types (both market rate and affordable) that build on the historical and cultural context of the neighborhood and, take advantage of Chinatown's proximity to public transportation to foster the development of a safe, healthy, vibrant, and sustainable neighborhood. Fair housing rights and protections must remain a priority to provide housing opportunities for all regardless of race and ethnicity, age, income, health, or disability.

Guiding Principle Icon Key

- Economic Prosperity, Equity and Diversity
- Collaborative, Inclusive, and Engaged Decision-Making
- Housing Opportunities for All
- Liveable and Sustainable Community
- Healthy and Safe Community
- Connectivity, Access and Mobility
- Youth Are the Future
- A Community to Celebrate

Goal Summary

HN 1. Increase Housing Supply and Bring New Housing Types to Chinatown.

Encourage the development of a diversity of new affordable and market rate residential and mixed-use development through financial incentives and new funding. Explore opportunities to rehabilitate and reuse underutilized buildings and properties in Chinatown for housing. Diversify housing options by encouraging the development of accessory dwelling units (ADUs) to increase the number of units, while preserving the character of traditional neighborhoods.

HN 2. Ensure Tenant Protections Are in Place to Protect Individuals and Households of All Ages, Abilities and Income Levels.

As the neighborhood transforms with new and redeveloped units, it is critical to ensure policies are in place to avoid displacement, extreme rent increases, and to provide assistance with relocation when displacement is unpreventable. Facilitating education workshops for tenants and owners to understand new State regulations surrounding housing policies and programs, and their housing rights will also help to mitigate potential adverse effects.

HN 3. Improve the Quality, Condition, and Sustainability of Housing Options for all Chinatown Residents.

Ensure the safety and quality of rental housing in Chinatown through implementing code enforcement best practices and strategies that minimize displacement. Connect households and developers to housing rehabilitation resources that promote environmental sustainability and improve housing and neighborhood conditions.

HN 4. Foster a Sense of Neighborhood Ownership Among Residents to Build Community Unity and Agency.

Collaborate with residents and property owners to support the City's current efforts in neighborhood rehabilitation and maintenance. Promoting resident involvement in planning and implementing neighborhood improvement projects will instill a sense of community pride.

HN 5. Assist the Chronically Homeless in their Search for Permanent and Sustainable Housing Solutions.

Pursue a coordinated, multi-pronged strategy to engage and assist chronically homeless individuals through outreach, intake and assessment and housing navigation services. Continue to explore options for innovative and low-barrier temporary, transitional, and supportive housing alternatives.

Single-family homes along N. Main Street are a key asset of the neighborhood.

Guiding Principle Connection

Economic Prosperity, Equity and Diversity

Access to safe, secure and affordable housing is fundamental to creating the type of stability required for personal and professional success and a high quality of life.

Healthy and Safe Community

Housing quality is directly tied to public health and safety, thus, the importance of bringing older structures into code compliance, remediating contaminated properties and rehabilitating housing stock into a more livable condition. Finding permanent housing for those experiencing homelessness is paramount to stabilizing their physical and mental health.

Housing Opportunities for All

Housing diversification is critical to create an authentic and diverse neighborhood where people of all backgrounds and income levels can coexist. Moving forward, Chinatown's housing strategy will prioritize affordability in the short-term while also pursuing opportunities for new market rate developments in the long-term.

Youth Are the Future

Children require a safe, stable, and comfortable living environment to be able to focus in school and realize their full potential. At the policy level, this means preserving housing affordability across Chinatown while also diligently working to improve building conditions.

Collaborative, Inclusive and Engaged Decision-Making

Community participation in the decision-making processes increases the social cohesion of a neighborhood. It is also vital that policies and neighborhood improvements are driven by the most impacted residents. The City will collaborate with its partners to strengthen neighborhood ties and encourage proactive participation in housing policy and neighborhood initiatives such as beautification programs.

Connectivity, Access and Mobility

Housing location strongly determines how, and how well, residents can navigate their communities. In Chinatown, there is ample opportunity to add residential infill development in already built-up areas, helping to connect residents to important neighborhood amenities and institutions required in daily life. This process of compact development not only improves access to public space, but also promotes sustainability by encouraging people to walk or bike to their destinations.

Livable and Sustainable Community

Household energy consumption is directly tied to the well-being of the environment. Incorporating green technologies such as rooftop solar panels and energy-efficient home appliances, will go a long way in fostering environmental stewardship in Chinatown.

A Community to Celebrate

New housing development can open possibilities to celebrate a community's identity. Mixed-use developments can provide ground-floor spaces for arts- cultural programs and retail, while thoughtful new design guidelines can use architecture as a means to preserve and complement Chinatown's rich cultural heritage. Affordable artist housing can be developed to encourage artists to live in Chinatown

MOON GATE PLAZA PROJECT

MidPen Housing's Moon Gate Plaza development will provide 90 new apartments for low and extremely low- income households, including formerly homeless individuals. Free onsite supportive services, combined with affordable housing, will provide the foundation for the Moon Gate Plaza residents to improve their lives. Ground floor commercial and service uses will create social hubs of activity for the neighborhood.

5.2 COMMUNITY ASSETS AND OPPORTUNITIES

Historic neighborhood fabric.

The Chinatown Core has a walkable, pedestrian-friendly scale that can accommodate new medium- density housing without changing the historic character of the area. Bringing new housing and additional residents to the neighborhood will activate the center of Chinatown, improving safety and increasing activity in public areas. Vacant and underutilized buildings and properties in the Chinatown Core offer a unique opportunity to add creative types of housing, such as live/work units or second-story mixed-use residential development to the neighborhood.

New affordable housing options in Chinatown.

Monterey County Housing Authority Development Corporation's (HDC) four housing projects (Haciendas Place – Phase 1 & 2, Daichi Village, and Hikari) and MidPen Housing's Moon Gate Plaza are catalysts for neighborhood transformation and strengthen the neighborhood by bringing new residents and amenities to the area. They also provide a range of housing types for different resident and household needs, including large units for families, senior housing, and supportive housing. These developments also bring new community spaces and in the case of Moon Gate Plaza, active ground-floor uses to the neighborhood.

Opportunity sites for new housing.

Chinatown contains several vacant and underutilized parcels that could be developed with housing and other neighborhood-serving uses. If they are developed with housing as a priority, the opportunity sites identified in the Land Use and Design chapter can accommodate a meaningful number of new units to strengthen existing neighborhoods.

Quality non-profit developers.

The success of several recent affordable housing projects is due in large part to the stewardship, financial knowledge, and community support generated by affordable housing developers, namely MidPen Housing and HDC. The expertise of these organizations to leverage federal and state tax credits, design viable

Courtyard and community open space at Hikari Apartments.

Courtyard and community open space at future Moon Gate Plaza project, currently under construction.

Haciendas Place Phase I and II landscape areas facing the street.

projects, and navigate the permitting and funding process is crucial to building new affordable units.

5.3 GOALS, POLICIES, AND ACTIONS

The vision, goals, and recommendations contained within this Revitalization Plan were developed through an intensive community engagement process. Each of the six primary topic areas was evaluated and refined by a Working Group of residents and stakeholders, presented at a series of public Open Houses, and vetted by a Technical Advisory Committee. These results then evolved into the Goals, Policies and Actions found in this Housing and Neighborhoods chapter.

This section contains two parts. The first is a narrative describing each of the Housing and Neighborhoods goals and policies – providing context, rationale, and framing for why certain policies or programs are important. The matrix that follows the narrative includes actions necessary to implement the goals and policies along with other, more detailed recommendations including the responsible entity or organization and the timeframe.

HN 1 – Increase Housing Supply and Bring New Housing Types to Chinatown.

Being one the oldest neighborhoods in the City, Chinatown's housing stock is old (pre-1978), contaminated (lead-based paint), dilapidated, and neglected (code violations and red tags). The only residential construction that has occurred in decades is the four affordable housing projects along the periphery of Chinatown's Core and Moon Gate Plaza on Soledad Street. Increased housing diversity is also needed to address local and regional needs. Planning for mixed-income neighborhoods is a holistic approach to the housing crisis that not only satisfies demand across income levels, but also fosters the creation of a vibrant and diverse residential community in Chinatown.

The many vacant and underutilized properties within the Chinatown Core provide opportunities to diversify housing type and affordability in Chinatown. The City should focus on developing the parcels it owns and can use various mechanisms to facilitate development, such as flexible development standards for live/work units, and ground lease agreements. Expanding the Adaptive Reuse Ordinance to include

Hikari Apartments modular unit being dropped into place along the building's foundation.

Dai-Ichi Village is a 40-unit senior affordable development by Monterey County Housing Authority Development Corporation.

Chinatown beyond its historically listed structures can incentivize existing safe and habitable structures to be reused as residential development. A critical aspect of supporting housing affordability is to preserve and protect housing that already exists in a neighborhood, including "naturally-occurring" affordable housing.

Re-investment is also needed in Chinatown's existing housing stock. Completing a Housing Conditions Assessment and exploring rehabilitation funding sources are first steps to identify opportunity sites to target for rehabilitation.

HN 2 – Ensure Tenant Protections Are in Place to Protect Individuals and Households of All Ages, Abilities and Income Levels.

Housing affordability continues to be a major concern both within Salinas and across California. The threat of displacement due to rising rents or redevelopment is a concern. Providing housing rights information through a coordinated outreach campaign to educate tenants and property owners on fair housing laws, tenant protections, and relocation assistance is key to ensuring that both parties understand their rights, responsibilities, and services available to them. Through the City's newly created Technical Advisory Committee for Housing Policies and Programs, Chinatown residents can be informed of new state laws around housing and have a voice in local decisions. These mechanisms, though likely to be implemented citywide, will be particularly beneficial for vulnerable communities living in transitioning neighborhoods like Chinatown.

HN 3 – Improve the Quality, Condition, and Sustainability of Housing Options for all Chinatown Residents.

Housing increasingly is understood to be a social determinant of health. Research shows that children living in dilapidated, overcrowded, or unsafe homes often exhibit comparatively lower levels of psychological health, which compromises their ability to excel in school and receive rewarding job opportunities later on as they age.

In the interest of public health and safety, Chinatown's existing housing stock requires extensive investment in rehabilitation. Apart from the affordable housing complexes and smaller structures constructed within the past decade, many of Chinatown's residential structures are either in disrepair or not code compliant due to age and lack of maintenance. Renovating existing buildings to both ensure code compliance and remove hazardous materials, such as lead-based paint, can go a long way in improving public health.

In general, the quality of Chinatown's housing stock is old and deteriorating. To ensure community health and safety, rental units need to be brought up to code. Starting with education, resident and property owners need to understand City code enforcement processes. Targeting the most extreme public nuisance properties is an effective way to leverage code enforcement to improve neighborhood conditions.

Improvements to building facades, front yards, and lighting can also help activate

Rendering of the Moon Gate Plaza, a mixed-use, 90 unit development by MidPen Housing following the Permanent Supportive Housing model.

Single Room Occupancy unit for extremely low income individuals at the Moon Gate Plaza project.

street frontages and alleviate blight, reducing the prospect of crime across the neighborhood. Sustainable living habits can also provide households with tangible financial benefits. Many low-income renters across California struggle with not only rising rents, but also costly utility bills. These expenses can be mitigated by using green technologies, such as solar panels and energy-efficient appliances, which contribute to reduced demand on the power grid. The City can expand access to and awareness of these technologies through partnerships with environmental nonprofits, such as GRID Alternatives, and new promotional materials that educate households on both the financial and environmental benefits of domestic sustainability.

HN 4 – Foster a Sense of Neighborhood Ownership Among Residents to Build Community Unity and Agency.

Strong neighborhoods are created and sustained as a result of significant investments in public space. In addition, neighborhood beautification and maintenance projects provide major opportunities for communities to come together around a common goal. These processes help build local capacity that lay the foundation for even deeper levels of engagement in the future.

Neighborhoods also benefit when residents are empowered to voice their opinions and take initiative to resolve issues, and a great example of that is the Downtown Streets Team (DST) and their members who are assisting the City with maintaining Chinatown streets clearn (see sidebar about DST on page 141). Identified actions can be pursued either at the grassroots level or in partnership with public agencies. Engaged individuals can point the City toward urgent needs, such as building code enforcement, while locally formed neighborhood groups can help maintain public safety through voluntary neighborhood watch groups. Providing residents with the resources needed to take charge of their community will build capacity and lead to a more inclusive Chinatown in the long run.

The City will work closely with residents, property owners, and local groups – such as neighborhood associations, cultural and religious organizations, and service providers – to create and maintain a high-quality physical environment that addresses the needs of the Chinatown community.

Members of the Down Streets Team, who are helping keep the streets clean, join the Chinatown Block Party.

HN 5 – Assist the Chronically Homeless in their Search for Permanent and Sustainable Housing Solutions.

Chronic homelessness is a term used to describe persons or heads of household who have experienced homelessness for over a year and have a disabling condition such as serious mental illness, a substance use disorder, or a physical disability. A number of chronically homeless persons have not yet established income or their income lands in the Extremely-Low-Income (ELI) category, a notch below the qualifying income threshold for the affordable housing classification. In Salinas and Monterey County, the majority of housing stock is market rate, followed by a limited number of available affordable housing units.

Due to severely limited income as a result of a disabling condition, market rate housing becomes out of reach and affordable housing subsidies, when available, typically fall short of the financial assistance an ELI renter needs to get and to stay housed. Those who cannot stay with family or friends discover few shelter beds, limited bridge housing options, and subsidy shortfalls, which result in living unsheltered on the streets, in parks, and in wooded areas. Subject to these conditions, despair and hopelessness grow. A return to one's former life seems nearly impossible.

True aide, alongside tangible assistance and intervention must convey a belief in people to recover their lives, to create and to direct new, healthy versions of themselves as contributing members of the larger community. Those living unsheltered, constituent groups, and concerned citizens alike are called to work on multiple fronts with the City to implement effective strategies and viable solutions to assist the homeless. For this reason, the City reopened the Chinatown Navigation Center.

Motorcycle club member giving a hair cut to a homeless individual at the Chinatown Block Party.

CHINATOWN NAVIGATION CENTER

The City reopened the Chinatown Navigation Center (formally known as the Chinatown Health Center) Phase 1 on November 1, 2019 as a bridge to permanent housing/permanent supportive housing and provide the homeless population access to bathrooms and showers. City staff continues to work on Phase II of the Chinatown Navigation Center, an overnight shelter.

HN 1. INCREASE HOUSING SUPPLY AND BRING NEW HOUSING TYPES TO DIVERSIFY CHINATOWN'S HOUSING STOCK.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 1.1 – Encourage the development of a diversity of new affordable and market rate residential and mixed-use developments.	**HN 1.1.a – Develop partnerships to build mixed-income housing.** Continue successful development of strategic partnerships with nonprofit and for-profit developers to create new mixed-income housing developments.	Community Development Department (CDD), For-Profit and Non-Profit Housing Developers	Ongoing-Short
	HN 1.1.b – Build low-and-moderate-income and workforce housing on City parcels. For City controlled properties, solicit developer proposals to build and manage deed restricted low, moderate, and workforce housing.	City, For-Profit and Non-Profit Housing Developers	Short–Medium
	HN 1.1.c – Consolidate sites to attract market rate development. Collaborate with developers to identify sites for possible lot consolidation and redevelopment to create new market rate housing.	CDD, For-Profit and Non-Profit Developers	Ongoing-Short
	HN 1.1.d – Inform stakeholders of housing opportunities outside of Chinatown. Work with housing providers to inform Chinatown residents and service providers of new and upcoming housing developments throughout the City.	CDD, For-Profit and Non-profit Developers, Public Services Agencies	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 1.2 – Create new financial incentives and secure new funding for the development of new affordable and market rate housing projects.	**HN 1.2.a – Reduce development fees.** Explore reducing City's development impact fees and waive permitting fees to encourage the development of more housing projects.	CDD, For-Profit and Non-Profit Housing Developers	Ongoing-Short
	HN 1.2.b – Work with partners to facilitate the production of affordable housing and help developers close the feasibility gap. Work with the United States Department of Housing and Urban (HUD), Neighborhood Infill Finance and Transit Improvement (NIFTI), Opportunity Zones, Community Revitalization and Investment Authorities (CRIA), Housing Authority of the County of Monterey (HACM), Community Development Financial Institutions Fund (CDFIs), philanthropy, Monterey Bay Economic Partnership (MBEP), and other lending institutions to finance housing projects.	CDD, Monterey Bay Economic Partnership (MBEP), Community Development Financial Institutions Fund (CDFIs), Philanthropy, United States Department of Housing and Urban Development (HUD), Banks (Community Reinvestment Act), Housing Authority of the County of Monterey (HACM), Neighborhood Infill Finance and Transit Improvement (NIFTI), Community Revitalization and Investment Authorities (CRIA)	Medium
	HN 1.2.c – Promote Tax Credit funding to developers. Encourage for-profit and non-profit developers to collaborate and pursue California Tax Credit Allocation Committee (CTCAC) funding to create more low-income and market rate housing.	CDD, For-Profit and Non-Profit Housing Developers	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 1.3 – Explore opportunities to rehabilitate and reuse underutilized buildings and properties in Chinatown for housing.	**HN 1.3.a – Expand Adaptive Reuse Ordinance to Chinatown.** Expand the Central City Overlay Adaptive Reuse Ordinance to include Chinatown to allow existing safe and habitable nonresidential structures to be reused as residential or mixed-use developments.	CDD	Short
	HN 1.3.b – Conduct a Housing Assessment Survey. Complete a Housing Condition Assessment of existing residential structures to identify potential opportunity sites for rehabilitation.	CDD, Code Enforcement, Residents, Volunteers	Short
	HN 1.3.c – Investigate new financing methods for rehabilitation. Explore other programs to finance rehabilitation of existing housing stock such as a Revolving Loan Fund and providing technical assistance.	CDD, Non-Profit and For-Profit Developers	Medium

HN 2. ENSURE TENANT PROTECTIONS ARE IN PLACE TO PROTECT INDIVIDUALS AND HOUSEHOLDS OF ALL AGES, ABILITIES AND INCOME LEVELS.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 2.1 – Develop mechanisms designed to support tenant's rights and uphold fair housing laws.	**HN 2.1.a – Establish a Relocation Assistance Program.** Create a program to financially support renters who must vacate uninhabitable housing and/or those evicted without just cause.	City, For-Profit and Non-Profit Housing, Developers, Rental Property Owners, Tenants, Community-Based Organizations (CBOs)	Medium
	HN 2.1.b – Launch a Fair Housing awareness and education campaign about tenant and landlord rights. Work with Fair Housing partners to create materials and workshops to educate residents and landlords about their rights and responsibilities.	CDD, Center for Community Advocacy, Eden Council for Hope and Opportunity (ECHO), HACM, Legal Services for Seniors	Short
HN 2.2 – Educate residents on the new State laws around housing policies and programs.	**HN 2.2.a – Use new housing committee to develop educational materials and outreach strategies.** Through the City's newly created Technical Advisory Committee for Housing Policies and Programs, educate and inform Chinatown residents of all the new State housing laws and programs. Hold community meetings at existing community facilities and/or pop-up events along with existing community events.	City, For-Profit and Non-Profit Housing, Developers, Rental Property Owners, Tenants, CBOs	On-going

HN 3. IMPROVE THE QUALITY, CONDITION AND SUSTAINABILITY OF HOUSING OPTIONS FOR ALL CHINATOWN RESIDENTS.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 3.1 – Ensure the safety and quality of rental housing in Chinatown.	**HN 3.1.a – Work with owners to bring properties and businesses into code compliance.** Coordinate with Code Enforcement Division to proactively work with property and business owners to bring their residential and commercial properties into code compliance.	CDD, Property Owners, Business Owners	Short
	HN 3.1.b – Incorporate CPTED into development. Encourage existing and future developments to incorporate Crime Prevention Through Environmental Design (CPTED) features into their buildings.	CDD, Police Department (PD), Fire Department (FD), For-Profit and Non-Profit Developers, Property Owners, Business Owners	Short
	HN 3.1.c – Provide lead and asbestos information. Educate property and business owners about the dangers of hazardous contaminants like lead and asbestos found in old buildings and soils around them.	City, for-Profit and Non-Profit Developers, Property Owners, Business Owners	Short
	HN 3.1.d – Promote Removal of Lead-Based Paints. Remove lead-based paint hazards in the homes of low-income property owners through the Lead-Based Paint Grant (LBP) and similar programs. Assist residents to apply fro the Lead-Based Paint and Healthy Homes Grant Program through HUD.	City, HUD	Immediate

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 3.2 – Leverage code enforcement strategies to improve neighborhoods.	**HN 3.2.a – Use Code Enforcement to address blight.** Reduce blight by using code enforcement, nuisance abatement, and receivership to address significant problem properties.	City, Residents, Property Owners, CBOs	Ongoing
	HN 3.2.b – Provide code enforcement education. Host workshops in Chinatown for residents and distribute educational material on what City Code and code enforcement processes mean for renters and owners of housing.	City, Residents, Property Owners, CBOs	Ongoing
	HN 3.2.c – Continue collaborative efforts between City departments. Continue the effective collaborative effort between the Police Department, Code Enforcement Division, and the Fire Department that has focused on addressing extreme nuisance properties.	City, Residents, Property Owners, CBOs	Ongoing
	HN 3.2.d – Increase the number of code enforcement cases on extreme public nuisance properties. Consider increasing fines or penalties for repeat offenders (for serious infractions threatening life and safety).	City, Property Owners	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 3.3 – Connect households and developers to resources that promote environmental sustainability.	**HN 3.3.a – Increase access to alternative energy sources.** Expand funding sources for existing housing stock to access alternative energy programs to improve energy efficiency (solar panels/appliances/weatherization), with priority given to elderly and low-income households.	CDD, GRID Alternatives, Central Coast Energy Services	Short
	HN 3.3.b – Promote use of green technology in new developments. Encourage new developments to incorporate environmentally sustainable building features into their buildings and promote the development of energy efficient and well-designed units.	CDD, For-Profit and Non-Profit Developers, Property Owners, Business Owners	Ongoing

HN 4. FOSTER A SENSE OF NEIGHBORHOOD OWNERSHIP AMONG RESIDENTS TO BUILD COMMUNITY UNITY AND AGENCY.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 4.1 – Collaborate with residents and property owners to assist in neighborhood rehabilitation and maintenance.	**HN 4.1.a – Expand the Neighborhood Beautification Program in Chinatown.** Broaden the scope and increase the resources available for the Neighborhood Beautification Program to enhance residents' ability to improve Chinatown planning area.	City, Residents, Property Owners	Ongoing
	HN 4.1.b – Create volunteer teams to organize community clean-ups. Building off existing neighborhood cleanups led by Downtown Streets Team, create formal civic committees and/or teams to organize clean-ups, and expand the number of beautification projects that promote safe, walkable spaces in the neighborhood.	City, City Council Members, CBOs	Ongoing

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 4.2 – Promote resident involvement in community planning and City decision-making processes across all age groups.	**HN 4.2.a – Continue engagement with residents on housing and neighborhood challenges and solutions.** Collaborate with community organizations, service providers, developers, and governmental agencies to include residents in the identification of issues affecting their community and the creation of solutions to solve these.	City Departments, Monterey County, CBOs, Service Providers, Developers, Residents	Ongoing
	HN 4.2.b – Create neighborhood-specific engagement strategies. Develop and continually improve a civic engagement strategy that helps increase the capacity of the public to collaborate in the City's decision-making processes with regards to their specific neighborhood. This might include block meetings, sub-area public workshops, or other targeted engagement.	City Departments	Short
	HN 4.2.c – Include youth in engagement. Incentivize and invite youth to participate in community meetings and events and promote initiatives that they feel are needed to improve the neighborhood.	Buddhist Temple of Salinas, Boys and Girls Club on Monterey County, School Districts, Chinese Association of Salinas (CAS), Chinese American Citizens Alliance (CACA), Buddhist Temple, Filipino Community - Salinas Valley (FCSV)	Short
	HN 4.2.d – Encourage use of SalinasConnect Application. Promote use of the SalinasConnect App for reporting dangerous sidewalks, a pothole, abandoned vehicles, tree trimming, graffiti, or variety of other issues.	City, Residents, Neighborhood Watch Group, CBOs	Short

HN 5. ASSIST THE CHRONICALLY HOMELESS IN THEIR SEARCH FOR PERMANENT AND SUSTAINABLE HOUSING SOLUTIONS.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 5.1 – Pursue a coordinated, multi-pronged strategy to engage and assist chronically homeless individuals through outreach, intake and assessment, and housing navigation services.	**HN 5.1.a – Develop an individual-centered engagement approach for assisting the homeless.** Implement a street outreach, navigation and engagement approach that includes building a personal connection with the individuals, assessing their immediate needs, and working to identify and overcome barriers to improve health status and social support network, and address their housing needs.	CDD, Monterey County Department of Social Services (MCDSS), Service Providers, Monterey County Continuum of Care (CoC)	Short-Medium
	HN 5.1.b – Help individuals develop a housing plan. Implement a housing navigation approach that focuses on helping homeless individuals develop a housing plan, address the barriers identified during the plan or during regular navigation activities, and assist them with acquiring documentation and completing forms required for housing.	CDD, MCDSS, Service Providers, CoC	Medium
	HN 5.1.c – Hire and train Housing Locators. Housing Locators will, with support from a wide range of community members, focus on identifying and recruiting landlords willing to provide housing opportunities for homeless persons engaged by street outreach workers.	CDD, MCDSS, Service Providers, CoC	Medium
	HN 5.1.d – Help individuals keep their housing. Ensure home-based case management which focuses on helping persons with maintaining their housing by providing a balanced approach that helps clients receive necessary on-site and off-site supportive services consistent with a Housing First approach.	CDD, MCDSS, Service Providers, CoC	Medium
	HN 5.1.e – Create a "Move On" transition program. Implement a "Move On" program that identifies and transitions current permanent supportive housing residents who no longer require intensive services into other housing assistance programs including, but not limited to, Housing Choice Vouchers.	CDD, MCDSS, Service Providers, CBOs, CoC	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 5.1 (Continued)	**HN 5.1.f – Create a "Housing First" program.** Pursue grant funding opportunities with nonprofit partners to establish a "Housing First" program that provides no-barrier access to supportive housing and is staffed with a Housing Navigator and Housing Locator. Ensure that these services connect and link individuals with a Section 8 Voucher.	CDD, Service Providers, CBOs, CoC	Short
	HN 5.1.g – Continue to work with the Monterey County Health Department to conduct street outreach. Evaluate existing barriers to housing access, and propose strategies to expand access through rehabilitation.	CDD, Monterey County Health Department (MCHD)	Ongoing
	HN 5.1.h – Utilize Federal, State and Local Funding to reduce homelessness. Allocate HUD and California Department of Housing and Community Development (HCD) and other local funding to produce additional housing opportunities (i.e., emergency shelter, transitional housing and permanent supportive housing) and improve services (i.e. housing navigation, housing locators, street outreach, rapid re-housing) to reduce homelessness.	CDD, HUD, HCD, Service Providers, CoC, Non-Profit Housing Developers	Short-Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HN 5.2 – Continue to explore options for innovative and low-barrier temporary, transitional, and supportive housing alternatives, such as the Sprung Structure.	**HN 5.2.a – Create a program focused on moving homeless people from encampments to supportive housing.** Launch a pilot program that transitions homeless individuals from encampments to permanent supportive housing.	CDD, MCDSS, CBOs	Short
	HN 5.2.b – Develop incentives for landlords to offer units to persons experiencing homelessness. Provide financial incentives such as holding fees for vacant units, damage mitigation funds, and offsetting potential legal fees to encourage landlords to rent their available units to persons experiencing homelessness.	CDD, Property Owners, Property Management Firms	Short
	HN 5.2.c – Develop more supportive housing units. Increase the number of permanent supportive housing units for low-income persons with a disabling condition for which they pay no more than 30% of their adjusted monthly income and where case-specific services, such as education employment health care, substance use counseling and treatment, trauma care, and emergency assistance, will be provided.	CDD, CBOs	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
Hn 5.3 – Work to remove dismissible criminal records/barriers that are preventing individuals experiencing homelessness from being housed.	**HS 5.3.a – Advocate for the creation of a Homeless Court.** This court would consider the dismissal of criminal records/ barriers that could be removed in the interest of justice to facilitate homeless individuals getting into permanent housing.	Monterey County Courts, CDD, PD, CoC, Service Providers	Medium
HN 5.4 – Create an interdisciplinary team assist homeless individuals find housing.	**HS 5.4.a – Consider expanding the term of service of the Homeless Outreach Team (HOT) Officer within the Police Department.** Along with expanding the term of service, collaborate with Monterey County social workers, and Chinatown service providers to assist individuals experiencing homelessness find permanent housing.	CDD, PD, MCDSS, Service Providers	Medium

Soleda
MARKETPLACE

Economic Development

Chinatown will transform into a prosperous neighborhood by providing its residents with education and training opportunities to start up small businesses and participate in employment, and by diversifying its economy through business development and promotion as a cultural and arts hub. Expanding Chinatown's retail and commercial base provides a range of benefits for the community – new types of businesses increase consumer choice and access to everyday neighborhood services, create job opportunities for the local workforce, and generate tax revenue that can be reinvested into revitalization efforts. Chinatown's reputation as an important historic and cultural destination will be capitalized on to attract new residents and visitors resulting in improved economic activity.

6.1 INTRODUCTION

This Chapter focuses on advancing economic development and improving prosperity for Chinatown's residents. Current physical conditions pose many challenges such as property blight, contamination, poor infrastructure, and the lack of public and private investment. However, Chinatown's location, walkability, and number of vacant and under-utilized parcels offer a unique opportunity to stimulate investment and entrepreneurship and reshape this downtown adjacent neighborhood into a vibrant and thriving place. Chapter goals and policies will help reverse decades of isolation and disinvestment in Chinatown by improving its appearance, promoting the neighborhood as a cultural and arts destination, creating a critical mass of economic activity, supporting business growth, and increasing residents' access to education, training, and employment.

Guiding Principle Icon Key

- Economic Prosperity, Equity and Diversity
- Collaborative, Inclusive, and Engaged Decision-Making
- Housing Opportunities for All
- Liveable and Sustainable Community
- Healthy and Safe Community
- Connectivity, Access and Mobility
- Youth Are the Future
- A Community to Celebrate

Goal Summary

ED 1. Improve the Appearance and Cleanliness of Chinatown.

A safe and clean environment is requisite to attract more residents, visitors, private investment, and commercial activity to Chinatown. The neighborhood's current environment of blight, violent crime, and homelessness negatively impacts Chinatown's prospects of a vibrant economy that meets residents' needs. The City will need to find creative ways to work with residents and local businesses to expand the scope of sanitation improvements, such as street sweeping and trash pickup and develop a robust maintenance schedule and improved coordination to maintain a clean and safe neighborhood that is attractive and viable for private investment and commercial activity.

ED 2. Promote Chinatown's Identity as a Unique Cultural, Arts, and Shopping Destination.

Chinatown's rich multicultural history, culture and arts are assets that can be used to counteract the negative reputation of the neighborhood, and attract new residents, visitors, and investment to Chinatown. Promoting cultural programming and events such as the annual Asian and Obon Festivals as well as the creation of new cultural events will draw more residents and visitors to the neighborhood, increasing its economic activity. Coordinated promotion and branding efforts should include a new webpage that tells the neighborhood's multicultural story, showcases recent area improvements, and advertises upcoming events and promotes existing and new local businesses.

ED 3. Foster Business Creation, Retention, Expansion, And Attraction to Create a Critical Mass of Economic Activity Across the Neighborhood.

Growing the number and diversifying the type of business and services in Chinatown are essential to building a stronger economic base that creates job opportunities for Chinatown's workforce, provides retail options for the neighborhood's growing consumer base, and increases revenue for public and private re-investment in the neighborhood. Vacant and underutilized buildings and properties have the potential to become low-cost live/work units, business incubators, and flexible makerspaces for artists, entrepreneurs and emerging industries. These emerging businesses will need business education, technical assistance and access to capital to thrive.

ED 4. Increase Access to Education Training, Entrepreneurship Programs, and Employment Opportunities for Existing and Future Residents.

Accessible and affordable education, training, and career pathway programs will prepare current and future residents for higher paying employment opportunities thus improving their economic stability and quality of life. Programs should include targeted food culture and "Ag Tech" opportunities related to Salinas' agricultural industry, and focus support for marginalized populations, such as individuals experiencing homelessness and undocumented immigrants, who often face discrimination in the job market.

Guiding Principle Connection

Economic Prosperity, Equity and Diversity

Providing businesses and employees with the resources, training, support, and access to capital and education that they need will stimulate economic growth, support self-sufficiency and expand employment opportunities.

Healthy and Safe Community

Public safety and economic revitalization reinforce one another. People are more likely to patronize shops in low-crime areas. These new consumers in turn bring more "eyes on the street" to further deter criminal behavior and maintain a safer, cleaner neighborhood.

Housing Opportunities for All

Expanding households' access to employment opportunities and well-paying jobs provides the means to afford decent, safe, and secure housing. As incomes climb and savings accumulate, households will have access to homeownership opportunities to provide a greater degree of stability and accrue property wealth for future generations.

Youth Are the Future

Today's youth are the future workers of Salinas. Providing Chinatown's youth with educational pathways and technical training will equip them with the skills and experience necesary to achieve economic mobility and contribute to the community where they live.

Collaborative, Inclusive and Engaged Decision-Making

Securing resources needed to spur economic development requires transparent and sustained dialogue between stakeholders. Specifically, the City and the Chinatown community will continue to work on identifying obstacles to economic revitalization and will collaborate on solutions to eliminate these barriers.

Connectivity, Access and Mobility

A neighborhood's economic vitality relies on its local street infrastructure and mobility of its residents and visitors. Retrofitting Chinatown's streets to be more pedestrian-friendly can increase foot traffic, stimulating business activity for local retail shops and restaurants. Restored connections to adjacent neighborhoods and streetscape improvements along Chinatown's edges can grow its consumer base.

Livable and Sustainable Community

The demand for products and services in the "green economy" is growing precipitously across the nation. Chinatown can leverage its strengths in both manufacturing and agriculture to pave the way for new, eco-friendly companies to thrive in this area. Chinatown's businesses will also be encouraged to embrace sustainable practices in operations and tenant improvements.

A Community to Celebrate

A robust marketing campaign can promote and reinforce Chinatown's reputation as a historic and cultural destination, helping draw residents and visitors to patronize local establishments, and bring money to the neighborhood economy.

6.2 COMMUNITY ASSETS AND OPPORTUNITIES

Arts as an Economic Engine.

Chinatown is home to historic landmarks and religious and cultural resources that add value to the neighborhood by opening their facilities for community gatherings and activities. In addition, annual events such as the Asian and Obon Festivals celebrate the rich history and culture of Chinatown and attract visitors to the neighborhood. Opportunities exist for community arts to be used as an economic driver to activate vacant buildings and bottom floor retail space in new mixed-use developments. The artist display area that will be in Moon Gate Plaza's ground floor has the potential to bring a critical mass of artists and visitors to Chinatown. However, the opportunity to utilize arts and annual events as an economic engine cannot be maximized without first addressing Chinatown's physical condition and encampments. Coordinated communication with all stakeholders and development of a brand for Chinatown can transform current negative perception into a positive image.

Neighborhood Retail.

Chinatown's central location, walkability, and low land costs are ideal for innovative and new business concepts, including local and ethnic restaurants. Organizations such as El Pájaro Community Development Corporation (ELPCDC), also support small business growth by providing an array of education, technical assistance and access to financial resources. However, the key to supporting start-ups, small businesses and entrepreneurial success is attracting clientele to an area that feels safe and inviting. Unfortunately, these conditions are not presently in place in the neighborhood. Encampments need to be better managed and routine clean-ups and beautification put in place. In addition, connections to Downtown, the ITC, and the rest of the City must be re-established to diversify and grow Chinatown's economic base. As the neighborhood transforms, new and creative approaches are needed to provide fresh, healthy, local, and affordable foods and other neighborhood services and retail options to existing and future Chinatown residents.

Training Programs for Target Populations.

Several organizations in Chinatown are dedicated to connecting individuals experiencing homelessness with educational, social and housing resources. California State University at Monterey Bay (CSUMB) operates a Student Learning Center in the heart of Chinatown that provides free classes in computer literacy and job readiness for the homeless population. The Downtown Streets Team program not only offers homeless individuals financial stipends for community service, but also connects participants to housing and employment opportunities. In return participants support neighborhood clean-up and beautification efforts. These resources, and others, are key to support individuals' transition from a life on the street into permanent housing and employment.

Local Agriculture and Food Production.

As the "Salad Bowl of the World," the Salinas Valley is poised to capitalize on a growing interest in local, sustainable food production, agricultural technology, and an ever-growing culinary culture. Chinatown

is an ideal location for small agriculture start-ups, food production, and shared kitchen facilities, offering easy access to Downtown bars, restaurants, cafés, coffee shops, and bakeries at a low cost. A few facilities in Chinatown have large commercial kitchens which may provide opportunities for shared usage to support catering and small-scale food production.

6.3 GOALS, POLICIES, AND ACTIONS

The vision, goals, and recommendations contained within this Revitalization Plan were developed through an intensive community engagement process. Each of the six primary topic areas was evaluated and refined by a Working Group of residents and stakeholders, presented at a series of public Open Houses, and vetted by a Technical Advisory Committee. These results then evolved into the Goals, Policies and Actions found in this chapter.

This section contains two parts. The first part is a narrative describing each of the Economic Development goals and policies – providing context, rationale, and framing for why certain policies or programs are important. The matrix that follows the narrative includes actions necessary to implement the goals and policies along with other, more detailed recommendations including the responsible entity or organization and the timeframe.

ED 1. Improve the Appearance and Cleanliness of Chinatown.

Chinatown has an image problem. Over the past two decades, widespread blight, violent crime, and homelessness have overshadowed the neighborhood's rich cultural history, existing businesses, and strong community based organizations.

Not surprisingly, these circumstances profoundly impact Chinatown's prospects of creating an inclusive and growing economy. Businesses require a safe, supportive, and attractive public environment to be successful, which is largely lacking in Chinatown. Many in the community point to crime, homelessness,

Historic and present day view along Soledad Street and the Chop Suey Republic Cafe Building in Chinatown.

Gutierrez Drive In Restaurant is the only food service establishment in the neighborhood.

Arold' s Upholsetry is one of a few light industrial and manufactoring establishments in the Chinatown Core.

poor sanitation, and dilapidated infrastructure as major deterrents to private investment. For this reason, minimal business expansion has occurred in the area over the last couple of decades. Poor neighborhood conditions contribute to a stagnant local economy, and a stagnant economy contributes to chronic unemployment and disinvestment in the community.

Improving Chinatown's physical condition is a prerequisite for economic development. The City will need to find creative ways to finance new initiatives that beautify Chinatown so that it becomes an attractive and viable area for commercial activity. This includes working with residents, local businesses and property owners to expand the scope of maintenance efforts, such as coordinated street sweeping and trash pickup. Establishing regular community organized clean-ups and a new "Adopt-a-Block" program can encourage local businesses, property owners, residents and nonprofit organizations to take ownership of their surrounding areas.

ED 2. Promote Chinatown's Identity as a Unique Cultural, Arts, and Shopping Destination.

Establishing design guidelines and coordinated marketing are required to change current negative perceptions regarding Chinatown. A website should be developed to tell the neighborhood's story, showcase recent improvements to the area, and advertise upcoming social events. Efforts to combat negative perceptions will in turn entice outsiders to visit Chinatown more frequently, helping to open possibilities for new private investment and expand the consumer base for local retailers.

To advance economic development, Chinatown should be promoted as an arts and cultural destination. When people

visit galleries, other cultural institutions, and attend events, they infuse money into the local economy by paying admission fees and patronizing nearby restaurants, cafes, and shops. Chinatown's rich cultural heritage lends itself well to the creation of new cultural spaces that can serve this very purpose. New places to gather for performances, entertainment, and other street activities will be created to foster creative expression while also showcasing the vibrancy of the local culture.

ED 3. Foster Business Creation, Retention, Expansion, And Attraction to Create a Critical Mass of Economic Activity Across the Neighborhood.

Growing Chinatown's commercial base is essential to the neighborhood's revitalization. Businesses provide much-needed job opportunities for the workforce, creating pathways toward economic mobility that can improve households' financial security. When employees have more disposable income, they become more likely to put money back into the local economy as consumers.

Business growth can take various forms. For example, entrepreneurship is often praised for its ability to stimulate local economic development as it leads to innovation – whether in process or product. This type of business expansion eventually increases local employment demand, providing dynamic job opportunities for workers who would otherwise have few options.

Strategies to stimulate commercial activity extend to the retail sector as well. In any vibrant neighborhood, a "main street" serves as an anchor for local commerce. By clustering retail options close together, these corridors provide convenient access to a broad range of amenities – including grocery stores, coffee shops, hair salons, and gyms – all within walking distance of one another. This clustering of uses increases foot traffic in public spaces, which allows businesses to interface more frequently with consumers, thus generating more sales revenue.

A range of financial, regulatory, and programmatic tools can be used to support Chinatown's commercial renaissance. To promote small business growth, the City can create a new microloan program to help local entrepreneurs get off the ground more easily. Partnerships with community organizations and other business

OPPORTUNITY ZONE

The federal Opportunity Zones (OZ) Program was created by the 2017 Tax Cuts and Jobs Act. These zones are designed to stimulate economic development and job creation in distressed communities throughout the U.S. by providing tax benefits to investors who invest capital in eligible OZ areas. The Chinatown planning area is entirely within Census Tract 13, which is one of 5 Census Tracts in the City designated as OZ.

NEW MARKET TAX CREDIT

The NMTC Program attracts private sector investment capital to underserved markets by permitting individual and corporate investors to receive a credit against their federal income taxes in exchange for equity investments in for-profit or non-profit operating businesses and real estate projects in low-income communities. The NMTC program is flexible with regard to project type and purpose and can be used to finance equipment, operations, or real estate. Real estate financing can purchase or rehabilitate retail, manufacturing, agriculture, community facilities (e.g., health services, museums, or charter schools), rental or for-sale housing, or combinations of these.

assistance providers can also facilitate the creation of new live/work units, business incubators, and flexible makerspaces that can accommodate a variety of existing and emerging industries. Chinatown's designation as a federal Opportunity Zone and New Market Tax Credit Program eligibility can also incentivize private sector investment.

ED 4. Increase Access to Education Training, Entrepreneurship Programs, and Employment Opportunities for Existing and Future Residents.

Workforce development is essential to ensuring inclusive economic growth. Structural changes to a neighborhood's economic base demand a high degree of adaptability from local workers, which exerts pressure on those with limited skills who wish to remain employable in an ever-evolving job market. Just 35% of Chinatown's current population has a high school diploma or higher education - these individuals may struggle to find opportunities to participate in new economic opportunities without targeted and sustained support.

The agricultural industry, which employs nearly one out of every four workers in Monterey County, presents a unique opportunity for education, training and job opportunities in Chinatown. As advancements in automation continue to reduce labor demand in the fields, many workers can be transitioned into the blossoming "AgTech" industry. Creating pathways for Chinatown's youth and workforce to enter this field presents an opportunity for an inclusive economic development process.

Individuals experiencing homelessness face greater challenges re-entering the workforce or finding permanent employment due to barriers that exist in their lives. Barriers that prevents them from finding or retaining employment range from having a criminal record to a drug/alcohol addiction, a chronic mental health problem, and/or a physical disability. The 2017 Chinatown Count and Survey conducted by the City and the Institute of Urban Initiatives showed that 18% of the homeless surveyed in Chinatown were employed, most of them having a part-time job and only a few of them having a full-time job. A great majority of the survey participants, 60.7%, indicated that they were unemployed. Survey participants

indicated that the main reasons for being unemployed included: a physical disabling condition (24.6%), a drug/alcohol problem (24.6%), a health problem(s) (14.8%), and no tools to perform a trade (21.3%). Non-profit organizations like the CSUMB Student Learning Center as well as the Downtown Streets Team, both of which are located in Chinatown, offer employment training and assist participants with gaining skills needed to re-enter the workforce. Continued efforts to remove employment barriers will assist homeless individuals to be better prepare for employment opportunities.

To create a truly livable and inclusive Chinatown, this Revitalization Plan outlines an agenda that centers on closing the local skills gap. The City and its partners can implement new job training programs, mentorship schemes, and other strategies following best practices such as We Are MORTAR that equip workers with the tools they need to thrive for years to come. This will include targeted support for marginalized populations, such as undocumented immigrants, formerly incarcerated, and homeless individuals who often face discrimination and "implicit bias" in the job market.

The Ted Taylor Ag Vocational Center will offer training for highly -skilled, living-wage agricultural jobs and a high school diploma.

Ted Ponton Glass Shop in Chinatown.

WE ARE MORTAR

Since 2014, MORTAR has provided historically marginalized entrepreneurs access to resources needed to start and run successful businesses. During a 15-week Academy aspiring entrepreneurs make real decisions as they develop a business plan and determine if entrepreneurship is a path they want to continue to pursue. Academy graduates receive 18-months of continued mentoring and coaching, technical and marketing assistance, accounting and financial literacy and support accessing capital. Program Alumni have launched arts and entertainment, retail and service, food and beverage, and social enterprises.

ED 1. IMPROVE THE APPEARANCE AND CLEANLINESS OF CHINATOWN.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 1.1 – Develop a streetscape plan to beautify the neighborhood and attract businesses.	**ED 1.1.a. Develop a Streetscape Plan.** Work with community members to create a streetscape plan that identifies amenities that will support a vibrant and clean retail corridor.	Community Development Department (CDD), Property Owners, Business Owners, Public Works Department (PW), Private Developers, Community Base Organizations (CBOs)	Medium
	ED 1.1.b. Focus on Keeping Public Spaces Clean and Safe. Prioritize safety and sanitation improvements on the public right of way to help encourage the return of local small and medium sized "mom and pop" businesses.	CDD, PW, Business Owners, Property Owners	Medium
	ED 1.1.c. Enlist Business and Property Owners to Maintain Streetscape. Establish maintenance agreements with business and property owners to maintain the streetscape.	CDD, PW, Business Owners, Property Owners	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 1.2– Establish a consistent neighborhood maintenance program.	**ED 1.2.a. Expand Trash Pick-up and Street Sweeping Schedules.** Expand trash pick-up and street sweeping schedules. Set regular maintenance schedules that meet the needs of the district and community. Educate the community so that cars can be removed to maximize trash pick-up and street sweeping.	Property Owners, Business Owners, Residents, Business Associations, CBOs	Short
	ED 1.2.b. Establish and Adopt-a-Block Program. Establish an Adopt-a-Block Program. Create program guidelines and seek program funding sources. Engage corporations, businesses, and faith-based organizations to take ownership of maintaining the areas around their businesses.	Business Associations	Short
	ED 1.2.c. Increase Number of Organized Clean-Ups. Increase the number of organized community clean-ups. Improve coordination and execution of quarterly corridor clean-ups that instill a sense of pride in the community.	City, Business Associations, Affordable Developments	Immediate
	ED 1.2.d. Continue to Collaborate with Downtown Streets Team. Partner and continue to collaborate with Downtown Streets Team to work with homeless individuals to maintain the public streets and places in Chinatown and keep them free of debris and trash.	CDD, Downtown Streets Team	Short
ED 1.3– Support creation of key cultural spaces, such as the creation of an Asian Museum/Cultural Center to bring visitors to Chinatown.	**ED 1.3.a. Transform Republic Café into Museum or Cultural Center.** Partner with community stakeholders and nonprofit partners to transform the Republic Café into an Asian Museum and/or Cultural Center.	CDD, Nonprofit Partners, Asian Cultural Experience (ACE), Property Owner	Long
	ED 1.3.b. Seek Funding for Museum or Cultural Center. Engage potential donors and foundations that could help fund, program, and operate the museum/cultural center.	CDD, Nonprofit Partners, Community Foundations	Long

ED 2. PROMOTE CHINATOWN'S IDENTITY AS A UNIQUE CULTURAL, ARTS, AND SHOPPING DESTINATION.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 2.1 – Develop a neighborhood branding and promotional strategy as commercial activity in the Chinatown core increases to promote Chinatown as a cultural, art and retail destination.	**ED 2.1.a – Develop a district identity theme.** Create a district branding program that includes logo, hashtag, and slogan that focuses on the uniqueness of Chinatown. Consider investing in a branding expert to develop and coordinate branding efforts.	City, Business Owners, Property Owners, CBOs	Short
	ED 2.1.b – Use social media to promote branding and district identity and pride. Improve social media presence, educating business owners on social media platforms and distributing promotional content to advertise Chinatown businesses.	City, Business Owners, Property Owners, CBOs, Residents	Short
	ED 2.1.c – Promote Chinatown businesses. Create a website for Chinatown that promotes district efforts and local businesses through an online business directory.	CDD, CBOs, Business Owners, Property Owners	Short
	ED 2.1.d. Establish a Chinatown Community Calendar. Create a Chinatown events calendar and increase the number of community, cultural, and art events. Work with community groups and businesses to develop calendar and come-up with new and culturally relevant events.	CDD, CBOs, Business Owners, Property Owners	Short
	ED 2.1.e. Include Business and Property Owners on Community Advisory Boards. Consider the creation and/or formation of a Community Business Association for the existing and new businesses in Chinatown.	CDD, Business Owners, Property Owners	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 2.2 – Establish corridor design guidelines to improve appearance, create district identity, and increase safety.	**ED 2.2.a – Establish Design Guidelines.** Create standards for colors, materials, building form, and frontage character that reflect Chinatown as a cultural and arts district for existing and new businesses to follow.	Property Owners, Business Owners, Residents, Residents, City	Short
	ED 2.2.b – Promote art in privately-owned spaces. Create a program to encourage the creation of more murals on blank business walls.	Arts Commission, Business Owners, Community Arts Groups	Short
	ED 2.2.c – Implement Crime Prevention Through Environmental Design (CPTED) concepts. Incorporate CPTED principles into design guidelines as a proven strategy for increased safety and community driven, neighborhood enhancements. Work with developers and business owners to incorporate CPTED design guidelines.		Short

ED 3. FOSTER BUSINESS CREATION, RETENTION, EXPANSION, AND ATTRACTION TO CREATE A CRITICAL MASS OF ECONOMIC ACTIVITY ACROSS THE NEIGHBORHOOD.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 3.1 – Transform Soledad Street into a retail-oriented corridor with a diverse array of amenities and businesses.	**ED 3.1.a. Create a Neighborhood Retail Strategy.** Work with community stakeholders to develop a strategy on how to attract neighborhood services such as retail, live/work units, restaurants, and art studios.	CDD, NDC, Economic Development Division (EDD), Property Owners, Business Owners, Developers	Medium
ED 3.2 – Identify vacant and/or underutilized buildings that could be used as incubator spaces for innovative business models that nurture entrepreneurship and attract home grown businesses.	**ED 3.2.a – Research Co-Working or Incubator Space Models.** Collaborate with business assistance providers to investigate successful models in other cities. Explore models that incorporate Chinatown's rich cultural, social, and artistic identity, combined with technology.	CDD, Property Owners, Business Owners	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 3.3 – Expand access to capital for existing and prospective small businesses in Chinatown that serve the daily needs of the existing and growing local population.	**ED 3.3.a. Identify Funding for Business Expansion and Property Improvements.** Pursue funding from the CDBG program and Grow Salinas Funds to assist business owners in rehabilitating and expanding their properties.	CDD, National Development Council (NDC)	Ongoing
	ED 3.3.b. Increase Business Access to Capital. Connect businesses to microloan programs to support their growth and expansion.	CDD, Pajaro Community Development Corporation (Pajaro CDC), Small Business Development Center (SBDC), Other Lenders	Medium
	ED 3.3.c. Simplify Regulatory Processes. Seek opportunities to streamline the business permitting and licensing process for new businesses seeking to locate or expand services in Chinatown.	CDD	Short
	ED 3.3.d – Create a Business Navigator Position. Create a City staff position to help current and future Chinatown business owners navigate regulatory processes from start to finish.	CDD	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 3.3 (Continued)	**ED 3.3.e – Develop a Business Coach/Mentorship Program.** Create bilingual coaching/mentorship opportunities that can help business owners write business plans. Match entrepreneurs with existing business owners. Identify both veteran and younger business owners to be mentors.	CDD, Pajaro CDC	Short
	ED 3.3.f. Provide Business Education and Technical Assistance. Provide relevant, bilingual business assistance workshops in topics like ADA Compliance, Lease Negotiation, Customer Service, Loans, Management, Business Plans, Bookkeeping, and Social Media. Explore offering online training and services.	CDD, Pajaro CDC	
	ED 3.3g. Foster Entrepreneurship. Research and pursue partnerships with national nonprofits, such as "We Are Mortar," that collaborate with local partners to support local entrepreneurship.	CDD, Non-Profit Partners	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 3.4 – Highlight investment opportunities in Chinatown for business owners and prospective investors.	**ED 3.4.a- Promote Chinatown's Investment Opportunities.** Utilize Chinatown's qualifying census tracts under the Opportunity Zone and New Market Tax Credit to attract investors.	CDD, Economic Development Division	Medium

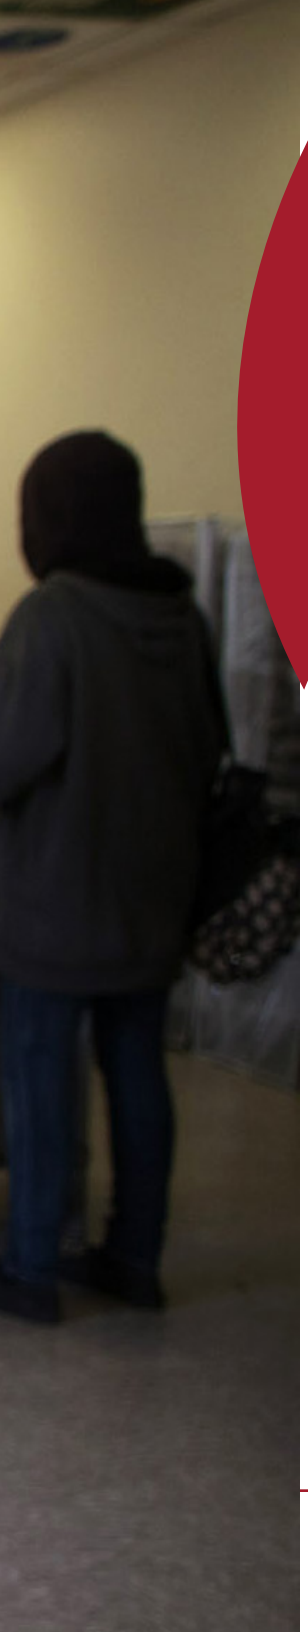
ED 4. INCREASE ACCESS TO EDUCATION TRAINING, ENTREPRENEURSHIP PROGRAMS AND EMPLOYMENT OPPORTUNITIES FOR EXISTING AND FUTURE RESIDENTS.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 4.1 – Create or recruit new job training programs (e.g., JobCorps) to both bring job opportunities for Chinatown's residents and satisfy the needs of local industry.	**ED 4.1a – Expand Vocational Training Opportunities.** Partner with regional stakeholders to create new, culturally competent vocational training programs and career fairs around retail and art business models and increase access to existing ones.	CDD, CBOs, Hartnell, California State University, Monterey Bay (CSUMB), Workforce Development Board	Short
	ED 4.1.b – Promote Available Educational Resources. Connect residents to educational resources that are tailored to the needs of the local industry through newsletters, program directories, promotional brochures, and displays at existing community centers.	CDD, CBOs, Center for Employment Center, Salinas Adult School	Short
	ED 4.1.c – Foster Relationships with Hartnell College. Collaborate with Hartnell College and existing community organizations and affordable developments to forge both informal and formal relationships with the Chinatown community via internships, workshops, and open house events.	CDD, Hartnell College, Buddhist Temple of Salinas, Chinese Association of Salinas (CAS), Chinese American Citizens Alliance (CACA), Buddhist Temple, Filipino Community - Salinas Valley (FCSV), Housing Authority of the County of Monterey (HACM)	Medium
	ED 4.1.d – Recruit College Graduates for Americorps VISTA Program. Engage community organizations, nonprofits, etc. to pursue Americorps partnerships such as CivicSpark to attract recent college graduates to support and implement affordable housing, mobility, and other projects/ initiatives.	CDD	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 4.2 – Leverage local agriculture, food, and non-profit resources to create entrepreneurial development, micro-lending, and job opportunities.	**ED 4.2.a – Foster Opportunities in Food Culture.** Educate residents interested in operating a Home Kitchen Microenterprise.	CDD, CBOs, County Health Department, Residents	Short
	ED 4.2.b – Establish a Community Kitchen. Create a community commercial kitchen on the ground-floor of a new mixed-use development or adaptive reuse building.	CDD, CBOs, For-Profit and Non-Profit Developers	Medium
	ED 4.2.c – Create Culinary Incubator Space. Establish strategic partnerships with El Pajaro CDC and stakeholders in the agricultural industry to create food startup opportunities in incubator spaces.	CDD, CBOs, El Pajaro CDC	Short
	ED 4.2.d – Pilot a Culinary Career Pathway Program. Develop a training program for those interested in pursuing a culinary career.	CDD, CBOs, El Pajaro, CDC, Rancho Cielo	Short
ED 4.3 – Support organizations that assist the homeless, undocumented immigrants, and the formerly incarcerated find employment and become self-sufficient.	**ED 4.3.a – Promote Downtown Streets Team.** Collaborate with Downtown Streets Team and promote their program as a steppingstone for homeless individuals into employment.	CDD, Downtown Streets Team (DST)	Immediate
	ED 4.3.b – Remove Barriers to Job-Entry and Re-Entry. Remove barriers to job entry and re-entry via implicit bias training and awareness workshops.	CDD, CBOs, Service Providers, DST	Short
	ED 4.3.c – Evaluate Employment Pathways for Marginalized Populations. Evaluate the idea of creating educational and vocational training programs that target the formerly incarcerated or individuals experiencing homelessness.	CDD, CBOs, Service Providers, DST	Short-Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
ED 4.4 – Integrate adult learning programming, such as general education development (GED) courses and English as a Second Language (ESL) classes, into vocational training and workforce development programs.	**ED 4.4.a – Develop Adult Career Pathways.** Create career pathways that help adults obtain a GED and develop the language skills required to enter into postsecondary and vocational training.	School Districts, CBOs, HACM, MidPen Housing	Ongoing
	ED 4.4.b – Expand adult learning opportunities. Collaborate with workforce development board and service providers to expand adult learning opportunities including workforce development training at existing community centers and affordable housing developments.	Workforce Development Board, School Districts, CBOs, HACM, MidPen Housing	Ongoing
ED 4.5 – Provide childcare professional development opportunities for Chinatown residents.	**ED 4.5.a. – Expand Childcare Career Pathways.** Expand pathways for residents to become licensed childcare providers, including advocating for Hartnell Community College to add state-required childcare certification courses.	Hartnell College, Residents	Ongoing
	ED 4.5.b – Connect childcare operators with business and financial education. Provide small business and financial management classes to support providers with establishing, managing, and expanding their business operations.	City, Hartnell College, Residents,	Ongoing
	ED 4.5.c – Help individuals navigate the childcare licensing process. Collaborate with child development organizations to provide educational workshops and materials to assist potential childcare providers with understanding and complying with State regulatory processes.	Mexican American Opportunity Foundation	Short

Calistoga



Health and Safety

Residents, business owners, faith-based and cultural organizations, service providers, and the City have coalesced around prioritizing the creation of a safe and clean Chinatown. Through programs like Downtown Streets Team and the Homeless Outreach Team (HOT) Officer, the City has invested as never before in creating a clean, safe, and welcoming community poised for new housing and businesses. By stepping up collective efforts around health and safety, Chinatown will finally become a vibrant, clean and well-maintained neighborhood.

Chinatown stakeholders are willing and ready to build trusting partnerships with public safety officials (police, fire, and code enforcement) to reduce criminal activity and blight and make critical infrastructure investments around lighting and security. Through continued collaboration with service providers, the Health Department, hospitals, and the City, medical and mental health services can be expanded to residents including those experiencing homelessness. With so many vacant properties, Chinatown is ripe for revitalization so long as remediation of these opportunity sites occurs. Significant affordable housing development has made Chinatown home to a large residential population in need of greater access to healthy and fresh foods.

7.1 INTRODUCTION

During the planning process, many in the community prioritized improvements to public safety, security, and health. However, the ongoing homeless encampments were identified as the biggest impediment to a safe and clean Chinatown. Ultimately, the solution to Chinatown's encampments is housing, but in the meantime, there must be a balance between homeless services including medical and mental health, enforcement, security enhancements, and clean-up efforts. In the short-term, it is critical that daytime camping on the public right of way in Chinatown no longer occurs especially as new case management services and new housing options become available. Chinatown's stakeholders effectively determined the most important actions to improve health and safety. As a result, this Chapter focuses on four main goals and associated policies and actions including: improving cleanliness and safety, renovating properties, strengthening the provision of social services, and increasing access to healthy food.

Guiding Principle Icon Key

- Economic Prosperity, Equity and Diversity
- Collaborative, Inclusive, and Engaged Decision-Making
- Housing Opportunities for All
- Liveable and Sustainable Community
- Healthy and Safe Community
- Connectivity, Access and Mobility
- Youth Are the Future
- A Community to Celebrate

Goal Summary

HS 1. Cultivate a Safe and Clean Neighborhood Environment in Which Residents, Employees, and Visitors Feel Comfortable and Safe at All Times.

A safe and clean environment encourages residents to spend time outside their homes while being active and socializing with neighbors. It also brings visitors to the neighborhood and increases foot traffic for local shops. By stimulating economic development, new businesses will be more willing to invest in the neighborhood, thus creating job opportunities for the local workforce invest in the neighborhood and creating job opportunities for the local workforce.

HS 2. Continue to Provide Needed Social Services to Stabilize the Homeless Population.

For a long time, homeless services have been concentrated in Chinatown. While these services are becoming more widely distributed throughout Salinas and Monterey County, unsheltered residents must continue to be supported by these social services throughout the revitalization process. As new housing and increased services for those experiencing homelessness are provided, daytime camping must in turn be phased out.

HS 3. Address Contaminated Parcels, Dilapidated Buildings, and Abandoned Properties to Ensure They Are Safe to Residents and Visitors.

Parts of Chinatown's built environment pose serious risks to public welfare. A dilapidated built environment can serve as an invitation for criminal behavior and pose serious fire risks. Additionally, exposure to hazardous building materials – like lead and asbestos – can cause health complications. A robust set of improvements will ensure the community's health and safety for years to come.

HS 4. Expand Access to Healthy and Affordable Foods for All Residents.

Creating a strong and resilient community requires a healthy food culture. Currently, access to healthy and affordable foods is severely limited in Chinatown except for established food assistance programs. Efforts should focus on organizing a grocery store, farmers' market, community garden, buying club, community kitchen, or/and educational campaign, which can go a long way in expanding access to fresh produce.

Guiding Principle Connection

Economic Prosperity, Equity and Diversity

Public health and safety are directly tied to the economy, at the individual and neighborhood levels. Reducing crime is also considered a prerequisite to attracting new private investment in a neighborhood. In Chinatown, challenges from homelessness, criminal activity, blight and trash accumulation are depressing economic activity and causing businesses to leave. Several strong businesses remain, but it is critical to work with them to address their immediate safety and cleanliness concerns.

Healthy and Safe Community

Individuals are less likely to walk, cycle, or exercise in public spaces such as parks and gymnasiums when they do not feel safe in their neighborhood. Lack of access to health and affordable foods can also lead to poor diets and compromise community health. Although Chinatown has limited access to public parks, numerous private facilitates can provide recreational opportunities in a safe setting. Service providers can continue and expand their role in fulfilling food security for Chinatown's low-income residents.

Housing Opportunities for All

Promoting public health and safety starts at home. In Chinatown, this means removing lead-based paints and remediating properties contaminated with lead or asbestos. It also means addressing blighted and vacant buildings that pose a risk to the new housing developments.

Youth Are the Future

Childhood experiences have a huge influence in shaping the people we become. Creating a safe and secure neighborhood means ensuring a bright future for our youth. Chinatown's sizable youth population makes it more critical than ever to ensure the neighborhood is safe and has access to health services for families.

Collaborative, Inclusive and Engaged Decision-Making

Community stakeholders and residents can bring attention to key safety concerns when they are empowered to participate in planning and governing. This improves transparency and creates an open dialogue with public agencies, ultimately resulting in public action to address concerns in the community. Community stakeholders have been extremely engaged in this planning process and are willing to participate in plan implementation.

Connectivity, Access and Mobility

Creating a safe interconnected network of bike lanes, trails, and greenways can encourage residents to walk and cycle through their neighborhood. Little investment has been made to improve Chinatown's connectivity and basic infrastructure; but through funding can be allocated toward improving infrastructure, connectivity, and overall safety in Chinatown.

Livable and Sustainable Community

Public health and safety are dependent upon the quality and sustainability of the local environment. Compact urban spaces, attractive neighborhoods, and community gardens are ideal components for a more livable Chinatown. Historically unregulated businesses must also be remediated for successful environmental redevelopment.

A Community to Celebrate

Vibrant public facilities offer spaces for the community to congregate, recreate, and socialize. They also increase "eyes on the street," which help to deter crime, encourage community gatherings and celebrations, and promote wellness for all. Community celebrations, like the Chinatown Block Party, can also be used to connect residents to health and housing services.

"EYES ON THE STREET"

The phrase 'eyes on the street' refers to an increased level of activity on a street and perceived safety to users as a result of the physical design. Well-lit streets, with pedestrian-scale amenities, clear lines of sight, and visibility into storefront windows create an environment that encourages higher levels of activity and reduces crime, thus improving neighborhood's perceived safety and social cohesion.

7.2 COMMUNITY ASSETS AND OPPORTUNITIES

Access to Fresh and Healthy Food.

Though there is a shortage of healthy and fresh food options within the neighborhood, Chinatown benefits from the social service agencies that provide food assistance. The Food Bank of Monterey County is the primary food resource to a network of 140 Monterey County nonprofit agencies that serve the elderly, chronically ill, homeless, unemployed and working poor. Member agencies include multiple service providers in Chinatown such as Dorothy's Place, Victory Mission, and Sun Street Centers. By feeding over 10,800 people every week, the Food Bank also provides valuable assistance to low-income residents by reducing food expenses so that they can afford to pay rent and stay housed. Dorothy's Place uses donations from the Food Bank to prepare nutritious meals for very low-income residents and those experiencing homelessness. The commercial kitchen, known as Dorothy's Kitchen, serves approximately 400 meals daily in Chinatown. This food assistance is often an effective outreach tool and a way to connect people who are experiencing homelessness with case management.

Structured food assistance programs have fulfilled an essential need; however, unstructured food donations have actually worsened conditions in Chinatown. Salinas residents frequently go down to Chinatown and hand out food directly to homeless individuals. Although it may feel like a good deed, it is often extending the amount of time people live on the street before seeking help. More importantly, it adds to safety and cleanliness problems in Chinatown by increasing waste that attract vermin, which can carry disease. Instead Salinas residents should be encouraged to donate and volunteer for established food assistance programs.

Access to a Strong Network of Social Service Providers.

Chinatown has an established network of social service providers dedicated to addressing homelessness. These long-standing organizations have been active participants in revitalization efforts while strongly advocating for the needs of those experiencing homelessness. Although these organizations have always worked well together, the revitalization plan, along

with new state homeless and housing funding, provides an even better incentive to closely collaborate especially around housing. The California Department of Housing and Community Development (HCD), along with other state agencies, also offer technical assistance to help jurisdictions and service providers build capacity to forge partnerships, leverage resources, and improve services and housing outcomes.

Clean Streets and Public Spaces

Chinatown has had ongoing sanitation challenges largely due to the concentration of encampments, which have led to accumulation of tons of trash and public urination and defecation. This problem is exacerbated by direct donations of household items, clothes, and food to homeless individuals as well as illegal dumping that adds to the waste stream. To mitigate immediate life and safety concerns associated with all this trash, Public Works has been conducting regular and expensive clean-up efforts. However, the City wanted a more sustainable solution and therefore, recruited the Downtown Streets Team (DST) Program to expand to Salinas. Through DST, homeless team members work Monday through Friday, four hours per day to keep Chinatown clean. The members also receive case management and housing navigation services. The Program has been a huge success resulting in a significantly cleaner Chinatown. In addition to DST, the City also extended access to bathroom facilities through strategic use of port-a-potties and opened of hygiene services at the Chinatown Navigation Center. These efforts have helped to reduce human waste along public streets, sidewalks, and other spaces.

Clean Streets and Public Spaces

Chinatown is regarded as one of the most dangerous areas of the City and is known for its open-air drug market. Due to changes in California law, it is harder to prosecute the narcotics trade, making it more difficult to halt the activity in Chinatown. This reality has frustrated both law enforcement and community stakeholders who would like to stop drug sales and significantly reduce crime. Despite these challenges, the Salinas Police Department (SPD) has stepped up investigations and worked effectively with stakeholders to identify perpetrators and make big arrests.

SPD's commitment to Chinatown is not just about enforcement, but also about community policing. Over a year ago, SPD initiated the Homeless Outreach Team (HOT) program based upon similar models in other communities to proactively engage those experiencing homelessness. A HOT Officer has been assigned to coordinate this team and works closely with Community Development's Housing Division. Early next year, SPD will establish offices on the ground floor of Moon Gate Plaza to support both its enforcement and community policing functions. These efforts are paying off by building trusting relationships between Chinatown stakeholders and SPD, and by creating a safer environment for everyone.

7.3 GOALS, POLICIES, AND ACTIONS

The vision, goals, and recommendations in this Revitalization Plan were developed through an intensive community engagement process. Each of the six primary topic areas was evaluated and refined by a Working Group of residents and stakeholders, presented at a series of public Open Houses, and vetted by a Technical Advisory Committee. These results then evolved into the Goals, Policies and Actions found in this chapter.

This section contains two parts. The first is a narrative describing each of the Health and Safety goals and policies – providing context, rationale, and framing for why certain policies or programs are important. The matrix that follows the narrative includes actions necessary to implement the goals and policies along with other, more detailed recommendations including the responsible entity or organization and the timeframe.

HS 1. Cultivate a Safe and Clean Neighborhood Environment in Which Residents, Employees, and Visitors Feel Comfortable and Safe at All Times.

A community thrives when its members feel safe and secure. People are more likely to spend time in public when they are comfortable with their surroundings. As a result, there are more interactions between neighbors, active lifestyles, and recreational opportunities for children at all times of the day. A lack of safety can also compromise a community's economic wellbeing. Prospective businesses are less likely to invest or expand in higher-crime areas due to fears of property crime, theft, or a lack of robust consumer base for retail establishments.

New housing development in Chinatown is starting to create a positive and secure perception of the neighborhood, but further work must still be done. Improving safety in Chinatown will require robust investment in resident, civic, and proprietor engagement, alongside evaluating targeted infrastructure improvements to support the phased transitioning of the district envisioned by stakeholders and residents alike. New lighting across the neighborhood will help reduce or eliminate dark spots along key neighborhood

COMMUNITY PARAMEDICINE TEAM

Community Paramedicine is a new and evolving healthcare model that combines public health, primary healthcare, and preventative services. A CP team is group of licensed paramedics and EMS professionals that provide and connect patients to primary care services, offer post hospital follow-up care, and integrate local health agencies and providers with underserved communities.

corridors, including Bridge, Soledad, California, and East Lake Streets. Other initiatives that could assist in changing this perspective include the regular and continued corridor maintenance that is currently underway by the Downtown Streets Team, expanding and continuing the Community Policing model of the Homeless Outreach Team; (HOT) Officer in Chinatown; as well as a donor education campaign to direct and better manage civic generosity. New design guidelines and development standards through the implementation of Crime Prevention Through Environmental Design (CPTED) can also require ground-floor storefronts to include large, unobstructed windows and public seating in high-traffic, high-visibility areas. With a combination of all these initiatives and with an increased the number of "eyes on the street," it is possible to deter criminal behavior and illegal activities and increase the community's sense of security.

HS 2. Continue to Provide Needed Social Services to Stabilize the Homeless Population.

Over the past few decades, cities across the nation have treated homelessness as a criminal behavior rather than a complex multi-dimensional public health issue that encompasses current socioeconomic determinants as well as personal factors like exposure to trauma and/or breakdowns in family structure. Some unsheltered individuals engage in survival-based behaviors or turn to substance abuse to attempt to meet their own personal needs or to cope with the overwhelming circumstances they face on a daily basis.

The 2017 Chinatown Count and Survey conducted by the City and the Institute of Urban Initiatives revealed that 42.6% of individuals living in the streets of Chinatown were homeless for the very first time in their lives. Also, 54% of individuals were chronically homeless for one year or more and 71% of the individuals experiencing homelessness in Chinatown were City residents. Many individuals living in Chinatown streets became homeless for a combination of reasons, but the most recurring reasons were the high cost of rent, job loss (27.9%), alcohol and drug use (19.7%), chronic mental health issues (16.4%), and/or domestic violence (32%). These factors are symptoms of deeply rooted socioeconomic and mental health issues that prevent individuals from being self-sufficient and productive members of our communities.

WHOLE PERSON CARE

Whole Person Care (WPC) is a 5-year pilot program, organized by the Monterey County Health Department and its community partners to provide comprehensive physical, mental, and social service case management for Medi-Cal recipients who are high users of hospital and emergency facilities. The population served by this program includes individuals who struggle with homeless/chronic homeless, mentally ill or substance abuse.

A sustainable solution to homelessness requires an empathetic approach that accounts for the socioeconomic issues responsible for such vulnerability. Stronger collaboration and expansion of access to free and improved health services such as substance abuse counseling, trauma-informed therapy, and other preventative programs will better connect individuals with the resources they need to rehabilitate themselves and put them on a path toward self-sufficiency.

HS 3. Address Contaminated Parcels, Dilapidated Buildings, and Abandoned Properties to Ensure They Are Safe to Residents and Visitors.

The quality of the built environment has a big impact on public health and safety of a community. Past research has suggested that there is a direct relationship between urban blight and crime. The frequency of violent and property crime in a neighborhood tends to increase as properties become more and more run-down. Safety hazards can also arise within buildings, even if these structures are regularly maintained and inhabited. All of these conditions currently exist in Chinatown.

Although many buildings in Chinatown are deteriorated, its rich cultural history is also anchored in these historic buildings. Thus, revitalization efforts are challenged with preserving the Asian cultural heritage and creating a renewed built environment in alignment with what stakeholders and residents envision for the future. Many of Chinatown's historic structures contain antiquated building materials, such as lead based paints and asbestos, that have since been discontinued due to their hazardous impacts on human health. In some cases, these buildings are too far gone to repair and sadly, the only option is to thoroughly document them for history and salvage any architectural features that could be displayed or potentially reincorporated into new construction. Hazardous materials in historic buildings must be fully remediated before remediation or rehabilitation.

In addition to its several aging and dilapidated structures, Chinatown also is subject to widespread soil contamination across several parcels, which pose major threats to public health and safety. To address issues of blight, deterioration, and contamination while trying to preserve Chinatown's historic resources, the City will need to devise creative funding strategies to assist property owners with environmental

DOWNTOWN STREETS TEAM

The DST addresses homelessness in a comprehensive manner. Its two pronged approach: provide a level of structure and support for individuals to build job skills and experience and secure housing, as well as benefit the community through debris removal and street clean-ups. Since July 2019, DST has removed tens of tons of trash and engaged between 15-20 homeless individuals to help with the cleaning efforts in Chinatown.

remediation, rehabilitation of historical buildings, and compliance with the current building codes.

HS 4. Expand Access to Healthy and Affordable Foods for All Residents.

Public health outcomes are tied to the foods we eat, yet Chinatown residents have very limited access to fresh, healthy and affordable produce. Incentivizing local stores to sell fresh food; establishing a nearby farmers' market; creating a community kitchen; and continuing to support local food assistance programs are just a few ways to expand access to affordable and fresh produce and encourage a balanced diet for Chinatown residents.

Across the entire planning area, the Smart & Final grocery store on the corner of Market and Simas Streets is the only commercial establishment offering healthy food options for residents. The former community garden on Soledad Street, which provided limited fresh produce to the community, was redeveloped for much needed affordable housing and now is the site of the Moon Gate Plaza Project. Residents suggested the inclusion of healthier and fresher food options at the Chin Brothers store on North Main street and East Rossi Street, which is predominantly focused on liquor sales. However, under the current conditions, community members are left with very few options for healthy food establishments.

Fortunately, there are several ways for the City to promote and expand access to sustainable and locally sourced food. The City's strategic location within the Salinas Valley gives it access to some of the best produce in the country, yet this strategic location must be catalyzed, and connections must be made to bring fresh produce to Salinas and Chinatown residents. Local farmers may be interested in establishing a weekly farmers' market in Chinatown perhaps in partnership with the deeply-rooted cultural and faith-based institutions in the neighborhood. The City can also connect zoning tools and other land use policies to both identify a new location site for the Chinatown Community Garden and incentivize the development of a local grocery store in Chinatown.

HOMELESS OUTREACH TEAM (HOT) OFFICER

In January 2019, Salinas Police Department initiated a Community Policing model in Chinatown, enacted through a Homeless Outreach Team (HOT) Officer, with the aim of fostering a stronger collaboration with law enforcement in the district. The HOT Officer's role is to engage with unsheltered individuals, service providers, and business owners alike.

HS 1. CULTIVATE A SAFE AND CLEAN NEIGHBORHOOD ENVIRONMENT IN WHICH RESIDENTS, EMPLOYEES, AND VISITORS FEEL COMFORTABLE AND SAFE AT ALL TIMES.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 1.1 – Implement a community-oriented policing approach to increase safety and reduce criminal activity in Chinatown.	**HS 1.1 a – Provide Public Safety and Other Services at Moongate Plaza.** Operate a police command post from the future City's Office Space at the Moon Gate Plaza Project, the Chinatown Community Alliance. Police Department and other City departments will conduct outreach activities and community engagement for Chinatown residents.	Police Department (PD), Community Development Departmenht (CDD), Other City Departments	Short
	HS 1.1.b – Build Trust Through Increased City Engagement. Host outreach events and community meetings with the Salinas Police Department to build trust with the Chinatown community.	CDD, PD	Short
	HS 1.1.c – Form a Neighborhood Watch Group. Establish a neighborhood watch group that trains residents and businesses to be vigilant and alert and collaborate with the Police Department.	CDD, PD, Community Base Organizations (CBOs), Residents	Short
	HS 1.1.d – Improve Security Through Cameras. Explore the idea of installing cameras on the public right-of-way and on buildings, where appropriate, to improve neighborhood security.	CDD, PD, Property Owners, Business Owners	Short
	HS 1.1.e – Establish an Interdisciplinary Outreach Team. Increase community policing through the creation of an Interdisciplinary Outreach Response Team, which will include the Homeless Outreach Team (HOT) Officer, County social workers, and service providers.	CDD, PD, Service Providers, County Social Workers	Medium
	HS 1.1.f – Promote the "Tip Line". Encourage residents to use the City's existing "Tip Line" to anonymously report crimes.	CDD, PD	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 1.2 – Work with high utilizers of medical and homeless individuals in Chinatown to reduce emergency visits and calls to regional hospitals.	**HS 1.2.a – Create a Paramedicine Team.** Explore the possibility and feasibility of building a Community Paramedicine Team in Chinatown.	PD, Fire Department (FD), Regional Hospitals, County Health Workers, Peers, Volunteers, Neighborhood Navigators, Community Doctors, MidPen Housing	Medium
	HS 1.2.b – Strengthen Whole Person Care (WPC) Collaboration. Improve communication and case management among service providers through Whole Person Care coordination to intentionally reduce emergency visits to the hospital by Chinatown's highest utilizers. Establish a sustaining case management system to replace WPC as it is phased out.	PD, FD, Regional Hospitals, County Health Workers, Peers, Volunteers, Neighborhood Navigators, Community Doctors	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 1.3 – Install infrastructure improvements that increase public safety.	**HS 1.3.a – Promote "eyes on the street".** Ensure that new uses and windows front both main streets and alleyways to increase the number of "eyes on the street."	CDD, Property Owners, Business Owners	Medium
	HS 1.3.b – Conduct a Lighting Survey. Complete a lighting needs survey to identify locations in need of urgent lighting improvements.	CDD, Public Works (PW)	Short
	HS 1.3.c – Install Lighting Strategically to Reduce "Dark Spots". Eliminate so-called "Dark Spots" based on the Lighting Needs Survey to deter crime after sundown.	CDD, PW	Medium
	HS 1.3.d – Employ Sustainable Lighting Technology. Utilize efficient and sustainable lighting technologies, such as solar-powered lighting.	CDD, PW	Medium
	HS 1.3.e – Reduce Trespassing Through Fencing. Work with and incentivize private property owners to improve fences where needed to deter illegal trespassing.	CDD, PD	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 1.4 – Ensure that streets, sidewalks, and public spaces are clean and well-maintained.	**HS 1.4.a – Continue Support for the Downtown Streets Team (DST).** Partner with DST to continue maintenance activities and seek a permanent source of funding to sustain the program in Chinatown.	CDD, Downtown Streets Team (DST), Residents	Short
	HS 1.4.b – Focus Giving on Organizations, Not Individuals. Create a campaign to discourage residents and businesses from donating household goods, clothes, and food directly to individuals experiencing homelessness to avoid trash problems in Chinatown. Encourage donations to service providers working on reducing homelessness.	CDD, DST, Community Foundations, Donors	Short
	HS 1.4.c – Stop Illegal Dumping. Enforce measures to prevent unwanted activities such as illegal dumping on the public right of way and on private properties.	CDD, PD	Short
	HS 1.4.d – Improve Street Outreach During Clean-ups. Strengthen Police and Public Works' Departments communication with the homeless population in Chinatown in advance of street maintenance activities.	CDD, PD, PW	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 1.5 – Work with property owners, business owners and homeless individuals to prevent future fires in Chinatown.	**HS 1.5.a – Promote Proactive Fire Prevention.** Educate property and business owners on fire prevention techniques.	CDD, Property Owners, Business Owners	Medium
	HS 1.5.b – Seek Funding for Fire Prevention Improvements. Pursue funding opportunities to assist property and business owners to conduct fire prevention upgrades, including the installation of fire sprinklers.	CDD, Property Owners, Business Owners	Medium
	HS 1.5.c – Secure Vacant Buildings and Prevent Encampment Fires. Prevent future fires by limiting access and securing vacant buildings and properties and discouraging encampment fires as a warming source for those experiencing homelessness.	CDD, Property Owners, Business Owners, Services Providers, Residents	Short

HS 2. CONTINUE TO PROVIDE NEEDED SOCIAL SERVICES TO STABILIZE THE HOMELESS POPULATION.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 2.1 – Expand physical and mental health services to homeless individuals, particularly in connection to housing.	**HS 2.1.a – Link Services to Housing.** Strengthen practices to improve the linkage to services and therefore create positive outcomes by increasing the number of homeless individuals housed.	CDD, PD, Monterey County Health Department (MCHD)	Medium
	HS 2.1.b – Increase Access to the Mobile Health Clinic. Coordinate with the mobile health clinic to continue providing free health services for the Chinatown community.	CDD, Clinica de Salud del Valle de Salinas	Ongoing
	HS 2.1.c – Offer Transportation to Health Services. Work with Monterey-Salinas Transit (MST) to provide subsidized transit passes to connect Chinatown vulnerable populations with needed health resources in other areas of the City.	CDD, Monterey-Salinas Transit (MST)	Short
HS 2.2 – Through an interdisciplinary team, provide substance abuse counseling and rehabilitation services to individuals experiencing homelessness.	**HS 2.2.a – Establish Safe Places to Detoxify from Substances.** Coordinate with service providers to establish a safe location for substance abusers to detoxify and seek rehabilitation.	CDD, Monterey County's Continuum of Care (CoC), Service Providers, PD, Monterey County Courts	Short
	HS 2.2.b – Expand Substance Abuse Counseling. Partner with the County Health Department and local service providers to improve the quality and breadth of substance abuse counseling in Chinatown.	CDD, PD, MCHD, Monterey County Courts	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 2.3 – Help improve access to bathrooms and personal hygiene supplies for individuals experiencing homelessness.	**HS 2.3.a – Explore Use of Mobile Bathrooms.** Work with nonprofit partners to provide mobile showers and hygienic services.	CDD, Service Providers, Non-Profit Organizations	Short
	HS 2.3.b - Continue Hygiene Services at the Chinatown Navigation Center. Promote the use of the restrooms and showers at the Chinatown Navigation Center. Secure additional resources to continue these important hygiene services.	CDD, PW, CBOs	Short
HS 2.4 – Strive to provide whole health approach that integrates both mental, emotional and physical health services for all Chinatown residents.	**HS 2.4.a – Provide Health Services to Low-Income Chinatown Residents.** Expand free health clinic services. Partner with a community group and the County Health Department to increase free clinic services that offer preventative health services and programs for low-income individuals.	Community Hospitals, MCHD	Ongoing
	HS 2.4.b – Promote Existing Mental Health Services. In partnership with community groups and the Monterey County Health Department, conduct awareness campaigns to advertise the types of physical and mental health services available to residents. Connect families with trauma informed care, pre-natal programs, and parenting skills classes.	MCHD, CBOs	Medium
	HS 2.4.c – Increase Free or Low-Cost Mental Health Resources. Increase mental health resources. Establish partnerships that help provide free or low-cost mental health resources, including referrals to existing resources at local schools or physical health clinics.	MCHD, CBOs	Short

HS 3. ADDRESS CONTAMINATED PARCELS, DILAPIDATED BUILDINGS, AND ABANDONED PROPERTIES TO ENSURE THEY ARE SAFE TO RESIDENTS AND VISITORS.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 3.1 – Support and strengthen code enforcement strategies with outreach and education.	**HS 3.1.a – Educate Stakeholders on Code Enforcement.** Host workshops to educate residents, landlords, business owners, and property owners on code enforcement procedures, regulations, and penalties.	CDD	Short
	HS 3.1.b – Concentrate on Chronic Code Violations. Provide proactive enforcement and follow-through on severe or chronic code violations.	CDD, CBOs	Short
	HS 3.1.c – Assist Owners in Addressing Code Violations. Strengthen existing collaborations between the Police Department, Fire Department, Code Enforcement Division, and property owners to resolve code violations and educate them on how to properly maintain their properties.	CDD (Code Enforcement Division), PD, FD	Ongoing

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 3.2 – Initiate a comprehensive strategy to identify and remediate all blighted and contaminated properties within Chinatown's Slum and Blight Area HUD designation	**HS 3.2.a – Consider the Allocation of CDBG Funding for Rehabilitation of Blighted Buildings and Properties.** Consider and evaluate the allocation of Community Development Block Grant (CDBG) funds toward the repair of blighted buildings and properties in the Chinatown Core, which matches the Chinatown Slum and Blight Area accpeted by United States Department of Housing and Urban Development (HUD).	CDD, United States Department of Housing and Urban Development (HUD)	Short
	HS 3.2.b – Emphasize Remediation of Contaminated Properties. Collaborate with the EPA, National Development Council (NDC), property and business owners to identify, assess, and remediate contaminated properties. Continue to pursue EPA Grants for remediation to facilitate infill development.	CDD, Environmental Protection Agency (EPA), Property Owners	Short
	HS 3.2.c – Work with PG&E to Remediate Their Properties. Continue to work with PG&E, California Department of Toxic Substances Control, and State of California Public Utilities Commission to clean and remediate the contamination on PG&E owned parcels.	CDD, PG&E, California Department of Toxic Substances Control (DTSC), California Public Utilities Commission (CPUC)	Ongoing

HS 4. EXPAND ACCESS TO HEALTHY AND AFFORDABLE FOODS FOR ALL RESIDENTS.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
HS 4.1 – Promote and expand year-round access to sustainable, locally sourced food.	**HS 4.1.a – Nurture a Community Garden.** Identify a permanent relocation site for the Community Garden in the Chinatown to serve as a neighborhood gathering place.	CDD, PW	Medium
	HS 4.1.b – Foster Healthy Foods at Local Stores. Assist the existing neighborhood liquor store to integrate more grocery items into its inventory, especially focusing on providing healthy local food options for the residents.	CDD, Property Owners, Residents	Medium
	HS 4.1.c – Establish a Framers' Market or Alternative Access to Fresh Food. Collaborate with local farmers and other interested stakeholders to develop a regular Chinatown Farmers' Market that provides fresh and affordable produce and accepts Electronic Benefit Transfer (EBT) cards.	CDD, CBOs	Short
	HS 4.1.d – Expand Food Bank Programs in Chinatown. Work with the Food Bank to provide access to fresh food for low income families and educate them on preparing healthy foods. Work with the community to identify a distribution site in Chinatown.	CDD, Food Bank	Short

White Cap

Transportation and Infrastructure

Chinatown has an unprecedented opportunity to create a walkable community with a mix of housing, commercial services, compact urban spaces, religious and institutional uses spread throughout the planning area. Providing safe sidewalks and intersection crossings, improved pedestrian lighting, continuous bicycle infrastructure along with creating a direct connection to Downtown and the Intermodal Transportation Center by collaborating with other transportation agencies, are much needed necessities for the neighborhood. Underutilized alleys along with disjointed pedestrian connections continue to present mobility and safety challenges for Chinatown. These challenges in infrastructure need to be solve to have a successful revitalization that supports the current and future developments of the neighborhood.

8.1 INTRODUCTION

Improving access, connectivity, and circulation is critical to revitalizing Chinatown. Conversion of the Chinatown Core from one-way streets to two-way streets is of vital importance. Physical barriers and limited connections to adjacent neighborhoods, Downtown, and the Intermodal Transportation Center have contributed greatly to the neighborhood's isolation and decline in relation to the rest of the City. Parking is an increasing concern as the neighborhood adds new residents and businesses developments.

This chapter recommends reintegrating Chinatown through new multi-modal connections and streetscape improvements. Upgrading infrastructure such as underground and above ground utilities, especially telecommunications, sewer and storm water systems, along with parking infrastructure are highlighted as an important necessities to support recent and future developments throghout the planning area.

Guiding Principle Icon Key

- Economic Prosperity, Equity and Diversity
- Collaborative, Inclusive, and Engaged Decision-Making
- Housing Opportunities for All
- Liveable and Sustainable Community
- Healthy and Safe Community
- Connectivity, Access and Mobility
- Youth Are the Future
- A Community to Celebrate

Goal Summary

TI 1. Establish an Efficient, Integrated, and Well-Connected Road Network That Reconnects Chinatown With the Rest of the Community.

Chinatown's Core neighborhood roadway network is poorly connected with the rest of Salinas and expansion area, creating issues for Chinatown residents wishing to access key destinations across the City. Converting the neighborhood to two-way streets, establishing a direct at-grade crossing across the Union Pacific rail lines and devising a comprehensive streetscape plan will assist in reconnecting the neighborhood and creating safe access the Downtown and the Intermodal Transportation Center.

TI 2. Establish a Complete Multi-Modal Transportation Network Throughout Chinatown to Improve Public Safety, Circulation, and Traffic Congestion.

Chinatown's streets need to be retrofitted and reprogrammed to safely accommodate all modes of travel. Sidewalks and pedestrian crossings also need to be upgraded. New bike lanes along main arterials like E. Rossi are needed as well as and improved bus service for the residents to navigate the community without needing to use a personal automobile. Minimizing the prospect for traffic congestion in the future is key for the neighborhood.

TI 3. Establish High-Quality Streetscape Improvements and Amenities to Create a Walkable Neighborhood.

Chinatown streetscape and infrastructure are in disrepair and in need of major upgrades. Many crosswalks and sidewalks in the neighborhood are damaged and repairing them is needed to create a pedestrian-friendly environment. These improvements along with more native trees and plants, ADA compliant ramps and pedestrian oriented lighting throughout the planning area will promote walkability throughout the neighborhood. These improvements will activate the public spaces by increasing foot traffic and ensuring pedestrian safety and comfort.

TI 4. Improve Above and Underground Infrastructure in Chinatown.

As redevelopment occurs, Chinatown's above and underground infrastructure should be evaluated and upgraded to respond to the needs of a new residents and land uses. This requires significant investments in sewer systems, telecommunications and stormwater management among other utilities. Enhanced infrastructure financing through new State funding will be vital in accomplishing these upgrades.

TI 5. Ensure Adequate Parking Facilities to Support a Thriving Neighborhood.

New residential developments and commercial establishments will mean more people living, working, and visiting. This will translate to more cars into Chinatown. The City will need an innovative parking management plan to support the neighborhood's continued growth, ensure pedestrian-friendly streets, and support the local needs of its residents and businesses.

Guiding Principle Connection

Economic Prosperity, Equity and Diversity

A healthy business environment relies on the strength of the surrounding infrastructure. Walkable streets stimulate foot traffic along established retail corridors, whereas strong connectivity with surrounding neighborhoods facilitates an increased number of consumers from other parts of Salinas and the region.

Healthy and Safe Community

The built form of the public realm strongly determines how safe and secure we feel. Poor sidewalk lighting, abandoned alleys, and a lack of windows all contribute to an unsafe environment in Chinatown that dissuades the community from moving freely after dark. Infrastructural improvements are needed to improve perceptions of safety that can activate public space at all hours.

Housing Opportunities for All

High-density housing projects need to be accompanied by investments in infrastructure. As neighborhoods grow, streets become overloaded and traffic conditions exacerbated if circulation is not improved. In anticipation of new residential growth in Chinatown, the City will need to improve both the carrying capacity of local streets and overall connectivity with surrounding neighborhoods and convert neighborhood streets to two-way.

Youth Are the Future

Neighborhood mobility networks deeply impact youth and children daily. Children in the neighborhood often travel to and from school, enrichment programs, and later employment opportunities either via transit or by foot. In Chinatown, this means ensuring wide, continuous sidewalks, safe bike lanes, and frequent bus services.

Collaborative, Inclusive and Engaged Decision-Making

Successfully retrofitting street infrastructure requires extensive community input. The City will need to collaborate with Chinatown residents and businesses to determine preferred transportation modes and other aesthetic improvements that ensure a smooth growth process.

Connectivity, Access and Mobility

Public infrastructure is the engine that powers our access to the outside world. A well-integrated network of roads, trails, and alleyways allows us to navigate environments both near and far through various means, whether by car, bus, bicycle, scooter, or foot.

Livable and Sustainable Community

Residents enjoy strong, safe, and consistent access to the community when streets are well-connected and designed to be pedestrian-friendly. This creation of walkable infrastructure can, in turn, promote sustainability by reducing the need for driving.

A Community to Celebrate

In many neighborhoods, the built environment serves as a medium through which people communicate their unique histories and cultural identities. In revitalizing Chinatown, this process of cultural celebration can be mobilized through new streetscape improvements that incorporate public art or other unique design features that reflect the neighborhood's history.

ITC

The Intermodal Transportation Center (ITC) is located in downtown Salinas. Improvements to the ITC include new direct signalized access, a bus transfer area, bike lanes and bike lockers, safe pedestrian crossings and sidewalks, and commuter parking. This station will integrate new passenger rail service to the San Francisco Bay Area with existing service by Amtrak intercity trains and buses, MST local buses, and Greyhound intercity buses.

8.2 COMMUNITY ASSETS AND OPPORTUNITIES

Historic Street Grid

The core of Chinatown has a fine-grained, walkable, street grid that can be the foundation for a vibrant public realm with activated streets. Improved vehicle circulation, parking management and streetscape improvements will be the foundation for a vibrant revitalized neighborhood that connects to adjacent neighborhoods, ITC, and Downtown.

Centralize Location

Chinatown is strategically located within Salinas and Monterey County, though currently disconnected from adjacent neighborhoods and key community assets by major and highspeed thoroughfares along with the Union Pacific railroad lines to the north of the plannign area. Improved connectivity will help spark revitalization, by making it easier to travel to, within and from Chinatown, and allowing residents and workers to more easily access Downtown, the ITC, and other transportation amenities and services throughout the City.

Generous Streets and Travel Lanes

Most streets across the neighborhood are wide enough to accommodate streetscape improvements that can improve circulation for all travel modes. Existing one-way streets in the historic core of Chinatown are at least 30 feet in width. Meanwhile, other two-way arterials are over 50 feet wide with travel lane widths in excess of 15 feet. By trimming down the areas dedicated to vehicle travel and on-street parking, these thoroughfares can realistically provide new bike facilities and other pedestrian amenities without compromising the flow of traffic.

Alleys

Chinatown contains three underutilized alleys that, if renovated and programmed, could provide tangible benefits to the community. The alleys could eventually be transformed into new and improved paths for people to walk, bike, and congregate in Chinatown, while allowing vehicle access to businesses and residences in the neighborhood. Short-term alley infrastructure and safety improvements will lay the groundwork for a more connected and safer Chinatown.

8.3 GOALS, POLICIES, AND ACTIONS

The vision, goals, and recommendations contained within this Revitalization Plan were developed through an intensive community engagement process. Each of the six primary topic areas was evaluated and refined by a Working Group of residents and stakeholders, presented at a series of public Open Houses, and vetted by a Technical Advisory Committee. These results then evolved into the Goals, Policies and Actions found in this chapter.

This section contains two parts. The first is a narrative describing each of the Transportation and Infrastructure goals and policies – providing context, rationale, and framing why certain policies or programs are important. The matrix that follows the narrative includes actions necessary to implement the goals and policies along with other, more detailed recommendations including the responsible entity or organization and the timeframe.

TI 1. Establish an Efficient, Integrated, and Well-Connected Road Network That Reconnects Chinatown With the Rest of the Community.

Physical infrastructure has contributed significantly to Chinatown's isolation over the years. Community stakeholders note that the neighborhood is effectively "boxed in" by busy roads, bridges, and the Union Pacific rail line, which does not provide an at-grade crossing for either vehicles or pedestrians. Further, the conversion of several internal streets to one-way travel has also restricted access within the neighborhood and discouraged vehicle traffic from other neighborhoods. As a result of these conditions, Chinatown residents face issues accessing important nearby destinations, such as the Intermodal Transit Center (ITC) and Downtown, both of which are physically adjacent to Chinatown.

If these barriers are not dealt with, Chinatown's potential for social, cultural, and economic reintegration with the rest of the Salinas will be severely limited. The neighborhood is poised to emerge as a unique cultural and retail destination as revitalization progresses, but unless

California Street is one of the one-way streets in Chinatown's Core.

Market Way and California Street current one way street signage.

significant investments are made in improving transportation infrastructure, patrons from outside the neighborhood will be largely unable to access Chinatown. Traffic gluts will increase as a result of such poor circulation and limit the neighborhood's potential for future growth and development.

In collaboration with other public agencies, the City can conduct a broad range of infrastructural improvements that will reconnect Chinatown with Salinas' urban fabric. Priority strategies may include converting one-way streets to two-travel, widening rights-of-way to increase travel space, and creating a new at-grade crossing at the Union Pacific rail line.

TI 2. Establish a Complete Multi-Modal Transportation Network Throughout Chinatown to Improve Public Safety, Circulation, and Traffic Congestion.

To promote livability and a high quality of life, Chinatown's street network needs to be retrofitted to accommodate all travel modes. Currently, Chinatown lacks protected bike lanes along many major corridors. This lack of supportive infrastructure forces cyclists to use either sidewalks or auto travel lanes as their primary pathways – both of which compromise user safety. Many in Chinatown also rely on transit to access key destinations both within the neighborhood and across Salinas; however, though Monterey-Salinas Transit (MST) operates seven bus routes that serve Chinatown, none travel in intervals of less than 60 minutes.

To address these challenges, the community needs to advocate for more transit focus and resources, connected and safe bicycle routes, and other expanded mobility choices for getting around without a car. Creating a continuous, protected, and low-speed network of bike lanes will not only help improve safety for current users, but also make cycling a more practical and viable option for individuals of all ages and skill levels. Over time, this multimodal infrastructure will incentivize mode shifts across all sectors of society.

Cross-agency collaboration will also be required to leverage sufficient resources toward needed transit improvements.

UNION PACIFIC RAILROAD

The Union Pacific Railroad operates the North American railroad system. Union Pacific's main line has daily Amtrak service which runs through Salinas; with a stop at the Intermodal Transportation Center. The California Public Utilities Commission regulates services and utilities, protects consumers, safeguards the environment, and assures Californians' access to safe and reliable utility infrastructure and services.

NPDS

Stormwater runoff is a major cause of water pollution in developed areas. The National Pollutant Discharge Elimination System (NPDES) permit program addresses water pollution by promoting green infrastructure practices of using soil and plants to reduce and treat stormwater runoff at its source. These best practices not only help with runoff, but deliver environmental, social and economic benefits.

Key transit planning bodies in the region – such as MST and the Transportation Authority for Monterey County (TAMC) – will need to collaborate on strategies to create transit options that both meet workforce needs and incentivize transit use for all sectors of society. The City may also elect to work with these agencies to implement a Bus Rapid Transit (BRT) system, which would create dedicated bus lanes that help increase service frequency and efficiency along major roads in the neighborhood.

TI 3. Establish High-Quality Streetscape Improvements and Amenities to Create a Walkable Neighborhood.

The poor quality of Chinatown's infrastructure is largely a product of the late-twentieth century. A sustained lack of public investment in the neighborhood allowed its sidewalks, crosswalks, and landscaped areas to deteriorate at the expense of the local population. To this day, Chinatown's residents continue to struggle with an uninviting pedestrian environment that compromises public safety. Several crosswalks require improvements to comply with ADA standards, and some sidewalks have widths as narrow as three to four feet.

Pedestrian infrastructure has a notable impact on quality of life. Places with inviting sidewalks generate more pedestrian activity that enhances the public environment. Wide sidewalks that provide street furniture can accommodate steady pedestrian volumes while also encouraging more walking and commercial activity, reinforcing the human scale of a neighborhood. Elements of green infrastructure also provide the added benefit promoting environmental sustainability – a strong and continuous canopy of street trees offers shade and sequesters carbon from the atmosphere, while drought-tolerant landscaping can help reduce local water demand.

When implemented together, these thoughtful design features can make neighborhood streets feel safer and more secure for pedestrians. The City can take tangible steps to improve public streetscapes centered on the needs of

pedestrians.

TI 4. Improve Above and Underground Infrastructure in Chinatown.

Public infrastructure is intimately tied to growth and development. An influx of residents, employees, and consumers to an area creates higher levels of demand for a variety of basic services, such as transportation, sewers, utilities, and telecommunications. In the context of a changing climate, variable weather patterns and extreme events also demand improvements to stormwater management systems, which can help mitigate the potential for damaging floods that could otherwise harm private property and public health.

In anticipation of new economic, population, and climatic changes, it is imperative to invest heavily in Chinatown's infrastructure to ensure that public services are continually provided at an adequate level. The City will need to work closely with other public agencies and private corporations – notably PG&E, Caltrans, and the Salinas Public Works Department

Sidewalk repair is necessary throughout Chinatown.

ASSESSMENT DISTRICT

Assessment Districts are financing mechanisms. With the approval of a majority of the landowners, cities, counties and special districts can collect fees to finance improvements constructed or acquired by the District. Each property owner pays a fair share of the costs of such improvements.

(PW) – to underground electrical utilities, improve wireless internet service, upgrade sewer systems, and implement stormwater control measures. Because such construction is both lengthy and disruptive, the City recognizes the importance of coordinating the timing of these efforts in order to "dig once" and complete multiple upgrades simultaneously.

TI 5. Ensure Adequate Parking Facilities to Support a Thriving Neighborhood.

Chinatown's parking facilities need to be significantly expanded. Currently, most parking is provided either on-street or in private lots or residential driveways. While this arrangement is adequate for the time being, greater parking demand is sure to arise as a result of the higher residential densities and greater commercial activity anticipated as Chinatown evolves. And yet, despite these projections, spatial constraints across the neighborhood will likely prevent the creation of new on-street. Some of the streetscape improvements mentioned above may be prioritized and require reductions in current parking spaces in order to widen sidewalks, add bike facilities, and convert one-way streets to accommodate two-way travel.

Many parking spaces in Chinatown are often occupied by abandoned vehicles, unauthorized semi-trucks, and other undesired uses. Better enforcement will open up more parking spots for residents and create a calmer and safer neighborhood street network. There will need to be clear criteria for vehicle removal paired with education to avoid negatively impacting low-income families.

A range of measures are needed to prevent significant parking constraints. The City will conduct a parking study to identify additional opportunities to reduce parking demand. Strategies may include consolidating park and ride areas, preserving on street parking, adding and enforcing time restrictions to increase spot turnover and availability, and implementing demand-based pricing incentives. A new parking management program, coupled with better alternatives to driving alone, can support better parking availability and eventual reduction in car dependency for residents in Chinatown.

Parking is constrained in Chinatown along Soledad Street.

TI 1. ESTABLISH AN EFFICIENT, INTEGRATED, AND WELL-CONNECTED ROAD NETWORK THAT RECONNECTS CHINATOWN WITH THE REST OF THE COMMUNITY.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI 1.1 – Identify and remove barriers on existing roadways that obstruct access to and from Chinatown.	**TI 1.1.a – Make State Route 183 underpass ADA compliant.** Continue conversations with Caltrans regarding the State Route 183 underpass to evaluate opportunities to bring it into compliance with ADA requirements.	Community Development Department (CDD), Public Works Department (PW), CalTrans	Medium
	TI 1.1.b – Explore removal of the Bridge Street Wall. Analyze the removal of the Bridge Street wall to increase access to and from Chinatown for all roadway users, including emergency responders. Conduct traffic studies as needed.	CDD, PW, Housing Authority of the County of Monterey (HACM)	Medium
TI 1.2 – Reconnect Chinatown to Downtown and the Intermodal Transit Center across from the railroad tracks.	**TI 1.2.a – Create an at-grade railroad crossing.** Work with Union Pacific and the California Public Utilities Commission to establish one at-grade railroad crossing for multimodal circulation along either Bridge Street or Soledad Street.	CDD, PW, California Public Utilities Commission (CPUC), Union Pacific	Long
	TI 1.2.b – Document previous at-grade crossings. Work with property and businesses owners as well as historical associations within the City and County to find photographs and document previous at-grade crossings along Bridge Street, Soledad Street, and California Street.	CDD, PW, Property Owners, Business Owners, Asian Cultural Experience (ACE), Chinese American Citizens Alliance (CACA), Chinese Association of Salinas (CAS), Filipino Community - Salinas Valley (FCSV)	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI 1.3 – Eliminate one-way streets within the Chinatown core without compromising the availability of street parking.	**TI 1.3.a – Convert core streets to two-way traffic.** Work with Public Works to retrofit roadways to accommodate two-way traffic on Bridge, E. Lake, Soledad, and California Streets.	PW, Residents, Property Owners, Business Owners	Medium
	TI 1.3.b – Preserve on-street parking. Strive to maintain as many street parking spaces as possible when converting streets from one-way streets into two-way.	PW, Residents, Property Owners, Business Owners	Medium
	TI. 1.3.c – Determine if "No Parking Zones" are necessary. Evaluate whether any "No Parking Zones" are needed when converting Chinatown to two-way streets, especially along Soledad Street.	PW, Residents, Property Owners, Business Owners	Medium
	TI 1.3.d – Widen right-of-way to accommodate two-way traffic. Work with adjacent property owners to widen the existing right-of-way on Market Way between Soledad and Bridge Streets to accommodate two-way traffic and associated infrastructure requirements.	CDD, PW, Property Owners	Long
TI 1.4 – Initiate a phased, long-range planning approach to revitalize and re-program alleys for pedestrian walkways, linear parks, farmers' markets, or other public uses.	**TI 1.4.a – Pave alleys.** Fully pave Bridge, Lake and Rossi Alleys for vehicular and pedestrian circulation, especially those connected to housing developments.	CDD, PW, Property Owners	Medium
	TI 1.4.b – Upgrade alley infrastructure to support public activity. Install key safety and infrastructure improvements (e.g., street lighting, cameras, street cleaning, and environmental remediation) to facilitate programming of these spaces.	CDD, PW	Medium

TI 2. ESTABLISH A COMPLETE MULTI-MODAL TRANSPORTATION NETWORK THROUGHOUT CHINATOWN TO IMPROVE PUBLIC SAFETY, CIRCULATION, AND TRAFFIC CONGESTION.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI 2.1 – Identify improvements for pedestrian and bicycle mobility at key intersections including Lake and Main Streets; Rossi Street, Calle Cebu and Sherwood Drive; and Market Street and Sherwood Drive.	**TI 2.1.a – Improve pedestrian crossings.** Continue to analyze and prioritize high visibility pedestrian crosswalks and markings where appropriate and as identified by traffic consultants.	CDD, PW	Medium
	TI 2.1.b – Utilize curb extensions. Analyze the installation of curb extensions where appropriate.	CDD, PW	Medium
	TI 2.1.c – Create wayfinding signage. Use wayfinding signage to facilitate multimodal circulation within, to, and from Chinatown to community centers, Downtown, ITC, and neighborhood/urban parks.	CDD, PW, Residents, Property Owners, Residents	Short
	TI 2.1.d – Add safe crossings, Explore increasing the number of safe crossings according to City standards throughout Chinatown to improve pedestrian safety.	CDD, PW	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI 2.2 – Improve roadways and public infrastructure to better accommodate all modes of travel.	**TI 2.2.a – Seek grant funding for street improvements.** Collaborate with partner transportation agencies to apply for the Active Transportation Program (ATP) funds, in addition to other grants, to fund complete streets improvements that may include Bus Rapid Transit (BRT) system and dedicated bus lanes on main thoroughfares (E. Rossi Street, Market Street, and Sherwood Drive).	CDD, PW, CalTrans	Short
	TI 2.2.b – Consider shared lanes. Evaluate the feasibility of creating shared lanes for bicycles and drivers on low-speed streets and protected bicycle lanes on adjacent thoroughfares (Market Street, E. Rossi Street, and Sherwood Drive)	CDD, PW	Medium
	TI 2.2.c – Evaluate potential for bikeshare. Explore the viability of establishing a pilot bikeshare program in Chinatown.	CDD, PW, Private Sector Partners	Long
TI 2.3 – Continue to work with MST to encourage and plan transit services and more frequent stops that connect Chinatown residents with key destinations, such as the ITC, downtown Salinas, and Hartnell College.	**TI 2.3.a – Support increased transit access.** Advocate and collaborate with MST to increase service levels and/or establish a bus stop either on E. Rossi Street or on E. Lake Street.	CDD, PW, Monterey-Salinas Transit (MST)	Medium
	TI 2.3.b – Improve transit stop infrastructure. Collaborate and encourage MST to provide benches, signage, and roof shelters at existing and new bus stops in and around Chinatown.	CDD, PW, MST	Short

TI 3. ESTABLISH HIGH-QUALITY STREETSCAPE IMPROVEMENTS AND AMENITIES TO CREATE A WALKABLE NEIGHBORHOOD.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI 3.1 – Prioritize streetscape improvements that promote human scale, engage the public realm, and ensure pedestrian safety and comfort.	**TI 3.1.a – Plant street trees.** Increase the level of tree canopy along pedestrian corridors to improve shade on sidewalks and seating areas, particularly along Soledad Street.	CDD, PW	Medium-Long
	TI 3.1.b – Program sidewalks. Activate sidewalks through programming and amenities to make them safer and more inviting to pedestrians.	CDD, PW	Short
	TI 3.1.c – Use sustainable plants. Use native and drought-tolerant plants in the landscaping of new public spaces.	CDD, PW	Ongoing
	TI 3.1.d – Improve sidewalk amenities. Add trash cans and decorative features to sidewalks.	CDD, PW, Republic Services	Short
	TI 3.1.e – Improve lighting. Add pedestrian-oriented lighting throughout Chinatown.	CDD, PW	Short
	TI 3.1.f – Provide a means of private care for street trees. Create a local "tree adoption" program for residents, businesses and Community-Based Organizations.	CDD, PW, Property Owners, Residents, CBOs	Short
	TI 3.2.g – Fix curb ramps. Collaborate with PW to identify missing curb ramps and improve those that are not ADA compliant.	CDD, PW	Medium-Long

TI 4. IMPROVE ABOVE AND UNDERGROUND INFRASTRUCTURE IN CHINATOWN.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI 4.1 – Invest in and improve above and underground infrastructure to support business activity and new developments.	**TI 4.1.a – Create an infrastructure maintenance plan.** Conduct an assessment of the existing streets, roads, alleys, lighting, sidewalks and curbs to make a determination of the existing conditions and create a plan to maintain and repair existing infrastructure.	CDD, PW, CalTrans	Medium
	TI 4.1.b – Protect waterways from runoff. Collaborate with partner agencies, property and business owners to prevent contaminated runoff from entering the City's drainage and sewer system.	CDD, PW	Medium
	TI 4.1.c – Improve sewer and stormwater systems. Continue to retrofit legacy sewer and stormwater and drainage systems to upgrade capacity and allow new development to occur.	CDD, PW	Ongoing
	TI 4.1.d – Evaluate a stormwater control plan. Explore the creation of a comprehensive stormwater control plan for the planning area that meets all of the requirements and is in compliance with the National Pollutant Discharge Elimination System (NPDES).	PW, United States Environmental Protection Agency (EPA)	Long
	TI 4.1.e – Improve communication infrastructure. Work to provide broadband service throughout Chinatown and improve telecommunications capabilities.	CDD, PW	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI 4.1 (continued)	**TI 4.1.f – Put utilities underground.** Work with PG&E to continue undergrounding electrical utilities.	CDD, PW, PG&E	Ongoing
	TI 4.1.g – Increase sidewalk width to accommodate infrastructure. Reconstruct damaged sidewalks to increase the effective width where utility poles, fire hydrants, street signs, are present.	CDD, PW	Medium-Long
	TI 4.1.h – Improve sidewalk connectivity. Develop a complete sidewalk network in the neighborhood. Provide a sidewalk on the southside of Market Way between Bridget Street and Soledad Street, adjacent to the Union Pacific Railroad fence.	CDD, PW, Union Pacific, Property Owners	Long

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI. 4.2 – Enhance infrastructure financing through new State funding for new developments or other funding sources.	**TI 4.2.a – Improve infrastructure in tandem with new development.** Conduct above and underground infrastructure improvements as new development occurs.	CDD, PW, Property Owners, Business Owners	Medium
	TI 4.2.b – Consider an assessment district. As Chinatown redevelops, explore the formation of an assessment district to provide funding for maintenance and new infrastructure improvements.	CDD, PW, Property Owners, Business Owners	Medium

TI 5. ENSURE ADEQUATE PARKING FACILITIES TO SUPPORT A THRIVING NEIGHBORHOOD.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI 5.1 – Develop an innovative parking plan to improve parking availability for residents, visitors, and employees in Chinatown.	**TI 5.1.a – Evaluate parking needs.** Conduct a detailed parking study to forecast demand, evaluate utilization of existing spaces, and identify potential locations for new parking and curbside uses (drop-off and pickup zones) for delivery and ride-share networks.	CDD, PW, Residents, Owners, Ride-Share Companies	Medium-Long
	TI 5.1.b – Explore parking permits. Consider revisiting the preferential parking permit ordinance and look into a potential Neighborhood Parking Permit (NPP) program for residents living in existing apartment complexes in Chinatown.	CDD, Property Owners, Residents	Short
	TI 5.1.c – Establish parking structures. Create a centralized multi-level parking (potentially at the PG&E site) or multiple decentralized parking structures throughout the planning area.	CDD, PW, Property Owners	Long
	TI 5.1.d – Provide carshare parking in new development. Require carshare parking spaces in multifamily residential and mixed-use developments.	CDD	Medium
	TI 5.1.e – Require bike parking infrastructure. Provide secure and covered bike parking at community facilities, parks, and apartment complexes.	CDD, PW, For-Profit and Non-Profit Housing Developers, Library and Community Services	Medium
	TI 5.1.f – Preserve parking when possible. Preserve existing parking supply when not in conflict with other intended streetscape or road improvements, especially along California Street, where there are several apartment complexes.	PW	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
TI 5.2 – Create flexible parking design standards that improve the aesthetic quality of the surrounding environment.	**TI 5.2.a – Encourage vegetation and sustainable stormwater maintenance.** Develop parking design guidelines that encourage use of thoughtful and sustainable landscaping materials including vegetated buffers, permeable pavers, or other features designed to improve stormwater management.	CDD	Medium
	TI 5.2.b – Orient parking away from the street. Where possible, locate parking lots at the side or back of properties such that they are not directly adjacent to streets.	CDD	Medium
TI 5.3 – Regulate and reduce unauthorized parking in Chinatown.	**TI 5.3.a – Decrease the number of abandoned vehicles in Chinatown.** Work with the Police Department and the City's Parking Enforcement contractor to remove abandoned and/or nonoperational parked vehicles that have been left unattended for long periods of time.	CDD, PD, PW	Short
	TI 5.3.b - Improve SalinasConnect awareness. Educate and inform residents about the SalinasConnect (QAlert) App, which allows them to report abandoned vehicles.	CDD, PD	Short

CHINATOWN
I ♥ chinatown

Arts, Youth, Programming and Community Facilities

Salinas Chinatown is a historical "gold mountain," as noted by the Asian Cultural Experience (ACE). Established by Chinese merchants in 1893 after the first Chinatown burned down, Soledad Street serves as the heart of the community. Today, Salinas' Chinatown is the largest, active Chinatown between San Francisco and Los Angeles. Besides serving as the historic home for Chinese immigrants, Chinatown also attracted immigrants from Japan, the Philippines, and Mexico. This mix of cultures is etched in the physical landscape of the buildings, businesses and cultural and faith-based institutions in Chinatown. No other neighborhood in Salinas can boast such an interesting history or capitalize on its unique cultural evolution. Since 2012, Chinatown's population has transformed with the construction of 280 affordable dwelling units. Most of these units are comprised of families in need of recreational programming, open space, and other services that do not exist in the neighborhood. Although there is an urgent need to provide services to homeless individuals, averaging 150, living in the encampments, the neighborhoods newest residents also require attention. There is a unique opportunity through programming and cultural facilities to serve both groups and build social cohesion between them.

9.1 INTRODUCTION

This chapter presents strategies to build on Chinatown's strong foundation of community centers and programming and its rich legacy of arts and culture to strengthen youth and family services, civic participation and overall community well-being. Residents of Chinatown today can be characterized by their housing status – sheltered or unsheltered. In more recent years, Chinatown provided refuge for the City's most vulnerable, those experiencing homelessness. With the new developments by the Housing Authority of the County of Monterey and MidPen Housing coming into the neighborhood, this is changing as more families, services, and businesses are moving into the neighborhood. The actions in this Chapter will help Chinatown develop into a safe and welcoming neighborhood by expanding its arts and cultural offerings, supporting existing and new community-based organizations, creating more recreational opportunities and open space, increasing youth programming, and strengthening local leadership.

Guiding Principle Icon Key

- Economic Prosperity, Equity and Diversity
- Collaborative, Inclusive, and Engaged Decision-Making
- Housing Opportunities for All
- Liveable and Sustainable Community
- Healthy and Safe Community
- Connectivity, Access and Mobility
- Youth Are the Future
- A Community to Celebrate

Goal Summary

AYPCF 1. Establish Chinatown as an arts and culture hub that celebrates its multicultural past, welcomes artists, and attracts public art investment.

Through Chinatown's strong arts and cultural organizations, the neighborhood is poised to become an arts and cultural center by deepening support for artists and ensuring they have places to live and work, and by hosting celebrations, public art, and storytelling of its history within the public spaces.

AYPCF 2. Support youth and family development by investing in programs that are healthy and nurturing.

Chinatown's many families and children can benefit from programs and services that provide resources and guidance so that young people and their families can thrive at every stage of life.

AYPCF 3. Encourage robust civic engagement and development of resident leaders committed to shaping Chinatown's future.

Robust stakeholder engagement and leadership shaped this Revitalization Plan, and the City and Chinatown community are committed to ongoing civic engagement that effectively involves and builds the capacity of local individuals and organizations as part of implementation.

AYPCF 4. Strengthen the capacity and sustainability of community-based organizations (CBOS) in Chinatown to provide critical services.

The City of Salinas will continue to partner with Chinatown's cultural and faith-based institutions and service providers to ensure they have the tools, resources and information needed to best serve the community and sustain their organizations.

AYPCF 5. Ensure that Chinatown allows for a full range of recreational activities to promote active and healthy lifestyles.

Through coordination and cooperation, the City of Salinas, local housing and service providers, and cultural and faith-based institutions will ensure residents have access to places and programs that support their health and well-being.

AYPCF 6: Create and support well-maintained and culturally relevant small parks and other urban gathering spaces in Chinatown.

As Chinatown revitalizes and redevelops, a strong system of diverse open spaces will serve the neighborhood by providing places for rest, relaxation, and respite. These clean, safe places can also be used to showcase Chinatown's rich and diverse arts and culture.

Guiding Principle Connection

Economic Prosperity, Equity and Diversity

Arts, cultural, and recreational programing, activities, and events are economic drivers that generate commercial activity and create opportunities for entrepreneurship and inclusive economic development. Supporting youth development and enrichment leads to improved job and career opportunities and the economic well-being of the next generation.

Healthy and Safe Community

Youth and family programs, community recreation facilities, urban parks, and neighborhood safety efforts are fundamental to healthy communities and individual and family well-being. And provide venues for social gathering, exercise and relaxation, and other safe outdoor activities.

Housing Opportunities for All

Arts, culture and community facilities and programs build strong neighborhoods. As Chinatown continues to add more housing, families, and youth, supporting these critical amenities will improve the neighborhood's overall quality life. Encouraging the development of live/work housing diversifies housing options and provides needed workspace for artists.

Youth Are the Future

Chinatown is a young and growing community. Programs, services and resources for youth in Chinatown will build skills, civic participation, and expand educational opportunities for the next generation of Salinas residents to ensure that they are engaged in making decisions about the future of their community.

Collaborative, Inclusive and Engaged Decision-Making

Empowering Chinatown residents to shape the future of their neighborhood by partnering with public, philanthropic and private organizations requires culturally effective engagement strategies and a commitment to removing barriers to participation. Supporting the work of community-based organizations will improve resident access to resources and result in more collaborative, inclusive and engaged decision-making.

Connectivity, Access and Mobility

As Chinatown grows and redevelops, it is critical to ensure its residents can easily move through the neighborhood as well as travel to nearby destinations, including cultural, religious, arts and recreation facilities. Improving connections between residential development and these amenities through enhanced bikeways, pedestrian paths and streetscapes is critical to residents' ability to access and benefit from these local community assets.

Livable and Sustainable Community

Enhanced youth, arts, and community programs contribute to the livability and sustainability of the Chinatown neighborhood. Creating and maintaining clean, safe and family-friendly recreation facilities and urban parks support quality of life by encouraging residents to socialize and participate in healthy physical, educational and enrichment activities.

A Community to Celebrate

Chinatown has a strong and growing tradition of neighborhood events and celebrations. As the neighborhood is revitalized, promoting its historic and contemporary arts and culture will draw more visitors to the neighborhood to learn about and celebrate Chinatown's distinctive contribution to the Salinas community.

ASIAN FESTIVAL

The Asian Festival, founded in 2007, promotes unity and is a celebration of the Chinese, Japanese, and Filipino communities in Chinatown. With the objective of revitalizing the Chinatown core, this annual festival educates hundreds of visitors about Asian culture and the history of Chinatown through cultural and historic displays, music, food, dancing, and cultural demonstrations and programs.

9.2 COMMUNITY ASSETS AND OPPORTUNITIES

Rich History of Arts and Culture.

Chinatown's arts, cultural, and historic identity is arguably the community's greatest strength. Key assets include the historic Republic Café and Chop Suey sign, Asian architectural elements, murals, strong cultural organizations, annual cultural events, and a growing artist community. Repositioning Chinatown as a regional arts and culture district will strengthen the neighborhood through increased economic activity for businesses and expanded community programming for residents.

Cultural Organizations, Events, and Programming.

In spite of Chinatown's blighted conditions, established cultural organizations such as the Asian Cultural Experience (ACE), Buddhist Temple of Salinas, Chinese Association of Salinas, and the Filipino Community-Salinas Valley have drawn thousands of visitors to cultural events like the Asian and Obon Festivals. Program offerings at their facilities, including youth and family activities, recreation, community classes, serve as cornerstones for building a strong neighborhood. There is opportunity for the City to collaborate with these organizations to utilize these community centers to expand programming and services for residents and visitors.

Growing Multi-generational Population.

Recent residential developments in Chinatown have brought a diverse set of new residents to the neighborhood. Housing developments designed for seniors, large families and other types of households contribute to a growing neighborhood and sense of community. Continuing to engage residents and providing opportunity for intergenerational collaboration and participation in Revitalization Plan implementation will increase its success and ensure neighborhood needs are met.

Dancers performing a traditional Filipino cultural dance at the Filipino Community-Salinas Valley hall as part of the 2018 Asian Festival.

9.3 GOALS, POLICIES, AND ACTIONS

The vision, goals, and recommendations contained within this Revitalization Plan were developed through an intensive community engagement process. Each of the six primary topic areas was evaluated and refined by a Working Group of residents and stakeholders, presented at a series of public Open Houses, and vetted by a Technical Advisory Committee. These results then evolved into the Goals, Policies and Actions found in this chapter.

This section contains two parts. The first is a narrative describing each of the Arts, Youth, Programming and Community Facilities (AYPCF) goals and policies – providing context, rationale, and framing for why certain policies or programs are important. The matrix that follows the narrative includes actions necessary to implement the goals and policies along with other, more detailed recommendations including the responsible entity or organization and the timeframe.

AYPCF 1. Establish Chinatown as an arts and culture hub that celebrates its multicultural past, welcomes artists, and attracts public art investment.

Incorporating arts and culture into the fabric of the neighborhood will enrich residents' lives. It is also a strategy to bring investment to the community while sharing Chinatown's history and cultural legacy with a broader audience. Art in the public realm – including

2017 Asian Festival in Chinatown and the Lion Dance Team performers along with Mayor Joe Gunter, City Manager Ray E. Corpuz, Jr., and Councilwomen Gloria De La Rosa.

Motorcycle clubs around the region joined the 3rd Annual Chinatown Block Party to provide services and clothing to individuals experiencing homelessness.

the design of building facades, open spaces, and streetscape elements – can "tell the Chinatown story."

Bringing public art and resources for artists and cultural organizations to Chinatown requires continued advocacy by residents, community-based-organizations, and non-profit and philanthropic groups. These efforts will be strengthened by developing a network of arts groups and working directly with the Salinas Public Arts Commission.

Chinatown can become a regional arts and cultural hub, drawing visitors day-to-day and during annual festivals and events. Ensuring that ample spaces for working artists, arts and culture programs, and displays are created and maintained is a critical piece of this effort. Ground-floor space of Moon Gate Plaza can be used to implement this strategy in the near term, demonstrating investment in neighborhood infrastructure that also supports the arts.

AYPCF 2. Support youth and family development by investing in programs that are healthy and nurturing.

Monterey County, Salinas and Chinatown have a rich system of service providers and organizations that support residents of all ages and at all stages of life. Continuing to improve personal, behavioral and community health in Chinatown requires enhancing access to a full spectrum of critical services and programs for youth and families – from nutritional support for expecting mothers, to caregiving and adult substance abuse prevention and treatment.

Improving families' access to and use of available programs requires centralized, culturally relevant, multi-lingual coordinated outreach and education to connect them to the resources they need to be healthy and successful.

Likewise, coordination between the City, County, school districts, and non-profit organizations like First Five Monterey and Alcoholics Anonymous will improve service delivery and resource efficiency. New and improved programs will emphasize parenting and caregiving skills and youth mentorship for Chinatown residents. Affordable housing developments, places of worship, and community facilities can continue to provide space for programs and service delivery as well as information centers.

OBON FESTIVAL

The Salinas Obon Festival, presented annually by the Buddhist Temple of Salinas, is a Japanese Buddhist custom to honor the spirits of one's ancestors. Over four thousand visitors come to the festival to see and experience displays of bonsai and flower arrangements, Japanese food, martial arts demonstrations, and a tea ceremony.

ASIAN CULTURAL EXPERIENCE (ACE)

ACE is a multi-ethnic non-profit organization dedicated to the historical and cultural preservation of Chinatown. Founded in 2007, ACE brings together members of the Chinese, Japanese, and Filipino communities, students and faculty from CSUMB, and staff from the National Steinbeck Center. Primary initiatives include the coordination of the Annual Asian Festival. Their dream goal is to convert the Republic Café into a museum.

AYPCF 3. Encourage robust civic engagement and development of resident leaders committed to shaping Chinatown's future.

The success of Chinatown's revitalization will require continued partnerships and collaboration between the City of Salinas, Chinatown residents, local community-based organizations and other public and private entities.

In order to ensure that Chinatown grows and evolves in a manner that reflects community values and priorities, public engagement must be effective and broad reaching. This requires creating safe, accessible, and welcoming environments in which neighbors can come together and interact with the City.

The City will ensure outreach efforts include many avenues and tools for participation and that they are fully accessible to the neighborhood's diverse residents. This means using simple clear language, providing translation and interpretation, and relying on trusted organizations and leaders in the community. Capacity-building, volunteerism, and events and programs that bring neighbors together to learn from one another will help develop local leaders and support successful neighborhood projects.

AYPCF 4. Strengthen the capacity and sustainability of community-based organizations (CBOs) in Chinatown to provide critical services.

Chinatown has a rich network of community-based organizations that are a critical piece of the neighborhood. Like many non-profit organizations, however, they face ongoing challenges related to funding, operations, and policy. To support these organizations so that they can continue their vital work, the City and its partners will enhance support for and coordination among CBOs. The Asian Cultural Experience has been one of the strongest supporters of this planning effort.

The City will work with local organizations to assess their challenges and tailor technical assistance and capacity-building programs to these needs. Support will come in the forms of formal training and technical assistance as well as mentorship and leadership development. Because

resources are scare and many CBOs have similar missions, increased collaboration between groups is needed. This may include City-led meetings, partnership opportunities, and shared staff and spaces.

AYPCF 5. Ensure that Chinatown allows for a full range of recreational activities to promote active and healthy lifestyles.

Chinatown residents of all ages and abilities need easy access to programs and places that will support their health, education, and enrichment. Establishing or strengthening partnerships among Salinas and Chinatown organizations is an effective way to ensure more people have more opportunities to play, grow, and learn in their neighborhood.

There are multiple strategies that the City and its partners will use to achieve this. This includes working with nearby schools, religious institutions, and housing providers to increase access to enrichment programs, play opportunities, and arts and cultural resources.

As Chinatown redevelops and grows over time, more places, spaces, and programs for healthy activities will be needed. The City will seek opportunities to bring services, including public library services, to the neighborhood on a temporary, pop-up, or permanent basis. New mixed-use developments and multi-family housing structures offer excellent opportunities to create new ground-floor spaces for community hubs with flexible spaces for classes, meetings, and other activities.

AYPCF 6. Create and support well-maintained and culturally relevant small parks and other urban gathering spaces in Chinatown.

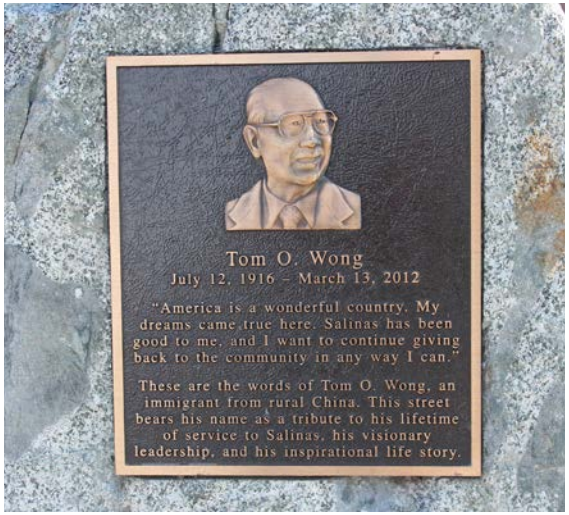
Outdoor spaces are key building blocks of healthy neighborhoods, and provide locations for many of the healthy programs and activities coming to Chinatown. A network of well-designed and maintained urban-scale parks and open spaces, including a community garden, throughout

Lion dance performance at the 3rd Annual Chinatown Block Party.

Chinatown will benefit the community at large. Some spaces may be more traditional landscaped parks, while others may be small spaces or plazas. Together, the system of small parks and spaces will provide places for social gatherings, art or cultural exhibitions, and informal play and relaxation.

New gathering spaces can be created in a number of ways. Chinatown has many underutilized sites that can be transformed into parks, gardens, or plazas. New housing developments will contribute new open spaces to the community, and the City will work with developers to ensure these are accessible to the public so that they benefit all of Chinatown. In the near-term and as Chinatown begins to redevelop, temporary installations and inexpensive fixtures can transform underutilized spaces into community amenities and "pop-up parks".

All public spaces in Chinatown should be designed to be flexible so that they can accommodate many uses at different times. Each space should be sited and designed to connect to other nearby amenities, including trails and community parks, and to reflect the unique identity and history of Chinatown.



Memorial plaque after Tom O. Wong, an important figure in Chinatown's history and heritage.

Traditional Chinese dance at the Salinas Confucius Church.

Street named after Tom O. Wong, whose name was also written in Chinese characters.

Salinas Kendo Club members perform inside of the Buddhist Temple of Salinas at the Asian Festival.

Chinatown's Obon Festival is a community-centric event that promotes cultural identity of the Japanese community within the City and Chinatown.

AYPCF 1. ESTABLISH CHINATOWN AS AN ARTS AND CULTURE HUB THAT CELEBRATES ITS MULTICULTURAL PAST, WELCOMES ARTISTS, AND ATTRACTS PUBLIC ART INVESTMENT.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 1.1 - Support culturally relevant public art and events to establish Chinatown as a destination that enriches residents and attracts visitors.	**AYPCF 1.1.a – Commission Culturally-Relevant Art in Public Spaces.** Integrate culturally relevant art in the design of public spaces especially along Soledad Street. Encourage businesses, housing development, and institutions to host public art to "tell the story" of Chinatown.	City, Businesses, Government/ Educational Institutions, Faith Based Community (FBC), Community Based Organizations (CBOs), Public Art Commission	Short
	AYPCF 1.1.b – Actively participate on Public Arts Commission. Encourage Chinatown stakeholders to participate in the Public Art Commission. Improve Public Art Commission's communication to Chinatown stakeholders about projects and initiatives and educate local artists on how to apply for funding.	City, Philanthropy, Government/ Educational Institutions, CBOs, Local Artists, Public Art Commission, Asian Cultural Experience (ACE), Buddhist Temple of Salinas, Filipino Community - Salinas Valley (FCSV), Chinese Association of Salinas (CAS), Chinese American Citizens Alliance (CACA)	Short
	AYPCF 1.1.c – Host Culturally-Relevant Events. Launch festivals celebrating Asian/Latino ethnic food, performing arts, and crafts to celebrate Chinatown's identity including an annual Chinese New Year event. Continue to hold the Chinatown Block Party, Asian Festival, and Obon Festival.	City, Businesses, Government/ Educational Institutions, FBC, CBOs, Public Art Commission, ACE, Buddhist Temple of Salinas, FCSV, CAS, CACA	Immediate – Short
	AYPCF 1.1.d – Create a Network of Arts Groups. Build partnerships between local arts groups and regional businesses, public institutions, philanthropy and to help Chinatown become a regional art destination.	City, Government & Educational Institutions, Businesses, CBOs, Public Art Commission, ACE, Buddhist Temple of Salinas, FCSV, CAS, CACA	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 1.1 - (Continues)	**AYPCF 1.1.e – Identify and develop a variety of art spaces for training, display, program, services, and performance.** Publish this list for event organizers. Repurpose or renovate existing community facilities to create new spaces for art and cultural programming.	City, Businesses, Philanthropy, Government/Educational Institutions, FFBC, CBOs, Public Art Commission, ACE, Buddhist Temple of Salinas, FCSV, CAS, CACA	Medium
	AYPCF 1.1.f – Create spaces for arts exhibition and programming. Utilize the ground floor of Moon Gate Plaza for art exhibition and programming space.	City, MidPen Housing, Artist, CBOs	Short
	AYPCF 1.1.g – Establish Public Art Maintenance Plan. Ensure that community stakeholders can assist in helping protect and maintain public art.	City, Community Stakeholders, CBOs, Public Art Commission, ACE, Buddhist Temple of Salinas, FCSV, CAS, CACA	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 1.2 - Support the development of new and existing arts and cultural programming.	**AYPCF 1.2.a – Create a Chinatown Arts Action Plan.** Work with the Public Art Commission and community stakeholders to develop a tailored action plan for Chinatown to implement the overall goals of the Citywide Public Art Master Plan. Identify appropriate locations for public art installations.	City, Businesses, Government/ Educational Institutions, FBC, CBOs, Public Art Commission	Short
	AYPCF 1.2.b – Expand Arts-Based Programming. Support existing arts-based organizations to expand cultural and arts programming through partnerships with existing community organizations and institutions.	City, Businesses, Government/ Educational Institutions, Public Art Commission, ACE, Buddhist Temple of Salinas, FCSV, CAS, CACA	Ongoing
	AYPCF 1.2.c – Increase arts and culture funding. Pursue grant opportunities such as the Living Cultures Grant Program from the Filipino Development Foundation to sustain and strengthen arts and cultural programming about Chinatown heritage.	City, Businesses, Government/ Educational Institutions, Public Art Commission, ACE, Buddhist Temple of Salinas, FCSV, CAS, CACA	Short
	AYPCF 1.2.d – Expand art education opportunities. Invite artists to give lectures, demonstrations, and classes at community facilities and other public gathering places. Host affordable culinary, art, and cultural courses tied to Chinatown's history.	City, Philanthropy, Artist, CBOs, Public Art Commission, ACE, Buddhist Temple of Salinas, FCSV, CAS, CACA	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 1.3 - Provide resources to allow local artists to live and work in Chinatown.	**AYPCF 1.3.a – Create art internships for youth.** Enable students to gain hands on experience with local artists and arts and cultural organizations.	City, Businesses, Government/ Educational Institutions, FBC, CBOs, Public Art Commission	Medium
	AYPCF 1.3.b – Develop vendor opportunities for artists. Create an "auction exhibit space" for local artists to sell their art pieces in conjunction with businesses and other organizations. Develop an online marketplace for artist products.	City, Businesses, Government/ Educational Institutions, FBC, CBOs, Local Artists, Public Art Commission	Short
	AYPCF 1.3.c – Create artist maker spaces. Develop new creative maker spaces within existing community facilities that provide tools and other equipment for burgeoning artists to produce art for sale. (See also action ED 3.2a)	City, Government/Educational Institutions, FBC, Philanthropy, CBOs, Public Art Commission	Medium
	AYPCF 1.3.d – Provide information to artists on small business development. Develop a resource guide specifically for artists in developing a small business.	City, Government/Educational Institutions, CBOs, Public Art Commission	Short
	AYPCF 1.3.e – Encourage the development of artist housing. Continue to work with affordable housing developers to incorporate live/work housing for artists in Chinatown. Eliminate barriers to the development of live/work housing. (See also policy ED 3.3)	City, Housing Developers, CBOs, Public Art Commission	Short

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 1.4 - Brand Chinatown as an art and cultural hub focusing on its unique history.	**AYPCF 1.4.a – Promote Chinatown's public art installations and historic sites.** Highlight Chinatown's public art assets and historic sites through the development of a brochure and map. Install appropriate directional signage for the art.	City, Government/Educational Institutions, CBOs, Historic Resource Board, Public Art Commission	Medium
	AYPCF 1.4.b – Market Chinatown as an arts and cultural hub. Work with Chinatown's cultural, religious, and arts institutions, businesses, and housing developers to create a branding campaign and associated material to establish Chinatown as an art/cultural destination in the region. Hire local artists to design branding and other marketing materials. Use social media and other tools to advertise arts and cultural programming. (See also policy ED 2.1)	City, Businesses, Business Association, CBOs, Public Art Commission	Short
	AYPCF 1.4.c – Establish a gateway and public signage to identify Chinatown as an arts/cultural HUB. Select a location and design new gateway and wayfinding signage that that reflects Chinatown's history and identity. Work with community-based organization to create storytelling signage including historic photos throughout Chinatown.	City, Government/Educational Institutions, CBOs, Historic Resource Board, Public Art Commission	Short-Medium

AYPCF 2. SUPPORT YOUTH AND FAMILY DEVELOPMENT BY INVESTING PROGRAMS THAT ARE HEALTHY AND NURTURING.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 2.1 – Promote Healthy Youth and Family Development By Expanding Access to Support and Resources in Chinatown.	**AYPCF 2.1.a – Expand access to high-quality, early childhood education and literacy programming.** Convene a coalition of schools, childcare providers, recreation centers/ library, service and housing providers to focus on increasing early childhood education and literacy opportunities, particularly at the affordable housing developments. Expand adult literacy and ESL classes in Chinatown.	First 5 Monterey, Monterey County Office of Education, School Districts, County Public Health Department, Hartnell, Monterey Peninsula College (MPC), CBOs, Housing Authority	Ongoing
	AYPCF 2.1.b – Provide early resources to expectant families and new parents. Increase access to programs like Women, Infants, and Children (WIC) to provide health care and nutrition resources to expectant mothers and offer early education training geared towards caregivers who are a child's first teacher, particularly at the affordable housing developments.	First 5 Monterey, WIC, Monterey County Office of Education, School Districts, County Public Health Department, CBOs, HACM	Medium
	AYPCF 2.1.c – Increase parenting and caregiver programs. Offer caregivers and parents training on how to effectively communicate with their children, use discipline, and manage problems and reinforce positive behavior, particularly at the affordable housing developments.	City, Monterey County Office of Education, School Districts, First 5 Monterey, CBOs, HACM, Caregivers	Short-Medium
	AYPCF 2.1.d – Assist families in accessing support programs. Assist Chinatown's low-income families access safety net programs such as Section 8 Vouchers, Supplemental Nutrition Assistance Program (SNAP), and Temporary Assistance for Needy Families (TANF). Work with churches, businesses, philanthropy, and community-based organization to establish a similar "safety net" for undocumented residents.	City, Monterey County Departments of Social Services and Public Health, Monterey County Office of Education, HACM, CBOs	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 2.1 – (Continues)	**AYPCF 2.1.e – Establish a centralized system for family resources**. Identify obstacles that prevent families from learning about community resources and develop a single source of information. Information should be accessible in multiple media forms and address potential language barriers. Create resource display areas at cultural/religious institutions and in community spaces inside Chinatown's housing developments.	City, Monterey County Office of Education, Monterey County Departments of Social Services and Public Health, School Districts, First 5 Monterey, CBOs	Medium
	AYPCF 2.1.f – Increase interactions between youth and caring adults. Promote opportunities to mentor, tutor, or volunteer with youth-serving programs. Encourage intergenerational programming between youth and seniors. Expand afterschool programs that involve adults as positive role models for youth, particularly at Chinatown's housing developments.	City, Monterey County Office of Education, CBOs, HACM	Medium
	AYPCF 2.1.g – Increase substance abuse prevention and treatment programs for youth and parents. Leverage existing resources and pursue grants to create substance abuse prevention (including vaping) and treatment programs in Chinatown. Work with community-based organizations to host support groups like Alcoholics Anonymous.	City, Monterey County Office of Education, Monterey County Departments of Social Services and Public Health, School Districts, CBOs	Short-Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 2.2 – Continue to reduce violence through prevention, intervention, suppresion, and re-entry strategies.	**AYPCF 2.2.a – Prioritize and invest in effective prevention activities.** Provide meaningful youth activities that develop their interests, skills, and talents particularly afterschool and during holiday break. Investing significantly in prevention programs is the most effective way to reduce violence among youth.	City, Community Alliance for Safety and Peace (CASP), School Districts, HACM, CBOs	Ongoing
	AYPCF 2.2.b – Teach nonviolent skills to resolve disputes. Expand violence prevention training at schools and within other youth programs so youth have skills to manage anger and resolve conflicts.	City, School Districts, HACM, CBOs	Short
	AYPCF 2.2.c – Increase intensive family-focused approaches. Provide therapeutic services for high-risk, chronic youth offenders and their families to address individual, family, school, and community factors that contribute to violence.	City, School Districts, Criminal Justice Agencies, CBOs, Caregivers, Monterey County Behavioral Health	Short
	AYPCF 2.2.d – Increase street outreach and community mobilization. Connect trained staff with at-risk youth to conduct conflict mediation, make service referrals, and change beliefs about the acceptability of violence.	City, Monterey County Office of Education, Monterey County Departments of Social Services and Public Health, School Districts, First 5 Monterey, CBOs	

AYPCF 3. ENCOURAGE ROBUST CIVIC ENGAGEMENT AND DEVELOPMENT OF RESIDENT LEADERS COMMITTED TO SHAPING CHINATOWN'S FUTURE.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 3.1 – Create a welcoming environment to nurture effective engagement.	**AYPCF 3.1.a – Implement culturally effective engagement.** Design engagement activities that are culturally relevant and resonate with the Chinatown's residents. Use culturally appropriate language and simplified written communications in multiple media forms.	City, CBOs	Ongoing
	AYPCF 3.1.b – Incorporate trusted community organizations in civic engagement. Pursue guidance from community-based organizations on how to design effective engagement activities and request assistance recruiting participants. Hold meetings in spaces where participants feel most comfortable.	City, CBOs	Ongoing
	AYPCF 3.1.c – Offer various forms of engagement opportunities. Provide a spectrum of engagement activities to allow people with different lifestyles and experiences to participate, which could range from simple online surveys to ongoing working groups.	City, CBOs	Ongoing

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 3.2 – Build the capacity of resident leaders to fully participate in City and community decision making.	**AYPCF 3.2.a – Establish civic academies to develop capacity of residents.** Develop the knowledge base of residents about local government to support true involvement in decision making. Encourage training to help residents facilitate community meetings and lead neighborhood projects.	City, Public Health Department, CBOs	Short-Medium
	AYPCF 3.2.b – Promote social cohesion as an approach to civic engagement. Sponsor neighborhood events in Chinatown such as the Chinatown Block Party to foster social cohesion.	City, Monterey County, Businesses, CBOs, Residents	Short
	AYPCF 3.2.c – Facilitate volunteerism. Make it easy for residents to volunteer by streamlining the application process and advertising a variety of volunteer opportunities to improve Chinatown. Empower volunteers to lead neighborhood improvement projects by eliminating regulatory barriers to "getting things done".	City, Businesses, CBOs, Residents	Short

AYPCF 4. STRENGTHEN THE CAPACITY AND SUSTAINABILITY OF COMMUNITY-BASED ORGANIZATIONS (CBOS) IN CHINATOWN TO PROVIDE CRITICAL SERVICES.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 4.1 – Offer capacity building training and technical assistance to existing and new community-based organizations.	**AYPCF 4.1.a – Survey CBOs on training needs.** Conduct an assessment to identify needs of CBOs and devise tailored training and technical assistance.	City, Philanthropy, CBOs	Short-Medium
	AYPCF 4.1.b – Partner with philanthropy to support CBOs. Request resources from philanthropy for CBO training and technical assistance in Chinatown.	City, Philanthropy, CBOs	Short-Medium
	AYPCF 4.1.c – Invite CBOs to governmental agency training. Encourage CBOs to attend City training opportunities for staff on issues such as time management. Recruit City staff experts to conduct training to CBOs on topics such as finance and small business support.	City, Monterey County Office of Education, Monterey County Departments of Social Services and Public Health, School Districts, CBOs	Immediate
	AYPCF 4.1.d – Encourage mentorship of new leaders. Connect experienced leaders of strong CBOs leaders of new or growing organizations to serve as an advisor.	City, Philanthropy, Monterey County Office of Education, Monterey County, School Districts, CBOs, Businesses	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 4.2 – Promote collaboration among CBOs to effectively leverage resources.	**AYPCF 4.2.a – Regularly assemble CBOs in Chinatown to share resources.** Convene a quarterly meeting of Chinatown CBOs to discuss how to collaborate and leverage resources to implement the Chinatown Revitalization Plan.	City, CBOs	Short
	AYPCF 4.2.b – Incentivize CBO partnerships. Promote grant-making that rewards collaborative partnerships over individual organization projects.	City, Philanthropy, Monterey County Office of Education, Monterey County, School Districts, CBOs	Medium
	AYPCF 4.2.c – Foster shared use of facilities and staffing. Encourage CBOs to share office space, equipment, supplies, and even staffing to reduce organization overhead and promote efficiency.	City, Philanthropy, Monterey County Office of Education, Monterey County, School Districts, CBOs	Medium

AYPCF 5. ENSURE THAT CHINATOWN ALLOWS FOR A FULL RANGE OF RECREATIONAL ACTIVITIES TO PROMOTE ACTIVE AND HEALTHY LIFESTYLES.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 5.1 – Cultivate partnerships to expand access to community facilities and education and recreation programming.	**AYPCF 5.1.a – Expand educational partnerships.** Establish and strengthen partnerships with schools, school districts, Hartnell College and community partners to offer new and expanded enrichment programming at community facilities in Chinatown.	City, Monterey County, Monterey County Office of Education, School Districts, CBOs	Short
	AYPCF 5.1.b – Develop joint-use agreements. Develop joint-use agreements between the City and Chinatown cultural/religious institutions and housing developments to provide expanded recreational programming that promotes arts, play, and health and wellness for residents of all ages.	City, Sport Clubs, Cultural/ Religious Institutions, CBOs, Housing Developments	Short-Medium
	AYPCF 5.1.c – Develop community hubs. Support flexible community spaces that can accommodate and support the needs of different programs and community uses. Partner with developers to dedicate ground-floor spaces in mixed-use projects as community spaces for recreational activities.	City, Cultural/Religious Institutions, CBOs, Housing Developments, Parks Commission	Immediate-Long
	AYPCF 5.1.d – Provide City recreational programming in Chinatown. Facilitate partnerships between the Library and Community Services (LCS) Department and private community facilities to extend City organized recreational activities to those sites in Chinatown.	City/LCS, Businesses, Philanthropy, CBOs, Parks Commission	Short-Medium
	AYPCF 5.1.e – Offer "active living classes" to residents. Work with LCS to specifically provide outdoor fitness, healthy eating, and other wellness at various community spaces to promote a healthy lifestyle.		
	AYPCF 5.1.f – Consider establishing a temporary library satellite in Moon Gate Plaza. Explore establishing a temporary location for library services at Moon Gate Plaza.	City, Businesses, Philanthropy, CBOs, Parks Commission	Short-Medium

AYPCF 6. CREATE AND SUPPORT WELL MAINTAINED, AND CULTURALLY RELEVANT SMALL PARKS AND OTHER URBAN GATHERING SPACES IN CHINATOWN.

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 6.1 – Establish an urban-style pocket and/or neighborhood park in Chinatown.	**AYPCF 6.1.a – Pursue grants to establish a park in Chinatown.** Seek grants and other funding opportunities to develop a park at the PG&E site near the Haciendas Housing Development.	Community Development Department (CDD), Public Works Department (PW), Library and Community Services Department (LCS)	Medium
	AYPCF 6.1.b – Transform underutilized parcels into urban open spaces. Identify poorly suited sites for development and create urban plazas, community gardens, or pocket parks.	CDD, LCS	Medium
	AYPCF 6.1.c – Provide incentives to housing developers to build common open spaces/parks. Allow for housing developers to meet open space requirements by creating open space/park that is open to the larger neighborhood.	CDD, PW, LCS	Medium
	AYPCF 6.1.d – Create a network of trails connecting to other parks. Establish trails and/or greenways that link Chinatown's residents to larger parks in the City such as Carr Lake, Natividad Creek and Cesar Chávez.	CDD, PW, LCS, Big Sur Land Trust	Long
	AYPCF 6.1.e – Design culturally relevant urban open spaces and parks. Integrate Chinatown design elements and storytelling into new parks and urban spaces including multi-lingual signage. Install exercise equipment wherever possible in these spaces or along trails and greenways.	CDD, PW, LCS	Medium

POLICY	IMPLEMENTATION ACTION	DEPARTMENT/ORG	TIMEFRAME
AYPCF 6.2 – Create temporary and flexible urban open spaces in Chinatown.	**AYPCF 6.2.a – Install temporary improvements to activate urban spaces.** Explore redeveloping underutilized or vacant parcels with temporary and inexpensive features that can create immediate urban spaces.	City, CBOs	Short
	AYPCF 6.2.b – Offer recreational programming in temporary urban spaces. Develop programming for temporary urban spaces to increase activity and improve safety.	City, Cultural/Educational Institutions, CBOs	Short-Medium
	AYPCF 6.2.c – Create a community garden. Build a new community garden at 45 Soledad to replace the one that was eliminated with the development of Moon Gate Plaza. Continue to explore additional locations for community gardens.	City, Businesses, Philanthropy, CBOs, Parks Commission	Short
AYPCF 6.3 – Implement regular maintenance of urban open spaces in Chinatown.	**AYPCF 6.3.a – Improve maintenance of open spaces.** Develop an annual maintenance plan for Chinatown's open spaces and work with Downtown Streets Team on executing the plan.	City, Downtown Streets Team	Short-Medium
	AYPCF 6.3.b – Encourage community stewardship program. Develop a Community Stewardship Program ("Adopt an Open Space") to promote opportunities for resident, neighborhood group, or community-based organization ownership and stewardship of open spaces.	City, Neighborhood Groups, CBOs, Parks Commission	Short-Medium

Next Steps and Implementation

10.1 INTRODUCTION

The Chinatown Revitalization Plan is an action-driven framework for revitalizing Chinatown. Revitalization Plan recommendations will inform the first comprehensive General Plan update since 2002. With input and collaboration from over 3,000 participants, the Chinatown Revitalization Plan is designed as a plan for community use, not just as City document, and requires broad community participation for successful implementation.

All of the actions within the Plan are important to creating a thriving Chinatown, yet many falls beyond the authority, discretion, or fiscal abilities of city government alone. The City recognizes its lead role, but it will take strong partnerships to fully implement the plan. City, County, other local government agency staff, residents, and other stakeholders working in Chinatown should use this plan daily to guide their projects, funding applications, and other improvements in alignment with the community's vision. Lead agencies and funding sources are identified where possible for specific tasks, and each implementation matrix represents a good-faith effort to identify primary related organizations, but it does not commit agencies to specific projects nor preclude additional partnerships with unmentioned groups.

While the Revitalization Plan contains efforts that could span 10-15 years, this Chapter focuses on next steps that capitalize on current strengths and opportunities to move the Plan forward over the next one-to-two years.

10.2 PLANNING AND CEQA CONTEXT

The City will start its General Plan update process in 2020, which will incorporate policies and recommendations from the Chinatown Revitalization Plan, and other recent planning efforts around Salinas. The update will likely take several years to complete. In the meantime, the Chinatown Revitalization Plan is being accepted by Salinas City Council as a strategic planning document, with no formal California Environmental Quality Act (CEQA) review.

Many of the projects and actions within this Plan will not require environmental review and can be completed without CEQA evaluation. This Plan will be included in the General Plan Update Environmental Impact Report (EIR) analysis. Prior to the preparation of the General Plan EIR, projects coming forward from Revitalization Plan recommendations that do require CEQA review would be required to undertake the appropriate level of analysis based on individual project CEQA requirements.

10.3 EMERGING PRIORITIES

This Plan contains hundreds of important goals, policies, and actions, many of which were created from community input. The Chinatown community is ready for change and eager to move forward, but not all actions can move forward at once.

To identify community priorities so that the City and its partners can direct resources to the right projects and programs, the community was engaged in an interactive exercise at the November 2019 Chinatown Block Party. Based on this and other stakeholder input, priorities for Plan implementation emerged. These priorities are listed below, and this Chapter outlines potential funding sources and, important actions toward these priorities that can be accomplished over the next one to two years.

Land Use and Design

Establish design guidelines and development standards to create a cohesive and culturally appropriate architectural style. Identify preserve and protect historic buildings.

New developments should be compatible with Chinatown's historic architecture and multicultural aesthetic.

Support existing and new commercial and industrial uses and protect residential areas from the adverse impacts from conflicting land uses.

As Chinatown transitions into a livable mixed-use neighborhood, it is imperative to ensure that existing light industrial, manufacturing, and warehousing operations find strategic new locations within the neighborhood and have access to financial assistance to enable them to grow.

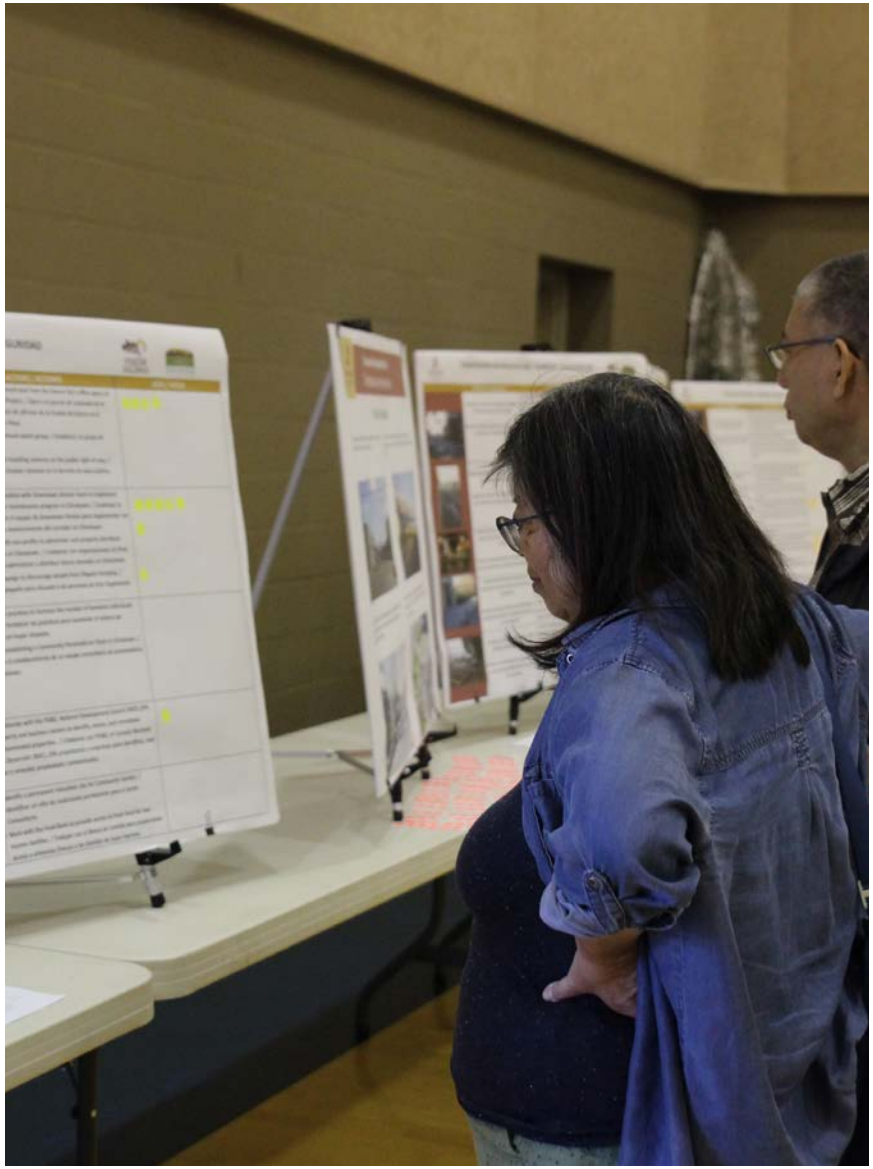
Encourage the development of mixed-use projects and rehabilitate abandoned buildings.

Mixed-use projects in infill locations can help support walkability across the Chinatown neighborhood.

Housing and Neighborhoods

Assist chronically homeless individuals with assessment and housing navigation services.

Homeless individuals face a range of structural barriers and require specialized assistance in their search for stable housing.



Stakeholder walking through the activity boards at the Final Draft Open House for the Chinatown Revitalization Plan.

Encourage the development of a diversity of new existing affordable and market-rate housing units.

In order to grow a diverse residential population, Chinatown needs to expand its housing supply with a range of products at varying price points.

Collaborate with residents and property owners to assist in neighborhood rehabilitation and maintenance.

Encouraging residents to participate in neighborhood maintenance projects helps to both build local capacity and ensure a beautiful, well-maintained public spaces.

Economic Development

Support the creation of cultural spaces and an Asian Museum/ Cultural Center for Chinatown.

A new museum can support revitalization efforts by attracting new visitors to the neighborhood, who can interact with the community learn more about Chinatown's rich multicultural history.

Transform Soledad Street into a retail-oriented corridor and identify vacant and/or underutilized buildings that could be used as incubator spaces.

Dense commercial corridors support walkability by providing residents with safe, convenient access to an array of amenities required in daily life.

Health and Safety

Ensure that streets, sidewalks, and public spaces are clean.

A well-maintained public realm is required to ensure safety, sanitation, and health for all in the Chinatown community.

Implement a community-oriented policing approach to increase safety and reduce criminal activity.

Communities are strengthened when residents are empowered to take ownership of neighborhood safety concerns and to work collaboratively with the Police Department to address them.

Improve physical and mental health services to homeless individuals.

Many homeless individuals suffer from substance abuse or mental health issues that prevent them from becoming self-sufficient; improving and expanding the breadth of services available to these populations is required to reintegrate them into society.

Transportation and Infrastructure

Reconnect Chinatown to Downtown and convert Chinatown streets to two-way traffic.

Increasing capacity on Chinatown's roadways will be critical to ensuring efficient and smooth travel throughout the neighborhood.

Improve roadways and public infrastructure to better accommodate all modes of travel.

Improved pedestrian infrastructure can help encourage transportation mode shifts that reduce dependence on driving

Stakeholder voting at the prioritization boards at the Final Draft Open House for the Chinatown Revitalization Plan.

Mayor Joe Gunter talking with stakeholders at the Final Draft Open House for the Chinatown Revitalization Plan.

across the community.

Develop an innovative parking plan to improve parking availability in neighborhoods.

An expanded supply of parking, both in structures and on-street, is required to accommodate to the growth anticipated as revitalization moves forward.

Art, Youth, Programming and Community Facilities

Support culturally relevant public art and events to establish Chinatown as a cultural and artistic destination.

Arts and culture are incredibly important to the Chinatown community and will put Chinatown on the map as a regional destination while improving the neighborhood.

Promote healthy youth and family development.

Chinatown is growing therefore, promoting the health and well-being of its families is a key priority for the future of the neighborhood and Salinas.

Strengthen the capacity and sustainability of community-based organizations.

Stable, well-funded, and efficient CBOs are critical to serving the Chinatown community and achieving many goals of this revitalization plan.

10.4 NEXT STEP ACTIONS AND POLICIES

LAND USE AND DESIGN

PRIORITY	IMPLEMENTATION ACTION	DEPARTMENT/ORG
Establish design guidelines and development standards for new development to conform to a cohesive and culturally appropriate architectural style and identify, preserve, and protect historic buildings. LUD 4.1	Create an arts overlay district. LUD 4.1.d Encourage new buildings in Chinatown to incorporate artistic elements such as culturally significant colors and/or murals. LUD 4.2.b Preserve and protect existing historic buildings. LUD 4.3.b Designate Chinatown as either a Historic or Cultural District. LUD 4.3.c	Community Development Department (CDD), For-Profit and Non-Profit Developers, Property Owners, Business Owners, Community Based Organizations (CBOs)
Support existing and new commercial and industrial uses and protect residential areas from the adverse impacts from conflicting land uses. LUD 3.1	Support and encourage light industrial manufacturing and warehouse distribution uses around the periphery of the plan area. LUD 3.1.a Work with automotive businesses to evaluate the feasibility of developing an auto-oriented business park. LUD 3.1.b Establish appropriate buffers, landscaping, screening, and open space to mitigate land use conflicts. LUD 3.2.b	CDD, Business Owners, Property Owners
Encourage the development of mixed-use projects and rehabilitate abandoned buildings. LUD 2.1	Promote the use of the new state density bonus provisions to increase affordable housing. LUD 2.1.a Expand the adaptive reuse ordinance to the Chinatown Core. LUD 2.1.e Eliminate regulatory barriers for live/work units. Create an inventory of vacant and historic buildings for adaptive reuse. LUD 2.1.f	CDD, Housing Developers, Property Owners, Business Owners

LAND USE AND DESIGN

PRIORITY	IMPLEMENTATION ACTION	DEPARTMENT/ORG
Encourage redevelopment of underutilized parcels, brownfield sites, and vacant properties. LUD 3.3	Encourage the consolidation of vacant and brownfield sites to facilitate larger infill projects. LUD 3.3.b Consolidate light industrial and automotive uses at the PG&E site. LUD 3.3.c	CDD, Business Owners, Property Owners
Promote intensification of land use in low and medium density neighborhoods and encourage supporting land uses. LUD 1.1	Allow more medium-density building types in low-density residential areas to increase housing supply. LUD 1.1.a Identify underutilized sites and work with property owners for potential redevelopment. LUD 1.1.d Incentivize the provision of urban public spaces in new housing developments. LUD 1.2.a Create new community facilities and/or childcare centers. LUD 1.2.c	CDD, Property Owners, Housing Developers

HOUSING AND NEIGHBORHOODS

PRIORITY	IMPLEMENTATION ACTION	DEPARTMENT/ORG
Encourage the development of a diversity of new existing affordable and market rate housing units. HN 1.1	Develop strategic partnerships with nonprofit and for-profit developers to create new mixed-income housing developments. HN 1.1.a Identify sites for lot consolidation and redevelopment to create new market rate housing. HN 1.1.c Expand the Central City Overlay to include Chinatown. HN 1.3.a	CDD, Monterey County Department of Social Services (MCDSS), Service Providers, Monterey County Continuum of Care (CoC)
Ensure tenant protections are in place for individuals and households of all ages, abilities and income levels. HN 2.1	Establish a Relocation Assistance Program. HN 2.1.a Launch a Fair Housing awareness and education campaign. HN 2.1.b Educate residents on new State laws around housing policies and programs. HN 2.2.a	CDD, Housing Developers, For-profit and Non-Profit Developers
Ensure the safety and quality of rental housing in Chinatown. HN 3.1	Bring residential and commercial properties into code compliance. Promote healthy youth and family development. AYPCF 2.1	Expand access to high-quality early childhood education and literacy programming. AYPCF 2.1.a Assist Chinatown's low-income families access Section 8 Vouchers, Supplemental Nutrition Assistance Program (SNAP) and Temporary Assistance for Needy Families (TANF). AYPCF 2.1.d Increase interactions between youth and caring adults. AYPCF 2.1.f Provide meaningful youth activities that develop their interests, skills, and talents. AYPCF 2.2.a	First 5 Monterey County, Monterey County Office of Education (MCOE), School Districts, County Public Health Department, Hartnell College, MPC, CBOs, HACM, Community Alliance for Safety and Peace
Strengthen the capacity and sustainability of Community-Based Organizations (CBOs). AYPCF 4.1	Identify needs of CBOs and devise tailored training and technical assistance AYPCF 4.1.c Invite CBOs to government agency training. AYPCF 4.1.a Foster shared use of facilities and staffing. AYPCF 4.2.c	City, Philanthropy, Monterey County Office of Education (MCOE), Departments of Social Services and Public Health, School Districts, CBOs

ART, YOUTH, PROGRAMMING AND COMMUNITY FACILITIES

PRIORITY	IMPLEMENTATION ACTION	DEPARTMENT/ORG
Provide open spaces and a full range of recreational activities to promote active and healthy lifestyles. AYPCF 6.1	Establish and strengthen partnerships with schools at community facilities in Chinatown to provide recreational programming. AYPCF 5.1.a Consider establishing a temporary library satellite in Moon Gate Plaza. AYPCF 5.1.f Pursue grants to establish a park in Chinatown and encourage housing developers to build common open spaces within developments. AYPCF 6.1.a	CDD, PW, Library and Community Services Department (LCS), MCOE, School Districts, Businesses, Philanthropy, CBOs
Encourage robust civic engagement and the development of resident leaders. AYPCF 3.2	Design engagement activities that are culturally relevant and resonate with Chinatown's residents. AYPCF 3.1.a Incorporate trusted community organizations in civic engagement. AYPCF 3.1 Establish civic academies to develop the capacity of residents. AYPCF 3.2.a	City, CBOs, Public Health Department

10.5 FUNDING STRATEGY & CONTEXT

Successful implementation of the Chinatown Revitalization Plan requires funding of street and neighborhood clean-ups and beautification, sidewalk, street and stormwater infrastructure improvements, new housing development, as well as new and existing programming. No local government can fund all these initiatives on its own and Salinas needs contributions from its partners to realize the vision of the Plan. With these limitations in mind this section identifies some of the primary government funding opportunities and mechanisms that could be used for Revitalization Plan implementation.

Government and Other Funding Opportunities

Community Development Block Grants (CDBG). Through the CDBG program, HUD provides funds to local governments for a range of community development activities. The eligible activities include but are not limited to acquisition and/or disposition of real estate or property, public facilities and improvements, rehabilitation and construction (under certain limitations) of housing, and public services. In addition, these funds can be used to acquire or subsidize at-risk units. The City of Salinas receives approximately $2 million annually in CDBG funds. Under its HUD Slum and Blight Designation the City has more flexibility and less administrative burden to fund the remediation and renovation of blighted buildings and properties that would normally not be eligible unless they meet HUD's Low/Mod benefit criteria. Properties within Chinatown's that demonstrate a significant level of blight or deterioration would be eligible to apply for CDBG funds.

Environmental Protection Agency (EPA). EPA' Community Wide Assessment Grant funds the inventory, assessment and remediation of contaminated parcels. In November 2017 and January 2019, the City, working with the National Development Council, submitted CWAG applications. While the City was not awarded the grant on both occasions, it is a viable funding source that the City will continue to pursue.

Opportunity Zones (OZ). Introduced Introduced into the tax code by the Tax Cuts and Jobs Act in December 2017, Opportunity Zones are federally designated census tracts that are intended to stimulate private investment in economically distressed communities by reducing taxes on capital gains for investments made in those communities and held for a minimum of five years. There are five census tracts in Salinas that have been designated a part of the Salinas OZ: Tracts 4, 5.02, 13, 18.02, and 145. Part of the Plan Area falls within the OZ.

New Market Tax Credits (NMTC). Chinatown's census tract meets the income and poverty level criteria to be NMTC eligible. The NMTC Program attracts private sector investment capital to underserved markets by permitting individual and corporate investors to receive a credit against their federal income taxes in exchange for equity investments in for-profit or non-profit operating businesses and real estate projects in low-income communities.

Low-Income Tax Credits. The Low-Income Housing Tax Credit (LIHTC) is an incentive to build or rehabilitate rental housing for low-income households. Created at the Federal level through the 1986 Tax Reform Act, these credits are awarded on a competitive basis through state agencies, including the California Tax Credit Allocation Committee.

HOME Investment Partnership Act. Salinas also receives an annual entitlement under the HOME program. HOME funds can be used for activities that promote affordable rental housing and homeownership, including but not limited to building acquisition, new construction, reconstruction, moderate or substantial rehabilitation, first-time homebuyer assistance, and tenant-based assistance. Currently, the City receives approximately half a million dollars annually in HOME funds.

Monterey Bay Housing Trust. The County maintains a robust housing fund that has been critical for recent affordable housing projects in Salinas, including the Chinatown revitalization efforts. The Trust was established in 2016 as a $10 million loan fund for the development of affordable housing projects in the counties of Monterey, San Benito and Santa Cruz. If not spent within five years this money can be spent regionally, making this a priority funding source.

City-Owned Property. The City owns several vacant parcels on Soledad Street (10, 12, and 45 Soledad Street) which are potential locations for mixed-use if combined with adjacent properties. However, the City does not have the expertise or finances to develop the properties on its own and needs partners or private investment to facilitate development. When a public agency or entity provides free or discounted land for an affordable housing project it significantly reduces the project's need for cash subsidy by reducing the overall cost.

Active Transportation Program (ATP). This program is administered by Caltrans. The purpose of the ATP is to encourage increased use of active modes of transportation, biking and walking. The ATP consolidates existing federal and state transportation programs, including the Transportation Alternatives Program (TAP), Bicycle Transportation Account (BTA) and State Safe Routes to School into a single program with a focus to make California a national leader in active transportation.

Other Funding Mechanisms. Neighborhood Infill Finance and Transit Improvement Act of 2017 (NIFTI), Community Revitalization and Investment Authorities (CRIAs), and Community Development Financial Institutions Fund (CDFIs) are funding mechanisms that can help close project feasibility gaps that often prevent development from moving forward. NIFTI (AB 1568), provides local jurisdictions with the authority to finance infrastructure and affordable housing using new sales and use and transactions and use taxes, in addition to property tax increment within qualifying districts. Using tax increment financing (similar to former California Redevelopment Agencies) CRIAs (AB2; 2015) can fund infrastructure improvements and upgrades, economic development activities and affordable housing development. CDFIs are private financial institutions that are 100% dedicated to delivering responsible, affordable lending to help low-income, low-wealth, and other disadvantaged people and communities join the economic mainstream.

Philanthropic Funding Mechanisms. Local, regional, state, and national philanthropic organizations such as the Community Foundation of Monterey County, The David and Lucile Packard Foundation and the Bayer Foundation are potential funding sources to implement policies and actions related to building a healthy, safe, clean and strong neighborhood.

10.6 PLAN TRACKING, UPDATES, & ACCOUNTABILITY

Tracking and measuring plan progress are critical to plan implementation and ensuring accountability. A successful monitoring and evaluation process requires regular data collection, data analysis, community outreach and input and the willingness to revise the City's priorities as needed. The City will establish an annual community meeting to review progress, successes, and challenges with Chinatown residents and stakeholders. As the Revitalization Plan is meant to be a living document, this process would allow the community to request modifications to actions or changes in priorities. Following this meeting, City staff will provide a progress report to City Council, which if necessary, will include recommended updates to Plan actions or priorities.

10.7 CONTINUING COMMUNITY ENGAGEMENT

Successful implementation of the Chinatown Revitalization Plan requires continuing and strengthening the robust engagement process that created this plan. This includes careful coordination between all levels of government, partners, residents and stakeholders. The City is committed to continuing engagement through overall Plan implementation, as well as individual projects in Chinatown.

In addition to annual update meetings, City staff and community partners should regularly collaborate on improvement projects and policy development. Examples include working with a neighborhood group to implement a Neighborhood Beautification grant, conducting meetings and focus groups on housing ordinances, and ensuring participation in annual budget prioritization events. Throughout the next phases of the Chinatown Revitalization Plan, the City will continue to strive for community-driven processes that empowers Chinatown.

City of Salinas

CHINATOWN
Revitalization Plan

Second Review Draft | December 2019

Chinatown Revitalization Plan – "What We Heard"

Land Use:

- Currently, there are land-use conflicts between the new mixed-use zoning and the current light industrial and automotive uses that are legal non-conforming.
- The neighborhood lacks parks, urban plazas, and open space within the planning area.
- Zoning changes in the previous Chinatown plans were integrated into the Zoning Map updates and made several types of current active uses in Chinatown legal non-conforming uses (auto repair, light industrial uses, etc.).
- Vacant and abandoned properties as well as physical separation from Downtown and the Intermodal Transportation Center have contributed to the current blight and an uninviting pedestrian environment.

Housing and Neighborhoods:

- There is strong community interest in diversifying the housing stock in Chinatown by adding workforce and market rate housing alongside the current affordable developments.
- Housing for homeless individuals and very-low income (0%-30 AMI) households is a key community priority.
- Residents and stakeholders would like to have a mixed-income neighborhood.

Homlessness

- Chinatown should no longer be the epicenter of homeless encampments and social services for homeless individuals. Social Services should be distributed across the City and Monterey County.
- Residents, business and property owners, as well as stakeholders, have expressed that it is of critical importance to reduce encampments in Chinatown to revitalize the neighborhood.
- Most homeless individuals in Chinatown prefer to be housed in groups, especially with friends, and be placed in single family homes or in a permanent supportive housing apartment complex like the Moon Gate Plaza project.

Health and Safety:

- Safety is one of the top priorities for all stakeholders. Crime, illegal dumping, prostitution, and most critically the open drug market, need to be addressed.
- Clean and well-maintained streets, sidewalks, public spaces, and buildings are critical to Chinatown's revitalization.
- Finding a relocation site for the community garden, which was replaced by Moon Gate Plaza development, is a big community priority.
- Businesses feel blamed for the lack of neighborhood cleanliness, though in reality, they are doing plenty of maintenance and would like assistance from the City.

Economic Development:

- Crime, homelessness, and blight are considered some of the biggest obstacles to private investment in Chinatown. In other parts of Salinas, there is resistance to reconnecting Chinatown to other neighborhoods due to negative perceptions and safety concerns.
- The existing local art scene in Chinatown should be leveraged to catalyze economic development and transform the neighborhood into a cultural center for the arts.
- Soledad Street should be transformed into a vibrant "Main Street" like corridor with retail storefronts on the ground floor and a

diverse array of amenities and businesses for the neighborhood.

Transportation and Infrastructure:

- There continues to be extensive support for conversion of Chinatown back to two-way streets as recommended in past plans.
- A direct connection/crossing point over the Union Pacific Rail Lines into Downtown and the Intermodal Transit Center is of great importance to reconnecting Chinatown.
- Sidewalks in Chinatown have deteriorated and require significant improvement.
- Improving above and below-ground infrastructure along with streetscape improvements that promote human scale, engage the public realm, and ensure pedestrian safety are much needed.

Arts, Programming and Community Facilities:

- There is strong community interest in additional arts and cultural spaces and programs as Chinatown revitalizes and becomes an arts district.
- Events including food festivals, performing arts and cultural events would help make Chinatown a destination not only for City residents, but also for tourists.
- Public art programming can transform Chinatown into a cultural center for the arts.
- Partner with existing community facilities to expand programming and to develop new social and cultural events for the community.

Chinatown Revitalization Plan Goal Summary

Land Use:

LUD 1. Preserve the character of traditional neighborhoods while adding new housing units.

Preservation of existing low-and-medium-density housing characterized as more traditional single-family and small multi-family apartments in the expanded study area is important to balance the new high-density projects within the Chinatown core. Allowing low-density areas to intensify their land use through the incorporation of accessory dwelling units (ADUs), duplexes, and triplexes, will open opportunities for the creation of more housing that complements the existing character of the neighborhood.

LUD 2. Expand mixed-use development to increase capacity for new businesses, services, and housing.

Chinatown is a neighborhood in transformation and the consolidation of parcels to support development of new compact mixed-use projects as well as the rehabilitation of vacant historic buildings will help support the creation of a healthy, vibrant and walkable neighborhood. Vacant buildings and underutilized properties in Chinatown's Core have the potential to be redeveloped as mixed-use projects that include residential units and introduce new and important neighborhood-serving amenities such as retail stores, restaurants, libraries, artist studios, and compact urban open spaces, among other complementary uses.

LUD 3. Provide employment and commercial oriented land uses in appropriate locations to advance the economic diversity of Chinatown.

Currently, Chinatown is home to a modest range of automotive, light industrial, and manufacturing establishments that comprise much of the neighborhood's economic base. Co-locating these uses within zoning designations that allow them to grow and expand is crucial to diversifying and growing Chinatown's economy. This will also protect the mixed use and residential areas from adverse impacts created by incompatible land uses and encourage the redevelopment of underutilized parcels into new and diverse commercial and employment-oriented development.

LUD 4. Promote and preserve and the culture, art, identity, and history of Chinatown through context and place-sensitive design.

Preserving Chinatown's historic architecture and multicultural heritage is a community priority for revitalization. The City can implement new development standards and design guidelines through the establishment of an Arts Overlay District to encourage new development to embrace a more cohesive and culturally appropriate architectural style. Commissioning public art that reflects Chinatown's unique and multicultural heritage will to strengthen neighborhood identity.

Housing and Neighborhoods:

HN 1. Increase housing supply and bring new housing types to Chinatown.

Encourage the development of a diversity of new affordable and market rate residential and mixed-use development through financial incentives and new funding. Explore opportunities to rehabilitate and reuse underutilized buildings and properties in Chinatown for housing. Diversify housing options by encouraging the development of accessory dwelling units (ADUs) to increase the number of units, while preserving the character of traditional neighborhoods.

HN 2. Ensure tenant protections are in place to protect individuals and households of all ages, abilities and income levels.

As the neighborhood transforms with new and redeveloped units, it is critical to ensure policies are in place to avoid displacement, extreme rent increases, and to provide assistance with relocation when displacement is unpreventable. Facilitating education workshops for tenants and owners to understand new State regulations surrounding housing policies and programs, and their housing rights will also help to mitigate potential adverse effects.

HN 3. Improve the quality, condition, and sustainability of housing options for all Chinatown residents.

Ensure the safety and quality of rental housing in Chinatown through implementing code enforcement best practices and strategies that minimize displacement. Connect households and developers to housing rehabilitation resources that promote environmental sustainability and improve housing and neighborhood conditions.

HN 4. Foster a sense of neighborhood ownership among residents to build community unity and agency.

Collaborate with residents and property owners to support the City's current efforts in neighborhood rehabilitation and maintenance. Promoting resident involvement in planning and implementing neighborhood improvement projects will instill a sense of community pride.

HN 5. Assist the chronically homeless in their search for permanent and sustainable housing solutions.

Pursue a coordinated, multi-pronged strategy to engage and assist chronically homeless individuals through outreach, intake and assessment and housing navigation services. Continue to explore options for innovative and low-barrier temporary, transitional, and supportive housing alternatives.

Economic Development:

ED 1. Improve the appearance and cleanliness of Chinatown.

A safe and clean environment is requisite to attract more residents, visitors, private investment, and commercial activity to Chinatown. The neighborhood's current environment of blight, violent crime, and homelessness negatively impacts Chinatown's prospects of a vibrant economy that meets residents' needs. The City will need to find creative ways to work with residents and local businesses to expand the scope of sanitation improvements, such as street sweeping and trash pickup and develop a robust maintenance schedule and improved coordination to maintain a clean and safe neighborhood that is attractive and viable for private investment and commercial activity.

ED 2. Promote Chinatown's Identity as a Unique Cultural, Arts, and Shopping Destination.

Chinatown's rich multicultural history, culture and arts are assets that can be used to counteract the negative reputation of the neighborhood, and attract new residents, visitors, and investment to Chinatown. Promoting cultural programming and events such as the annual Asian and Obon Festivals as well as the creation of new cultural events will draw more residents and visitors to the neighborhood, increasing its economic activity. Coordinated promotion and branding efforts should include a new webpage that tells the neighborhood's multicultural story, showcases recent area improvements, and advertises upcoming events and promotes existing and new local businesses.

ED 3. Foster Business Creation, Retention, Expansion, And Attraction to Create a Critical Mass of Economic Activity Across the Neighborhood.

Growing the number and diversifying the type of business and services in Chinatown are essential to building a stronger economic base that creates job opportunities for Chinatown's workforce, provides retail options for the neighborhood's growing consumer base, and increases revenue for public and private re-investment in the neighborhood. Vacant and underutilized buildings and properties have the potential to become low-cost live/work units,

business incubators, and flexible makerspaces for artists, entrepreneurs and emerging industries. These emerging businesses will need business education, technical assistance and access to capital to thrive.

ED 4. Increase Access to Education Training, Entrepreneurship Programs, and Employment Opportunities for Existing and Future Residents.

Accessible, affordable education, training and career pathway programs will prepare current and future residents for higher paying employment opportunities thus improving their economic stability and quality of life. Programs should include targeted food culture and "Ag Tech" opportunities related to Salinas' agricultural industry, and focus support for marginalized populations, such as individuals experiencing homelessness and undocumented immigrants, who often face discrimination in the job market.

Health and Safety:

HS 1. Cultivate a safe and clean neighborhood environment in which residents, employees, and visitors feel comfortable and safe at all times.

A safe and clean environment encourages residents to spend time outside their homes while being active and socializing with neighbors. It also brings visitors to the neighborhood and increases foot traffic for local shops. By stimulating economic development, new businesses will be more willing to invest in the neighborhood, thus creating job opportunities for the local workforce invest in the neighborhood and creating job opportunities for the local workforce.

HS 2. Continue to provide needed social services to stabilize the homeless population.

For a long time, homeless services have been concentrated in Chinatown. While these services are becoming more widely distributed throughout Salinas and Monterey County, unsheltered residents must continue to be supported by these social services throughout the revitalization process. As new housing and increased services for those experiencing homelessness are provided, daytime camping must in turn be phased out.

HS 3. Address contaminated parcels, dilapidated buildings, and abandoned properties to ensure they are safe to residents and visitors.

Parts of Chinatown's built environment pose serious risks to public welfare. A dilapidated built environment can serve as an invitation for criminal behavior and pose serious fire risks. Additionally, exposure to hazardous building materials – like lead and asbestos – can cause health complications. A robust set of improvements will ensure the community's health and safety for years to come.

HS 4. Expand access to healthy and affordable foods for all residents.

Creating a strong and resilient community requires a healthy food culture. Currently, access to healthy and affordable foods is severely limited in Chinatown except for established food assistance programs. Efforts should focus on organizing a grocery store, farmers' market, community garden, buying club, community kitchen, or/and educational campaign, which can go a long way in expanding access to fresh produce.

Transportation and Infrastructure:

TI 1. Establish an efficient, integrated, and well-connected road network that reconnects Chinatown with the rest of the community.

Chinatown's Core neighborhood roadway network is poorly connected with the rest of Salinas and expansion area, creating issues for Chinatown residents wishing to access key destinations across the City. Converting the neighborhood to two-way streets, establishing a direct at-grade crossing across

the Union Pacific rail lines and devising a comprehensive streetscape plan will assist in reconnecting the neighborhood and creating safe access the Downtown and the Intermodal Transportation Center.

TI 2. Establish a complete multi-modal transportation network throughout Chinatown to improve public safety, circulation, and traffic congestion.

Chinatown's streets need to be retrofitted and reprogrammed to safely accommodate all modes of travel. Sidewalks and pedestrian crossings also need to be upgraded. New bike lanes along main arterials like E. Rossi are needed as well as and improved bus service for the residents to navigate the community without needing to use a personal automobile. Minimizing the prospect for traffic congestion in the future is key for the neighborhood.

TI 3. Establish high-quality streetscape improvements and amenities to create a walkable neighborhood.

Chinatown streetscape and infrastructure are in disrepair and in need of major upgrades. Many crosswalks and sidewalks in the neighborhood are damaged and repairing them is needed to create a pedestrian-friendly environment. These improvements along with more native trees and plants, ADA compliant ramps and pedestrian oriented lighting throughout the planning area will promote walkability throughout the neighborhood. These improvements will activate the public spaces by increasing foot traffic and ensuring pedestrian safety and comfort.

TI 4. Improve above and underground infrastructure in Chinatown.

As redevelopment occurs, Chinatown's above and underground infrastructure should be evaluated and upgraded to respond to the needs of a new residents and land uses. This requires significant investments in sewer systems, telecommunications and stormwater management among other utilities. Enhanced infrastructure financing through new State funding will be vital in accomplishing these upgrades.

TI 5. Ensure adequate parking facilities to support a thriving neighborhood.

New residential developments and commercial establishments will mean more people living, working, and visiting. This will translate to more cars into Chinatown. The City will need an innovative parking management plan to support the neighborhood's continued growth, ensure pedestrian-friendly streets, and support the local needs of its residents and businesses.

Art, Youth, Programming and Community Facilities:

AYPCF 1. Establish Chinatown as an arts and culture hub that celebrates its multicultural past, welcomes artists, and attracts public art investment.

Through Chinatown's strong arts and cultural organizations, the neighborhood is poised to become an arts and cultural center by deepening support for artists and ensuring they have places to live and work, and by hosting celebrations, public art, and storytelling of its history within the public spaces.

AYPCF 2. Support youth and family development by investing in programs that are healthy and nurturing.

Chinatown's many families and children can benefit from programs and services that provide resources and guidance so that young people and their families can thrive at every stage of life.

AYPCF 3. Encourage robust civic engagement and development of resident leaders committed to shaping Chinatown's future.

Robust stakeholder engagement and leadership shaped this Revitalization Plan, and the City and Chinatown community are committed to ongoing civic engagement that effectively involves and builds the capacity of local individuals and organizations as part of implementation.

AYPCF 4. Strengthen the capacity and sustainability of community-based organizations (CBOS) in Chinatown to provide critical services.

The City of Salinas will continue to partner with Chinatown's cultural and faith-based institutions and service providers to ensure they have the tools, resources and information needed to best serve the community and sustain their organizations.

AYPCF 5. Ensure that Chinatown allows for a full range of recreational activities to promote active and healthy lifestyles.

Through coordination and cooperation, the City of Salinas, local housing and service providers, and cultural and faith-based institutions will ensure residents have access to places and programs that support their health and well-being.

AYPCF 6: Create and support well-maintained and culturally relevant small parks and other urban gathering spaces in Chinatown.

As Chinatown revitalizes and redevelops, a strong system of diverse open spaces will serve the neighborhood by providing places for rest, relaxation, and respite. These clean, safe places can also be used to showcase Chinatown's rich and diverse arts and culture.

Errata Sheet to the Public Review Draft of the Chinatown Revitalization Plan

Introduction and Content

After the Public Review Draft of the Chinatown Revitalization Plan was circulated on November 27th, staff continued to make minor modifications to clarify language and fix grammatical errors. These revisions did not change the intent or content of the document and therefore are not specifically outlined in the Errata Sheet.

The only substantive addition is identified below in Table 1. This action item under Table 1 was added to the Draft Chinatown Revitalization Plan between the public release date, November 27, 2019, and City Council date. This action item was added to reflect the focus of using HUD, HCD, and local funding to expand housing opportunities and services to reduce homelessness in Chinatown. Efforts that are already taking place now.

Table 1: Errata Changes

Section	Page	Modification
5.3	105	HN 5.1.h – Utilize Federal, State and Local Funding to reduce homelessness. Allocate HUD and California Department of Housing and Community Development (HCD) and other local funding to produce additional housing opportunities (i.e., emergency shelter, transitional housing and permanent supportive housing) and improve services (i.e. housing navigation, housing locators, street outreach, rapid re-housing) to reduce homelessness. File #: ID#19-678, **Version:** 1

West Area Specific Plan Project

Approve a Resolution certifying the West Area Specific Plan Final Program Environmental Impact Report (ER 2018-003); Approve a Resolution adopting the CEQA Findings of Fact, a Statement of Overriding Considerations, and a Mitigation Monitoring and Reporting Program for the West Area Specific Plan (SPEC 2013-002); Approve a Resolution for the West Area Specific Plan (SPEC 2013-002), including the incorporation of minor text and figure modifications (the Specific Plan Errata); Adopt an Ordinance approving a Rezone (RZ 2019-001) and amending the City of Salinas Zoning Map accordingly for approximately 797 acres of land located within the West Area Specific Plan Project Area; and Adopt an Ordinance approving a Development Agreement (DA 2019-001) between the City of Salinas and property owners and developers related to the West Area Specific Plan Project Area. The West Area Specific Plan Project Area is bounded by East Boronda Road on the south, San Juan Grade Road on the west, Natividad Road on the east, and Rogge Road and the future extension of Russell Road on the north and will include approximately 4,340 dwelling units, a Village Center with up to 571,500 square feet of mixed-use commercial floor area, eleven parks, up to five schools, open space, and well sites.

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **DECEMBER 17, 2019**

DEPARTMENT: **COMMUNITY DEVELOPMENT DEPARTMENT**

FROM: **MEGAN HUNTER, COMMUNITY DEVELOPMENT DIRECTOR**

THROUGH: **TARA HULLINGER, PLANNING MANAGER**

BY: **JILL MILLER, SENIOR PLANNER**

TITLE: **WEST AREA SPECIFIC PLAN PROJECT**

RECOMMENDED MOTION:

1. A motion to approve a resolution certifying the West Area Specific Plan Final Program Environmental Impact Report (ER 2018-003);

2. A motion to approve a resolution adopting both the CEQA Findings of Fact, including the Statement of Overriding Considerations, and the Mitigation Monitoring and Reporting Program for the Specific Plan;

3. A motion to approve a resolution for the West Area Specific Plan (SPEC 2013-002) including the incorporation of minor text and figure modifications (the Specific Plan Errata);

4. A motion to adopt an Ordinance approving Rezone (RZ 2019-001) and amending the City of Salinas Zoning Map accordingly for approximately 797 acres of land located within the West Area Specific Plan Project area; and

5. A motion to adopt an Ordinance approving Development Agreement (DA 2019-001).

RECOMMENDATION:

It is recommended that the City Council affirm the findings and approve the attached resolutions certifying the Final Program EIR (ER 2018-003), adopting the Statement of Overriding Considerations and Mitigation Monitoring and Reporting Program and approving the West Area Specific Plan (SPEC 2013-002). It also recommended that the City Council adopt the attached ordinances approving a Rezone (RZ 2019-001) and a Development Agreement (DA 2019-001) for the Project.

EXECUTIVE SUMMARY:

The project applicant, Brian Finegan (representing multiple property owners and developers) has applied for the approval of the West Area Specific Plan (SPEC 2013-002), a Rezone (RZ 2019-001) and a Development Agreement (DA 2019-001). The West Area Specific Plan project (also referred herein as "the Project") encompasses approximately 797 acres of land located in the northern portion of the City. The project site is bounded by East Boronda Road on the south, San Juan Grade Road on the west, Natividad Road on the east, and Rogge Road and the future extension of Russell Road on the north.

A Final Program EIR (consisting of the Draft EIR, Response to Comments and MMRP) has been prepared to evaluate the environmental impacts of the Project in accordance with requirements of the California Environmental Quality Act (CEQA). In this regard, a Statement of Overriding Considerations has also been prepared for the Project.

BACKGROUND:

Existing Setting

The West Area Specific Plan area (also referred herein as "Plan Area") is located within the western portion the North of Boronda Future Growth Area (FGA), which was annexed into the City in 2008. Four arterial streets form the boundaries of the project site (also referred herein as "the site") including E. Boronda Road on the south, San Juan Grade Road on the west, Natividad Road on the east and Rogge Road and the extension of Russell Road on the north (see Attachment 7).

The approximately 797-acre site is currently utilized primarily for row-crop farming and other agricultural-related activities. Two schools, McKinnon Elementary School (Santa Rita Union School District) and Rancho San Juan High School (Salinas Union High School District), are located in the southwest and northern portions of the site, respectively. A few residences and farm structures are also located adjacent to San Juan Grade Road, Natividad Road and Rogge Road in the western, eastern and northern portions of the site, respectively.

The topography of the site is nearly flat (with an overall slope from northeast to southwest of approximately 0.3%). No significant Special Flood Hazard Areas have been mapped on the site according to the Federal Emergency Management Agency (FEMA). There are no natural streams or water bodies present; however, there are several agricultural irrigation ditches located on the site.

Existing infrastructure is currently located along E. Boronda Road, including water, sewer, electricity, storm drainage and dry utilities, and will be extended into the Plan Area boundaries as development occurs. Monterey Salinas Transit (MST) currently provides transit access to the site via bus stops located along E. Boronda Road.

The Plan Area includes 13 parcels and 11 property owners (see Attachment 8). Two of the parcels are owned by school districts (the Santa Rita Union School District and the Salinas Union High

School District). The remaining parcels are owned by private parties. The project applicants own or control approximately 471.64 of the 797-acre site and have been actively participating in the planning process and funding the cost of the preparation of the West Area Specific Plan, environmental document and related documents to date. As such, these applicants are referred herein to as "participating property owners".

Surrounding Land Uses

West: Low and medium density residential uses are located across San Juan Grade Road. The Gateway Center Specific Plan area (Lowe's Home Improvement Store) directly abuts the southwest corner of the project site. This area was originally included within the boundaries of the proposed West Area Specific Plan. In 2011, however, the City Council approved a separate specific plan for the approximate 20-acre commercial shopping center site to allow the commercial shopping center to be developed and this area was subsequently removed from the West Area Specific Plan. Staff and the developers of both specific plan areas have coordinated the two planning efforts to ensure pathway connections, sound attenuation walls, street lighting, and other improvements were consistent and complementary between the two projects.

North: The Bolsa Knolls residential area and scattered residential and agricultural-related uses are located along Rogge Road within unincorporated Monterey County.

East: Row-crop farming and other agricultural related uses on land located within both unincorporated Monterey County and City limits. The proposed Central Area Specific Plan (which is currently being processed by the City) will be located directly to the east of the Plan Area.

South: Low- and high-density residential uses and commercial shopping centers (Harden Ranch and Shaker Square) are located to the southwest and southeast, respectively.

Existing Salinas General Plan Land Use Designations and Zoning District

The General Plan Land Use Designations for the project site are Residential Low, Residential Medium, Residential High Density, Mixed Use, Park, Public/Semipublic, and Open Space.

Upon annexation in 2008, the North of Boronda FGA (including the project site) was zoned New Urbanism Interim (NI) with a Specific Plan Overlay District. The NI District was intended to serve as an interim holding zone for land located in the North of Boronda FGA until such time that future Specific Plans were approved, and the new zoning district designations were established for the area. Additionally, at that time, the City certified the Salinas General Plan Final EIR pursuant to the requirements of the California Environmental Quality Act (CEQA), which included a statement of overriding considerations for the loss of agricultural lands located in the FGA as a result of the anticipated future development of that area.

The project applicants are requesting to rezone the project site from the New Urbanism Interim (NI) with a Specific Plan Overlay District to the new zoning districts proposed in the West Area Specific Plan. See below for further discussion of the requested rezone.

Project Milestones

The following is a list of Project milestones:

- September 9, 2008, the North of Boronda FGA consisting of approximately 2,400 acres (including the project site) was annexed into the City of Salinas.
- August 12, 2013, the project applicant submitted applications to the City for the purpose of developing the West Area Specific Plan.
- October 14, 2015, a Notice of Preparation (NOP) of a Draft EIR (also referred herein as "DEIR") for the West Area Specific Plan was distributed in accordance with Section 15082 of the California Environmental Quality Act (CEQA) Guidelines for a 30-day public review period. Nine comment letters were received.
- October 29, 2015, a Scoping Meeting for the DEIR was held.
- February 27, 2019, the City filed a Notice of Completion (NOC) of the Draft EIR with the California Office of Planning and Research State Clearinghouse commencing the 45-day state public agency review period, which ended on April 15, 2019.
- February 27, 2019, the City filed a Notice of Availability (NOA) of the Draft EIR with the Monterey County Clerk on February 27, 2019 commencing the 45-day local public review period, which ended on April 15, 2019. The NOA was also posted at the City of Salinas City Hall, the Salinas Permit Center, the Steinbeck and Cesar Chavez Libraries, and on the City's website.
- February 27, 2019, the Draft West Area Specific Plan was circulated for a 45-day public review period, which ended on April 15, 2019 along with the DEIR. An electronic file of the Draft West Area Specific Plan was also distributed to the Planning Commission for review at that time.
- March 12, 2019, staff presented the proposed Project to the Housing Subcommittee for consideration.
- March 13, 2019, staff presented the proposed Project to the Library and Community Services Commission for consideration. The Commission voted 5-0 to recommend approval of the park plan contained in the West Area Specific Plan to the City Council.
- March 14, 2019, staff presented the Project to the Traffic and Transportation Commission. The Commission voted 6-0 to recommend approval of the Project (based on the Traffic Impact Analysis) to the City Council.
- April 3, 2019, the Planning Commission held a study session regarding the proposed Project. Issues raised during that meeting were: traffic noise, the need for sound-attenuation walls and grading along Russell Road; potential sewer connection requirement for the Bolsa Knolls area (which is located in unincorporated Monterey County); the need for future transit service in the Plan Area; and the adequacy of the newspaper noticing. As this was a study session, no action was taken.
- April 15, 2019, the 45-day comment period for the West Area Specific Plan and the DEIR documents closed. The City received comment letters from the following individuals and agencies:

- Native American Heritage Commission, received March 4, 2019
- Monterey County Health Department, received April 10, 2019
- LandWatch, received April 11, 2019
- California Department of Transportation, received April 12, 2019
- Salinas Union High School District, received April 12, 2019
- Alisal Union School District, received April 15, 2019
- Santa Rita Union School District, received April 15, 2019
- Brian Finegan, received April 15, 2019
- California Department of Fish and Wildlife, received April 16, 2019
- Monterey Bay Air Resources District, received April 16, 2019

See Section 2.0 of the West Area Specific Plan Final Program EIR (also referred herein as "Final EIR") for further discussion of these comment letters including the responses to comments.

- April 30, 2019, the City Council held a study session regarding the proposed Project. Issues raised during that meeting were: school facility funding; project density, traffic noise, sound-attenuation walls, and grading along Russell Road; potential sewer connection requirement for the Bolsa Knolls area (which is located in unincorporated Monterey County); and the need for future transit service in the Plan Area. As this was a study session, no action was taken.
- June 10, 2019, staff held a community meeting at the Northminster Presbyterian Church community room located at 315 Alvin Drive. At the meeting, individual stations were provided for the public to obtain information about the project, provide comments, ask questions and directly engage with City staff and members of the development team. Over 70 people attended.
- November 6, 2019, the Planning Commission held a study session regarding the proposed Project. Issues raised during that meeting were: traffic noise, the need for sound-attenuation walls and grading along Russell Road; potential sewer connection requirement for the Bolsa Knolls area (which is located in unincorporated Monterey County). As this was a study session, no action was taken.
- December 4, 2019, the Planning Commission considered the project and voted **unanimously** (7-0) to recommend that the City Council approve the Project (see Attachment 6) as presented. Further discussion of this meeting is provided below.

DISCUSSION:

The requested entitlements include a Specific Plan and Rezone. The approval of these entitlements is needed in order to allow the development of the 797-acre project site. A Development Agreement is also included within the package of proposed entitlements to provide certainty to the City and the applicant with respect to development of the Project.

A Final EIR (consisting of the Draft EIR, MMRP and Response to Comments) has been prepared to evaluate the environmental impacts of the Project in accordance with requirements of the California Environmental Quality Act (CEQA). A Statement of Overriding Considerations has

been prepared for the Project. The Specific Plan, Rezone, Development Agreement, Final EIR and other project-related issues are discussed below:

Specific Plan

General Plan Conformance

The Salinas General Plan requires the approval of Specific Plans by the City Council prior to any development in the City's Future Growth Area (FGA). Subsequent to the adoption of the Salinas General Plan in 2002, the area located in the northern portion of the City (referred to as the North of Boronda FGA) was generally divided by the City into three proposed specific plan areas (the West Area, the Central Area and the East Area) for comprehensive planning purposes. As such, the development of the North of Boronda FGA (including the proposed Project) has been anticipated by the City as part of a long-term coordinated planning and development process envisioned under the General Plan.

The General Plan requires that development in the North of Boronda FGA be based on the principles of New Urbanism and meet specific minimum densities/percentages. In this regard, specific plans prepared for the FGA must incorporate the following:

- Distinct identifiable neighborhoods that are pedestrian-oriented and promote a safe environment.
- Pedestrian, bicycle and transit connectivity.
- An interconnected street network with narrow streets and traffic calming devices.
- A mix of housing, workplaces, retail, parks, schools and other uses.
- A variety of housing types and affordability levels.
- A minimum average density of 9 dwelling units per net residential acre to promote compact design and preserve agricultural land.
- A mix of low, medium and high density dwelling units; with 15% to 25% of the dwelling units falling within the density range of 16 to 24 dwelling units per net residential acre and 35% to 45% of the dwelling units falling within the density range of 7 to 14 dwelling units per net residential acre.

The West Area Specific Plan (also referred herein as "the Specific Plan") is the first of the three proposed specific plans to move forward into the entitlement phase. This Specific Plan will serve as the implementation tool to realize the General Plan vision for the western portion of the North of Boronda FGA. In this regard, the Specific Plan incorporates the New Urbanism Design Principles and the required minimum residential densities/percentages noted above, as well as other design principles such as Crime Prevention through Environmental Design (CPTED), Health in All Polices, Green Streets and Smart Growth to ensure consistency with the General Plan.

The Specific Plan also specifies the ultimate distribution, location and intensity of land uses in the Plan Area in accordance with the total development capacities provided under the General Plan to ensure development of the area in an orderly and comprehensive manner with adequate infrastructure and facilities. The Project's consistency with the General Plan is further discussed in Appendix C of the Specific Plan and is herein incorporated by reference.

Content and Organization of the Specific Plan

The Specific Plan establishes the overall land use concept and development framework for the Plan Area. The Specific Plan was prepared by the applicant with the direction and input of City staff. Early consultations with local, regional, and State agencies also formed the content of the Specific Plan. The content of the Specific Plan is consistent with Government Code Sections 65450 - 65457 and Article VI, Division 15 of the Salinas Zoning Code.

The Specific Plan is organized into nine chapters and the appendices as follows:

- Chapter 1 – Introduction: This Chapter discusses the purpose and scope of the Specific Plan, the project description and regulatory authority and compliance.

- Chapter 2 - Land Use: This Chapter provides an overview of the land use plan, General Plan land use and zoning district designations, inclusionary housing, density bonus, parks and open space land use, resource management and conservation, and sustainable planning and design.

- Chapter 3 - Use Classifications and Development Regulations: This Chapter addresses the relationship of the Specific Plan to the City's Zoning and Building Codes, establishes the applicable zoning districts, use classifications and development regulations, residential product flexibility, and required residential units and commercial mix to meet General Plan requirements.

- Chapter 4 - Design Standards: This Chapter establishes the New Urbanism design standards, architectural standards, green building standards and landscaping and streetscape standards for the Plan Area.

- Chapter 5 - Circulation: This Chapter describes the existing and planned streets and improvements in the Plan Area and surrounding area. It also addresses traffic calming, public transit, pedestrian and bicycle circulation.

- Chapter 6 – Infrastructure Plan: This Chapter describes the required and planned infrastructure such as water supply, treatment, storage, and distribution, wastewater collection and treatment, public services and utilities.

- Chapter 7 - Stormwater and Water Quality Management: This Chapter outlines stormwater infrastructure as it relates to water quality, supplemental storm water detention/retention and flow control.

- Chapter 8 - Public Facility Financing Plan: This Chapter addresses the financing of public facilities, infrastructure improvements, funding and reimbursement policies and maintenance responsibilities.

- Chapter 9 – Implementation and Administration: This Chapter discusses the Specific Plan's authority and implementation, project review procedures, preservation and enforcement procedures, phasing, minor revisions and amendment procedures and enforcement.

- Appendices: Includes the definitions, the project's consistency with the General Plan, street lighting standards, inclusionary housing, street sections and other related items.

Project Summary:

At build-out (estimated to occur over the next 20 to 30 years), the West Area Specific Plan Project will include approximately 4,340 dwelling units (provided as a mix of low, medium and high densities in conformance with the General Plan), a Village Center with up to 571,500 square feet of mixed-use commercial floor area, eleven parks, up to five schools (one high school [existing], one middle school, and three elementary schools [one existing]), open space (supplemental storm water basins) and well-sites. These land uses are further summarized below.

It is important to note that the majority of the dwelling units provided in the Plan Area will fall within the medium density range of 9 to 15 dwelling units per net residential acre (without density bonus) and the high density range of 16 to 24 dwelling units per net residential acre (without density bonus) to ensure a variety of housing options and affordability levels are provided. In addition, dwelling units in the density range of 30 to 40 dwelling units per net residential acre (without density bonus) will also be permitted in and around the Village Center through the conversion of commercial floor area to residential units, providing additional affordable housing opportunities. Accessory dwelling units will also be permitted to further increase the number of affordable housing options provided within the Plan Area.

Land Use/Proposed Zoning Districts		**Framework Acres**	**Projected Dwelling Units or Square Feet (without Density Bonus)**
Residential Planning Areas	NE (Low)	227.72	1,361 du
	NG-1 (Medium)	188.44	1,803 du
	NG-2 (High)	59.84	1,085 du
	VC (Village Center)	4.55	91 du
	Total	**480.55**	**4,340 du**
Mixed Use Village Center (1)		20.13	571,500 sq. ft.
Total Residential and Village Center		**500.68**	
High School		38.97	
Middle School		20.78	
Elementary School #1		10.98	
Elementary School #2		10.00	
Elementary School #3		10.00	

Community Park	30.83	
Neighborhood Parks (four)	12.52	
Small Parks (six)	6.41	
Supplemental Detention/Retention Basin Open Space	35.03	
Water Wells/Water Treatment	1.50	
Total Public Facilities	**177.02**	
Circulation Roadways (2)	118.85	
Total	**796.55**	

Vision Statement/Key Features of the Specific Plan:

The vision statement for the West Area Specific is to "create a livable and pedestrian-oriented community, planned and designed to implement the tenets of New Urbanism and other General Plan principles, with a diverse mix of housing types and lot size, a vibrant mixed-use main street and town square, accessible public uses and gathering places, an interconnected bicycle, path and public transit networks and well planned infrastructure." In this regard, the following key features have been incorporated into the design of the Plan Area:

- A Village Center with a main street, town square and a mix of high-density housing and mixed-use commercial uses easily accessible to residents of the Specific Plan and surrounding areas.
- Four residential neighborhoods that are organized around neighborhood parks that serves as public gathering space for the residents of each neighborhood.
- A mix of housing types and residential densities in conformance with General Plan requirements for medium and high densities.
- A centrally located community core of public facilities and services (comprised of the Village Center, community park, middle school, high school and high-density residential housing).
- Four neighborhood parks and six small parks conveniently located within 5-minute walk of residences.
- An approximate 30-acre community park located within a 10-minute walk of residences.
- Three school sites (two elementary and one middle school) and two existing schools distributed throughout the Specific Plan.
- A vehicular circulation system that fosters the efficient and safe distribution of trips incorporating traffic calming devices at key intersections and other locations nears schools, parks and other areas to enhance pedestrian and bicycle safety.
- A network of paths, bike lanes/routes, transit stops and pedestrian-friendly streets connecting the schools, parks, the Village Center and the Project's four residential neighborhoods.
- Two greenways streets and paths that will extend through the entire length of the Specific Plan and into the greater North of Boronda FGA. The southerly greenway street includes a 10-foot wide shared-use off-street path to accommodate both pedestrians and bicyclists. These paths/streets will connect to other paths and bike lanes/routes located both in the Plan Area and to existing developed areas located to the north, south and west.

- Decorative street lighting and pedestrian amenities are incorporated throughout the Project to further create a distinct sense of place.
- Low Impact Development (LID) features have been incorporated throughout the Project to ensure conformance with the City's stormwater requirements.

Development Regulations, Use Classifications and Design Standards:

The Specific Plan includes Development Regulations and Use Classifications (see Chapter 3 of the Specific Plan) that will modify a number of the City's existing New Urbanism Zoning district regulations contained in Article III, Division 8 of the City of Salinas Zoning Code as well as other Supplemental Development Regulations and Standards contained in the Zoning Code. Development in the Plan Area will be subject to the Salinas Zoning Code regulations and standards except where specifically modified or otherwise provided for in the Specific Plan.

The proposed Use Classifications and Development Regulations applicable to the Plan Area are listed in Tables 3-1 through 3-5 of the Specific Plan. The standards proposed in the Specific Plan are intended to facilitate New Urbanism development as envisioned in the General Plan and Salinas Zoning Code and promote Traditional Neighborhood Development (TND) and other design principles. Generally, the modifications to the Zoning Code provide additional flexibility to accommodate a variety of different housing types, residential densities and lots sizes, and mixed-use development.

Design standards have also been included in the Specific Plan (see Chapter 4 of the Specific Plan) addressing items such as streetscape, area entry features, landscaping, architecture, and sustainable building design. These standards are in addition to the design standards contained in the City's Zoning Code except where specifically superseded in the Specific Plan. These design standards will provide for the creation of distinct identifiable neighborhoods with a variety of architectural housing styles, porches, recessed garages and other features, which emphasize the pedestrian over the automobile.

The Specific Plan also includes a number of design and infrastructure features to reduce greenhouse gas emissions that could contribute to global warming. A range of measures have also been included to enhance development sustainability. These measures are described in Section 4.5, *Green Building Standards*, of the Specific Plan.

Housing Types, Densities, and Affordability:

All residential development within the Plan Area is required to meet the minimum/maximum densities and density percentages required under the General Plan to ensure a variety of housing options and affordability levels are provided. As previously noted, these requirements include:

- A minimum average density of nine dwelling units (du) per net residential acre must be achieved over the Plan Area;
- 35%-45% of dwelling units must be in the density range of 7 to 14 du per net residential acre (which equates to approximately 1,519-1,953 dwelling units in the Plan Area); and
- 15%-25% of dwelling units in density range of 16 to 24 du per net residential acre (which equates to approximately 651-1,085 dwelling units in the Plan Area).

Additionally, the Village Center and surrounding areas (subareas 1.6, 1.7 (portion), 3.1 and 3.5) may be developed at a minimum of 30 to 40 du per net residential acre in accordance with the City's Housing Element and State Law. These additional units may be provided through the conversion of commercial floor area into dwelling units. In this regard, up to 250,000 square feet of the mixed-use commercial floor area allocated to the Village Center may be converted into 250 additional dwelling units (see Section 3.9.3 of the West Area Specific Plan). This concept is described in the General Plan as "comparable impact". Comparable impact is considered to be the substitution of 1,000 square feet of non-residential floor area for one residential dwelling unit.

Additional dwelling units will also be permitted pursuant to the City's density bonus and accessory dwelling unit ordinances. The City's Inclusionary Housing ordinance will also apply to development in the Plan Area. See Appendix H in the West Area Specific Plan for further discussion of the project's inclusionary housing requirements.

Circulation and Transportation:

The circulation plan for the Plan Area includes an interconnected pedestrian, bicycle and roadway and public transit system to ensure connectivity between land uses and create a safe and efficient circulation system for all users. Traffic calming devices, wider parkways (separating the street from the pathways) and narrower streets will be utilized to place the emphasis on the pedestrian rather than the automobile. The Specific Plan land use and circulation design promotes increased daily pedestrian trips by connecting residential neighborhoods within walking and bicycling distance to public facilities such as schools and parks, and to retail, employment areas, and transit connections.

Two greenway streets have been provided the length of the Plan Area and will ultimately extend into the proposed Central Area Specific Plan and the greater North of Boronda FGA located to the east. These greenway streets have paths with enhanced parkways and landscaping, decorative street lighting and limited vehicular interruptions (from driveways) to promote pedestrian and bicycle use. These greenways as well as other paths and streets within the Plan Area have been designed to link with existing off-site pedestrian, bicycle and vehicular (including transit) circulation systems (see Figure 5-28 of the Specific Plan).

The Specific Plan includes a conceptual transit plan for the Plan Area. This plan (see Figure 5-23 of the Specific Plan) anticipates that there will be bus stops/shelters adjacent to the Village Center, high density residential areas and/or near major activities centers such as the community park. It was prepared in consultation with Monterey-Salinas Transit (MST) staff. The final routing and bus stop/shelter locations will be subject to the approval of MST in coordination with the City and the developers of the Plan Area.

Three roundabouts will be provided along the southern boundaries of the site in conjunction with the Boronda Road Congestion Relief Project. As part of that project, E. Boronda Road will be improved to four lanes with roundabout intersection controls at McKinnon Street, El Dorado Drive and Natividad Road. Roundabouts will also be located to the east of the Plan Area at Independence Boulevard and Hemingway Drive as part of a later phase. The use of roundabouts along E. Boronda Road was approved by City Council on May 16, 2017 (City Council Resolution No. 21169). The

first phase of the Boronda Road Congestion Relief Project includes the installation of a roundabout at McKinnon Street, with design estimated to be completed by the end of 2019 and construction estimated to commence in summer of 2020. Roundabouts were chosen as the traffic relief mechanism along E. Boronda Road because of various benefits related to noise, air quality, greenhouse gas emissions and aesthetics.

Infrastructure, Stormwater/Water Quality and Maintenance:

The Specific Plan provides infrastructure planning for the Plan Area for water supply (including treatment, storage and distribution), wastewater; public services including schools, public safety, and libraries; and utilities (see Chapter 6 of the Specific Plan). Roadway improvements and infrastructure required to serve the West Area Specific Plan include frontage street improvements, extension of sanitary sewers, storm water and drainage facilities, including on-site supplemental detention/retention basins; and the extension of utilities to the site. These improvements will be the responsibility of the applicant and may be provided through a combination of applicant-funded financing, dedications, payment of development impact fees and through main extension agreements or payment of connection fees with the applicable utility companies.

Concurrent with recording of the first final subdivision map, a Plan Area Landscaping and Lighting Maintenance District (LLMD) will be formed. The LLMD will fund the maintenance and or operations of improvements such as of the small parks, decorative streetlights, and furniture, Low Impact Development (LID) and basin areas, landscaping in parkways and other public areas, traffic calming devices and slurry sealing of roads.

The project site will be served by Cal Water. Three new well sites are proposed within the site. The approval of a conditional use permit will be required prior to construction of each well site to ensure the design of the proposed well sites blend with the surrounding neighborhood and does not adversely impact adjacent land uses. The Project will also be required to implement a Water Conservation program and meet the State's Model Water Efficient Landscape Ordinance, the City's Water Conservation Ordinance, Salinas Zoning Code and other City requirements.

Monterey One Water (formerly known as Monterey Regional Water Pollution Control Agency) will be providing sanitary sewer treatment services and Monterey Bay Community Power will be the primary provider of electricity and natural gas. Solid waste management and recycling will be provided by Republic Services or other service provided as determined by the City.

The West Area Specific Plan designates sites for three new elementary schools (each site is approximately ten acres in size) and one middle school (approximately 20 acres in size) within the Santa Rita Union School District. These sites will be reserved in accordance with the requirements of the City's Subdivision Ordinance and State Law. The school districts have voiced concerns regarding the cost of the school facilities and need for sufficient funds to construct schools. The developers will be required to pay school impact fees in accordance with the requirements of State

law and local ordinance. This issue is further discussed in the response to comments in Section 2.0 of the Final EIR.[1]

A new fire station is planned directly to the east of the Specific Plan (off Natividad Road within the proposed Central Area Specific Plan area). This fire station will be constructed as development occurs to meet the fire needs of the West Area Specific Plan area, the greater North of Boronda FGA and surrounding areas.

Storm water and water quality management is addressed in Chapter 7 of the Specific Plan. The Chapter outlines how the Project will comply with the City of Salinas Storm Water Management Program, including the Storm Water Development Standards, as required under the City's current National Pollutant Discharge Elimination System (NPDES) Permit.

The Project will be required to incorporate on-site LID Best Management Practices such as bio-swales and bio-retention planters and detention/retention/infiltration basins to provide the required mitigation in relation to water quality and hydromodification. The supplemental basins will also be required to be landscaped and maintained to ensure a natural and visually pleasing vegetated appearance.

Section 3.9 of the EIR discusses public services and Section 3.11 discusses utilities including stormwater.

Clarification of General Plan FGA Land Use Designations:

The comprehensive master planning of the FGA had not been undertaken at the time the City of Salinas General Plan Update was adopted in 2002. As a result, the land use designations shown on the General Plan Land Use and Circulation Policy Map (herein called the "Land Use Map") for land located in the FGA illustrated potential land use scenarios based on the total development capacities provided under the General Plan for these areas. It was envisioned that the actual distribution, location, density and intensity of the land uses located in these areas would be clarified and determined through the formulation of Specific Plans subsequently prepared by Project applicants and adopted by the City Council for these areas. As such, it was anticipated that the General Plan Land Use Map would be revised to reflect the land use plans brought to the City and ultimately adopted by the City Council for the Future Growth Areas as part of the Specific Plan approval process.

Upon approval of the Specific Plan, the General Plan Land Use Map will be revised to clarify the location and distribution of these existing General Plan land use designations for the project site as shown on Figure 1-8 of the Specific Plan. These land use designations will be consistent with the land use designations envisioned and planned for the FGA and with the total development capacities specified under the General Plan for this area.

[1] The Santa Rita Union School District has also alleged Brown Act violations associated with the Planning Commission's consideration of the Project. (Attachments 22.c and 23) The City Attorney has evaluated the allegations, has determined the allegations, to be meritless and will respond accordingly.

Errata - Minor Text and Figure Modifications to the Draft Specific Plan Document:

The Draft West Area Specific Plan was released for a 45-day public review and comment period on February 27, 2019, which ended on April 15, 2019. Subsequent to release of the draft document, staff prepared an Errata Sheet (see Attachment 11) to the Specific Plan with recommended modifications to refine text, figures or clarify issues that have arisen since the draft document's release. Upon the recommendation of the Planning Commission and the adoption of the West Area Specific Plan by the City Council, a final Specific Plan document will be produced incorporating these recommended modifications (the Errata), other changes approved as part of the public hearing process and any other corrections that are typographical or non-substantive in nature.

Rezone

Zoning for the project site is currently New Urbanism Interim (NI) with a Specific Plan Overlay. Upon approval of the Rezone and related entitlements, the site will be rezoned to following four New Urbanism (NU) Zoning Districts: Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1(NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC) as well as the Park (P), Open Space (OS) and Public/Semipublic Zoning Districts, as applicable (see Attachment 12, Zoning Map Upon Adoption of Specific Plan). These Zoning Districts align with the corresponding General Plan Land Use Designations for the site. A Specific Plan Overlay will also be applicable to each district.

Development Agreement

A draft Development Agreement (see Attachment 13) has been prepared for the Project pursuant to Government Code Section 65864. The Development Agreement will allow the participating property owners and developers to proceed with the Project in accordance with existing policies, rules, and regulations, subject to the conditions of approval, thus vesting certain development rights in the property. As previously indicated, the participating property owners control approximately 471.64 of the 797-acre site. As of the writing of this staff report, the proposed Development Agreement would be applicable only to these properties. Staff understands that the Kantro property (approximately 154 acres) will also join the Development Agreement and will therefore be subject to the Development Agreement. With the Kantro property included, owners and developers controlling approximately 626 acres of the 797-acre site would be participating in the development process.

Public Review of the West Area Specific Plan and DEIR

The following is a brief discussion of the comments received during the 45-day public review period for both the Specific Plan and DEIR as well as those issues raised at the Planning Commission and City Council study sessions and the West Area Specific Plan community meeting.

- *45-day Public Review Period:* No comment letters were submitted to the City regarding the Specific Plan during the 45-day public review period, which began on February 27,

2019 and ended on April 15, 2019. The City did receive ten comment letters on the DEIR from the following agencies and individuals during the same review period as follows:

- Native American Heritage Commission, received March 4, 2019
- Monterey County Health Department, received April 10, 2019
- LandWatch, received April 11, 2019
- California Department of Transportation, received April 12, 2019
- Salinas Union High School District, received April 12, 2019
- Alisal Union School District, received April 15, 2019
- Santa Rita Union School District, received April 15, 2019
- Brian Finegan, received April 15, 2019
- California Department of Fish and Wildlife, received April 16, 2019
- Monterey Bay Air Resources District, received April 16, 2019

See Section 2.0 of the Final EIR for further discussion of these comment letters including staff's responses to the comments.

- *Planning Commission (PC) Study Session*: A study session was held at the PC meeting on April 3, 2019. Issues raised during that meeting were traffic noise, the need for sound-attenuation walls, and grading along Russell Road, the potential sewer connection requirement for the Bolsa Knolls area (which is located in unincorporated Monterey County), the need for future transit service in the Plan Area, and the adequacy of the newspaper noticing and whether residents had informed of the study session.

- *City Council (CC) Study Session:* A study session was held at the CC meeting on April 30, 2019. In addition to the same issues that were raised at the PC meeting (relating to traffic noise, the need for sound-attenuation walls and grading along Russell Road, the potential sewer connection requirement for the Bolsa Knolls area and the need for future transit service); school facility funding and the proposed intensity of densities in the Specific Plan were also raised by the public.

- *West Area Specific Plan Community Meeting*: Staff held a community meeting on June 10, 2019 at the Northminster Church community room; over 70 members of the public attended. The Project was generally well-received by those in attendance. The primary feedback received from the public related to the need for more market rate and affordable housing given the housing shortage in Salinas. Representatives from the Santa Rita Union School District also voiced concerns regarding funding for the schools.

- *Planning Commission (PC) Study Session*: A study session was held at the PC meeting on November 6, 2019. Issues raised during that meeting were traffic noise, the need for sound-attenuation walls, and grading along Russell Road, the potential sewer connection requirement for the Bolsa Knolls area (which is located in unincorporated Monterey County).

Staff responses to the issues raised at the PC and CC study sessions:

- *Traffic Noise and Sound Walls:* Sound attenuation walls will be provided along Russell Road to mitigate traffic noise impacts to the Bolsa Knolls area. Section 3.7 of the DEIR analyzes noise and provides eight mitigation measures. Figure 4-1 of the West Area Specific shows the community wall concept for the Plan Area.

- *Grading on Russell Road*: Changes in grade will be addressed as part of the review of the improvement and grading plans for future development in the Plan Area. Appropriate measures such as retaining walls may be required.

- *Bolsa Knolls Sewer Connection*: The West Area Specific Plan does not mandate that residential uses in the Bolsa Knolls neighborhood tie into the City sewer system. According to Monterey County Local Agency Management Program (LAMP), when a septic system fails, if sewer is located within 300 feet of the site, the property may be required to tie in. This is a Monterey County regulation. Neither the City nor the West Area Specific Plan would trigger mandatory sewer connection for the Bolsa Knolls neighborhood; the City Council's approval of the proposed Project would not automatically and in-and-of itself require the residents of the Bolsa Knolls neighborhood to connect to the City's sewer system.

- *Transit:* Monterey-Salinas Transit (MST) is the public transit provider in the area and would provide service based on demand and funding availability. Figure 5-23 in the West Area Specific Plan illustrates the concept for extending bus transit and stops in the Plan Area, provided by MST in May 2016. Appendix G of the West Area Specific Plan includes correspondence from MST regarding transit in the Plan Area.

- *Newspaper Noticing*: In this regard, staff utilized the Monterey Herald to notice the City Council study session, which is the standard practice for the City. This manner of noticing complies with Section 37-60.400(d)(1) of the Salinas Zoning Code, which requires notices to be published in a newspaper of general circulation. The Monterey Herald offers more frequent publishing for legal ads thus offering more flexibility than the Salinas Californian. Noticing is not typically required for study sessions and was circulated as a courtesy in an effort to inform the public about the Project.

- *Development Density*: The project complies with the average minimum/maximum residential density per net residential acre as prescribed in the General Plan, and the required high and medium density percentages. As previously noted, the 4,340 dwelling units proposed as part of the Project does not include accessory dwelling units, density bonus dwelling units, or the commercial conversion of 250,000 square feet of mixed-use commercial floor area into an additional 250 dwelling units. The additional units provided through these mechanisms have been considered in the Project EIR and would further increase the density and intensity of the Project to provide additional housing opportunities in the Plan Area.

- School Facility Funding: The City will require that the Project applicants (including but not limited to subsequent developers and other applicable parties) to pay the State identified school impact fees, which are set to assist in school funding. The applicants have agreed to pay this obligation. The timing of the payment of the school impact fees will be in accordance with the requirements of State law. Three new school sites (requested by the Santa Rita Union School District) will also be reserved within the Plan Area pursuant to applicable law and regulations.

Library and Community Services Commission Review

The Library and Community Services Commission considered the Specific Plan park plan at a public hearing on March 13, 2019. The Commission voted (7-0) to recommend that the Planning Commission and the City Council approve the Specific Plan park plan. The Library and Community Services Commission minutes of the meeting are attached as Attachment 9 herein. The Commission raised the issue of sizing and designing the proposed parks so that multiple sports fields might be accommodated. In this regard, staff directed the Commission to Figures 4-6 and 4-7 of the West Area Specific Plan, which demonstrates how the neighborhood parks can accommodate multiple sports fields/courts.

Traffic and Transportation Commission Review

The Traffic and Transportation Commission considered the traffic implications of the Project at a public hearing on March 14, 2019. The Commission voted (7-0) to recommend that the Planning Commission and the City Council approve the Project. The Traffic and Transportation Commission minutes of the meeting are attached as Attachment 10 herein. The Commission pressed the importance of ensuring the cumulative impact intersection mitigations are funded, that drop-off and pick-up traffic at school sites be carefully considered to minimize impacts on City streets, and that the Boronda Road Congestion Relief Project precede the West Area Specific Plan.

Planning Commission Review

On December 4, 2019, the Planning Commission considered the Project at a duly noticed and agendized public hearing. The primary issues discussed by the Commission included residential density, fiscal impacts, road and infrastructure maintenance, affordable and inclusionary housing, school funding and community benefits. Commissioners noted concerns regarding the phasing of the proposed development including the timing of when the affordable and high density would be potentially built, with fire access on the project's narrower residential streets and other traffic-related issues. Staff explained the various residential density categories and additional mechanisms for increasing density of housing and that the timing of development will be largely market driven. Staff clarified that the current Inclusionary Housing Ordinance will apply to the project and would be implemented accordingly with the approval of each subsequent planning entitlement. Staff also explained that extensive collaboration occurred early in the project planning process between Community Development Department staff and Fire Department staff to ensure narrow New Urban roads could be accessed with fire apparatus. Regarding the traffic-related issues, Public Works staff provided a brief overview of the related Boronda Road Congestion Relief Project.

The following issues were raised by members of the public at the Planning Commission meeting on December 4, 2019: insufficient school site funding, potential project impacts on the Bolsa Knolls community, the need for higher residential densities and more affordable dwelling units, the need for a community benefits agreement, and that the reduced land alternative (Alternative 2) considered in the EIR should be the staff recommended project.

Staff responses to the issues raised at the Planning Commission meeting:

- *School Site Funding:* The City will require the Project applicants (including but not limited to subsequent developers and other applicable parties) to pay the State identified school impact fees, which are set to assist in school funding. The applicants have agreed to pay this obligation. The timing of the payment of the school impact fees will be in accordance with the requirements of State law. By statute, the City and School District cannot require fees beyond that allowed by State law and affirmed by the District through their approved nexus study, nor may the City deny the project proponents' request for approval of the Specific Plan solely due to projected funding shortfalls. Additionally, three new school sites (requested by the Santa Rita Union School District) will be reserved within the Plan Area pursuant to applicable law and regulations. The City has worked with the District to ensure the size, location and number of these school sites are appropriate and acceptable to them.

- *Impacts on Bolsa Knolls:*
    - Grade Differences. Changes in the grade (from that currently existing) will be addressed as part of the review of the improvement and grading plans for future development in the Plan Area. Measures such as retaining walls may be required, if deemed appropriate by the City Engineer.
    - Bolsa Knolls Sewer Connection: The West Area Specific Plan does not mandate, obligate or require in any way that residential uses in the Bolsa Knolls community (which is located directly north of the Project Site) connect to the City sewer system. According to Monterey County Local Agency Management Program (LAMP), when a septic system fails, if sewer is located within 300 feet of the site, the property may be required to tie in. Since the Bolsa Knolls community is located in unincorporated Monterey County, the determination of when and if a property is required to connect to a sewer system falls under the purview of the County not the City.
    - Noise Attenuation. Sound attenuation walls will be provided along Russell Road to mitigate traffic noise impacts to the Bolsa Knolls area. Section 3.7 of the DEIR analyzes noise and provides eight mitigation measures in this regard. Figure 4-1 of the West Area Specific shows the community wall concept for the Plan Area. As part of the improvement and grading plans for subsequent entitlements, the location and height of the sound attenuation wall (as measured from final grade) will be further addressed to ensure compliance with these mitigations.

- *Higher Residential Density*: The project complies with the average minimum/maximum residential density per net residential acre as prescribed in the General Plan, and the required high and medium density percentages. In this regard, it is important to note that the majority of the dwelling units provided in the Plan Area will fall within the medium

density range of 9 to 15 dwelling units per net residential acre (without density bonus) and the high density range of 16 to 24 dwelling units per net residential acre (without density bonus) to ensure a variety of housing options and affordability levels are provided. As previously noted, the 4,340 dwelling units proposed as part of the Project does not include accessory dwelling units, density bonus dwelling units, or the commercial conversion of 250,000 square feet of mixed use commercial floor area into an additional 250 dwelling units. The additional units provided through these mechanisms have been considered in the Project EIR and would further increase the density and intensity of the Project to provide additional housing opportunities in the Plan Area.

- *Community Benefits Agreement*: Community Benefits Agreements are agreements between project developers and community groups to provide advance agreement on how some of the benefits of economic development projects will be shared. A typical CBA defines specific benefits the developer(s) guarantee to residents of affected neighborhoods. The benefits can include living-wage jobs, affordable housing, childcare centers, recreational facilities, parks, and playgrounds. CBA's are most-applicable to those development projects which occur on already-developed property where residents or jobs are being displaced or where greenspace is being developed. The proposed project is not an appropriate project for a CBA: it is being proposed on undeveloped farmland, will not displace residents or jobs; it will create jobs, will include open space, recreation centers, and park space (including a 30+ acre community park accessible to all of Salinas's residents); it will result in the development of much-needed housing at a variety of densities, accessible to a variety of income levels (including low income housing) through application of the City's Inclusionary Housing Ordinance and Guidelines.

  The CBA proposed by the "Housing Coalition" in its December 2, 2019 letter (Attachment 22) is particularly problematic. The Housing Coalition letter demands "a commitment to adequately and continually fund an Anti-Displacement Fund that will support tenant and landlord education, free legal assistance, and relocation assistance." Regarding the demand for an Anti-Displacement fund: no displacement will occur as a result of the proposed Project. The Project is proposed for undeveloped land; no residents or jobs will be displaced by development of the proposed Project. The demand is for the Fund to be both "adequately and *continually*" funded, but there is no definition as to what is adequate or who determines the adequacy of the funding. Moreover, the demand is for the Fund to be *continually* funded, meaning the developers would be responsible for funding the Fund in perpetuity. Similarly, the Housing Coalition demands "free legal assistance," but provides no definition as to who would be entitled to the free legal assistance or what sort of legal issues would be eligible for assistance: Would the free legal assistance be available in criminal cases, civil cases, divorce proceedings? Delays to the City Council's consideration of the proposed Project to attempt and address demands for a CBA in this context will not guarantee a CBA and would result only in a delay in the opportunity for development of much-needed affordable housing in Salinas.

- *Reduced Land Area (RLA, Alternative 2):* LandWatch submitted a comment letter containing remarks regarding the RLA alternative, the full discussion of which is included on pages 2.0-55 through 2.0-97 in Chapter 2.0 of the FEIR. The RLA Alternative would

leave two parcels that total approximately 162 acres in size (APNs 211-011-008 and 211-011-009) undeveloped. In addition to the discussion provided in the FEIR regarding the RLA, staff would add the following as to why the RLA alternative is not the preferred alternative:

- The City has contemplated and planned for the development of the North of Boronda FGA (including the project site) since the update and adoption of the Salinas General Plan in 2002. Additionally, at that time, the City certified the Salinas General Plan Final EIR pursuant to the requirements of the California Environmental Quality Act (CEQA), which included a statement of overriding considerations for the loss of agricultural lands located in the FGA as a result of the anticipated future development of that area. In 2008, the North of Boronda FGA was annexed into the City and rezoned from the Agricultural (A) district to the New Urbanism Interim (NI) with a Specific Plan Overlay district to serve as a holding zone until such time that specific plans (required under the General Plan) were approved by the City for that area and development could be undertaken.
- The General Plan requires a minimum average density of 9 dwelling units per net residential acre within the North of Boronda FGA. This does not include the additional dwelling units permitted pursuant to the City ordinance and State law, accessory dwelling unit ordinance or the conversion of commercial floor area to dwelling units. As such, the ultimate density provided in the Plan Area can exceed the minimum and maximum densities currently proposed.
- The General Plan requires the City to "Provide public services and infrastructure improvements that achieve and maintain City Service Standards". The RLA would result in the following roadways and infrastructure not being developed in accordance with the General Plan: expansion of Natividad Road and frontage improvements, expansion of Russell Road, Rogge Road frontage improvements, the #3 water well/treatment site and supplemental stormwater basins along Natividad Road. Without these improvements, the City's ability to provide public service and infrastructure in accordance with the requirements of the General Plan would be compromised.
- A portion of the northerly greenway feature street runs through APN 211-011-009. This is a key feature of the Plan Area providing pedestrian and bicycle access and connections across the full North of Boronda FGA. Under the RLA, a gap in this important pathway system would occur as a result of elimination of this land area from the project site.
- Also, with the RLA, the density of the project would generally provide a similar number of residential units as the Project, but the alternative would reduce the amount of land area within the project site resulting in the elimination of a three-acre neighborhood park. As such, the RLA would not meet the three acres of parkland per 1,000 persons required under Quimby Act, City Subdivision Ordinance and the General Plan.

Additional letters commenting on the project were submitted before the meeting after agenda packets had been distributed. Copies were provided to the commission and made available to the

public. An email (containing written testimony from LandWatch) was received the day after the Planning Commission hearing. These letters and correspondence are included as Attachment 22.

After deliberating on the proposed project, the Planning Commission voted **unanimously** (7 – 0) to recommend the City Council certify the EIR and adopt the CEQA Findings, including the Statement of Overriding Considerations and Mitigation Monitoring and Reporting Program, approve the specific plan and adopt ordinances approving the rezone and development agreement. The Planning Commission resolutions are included as Attachment 6.

CEQA CONSIDERATION:

The purpose of the California Environmental Quality Act (CEQA) is to disclose the potential environmental impacts of a proposed Project and the mitigation measures that can be employed to lessen or avoid impacts identified as potentially significant and significant. Decision-makers are to consider these effects as part of their deliberations to approve or deny a proposed Project. Documents associated with the CEQA process for the Project are included in Attachments 15 through 20 of this staff report. When a proposed Project has potentially significant environmental impacts that cannot be reduced to less than significant with implementation of mitigation measures, an EIR is required. The Draft Program EIR (herein referred to as "Draft EIR" or "DEIR") included in Attachment 16 identifies that the Project would result in a number of significant environmental impacts. A summary of the significant impacts is included in Table ES-2, *West Area Specific Plan Impacts and Proposed Mitigation Measures*, in the Summary section of the Draft EIR. The table lists each significant impact by topic area, the impact level of significance, mitigation measures to avoid or substantially lessen each impact, and the level of significance of each impact after implementation of the mitigation measures.

Project Description

The West Area Specific Plan Project details are described in Section 2.0, Project Description of the DEIR. Implementation of the project would result in physical change to the environment, the impacts of which must be evaluated under CEQA. These are identified in the DEIR.

The proposed West Area Specific Plan project (see summary table on page 8 above) will establish the land use planning and regulatory guidance, including the land use and zoning designations and policies, development regulations and design standards, for the approximately 797-acre Specific Plan Area. The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to— the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the General Plan, as well as more specific policies and implementation measures contained in other documents. The City of Salinas Zoning Code requirements will apply to development applications and property within the Specific Plan Area unless specifically superseded by the development regulations or design standards contained in the Specific Plan.

The Specific Plan establishes the overall land use concept and development framework for the Plan Area. The specific planning process involves analyses of the following: planning, environmental, financial, and engineering. The process also included public comment and contribution; developing a document that will guide the future development of the Specific Plan Area; and subsequent implementation measures recommended by the Specific Plan. The content of the Specific Plan reflects the physical characteristics of the Plan Area, as well as the City's goals for land use change in general and for the Plan Area, in particular. The Specific Plan establishes and/or identifies:

- The New Urbanism and other design principles, purpose, relationship to, and conformance with the General Plan policies, the preparation process, and the Specific Plan content.

- The proposed land use plan, General Plan Land Use and Zoning Designations, development intensities, and organization of land uses used to meet the objectives of the Specific Plan.

- The use classifications and development regulations to implement the land uses contained in the Specific Plan, which will create a New Urbanism style community.

- The standards that guide design and planning of residential and mixed-use commercial development, as well as parks and other amenities.

- The location and classification of roadways and the circulation infrastructure needed to link the Specific Plan Area to the vicinity road network.

- Public services and a framework for the expansion of infrastructure systems.

- The plans for low impact development features and a supplemental storm water collection system that are being incorporated into the Project to comply with the City's National Pollutant Discharge Elimination System (NPDES) Permit, Storm Water Development Standards (SWDS) and Storm Water Standard Plans (SWSP).

- The proposed financing plan, Project phasing, public facility cost summaries, and funding sources.

- The Project review process, actions, and approvals needed to implement and amend the Specific Plan.

Environmental Impact Summary

The areas of potential environmental effects analyzed in the West Area Specific Plan DEIR include air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, population and housing, public services, transportation and circulation, utilities and cumulative impacts. The Draft EIR includes a number of appendices. The appendices are found in Attachment 17 to this report, and include: Appendix A, *Notice of Preparation/Initial Study & Comments*; Appendix B, *Criteria Air Pollutant, Greenhouse Gas Mitigation measures Guidebook*; Appendix C, *CAPCOA's Quantifying Greenhouse Gas, and Energy Modeling Results*; Appendix D, *Biological Resources Report; Appendix E, Hazards and Hazardous Materials Studies/Reports*; Appendix F, *Hydrology and Water Quality Technical Study*; Appendix G, *Water Supply Assessment*; Appendix H, *Noise Technical Report*; Appendix I, *Transportation Impact Analysis*; and Appendix J, 2007 *Final Supplement for the Salinas General Plan Final Program EIR mitigation and Monitoring Reporting Program*.

Pursuant to CEQA Guidelines Section 15128, the DEIR includes a statement indicating reasons that various possible significant effects of the Project were determined not to be significant and were therefore not discussed in detail. Moreover, per CEQA Guidelines Section 15183, the findings of the initial study on environmental topics that were either found to have no impact or be less than significant, or would be found to be sufficiently addressed in the Salinas General Plan Final Environmental Impact Report (Cotton Bridges Associates 2002), and subsequent Final Supplement for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007), are not included within individual sections of the DEIR. These areas include aesthetics, agricultural and forest resources, geology and soils, hazards and hazardous materials, land use and planning, mineral resources, population and housing, recreation, transportation and circulation (air traffic).

The following impacts can be mitigated to a less than significant level through implementation of identified mitigation measures, as identified in the DEIR: Cultural and Tribal Resources, Hazards and Hazardous Materials, Hydrology and Water Quality, Population and Housing, and Utilities.

Significant Unavoidable Impacts

The following impacts are significant and unavoidable even with the adoption of all feasible mitigation, as identified in the DEIR:

- Air Quality - The Specific Plan would exceed the Monterey Bay Air Resources District (MBARD) thresholds of significance for operations for ROG, NOx, and PM10, even after mitigation. (DEIR, pp. 3.1-19 through 3.1-23);
- Biological Resources - Wildlife Movement and Corridors. Development of the proposed Project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. There are no mitigation measures that can fully mitigate this impact and, given the fact that once the land is converted, it will no longer be a viable migration corridor for any species. (DEIR, pp. 3.2-46 through 3.2-47);

- Greenhouse Gases and Climate Change - Greenhouse Gas Emissions. The Project would generate GHG emissions, directly and indirectly, that may have a significant impact on the environment. While the recommended mitigation measures would result in reduced GHGs, it is possible that individual Projects within the Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant. (DEIR, pp. 3.4-31 through 3.4-38);
- Noise - Traffic Noise at Existing Receptors. The proposed Project would cause increased noise levels exceeding the City of Salinas 60 dB Ldn exterior noise level standard at existing residential receptors. Additionally, traffic noise level increases would exceed the FICON CEQA substantial increase criterion of 1.5 to 5 dB, as outlined in Table 3.7-7. (DEIR, pp. 3.7-14 through 3.7-23);
- Public Services –
    - School Facilities: Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts. Development of a school within the proposed Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4)(DEIR, pp. 3.9-19 through 3.9-21);
    - Park Facilities: Project implementation may result in effects on parks or has the potential to require the construction of park facilities which may cause substantial adverse physical environmental impact. Development of 49.76 acres of park land within the Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-22 through 3.9-23); and
- Transportation and Circulation Under Cumulative Plus Project Conditions - Implementation of the proposed Specific Plan would conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. (DEIR, pp. 3.10-63 through 3.10-70).

Some of the impacts listed above also represent cumulatively considerable (i.e., significant) and unavoidable impacts of the proposed Project as discussed in Section 4.1, Cumulative Setting and Impact Analysis.

Analysis of Alternatives

One of the main differences between an EIR and a lower level environmental review, such as a Negative Declaration, is the need for the EIR to consider a reasonable range of alternatives, and then evaluate these alternatives to determine the extent to which significant adverse impacts of the Project are lessened or avoided. Each alternative's ability to meet the Project's objectives is also considered. Based on these analyses, the alternative(s) that best substantially lessens or avoids significant environmental impacts of the Project is identified as the environmentally superior alternative. If the environmentally superior alternative is not approved, findings must be made that

the environmentally superior alternative(s) is infeasible (e.g., because it does not meet all Project objectives or does not meet them as well as the proposed Project).

Four alternatives to the Project were evaluated in the DEIR:

- Alternative 1: No Project (No build) Alternative;
- Alternative 2: Reduced Land Area Project Alternative;
- Alternative 3: Reduced Residential Intensity/Density Alternative;
- Alternative 4: Smaller-Scale Project Alternative.

The significance of each impact of the Project and the significance of each impact of each alternative is detailed in Section 5.0 of the DEIR, *Alternatives to the Proposed Project*. The results of the analysis are tabulated in the DEIR in Table 5.0-10, *Comparison of the Alternative Project Impacts to the Specific Plan*.

Alternative 1, the No Project Alternative is the environmentally superior alternative because it results in the least adverse environmental impacts when compared to the proposed Project. However, as required by CEQA, when the No Project Alternative is the environmentally superior alternative, the environmentally superior alternative among the others must be identified. The Smaller-scale Project Alternative is the next best alternative. It ranks equal to or better than the proposed Project for every environmental issue. In addition, in aggregate, the Reduced Land Area Project Alternative, and the Reduced Residential Intensity/Density Project Alternative rank higher than the proposed Project. It should be noted that none of alternatives meet all the Project objectives, as listed below. Additionally, the reduced number of residential units in the Reduced Residential Intensity/Density Alternative would be inconsistent with the General Plan standards for the Plan Area and would not meet the minimum number of residential units required for New Urbanism.

Even though the Smaller-scale Project Alternative, the Reduced Land Area Project Alternative, and the Reduced Residential Intensity/Density Project Alternative would all provide a lesser level of environmental impact than the proposed Project, the Final Program EIR (also referred herein as "Final EIR") explains why these alternatives do not meet the City's Project objectives (see immediately below) and be infeasible on other grounds. The reasoning from these discussions is included in the draft CEQA Findings of Fact submitted to the City Council concurrent with this staff report.

<u>Project Objectives</u>

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly;
- Provide a variety of land uses in easy walking distance of housing including a mixed-use village, parks, and schools to reduce vehicle miles travelled;
- Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents;
- Provide a variety of low density, medium density, and high-density housing to provide a variety of housing options for residents at various life stages;

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Provide an inviting tree-lined street system which incorporates traffic calming and other measures;
- Establish an interconnected sidewalk/path system throughout the development which links to the greater FGA and City as a whole;
- Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements;
- Provide for a reasonable jobs/housing balance;
- Provide opportunities for senior housing; and
- Provide for a site/parcel-based post construction Stormwater Control Measures (SCMs)/LID to the maximum extent practicable.

Final EIR

The Draft EIR was released and circulated for public comment (for 45 days) pursuant to CEQA requirements on February 27, 2019. The comment period ended on April 15, 2019. Refer to the Notice of Completion found in Attachment 18. Ten comment letters were received as previously noted above. General themes from the comment letters address: air quality, biological resources, cultural resources, greenhouse gas emissions, traffic and circulation, and existing school capacity/new school funding, and water resources.

Section 2.0 of the Final EIR contains responses to these comments. Where changes to the Draft EIR were warranted based on the responses to comments, these changes are identified in Section 3.0 of the Final EIR in strike-through (the FEIR Errata) and underline format. The Final EIR, included in Attachment 19, was completed in October 2019.

Certification of the Final EIR

The City Council will be responsible for the certification of the Final EIR. Should it choose to approve the Project, the City Council must first certify the Final EIR by making the following findings, pursuant to CEQA Guidelines section 15090:

- The Final EIR has been completed in compliance with CEQA;
- The Final EIR was presented to the decision-making body of the lead agency, and that the decision-making body reviewed and considered the information contained in the Final EIR prior to approve the Project; and
- The Final EIR reflects the lead agency's independent judgment and analysis.

Findings

If approving a Project, the City Council, upon recommendation of the Planning Commission, must make certain determinations or findings. Some of these are related to the CEQA process and others are related to the Project approvals and their consistency with the General Plan. In recommending action to the City Council on the resolutions, the Planning Commission must also recommend the

adoption of these findings. Findings are required for both CEQA review process and the Project approvals.

CEQA Findings, Statement of Overriding Considerations, and Mitigation Monitoring and Reporting Program

When an EIR has been prepared that indicates implementing a Project or plan would result in significant environmental impacts, the lead agency documents the environmental review analysis in CEQA Findings that are adopted following certification of the Final EIR. When there are mitigation measures applied to reduce or eliminate potential environmental impacts, the lead agency must also adopt a MMRP. The CEQA Findings also contain the Statement of Overriding Considerations. The CEQA Findings, Statement of Overriding Considerations, and MMRP are included as Exhibits to Attachment 1, the Final EIR certification resolution.

Project Findings

The City Council's decisions to approve the Specific Plan, Rezone, and Development Agreement must be supported by findings. Each approval requires that a specific set of findings be made. The required findings for these approvals are identified in the Salinas Zoning Code in sections 37-60.1230, 37-60.1120, and 37-60.810, respectively. The findings are found in the Project Findings, which are included in Attachment 21. The Project Findings are referenced in the resolutions for each of the approvals.

Planning Commission and City Council Decision Making Process

Planning Commission. Following the conclusion of the public hearing, the Planning Commission shall make written recommendations to the City Council to approve, approve with conditions or modifications, or deny the requested approvals as submitted or in modified form and shall make written findings supporting the reason for the recommendation. An affirmative vote of a majority (not less than four (4) votes) of the Planning Commission's total membership is required to forward the recommendations to the City Council (Salinas Zoning Code, Section 37-60.920, (Ord. No. 2463 (NCS)).

City Council. Following the conclusion of the public hearing at which it considers the Final EIR and Project approvals, the City Council will consider the Planning Commission's recommendations, and vote to approve, modify, or deny the Project. An affirmative vote of the City Council is required for its decision to be final (Salinas Zoning Code, Section 37-60.930, (Ord. No. 2463 (NCS)).

STRATEGIC PLAN INITIATIVE:

The West Area Specific Plan aligns closely with the City Council's goals (2016-2019) of Economic Diversity and Prosperity, Safe, Livable Community, Effective, Sustainable Government, Well Planned City and Excellent Infrastructure, and Quality of Life. The Project is consistent with the Council Goal to entitle and develop the FGA. Additionally, responsible consideration of developments supports the Council Strategic Plan goal of Economic Diversity

and Prosperity. The Project also requires the installation of dark fiber conduit within the Specific Plan consistent with the Council Strategic Goal of supporting the development of the City's Broadband infrastructure.

DEPARTMENTAL COORDINATION:

The Community Development Department staff is the lead on this Project in coordination with the Public Works Department regarding infrastructure, traffic and stormwater-related issues. Coordination also occurred with the Police, Fire, Finance, Library and Community Services Departments. The City Attorney's Office was particularly instrumental in review of the CEQA documents, the Specific Plan, and the related ordinances and resolutions. The City Attorney's Office also led the drafting of the Development Agreement on behalf of the City.

FISCAL AND SUSTAINABILITY IMPACT:

A fiscal impact analysis (Attachment 14) has been prepared for the Project to assess its net economic effects. The report considers the fiscal impact of both the West Area Specific Plan and the Central Area Specific Plan. At build out, the report indicates that the Project (plus the Central Area) is Projected to generate an approximate annual surplus of between $2,422,000 and $5,872,000 for the City's General Fund based on three scenarios (conservative, baseline, and optimistic). Of this total amount, the West Area Specific Plan is Projected to generate an annual surplus of between approximately $1,541,619 to $3,376,303.

RESOLUTION NO. _____ (N.C.S.)

RESOLUTION CERTIFYING THE FINAL PROGRAM ENVIRONMENTAL IMPACT REPORT (ER 2018-003) FOR THE WEST AREA SPECIFIC PLAN PROJECT (SPEC 2013-002)

WHEREAS, Brian Finegan, Esq. (representing multiple property owners and developers) has submitted applications for the West Area Specific Plan project (Project), including requests for Specific Plan, Rezone, and Development Agreement approvals that would permit development of the approximately 797-acre project site shown in Exhibit A, herein incorporated by reference; and

WHEREAS, the City of Salinas (hereinafter "City"), as lead agency under the California Environmental Quality Act (Pub. Res. Act Section 21000 et seq.) and the State CEQA Guidelines (14 Cal. Code Regs. Section 15000 et seq.) (collectively "CEQA") has completed the Final Program Environmental Impact Report ("Final EIR") [State Clearinghouse No. 2006021072] for the West Area Specific Plan in compliance with CEQA; and

WHEREAS, in accordance with Section 15082 of the CEQA Guidelines, on October 14, 2015, the City released a Notice of Preparation ("NOP") for the Draft Program Environmental Impact Report ("Draft EIR"), and received comments from nine (9) agencies and commenters in response to the NOP (these comments are included in Appendix A of the Draft EIR, herein incorporated by reference); and

WHEREAS, an EIR public scoping meeting was duly noticed and held on October 29, 2015, to solicit public and agency comments on the scope of the Draft EIR; and

WHEREAS, at the end of the NOP 30-day public comment period, the City received comments from nine (9) agencies and commenters, which are included in Appendix A of the Draft EIR; and

WHEREAS, the Draft EIR and associated technical appendices to the Draft EIR, herein incorporated by reference as Exhibits B and C, were prepared and the City filed a Notice of Completion of the Draft EIR, herein incorporated by reference as Exhibit D, with the California Office of Planning and Research State Clearinghouse on February 27, 2019, which commenced a 45-day state public agency review period ending on April 15, 2019; and

WHEREAS, the City filed a Notice of Availability of the Draft EIR with the Monterey County Clerk on February 27, 2019, which commenced a 45-day local public review period ending on April 15, 2019; and

WHEREAS, the Notice of Availability was also posted at the City of Salinas City Hall, the Salinas Permit Center, the City's two (2) libraries, and on the City's website; and

WHEREAS, the City, in accordance with CEQA Guidelines Section 15088, considered and evaluated ten comments received on the Draft EIR from members of the public, private organizations, and public agencies; and

WHEREAS, the City subsequently prepared the Final EIR, herein incorporated by reference as Exhibit E, which contains the comment letters and written responses to comments addressing the substantive environmental issues received; and

WHEREAS, the City prepared a record of modifications to the Draft EIR made in response to these comments; and

WHEREAS, the complete Final EIR consists of the Draft EIR, comments received on the Draft EIR; written responses to comments that addressed substantive environmental issues; a record of modifications made to the Draft EIR made in response to the substantive comments; appendices to the Draft and Final EIRs; and all documents and resources referenced and incorporated by reference in the Final EIR; and

WHEREAS, On November 27, 2019, the City provided the Final EIR to commenting agencies, thereby satisfying the City's obligations under Public Resources Code section 21092.5, subdivision (a); and

WHEREAS, on December 4, 2019 the Planning Commission held a duly noticed and agendized public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, the Planning Commission weighed the evidence presented at said public hearing, including the staff report which is on file at the Community Development Department, together with the record of environmental review including the Draft EIR, public comments on said document and responses thereto, the Final EIR (all of which were made publicly available consistent with state law prior to the Planning Commission's public hearing and consideration of a recommendation on the Project to the City Council), and evidence and public testimony presented at the public hearing; and

WHEREAS, the Planning Commission reviewed and considered all of the extensive information contained therein prior to making recommendations to the City Council; and

WHEREAS, the Planning Commission voted 7-0 to recommend that the City Council Certify the Final EIR, approving Resolution No. 2019-18; and

WHEREAS, the City Council must first certify the Final EIR as adequately prepared in compliance with CEQA before considering Project approval; and

WHEREAS, on December 17, 2019 the City Council held a duly noticed and agendized public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, the City Council weighed the evidence presented at said public hearing, including the staff report which is on file at the Community Development Department, together with the record of environmental review including the Draft EIR, public comments on said document and responses thereto, the Final EIR (all of which were made publicly available consistent with state law prior to the City Council's public hearing and consideration of the Project), and evidence and public testimony presented at the public hearing; and

WHEREAS, notice of time and place of hearing for recommending certification of the Final EIR and recommending approval of the Project to the City Council was given in the manner prescribed by the City; and

NOW, THEREFORE, BE IT RESOLVED that the Salinas City Council hereby finds and determines the following:

1. The foregoing recitals and the information contained in the Exhibits are true and correct and are included herein by reference as findings.
2. The Final EIR has been completed in compliance with CEQA, the State CEQA Guidelines and local procedures adopted pursuant thereto.
3. It is hereby certified that the City Council has reviewed the Final EIR prepared for the Project, as well as all staff reports pertaining to the Project, and all other pertinent documents relating to the preparation of the Final EIR, including the Draft EIR and all comments received thereon.
4. It is hereby certified that the City Council has independently reviewed, analyzed and considered the Final EIR and all reports or declarations required by Section 21082.1 of the Public Resources Code, and in the exercise of its independent judgment, finds the FEIR as adequate in compliance with CEQA.

5. The City Council further finds that the Final EIR is legally sufficient not just with respect to the proposed project as set forth in the document, but also with respect to the alternatives discussed therein.

NOW, THEREFORE, BE IT FURTHER RESOLVED that the Salinas City Council approves this Resolution certifying the Final Program Environmental Impact Report [State Clearinghouse No. 2006021072] for the West Area Specific Plan (2013-002).

PASSED AND APPROVED this 17th day of December 2019, by the following vote:

RESOLUTION NO. _____ (N.C.S.)

RESOLUTION ADOPTING THE CEQA FINDINGS OF FACT, INCLUDING THE STATEMENT OF OVERRIDING CONSIDERATIONS, AND ADOPTING A MITIGATION MONITORING AND REPORTING PROGRAM (ER 2018-003) FOR THE WEST AREA SPECIFIC PLAN PROJECT (SPEC 2013-002)

WHEREAS, Brian Finegan, Esq. (representing multiple property owners and developers) has submitted applications for the West Area Specific Plan project (Project), including requests for Specific Plan, Rezone, and Development Agreement approvals that would permit development of the appoximately 797-acre project site shown in Exhibit A, herein incorporated by reference; and

WHEREAS, the City of Salinas (hereinafter "City"), as lead agency under the California Environmental Quality Act (Pub. Res. Act Section 21000 et seq.) and the State CEQA Guidelines (14 Cal. Code Regs. Section 15000 et seq.) (collectively "CEQA") has completed the Final Program Environmental Impact Report ("Final EIR") State Clearinghouse No. 2006021072 for the West Area Specific Plan in compliance with CEQA; and

WHEREAS, on December 4, 2019 the Planning Commission held a duly noticed and agendized public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, the Planning Commission weighed the evidence presented at said public hearing, including the staff report which is on file at the Community Development Department, together with the record of environmental review including the Draft EIR, public comments on said document and responses thereto, the Final EIR (all of which were made publicly available consistent with state law prior to the Planning Commission's public hearing and consideration of a recommendation to the City Council on the Project), and evidence and public testimony presented at the public hearing; and

WHEREAS, the Planning Commission reviewed and considered all of the extensive information contained therein prior to making recommendations to the City Council; and

WHEREAS, the Planning Commission voted 7-0 to recommend that the City Council adopt the CEQA Findings of Fact, including the Statement of Overriding Considerations and Mitigation Monitoring and Reporting Program approving Resolution No. 2019-18; and

WHEREAS, on December 17, 2019 the City Council held a duly noticed and agendized public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, the City Council weighed the evidence presented at said public hearing, including the staff report which is on file at the Community Development Department, together with the record of environmental review including the Draft EIR, public comments on said document and responses thereto, the Final EIR (all of which were made publicly available consistent with state law prior to the City Council's public hearing and consideration of the Project), and evidence and public testimony presented at the public hearing; and

WHEREAS, after closing the public hearing, the City Council approved Resolution _____ (N.C.S.), herein incorporated by reference, certifying the FEIR; and

WHEREAS, CEQA Findings have been prepared for the Project and are incorporated herein as Exhibit B regarding the environmental review process and the contents of the West Area Specific Plan Final EIR; and

WHEREAS, these findings, consistent with Public Resources Code section 20181, subdivision (a), address the significant environmental impacts of the Project, the mitigation measures for those impacts identified in the Final EIR and adopted as conditions of approval, and the feasibility of alternatives and the reasons why such alternatives to the Project were not approved; and

WHEREAS, Pursuant to CEQA, a Statement of Overriding Considerations, herein incorporated by reference as Exhibit B, has been prepared for the Project; and

WHEREAS, this Statement of Overriding Considerations, consistent with consistent with Public Resources Code section 20181, subdivision (b), identifies benefits of the Project that outweigh its significant unavoidable environmental impacts, therefore justifying approval of the Project despite the impacts; and

WHEREAS, the City Council has independently reviewed and considered the CEQA Findings and the Statement of Overriding Considerations required for the adoption of the Project; and

WHEREAS, the City Council has independently reviewed and considered a Mitigation Monitoring and Reporting Program, herein incorporated by reference as Exhibit C; and

WHEREAS, this Mitigation Monitoring and Reporting Program, consistent with consistent with Public Resources Code section 20181.6, subdivision (a)(1), incorporates the mitigation measures identified in the Final EIR and provides mechanisms for making them enforceable; and

WHEREAS, certain mitigation measures identified in the City's 2002 General Plan Final Program EIR and in the City's 2007 Final Supplement for the General Plan Final Program EIR are still valid and applicable and are herein incorporated by reference; and

WHEREAS, subject to mitigation measures contained in the Final EIR and to conditions of approval for the Specific Plan, the Project is in conformance with the General Plan of the City of Salinas.

WHEREAS, the City Council has weighed the evidence presented at the public hearing, including the staff report which is on file at the City of Salinas Community Development Department, together with the record of environmental review.

NOW, THEREFORE, BE IT RESOLVED that the Salinas City Council hereby finds and determines the following:

1. The foregoing recitals and the information contained in the Exhibits are true and correct and are included herein by reference as findings.
2. The Final EIR has been completed in compliance with CEQA, the State CEQA Guidelines and local procedures adopted pursuant thereto.
3. It is hereby certified that the City Council has independently reviewed, analyzed and considered the Final EIR and all reports or declarations required by Section 21082.1 of the Public Resources Code, and in the exercise of its independent judgment, finds the FEIR as adequate in compliance with CEQA.
4. The City Council has been provided with, reviewed and weighed the information contained in the Final EIR, the evidence in the record, the staff report and recommendations, and written and oral comments, and having done so, herby adopts the CEQA Findings and Statement of Overriding Considerations (incorporated herein by reference as Exhibit B), and based on those findings, further adopts the Mitigation Monitoring and Reporting Program (incorporated herein by reference as Exhibit C).

NOW, THEREFORE, BE IT FURTHER RESOLVED that the Salinas City Council hereby:

a. Adopts the CEQA Findings contained in Exhibit B and adopts as conditions of approval all mitigation measures within the responsibility and jurisdiction of City of Salinas set forth in the CEQA Findings and the Final EIR;

b. Adopts the Statement of Overriding Considerations included within the CEQA Findings in Exhibit B; and

c. Adopts the Mitigation Monitoring and Reporting Program contained in Exhibit C.

EXHIBIT "B"

CEQA FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS OF THE CITY COUNCIL OF THE CITY OF SALINAS FOR THE WEST AREA SPECIFIC PLAN

I. INTRODUCTION

The City of Salinas (hereinafter "City"), as lead agency, prepared a Program Environmental Impact Report (hereinafter "EIR") for the West Area Specific Plan (hereinafter "Specific Plan" or "project"). In its entirety, the EIR consists of the February 27, 2019 Draft Program EIR (hereinafter "Draft EIR" or "DEIR") and the October 10, 2019 Final Program EIR (hereinafter "Final EIR" or "FEIR") (State Clearinghouse No. 2006021072).

The Applicant has submitted applications requesting approval of the West Area Specific Plan, Rezoning, and Development Agreement. As approved, the project will facilitate the City's future consideration of applications for individual projects to be proposed within the Specific Plan Area.

The EIR analyzes the impacts of the West Area Specific Plan and the anticipated subsequent filing of maps and other development applications in the future. Therefore, the EIR analyzes the total impacts of the West Area Specific Plan, including these applications yet unfiled, so that future filings will not require separate environmental analysis, as long as development proposed does not substantially deviate from the approved Specific Plan. The specific processes by which the City will review individual applications are set forth on pages ES-1 through pages ES-4 of the Draft EIR and are also described below in section III(D).

These findings, as well as the accompanying statement of overriding considerations in Section XI below, have been prepared in accordance with the California Environmental Quality Act (hereinafter "CEQA") (Pub. Resources Code, § 21000 et seq) and its implementing guidelines (hereinafter "CEQA Guidelines") (Cal. Code Regs., tit. 14, § 15000 et seq).

II. DEFINITIONS AND ACRONYMS

Like the EIR itself, these findings use a number of acronyms. Key acronyms are defined the first time they are introduced in the text of this document.

III. PROJECT DESCRIPTION

A. Location

As described in the DEIR, the City of Salinas is located in northern Monterey County, within the Salinas Valley between the Gabilan and Santa Lucia mountain ranges. Salinas is situated approximately 20 miles northeast of the City of Monterey, 60 miles south of San Jose, 100 miles south of San Francisco and 325 miles north of Los Angeles. Figure 2-1 in the Draft EIR displays the project regional location. Several regional transportation routes are located within or near Salinas, including U.S. Highway 101 (U.S. 101), State Routes 68 (SR 68) and 183 (SR 183), the

Union Pacific Railroad line and the Monterey Regional Airport in Monterey. Salinas Municipal Airport, a general aviation facility, is located in the southeastern portion of the city.

The Specific Plan Area is located within the incorporated boundary of the City of Salinas. It is bounded by San Juan Grade Road on the west, East Boronda Road (also referred to as "Boronda Road") on the south, Natividad Road on the east, and Rogge Road and the future extension of Russell Road on the north. Gabilan Creek is located east of the Specific Plan Area, while U.S. 101 and North Main Street are located to the west. Unincorporated land under the jurisdiction of the County of Monterey abuts the Specific Plan Area on the north and northeast (DEIR, p. 2.0-1).

B. Overview

The West Area Specific Plan establishes the land use planning and regulatory guidance, including the land use and zoning designations and policies, development regulations, and design standards, for the approximately 797-acre Specific Plan Area. The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to—the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the City of Salinas General Plan, as well as more specific policies and implementation measures contained in other documents. The City of Salinas Zoning Code requirements will apply to development applications and property within the Specific Plan Area unless specifically superseded by the development regulations or design standards contained in the Specific Plan.

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan (including the Specific Plan's goals) and related entitlements. Land uses in the approximate 797-acre Specific Plan Area include residential, mixed use commercial, community park, neighborhood parks, small parks, schools and open space (including supplemental storm water detention/retention basins). Implementation will involve development of the site under the New Urbanism Zoning Districts of Neighborhood Edge (NE)/Low Density Residential, Neighborhood General 1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, Village Center (VC) as well as the Public and Semipublic (PS), Parks (P), and Open Space (OS) Zoning Districts.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space areas (including supplemental storm water detention/retention basins) and 11 parks). It is anticipated that the Specific Plan Area will house up to 15,928 residents at project build-out.

C. Project Objectives

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan and related entitlements. The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and 11 parks. The Specific Plan goals are summarized as follows:

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.
- Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.
- Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.
- Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.
- Provide public services and infrastructure improvements that achieve and maintain City service standards.
- Provide an inviting tree-lined street system which incorporates traffic calming and other measures.
- Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater Future Growth Area (FGA) and City as a whole.
- Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.
- Provide for a reasonable jobs/housing balance.
- Provide opportunities for senior housing.
- Provide for a site/parcel-based post-construction Stormwater Control Measures (SCMs)/LID to the maximum extent practicable.

It is noted that there are additional project objectives that are not specifically presented in the Specific Plan, but are more overarching and are a response to, and driven by, the policy direction from the State Legislature and the Salinas City Council.

The State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by

producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The City of Salinas has recognized the need for additional housing supply for its citizens for many decades. Dating back to 1986, the City entered into the Boronda Memorandum of Understanding (MOU) with the County of Monterey to preserve the best agricultural land and to provide certain areas for future urban growth. Twenty years later, in 2006, the Greater Salinas Area MOU was adopted to preserve agricultural lands within Monterey County, and to provide future growth areas (FGSs) for Salinas. A year later, in 2007, applications for an amendment to the City's Sphere of Influence (to include the FGAs) and Pre-Zoning and Annexation (for the majority of the North of Boronda FGA consisting of approximately 2,400 acres) were submitted to the Monterey County Local Agency Formation Commission (LAFCO) for consideration. A Supplemental EIR for the Salinas General Plan Final Program EIR (SCH#2007031055) was also submitted in conjunction with the applications. The applications were approved by LAFCO on May 19, 2008. The North of Boronda FGA (which includes the West Area Specific Plan) was formally annexed to the incorporated City of Salinas on September 8, 2008 and zoned New Urbanism Interim (NI) with a Specific Plan Overlay. The West Area Specific Plan is a reflection of over twenty years of planning for new development, which is reflected by the City Council's approval of the FGA, including annexation of the land into the City limits.

The following two overarching project objectives are presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

Based on its own review of the EIR and other information and testimony received in connection with the project, as well as the statutory and planning policies described above, the City Council finds all of these objectives to be acceptable and persuasive from a public policy standpoint. In

choosing to approve the project, the City thus embraces these objectives and accords them weight in considering the feasibility of alternatives set forth in the EIR, and in invoking overriding considerations in approving the project. (See *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1507-1508.)

D. Discretionary Approvals

Project approval requires the City, as lead agency, to take discrete planning and regulatory actions to approve the overall project. In addition, certain "responsible agencies" may ultimately rely in part on the programmatic analysis in the Specific Plan Area in making decisions associated with future site-specific projects consistent with the Specific Plan. Described below are the discretionary actions necessary to carry out the project.

City of Salinas

In addition to certifying the Final EIR and adopting these Findings and the associated Statement of Overriding Considerations and Mitigation Monitoring Plan (CEQA requirements), the City itself must approve the following actions:

- Certification of the EIR and adoption of the Mitigation Monitoring and Reporting Program (MMRP);
- Approval of the Draft West Area Specific Plan;
- Approval of the rezoning of the Specific Plan area from NI with a Specific Plan Overlay to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay is also applicable to each Zoning District; and
- Approval of the Development Agreement;
- Subsequent Approvals: Parcel Maps, tentative maps, Final Maps, Subdivision Improvement Plans, Site Improvement Plans, Grading Permits, Building Permits, Conditional Use Permits, Business Permits, Encroachment Permits, etc.

Other Responsible/Trustee Agencies

The agencies below will also use the EIR, either as responsible agencies or as trustee agencies:

- California Department of Fish and Wildlife – Lake and Streambed Alteration Agreement (1600 permit);
- Cal Water – Approval of SB 610 Water Supply Assessment, Approval to serve the Specific Plan Area;
- Central Coast Region - Regional Water Quality Control Board – Clean Water Act Section 401 Water Quality Certification, National Pollution Discharge Elimination System (NPDES) general construction permit;
- Comcast/AT&T/SBC/Other – Approval to serve the Specific Plan Area, approval of telecommunications utility plans, Encroachment Permits;
- Johnson Canyon Landfill – Approval to serve the Specific Plan Area;
- Monterey Bay Air Resources District – Authority to Construct; Demolition permit;

- Monterey Bay Community Power – Approval to Serve the Specific Plan Area;
- Monterey One Water – Approval to serve the Specific Plan Area for wastewater services, and Encroachment Permit;
- Monterey County Health Department - Well demolition permit, Well construction permit;
- Monterey County Water Resources Agency – Approval to serve the Specific Plan Area, Encroachment Permit;
- Monterey-Salinas Transit – Approval to serve the Specific Plan Area, approval of bus stop locations and design;
- Pacific Gas and Electric Company – Approval to serve Specific Plan Area, approval of relocation plans, approval of electric and gas utility plans, Encroachment Permit;
- Salinas Valley Solid Waste Authority – Approval to serve the Specific Plan Area; and
- Santa Rita Union School District – Approval of site for the construction of two new elementary schools and one middle school

Federal Agencies

The following federal agencies also have approval authority over some aspects of the project, though these agencies are not subject to CEQA and instead are required to comply with the federal National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.):

- U.S. Army Corps of Engineers;
- U.S. Fish and Wildlife Service; and
- U.S. Federal Emergency Management Agency.

Future Projects

All individual future development projects proposed within the Specific Plan Area will be reviewed to determine their individual CEQA compliance requirements. The type of CEQA analysis required would be determined at the time a project is proposed.

It is noted that the Specific Plan provides a very high level of design detail for certain components of the project. To the extent that sufficient detail is available in the Specific Plan, a full project-level analysis is provided in this EIR. Examples of a full project level analysis would include topics that are related to the physical acreage affected (i.e., the project footprint), as opposed to the number of units, land uses/zoning, or other design parameters. Topics such as Biological Resources, Cultural Resources, and Hydrology/Water Quality are analyzed at a project-level analysis in this EIR given that these are physical environmental resources, and the area of impact is fully defined. Additionally, the Specific Plan includes a substantial level of detailed information that allows for a project-level analysis of topics such as Air Quality, Greenhouse Gases and Climate Change, Noise, Population and Housing, Transportation and Circulation, and Utilities. The analysis for these topics is driven by the number of units and square footage of development, which is detailed in the land use design and development projections. In some cases, there may be specific commercial uses that have design details developed at a later date that cannot reasonably be analyzed at a project-level at this time. Additionally, the design of the school facilities and other public facilities are not known at this time, so they are not able to be analyzed at a project-level.

This EIR examines the planning, construction and operation of the project. The program-level approach, with some project-level analysis, is appropriate for the project because it allows comprehensive consideration of the reasonably anticipated scope of the development plan; however, as discussed above, not all design aspects of the future development phases are known at this stage in the planning process. Subsequent individual development that requires further discretionary approvals will be examined in light of this EIR to determine whether additional environmental documentation must be prepared.

CEQA Guidelines Section 15168 states that a program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

1. Geographically,
2. As logical parts in the chain of contemplated actions,
3. In connection with issuance of rules, regulations, plans or other general criteria to govern the conduct of a continuing program, or
4. As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

According to CEQA Guidelines section 15168, subdivision (c)(5), "[a] program EIR will be most helpful in dealing with later activities if it provides a description of planned activities that would implement the program and deals with the effects of the program as specifically and comprehensively as possible." Later environmental documents (EIRs, mitigated negative declarations, or negative declarations) can incorporate by reference materials from the program EIR regarding regional influences, secondary impacts, cumulative impacts, broad alternatives, and other factors (CEQA Guidelines Section 15168[d][2]). These later documents need only focus on new impacts that have not been considered before (CEQA Guidelines Section 15168[d][3]).

Section 15168(c), entitled "Use with Later Activities," provides, in pertinent part, as follows: Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared:

1. If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration. That later analysis may tier from the program EIR as provided in Section 15152.
2. If the agency finds that pursuant to Section 15162, no subsequent EIR would be required, the agency can approve the activities as being within the scope of the project covered by the program EIR, and no new environmental document would be required. Whether a later activity is within the scope of a program EIR is a factual question that the lead agency determines based on substantial evidence in the record. Factors that an agency may consider in making that determination include, but are not limited to, consistency of the later activity with the type of allowable land use, overall planned density and building intensity, geographic area analyzed for environmental impacts, and covered infrastructure, as described in the program EIR.

3. An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into later activities in the program.
4. Where the later activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were within the scope of the program EIR.

Here, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e. tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether there are new environmental effects that were not covered by the program EIR). The City's expectation, at least at present, is that the checklist will conclude that most, or all, components of the Specific Plan can be developed with no new analysis of environmental effects given that there is a high level of resolution with regard to the project details that have been analysis in this program EIR. In some cases, however, a site-specific application (i.e., a proposed commercial use) may have specific issues associated with the project, or business, that this program EIR could not anticipate given the information that was available at this time. In those situations, the detailed site-specific information from that application could have site-specific effects not wholly anticipated in this EIR and would require some additional environmental review. (See also CEQA Guidelines section 15063, subd. (b)(1)(C).)

Future site-specific approvals may also be narrowed pursuant to the rules for tiering set forth in CEQA Guidelines Section 15152. "'[T]iering is a process by which agencies can adopt programs, plans, policies, or ordinances with EIRs focusing on 'the big picture,' and can then use streamlined CEQA review for individual projects that are consistent with such…[first tier decisions] and are…consistent with local agencies' governing general plans and zoning.'" (*Koster v. County of San Joaquin* (1996) 47 Cal.App.4th 29, 36.) Section 15152 provides that, where a first-tier EIR has "adequately addressed" the subject of cumulative impacts, such impacts need not be revisited in second- and third-tier documents. Furthermore, second- and third-tier documents may limit the examination of impacts to those that "were not examined as significant effects" in the prior EIR or "[a]re susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means." In general, significant environmental effects have been "adequately addressed" if the lead agency determines that:

a. they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental impact report; or
b. they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project.

Here, as noted above, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e., tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether all significant environmental impacts identified have been "adequately addressed" in the program EIR). Thus, if a new analysis is required for these site-specific actions, it would focus on impacts that cannot be "avoided or mitigated" by mitigation measures that either (i) were adopted in connection with the Specific Plan or (ii) were formulated based on information in this EIR.

In addition, because the EIR addresses the effects of rezoning the land within the proposed Specific Plan area, future environmental review can also be streamlined pursuant to Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183. These provisions, which are similar but not identical to the tiering provisions, generally limit the scope of necessary environmental review for site-specific approvals following the preparation of an EIR for a "zoning action." For such site-specific approvals, CEQA generally applies only to impacts that are "peculiar to the parcel or to the project" and have not been previously disclosed, except where "substantial new information" shows that previously identified impacts would be more significant than previously assumed. Notably, impacts are considered not to be "peculiar to the parcel or to the project" if they can be substantially mitigated pursuant to previously adopted, uniformly applied development policies or standards. As noted above, the City anticipates that, in assessing the extent to which the Specific Plan EIR has previously addressed significant impacts that might occur with individual projects, the City may conclude that in some instances (e.g., with respect to agricultural resources, cultural resources, geology, soils, and paleontological resources), no further analysis beyond that found in the program EIR will be necessary.

Finally, for purely residential projects consistent with the Specific Plan, the City intends to preserve its ability to treat such projects as exempt from CEQA pursuant to Government Code section 65457. Subdivision (a) of that statute provides that "[a]ny residential development project, including any subdivision, or any zoning change that is undertaken to implement and is consistent with a specific plan for which an [EIR] has been certified after January 1, 1980, is exempt from the requirements of [CEQA]." The statutes go on to say, moreover, that "if after adoption of the specific plan, an event as specified in Section 21166 of the Public Resources Code occurs, the exemption provided by this subdivision does not apply unless and until a supplemental [EIR] for the specific plan is prepared and certified in accordance with the provisions of [CEQA]. After a supplemental [EIR] is certified, the exemption … applies to projects undertaken pursuant to the specific plan." (See also CEQA Guidelines section 15182.)

When purely residential projects are proposed, the City will consider whether they qualify for this exemption or whether the West Area Specific Plan EIR must be updated through a supplement to this EIR or a subsequent EIR as required by Public Resources Code section 21166 and CEQA Guidelines sections 15162 and 15163.

IV. ENVIRONMENTAL REVIEW PROCESS

The Notice of Preparation (hereinafter "NOP") of an EIR was circulated for public review and comment from October 15, 2015 to November 13, 2015 in accordance with CEQA Guidelines section 15082. Written responses to the NOP were received from the following interests/agencies:

1. Northern Salinas Valley Mosquito Abetment District (October 21, 2015)
2. California Department of Transportation (October 28, 2015)
3. Monterey-Salinas Transit (November 16, 2015)
4. Monterey County Resource Management Agency (November 16, 2015)
5. California Natural Resource Agency Division of Land Resource Protection (November 10, 2015)
6. Salinas Union High School District (November 10, 2015)
7. Ohlone/Costanoan-Esselen Nation (January 11, 2016)
8. Santa Rita Union School District (January 29, 2016)
9. Transportation Agency of Monterey County (March 31, 2016)

As part of the early consultation process and pursuant to the CEQA Guidelines section 15083 regarding early public consultation, a scoping meeting was held at the City of Salinas Rotunda (City Council chamber) on October 29, 2015. No specific comments were made about the scope of issues to be addressed in the EIR. Questions and comments were primarily focused on the project description and the project consideration process.

Pursuant to CEQA Guidelines sections 15023, subdivision (c), and 15087, subdivision (f), the State Clearinghouse in the Office of Planning and Research was responsible for distributing environmental documents to State agencies, departments, boards, and commissions for review and comment. The City followed required procedures with regard to distribution of the appropriate notices and environmental documents to the State Clearinghouse. The State Clearinghouse was obligated to make, and did make, that information available to interested agencies for review and comment. The NOP was received by the State Clearinghouse (SCH # 2006021072) and a 30-day public review period ended on November 13, 2015. The NOP and all comments received on the NOP are presented in Appendix A of the Draft EIR.

An Initial Study was also prepared for the project. Included below is a brief summary of findings from the Initial Study on environmental topics that were either found to have no impact or be less than significant, or were found to be sufficiently addressed in the General Plan EIR, and thus are not included within individual sections of the Draft EIR. For full Initial Study Findings and individual topics found to be less than significant through the Initial Study process refer to Appendix A of the Draft EIR.

- **Aesthetics:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would allow development to occur in the City in both vacant and underdeveloped portions of the community, and that the introduction/expansion of urban uses into these areas has the potential to interrupt views of natural features, open space, the hillsides, and agricultural resources, reducing

the aesthetic value of these resources. Additionally, new development in the City was found to increase the amount of light and glare in the community, particularly in areas planned for nonresidential development, such as retail and general commercial. It was also found that future development under the General Plan has the potential to change the visual character of the City.

To minimize and mitigate the impacts on aesthetics, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following five mitigation measures: Mitigation Measure A1 requires the City to implement the City's Gateway Guidelines; Mitigation Measure A2 requires the City to strengthen and require compliance with the City's Design Guidelines; Mitigation Measure A3 requires the City to improve the Lighting Ordinance; Mitigation Measure A4 requires the City to implement landscaping requirements for all proposed projects; and Mitigation Measure A5 requires the City to review all discretionary projects for aesthetics impacts. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures A1 through A5, the potential citywide aesthetics impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that aesthetic impacts associated with the FGAs, which includes the West Area Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Agriculture and Forest Resources:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would result in the conversion of 3,525 acres of agriculture lands to urban uses. The *Final Environmental Impact Report* also indicates that General Plan buildout would result in agricultural activity in proximity to residential and other urban uses, which may result in conflicts between the uses. It is noted that agricultural activity can cause nuisances related to air quality and noise that may disturb surrounding development. Urban activities may also negatively affect nearby agricultural uses, as increased vandalism often occurs and the introduction of domestic animals may disturb certain agricultural activities.

  The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures AG1 through AG4, the impacts on potential compatibility issues would be reduced to a less than significant level; however, while the impacts on agricultural conversion would be reduced to the extent feasible, a significant and unavoidable impact would remain related to the loss of important farmland. Mitigation AG5 specifically addressed Agricultural

Land Conservation Easement Program, which states that the City will work with the County of Monterey and other local jurisdictions to create and implement an agricultural land conservation easement program, including such measures as securing the dedication of easements or by paying a mitigation fee that could be used to purchase easements through a mitigation bank. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a $750.00 per acre mitigation fee for agricultural lands currently designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance."

The City of Salinas certified the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), adopted a statement of overriding considerations relative to this significant and unavoidable impact, and approved the Salinas General Plan.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that agricultural impacts associated with the FGAs, which includes the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above-referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Geology and Soils:** Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Hazards and Hazardous Materials:** While the Draft EIR analyzes Hazards and Hazardous Materials, several topics were determined to not warrant additional analysis within the Chapter.

  The land uses proposed within the Specific Plan Area would not be expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Furthermore, the project is not located in the vicinity of an airport or private airstrip; therefore, it would not result in a safety hazard related to air traffic for people residing or working in the Specific Plan Area. These topics did not warrant additional analysis and were not addressed further in the EIR.

Separately, the City has adopted a Multi-hazard Emergency Plan, which serves as extensions of the California Emergency Plan and the Emergency Resource Management Plan. The purpose of the Multi-hazard Emergency Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Operations Center (EOC) in City Hall serves as the center of the City's emergency operations. The Plan also addresses evacuation and movement of people in the event of an emergency. The project does not impair implementation of or physically interfere with the Multi-hazard Emergency Plan. Implementation of the project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

Lastly, the project is not located in an area that is considered a high risk for wildfires. The project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Implementation of the proposed project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

- **Land Use and Planning:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the impacts would be reduced to a less than significant level with mitigation.

  Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

  The City certified the Final Supplemental EIR and approved annexation of the North of Boronda FGA, which includes the West Area Specific Plan. The project, as proposed, is consistent with the Greater Salinas Area Memorandum of Understanding (GSA MOU). All development under the project would be required to comply with the regulations, policies, and standards identifies in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). Implementation of the project would not result in any new significant adverse impacts beyond those addressed within these supporting documents. This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Mineral Resources:** It was determined in the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) that development of the FGA, including the Specific Plan Area, would not have a significant impact on mineral resources or mining activities. As such, implementation of the project would have no impact on mineral resources and this topic did not warrant additional analysis and is not addressed further in the EIR.

- **Population and Housing:** While the Draft EIR analyzes Population and Housing, several topics were determined to not warrant additional analysis within the Chapter.

The Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) noted that the General Plan would not result in the displacement of substantial numbers of existing housing units or persons since the majority of the FGA designated for future development consists of vacant, agricultural, or redevelopment of nonresidential land. Additionally, any individual units that require removal would be offset by the increase in housing by the development of approximately 18,397 additional dwelling units at General Plan buildout.

The project would necessitate the removal of some existing houses within the Specific Plan Area; however, removal of any individual units would be offset by the increase in housing by the development of approximately 4,340 additional dwelling units at Specific Plan buildout. As such, the project would not displace substantial numbers of existing housing or people. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Recreation:** While the project would increase the demand for parks and other recreational facilities based on the population growth, the amount of parkland and open space provided within the Specific Plan Area sufficiently meets the City's parkland requirements. Construction of the parks would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Transportation and Circulation:** While the Draft EIR analyzes Traffic and Circulation, several topics were determined to not warrant additional analysis within the Chapter.

  The project is not located in the vicinity of an airport or airstrip; therefore, it would not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks. Implementation of the project would have no impact relative to this environmental topic

The remaining issues areas and checklist questions are analyzed in the EIR. The EIR includes an analysis of the following issue areas:

- Air Quality
- Biological Resources
- Cultural Resources
- Greenhouse Gases and Climate Change
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Noise
- Population and Housing

- Public Services
- Transportation and Circulation
- Utilities

The City circulated the DEIR for public and agency review on February 27, 2019. A public review period of 45 days was provided on the DEIR and ended on April 15, 2019. This period satisfied the requirement for a 45-day public review period as set forth in Section 15105 of the CEQA Guidelines.

V. RECORD OF PROCEEDINGS

In accordance with Public Resources Code section 21167.6, subdivision (e), the record of proceedings for the City's decision on the project includes the following documents:

- The NOP and all other public notices issued by the City in conjunction with the project;

- All comments submitted by agencies or members of the public during the comment period on the NOP;

- The Draft EIR for the project (February 2019) and all appendices;

- All comments submitted by agencies or members of the public during the comment period on the Draft EIR;

- The Final EIR for the project, including comments received on the Draft EIR and the responses to those comments and appendices;

- Documents cited or referenced in the Draft EIR and Final EIR;

- The mitigation monitoring and reporting program for the project;

- All findings and resolutions adopted by the City Council in connection with the project and all documents cited or referred to therein;

- All reports, studies, memoranda, maps, staff reports, or other planning documents relating to the project prepared by the City, consultants to the City, or responsible or trustee agencies with respect to the City's compliance with the requirements of CEQA and with respect to the City's action on the project;

- The Draft West Area Specific Plan;

- All documents submitted to the City by other public agencies or members of the public in connection with the project, up through the close of the Planning Commission public hearing, and the close of the City Council public hearing;

- Any minutes and/or verbatim transcripts of all information sessions, public meetings, and public hearings held by the City in connection with the project;

- Any documentary or other evidence submitted to the City at such information sessions, public meetings, and public hearings;

- The City of Salinas General Plan and all environmental documents prepared in connection with the adoption of the General Plan;

- Any and all resolutions approved by the City regarding the project, and all staff reports, analyses, and summaries related to the adoption of those resolutions;

- Matters of common knowledge to the City, including, but not limited to federal, state, and local laws and regulations;

- Any documents expressly cited in these findings, in addition to those cited above; and

- Any other materials required for the record of proceedings by Public Resources Code section 21167.6, subdivision (e).

The documents constituting the record of proceedings are available for review by responsible agencies and interested members of the public during normal business hours at the City of Salinas Community Development Department, 65 West Alisal Street, Salinas, California 93901. The custodian of these documents is the Community Development Director. Without exception, any documents set forth above not found in the project files fall into one of two categories. Many of them reflect prior planning or legislative decisions of which the City Council was aware in approving the project. (See *City of Santa Cruz v. Local Agency Formation Commission* (1978) 76 Cal.App.3d 381, 391-392; *Dominey v. Department of Personnel Administration* (1988) 205 Cal.App.3d 729, 738, fn. 6.) Other documents informed the experts who provided advice to City Staff or consultants, who then provided advice to the City Council. For that reason, such documents form part of the underlying factual basis for the City Council's decisions relating to the approval of the project. (See Pub. Resources Code, § 21167.6(e)(10); *Browning-Ferris Industries v. City Council of City of San Jose* (1986) 181 Cal.App.3d 852, 866; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 153, 155.)

VI. CONSISTENCY WITH APPLICABLE PLANS

This section includes a review of the project's relationship to the General Plan, other land use related documents/agreements, and to regional plans and identifies whether inconsistencies with these plans may exist.

Consistency with the Salinas General Plan

The Salinas General Plan states the City's vision for the community's future and outlines goals, policies and implementation measures to achieve its vision. The General Plan also projects the population, dwelling units, and non-residential building square footage associated with the future

buildout of the Land Use Plan, also referred to as General Plan buildout. Typically, General Plan buildout is decades beyond the 20-year General Plan planning cycle.

As described in CEQA Guidelines section 15125, subdivision (d), an EIR must discuss any inconsistencies between a proposed project and applicable general plans, specific plans, and regional plans. Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan, area-wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, regional blueprint plans, plans for the reduction of greenhouse gas (GHG) emissions, habitat conservation plans, and natural community conservation plans.

New Urbanism principles, a component of the General Plan Land Use Element, were used to design a land use plan for the project that is compact and pedestrian-friendly, with a mixture of uses surrounding activity centers/neighborhood local points in the Specific Plan Area. Higher density residential uses are proposed around retail, recreation, and public uses and all of these core activity centers are proposed to be connected with pedestrian, bicycle, and transit systems.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, middle school, supplemental detention/retention basins and 11 parks). It is anticipated that Specific Plan Area will have up to 15,928 residents at project build-out. This is consistent with the expected intensity of development within the Specific Plan Area under General Plan buildout conditions as analyzed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

The Salinas General Plan requires the approval of Specific Plans prior to development of any land in the North of Boronda Future Growth Area (FGA). The West Area Specific Plan includes certain development regulations and design standards that are intended to be specific to the Specific Plan Area. Where there is a matter or issue not specifically covered by the Specific Plan development regulations and design standards, the Salinas Zoning Code would apply. Where there is a conflict between the Specific Plan and the Zoning Code, the Specific Plan would prevail.

The Specific Plan is intended to be adopted by the City Council and to serve as a tool for the City of Salinas to implement. The Specific Plan is to be used by designers, developers, builders, and planners, to guide development of the Specific Plan Area. The land use, development standards, and design guidelines are provided to ensure that all proposed developments remain consistent with the vision established by the Specific Plan as the project is built over time. The Specific Plan development concepts, design guidelines, and standards are in accordance with the City's General Plan, Municipal Ordinances, and City Specifications. The Specific Plan shall be used to review, process, and approve development proposals for individual parcels/project sites within the Specific Plan Area, including but not limited to site specific development applications and site improvement plans.

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that the General Plan may impact the related land use plans and policies that have

been adopted to avoid or mitigate an environmental effect. The Salinas Zoning Code, Salinas Redevelopment Plan, Greater Salinas Area Plan, Salinas Municipal Airport Master Plan, Monterey County Airport Land Use Plan, GSA MOU, are specifically mentioned. Of these seven documents, the project does not affect an existing Specific Plan, the Salinas Municipal Airport Master Plan, or the Monterey County Airport Land Use Plan, and the Salinas Redevelopment Plan is no longer in effect. These topics are not discussed further, but the other three are discussed below.

Salinas Zoning Code

The Specific Plan Area is currently zoned NI with a Specific Plan Overlay. The project includes a rezone to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay District is also applicable to each Zoning District. The purpose of the rezone is to ensure consistency between the proposed General Plan Land Use Designations and Zoning. With the approval of the rezoning application, the Specific Plan would be consistent with the Salinas Zoning Code.

City/County Greater Salinas Area Memorandum of Understanding

In 2006, the City and the County adopted the GSA MOU to allow for annexation and development of specific parcels that are located outside of the Future Growth Areas as illustrated in the General Plan. These areas were not contemplated for annexation and development at the time the General Plan was adopted. These areas include, but are not limited to, the "Unikool", Boronda Road, and Fresh Express sites.

The GSA MOU describes the intent of each agency to consider annexation of the subject growth areas and identifies framework conditions under which annexations could be considered. The following excerpt from the Preface of the GSA MOU identifies its general intent:

"This Memorandum of Understanding (MOU), by and between the County of Monterey (County) and the City of Salinas (City), is to set forth certain agreements between the parties to express their intent to jointly pursue action to assure orderly and appropriate land use development in the area designated in the General Plan of Monterey County as the Greater Salinas Area Plan area and in the City of Salinas. Specific objectives to be achieved through the implementation of the land use and associated policies included in this MOU are the preservation of certain agriculture land, the provision of future growth areas, and the provision of adequate financing for the services and facilities of benefit to the residents of the Greater Salinas Area Plan area and the City."

With the adoption of the GSA MOU, both the City and the County acknowledged that additional development outside the City's Future Growth Areas would be considered subject to amendment of the City's SOI and annexation of such areas to the City. The GSA MOU also includes a set of points of agreement that govern future annexations and associated development. Among other topics, the points of agreement address the future direction of City growth, agricultural mitigation, traffic impacts, and storm drainage. The GSA MOU states that the direction of future growth of the City shall be to the north and east of the current city limits, except as otherwise provided for in the GSA MOU.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following two mitigation measures: Mitigation Measure LU5 requires the City to continue to cooperate with the County of Monterey to implement the GSA-MOU, which directs that City growth generally to the north and east away from the most productive farmland; and Mitigation Measure LU6 requires the City to encourage City-centered growth and give priority to redevelopment and infill projects that reduce development pressure on agricultural lands. The City will also establish an incentive program to promote these projects, such as priority permit processing and density bonuses for such developments. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda FGA, which includes the WASP. The project as proposed is consistent with the GSA-MOU. All development under the project would be required to comply with the above-referenced regulations, policies, and standards.

Greater Salinas Area Plan

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that implementation of General Plan will result in development outside the existing City limits, into the Greater Salinas Planning Area. Development occurring outside of the City limits is subject to the Greater Salinas Area Plan. The implementation of the General Plan may conflict with the Greater Salinas Area Plan, resulting in a significant impact.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented Mitigation Measure LU2, which requires the City to be consistent with a portion of Draft Policy LU 3.4 of the Monterey County Draft General Plan, and to cooperate with LAFCO and the County of Monterey to direct growth outside the City limits to the Future Growth Area, on lands that are served or are planned to be served, with a full range of urban services, such as public water and sewer, an extensive road network, public transit, safety and emergency response services, parks, trails, and open space. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda Future Growth Area, which includes the Specific Plan. The project as proposed is consistent with the Greater Salinas Area Plan. All development

under the project would be required to comply with the above-referenced regulations, policies, and standards.

VII. FINDINGS REQUIRED UNDER CEQA

Public Resources Code section 21002 provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute provides that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects." Section 21002 goes on to provide that "in the event [that] specific economic, social, or other conditions make infeasible such project alternatives or such mitigation measures, individual projects may be approved in spite of one or more significant effects thereof."

The mandate and principles announced in Public Resources Code section 21002 are implemented, in part, through the requirement that agencies must adopt findings before approving projects for which EIRs are required. For each significant environmental effect identified in an EIR for a project, the approving agency must issue a written finding reaching one or more of three permissible conclusions. The first such finding is that changes or alterations have been required in, or incorporated into, the project, which avoid or substantially lessen the significant environmental effect as identified in the final EIR. The second permissible finding is that such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding, and that such changes have been adopted by, or can and should be adopted by, such other agency. The third potential conclusion is that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR. (CEQA Guidelines, § 15091, subd. (a).)

As explained elsewhere in these findings, "feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors. The concept of "feasibility" also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. (*Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1506-1509 (court upholds CEQA findings rejecting alternatives in reliance on project's objectives); see also *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1001 (*CNPS*) (an alternative "'may be found infeasible on the ground it is inconsistent with the project objectives as long as the finding is supported by substantial evidence in the record'") (quoting Kostka & Zischke, *Practice Under the Cal. Environmental Quality Act* [Cont.Ed.Bar 2d ed. 2009] (*Kostka*), § 17.309, p. 825); *In re Bay-Delta Programmatic Environmental Impact Report Coordinated Proceedings* (2008) 43 Cal.4th 1143, 1165, 1166 (*Bay-Delta*) ([i]n the CALFED program, feasibility is strongly linked to achievement of each of the primary program objectives"; "a lead agency may structure its EIR alternative analysis around a reasonable definition of underlying purpose and need not study alternatives that cannot achieve that basic goal).) Moreover, "'feasibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133

Cal.App.3d 410, 417 (*City of Del Mar*); see also *CNPS, supra,* 177 Cal.App.4th 957 (after weighing "'economic, environmental, social, and technological factors,' ... 'an agency may conclude that a mitigation measure or alternative is impractical or undesirable from a policy standpoint and reject it as infeasible on that ground) (quoting Kostka, *supra,* § 17.29, p. 824))

For purposes of these findings (including the table described in Section IX below), the term "avoid" refers to the effectiveness of one or more mitigation measures to reduce an otherwise significant effect to a less than significant level. In contrast, the term "substantially lessen" refers to the effectiveness of such measure or measures to substantially reduce the severity of a significant effect, but not to reduce that effect to a less than significant level.

As explained above, CEQA requires that the lead agency adopt feasible mitigation measures or, in some instances, feasible alternatives to substantially lessen or avoid significant environmental impacts that would otherwise occur. With respect to a proposed project for which significant impacts are not avoided or substantially lessened, a public agency, after adopting proper findings, may nevertheless approve the project if the agency first adopts a statement of overriding considerations setting forth the specific reasons that the agency found that the project's benefits outweigh its unavoidable adverse environmental effects. The City of Salinas' Statement of Overriding Considerations for the project is included herein in Section XI below.

VIII. MITIGATION MONITORING AND REPORTING PROGRAM

A Mitigation Monitoring and Reporting Program (hereinafter "MMRP") has been prepared for the project, and is being approved by the City Council by Resolution 2019-__(N.C.S.). The City will use the MMRP to track compliance with project mitigation measures. The MMRP will remain available for public review during the compliance period. The Final MMRP is Exhibit "B" of the aforementioned resolution and is approved in conjunction with these Findings of Fact.

IX. SIGNIFICANT EFFECTS AND MITIGATION MEASURES

The EIR identified a number of significant and potentially significant environmental effects (or impacts) that the project will cause or contribute to. Most of these significant effects can be fully avoided through the adoption of feasible mitigation measures. Other effects, however, cannot be avoided by the adoption of feasible mitigation measures or alternatives, and thus will be significant and unavoidable. Some of these unavoidable significant effects can be substantially lessened by the adoption of feasible mitigation measures. Other significant, unavoidable effects cannot be substantially lessened or avoided. For reasons set forth in Section XI however, the City Council has determined that overriding economic, social, and other considerations outweigh the significant, unavoidable effects of the project.

The City Council's findings with respect to the project's significant effects and mitigation measures are set forth in the Table of Impacts, Mitigation Measures, and CEQA Findings attached to these findings. The findings set forth in the table are hereby incorporated by reference.

This table does not attempt to describe the full analysis of each environmental impact contained in the EIR. Instead, the table provides a summary description of each impact, describes the

applicable mitigation measures identified in the Draft EIR or Final EIR and adopted by the City Council, and states the City Council's findings on the significance of each impact after imposition of the adopted mitigation measures. A full explanation of these environmental findings and conclusions can be found in the Draft and Final EIRs, and these findings hereby incorporate by reference the discussions and analyses in those documents supporting the Final EIR's determinations regarding mitigation measures and the projects' impacts and mitigation measures designed to address those impacts. In making these findings, the City Council ratifies, adopts, and incorporates into these findings the analyses and explanations in the Draft EIR and Final EIR, and ratifies, adopts, and incorporates in these findings the determinations and conclusions of the Draft EIR and Final EIR relating to environmental impacts and mitigation measures, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

By Resolution 2019-__(N.C.S.), the City Council adopts all of the mitigation measures identified in the table.

X. PROJECT ALTERNATIVES

A. Basis for Analysis of the Feasibility of Alternatives

Public Resources Code section 21002, a key provision of CEQA, provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute states that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects."

Where a lead agency has determined that, even after the adoption of all feasible mitigation measures, a project as proposed will still cause one or more significant environmental effects that cannot be substantially lessened or avoided, the agency, prior to approving the project as mitigated, must first determine whether, with respect to such impacts, there remain any project alternatives that are both environmentally superior and feasible within the meaning of CEQA. Although an EIR must evaluate this range of *potentially* feasible alternatives, an alternative may ultimately be deemed by the lead agency to be "infeasible" if it fails to fully promote the lead agency's underlying goals and objectives with respect to the project. (*City of Del Mar, supra,* 133 Cal.App.3d at p. 417) "'[F]easibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*Ibid*.; see also *CNPS, supra,* 177 Cal.App.4th at p. 1001.) Thus, even if a project alternative will avoid or substantially lessen any of the significant environmental effects of the project, the decision-makers may reject the alternative if they determine that specific considerations make the alternative infeasible.

Under CEQA Guidelines section 15126.6, the alternatives to be discussed in detail in an EIR should be able to "feasibly attain most of the basic objectives of the project [.]" For this reason, the Objectives described above provided the framework for defining possible offsite alternative project locations. (See *Bay-Delta, supra,* 43 Cal.4th at p. 1166). The project objectives are set out

above in section III.C. Based on the requirements of CEQA Guidelines section 15126.6 and the Project's Objectives, the following alternatives to the project were identified:

No Project (No Build) Alternative

The CEQA Guidelines (Section 15126.6[e]) require consideration of a no project alternative that represents the existing conditions, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved. For purposes of this analysis, the No Project (No Build) Alternative assumes that development of the Specific Plan Area would not occur, and the Specific Plan Area would remain in its current agricultural condition. It is noted that the No Project (No Build) Alternative would fail to meet the project objectives identified for the West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

Reduced Land Area Project Alternative

Under this alternative, the Specific Plan Area would be developed with the same components as described in the Project Description, but the area utilized for the development (i.e., the project footprint) would be reduced by approximately 20 percent. Under this alternative, approximately 162 acres of land in the northeast corner of the Specific Plan Area would be removed. This removed area would include the 52.85-acre Mortensen property (APN 21101108) and the 108.32-acre Madolora/Global property (APN 21101109), which are shown on Figure 5.0-1. The resultant Specific Plan Area would include approximately 635 acres. The proposed land uses within this area identified for removal under this alternative would be incorporated into the remaining 635 acres of the Specific Plan Area, which would increase the residential density of the Specific Plan Area under this alternative, while retaining the same number of residences, mixed use commercial areas, schools, parks, etc. as the project. This alternative would establish a site for a third 10.0-acre elementary school to be developed by the Santa Rita Union School District (District). However, if the District decides against the elementary school siting, the area would instead be residential units.

Under this alternative the average residential density (units per net acre) would increase from 9.0 to approximately 11.3 units/acre. It is assumed that the number of NE parcels would be reduced, and the number of NG-1 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

Reduced Residential Intensity/Density Project Alternative

Under this alternative, the Specific Plan Area would be developed with a reduction in the overall residential intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 25 percent reduction in the intensity/density of the residential components of the project while maintaining the approximately 797-acre project footprint. This would result in fewer residential lots, but larger lot sizes. This alternative would result in up to 3,255 residential units. This alternative would retain the approximately 571,500 square feet of mixed commercial uses, the five proposed schools (three elementary, one middle, and one high school), and the same acreage of parks and detention basins as the project.

Under this alternative, the average residential density (units per net acre) would decrease from 9.0 to approximately 6.8 units/acre. It is assumed that the number of NE parcels would be increased, and the number of NG-1 and NG-2 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

This alternative, based upon residential overall density, is inconsistent with the Salinas General Plan's standards for the Specific Plan Area, which require a minimum of 3,553 residential units within the Specific Plan Area, and the incorporation of New Urbanism concepts which mandates that new residential development have a minimum average density of 9 dwelling units per net residential acre. A General Plan Amendment would be required.

Smaller-scale Project Alternative

Under this alternative, the Specific Plan Area would be reduced by approximately 33 percent and the proposed residential and non-residential uses would also be reduced by approximately 33 percent. For the purposes of discussion, this alternative assumes that approximately 264 acres of land along the entire eastern boundary of the Specific Plan Area would be removed and remain as undeveloped agricultural land. The resultant Specific Plan Area under this alternative would be approximately 533 acres in size, and include up to 2,908 residential units, up to 382,905 square feet of commercial/mixed use building area, and up to 119 acres of public facilities (including two elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and up to 8 parks). The number of residential units under this alternative would not meet the minimum of 3,553 residential units as provided within the City of Salinas General Plan. The residential densities under this alternative would be similar to the project.

The City Council finds that that a good faith effort was made to evaluate all potentially feasible alternatives in the EIR that are reasonable alternatives to the project and could feasibly obtain the basic objectives of the project, even when the alternatives might impede the attainment of the project objectives and might be more costly. As a result, the scope of alternatives analyzed in the EIR is not unduly limited or narrow. The City Council also finds that all reasonable alternatives were reviewed, analyzed and discussed in the review process of the EIR and the ultimate decision on the project. (See, e.g., DEIR, pp. 6-5 to 6-55)

1. Significant, Unavoidable Impacts of the Project

The significant and unavoidable impacts of the project are set out in detail below in Section XI.A.

2. Scope of Necessary Findings and Considerations for Project Alternatives

As noted above, these findings address whether the various alternatives substantially lessen or avoid any of the significant unavoidable impacts associated with the project and also consider the feasibility of each alternative. Under CEQA, "[f]easible means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic,

environmental, legal, social, and technological factors." (CEQA Guidelines § 15364). As explained earlier, the concept of feasibility permits agency decision makers to consider the extent to which an alternative is able to meet some or all of a project's objectives. In addition, the definition of feasibility encompasses "desirability" to the extent that an agency's determination of infeasibility represents a reasonable balancing of competing economic, environmental, social, and technological factors supported by substantial evidence.

In identifying potentially feasible alternatives to the project, the following project objectives were considered:

1. Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.

2. Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.

3. Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.

4. Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.

5. Provide public services and infrastructure improvements that achieve and maintain City service standards.

6. Provide an inviting tree-lined street system which incorporates traffic calming and other measures.

7. Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater FGA and City as a whole.

8. Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.

9. Provide for a reasonable jobs/housing balance.

10. Provide opportunities for senior housing.

11. Provide for a site/parcel-based post-construction SCMs/LID to the maximum extent practicable.

As noted near the beginning of these findings, moreover, the City is keenly aware that the State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most

expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The following two overarching project objectives are therefore presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

B. No Project (No Build) Alternative

In general, a CEQA "No Project Alternative" must "discuss the existing conditions …, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services." (CEQA Guidelines, § 15126.6, subd. (e)(2).) When the proposed project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. In such an instance, the no project alternative consists of evaluating the projected impacts of the proposed plan to the impacts that would occur under the existing plan. "Typically, this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan. (*Id.*, subd. (e)(3)(A).)

1. Analysis of No Project (No Build) Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to air quality. As such, the project level and cumulative impacts would be greatly reduced when compared to the project.

Biological Resources

Under the No Project (No Build) Alternative, the West Area Specific Plan would not be constructed, no habitat would be removed, no wetlands disturbed, and no ground disturbing activities would occur. The Specific Plan Area would remain open to migration, foraging, nesting, and other uses by wildlife. Therefore, potential for impacts to biological resources would be eliminated under the No Project (No Build) Alternative. Impacts to biological resources would be reduced as compared to the project.

Cultural Resources

The No Project (No Build) Alternative would continue to result in ground disturbing activities associated with the agricultural operations (i.e., soil tilling); however, because the ground disturbance associated with farming has occurred for an extended period of time with no cultural resources being found it is anticipated that the continuation of these operations under this alternative would have a significantly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources, the No Project (No Build) Alternative would result in slightly less potential for impacts to cultural resources as the entire Specific Plan Area would continue to be used for agriculture production.

Greenhouse Gases and Climate Change

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to GHG reductions. As such, this impact would be reduced when compared to the project. This does not necessarily mean, however, that the No Project Alternative represents a better long-term policy outcome for climate than the project. California has a large housing need, and new housing will have to be built somewhere, if not the Specific Plan Area. As the California Supreme Court explained, "[g]iven the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced." (*Center for Biological Diversity v. California Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 220-221.)

Hazards and Hazardous Materials

Under the No Project (No Build) Alternative, no new land uses would be introduced to the Specific Plan Area, and the potential for hazardous material release in the Specific Plan Area would be reduced. Ongoing pesticide use would occur within the area to remain in agriculture, and this has the potential to generate negative health effects on existing residents located in the areas south and west of the Specific Plan Area. However, there would not be long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, because development would not occur. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the No Project (No Build) Alternative would result in less potential for impacts.

Hydrology and Water Quality

Under the No Project (No Build) Alternative, potential new water quality impacts from construction and operation of the West Area Specific Plan would be eliminated. Under this alternative, the land would be kept in its present state with the majority of the Specific Plan Area either fallow land or being used for agricultural purposes. The No Project (No Build) Alternative would have a greater chance of groundwater recharge because it would not introduce large areas of impervious surfaces as would the West Area Specific Plan. However, the beneficial impact of reducing the consumptive use of water by 2,078 acre-feet per year (AFY) (Cal Water, 2015) would not exist. This is a significant contribution in reducing overdraft in the Salinas Valley Ground Water basin.

The potential to result in the violation of water quality standards would be reduced under this alternative as compared with the project. However, there are some instances where the No Project (No Build) Alternative would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Nevertheless, overall, potential impacts related to hydrology and water quality would be reduced under this alternative.

Noise

Existing agricultural activities within the Specific Plan Area sometimes involve on-going noise sources such as agricultural equipment (e.g., tractors, harvesters, planters, etc.). Such noise sources are part of the existing ambient noise levels in the Specific Plan Area. Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and there would be no potential for new noise sources; however, existing noise from agricultural operations would continue. As such, this alternative would have less impact relative to the project.

Population and Housing

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and the Specific Plan Area would not accommodate the City's anticipated growth. Growth would still be anticipated to occur within the region, but it would not be accommodated in the FGA, which has undergone extensive planning efforts by the City and community for over a decade. This outcome would not be consistent with the FGA and General Plan. The City would need to look

to other undeveloped areas of the region to develop for new housing, which would be expected to have environmental impacts that have not yet been assessed, but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the No Project (No Build) Alternative, there would be no increased demand for police, fire, schools, parks, or other public services. Alternatively, this alternative would result in no new school or park facilities, which are designed to accommodate more than the demand that is generated by the West Area Specific Plan. Overall, this alternative would have a slightly greater impact to public services when compared to the project.

Transportation and Circulation

Under the No Project (No Build) Alternative, there would be no new traffic generated within the Specific Plan Area. This alternative would also not result in new traffic improvements on the City's roadway system and it would not result in payments of traffic impact fees into the City's Capital Improvement Program (CIP) that would be used for the roadway system. Existing deficiencies in the traffic system would not receive the benefit of improvements to improve existing deficiencies; however, this would be more than offset by the fact that there would be no new contribution to degrading traffic levels of service at a project and cumulative level. Overall, this alternative would have less of an overall traffic impact than the project. Still, the growth for which there is market demand would still be anticipated to occur somewhere else within the region, possibly in areas that could result in transportation effects worse than those of the West Area Specific Plan.

Utilities

Under the No Project (No Build) Alternative, the Specific Plan Area would not have an increased demand for wastewater, storm drainage, or solid waste disposal. There would be no new impacts on these utilities and there would be no need to construct new infrastructure. Therefore, overall, the impact on wastewater, solid waste, and storm drainage would be reduced under this alternative. In conclusion, the No Project (No Build) Alternative would not result in a beneficial impact to groundwater recharge. However, this alternative would decrease the amount of solid waste and wastewater generated at the site, and would not require construction of new utilities infrastructure. Overall, the No Project (No Build) Alternative would not add new impacts to wastewater, storm drainage, or solid waste disposal systems, but would not result in the beneficial impacts to the groundwater system.

2. Feasibility of No Project (No Build) Alternative

The No Project (No Build) Alternative is the environmentally superior alternative because it results in the least adverse environmental impacts when compared to the project. However, the No Project (No Build) Alternative would fail to meet the project objectives identified for the

West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

The City Council finds the No Project (No Build) Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the Project.

C. Reduced Land Area Project Alternative

1. Analysis of Reduced Land Area Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Land Area Project Alternative, the Specific Plan Area would be developed with a 20 percent smaller development area, with an overall increase in residential density. Although the number of users would be the same under this alternative as compared with the project, this alternative has reduced mobile emissions when compared to the project, due to the more compact design of this alternative. It was assumed that mobile emissions under this alternative would be reduced by approximately twenty percent (as compared to the project), the same amount as the reduction in the size of this alternative's footprint when compared to the project. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for reactive organic compounds (ROG), nitrogen oxides (NO_x), and respirable particulate matter (PM_{10}) at buildout.

This alternative would provide more compact development than the project, providing greater opportunities for non-motorized transportation choices (such as walking or cycling). This would slightly reduce vehicle miles travelled (VMT) as compared to the project, which would slightly the mobile source emissions.

The Reduced Land Area Project Alternative would have greater impacts with respect to Air Quality Impact 3.1-1, which is identified as "the potential to conflict with or obstruct implementation of the applicable air quality plan." This is because the Association of Monterey Bay Area Governments (AMBAG), in consultation with the City of Salinas, included the North of Boronda FGA (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The AMBAG 2018 Regional Growth Forecast feeds into the Monterey Bay Air Resources Board's (MBARD) 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as the future version of the Air Quality Management Plan (AQMP). Therefore, while an increase in density has the potential to reduce mobile source emissions if residents chose alternative transportation modes (i.e., walk/bike/transit instead of driving a vehicle), this is not guaranteed to occur given that the choice to drive is still convenient and economical for most residents under this residential density in a suburban environment. The increased residential density under this alternative was not specifically planned for in the MBARD planning documents and within the AMBAG forecasts. Nevertheless, due to the reduced footprint and slightly reduced VMT, this impact would be slightly reduced when compared to the West Area Specific Plan.

Biological Resources

Under the Reduced Land Area Project Alternative, less habitat would be removed, and fewer ground disturbing activities would occur. It is still anticipated that the drainage ditches along Boronda Road would be eliminated (i.e., fill activity). A portion of the Specific Plan Area (twenty percent) would remain open to migration, foraging, nesting, and other uses by wildlife. The balance of the Specific Plan Area (eighty percent of site) would be developed and no longer available for migration, foraging, nesting, and other uses by wildlife. This would still be a significant and unavoidable impact, and would be cumulatively considerable.

When compared to the Specific Plan, potential for impacts to biological resources would be reduced under the Reduced Land Area Project Alternative proportionate to the reduction in developed area estimated at twenty percent.

Cultural Resources

The Reduced Land Area Project Alternative would result in fewer ground disturbing activities and would have a slightly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Land Area Project Alternative would result in slightly less potential for impacts to cultural resources, as a portion of the Specific Plan Area would remain undeveloped.

Greenhouse Gases and Climate Change

The Reduced Land Area Project Alternative would not develop approximately 162 acres that is proposed to be developed under the project. This would provide more compact development, creating more opportunities for non-motorized transportation options (such as walking or cycling). This is likely to reduce overall VMT as compared to the project. This would reduce mobile-related GHG emissions by an amount approximately equivalent to proportional reduction in the size of the Specific Plan Area (twenty percent) under this alternative, as compared with the project. Total operational emissions would be reduced by approximately 11 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 16,785 (same as the project), this alternative would generate approximately 2.53 metric tons of carbon dioxide equivalent (MT CO_2e)/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. However, this value is below the per service population estimate for the project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, the emissions per capita under this alternative would be reduced as compared with the project. This impact would be slightly reduced when compared to the project.

Hazards and Hazardous Materials

Under the Reduced Land Area Project Alternative, the land area to be developed would be reduced by 20 percent and the potential for exposure to hazardous materials, or a release of hazardous materials would be reduced proportionately. Ongoing pesticide use would occur within the area to remain in agriculture, and this would have the potential to generate negative health effects on new residents in the development. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the Reduced Land Area Project Alternative would result in slightly less potential for impacts.

Hydrology and Water Quality

Implementation of the West Area Specific Plan has the potential to result in the violation of water quality standards and waste discharge of pollutants into surface waters during both construction and long-term operations. Construction operations could result in temporary increases in runoff, erosion, sedimentation, soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. The long-term operation of the West Area Specific Plan could result in long-term impacts to surface water quality from urban stormwater runoff and could enter groundwater or surface water systems. Additionally, the proposed project would result in new impervious surfaces that could reduce rainwater infiltration and groundwater recharge. Mitigation measures incorporated into the project would reduce potential water quality impacts to a less than significant level. The West Area Specific Plan would not place persons or structures in a flood hazard zone.

Under the Reduced Land Area Project Alternative, potential water quality impacts from construction and operation of the West Area Specific Plan would be reduced. Under this alternative, the developed area would be reduced by 20 percent when compared with the project. The Reduced Land Area Project Alternative would have a greater chance of groundwater recharge because it would reduce the amount of impervious surfaces by 20 percent as compared to the West Area Specific Plan. The areas that would not be developed (i.e., the 162 acres of land in the northeast corner of the Specific Plan Area) would remain under agricultural production. While the 162-acre agricultural area would provide opportunities for groundwater recharge, the agricultural uses would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping required for the 162-acres of agricultural use under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. The amount of total consumptive water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412

AFY less water than buildout of the proposed project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the proposed project.

Under this alternative, there are some instances where the undeveloped portions of the Specific Plan Area would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, while the potential to result in water quality violations would be reduced under this alternative when compared with the project, the higher amount of groundwater pumping under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the proposed project. There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 80 percent of the land area would be converted into a use that would not require intensive groundwater pumping. As such, potential impacts related to hydrology and water quality would be increased under this alternative when compared to the project.

Noise

Under the Reduced Land Area Project Alternative, development would be reduced by 20 percent when compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Receptors would be subject to ongoing agricultural noise under this alternative. It is noted that, despite this reduction in the size of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact. As such, this alternative would have a reduced impact relative to the project.

Population and Housing

Under the Reduced Land Area Project Alternative, the project footprint would be reduced by 20 percent when compared with the project. However, although the residential density would increase from approximately 9.0 to 11.3 residential units per acre under this alternative, the number of residences developed under this alternative would be the same as for the proposed project. Overall, this alternative would have a equal impacts when compared to the project.

Public Services

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, the demand for police, fire and other public services would be equal. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have equal impacts to public services when compared to the project.

Transportation

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, traffic generated in the Specific Plan Area would be equal.

This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts to this topic under this alternative.

The Reduced Land Area Project Alternative would have "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-7, which is identified as "impacts related to emergency access." The basis for this determination is that the increased density of the proposed project would increase congestion on existing and planned roadways as compared to the proposed project, given that fewer roadways would be developed under this alternative (because the APNs 211-011-008 and 211-011-009 would not be developed under this alternative). Specifically, Natividad Road (Major Arterial), Russell Road (Major Arterial), and Rogge Road would not be expanded with full frontage improvements under this alternative. Congestion is also expected to be slightly higher under this alternative compared to the proposed project, given the increased density of traffic (based on fewer roadway miles being developed under this alternative compared with the proposed project, and the increased density of the proposed project [to 11.3 residential units per acre under this alternative, compared to 9.0 residential units per acre under the proposed project]). This represents a slightly greater impact with respect to emergency access within the Specific Plan Area. It is noted that the significance determination under Transportation and Circulation Impact 3.10-7 would likely still be less than significant for the Reduced Land Area Alternative, similar to the proposed project; however, the roadway network will not have the same capacity as under the proposed project, so the determination remains "slightly greater."
Additionally, the Reduced Land Area Project Alternative would have a "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-8, which is identified as "conflict with adopted multi-modal circulation policies, plans, or programs" or a "decrease [in] the performance or safety of public transit, bicycle, or pedestrian facilities." The basis for this determination is that the following roadways would not be developed in full under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane);
- Rogge Road frontage improvements.

Since these roadways would not be developed in full, as planned for by the proposed project, connectivity with the remainder of the City and County, including other areas within the City's FGA, would be more limited under the Reduced Land Area Project Alternative as compared to the proposed project. Overall, this alternative would have slightly greater traffic impacts than the project.

Utilities

This alternative would not save as much groundwater when compared to the proposed project. The amount of total consumptive water usage reduced by this alternative when compared to the

existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412 AFY less water than buildout of the proposed project. This is due to the dramatically higher water usage under the current irrigated agricultural cultivation uses as compared with developed residential and/or commercial uses. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project.

Although this alternative would save less groundwater than the project, generate a similar amount of solid waste, and demand a similar amount of water, this alternative would reduce impacts to stormwater compared to the project. Overall, the demand for utilities would be reduced under this alternative when compared to the project.

2. Feasibility of Reduced Land Area Project Alternative

The Reduced Land Area Project Alternative would slightly reduce impacts to air quality, biological resources, cultural resources, GHG and climate change, hazards, hydrology, noise, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to groundwater supplies and recharge (cumulative and project-level), population and housing, emergency vehicle access, and conflicts with adopted multi-modal circulation policies, plans, or programs. Further, this alternative does not meet the following project objectives:

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole.

The Reduced Land Area Project Alternative does not fully meet the project objective to "Provide public services and infrastructure improvements that achieve and maintain City service standards" because the Reduced Land Area Project Alternative would develop fewer roadways, bicycle and pedestrian pathways, and other infrastructure improvements (such as well sites) when compared with the project.

Under this alternative, APNs 211-011-008 and 211-011-009, as shown in Figure 5.0-1 of the Draft EIR, would not be developed. The effect of this area not developing in accordance with the General Plan would be that the following roadways and infrastructure improvements would not be developed:

- Natividad Road (Major Arterial) expansion frontage improvements;
- Russell Road (Major Arterial) expansion;
- Rogge Road frontage improvements;
- The proposed water well #3 and water treatment site;
- The supplemental stormwater basins along Natividad Road; and
- Neighborhood Park WA-3 (3-acre park).

Therefore, based on the above list of roadways and infrastructure improvements that would not be developed under this alternative, the ability of the City to provide public services and infrastructure improvements in accordance with the adopted General Plan would be hampered under the Reduced Land Area Project Alternative.

The Reduced Land Area Project Alternative does not meet the project objective to "Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole" because this alternative would leave undeveloped a portion of the land that would be developed under project (i.e., APNs 211-011-008 and 211-011-009), as shown in Figure 5.0-1 of the Draft EIR. This is an area located adjacent to the future Central Area Specific Plan (within the City's FGA). If this area were to remain undeveloped, there would be fewer interconnected sidewalks/pathways and available open space areas for City residents, and connectivity would be limited between the West Area Specific Plan (the project) and the planned for Central Area Specific Plan (a planned Specific Plan Area that would be located just to the east of the proposed project). This reduced connectivity means that the Reduced Land Area Project Alternative would not establish an interconnected sidewalk/pathway and open space system that fully links with the greater FGA and with the City as a whole. Notably, this rationale is also the basis for determining that the Smaller-Scale Project Alternative would not meet this Specific Plan objective. Specifically, the following roadways would not be developed under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane); and
- Rogge Road frontage improvements.

The Reduced Land Area Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, hydrology and water quality, population and housing, public services, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects anticipated with the project would still occur under this Reduced Land Area Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts may occur to a lesser extent than under the project under this alternative, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to increased traffic noise levels at existing receptors would occur under the project and the Reduced Land Area Project Alternative as there is a possibility of not being able to feasibly install sounds walls in some locations that would be warranted. It is noted that, due to decreased noise levels associated with this alternative, the noise at existing receptors would likely decrease. However, the cumulative traffic noise level increases would exceed the Federal Interagency Committee on Noise (FICON) CEQA substantial increase criteria of 1.5 to 5 dB.

The City Council finds the Reduced Land Area Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

D. Reduced Residential Intensity/Density Project Alternative

1. Analysis of Reduced Residential Intensity/Density Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area, with an overall decrease in residential density.

It was assumed that overall criteria pollutant emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for ROG, NOx, and PM_{10} at buildout.

Although less compact development generally increases overall per capita VMT, the smaller number of residential units under this alternative as compared with the project would reduce overall air quality emissions, including under area sources, mobile sources, and energy sources. As such, this impact would be reduced when compared to the project.

Biological Resources

Under the Reduced Residential Intensity/Density Project Alternative, an equivalent amount of habitat would be removed as under the project, and a similar level of ground disturbing activities would occur as compared with the project. Therefore, there would be an approximately equal potential for impacts to biological resources under this alternative as compared with the project.

Cultural Resources

The Reduced Residential Intensity/Density Project Alternative would result in a similar level of ground disturbing activities and would have a similar potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Residential Intensity/Density Project Alternative would result in equal potential for impacts to cultural resources.

Greenhouse Gases and Climate Change

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area. It

was assumed that overall GHG emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. Total operational emissions would be reduced by approximately 25 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 12,803 under this alternative (this is equivalent to a 25 percent smaller residential population but the same number of workers, when compared to the project), this alternative would generate approximately 2.79 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035, but lower than the per service population estimate for the project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, this impact would be slightly reduced when compared to the project.

The slight reduction does not necessarily mean that the Reduced Residential Intensity/Density Project Alternative represents a better long-term policy outcome for climate than the project. California has a large housing need, and new housing will have to be built somewhere, if not in the Specific Plan Area. As the California Supreme Court explained, "[g]iven the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced." (*Center for Biological Diversity v. California Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 220-221.)

Hazards and Hazardous Materials

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential components would be reduced by 25 percent as compared with the project. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. Overall, given the reduction in the intensity-density of this alternative as compared with the project, it is expected that the Reduced Residential Intensity/Density Project Alternative would have a slightly reduced impact to this topic relative to the project.

Hydrology and Water Quality

Under the Reduced Residential Intensity/Density Project Alternative, potential water quality impacts from construction and operation would be slightly reduced. Under this alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project, although the footprint would remain the same. This would result in fewer residential lots, but larger lot sizes. Since the residential lot sizes under this alternative would be larger when

compared with the project, there would be less impervious surface, and therefore there would be a greater chance of groundwater recharge under this alternative. As such, potential impacts related to hydrology and water quality would be reduced under the Reduced Residential Intensity/Density Alternative when compared to the project.

Noise

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Despite this reduction in the size of intensity of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact. As such, this alternative would have less impact relative to the project.

Population and Housing

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project. Development of housing would still occur under this alternative, but fewer units would be built. Growth would still be anticipated to occur within the region, but it would not be fully accommodated in the North of Boronda FGA, which has undergone extensive planning efforts by the City and community for over a decade. This would not be consistent with the FGA and General Plan. The City would need to look to other undeveloped areas of the region to develop for new housing which would be expected to have environmental impacts that have not yet been assessed but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. The lower density of this alternative would also not meet the minimum number of residential units required for New Urbanism principles that are established in the General Plan for the Specific Plan Area. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent; therefore, the demand for police, fire and other public services would be reduced. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have a slightly reduced impact to public services when compared to the project.

Transportation and Circulation

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent; therefore, traffic generated in the Specific Plan Area would be reduced. This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway

system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts under this alternative. Overall, this alternative would have less of an overall traffic impact than the project.

Utilities

Under the Reduced Residential Intensity/Density Alternative, the Specific Plan Area would be developed with a reduction in the overall residential intensity/density while maintaining the approximate overall project footprint as in the project. For the purposes of discussion, this option considers a 25 percent reduction in the intensity/density of the residential components of the project while maintaining the approximately 797-acre project footprint. This would result in fewer residential lots, but larger lot sizes. This alternative would result in up to 3,255 residential units. This alternative would retain the approximately 571,500 square feet of mixed commercial uses, the five proposed schools (three elementary, one middle, and one high school), and the same acreage of parks and detention basins as the project.

The total quantity of infrastructure installed would not be reduced, but the demand for wastewater and solid waste services would be less than would be required for the project. For example, is expected that this alternative would generate approximately 0.8 million gallons per day (MGD) of wastewater and approximately 37,777 pounds per day (lbs/day) of solid waste, smaller than would be generated by the project, since this alternative would generate fewer residents when compared to the project.

Separately, the total storm drainage runoff under this alternative would be approximately the same when compared to the project, due to the project footprint remaining the same for this alternative when compared to the project. Additionally, this alternative would save approximately the same amount of groundwater when compared to the project, since the project footprint would remain the same for this alternative as compared to the project. Overall, the demand for wastewater and solid waste services would be less than would be required for the project, and the amount of storm drainage runoff would be approximately the same. Therefore, demand for utilities would be slightly reduced under this alternative when compared to the project.

2. Feasibility of Reduced Residential Intensity/Density Project Alternative

The Reduced Residential Intensity/Density Project Alternative would slightly reduce impacts to air quality, cultural resources, GHG and climate change, hydrology, noise, public services, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to conflicts with applicable air quality plans and population and housing. Further, this alternative does not meet the following project objectives:

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly;
- Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages;
- Provide a reasonable jobs/housing balance.

The Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly" because the Reduced Residential Intensity/Density Project Alternative would result in fewer lots with larger lot sizes than will occur under the project. Larger lot sizes are inherently not compact, and development of these larger lot sizes may result in larger block sizes, which are less conducive to travel by walking, bicycles, and transit. Based upon residential overall density, this alternative is inconsistent with the Salinas General Plan's standards for the Specific Plan Area, which require a minimum of 3,553 residential units within the Specific Plan Area, and the incorporation of New Urbanism concepts, which mandate that new residential development have a minimum average density of 9 dwelling units per net residential acre.

The Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages" because the Reduced Residential Intensity/Density Project Alternative would provide fewer medium- and high-density housing units than the project. The number of low-density housing options would increase compared to the project, and these units would replace otherwise varied density housing options.

Furthermore, the reduction in housing units under the Reduced Residential Intensity/Density Project Alternative would be less consistent than the project in meeting statewide legislative goals of building housing units in order to address the statewide housing crisis. Given the enormous unmet demand for housing in California, the City believes that it has an obligation to facilitate the construction of more, rather than fewer, housing units when opportunities for residential development arise.

Similarly, the Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Provide a reasonable jobs/housing balance" because the Reduced Residential Intensity/Density Project Alternative would result in 1,085 fewer housing units than the project, but the same amount of commercial uses. This would impact the jobs/housing balance because fewer residents would be live in the Specific Plan Area, which proximity is vital to ensuring the success of the businesses in the Specific Plan Area.

The Reduced Residential Intensity/Density Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, cultural resources, greenhouse gases and climate change, hydrology and water quality, hazards and hazardous materials, noise, public services, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, biological resources, hazards and hazardous materials, population and housing, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects which are anticipated with the project would still occur under this Reduced Residential Intensity/Density Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts

may occur to a lesser extent under this alternative than under the project, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to violation of an air quality standard would occur under both the project and the Reduced Residential Intensity/Density Project Alternative. As shown in Table 5.0-4 of Chapter 5.0 of the Draft EIR, the Reduced Residential Intensity/Density Project Alternative would exceed the threshold of significance for ROG, NOx, and PM_{10} at buildout. Although the emissions would be less than with the project, this alternative would also cause a violation of an air quality standard. This is considered a significant and unavoidable impact.

The City Council finds the Reduced Residential Intensity/Density Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

E. Smaller Scale Project Alternative

1. Analysis of Smaller Scale Project's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Smaller-scale Project Alternative, the overall size of the project would be scaled down by approximately 33 percent as compared with the project. This would reduce Specific Plan Area operational emissions by an approximately equivalent amount (33%) as compared to the project. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for ROG, NOx, and PM_{10} at buildout.

Nevertheless, overall air quality emissions under this alternative would be reduced compared to the project, due to the smaller size of this alternative, including for area sources, mobile sources, and energy sources. As such, this impact would be reduced when compared to the project.

Biological Resources

Under the Smaller-scale Project Alternative, an area of about 264 acres would not be developed, and fewer ground disturbing activities would occur. It is still anticipated that the drainage ditches along Boronda would be eliminated (i.e., fill activity). The 264 acres would remain open to migration, foraging, nesting, and other uses by wildlife. The balance of the Specific Plan Area would be developed and no longer available for migration, foraging, nesting, and other uses by wildlife. This would still be a significant and unavoidable impact, and would be cumulatively considerable.

When compared to the Specific Plan, potential for impacts to biological resources would be reduced under the Smaller-scale Project Alternative proportionate to the reduction in developed area.

Cultural Resources

The Smaller-scale Project Alternative would result in a reduced level of ground disturbing activities and would therefore have slightly less potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, this alternative would result in slightly less potential for impacts to cultural resources.

Greenhouse Gases and Climate Change

The Smaller-scale Project Alternative would reduce the level of development by approximately 33 percent as compared with the project. This would reduce Specific Plan Area operational GHG emissions by an approximately equivalent amount (33%) when compared to the project. Total operational emissions would be reduced by approximately 33% under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 11,190 under this alternative (this is equivalent to a 33% reduction in both residential and worker population, when compared to the project), this alternative would generate approximately 2.84 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. Additionally, this emissions-per-capita value would be the same as those generated by the project. Therefore, this impact would be equal when compared to the project.

Hazards and Hazardous Materials

The Smaller-scale Project Alternative would reduce the level of development by approximately 33 percent and the potential for exposure to hazardous materials, or a release of hazardous materials would be reduced proportionately. Ongoing pesticide use would occur within the area to remain in agriculture, and this would have the potential to generate negative health effects on new residents in the development. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the Smaller-scale Project Alternative would result in slightly less potential for impacts.

Hydrology and Water Quality

Under the Smaller-scale Project Alternative, potential water quality impacts from construction and operation would be reduced. Under this alternative, the overall level of development (including the size of the site and the overall development area per use) would be reduced by approximately 33 percent. An area of approximately 264 acres that would be developed as part of the project would not be developed as part of this alternative. The areas that would not be developed would remain under agricultural production, and while they would have better

recharge in those areas, they would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 66 percent of the land area would be converted into a use that would not require intensive groundwater pumping.

There are some instances where the 264 acres of Specific Plan Area that remains undeveloped would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, overall, while the potential to result in the violation of water quality standards would be reduced under this alternative when compared with the project, overdraft conditions would worsen in the Salinas Valley Ground Water basin under this alternative when compared to the project. As such, potential impacts related to hydrology and water quality would be increased under the Smaller-scale Project Alternative when compared to the West Area Specific Plan.

Noise

Under the Smaller-scale Project Alternative, the overall level of development would be reduced by 33 percent as compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Despite this reduction in the size and intensity of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact As such, this alternative would have less impact relative to the project.

Population and Housing

Under the Smaller-scale Project Alternative, the overall level of development would be reduced by 33 percent as compared with the project. Development of housing would still occur under this alternative, but fewer units would be built. Growth would still be anticipated to occur within the region, but it would not be fully accommodated in the FGA, which has undergone extensive planning efforts by the City and community for over a decade. This would not be consistent with the FGA and General Plan. The City would need to look to other undeveloped areas of the region to develop for new housing, which would be expected to have environmental impacts that have not yet been assessed but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the Smaller-scale Project Alternative, the overall level of development and the number of residential/non-residential uses would be reduced by 33 percent; therefore, the demand for police, fire and other public services would be reduced. This alternative would still result in development of public facilities (i.e., schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have a slightly reduced impact to public services when compared to the project.

Transportation and Circulation

Under the Smaller-scale Project Alternative, the overall level of development and the number of residential/non-residential uses would be reduced by 33 percent; therefore, traffic generated in the Specific Plan Area would be reduced. This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts. Overall, this alternative would have less of an overall traffic impact than the project.

Utilities

Under the Smaller-scale Project Alternative, the Specific Plan Area would be reduced by approximately 33 percent and the proposed residential and non-residential uses would also be reduced by approximately 33 percent. This alternative assumes that approximately 264 acres of land along the entire eastern boundary of the Specific Plan Area would be removed and remain as undeveloped agricultural land. The resultant Specific Plan Area under this alternative would be approximately 533 acres in size, and include up to 2,908 residential units, up to 382,905 square feet of commercial/mixed use building area, and up to 119 acres of public facilities (including two elementary schools, a high school, middle school, open space (including supplemental detention/retention basins) and up to 8 parks).

The total quantity of infrastructure installed would be reduced, and the demand for wastewater, stormwater, and solid waste services would be less than would be required for the project. For example, is expected that this alternative would generate approximately 0.7 MGD of wastewater and approximately 33,473 lbs/day of solid waste, less than what would be generated by the project, since this alternative would generate fewer residents when compared to the project.

Separately, the total storm drainage runoff under this alternative would be reduced by approximately 33% when compared to the project, due to the project footprint being reduced by 33% when compared to the project.

However, this alternative would not save as much groundwater when compared to the project. The amount of total water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,389 AFY, compared with the approximately 2,078 AFY estimated to be saved by the project. That is, buildout this alternative would save approximately 689 AFY less water than buildout of the project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project. However, in general, the demand for utilities would be reduced under this alternative when compared to the project.

2. Feasibility of Smaller-scale Project Alternative

The Smaller-scale Project Alternative would slightly reduce impacts to air quality, biological resources, cultural resources, GHG and climate change, hazards, hydrology, noise, public

services, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to conflicts with applicable air quality plans, groundwater supplies and recharge (cumulative and project-level), population and housing, emergency vehicle access, and conflicts with adopted multi-modal circulation policies, plans, or programs. Further, this alternative does not meet the following project objectives:

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole.

The Smaller-scale Project Alternative does not fully meet these two project objectives because, similar to the Reduced Land Area Project Alternative, this alternative would leave 33 percent of the Specific Plan Area undeveloped, which would include 264 acres of land along the entire eastern boundary of the Specific Plan Area. This eastern area is located adjacent to the future Central Area Specific Plan (within the City's FGA). This means that there would be fewer interconnected sidewalks/pathways and available open space areas for City residents, and that there would be limit connectivity between the West Area Specific Plan (the project) and the future Central Area Specific Plan (a planned Specific Plan Area that would be located just to the east of the proposed project). This reduced connectivity means that the Reduced Land Area Project Alternative would not establish an interconnected sidewalk/pathway and open space system which fully links with the greater FGA and the City as a whole. Specifically, the following roadways would not be developed under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane); and
- Rogge Road frontage improvements.

Furthermore, the reduction in housing units under the Reduced Residential Intensity/Density Project Alternative would be less consistent than the project in meeting statewide legislative goals of building housing units in order to address the statewide housing crisis. Given the enormous unmet demand for housing in California, the City believes that it has an obligation to facilitate the construction of more, rather than fewer, housing units when opportunities for residential development arise.

The Smaller-scale Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, public services, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, greenhouse gases and climate change, hydrology and water quality, population and housing, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects anticipated with the project would still occur under this Smaller-scale Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts may occur to a lesser extent under this alternative than under the project, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to violation of an air quality standard would occur under both the project and the Smaller-scale Project Alternative. As shown in Table 5.0-7 of Chapter 5.0 of the Draft EIR, the Smaller-scale Project Alternative would exceed the threshold of significance for ROG, NOx, and PM_{10} at buildout. Although the emissions would be less than the proposed project, this alternative would also cause a violation of an air quality standard. This is considered a significant and unavoidable impact.

The City Council finds the Smaller- scale Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

XI. STATEMENT OF OVERRIDING CONSIDERATIONS

As set forth in the preceding sections, the City of Salinas's approval of the West Area Specific Plan will result in a significant adverse environmental effect that cannot be avoided even with the adoption of all feasible mitigation measures; and there are no feasible project alternatives that would mitigate or substantially lessen all of these impacts. Despite the occurrence of these effects, however, the City Council, in accordance with CEQA Guidelines section 15093, chooses to approve the project because, in the Council's view, the economic, social, and other benefits that the project will produce will render the significant effects acceptable.

A. Significant and Unavoidable Impacts

The project will result in the following potentially significant and unavoidable impacts, even with the implementation of all feasible mitigation measures:

- **Air Quality Operation.** The Specific Plan would exceed the Monterey Bay Air Resources District (MBARD) thresholds of significance for operations for ROG, NO_x, and PM_{10}, even after mitigation. (DEIR, pp. 3.1-19 through 3.1-23)
- **Cumulative Air Quality.** As is currently proposed, the Specific Plan is expected to be built out under a staged approach, and all mitigation would be applicable to each stage. However, even with the application of mitigation measures, operational emissions levels would remain above the defined thresholds of significance. Exceedance of the threshold within an area designated as nonattainment would be a cumulatively considerable impact. (DEIR, pp. 3.1-31 through 3.1-32)
- **Wildlife Movement and Corridors.** Development of the project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. There are no mitigation measures that can fully mitigate this impact and, given the fact that once the land is converted, it will no longer be a viable migration corridor for any species. (DEIR, pp. 3.2-46 through 3.2-47)
- **Cumulative Biological Resources.** Development of the project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. Given the rareness of CTS and CRLF in the Bioregion, the incremental loss of movement habitat from the project, when considered alongside all

past, present, and probable future projects (inclusive of all communities within the Bioregion), is a significant and unavoidable cumulative impact, and the Specific Plan's incremental contribution to this impact is itself cumulatively considerable. (DEIR, pp. 3.2-52 through 3.2-53)

- **Greenhouse Gas Emissions.** The project would generate GHG emissions, directly and indirectly, that may have a significant impact on the environment. While mitigation measures would result in reduced GHGs, it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant. (DEIR, pp. 3.4-31 through 3.4-38)
- **Cumulative Greenhouse Gas Emissions.** Implementation of the project will still generate GHG emissions that would not otherwise exist without the project. Given the length of construction activities for a project of this size, the construction emissions would be a long-term release of approximately 168,734.3 MT CO_2e. The operational emissions would be a long-term release totaling approximately 51,939.2 MT CO2e per year without mitigation, and 47,684.9MT CO_2e per year with mitigation. Because it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant, implementation of the Specific Plan would have a cumulatively considerable contribution and significant and unavoidable impact to GHGs. (DEIR, pp. 3.4-48 through 3.4-49)
- **Traffic Noise at Existing Receptors.** The project would cause increased noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard at existing residential receptors. Additionally, traffic noise level increases would exceed the FICON CEQA substantial increase criteria of 1.5 to 5 dB, as outlined in Table 3.7-7. (DEIR, pp. 3.7-14 through 3.7-23)
- **Cumulative Traffic Noise.** The project would cause increased noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard at existing residential receptors. Therefore, there would be a cumulative exposure of existing and future noise-sensitive land uses to increased noise resulting from cumulative development. (DEIR, pp. 3.7-33 through 3.7-37)
- **School Facilities.** Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts. Development of a school within the proposed Specific Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1 and 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-19 through 3.9-21)
- **Park Facilities.** Project implementation may result in effects on parks, or require the construction of park facilities which may cause substantial adverse physical environmental impact. Development of 49.76 acres of park land within the Specific Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2 and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1 and 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-22 through 3.9-23)
- **Cumulative Public Facilitates.** The construction and operation of future public facilities required to serve cumulative development (including the West Area Specific Plan Area) could potentially cause significant impacts. Cumulative development, including

additional parks, schools, library, and other public facilities within the city and service area, would contribute to significant and unavoidable cumulative impacts that have been identified within this EIR related to: air quality (Impact 3.1-7), biological resources (Impact 3.2-12), greenhouse gases (Impact 3.4-4), noise (Impact 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-24 through 3.9-26)

- **Cumulative Plus Project Traffic.** Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan would conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. (DEIR, pp. 3.10-63 through 3.10-70)
- **Cumulative Plus Central Area Specific Plan Plus Project Traffic.** Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan would with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans (DEIR, pp. 3.10-76 through 3.10-81)

B. Overriding Considerations

In the City Council's judgment, the project and its benefits outweigh its unavoidable significant effects. The following statement identifies the specific reasons why, in the City Council's judgment, the benefits of the project as approved outweigh its unavoidable significant effects. Any one of these reasons is sufficient to justify approval of the project. Thus, even if a court were to conclude that not every reason is supported by substantial evidence, the City Council would stand by its determination that each individual reason is sufficient. The substantial evidence supporting the various benefits can be found in the preceding findings, which are incorporated by reference into this section (XI), and in the documents found in the Record of Proceedings, as defined in section V.

1. The project will substantially expand employment opportunities for local residents.

It is anticipated that local employment would be increased to provide administrative, management, and retail services. The project is expected to require both full-time and part-time employees. It is anticipated that the employment growth would be met both by existing residents and through the attraction of new residents. Data from U.S. Bureau of Labor Statistics (2018) indicates that the City has an unemployment rate of approximately 4.9%, as of November 2018, which is higher than the State and national averages at 4.2% and 3.7%, respectively (U.S. Bureau of Labor Statistics, 2018). Many of the newly created jobs are expected to be in the retail/commercial sector and would be opportunities well-suited for second wage earners in households, the younger workforce, and others, which generally depend on the local workforce. Due to the fact there is currently a surplus of unemployed workforce within the City, it is likely that current residents would fill the majority of new positions. Additional population growth induced by the creation of new businesses could be supported by the available housing within Salinas as well as new housing planned as part of the West Area Specific Plan.

The construction of new developments within the Specific Plan Area would increase temporary construction jobs in the area. New employment opportunities are critical to the residents of the

City as a basis to reduce the City's higher than average unemployment rate and to improve the balance between jobs and housing.

The creation of new jobs has a variety of other co-benefits that lead to improved quality of life. These benefits include enhancing overall economic activity in the City, which leads to increased revenue to fund and maintain city services and facilities such as public safety, parks, recreation centers and libraries and related programs that support a high quality of life. Benefits also include improving community health through crime reduction, improving economic productivity, decreasing traffic congestion and greenhouse gas emissions by reducing the number of residents that must travel out of the city to find employment.

2. The project will help attract economic investment.

Currently, Salinas lags behind the region in private economic investment. This lack of investment can be quantified in terms of the number of building permits pulled and the associated building valuation. For example, from June 1, 2018 to June 21, 2019, 1,765 permits with a building valuation of approximately $5,116,481.85 were pulled in Salinas.[1] This is a fraction, 10.0 percent, of the private investment in the City of Monterey totaling a valuation of $51,289,904 (422 permits).[2] This is especially significant considering Salinas (162,797) has more than five times the population of the City of Monterey (28,448).

The project streamlines opportunities for economic investment in the City by positioning the Specific Plan Area for development. The project creates the land use and zoning entitlements and provides specific guidance about how development is to proceed needed to catalyze economic development in the form of individual development projects.

3. The project will generate sales and property taxes for the City.

The project will generate substantial sales tax revenue from the planned commercial and retail uses and property tax revenue from the planned residential uses. The City can use this revenue to fund City programs that benefit the City's residents. The project has been designated with land uses that are intended to generate jobs and tax revenue for the City, while providing recreational facilities, retail opportunities, and housing opportunities.

4. The project will help improve the quality of life for City residents.

The City is experiencing significant retail leakage to surrounding communities and the region resulting in the loss of sales tax revenue. The 2008 Buxton Retail Leakage and Surplus Analysis, estimated that as much as $250 million in annual retail sales could be recaptured by the City through targeted retail development which offers goods and services now sought from businesses located outside the City. The City's total revenue per capita figures demonstrate the impacts of this leakage. In 2016, Salinas' total revenue per capita was $752 dollars compared to Monterey at $2,224 dollars per capita. (California Controller, 2016)

[1] CRW Systems. City of Salinas Permits Issued for the Period 6/1/2018 thru 6/1/2019. Provided by Kristy Parker, City of Salinas Permit Center Coordinator, on June 24, 2019.
[2] City of Monterey Permits Issued for the Period 6/1/2018 thru 6/1/2019. Provided by Lisa Feliciano, City of Monterey Permit Inspection Services Division, on June 14, 2018.

The project would include a central core area with retail and professional services. The retail and professional service uses would help increase annual retail sales and reduce retail leakage. Residents of the Specific Plan Area and the surrounding City and unincorporated areas could shop at the planned core area retail and professional service facilities located within the central core area.

The Specific Plan focuses on individual neighborhoods, parks, schools, and other civic gathering spaces; the tree-lined streets with pedestrian amenities; a Main Street and Town Square surrounded by shops and restaurants; and mixing of land uses that encourages residents to frequently walk and bicycle in their community. The Specific Plan also contains goals and policies which require and/or encourage the necessary services to enhance residents' quality of life. The Specific Plan includes design and management strategies that aim to specifically increase the quality of life for the future residents and employees of the Specific Plan Area. For example, the Specific Plan includes sections regarding traffic calming and landscaping in order to create safe and attractive streets, parks, and landscaped areas.

Quality of life is also an important factor in the ability of the City to attract and retain businesses. The Specific Plan addresses improving safety, improving access to open space and recreational opportunities, and the adequate provision of public services. If currently unemployed residents become employed and increase their earnings through new businesses resulting from development of the Specific Plan, it is expected that their income level and standard of living will improve.

5. The project will revitalize the local infrastructure.

The proposed Specific Plan circulation and infrastructure policies promote investment in infrastructure systems including water supply, wastewater and storm drainage conveyance and disposal facilities that are critical to support the proposed uses. Section 7.3.4.1 of the Specific Plan outlines the Public Facilities Impact Fee program. Section 7.5 of the Specific Plan includes funding policies that will govern the funding of infrastructure and public facilities for the Specific Plan Area.

6. The project will implement the Salinas General Plan.

The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to—the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the General Plan, as well as more specific policies and implementation measures contained in other documents.

The 2002 General Plan identifies areas for growth within the FGAs (which includes the Specific Plan Area). The Salinas General Plan Land Use Table LU-3 identifies the development capacity of the FGAs. This includes 15,873 residential units, resulting in an additional population of 58,253 within the City's FGAs. The proposed West Area Specific Plan development proposes 4,340 units with the potential to increase the population of the city by an estimated 16,101 persons, which is within the projections identified in the Salinas General Plan.

Additionally, the General Plan identified FGAs as areas of the City where future urban development will be directed. FGAs are established as a part of the General Plan maps, and include the Specific Plan Area, as well as other nearby areas. The General Plan provides development guidance within the FGAs so that they are developed as urban neighborhoods using the principles of New Urbanism. The principles of new urbanist design are further detailed in Chapter 37 (Zoning) of the City's Municipal Code. The Specific Plan Area is currently designated New Urbanism Interim (NI) by the City's zoning map**.** The purpose of the NI zoning district is to provide a transitional zone for the FGAs of the City located north of East Boronda Road (including the Specific Plan Area) that are within the City limits and are subject to the preparation of specific plans and subsequent subdivision maps.

The New Urbanism Districts promote the principles of New Urbanism and the creation of distinct identifiable neighborhoods that have Traditional Neighborhood Development (TND) characteristics as expressed in the Salinas General Plan and that are intended to guide the development of the North of Boronda FGA. The FGA is also subject to a Specific Plan Overlay. The Overlay requires that a Specific Plan be approved by the City prior to the development of any land located in the FGA. As such, an approved Specific Plan will ultimately regulate the development in the FGA. The New Urbanism districts identified in the City's zoning code and the West Area Specific Plan are as follows: Neighborhood Edge/Low Density Residential (NE), Neighborhood General 1/Medium Density Residential (NG-1), Neighborhood General 2/High Density Residential (NG-2), and Village Center (VC).

The development allowed by the project will be consistent with the development types and intensities identified in the General Plan and its associated Final Program EIR. The project does not change limits, amount, type, or intensity of development allowed in the Plan Area beyond what was analyzed in the certified Final Program EIR for the General Plan and Supplemental EIR for the Salinas General Plan Final Program EIR (SCH#2007031055).

7. The project will provide much-needed housing.

One of the core goals of the Specific Plan is to provide a variety of low-density, medium-density, and high-density housing and a variety of housing options for residents at various life stages. As emphasized earlier, the State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and

businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The City of Salinas has recognized the need for additional housing supply for its citizens for many decades. The project will provide much-needed housing in an area of the City that has been recognized and planned for future growth.

C. Conclusion

As explained above, the City Council has balanced these benefits and considerations against the significant unavoidable environmental effects of the project and has concluded that the impacts are outweighed by these benefits, among others. After balancing environmental costs against project benefits, the City Council has concluded that the benefits the City of Salinas community and economy will derive from the project outweigh the risks. The City Council believes the project benefits outlined above override the significant and unavoidable environmental costs associated with the project.

Impacts, Mitigation Measures and CEQA Findings Summary Table

WEST AREA SPECIFIC PLAN
CITY OF SALINAS, CALIFORNIA
TABLE OF IMPACTS, MITIGATION MEASURES, AND CEQA FINDINGS

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
AIR QUALITY			
Impact 3.1-1: The project has the potential to conflict with or obstruct implementation of the applicable air quality plan (Less than Significant) AMBAG, in consultation with the City of Salinas, included the North of Boronda Future Growth Area (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The 2018 Regional Growth Forecast provides the region's population, housing, and employment forecasts for inclusion for AMBAG's 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as for the future version of the AQMP. The City of Salinas has worked closely with AMBAG to ensure that City population estimates are included within AMBAG's 2018 Regional Growth Forecast, which will feed into the next AQMP. The population estimates for the West Area Specific Plan are included in these growth forecasts. As such, the City has met the action recommended by MBARD in the *CEQA Air Quality Guidelines* (MBARD, 2008a) to ensure consistency with the applicable air quality plan (i.e. "*Ensure that the jurisdiction's population forecasts are updated in the next AQMP by working with AMBAG or the appropriate local agency*."). The proposed project would not conflict with or obstruct the latest air quality plan. (DEIR, pp. 3.1-18 through 3.1-19)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.1-2: Project operation has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation (Potentially Significant) Buildout of the Plan Area is expected to exceed some of the MBARD operational criteria pollutant emissions thresholds, as modelled. Mitigation measures are provided below to reduce emissions to the maximum extent feasible. Upon full buildout, the Specific Plan would exceed the MBARD thresholds of significance for operations	**Mitigation Measure 3.1-1:** Prior to approval of development review permits including tentative maps, the project applicant(s) shall incorporate the following features into project plans and specifications, as directed by the City of Salinas: • Provide traffic calming measures wherever feasible, within the Specific Plan Area; • Provide preferential carpool/vanpool parking spaces;	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Even with implementation of Mitigation Measures 3.1-1 through 3.1-8, the Specific Plan would exceed the MBARD thresholds of significance for operations for ROG, NO_x, and PM_{10}. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
for ROG, NO_x, and PM_{10}, even after mitigation. (DEIR, pp. 3.1-19 through 3.1-23)	• Provide electric-vehicle parking spaces; • Require the use of low-VOC paint for all new building architectural coatings within the Specific Plan Area, consistent with or better than, what is required by the City's Municipal Code. **Mitigation Measure 3.1-2:** Prior to approval of development review permit(s), the project applicant(s) shall incorporate effective methods to encourage the use of cleaner alternative fuel vehicles and carpooling within the Specific Plan Area. Effective methods may include the installation of alternative fuel (e.g. electric) charging stations at locations spaced throughout the Specific Plan Area, consistent with or better than what is required by the City's Municipal Code and Specific Plan. Additionally, this can be achieved by providing preferential parking for alternatively-powered vehicles, including electric cars, and/or by providing carpool/vanpool parking spaces. **Mitigation Measure 3.1-3:** Prior to approval of development review permit(s), the project applicant(s) shall incorporate the use of alternative energy for the residential and mixed-use/commercial developments, including by implementing alternative energy (e.g. PV solar) building requirements, consistent with or better than, what is required by the City's Municipal Code. Project applicant(s) shall also ensure that pre-installed electrical hookups and/or charging stations, as applicable, are incorporated into all project plans and specifications. **Mitigation Measure 3.1-4:** Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that low-flow (high-efficiency) indoor water fixtures will be installed throughout the Specific Plan Area, including for bathroom and kitchen faucets, toilet fixtures, and showers, in both residential and non-residential buildings, in compliance with or better than the standards required within the most recent version of the California Green Building Standards Code. **Mitigation Measure 3.1-5:** Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that water-		outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	efficient irrigation systems will be installed throughout the Specific Plan Area, consistent with or better than the requirements contained within the State's Model Water Efficient Landscape Ordinance, the City's Water Conservation Ordinance and the Salinas Zoning Code Landscaping and Irrigation requirements. **Mitigation Measure 3.1-6:** Prior to approval of improvement plans or development review permits, as applicable, the project applicant(s) shall ensure that pedestrian/bicycle facilities (e.g. pedestrian paths, outdoor bike racks, etc.) are provided within the Specific Plan Area, in coordination with and subject to approval by the City of Salinas. The project proponent shall also provide bicycling parking near the entrance to commercial establishments within the Specific Plan Area, consistent with or better than the requirements contained within the City's Municipal Code. **Mitigation Measure 3.1-7:** Prior to the issuance of development review permit(s), the project applicant(s) shall incorporate of one or more of the following additional Specific Plan Area requirements, as determined by the City of Salinas: • Install secured bicycle storage facilities (bike lockers, cages, interior space, or similar as approved by the City Engineer) at all commercial and public facilities with 50 employees or more; • Incorporate a park-and-ride lot; • Install Level 2 electric vehicle (EV) charge stations at workplace sites with 50 or more employees (10% of total available parking spaces); and • Install publicly-available dual post Level 2 charge within commercial zones, and/or other zones as deemed acceptable by the City of Salinas. (Note: The 'level' of the charging station refers to the voltage that the electric vehicle charger uses. Level 1 charging is your typical traditional home outlet, while level 2 is a 240 Volt Portable Cordset or Wall-		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	mounted Charging Station (2-10 hours charging). **Mitigation Measure 3.1-8**: Prior to the approval of individual phases (i.e. tentative maps, commercial design review, etc.), the project applicant(s) shall develop an offsite mitigation program that provides funding to offset the project-generated air emissions that are still above the Air District's operational criteria pollutant thresholds after the adoption of other applicable air quality mitigation measures. The offsite mitigation program is subject to the review and approval of the Air District and the City of Salinas on a project-by-project basis (of phase-by-phase), and is intended to be in addition to offsets that are obtained through any on-site mitigation measures. Example projects that could be included in the offsite mitigation program may include, but are not limited to, the following: • Replace existing agricultural combustion-based generators/pumps with electric agricultural water pumps (in place of generators/pumps; • Replace combustion school buses with electric school buses within the local community; • Install adaptive traffic control systems; • Install solar photovoltaic (PV) systems.		
Impact 3.1-3: Project construction has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation (Potentially Significant) The Specific Plan maximum daily unmitigated emissions during construction of the Plan Area buildout in a single year is not expected to exceed the MBARD threshold of significance (82 pounds per day) for construction-generated PM_{10}. Nevertheless, since it is possible that future development proposed within the Plan Area could involve grading that exceeds 2.2 acres per day, MBARD recommends the implementation Mitigation Measure 3.1-9. (DEIR, pp. 3.1-23 through 3.1-25)	**Mitigation Measure 3.1-9**: Prior to the issuance of grading permits, the project applicant shall prepare a grading plan subject to review and approval by the City. In the event that ground-disturbance exceeds 2.2 acres per day for initial site preparation activities that involve extensive earth-moving activities (e.g., grubbing, excavation, rough grading), and 8.1 acres per day for activities that involve minimal earth-moving (e.g., finish grading), the required grading plans shall include the following measures to be implemented as needed to prevent visible dust emissions: • Water all active construction sites to prevent visible dust emissions. Frequency should be based on the type of operation, soil, and wind exposure; • Prohibit grading and earthmoving	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.1-9 be adopted. Mitigation Measure 3.1-9 requires preparation of a grading plan with measures to prevent visible dust emissions. Implementation of Mitigation Measure 3.1-9 would reduce this impact to a less-than-significant level.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	activities, and cover stock piles, during periods of high wind (over 15 mph); • Limit vehicle speed on construction sites to 15 mph. • Apply chemical soil stabilizers on inactive construction areas (disturbed lands within construction projects that are unused for at least four consecutive days); • Apply non-toxic binders (e.g., latex acrylic copolymer) to exposed areas after cut and fill operations and hydroseed area; • Maintain at least 1-foot of freeboard in each haul truck; • Provide windbreaks on the windward perimeter of construction projects where adjacent to open land; • Cover inactive storage piles; • Sweep streets if visible soil material is carried out from the construction site; and/or • Post a publicly visible sign written in English and Spanish which specifies the telephone number and person to contact regarding dust complaints. This person shall respond to complaints and take corrective action within 48 hours. The phone number of the Monterey Bay Air Resources District (MBARD) shall be visible to ensure compliance with Rule 402 (Nuisance). The sign shall be in accordance with MBARD and/or City requirements, as applicable; • Use cleaner construction equipment that conforms to EPA's Tier 3 or Tier 4 emission standards; and/or • Further, where feasible construction should include the use of alternative fuels such as compressed natural gas (CNG), propane, electricity or biodiesel.		
Impact 3.1-4: The proposed project has the potential to have carbon monoxide hotspot impacts (Less Than Significant) This project is located in an area that is designated	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
attainment-unclassified for carbon monoxide. Therefore, no project-level conformity analysis is necessary for CO. Substantial concentrations of carbon monoxide are not expected at or along any streets or intersections affected by the development of the Plan Area. (DEIR, pp. 3.1-25 and 3.1-26)			
Impact 3.1-5: The proposed project has the potential for public exposure to toxic air contaminants (Potentially Significant) While implementation of the West Area Specific Plan, in and of itself, would not result in an increased exposure of sensitive receptors to localized concentrations of TACs, there is a potential for future commercial business activity, as permitted under the West Area Specific Plan, to result in increased exposure of sensitive receptors to localized concentrations of TACs. The emission sources could be stationary sources and/or mobile source (i.e. diesel truck traffic). Because, at the Specific Plan level of land use planning, the City does not yet know the precise locations, configurations, and sizes of any future land uses within the Specific Plan that uses may generate sufficient levels of TACs to create the possibility of adverse health effects, it is premature, at the Specific Plan stage, to undertake an overall health risk assessment for the Specific Plan. Future health risk assessments will be performed where warranted, as required by Mitigation Measure 3.1-10. (DEIR, pp. 3.1-26 through 3.1-30)	**Mitigation Measure 3.1-10:** Prior to issuance of building permits or commencing operation of any commercial building/use that would emit toxic air contaminants (such as gas stations or dry cleaning operations), the project applicant shall, at a minimum, perform prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. The prioritization screening shall be performed in accordance with the California Air Pollution Control Officers Association Air Toxic "Hot Spots" Program guidance. The prioritization screening shall also be conducted consistent with the guidance provided by the Monterey Bay Air Resources District, which will be responsible for determining which facilities based on their prioritization screening score, must perform a health risk assessment. In determining the need to prepare a health risk assessment, the Monterey Bay Air Resources District considers the potency, toxicity, quantity, and volume of hazardous materials released from the facility, the proximity of the facility to potential receptors, and any other factors specific to the facility that indicate that it may pose a significant health risk. If a health risk assessment is warranted for a facility based on its prioritization score, the project applicant shall assess the facilities for the potential to expose the public to toxic air contaminants in excess of the applicable thresholds (utilizing an air dispersion modelling program such as AERMOD). As of the time of this writing, the commonly accepted threshold for cancer risk is 10 in a million for carcinogens, and the reference exposure level for non-carcinogens (HI = 1). Facilities that exceed the applicable threshold(s) have the potential to expose the public to toxic air contaminants levels that would be considered significant. Facilities that exceed the applicable threshold(s) must incorporate mitigation to reduce the risks from emission of toxic air contaminants to an acceptable level (i.e.,	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.1-10 be adopted. Mitigation Measure 3.1-10 requires performance of a prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. Implementation of Mitigation Measure 3.1-10 would reduce this impact to a less-than-significant level.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	to a level that does not exceed the applicable threshold[s]). Potential mitigation includes: reducing the size of the facility area; rearranging the site to reduce the potential for impacts on the nearest sensitive receptors; and utilizing products that reduce the level of toxic air contaminants, or removal of such products from the operational phase of the project.		
Impact 3.1-6: The proposed project has the potential for exposure to odors (Less than Significant) The Specific Plan does not propose sensitive receptors that could be exposed to odors in the vicinity; nor does it propose uses that would create odors that could expose receptors in the area. Therefore, operation of the proposed project would not result in significant objectionable odors. (DEIR, pp. 3.1-30 and 3.1-31)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.1-7: Cumulative impact on the region's air quality (Potentially Significant) As discussed under Impact 3.1-2, implementation of the Specific Plan would result in increased emissions primarily from vehicle miles travelled associated with project implementation and area sources. The MBARD has established operations-related emissions thresholds of significance and it was determined that the Specific Plan annual emissions of ROG, NOx, and PM_{10} at full buildout would exceed the MBARD's thresholds of significance for these pollutants, even with mitigation. As is currently proposed, the Specific Plan is expected to be built out under a staged approach, and all mitigation would be applicable to each stage. However, even with the application of mitigation measures, operational emissions levels would remain above the defined thresholds of significance. Exceedance of the threshold within an area designated as nonattainment would be a cumulatively considerable impact. (DEIR, pp. 3.1-31 and 3.1-32)	Implement Mitigation Measures 3.1-1 through 3.1-9.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council has directed that Mitigation Measures 3.1-1 through 3.1-9 be adopted. Implementation of Mitigation Measures 3.1-1 through 3.1-9, which have been required or incorporated into the Project, will substantially lessen the severity of the significant effect, but will not reduce this impact to a less-than-significant level. No mitigation is available to render the effects less than significant. The effects therefore remain significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
BIOLOGICAL RESOURCES			
Impact 3.2-1: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Invertebrates (Less Than Significant) Based on field surveys, habitat conditions, and records searches, there are no special status invertebrate species that have the potential to be present within the Specific Plan Area. The proposed project would not, directly or indirectly, have a substantial adverse effect on invertebrate species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-30)			
Impact 3.2-2: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Reptile and Amphibian (Potentially Significant) There are numerous locations for refugia (debris, burrows, crevices, barns, sheds, etc.) within the Plan Area that could be used by migrating California tiger salamander (CTS). Higher quality upland habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential refuge sites. It is noted that there is not any known CTS taking refuge in the Specific Plan Area during their estivation period. It is also theoretically possible that a breeding CTS would emerge from the breeding basin and migrate west of Natividad Road to find refugia in the Specific Plan Area. The areas with potential upland habitat in the Specific Plan Area include the farmland fringe, irrigation ditch, roadside ditch, and farmland residence. The paved roads, dirt roads, and tilled farmland provide	**Mitigation Measure 3.2-1:** Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CTS. This is may, or may not, include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS, CDFW, or the City's Community Development Director determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CTS habitat. **Mitigation Measure 3.2-2:** Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to California tiger salamander, the proposed project activities shall be compliant with all Avoidance and Minimization Measures imposed by the USFWS and/or CDFW during Construction Activities. Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CTS to be	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.2-1 through 3.2-4 be adopted. Mitigation Measure 3.2-1 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CTS even though they are well documented as a hybrid population. Mitigation Measure 3.2-2 would require activities to avoid and minimize impacts to CTS to the extent feasible. Mitigation Measure 3.2-3 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CRLF. Mitigation Measure 3.2-4 would require activities to avoid and minimize impacts to CRLF to the extent feasible. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
limited habitat because of the frequency of disturbance in these areas. Given that the entire Specific Plan Area is within the 1.3-mile migration radius, and there is potential aquatic breeding and upland habitat, the proposed project will affect this breeding population of CTS. There are numerous documented occurrences of California red-legged frog (CRLF) in the vicinity of the Specific Plan Area. Higher quality upland and aquatic habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential habitat within the drainage features (i.e. ditches). It is noted that there is not any known CRLF within the Specific Plan Area. The foothill yellow-legged frog (FYLF) is not documented in the vicinity of the Specific Plan Area. The ditches within the Specific Plan Area provide some limited habitat for FYLF. This species is known to occur in aquatic habitats, such as creeks or rivers in woodland, forest, mixed chaparral, and wet meadow habitats with rock and gravel substrate and low overhanging vegetation along the edge. They are usually found near riffles with rocks and sunny banks nearby. The conditions of the Plan Area, including the drainages, are not ideal for this species and they are presumed absent. (DEIR, pp. 3.2-30 through 3.2-38)	responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit traps to capture CTS migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CTS found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report. **Mitigation Measure 3.2-3:** Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CRLF. This may, or may not, include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS, CDFW, or the City's Community Development Director determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CRLF habitat. **Mitigation Measure 3.2-4:** Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to CRLF, the proposed project activities shall be compliant with all Avoidance and Minimization Measures imposed by the USFWS and CDFW during Construction Activities. Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CRLF to be responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	traps to capture CRLF migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CRLF found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report.		
Impact 3.2-3: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Birds (Potentially Significant) Construction activities in the Specific Plan Area would create temporary sources of noise and light that could affect nesting songbirds if they are located adjacent to the Specific Plan Area in the future. The ongoing activities associated with the operational phase (i.e., human and/or domesticated animal presence, light, noise, etc.) could disrupt nesting birds if they are located adjacent to the Specific Plan Area in the future. (DEIR, pp. 3.2-38 through 3.2-40)	**Mitigation Measure 3.2-5:** Building and grading permits and plans issued for development in the Specific Plan Area shall note the following: If construction activities occur during the avian breeding season (February 1 – September 15) then the project proponent shall conduct pre-construction surveys to prevent impacts to nesting birds. No more than 15 days prior to the start of construction a bird survey shall be conducted by a qualified biologist to identify any active nests within 300 feet of the construction zone, and shall be submitted to the City. If construction stops for a period of 15 days or more during the avian breeding season than an additional bird survey shall be conducted. The biologist will conduct a survey within 300 feet of the construction zone for all special-status birds protected by the federal and state ESA, MBTA and CFGC. The biologist shall map all nests that are within, and visible from, 300 feet of the construction zone. If nests are identified, the biologist shall map the location and establish a minimum 300-foot buffer zone around active nests. Construction activity shall be prohibited within the buffer zones until the young have fledged. Nests shall be monitored at least twice per week during the nesting season and a report submitted to the City and CDFW monthly.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-1 through 3.2-5 be adopted. Mitigation Measure 3.2-5 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CRLF. Mitigation Measure 3.2-4 requires a preconstruction survey of the Plan Area and immediate vicinity for all special-status birds protected by the federal and state ESA, MBTA and CFGC prior to construction. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.2-4: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Fish (Less Than Significant) field surveys, habitat conditions, and records searches, there are no fish species that have the potential to be present within the Specific Plan Area. The proposed project would not, directly or indirectly, have a substantial adverse effect on fish	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-41)			
Impact 3.2-5: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Mammals (Potentially Significant) The Specific Plan Area provides potential habitat for several special-status bats, including: Mexican free-tailed bat (*Tadarida brasiliensis),* California mastiff bat (*Eumops perotis californicus*), big brown bat (*Eptesicus fuscus),* Hoary bat (*Lasiurus cinereus),* spotted bat (*Euderma maculatum),* Townsend's big-eared bat (*Corynorhinus townsendii),* pallid bat (*Antrozous pallidus*), western pipistrelle (*Pipistrellus Hesperus),* small-footed myotis/bat (*Myotis ciliolabrum*), long-eared myotis/bat (*Myotis evotis*), California myotis (*Myotis californicus),* long-legged myotis/bat (*Myotis volans*), Yuma myotis/bat (*Myotis yumanensis*), and little brown bat *(Myotis lucifugus).* These species are not federal or State listed; however, most of them are considered California Species of Special Concern and/or are tracked by the CNDDB. Bats are found in a variety of habitats in the region, including buildings, bridges, mines, caves, tree cavities, under bark or rocks, etc. There is the potential for bats to roost in the two on-site farmland residence complexes along San Juan Grade Road, and/or the complexes located along Natividad Road. There is no evidence that bats are present in these locations at this time; however, they can become occupied at some future date. (DEIR, pp. 3.2-41 through 3.2-43)	**Mitigation Measure 3.2-6:** Grading and/or building permits and plans issued for development in the Specific Plan Area shall note the following: Fifteen days prior to construction activities within 200 feet of the residential complexes located along Natividad Road and San Juan Grade Road, the project applicant shall retain a qualified biologist familiar with bat biology to perform a preconstruction survey for roosting special-status bats; and shall be submitted to the City. The survey shall include a minimum of one daytime and one evening survey. The survey shall cover the trees, structures, and debris located within these complexes. If active roosting is observed, removal of the tree or building shall be avoided until the bats can be excluded. All active non-maternity roosting sites shall be fitted with passive exclusion devices, such as one-way flaps or doors, and all bats shall be allowed to leave voluntarily. Once it is confirmed that all bats have left the roost (minimum of five days), crews shall be allowed to continue work in the area. If a maternity roosting site is discovered, a minimum 50-foot buffer shall be established around the roost. The project applicant shall consult with the qualified biologist in order to determine if a greater buffer is warranted based on the bat species, roost location, and specific construction activities to be performed in the vicinity. The buffer shall stay in effect until all young are determined to be volant (i.e., able to fly and feed independently) by a qualified biologist. Once it is determined that all young are volant (generally by August 1st), passive exclusion devices shall be installed and all bats shall be allowed to leave voluntarily. Once it is determined by a qualified biologist that all bats have left the roost (minimum of five days), crews shall be allowed to work within the buffer zone. Project Improvement Plans will include this measure as a note in the plans.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-6 be adopted. Mitigation Measure 3.2-6 requires avoidance and minimization measures to avoid impacts to bat species. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.2-6: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS – Plants (Less Than Significant) The records search identified numerous special-status plants located within the region. Field surveys and habitat evaluations were performed in 2004 by Biotic Resources Group: March (26th and 31st), April (14th and 30th), May (17th), June (17th), July (26th). Additional field surveys were performed by De Novo Planning Group in 2015 September (11th) and in 2016 (April 18th). The collection of field surveys included surveys that coincided with the blooming period for special many status plants known to occur within the region. The conditions of the Specific Plan Area are highly disturbed due to the active agricultural operations. No special-status plants were observed within the Specific Plan Area during field surveys. The proposed project would not, directly or indirectly, have a substantial adverse effect on plant species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-43)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-7: The proposed project has the potential to have substantial adverse effect on federally - or state-protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means (Potentially Significant) The Specific Plan Area contains a roadside ditch located along the north side of East Boronda Road. The ditch was constructed to support agricultural operations, and drains agricultural runoff from most of the Specific Plan Area into the existing City storm water drainage system	**Mitigation Measure 3.2-7**: Prior to grading/building permit issuance in an area that would disturb the irrigation ditches and/or roadside ditches, the project applicant shall obtain a jurisdictional determination from the USACE and CDFW for the ditches that are proposed to be disturbed. If these regulatory agencies concur that these facilities are exempt, then no further mitigation is necessary. If it is determined that these facilities are not exempt, authorization for fill from the regulatory agencies (USACE-404 permit, RWQCB-401 certification, 1600 Streambed Alteration Agreement) will be	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-7 be adopted. Mitigation Measure 3.2-7 requires a 1:1 replacement of acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation or operations. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
The USACE has regulatory responsibility for navigable waters as well as "all other waters such as...streams ...wetlands...and natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce" (33 CFR 323.2) under Section 404 of the CWA. A formal jurisdictional determination must be made by the USACE relative to the protected wetlands and jurisdictional waters within the Specific Plan Area. The agricultural irrigation ditches are manmade and believed to solely function to drain upland agricultural runoff. As such, they are expected to be exempted from the USACE jurisdiction under the Irrigation Ditch Exemption pursuant to Federal Regulations (33 CFR 323.4(a)(3)). However, a final determination must be made by the USACE prior to any filling of these ditches for urban use. (DEIR, pp. 3.2-43 through 3.2-45)	necessary and a permit shall be adhered to throughout the construction phase. At a minimum, the project applicant shall replace on a "no net loss" basis (minimum 1:1 ratio) the acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation or operations, although a higher mitigation measure may be required by the USACE, RWQCB, and CDFW through their permitting processes. Wetland habitat shall be replaced at acreage and location agreeable to the USACE, RWQCB, and CDFW and as determined during the Section 401, 404, and 1600 permitting processes.		
Impact 3.2-8: The proposed project has the potential to have substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service (Less Than Significant) The records search and field surveys did not reveal the presence of any riparian habitat or sensitive natural communities within the Specific Plan Area. The conditions of the Specific Plan Area are highly disturbed due to the active agricultural operations. The proposed project would not result in a substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or UFWSF. (DEIR, pp. 3.2-45 and 3.2-46)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-9: The proposed project has the potential to interfere substantially with the movement of native fish or wildlife species or with established wildlife corridors, or impede the use of native wildlife nursery sites (Potentially Significant) The proposed project has the potential to interfere substantially with the movement of native fish or wildlife species or with established wildlife corridors, or impede the use of native wildlife nursery sites. Development of the proposed project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. (DEIR, pp.	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
3.2-46 through 3.2-47)			
Impact 3.2-10: The proposed project has the potential to conflict with an adopted Habitat Conservation Plan or Natural Community Conservation Plan (Less Than Significant) The proposed project is not subject to a Habitat Conservation Plan or Natural Community Conservation Plan. Therefore, the proposed project would not conflict with an adopted Habitat Conservation Plan or Natural Community Conservation Plan. (DEIR, pp. 3.2-47)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-11: The proposed project has the potential to conflict with local policies or ordinances protecting biological resources (Less Than Significant) The proposed project would not conflict with local policies or ordinances protecting biological resources. The project proponent is required to comply with the provisions of the City's General Plan and Municipal Code. The proposed project is generally consistent with the above relevant open space and conservation policies of the General Plan, as well as the City's Municipal Code. (DEIR, pp. 3.2-47 through 3.2-52)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-12: Cumulative loss of biological resources including habitats and special status species (Potentially Significant) The project would result in impacts to biological resources including habitats and special status species. Development of the proposed project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. Given the rareness of CTS and CRLF in the Bioregion, the incremental loss of movement habitat from the proposed project, when considered alongside all past, present, and probable future projects (inclusive of all communities within the Bioregion), is a significant and unavoidable cumulative impact, and the Specific Plan's incremental contribution to this impact is itself cumulatively considerable**.** (DEIR, pp. 3.2-52 and 3.2-53)	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
CULTURAL AND TRIBAL RESOURCES			
Impact 3.3-1: Project implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines	**Mitigation Measure 3.3-1:** In the event that evidence of archaeological or historical features or deposits (e.g., ceramic shard, trash scatters,	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
§15064.5 (Potentially Significant) No historical resources were found during field surveys for the proposed project. Additionally, there are no historical resources that have been identified in the Specific Plan Area on maps and files maintained by the Northwest Information Center (NWIC). There have been three previous cultural resource studies that examined approximately three-quarters of the Specific Plan Area and no historical resources were documented. The Monterey County Historic Property Data File Directory and National Register of Historic Resources do not list any historical resources in the Specific Plan Area. It is not anticipated that ground disturbing activities would result in impacts to historical resources given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of a previously unknown historical resource. Project implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5. (DEIR, pp. 3.3-12 and 3.3-13)	lithic scatters) are uncovered (discovered) during excavation and/or grading, all work shall stop in the area of the subject property until an appropriate data recovery program can be developed and implemented by a qualified archaeologist. This archaeologist shall determine whether the uncovered deposits or features qualify as either "historical resources" within the meaning of CEQA Guidelines section 15064.5, subdivision (a), "unique archaeological resources" as defined in Public Resources Code section 21083.2, subdivision (g), or "tribal cultural resources," as defined in Public Resources Code section 21074. If historical resources, unique archaeological resources, or tribal cultural resources are present, the project proponent shall preserve any such resources or implement any feasible mitigation measures identified by the archaeologist and imposed by the City. Recommended mitigation measures shall be reviewed by the City Planner and shall be approved if feasible in light of project design, logistics, and cost considerations and, if approved, shall be implemented and completed prior to commencing further work for which grading or building permits were issued, unless otherwise directed by the City Planner. Data recovery shall be an option if preservation in place is infeasible. Where resources have been determined to be "unique archaeological resources" but not "historical resources" or "tribal cultural resources," the project proponent's obligations shall be limited as set forth in Public Resources Code section 21083.2, subdivisions (d), (e), and (f). Grading/building permits and plans shall note this measure.		The City Council hereby directs that Mitigation Measure 3.3-1 be adopted. Implementation of Mitigation Measure 3.3-1 requires work to stop if an archaeological or historical feature or deposit is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-2: Project implementation may cause a substantial adverse change in the significance of archaeological resource pursuant to CEQA Guidelines §15064.5 (Potentially Significant) No archaeological resources were found during field surveys for the proposed project. Additionally, no archaeological resources have been identified in the Plan Area on maps and files maintained by the NWIC. There have been three previous cultural resource studies that examined approximately three-quarters of the Specific Plan Area and no archaeological resources were documented. The Monterey County Historic Property Data File Directory and National Register of Historic	Implement Mitigation Measure 3.3-1	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.3-1 be adopted. Implementation of Mitigation Measure 3.3-1 requires work to stop if an archaeological or historical feature or deposit is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Resources do not list any archaeological resources in the Specific Plan Area. It is not anticipated that ground disturbing activities would result in impacts to archaeological resources given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of a previously unknown archaeological resource. Project implementation may cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines §15064.5. (DEIR, pp. 3.3-13)			
Impact 3.3-3: Project implementation may directly or indirectly destroy a unique paleontological resource (Potentially Significant) A search of the University of California, Berkeley Museum of Paleontology collections database of Paleontology Localities did not identify any paleontological resources (fossils or fossil formations) within the Specific Plan Area. The Monterey County General Plan Draft EIR (2007) included a review of known fossil localities conducted by paleontologists in 2001. Twelve fossil sites were identified as having outstanding scientific value. For the most part, the fossils at these 12 sites reflect the type of assemblages found throughout the county (microorganisms or invertebrates); however, each has special characteristics that make it unique or rare, or in some way provide important stratigraphic or historic information. None of the 12 identified high value sites are located on or near the Specific Plan Area. Additionally, the Salinas General Plan Final EIR (2002) does not identify any high value sites in the Specific Plan area or in the City as a whole. However, unknown important paleontological resources have the potential to occur within the planning area including the undeveloped future growth areas, which include the Specific Plan Area. The construction of new development would involve grading and other earthwork that can disturb important fossils. Therefore, project implementation may directly or indirectly destroy a unique paleontological resource. (DEIR, pp. 3.3-13 and 3.3-14)	**Mitigation Measure 3.3-2**: If paleontological resources are discovered during the course of construction, work shall be halted immediately within 50 meters (165 feet) of the discovery, the City of Salinas shall be notified, and a qualified paleontologist shall be retained to determine the significance of the discovery. If the paleontological resource is considered significant, it should be excavated by a qualified paleontologist and given to a local agency, State University, or other applicable institution, where the resource could be curated and displayed for public education purposes. Grading/ building permits and plans shall note this measure.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.3-2 be adopted. Implementation of Mitigation Measure 3.3-2 requires work to stop if a paleontological resource is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-4: Project implementation may disturb human remains, including those interred outside of	**Mitigation Measure 3.3-3:** If human remains are found during construction within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
formal cemeteries (Potentially Significant) No human remains or known burial sites were found during field surveys for the proposed project. Additionally, there are no human remains or known burial sites that have been identified in the Plan Area on maps and files maintained by the NWIC. It is not anticipated that ground disturbing activities would result in impacts to human remains or known burial sites given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of previously unknown human remains or known burial sites. Project implementation may disturb human remains, including those interred outside of formal cemeteries. (DEIR, pp. 3.3-14 and 3.3-15)	Plan Area, or at off-site infrastructure improvement locations, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until a qualified archeological monitor and the coroner of Monterey County are contacted. If it is determined that the remains are Native American, the coroner shall contact the Native American Heritage Commission within 24 hours. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descendent (MLD) from the deceased Native American. The MLD may then make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and associated grave goods as provided in Public Resources Code section 5097.98. The landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further disturbance if: a) the Native American Heritage Commission is unable to identify a MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission; b) the descendent identified fails to make a recommendation; or c) the landowner or his authorized representative rejects the recommendation of the descendent, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner. Grading permit/building permits and plans shall note this measure.		environment. The City Council hereby directs that Mitigation Measure 3.3-3 be adopted. Implementation of Mitigation Measure 3.3-3 requires work to stop if human remains are found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-5: The project may contribute to cumulative impacts on known and undiscovered cultural resources (Less Than Significant) While there are extensive documented cultural resources in Salinas and unincorporated Monterey County, there are no cultural resources that were found during field surveys of the proposed project. Additionally, there are no cultural resources that have been identified in the Plan Area on maps and	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
files maintained by the NWIC. The Monterey County Historic Property Data File Directory and National Register of Historic Resources do not list any cultural resources in the Plan Area. Any significant discoveries during construction would be required to be preserved in place or mitigated through relocation or documentation; and the project is not anticipated to considerably contribute to a significant reduction in cultural resources. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts. The proposed project would not have cumulatively considerable impacts associated with cultural resources. (DEIR, pp. 3.3-15 and 3.3-16)			
GREENHOUSE GASES, CLIMATE CHANGE, AND ENERGY			
Impact 3.4-1: Potential to generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment (Potentially Significant) Short-term construction GHG emissions are a one-time release of GHGs and are not expected to significantly contribute to global climate change over the lifetime of the Specific Plan. Even after incorporation of the mitigation measures provided in Section 3.1: Air Quality, overall GHGs generated by the proposed project are expected to be greater than the applicable thresholds of 1,150 MT of CO_2e per year for construction emissions, 1.94 MT CO_2e/service population/year for operational emissions during Year 2035, and 0.80 MT CO_2e/service population/year for operational emissions during Year 2050. The project would generate GHG emissions, directly and indirectly, that may have a significant impact on the environment. (DEIR, pp. 3.4-31 through 3.4-38)	**Mitigation Measure 3.4-1**: Prior to the approval of the tentative maps and development review permits, as applicable, pursuant to CEQA Guidelines section 15183.5(b), Plans for the Reduction of Greenhouse Gas Emissions, the project applicant shall prepare a Greenhouse Gas Reduction Plan (GGRP) aimed at achieving specific performance standards. The GGRP shall include the following: 1) The GGRP shall achieve a per capita operational emissions level of 1.94 MT CO_2e/service population/year by year 2035, and 0.80 MT CO_2e/service population/year by year 2050. 2) Calculation of GHG emissions projection using an acceptable modeling tool such as the most recent version of CalEEMod. GHG reduction measures may include building and site energy reduction measures, measures to reduce project-generated vehicle miles traveled, or other measures. Off-site measures such as participation in a community-wide GHG reduction program(s), if any are adopted, or payment of GHG reduction fees (carbon offsets) into a qualified existing program, if one is in place, may be considered after all feasible on-site reduction measures are considered. The effectiveness of the GHG reduction measures included in the GGRP must be verifiable based	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Even with implementation of Mitigation Measure 3.4-1, it is possible that individual projects within the Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	on evidence presented in the GGRP. Representative GHG reduction measures which may be considered may include, but are not limited to: • Measures identified by the California Air Pollution Control Officers' Association in Quantifying Greenhouse Gas Mitigation Measures: A Resource for Local Government to Assess Emission Reductions from Greenhouse Gas Mitigation Measures or updates to this document as may occur from time to time. • Applicable measures identified in guidance from MBARD, if any, and/or in guidance provided by other regional air districts such as the Bay Area Air Quality Management District, Sacramento Metropolitan Air Quality Management District, San Luis Obispo County Air Pollution Control District, or other agencies with adopted GHG reduction guidance that is applicable on the date the project application is deemed complete by the City. If sufficient feasible GHG reduction measures are unavailable to reduce GHG emissions to below the threshold of significance, the project applicant shall include evidence in the GGRP to this effect. The GGRP shall be subject to review and approval of the City of Salinas Community Development Department prior to approval of the tentative map or development review application, as applicable. Implementation of this mitigation measure shall not be required if the City has a qualified GHG reduction plan in place on the date a future individual project application is deemed complete, the qualified GHG reduction plan reflects the most recent legislatively-adopted GHG reduction targets (e.g., the 2030 target set by SB 32), includes an inventory of projected GHG emissions from development within the Specific Plan Area, and includes GHG reduction measures applicable to development within the Specific Plan Area whose implementation is required as a condition of approval of such projects.		
Impact 3.4-2: Potential to conflict with an applicable plan, policy, or regulation adopted for the purpose of	Implement Mitigation Measure 3.4-1.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
reducing the emissions of greenhouse gases (Potentially Significant) The Specific Plan would generate GHG emissions that could conflict with the State's long-term GHG Reduction targets, even with implementation of Mitigation Measures 3.1-1 through 3.1-9 contained within Section 3.1: Air Quality. The Specific Plan would not interfere with the *2008 Monterey Bay Regional Energy Plan* objectives. (DEIR, pp. 3.4-38 through 3.4-42)			environment. The City Council hereby directs that Mitigation Measure 3.4-1 be adopted. Implementation of Mitigation Measure 3.4-1 would ensure that GHG reduction measures required pursuant to it are consistent with the intent of current and future statewide GHG reduction legislation and regulations, and with current and future expectations of local, regional, and State stakeholders regarding the City's effort to reduce GHG emissions from new development, including Executive Order B-30-15 and S-03-05. Therefore, with implementation of Mitigation Measure 3.4-1, new development of the Plan Area would consistent with Executive Orders B-30-15 (and SB 32) and S-03-05. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.4-3: Project implementation may result in the inefficient, wasteful, or unnecessary use of energy resources (Less Than Significant) The proposed project would use energy resources for the operation of project buildings (electricity and natural gas), for on-road vehicle trips (e.g. gasoline and diesel fuel) generated by the proposed project, and from off-road construction activities associated with the proposed project (e.g. diesel fuel). Each of these activities would require the use of energy resources. The proposed project would be in compliance with all applicable federal, State, and local regulations regulating energy usage. Overall, the incorporation of mitigation measures would ensure that the proposed project would avoid and reduce inefficient, wasteful, and unnecessary consumption of energy. The proposed project would comply with all existing energy standards, including those established by the City of Salinas, the local air district (MBARD), and the State of California, and would not be expected to result in significant adverse impacts on energy resources. (DEIR, pp. 3.4-42 through 3.4-48)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.4-4: Cumulative impact on climate change from increased project-related greenhouse gas emission (Potentially Significant) Implementation of the proposed project will generate GHG emissions that would not otherwise exist without the proposed project. Given the length of construction activities for a project of this size, the construction emissions would be a long-term release of approximately 168,734.3 MT CO_2e. The operational emissions would be a long-term release totaling approximately 51,939.2 MT CO2e per year without mitigation, and 47,684.9MT CO_2e	Implement Mitigation Measure 3.4-1.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council hereby directs that Mitigation Measure 3.4-1 be adopted. Implementation of Mitigation Measure 3.4-1 would ensure that GHG reduction measures required pursuant to it are consistent with the intent of current and future statewide GHG reduction legislation and regulations, and with current and future expectations of local, regional, and State stakeholders regarding the City's effort to reduce GHG emissions from new

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
per year with mitigation. The City of Salinas's planning efforts included targeted growth that accommodates the economic and social needs of the community, while recognizing and seeking to mitigate environmental impacts when growth occurs. The State of California continues to implement measures that are intended to reduce emissions on a State-wide scale (i.e. vehicle fuel efficiency standards in fleets, low carbon fuels, etc.) that are consistent with AB 32 and SB 32. These types of statewide measures will benefit the proposed project (and city as a whole) in the long-term as they come into effect; however, the City does not have the jurisdiction to create far-reaching (i.e. statewide) measures to reduce GHG emissions. (DEIR, pp. 3.4-48 through 3.4-49)			development, including Executive Order B-30-15 and S-03-05. Therefore, with implementation of Mitigation Measure 3.4-1, new development of the Plan Area would consistent with Executive Orders B-30-15 (and SB 32) and S-03-05. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
HAZARDS AND HAZARDOUS MATERIALS			
Impact 3.5-1: Potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment (Potentially Significant) The hazards assessments included site reconnaissance, interviews, historical land use research, database research, and soils testing. The project has the potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment. (DEIR, pp. 3.5-24 through 3.5-26)	**Mitigation Measure 3.5-1**: Prior to issuance of grading permits or building permits, (including the issuance of demolition permits for agricultural support buildings) as applicable, the applicant shall hire a qualified consultant to: 1) Provide a final evaluation of the soils around the agricultural operations support buildings (residences, warehouses, barns, etc.) before they are demolished. If toxic levels of residual agrichemicals or surface staining are found, the contaminated soil shall be excavated and disposed of at an off-site disposal facility permitted to accept such waste. Any contaminated areas shall be remediated by the project applicant in accordance with recommendations made by the Monterey County Health Department Hazardous Materials Management Services, Regional Water Quality Control Board, Department of Toxic Substances Control, or other appropriate federal, State, or local regulatory agencies. 2) Investigate structures for asbestos-containing materials and lead. If asbestos-containing materials and/or lead are found in the buildings, a Cal-OSHA certified ACBM and lead based paint contractor shall be retained to remove the asbestos-containing materials and lead in accordance with U.S. EPA and California	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.5-1 through 3.5-3 be adopted. Implementation of the Mitigation Measures 3.5-1 requires a final evaluation of the soils around the agricultural operations support buildings and investigation of structures for asbestos-containing materials and lead. Implementation of the Mitigation Measures 3.5-2 requires destruction of existing water wells. Implementation of the Mitigation Measures 3.5-2 requires that water wells serving the proposed building be constructed and tested for water quality under permit from the Monterey County Health Department Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Occupational Safety and Health Administration (Cal/OSHA) standards. In addition, all activities (construction or demolition) in the vicinity of these materials shall comply with Cal/OSHA asbestos and lead worker construction standards. Any ACBM and lead shall be disposed of properly at an appropriate offsite disposal facility. **Mitigation Measure 3.5-2**: Prior to the issuance of grading permits, existing water wells within the grading area shall be destroyed under permit from the City of Salinas and/or the Monterey County Health Department, as applicable. Any destruction of these facilities shall be in accordance with the Monterey County Well Standards for Abandonment/Destruction. The project applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate destruction of these facilities. **Mitigation Measure 3.5-3:** Prior to the issuance of building permits, the water well or wells that will be providing water for the applicable portion of the Specific Plan Area, shall be constructed and tested for water quality under permit from the Monterey County Health Department. The project applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate construction and operation of these facilities.		
Impact 3.5-2: Create a significant hazard to school sites due to siting or the placement of infrastructure (Potentially Significant) The proposed project does not pose significant hazards from existing natural gas transmission piping, and mitigation measures identified under Impact 3.5-1 would ensure water well construction and abandonment impacts would be less than significant. However, implementation of the project may create a significant hazard to school sites due to siting or the placement of infrastructure (i.e., the due to the citing of school sites near power lines). (DEIR, pp. 3.5-26 through 3.5-28)	**Mitigation Measure 3.5-4:** The property line of all school sites (even if it is a joint use agreement as described in subsection (o) of § 14010) shall be at least the following distance from the edge of respective power line easements as identified in the California Code of Regulations Title 5, Article 2. School Sites § 14010. Standards for School Site Selection (c). • 100 feet for power lines that are between 50 and 133 kV.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.5-4 be adopted. Implementation of Mitigation Measure 3.5-4 ensures all future electrical transmission alignments are required to comply with California Code of Regulations Title 5, Article 2 (School Sites) § 14010 (Standards for School Site Selection) setback requirements. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.5-3: Cumulative impact related to hazards and hazardous materials (Less Than Significant) The proposed project includes the approval and	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
subsequent implementation of an approximately 797-acre Specific Plan Area that includes residential, mixed use commercial, a community park, neighborhood parks, small parks, schools, and open space (with supplemental storm water detention/retention basins). These uses are not expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. The proposed Specific Plan land uses are not expected to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste. Mitigation measures have been included to minimize the risk of on-site hazards. (DEIR, pp. 3.5-28 through 3.5-29)			
HYDROLOGY AND WATER QUALITY			
Impact 3.6-1: The proposed project has the potential to violate water quality standards or waste discharge requirements during construction (Potentially Significant) Grading, excavation, removal of vegetation cover, and loading activities associated with construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. (DEIR, pp. 3.6-21 through 3.5-23)	**Mitigation Measure 3.6-1:** Prior to issuance of grading permits, the project proponent shall submit a Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) to the City of Salinas prior to submitting to the RWQCB to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit Order 2009-0009-DWQ amended by 2010-0014-DWQ & 2012-0006-DWQ). The SWPPP shall be designed with Best Management Practices (BMPs) that the RWQCB has deemed to be effective at reducing erosion, controlling sediment, and managing runoff. These include: covering disturbed areas with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. Sediment control BMPs, installing silt fences or placing straw wattles below slopes, installing berms and other temporary run-on and runoff diversions. These BMPs are only examples of what should be considered and shall not preclude the use of equally or more effective new or innovative approaches currently available or being developed. Final selection of BMPs will be subject to approval by City of Salinas. The SWPPP will be kept on site during construction activity and will be made available upon request	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.6-1 be adopted. Mitigation Measure 3.6-1 requires the use of BMPs during construction activities in order to reduce erosion, control sediment, and manage runoff from the Plan Area. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	to representatives of the RWQCB.		
Impact 3.6-2: The proposed project has the potential to violate water quality standards or waste discharge requirements during operation (Potentially Significant) The long-term operations of the proposed project (all phases) could result in long-term impacts to surface water quality from urban stormwater runoff. The proposed Project would result in new impervious areas associated with roadways, driveways, parking lots, buildings, and landscape areas. Normal activities in these developed areas include the use of various automotive petroleum products (i.e. oil, grease, and fuel), common household hazardous materials, heavy metals, pesticides, herbicides, fertilizers, and sediment. Within urban areas, these pollutants are generally called nonpoint source pollutants. The pollutants pollutant levels vary based on factors such as time between storm events, volume of storm event, type of uses, and density of people. The proposed project has the potential to violate water quality standards or waste discharge requirements during operation. (DEIR, pp. 3.6-23 through 3.6-26)	**Mitigation Measure 3.6-2:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention/retention basins designed to meet the applicable regulatory requirements and to reduce contaminant loadings to receiving waters to the maximum extent practicable. The Improvement Plans shall be consistent with the City's NPDES permit requirements at the time of permitting. The NPDES permit granted to the City of Salinas by the Central Coast RWQCB (CCRWQCB, 2012) requires the following: I. Erosion and Sediment Control BMPs – Erosion control and sediment control BMPs shall be designed, installed, and maintained to reduce the discharge of pollutants from construction sites to the maximum extent practical (MEP) and protect water quality; II. Erosion and sediment from slopes and channels shall be controlled by implementing an effective combination of erosion control (source control) and other sediment control BMPs; and II. Soil Stabilization – Stabilization of disturbed areas shall, at a minimum, be initiated immediately whenever any clearing, grading, excavating, or other earth disturbing activities have permanently ceased. Additionally, the Improvement Plans shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The City of Salinas Stormwater Standards for New and Redevelopment Projects (City of Salinas, 2013) require the following practices: I. Limit disturbance of creeks and natural drainage features and provide setbacks according to the City's latest NPDES permit; II. Minimize compaction of highly permeable	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.6-2 through 3.6-4 be adopted. Mitigation Measure 3.6-2 requires submittal of a Stormwater Control Plan that includes calculations, BMPs and plan of sufficient detail to confirm that contaminant loadings to receiving waters will be reduced to the maximum extent practicable. Mitigation Measures 3.6-3 and 3.6-4 require submittal of detailed plans and calculations for the water quality BMPs, water quality detention basins, and supplemental retention and peak flow control. The BMPs will be designed to meet regulatory requirements and to reduce peak flows during storm events below peak flows under pre-project conditions. The various RWQCBs have evaluated the effectiveness of the types of BMPs required by Mitigation Measures 3.6-2 through 3.6-4 and have determined that BMPs are known to be effective in protecting receiving waters. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	soils; and II. Limit clearing and grading of native vegetation to the minimum needed to build the project and provide fire protection. **Mitigation Measure 3.6-3:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention basins designed to prevent to the maximum extent practicable the creation of new sources of polluted runoff. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department. **Mitigation Measure 3.6-4:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department detailed plans and calculations for supplemental retention and peak flow control. BMPs will be designed to meet regulatory requirements and to reduce peak flows during storm events below peak flows under pre-project conditions. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department.		
Impact 3.6-3: The proposed project has the potential to substantially deplete groundwater supplies or interfere substantially with groundwater recharge (Potentially Significant) The proposed project, without mitigating features, would reduce infiltration of rainwater and runoff into the local groundwater system due to the increase in impermeable area. This may deplete groundwater supplies or interfere substantially with groundwater recharge. The total annual rainfall depth in an average year is approximately 16 inches and the project surface area is approximately 797 acres, producing an annual rainfall volume of approximately 1,060 AF. Nearly all of this area is currently in agriculture, while the proposed project could convert as much as 60 percent of the area to impervious surfaces, resulting in a reduction in groundwater recharge in the range of 400 to 600 AF. (DEIR, pp. 3.6-26 through 3.6-29)	**Mitigation Measure 3.6-5:** Prior to the approval of site improvement plans, the project applicant shall site, and design and include an Operation and Maintenance Plan for stormwater retention/infiltration basins and infiltration promoting BMPs sufficient to assure that there is no reduction in groundwater recharge. In order to assure there is no reduction in recharge, the plan shall result in circumstances which maintain infiltration to support baseflow and interflow to wetlands and surface waters, and deep vertical infiltration to groundwater. The site, design, and installation shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The contents of the site, design, and installation shall be included in a stormwater control plan. The stormwater control plan shall be reflected on the Improvement Plans, subject to review and approval by the Salinas Public Works Department.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.6-5 and 3.6-6 be adopted. Implementation of Mitigation Measure 3.6-5 requires an Operation and Maintenance Plan for stormwater retention/infiltration basins and infiltration promoting BMPs sufficient to assure that there is no reduction in groundwater recharge. Implementation of Mitigation Measure 3.6-6 requires an Operation and Maintenance Plan for post-construction BMPs and supplemental stormwater detention basins in accordance with City of Salinas stormwater development standards. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Mitigation Measure 3.6-6: Prior to the approval of site improvement plans, the project applicant shall site, design, and include an Operation and Maintenance Plan for post-construction BMPs and supplemental stormwater detention basins in accordance with City of Salinas stormwater development standards. Maintenance procedures (including frequency of procedure, cleaning schedules, applicant responsibility for each procedure, performance standards, or other means) and funding mechanisms shall be established for those facilities to assure adequate long-term performance and success in treating the water and controlling infiltration into the groundwater. The Improvement Plans and Operation and Maintenance Plan shall be subject to review and approval by the Salinas Public Works Department.		
Impact 3.6-4: The proposed project has the potential to alter the existing drainage pattern in a manner which would result in substantial erosion, siltation, flooding, or polluted runoff (Less than Significant) The proposed project will not alter drainage patterns in a manner which will cause flooding, erosion, or siltation. Surface runoff from the area will be managed via parcel-based LID measures, detention/retention basins, and flow reducing BMPs to prevent local flooding within the site. These features will also reduce peak flows from the Plan Area to receiving creeks and storm drains to amounts less than such flows under existing conditions. Sediment in the stormwater flows will be captured in detention ponds designed to prevent siltation. Flooding, erosion, or siltation is not anticipated by the proposed project given the storm drain design and best management practices that will be implemented. (DEIR, pp. 3.6-29 through 3.6-30)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-5: The proposed project has the potential to otherwise substantially degrade water quality (Potentially Significant) The proposed project would not otherwise substantially degrade water quality. The use of BMPs are intended to treat runoff close to the source during the construction and long term operational phase of the project to reduce stormwater quality impacts. (DEIR, pp. 3.6-30 through 3.6-31)	Implement **Mitigation Measure 3.6-1**.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.6-1 be adopted. Mitigation Measure 3.6-1 requires the use of BMPs during construction activities in order to reduce erosion, control sediment, and manage runoff from the Plan Area. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.6-6: Place housing or structures that would impede/redirect flows within a 100-year, or 200-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map (Less than Significant) The project would no place housing or structures that would impede/redirect flows within a 1-percent annual chance flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. Provided that the storm drain system and detention/retention facilities to be installed as part of the proposed development are adequately sized and properly installed and maintained, additional flooding and/or impedance or redirection of flows will not be induced by the proposed project. (DEIR, pp. 3.6-31)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-7: The proposed project has the potential to expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, seiche, tsunami, or mudflow (Less than Significant) The proposed project would not result in the exposure of people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, seiche, tsunami, or mudflow. (DEIR, pp. 3.6-31 through 3.6-32)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-8: Cumulative increases in peak stormwater runoff from the plan area (Less than Significant) With the design and construction of flood control improvements, the West Area Specific Plan would not increase peak stormwater runoff. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures would control peak stormwater runoff. The proposed project would not have cumulatively considerable impacts associated with stormwater runoff. (DEIR, pp. 3.6-	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
32 through 3.6-33)			
Impact 3.6-9: Cumulative impacts related to degradation of water quality (Less than Significant) The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures would control storm water quality. The proposed project would not have cumulatively considerable impacts associated with water quality. (DEIR, pp. 3.6-33 through 3.6-35)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-10: Cumulative impacts related to degradation of groundwater supply or recharge (Less than Significant) The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures require maintaining water quality standards and preserving the infiltration of rainwater within the aquifer. The proposed project would not have cumulatively considerable impacts associated with groundwater supply/recharge. (DEIR, pp. 3.6-35 through 3.6-36)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-11: Cumulative impacts related to flooding (Less than Significant) Future development in the area must be sited and designed in accordance with the aforementioned City flood damage regulations (i.e., Article VI, Flood Damage Prevention, of the City's Code). The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures require designs that ensure structures are outside the base flood elevation and that storm water flows are maintained to prevent downstream flooding. The proposed project would not have cumulatively considerable impacts associated with flooding. (DEIR, pp. 3.6-36 through 3.6-38)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
NOISE			
Impact 3.7-1: The proposed project has the potential to increase traffic noise levels at existing receptors (Potentially Significant) As shown in Tables 3.7-8 through 3.7-11, some noise-sensitive receptors located along the Plan Area roadways are currently exposed to exterior traffic noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard for residential uses. These receptors would continue to experience elevated exterior noise levels with implementation of the proposed project. As shown in Table 3.7-8, the segment of Natividad Road south of E. Boronda Road would experience unacceptable noise levels under Existing Plus Project conditions. The project would cause noise levels along this segment to increase by 1.6 dB. As shown in Table 3.7-9, the segment of Natividad Road south of E. Boronda Road would experience unacceptable noise levels under Existing Plus Project Plus CASP conditions. As shown in Table 3.7-10, the following roadway segments would experience unacceptable noise levels under Cumulative Plus Project conditions: • E. Boronda Road from San Juan Grade to McKinnon (2.4 dB increase); • E. Boronda Road from Independence to Hemmingway (1.8 dB increase); • E. Boronda Road from N. Sanborn to Williams (2.4 dB increase); • Natividad Road south of E. Boronda (3.7 dB increase); and • Natividad Road from E. Boronda to Future Russell Road (3.0 dB increase). As shown in Table 3.7-11, significant traffic noise increases are anticipated under the Cumulative Plus Project Plus CASP traffic condition include the following segments: • Constitution Blvd., South of E. Boronda – noise levels are predicted to increase by 3.5 dB from 62.2 dB to 65.7 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB,	Implement Mitigation Measures 3.7-1 and 3.7-8.	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Mitigation Measure 3.7-1 requires adherence to the requirements of the City of Salinas Municipal Code with respect to hours of operation during project construction. Mitigation Measure 3.7-2 requires all equipment to be fitted with factory equipped mufflers and in good working order. Mitigation Measure 3.7-3 requires sound walls for residents located along the primary Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. Mitigation Measure 3.7-4 requires 3-coat stucco and windows having a Sound Transmission Class (STC) 35, or higher, rating to be installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-5 requires mechanical ventilation for the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-6 requires the center of active play areas, such as football fields, soccer fields or other athletic fields, to be located at a minimum distance of 90-feet from the nearest residential property lines. Mitigation Measure 3.7-7 includes various project design requirements where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas. Mitigation Measure 3.7-8 includes various project design requirements fort the well and treatment plant facilities. Even with implementation of Mitigation Measures 3.7-1 through 3.7-8, there is the potential for noise levels to exceed the acceptable levels in some cases if encroachment into private property proves for the construction of sounds walls proves to be infeasible. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
as outlined in Table 3.7-7. • E. Boronda Road, Main to San Juan Grade – noise levels are predicted to increase by 1.5 dB from 66.5 dB to 68.1 dB L_{dn}. This would equal the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, San Juan Grade to McKinnon – noise levels are predicted to increase by 2.6 dB from 65.3 dB to 67.9 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, El Dorado to Natividad – noise levels are predicted to increase by 3.3 dB from 64.1 dB to 66.1 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Natividad to Independence – noise levels are predicted to increase by 2.6 dB from 66.6 dB to 69.3 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Independence to Hemmingway – noise levels are predicted to increase by 3.5 dB from 65.1 dB to 68.6 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Hemmingway to Constitution – noise levels are predicted to increase by 3.0 dB from 58.2 dB to 61.3 dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • E. Boronda Road, N. Sanborn to Williams – noise levels are predicted to increase by 3.1 dB from 59.6 dB to 62.7dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • Natividad Road., South of E. Boronda – noise levels are predicted to increase by 4.5 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • Natividad Road., E. Boronda to Future Russell Road – noise levels are predicted to increase by 3.8 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. However, it should be noted that this roadway segment is located between the West Area Specific Plan and Central Area Specific Plan projects and future sensitive receptors along this roadway would be constructed with noise control measures designed to achieve compliance with the City of Salinas exterior and interior noise level standards. • Russell Road, West of San Juan Grade – noise levels are predicted to increase by 1.9 dB from 67.5 dB to 69.4 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. (DEIR p. 3.7-14 through 3.7-23)			
Impact 3.7-2: The proposed project has the potential to increase noise levels associated with construction activities (Potentially Significant) Noise would also be generated during the construction phase by increased truck traffic on area roadways. The proposed project has the potential to increase noise levels associated with construction activities. (DEIR, pp. 3.7-23 and 3.7-24)	**Mitigation Measure 3.7-1:** Prior to the approval of site improvement plans and respective permits, plans shall note that construction activities shall adhere to the requirements of the City of Salinas Municipal Code with respect to hours of operation. **Mitigation Measure 3.7-2:** Prior to the approval of site improvement plans and respective permits, plans shall note that all equipment shall be fitted with factory equipped mufflers and in good working order. All stationary noise generating equipment (i.e. generators) shall be located at least 300 feet from a sensitive receptor. All construction staging areas shall be located at least 300 feet from a sensitive receptor.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.7-1 and 3.7-2 be adopted. Mitigation Measure 3.7-1 requires adherence to the requirements of the City of Salinas Municipal Code with respect to hours of operation during project construction. Mitigation Measure 3.7-2 requires all equipment to be fitted with factory equipped mufflers and in good working order. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.7-3: The proposed project has the potential to increase noise vibration association with construction activities (Less Than Significant) The proposed project would not increase noise vibration associated with construction activities. Therefore, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. (DEIR, pp. 3.7-24 and 3.7-25)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.7-4: The proposed project has the potential to expose new sensitive receptors to excessive transportation noise (Potentially Significant) Table 3.7-14 data indicate that noise barriers 6- to 8-feet in height would generally be sufficient to achieve compliance with the City of Salinas 60 dB L_{dn} exterior noise level standard for the proposed residential uses. However, for the residential uses located along E. Boronda Road and Natividad Road, sound walls of 6- to 8-feet in height would only reduce exterior noise levels to 62 to 65 dB L_{dn}. While these noise level do not meet the City's preferred 60 dB L_{dn} noise standards, they would comply with the City's conditionally acceptable standard of 60 to 70 dB L_{dn}. Predicted interior noise levels would exceed the City's 45 dB L_{dn} interior noise level standard at the first row of residential uses located closest to E. Boronda Road and Natividad Road. Therefore, additional interior noise control measures would be required for these residential uses along E. Boronda Road and Natividad Road. To reduce interior noise levels to 45 dB L_{dn}, or less, it is likely that second floor facades would require windows having a Sound Transmission Class (STC) 35 rating, or higher. Exterior walls would also likely require 3-coat stucco and RC-channels. This would specifically apply to the first row of homes along E. Boronda Road and Natividad Road and would not apply to facades facing away from the roadway. (DEIR, pp. 3.7-25 through 3.7-28)	**Mitigation Measure 3.7-3:** Prior to the approval of site improvement plans and respective permits, the plans shall note the location, design and constructions details of the eight-foot to nine-foot tall sound attenuation walls and/or landscaped berm/wall combinations, as applicable, that will be constructed along the primary Specific Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. At the City's discretion, wall heights which achieve the City's conditionally acceptable 60-70 dB L_{dn} noise standard may be allowed. See the Draft EIR Table 3.7-14 for specific noise barrier/wall heights along each roadway. Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of the wall is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti. These graffiti prevention best management practices may include, without limitation: (1) The use or the installation and maintenance of ant-graffiti materials and	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-3 through 3.7-5 be adopted. Mitigation Measure 3.7-3 requires sound walls for residents located along the primary Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. Mitigation Measure 3.7-4 requires 3-coat stucco and windows having a Sound Transmission Class (STC) 35, or higher, rating to be installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-5 requires mechanical ventilation for the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	surface treatments approved by the City on likely graffiti-attracting surfaces. (2) Installation and maintenance of landscaping to discourage defacement of and/or protect likely graffiti-attracting surfaces. (3) Installation and maintenance of lighting to protect likely graffiti-attracting surfaces. (4) Immediate removal of graffiti by appropriate means within seventy-two hours. (5) Incorporation of architectural or design elements or features to discourage graffiti defacement in accordance with the principles of Crime Prevention Through Environmental Design (CPTED). (6) Authorizing right of access by city employees or contract agents to remove graffiti if not removed within specified time periods. (7) Supplying the city at its request with paint (of the appropriate color and type), cleaning agents, and/or other materials acceptable to the city to abate or to deter graffiti. (8) Other requirements, as deemed reasonably feasible by the city planner, to deter, to protect or to reduce the potential for graffiti defacement. **Mitigation Measure 3.7-4:** Prior to the approval of building permits, the first row of residential dwellings located along E. Boronda Road and Natividad Road shall include windows having a Sound Transmission Class (STC) 35, or higher, rating installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Exterior walls shall also require 3-coat stucco and RC-channels, sheathing, or another acceptable construction application that effectively attenuates noise intrusion to the interior of the house. The exterior wall specifications would specifically apply to the first row of homes that abut E. Boronda Road and/or Natividad Road and only applies to the facades facing these roadways. These specifications do not apply to single story homes,		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	or the first floor of a two-story home, both of which are attenuated by the sound wall. These requirements shall be included in the building plans for the specific dwelling units and noted on the building permits. A detailed analysis of any additional interior mitigation measures shall be conducted when building plans are available and prior to building permit issuance to verify these requirements. These requirements shall also be noted in the site improvement plans prior to approval by the City. **Mitigation Measure 3.7-5:** Prior to the approval of building permits, mechanical ventilation shall be required in the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road, sufficient to allow residents, as desired for acoustical isolation, to keep their doors and windows closed and still maintain acceptable interior temperature and noise levels. This requirement shall be included in the building plans for the specific dwelling units and noted on the building permits. This requirement shall also be noted in the site improvement plans prior to approval by the City.		
Impact 3.7-5: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed park and school uses (Potentially Significant) Children playing at neighborhood parks or outdoor recreational fields (softball, soccer, basketball, tennis) are often considered potentially significant noise sources which could adversely affect adjacent noise-sensitive land uses. Typical noise levels associated with groups of approximately 50 children playing at 50 feet generally range from 55 to 60 dB L_{eq} and 70 to 75 dB L_{max}. It is expected that park activities would occur primarily during daytime hours. Therefore, noise levels from the playgrounds would need to comply with the City of Salinas exterior noise level standards of 60 dB L_{eq} and 70 dB L_{max} at the nearest residential uses. (DEIR, pp. 3.7-29 and 3.7-30)	**Mitigation Measure 3.7-6:** Prior to the approval of site improvement plans, as applicable, when parks or play areas are located near residential uses, the center of active play areas, such as football fields, soccer fields or other athletic fields, shall be located at a minimum distance of 90-feet from the nearest residential property lines. Large active play areas shall comply with the 60 dB L_{eq} and 70 dB L_{max} standards, and shall include these further noise level evaluations during the design phases of future park areas. Parks shall be designed such that residences front, or side in limited locations where approved by the City Planner, to the park. Minimum 6-foot tall sound walls and/or landscaped berms shall be constructed where school site directly abuts a residential property line in instances where site design (i.e., minimum distances, siting of activity areas, etc.) cannot achieve the 60 dB L_{eq} and 70 dB L_{max} noise standards. No wall shall be required where residential uses are fronted towards a park or school site and separated by a roadway or a walkway. Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-6 be adopted. Mitigation Measure 3.7-6 requires the center of active play areas, such as football fields, soccer fields or other athletic fields, to be located at a minimum distance of 90-feet from the nearest residential property lines. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of walls is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti (see mitigation 3.7.3 for further discussion of best management practices.)		
Impact 3.7-6: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed commercial mixed-uses (Potentially Significant) Mixed-use commercial land use activities can produce noise levels which affect adjacent sensitive land uses. The primary noise sources generally include truck deliveries, trash pickup, parking lot use, and heating, ventilation, and air conditioning (HVAC) equipment operation. These sources may result in noise levels exceeding the City's standards at nearby receptors. (DEIR, pp. 3.7-30 through 3.7-31)	**Mitigation Measure 3.7-7:** Prior to the approval of development review permits, the plans shall demonstrate: where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas, the following measures shall be included in the project design: • All HVAC equipment shall be located within mechanical rooms where possible or shielded from view with solid or grated barriers; • Emergency generators shall comply with the City's noise criteria at the nearest noise-sensitive receivers; • Delivery/loading activities shall comply with the Salinas Zoning Code standards and regulations; and • The applicant shall submit a noise study to verify that the appropriate noise control measures have been incorporated into the project design and will achieve compliance with the City's noise level standards.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-7 be adopted. Mitigation Measure 3.7-7 includes various project design requirements where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.7-7: The proposed project has the potential to expose sensitive receptors to substantial noise from	**Mitigation Measure 3.7-8:** The potential well and treatment plant sites are shown in the	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
proposed well sites (Potentially Significant) Typical noise levels for well sites at 50 feet are expected to be 60 dB L_{eq}. If a backup generator is present and running, a noise level of 70 dB L_{eq} at 50 feet would be expected. It is expected that wells could operate during daytime or nighttime hours. Long-term operation of the backup generator would only occur under emergency conditions and would therefore not be subject to the City of Salinas exterior noise level standards for Class A noise. However, weekly exercising of the generator may be subject to the City's 60 dB L_{eq} daytime exterior noise level standard at the nearest noise-sensitive residential receptors. (DEIR, pp. 3.7-32)	Specific Plan. The actual well and treatment plant facilities are subject to the approval of a Conditional Use Permit (CUP) by the City pursuant to the requirements of the Salinas Zoning Code and the West Area Specific Plan. The potential well and treatment plant sites and the CUP requirement for said facilities shall be clearly noted on the site improvement plans. Prior to approval of the CUP and subsequent issuance of the building permits for the well and treatment plant facilities, the plans shall demonstrate that the following measures shall be included in the project design: • The well and treatment facilities have been designed and will be built to not exceed a noise level of 55 dB L_{eq} at the nearest residential or school property line during normal operation of the facilities; • The generators shall not be permitted to exceed the City's daytime noise standard of 60 dB L_{eq}; • The generators shall be tested only during daytime hours; and • Additionally, that the well and treatment facilities/sites have been designed (in accordance with the West Area Specific Plan) to incorporate decorative screen walls, landscaping and other features to ensure compatibility with surrounding land uses.		environment. The City Council hereby directs that Mitigation Measure 3.7-8 be adopted. Mitigation Measure 3.7-8 includes various project design requirements fort the well and treatment plant facilities. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.7-8: Cumulative exposure of existing and future noise-sensitive land uses to increased noise resulting from cumulative development (Potentially Significant) Significant traffic noise increases under the Cumulative Plus Project Plus CASP traffic condition include the following segments: • Constitution Blvd., South of E. Boronda – noise levels are predicted to increase by 3.5 dB from 62.2 dB to 65.7 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Main to San Juan Grade – noise levels are predicted to increase by 1.5	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
dB from 66.5 dB to 68.1 dB L_{dn}. This would equal the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, San Juan Grade to McKinnon – noise levels are predicted to increase by 2.6 dB from 65.3 dB to 67.9 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, El Dorado to Natividad – noise levels are predicted to increase by 3.3 dB from 64.1 dB to 66.1 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Natividad to Independence – noise levels are predicted to increase by 2.6 dB from 66.6 dB to 69.3 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Independence to Hemmingway – noise levels are predicted to increase by 3.5 dB from 65.1 dB to 68.6 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Hemmingway to Constitution – noise levels are predicted to increase by 3.0 dB from 58.2 dB to 61.3 dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • E. Boronda Road, N. Sanborn to Williams – noise levels are predicted to increase by 3.1 dB from 59.6 dB to 62.7dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
receptors. • Natividad Road., South of E. Boronda – noise levels are predicted to increase by 4.5 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • Natividad Road., E. Boronda to Future Russell Road – noise levels are predicted to increase by 3.8 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. However, it should be noted that this roadway segment is located between the West Area Specific Plan and Central Area Specific Plan projects and future sensitive receptors along this roadway would be constructed with noise control measures designed to achieve compliance with the City of Salinas exterior and interior noise level standards. • Russell Road, West of San Juan Grade – noise levels are predicted to increase by 1.9 dB from 67.5 dB to 69.4 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. (DEIR, pp. 3.7-33 through 3.7-37)			
POPULATION AND HOUSING			
Impact 3.8-1: The proposed Project has the potential to induce substantial population growth in an area (Less Than Significant) The West Area Specific Plan proposes development on the 797-acre Specific Plan Area including housing units that would result in direct population growth. The project includes a maximum of 4,340 total residential units. The addition of 4,340 housing units at full buildout has the potential to increase the population of the city by an estimated 16,101 persons (based on a U.S. Census Bureau estimate of 3.71 persons per household) (U.S. Census Bureau, 2017). The 2002 General Plan identifies areas for growth within the FGAs (which includes the Specific Plan Area). The Salinas General Plan Land Use Table LU-3 identifies the development capacity of the FGAs.	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
This includes 15,873 residential units, resulting in an additional population of 58,253 within the City's FGAs. The proposed West Area Specific Plan development proposes 4,340 units with the potential to increase the population of the city by an estimated 16,101 persons, which is within the projections identified in the Salinas General Plan. Implementation of the West Area Specific Plan would increase employment in the area through development of a maximum of 571,500 square feet of commercial space. The Salinas General Plan designates land uses to ensure a balance between new residential development and job-creating uses. Within the FGAs (including the Specific Plan Area) the General Plan assumes a development capacity that includes 178,000 square feet of retail space, 30,000 square feet of office space, 599,000 square feet of general commercial space, and 2,613,000 square feet of mixed use area (Salinas General Plan pg. LU 37: Land Use Element Table LU-3 Development Capacity). The proposed maximum 571,500 square feet developable by the proposed project is within the development capacities stated in the Salinas General Plan. (DEIR, pp. 3.8-14 through 3.8-19)			
Impact 3.8-2: Cumulative impact on the potential to induce substantial population growth in an area (Less Than Significant) Development of the North of Boronda FGA is a component of the City's planned long-term growth as identified in the City's General Plan. Infrastructure needed to support development of the site and the FGAs, and the subsequent population, housing and employment increases expected through implementation of the West Area Specific Plan, have already been planned and evaluated. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts. The proposed project would not have cumulatively considerable impacts associated with population and housing. (DEIR, pp. 3.8-19 through 3.8-20)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
PUBLIC SERVICES			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.9-1: The proposed project may require the construction of fire department facilities which may cause substantial adverse physical environmental impacts (Potentially Significant) The site-specific environmental impact of constructing a new fire facility to serve the West Area Specific Plan will be reviewed under CEQA as part of the Central Area Specific Plan Draft EIR, which is expected to be circulated in 2019. The proposed project may require the construction of fire department facilities which may cause substantial adverse physical environmental impacts. (DEIR, pp. 3.9-16 through 3.9-18)	**Mitigation Measure 3.9-1:** Prior to the issuance of a Certificate of Occupancy for each dwelling unit (and prior to issuance of building permits for non-residential uses), the applicant shall pay all applicable project impact fees per the impact fee schedule.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.9-1 be adopted. Mitigation Measure 3.9-1 requires payment of the project impact fees for each dwelling unit. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.9-2: The proposed project may result in, or have the potential to require the construction of police department facilities which may cause substantial adverse physical environmental impacts (Less Than Significant) The proposed project would not result in, or have the potential to require the construction of police department facilities which may cause substantial adverse physical environmental impacts. Development of the Specific Plan Area did not directly trigger the need for a new facility; however, additional staffing and patrols are required to serve the proposed Specific Pan Area. The City collects impact fees from new development based upon projected impacts from the development. The City also reviews the adequacy of impact fees on an annual basis to ensure that the fee is commensurate with anticipated future facilities demands, assessed on a fair share basis for new development. (DEIR, pp. 3.9-18 through 3.9-19)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.9-3: Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts (Potentially Significant) Physical impacts from construction of the school sites within the Specific Plan Area would be related to relevant environmental topics included in this EIR, such as: air quality (Section 3.1), biological resources (Section 3.2), cultural resources (Section 3.3), greenhouse gas emissions and climate change (Section 3.4), hazards and hazardous materials (Section 3.5), hydrology and water quality (Section 3.6), noise (Section 3.7) population (Section 3.8), public services (Section 3.9), transportation (Section 3.10), and utilities (Section 3.11). A	**Mitigation Measure 3.9-2:** Prior to the issuance of building permits for each dwelling unit, the applicant shall pay applicable school fees mandated by SB 50 to the Salinas Union High School District (SUHSD), and Santa Rita Union School District (SRUSD) and provide documentation of said payment to the City. Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.9-2, 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34 be adopted. Mitigation Measure 3.9-2 requires payment of the applicable school fees. Under state law, the payment of school impact fees is deemed to be adequate mitigation for the need for new school facilities. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
detailed discussion of relevant operational and construction impacts can be found in each respective section of this EIR. Furthermore, site-specific environmental review would be required for each school by the responsible school district prior to approval of a design for the facility and would consider any site-specific impacts unknown at this time. Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts. Potential environmental impacts associated with the future construction of each school within the Plan Area are addressed throughout this EIR. This EIR analyzes the physical environmental effects that may occur as a result of development and introduction of new urban land uses within the Plan Area. Each future school, if constructed, would fall within the range of environmental impacts disclosed in this EIR, and would be subject to relevant mitigation measures included in this EIR. It is noted, however, that development of a school within the proposed Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-19 through 3.9-21)			
Impact 3.9-4: Project implementation may result in effects on parks, or has the potential to require the construction of park facilities which may cause substantial adverse physical environmental impacts (Potentially Significant) Physical impacts from construction of the park sites within the Specific Plan Area would be related to relevant environmental topics included in this EIR, such as: air quality (Section 3.1), biological resources (Section 3.2), cultural resources (Section 3.3), greenhouse gas emissions and climate change (Section 3.4), hazards and hazardous materials (Section 3.5), hydrology and water quality (Section 3.6), noise (Section 3.7) population (Section 3.8), public services (Section 3.9), transportation (Section 3.10), and utilities (Section 3.11). A detailed discussion of relevant operational and construction impacts can be found in each	Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	SU	Changes or alterations have been required in, or incorporated into the project, which mitigate the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
respective section of this EIR. Project implementation may result in effects on parks, or has the potential to require the construction of park facilities which may cause substantial adverse physical environmental impact. Potential environmental impacts associated with the future construction of park and other recreational facilities within the Plan Area are addressed throughout this EIR. This EIR analyzes the physical environmental effects that may occur as a result of development and introduction of new urban land uses within the Plan Area. Each future park, if constructed, would fall within the range of environmental impacts disclosed in this EIR, and would be subject to relevant mitigation measures included in this EIR. It is noted, however, that development of 49.76 acres of park land within the Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-22 through 3.9-23)			
Impact 3.9-5: Project implementation may result in effects on other public facilities (Less than Significant) Project implementation may result in effects on other public facilities. The West Area Specific Plan would result in new demand for public facilities, including library facilities and recreational facilities. The West Area Specific Plan does not propose a library or other public facility such as a community building within the Plan Area, therefore, it does not have a direct physical impact on the environment. The West Area Specific Plan would be responsible for paying the applicable impact fees, and ongoing revenues from the Specific Plan would be generated from property taxes, sales taxes, and other appropriate fees/payments. Such fees/payments would be the financial contribution for any new demand created by the West Area Specific Plan. (DEIR, pp. 3.9-23 through 3.9-24)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.9-6: Under cumulative conditions the proposed project may result in effects on public facilities (Potentially Significant) The construction and operation of future public	Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which mitigate the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
facilities required to serve cumulative development (including the West Area Specific Plan Area) could potentially cause significant impacts. Cumulative development including additional parks, schools, library, and other public facilities within the city and service area would contribute to significant and unavoidable cumulative impacts that have been identified within this EIR related to: air quality (Impact 3.1-7), biological resources (Impact 3.2-12), greenhouse gases (Impact 3.4-4), noise (Impact 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-24 through 3.9-26)			avoid the effects. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
TRANSPORTATION AND CIRCULATION			
Impact 3.10-1: Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan, without mitigations, results in unacceptable operation at eight of the study intersections, and two of the U.S. 101 ramp junctions. All study segments of U.S. 101 performed within the County CMP standards. (DEIR, pp. 3.10-42 through 3.10-46)	**Mitigation Measure 3.10-1**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal at San Juan Grade Road/Van Buren Avenue, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans for each stage of project development shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-2**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of the existing signal timing at San Juan Grade Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-1 through 3.10-9 be adopted. Mitigation Measures 3.10-1 through 3.10-9 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and ramps. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-3**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the signalization of the intersection at Hemingway Drive/East Boronda Road or equivalent traffic control (such as a roundabout), in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of roundabouts), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-4**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings at North Main Street/Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-5**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the widening of the intersection at Natividad Road/East Laurel Drive to add additional northbound and southbound through lanes, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of a roundabout), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-6**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal or equivalent traffic control (such as a roundabout) at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of a roundabout), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-7**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings and to add an eastbound left turn pocket at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. This mitigation includes the addition of an eastbound left turn pocket and optimization of the existing signal timing to better accommodate the expected changes in traffic distribution and volume with implementation of the proposed project. The final improvement plans shall note		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-8**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the addition a southbound left turn lane and optimization of the traffic signal's timing at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share requirement. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-9**: Each project applicant for development within the Specific Plan Area shall contribute its fair-share funding to the Transportation Agency for Monterey County (TAMC) Regional Development Impact Fee (RDIF) Program and the City of Salinas' Traffic Impact Fee (TIF) Program, as determined by the TAMC and the City of Salinas, respectively, in proportion to the area planned for development by each project applicant. These programs include improvements to U.S. 101 that would improve mainline and ramp junction operations, which would mitigate the proposed project's impact to the U.S. 101 ramp junctions affected by the proposed project (i.e. the Northbound Road Off-Ramp and Northbound West Laurel Drive Off-Ramp). Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.		
Impact 3.10-2: Under Existing Plus Project and Central Area Specific Plan conditions, implementation	**Mitigation Measure 3.10-10**: Each project applicant for development within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
of the proposed Specific Plan may conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Existing Plus Project and Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan would result in unacceptable operation at ten of the study intersections, and two of the U.S. 101 ramp junctions, under the Existing Plus Project and Central Area Specific Plan scenario. All study segments of U.S. 101 performed within the County CMP standards. (DEIR, pp. 3.10-53 through 3.10-56)	Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-11**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to convert the eastbound right turn lane to a shared through-right turn lane at Natividad Road/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-12**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for addition of an eastbound right turn pocket at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-13**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for the installation of a traffic signal at the intersection of Williams Road/East Boronda Road, in proportion to the area planned for		environment. The City Council hereby directs that Mitigation Measures 3.10-10 through 3.10-14 be adopted. Mitigation Measures 3.10-10 through 3.10-14 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and ramps. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-14**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at the South Sanborn/North Sanborn/John Street intersection, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.		
Impact 3.10-3: Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan under the cumulative Plus Project scenario would result in unacceptable operation at seventeen of the study intersections, and three of the freeway segments. All ramp junctions perform at or above the minimum standards set by the County CMP under this scenario. (DEIR, pp, 3.10-63 through 3.10-70)	**Mitigation Measure 3.10-15**: Each project applicant for development within the Specific Plan Area shall contribute its fair-share of funding to the TAMC Regional Development Impact Fee provides mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Southbound Ramps/Echo Valley Road/Crazy Horse Canyon Road. Regional fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-16**: Each project applicant for development within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-15 through 3.10-27 be adopted. Mitigation Measures 3.10-15 through 3.10-27 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and segments. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Plan Area shall contribute its fair-share of the TAMC Regional Development Impact Fee to provide mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Northbound Ramps/Crazy Horse Canyon Road. Total fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-17**: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Crazy Horse Canyon Road/San Juan Grade Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-18**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Natividad Road/Rogge Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-19**: Each project

	applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Natividad Road/Russell Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-20**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of southbound and westbound left turn lanes at the intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-21**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a southbound left turn lane at the intersection of Constitution Boulevard/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-22**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	for the installation of a traffic signal at the intersection of Old Stage Road/Williams Road/Private Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-23**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound through lane, the addition of a northbound right turn overlap phase, and the conversion of the westbound through lane to a westbound shared through-left turn lane at the intersection of North Main Street/East Bernal Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note these improvements and the fair-share funding requirement. **Mitigation Measure 3.10-24**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound and southbound through lanes at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Mitigation Measure 3.10-25: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of South Davis Road/Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-26**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane and a southbound left turn lane at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-27**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound left turn lane at the intersection of South Main Street/West Blanco Road/East Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		
Impact 3.10-4: Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by	**Mitigation Measure 3.10-28**: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan would result in unacceptable operation at twenty-two of the study intersections, and four of the freeway segments, under the cumulative Plus Project with Central Area Specific Plan scenario. All ramp junctions perform at or above the minimum standards set by the County CMP under this scenario. (DEIR, pp, 3.10-76 through 3.10-81)	installation of a traffic signal at intersection of Old Stage Road/Hebert Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-29**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of northbound and southbound through lanes on Natividad Road and for the conversion of the existing eastbound right turn lane on East Laurel Drive to a shared through-right turn lane, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-30**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of eastbound and southbound left turn lanes at Constitution Boulevard/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-31**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of North Sanborn Road/Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to		28 through 3.10-33 be adopted. Mitigation Measures 3.10-28 through 3.10-33 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and segments. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-32**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane at Williams Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-33**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a southbound left turn lane at the intersection of East Front Street/Sherwood Drive/Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		
Impact 3.10-5: Implementation of the proposed Specific Plan would not result in changes to air traffic patterns (Less than Significant) The nearest air facility to the Specific Plan boundaries is Salinas Municipal Airport, located approximately four miles to the southeast. Additionally, Marina Municipal Airport is located approximately six miles to the southwest. The Specific Plan Area contains no existing or planned airport facilities. The proposed land use changes to and development of the Specific Plan Area are expected to have no effect on the Salinas Municipal Airport or Marina Municipal Airport approach or departure zones, or any other airport approach or	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
departure zones. Implementation of the proposed Specific Plan would not result in changes to air traffic patterns. (DEIR, pp, 3.10-81 through 3.10-82)			
Impact 3.10-6: Implementation of the proposed Specific Plan would not substantially increase hazards due to a design feature (Less than Significant) Implementation of the proposed Specific Plan would not substantially increase hazards due to a design feature. Development within the Specific Plan Area would include new streets, access points, paths, and other circulation improvements that would be reviewed and checked for compliance with design and safety standards as part of the entitlement process conducted by the City of Salinas. (DEIR, pp, 3.10-82)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.10-7: Implementation of the proposed Specific Plan would not result in impacts related to emergency access (Less than Significant) Buildout of the proposed Specific Plan would result in increased development densities and land use intensities within the Specific Plan Area. As a result of buildout of the West Area Specific Plan, which includes the development of an internal transportation network within the Plan Area, the volume of users travelling within the Specific Plan Area is expected to increase. Emergency access along proposed and existing roadways must be accommodated in conjunction within the expected population and employment growth. Plans submitted for individual developments to be constructed in the Specific Plan Area would be reviewed for compliance with emergency access requirements by public safety officials during the City's entitlement process. Implementation of the proposed Specific Plan would not result in impacts related to emergency access. (DEIR, pp, 3.10-82)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.10-8: Implementation of the proposed Specific Plan would not conflict with adopted multi-modal circulation policies, plans, or programs, and would not decrease the performance or safety of public transit, bicycle, or pedestrian facilities (Less than Significant) Implementation of the Specific Plan would be consistent with, and would expand upon, the pedestrian and bicycle network identified in the 2002 *Salinas Bikeways Plan*. The Specific Plan	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
would improve the existing bicycle and pedestrian circulation infrastructure within the Specific Plan Area, as well as adjacent areas in the City of Salinas. The West Area Specific Plan is estimated to generate approximately 1,000 new transit trips on a daily basis, as well as 140 trips in the morning peak hour and 150 trips in the evening peak hour (Fehr & Peers, 2018). These new transit trips alone are not expected to overburden existing transit service in the area. Implementation of the proposed Specific Plan would not conflict with adopted multi-modal circulation policies, plans, or programs, and would not decrease the performance or safety of public transit, bicycle, or pedestrian facilities. (DEIR, pp, 3.10-83 through 3.10-84)			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
UTILITIES			
Impact 3.11-1: The proposed project has the potential to exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board (Less than Significant) Wastewater generated within the Plan Area would be conveyed by the City of Salinas wastewater conveyance system to M1W Regional Treatment Plant. M1W, a regional agency, owns and operates M1W Treatment Plant. The wastewater treatment system treats domestic wastewater from residential and commercial sources. Waste Discharge Requirements (WDRs) Order No. R3-2018-0017 provides waste discharge requirements for M1W Treatment Plant, and a supply capacity of up to 29.6 MGD. Implementation of West Area Specific Plan would be covered under the existing capacity and would not exceed the wastewater discharge requirements in this Order. (DEIR, pp. 3.11-9)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-2: The proposed project has the potential to result in a determination by the wastewater treatment and/or collection provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the provider's existing commitments (Less than Significant) The City of Salinas Sanitary Sewer Master Plan projects new development would increase the total wastewater discharge to an average dry weather flow to a maximum of approximately 22.1 MGD at full build-out of the entire City Sphere of Influence. The estimated wastewater discharge for full buildout of the proposed project would be approximately 1.0 MGD. The West Area Specific Plan would increase the amount of wastewater requiring treatment. The wastewater would be treated at M1W Treatment Plant. The (WDRs Order No. R3-2018-0017 allows M1W Treatment Plant to accept up to 29.6 MGD. Given a current demand of approximately 16 MGD (as provided by M1W Treatment Plant Engineer Jennifer Gonzalez), the M1W Treatment Plant currently has an additional capacity of approximately 11 MGD; given 1.0 MGD generated by the project, there is sufficient plant capacity. (DEIR, pp. 3.11-10 through 3.11-11)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.11-3: The proposed project has the potential to require or result in the construction of new wastewater treatment or collection facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) The West Area Specific Plan project does not trigger a need to expand the M1W Treatment Plant. There would be a network of sewer collection infrastructure installed throughout the Plan Area to serve the West Area Specific Plan. The potential for environmental impacts associated with the installation of the wastewater collection system, and all construction activities within the Plan Area, are addressed throughout this EIR. (DEIR, pp. 3.11-11 through 3.11-12)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-4: Cumulative impact on wastewater utilities (Less than Significant) The M1W plant is designed and constructed to handle 29.6 MGD; which is more than 4 MGD than the project 2055 demand, under the worst case scenario modelled. The 1.0 MGD expected to be generated by full buildout of the proposed project would thereby leave approximately 3.6 MGD available in 2055, under the worst case scenario modelled. Moreover, it is more than likely that this represents an overestimate of cumulative wastewater demand, given that this estimate utilizes the higher end of the range of projected wastewater at the M1W Regional Treatment Plant in the future. Additionally, buildout of the Specific Plan is expected to occur over an approximately 20 to 30 year timeframe; therefore buildout is expected to occur no later than approximately 2048 (at latest). Therefore, using the year 2055 as the analysis year serves as a conservative date for buildout of the proposed project. (DEIR, pp. 3.11-12 through 3.11-13)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-5: The proposed project has the potential to require construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) The proposed project would not require construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. The water infrastructure is sized to meet the	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
demand within the Plan Area. All offsite improvements are to be placed in or adjacent to existing streets to minimize potential impacts. Although the West Area Specific Plan would not require the expansion of existing water treatment facilities, the West Area Specific Plan may require the construction of a new centralized treatment facility within the Plan Area. This treatment facility would be specifically sized to serve the West Area Specific Plan and would not be upsized to ensure that it does not induce growth beyond what is anticipated by the West Area Specific Plan. (DEIR, pp. 3.11-37 through 3.11-38)			
Impact 3.11-6: The proposed project has the potential to have insufficient water supplies available to serve the project from existing entitlements and resources (Less than Significant) Water supplies are sufficient to meet the City's existing and projected future potable water demands, including those future water demands associated with the West Area Specific Plan, to the year 2035 under all hydrologic conditions. The three new groundwater wells would provide adequate groundwater for the proposed project. Additionally, the Cal Water Salinas District has sufficient water supply throughout its service area to serve the proposed project, even during the third year of a multi-year drought, and even if the proposed project's groundwater wells proved to not be sufficient to serve the entire Plan Area. Moreover, the development of the West Area Specific Plan would reduce consumption of groundwater (equivalent to increasing groundwater storage), when compared to the existing agricultural uses; this would also have the effect of reducing the potential for seawater intrusion into the groundwater basin, when compared to the existing agricultural uses. (DEIR, pp. 3.11-38 through 3.11-41)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-7: Cumulative Impact on Water Utilities (Less than Significant) There would be sufficient water resources available to provide supply for buildout of the cumulative scenario, so that no significant cumulative effect on the overall water supply would result. (DEIR, pp. 3.11-41 through 3.11-43)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.11-8: The proposed project has the potential to require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) No new or expanded existing off-site infrastructure is proposed or would be required. Proposed project storm water infrastructure would be developed on-site, with connections made to off-site existing storm drain pipes along existing rights-of-way (such as along McKinnon Street). Installation of storm drainage infrastructure would occur during the construction phase of the proposed project. The construction of the new on-site stormwater drainage facilities, which are associated with the proposed project, has the potential to cause environmental impacts. The potential for environmental impacts associated with the installation of the stormwater system, and all construction activities within the Plan Area, are addressed throughout this EIR. (DEIR, pp. 3.11-63)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-9: Cumulative Impact on Stormwater Facilities (Less than Significant) The West Area Specific Plan includes an extensive system of on-site stormwater collection, treatment and retention facilities to accommodate the increased stormwater flows that would originate in the Specific Plan Area. Surface runoff from the area will be managed via detention/retention basins and flow reducing Best Management Practices (BMPs) to prevent local flooding within the Specific Plan Area. These features will also reduce peak flows from the Specific Plan Area to receiving creeks and storm drains to amounts less than such flows under existing conditions. The construction, maintenance, and operation of all stormwater facilities are not anticipated to cause substantial adverse impacts. The proposed project would not have cumulatively considerable impacts associated with stormwater facilities. (DEIR, pp. 3.11-63 through 3.11-65)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-10: The proposed project would be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs and comply with federal, State, and local statutes and regulations related to solid waste (Less than	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Significant) The West Area Specific Plan would be required to comply with applicable State and local requirements including those pertaining to solid waste, construction waste diversion, and recycling. The addition of the volume of solid waste associated with the West Area Specific Plan, approximately 24.5 tons per day at total buildout, would increase the total to the Johnson Canyon Landfill; however, this increase would not cause an exceedance of the landfill's remaining capacity. (DEIR, pp. 3.11-72)			
Impact 3.11-11: Cumulative Impact on Solid Waste Facilities (Less than Significant) The Salinas Valley Solid Waste Authority service area is expected to add numerous developments through 2055. The Central Area Specific Plan, East Area Specific Plan, and the Economic Development Element (EDE) are three such areas, located within the City of Salinas. These new areas would generate an estimated 75 to 100 tons per day at total buildout. Buildout of other communities within the Salinas Valley Solid Waste Authority' service area would also affect Johnson County Landfill. These jurisdictions within the region are likely to generate new sources of solid waste that would need to be processed at the landfill. The Johnson Canyon Landfill has the capacity to serve nearly three times as much waste per day as it does currently and will have sufficient capacity to serve communities within the Salinas Valley Solid Waste Authority service area. Implementation of the proposed project would have a less than significant cumulative impact relative to this environmental topic. (DEIR, pp. 3.11-72 through 3.11-73)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
OTHER ISSUES			
Aesthetics The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would allow development to occur in the City in both vacant and underdeveloped portions of the community, and that the introduction/expansion of urban uses into these areas has the potential to interrupt views of natural features, open space, the hillsides, and agricultural resources, reducing the aesthetic value of these resources. Additionally, new development	To minimize and mitigate the impacts on aesthetics, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following five mitigation measures: Mitigation Measure A1 requires the City to implement the City's Gateway Guidelines; Mitigation Measure A2 requires the City to strengthen and require compliance with the City's Design Guidelines; Mitigation Measure A3 requires the City to improve the Lighting Ordinance; Mitigation Measure A4 requires the	LTS	Three of the five mitigation measures included in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), including Mitigation Measures A1, A2, and A3, are requirements for the City of Salinas to implement. These measures do not apply to the proposed project. Mitigation Measures A4 and A5 are requirements for both the City and for proposed projects or discretionary projects. The proposed project would be subject to Mitigation Measure A4, which requires consistency with the landscaping requirements. All landscaping in the Specific Plan Area would be subject to the City's landscaping requirements. The proposed project would also be

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
in the City was found to increase the amount of light and glare in the community, particularly in areas planned for nonresidential development, such as retail and general commercial. It was also found that future development under the General Plan has the potential to change the visual character of the City. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that aesthetic impacts associated with the FGAs, which includes the West Area Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the proposed project, would be required to comply with the above referenced regulations, policies, and standards. Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). (See the Initial Study)	City to implement landscaping requirements for all proposed projects; and Mitigation Measure A5 requires the City to review all discretionary projects for aesthetics impacts.		subject to Mitigation Measure A5, which requires the City of review the proposed project for aesthetics impacts. Impacts to aesthetics are analyzed in the Initial Study for the project. See Appendix A of the Draft EIR for the West Area Specific Plan Initial Study. Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Agriculture and Forest Resources The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would result in the conversion of 3,525 acres of agriculture lands to urban uses. The *Final Environmental Impact Report,* also indicates that General Plan buildout would result in agricultural activity in proximity to residential and other urban uses, which may result in conflicts between the uses. It is noted that agricultural activity can cause nuisances related to air quality and noise that may disturb surrounding development. Urban activities may also negatively affect nearby agricultural uses, as increased vandalism often occurs and the introduction of domestic animals may disturb certain agricultural activities. The City of Salinas certified the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), adopted a statement of overriding considerations relative to this significant and unavoidable impact, and approved the Salinas	The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures AG1 through AG4, the impacts on potential compatibility issues would be reduced to a less than significant level; however, while the impacts on agricultural conversion would be reduced to the extent feasible, a significant and unavoidable impact would remain related to the loss of important farmland. Mitigation AG5 specifically addressed Agricultural Land Conservation Easement Program, which states that the City will work with the County of Monterey and other local jurisdictions to create and implement an agricultural land conservation easement program, including such measures as securing the dedication of easements or by paying a mitigation fee that could be used to purchase easements through a mitigation bank. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a $750.00 per acre mitigation fee for agricultural lands currently	LTS	All of the five mitigation measures included in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), including Mitigation Measures AG1 through AG5, are requirements for the City of Salinas to implement. These measures do not apply to the proposed project. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a per acre mitigation fee for agricultural lands currently designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance." The project would be subject to this fee. Impacts to agricultural resources are analyzed in the Initial Study for the project. See Appendix A of the Draft EIR for the West Area Specific Plan Initial Study. Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
General Plan. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that agricultural impacts associated with the FGAs, which includes the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the proposed project, would be required to comply with the above-referenced regulations, policies, and standards. Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). (See the Initial Study)	designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance."		
Geology and Soils Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). (See the Initial Study)	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Hazards and Hazardous Materials While the Draft EIR analyzes Hazards and Hazardous Materials, several topics were determined to not warrant additional analysis within the Chapter. The land uses proposed within the Specific Plan Area would not be expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Furthermore, the proposed project is not located in the vicinity of an airport or private airstrip; therefore, it would not result in a safety hazard related to air traffic for people residing or working in the Specific Plan Area. These topics do not	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
warrant additional analysis and will not be addressed further in the EIR. Separately, the City has adopted a Multi-hazard Emergency Plan, which serves as extensions of the California Emergency Plan and the Emergency Resource Management Plan. The purpose of the Multi-hazard Emergency Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Operations Center (EOC) in City Hall serves as the center of the City's emergency operations. The Plan also addresses evacuation and movement of people in the event of an emergency. The proposed project does not impair implementation of or physically interfere with the Multi-hazard Emergency Plan. Implementation of the proposed project would have a less than significant impact relative to this environmental topic and will not be further analyzed or addressed further in the EIR. Lastly, the proposed project is not located in an area that is considered a high risk for wildfires. The proposed project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. (See the Initial Study)			
Land Use and Planning The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the impacts would be reduced to a **less than significant** level with mitigation. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified the Final Supplemental EIR and approved annexation of the North of Boronda FGA, which includes the West Area Specific Plan. The project, as proposed, is consistent with the Greater Salinas Area Memorandum of Understanding (GSA-MOU). All development under the proposed project would be required to comply with the regulations, policies, and standards identifies in the *Final Environmental*	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact Report, Salinas General Plan (Cotton Bridges Associates 2002), and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed within these supporting documents. (See the Initial Study)			
Mineral Resources It was determined in the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) that development of the FGA, including the Specific Plan Area, would not have a significant impact on mineral resources or mining activities. As such, implementation of the proposed project would have no impact on mineral resources. (See the Initial Study)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

Attachment 3

RESOLUTION NO. _____ (N.C.S.)

RESOLUTION APPROVING THE WEST AREA SPECIFIC PLAN PROJECT (SPEC 2013-002)

WHEREAS, Brian Finegan, Esq. (representing multiple property owners and developers) submitted applications for the West Area Specific Plan project (Project), including requests for Specific Plan, Rezone, and Development Agreement approvals that would permit development of the approximately 797-acre project site shown in Exhibit A, herein incorporated by reference; and

WHEREAS, the City of Salinas (hereinafter "City"), as lead agency under the California Environmental Quality Act (Pub. Res. Act Section 21000 et seq.) and the State CEQA Guidelines (14 Cal. Code Regs. Section 15000 et seq.) (collectively "CEQA") has completed the Final Program Environmental Impact Report ("Final EIR") State Clearinghouse No. 2006021072 for the West Area Specific Plan in compliance with CEQA along with all supporting documentation and notices which are herein incorporated by reference as Exhibits C through I; and

WHEREAS, on December 4, 2019 the Salinas Planning Commission held a duly noticed and agendized public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, by Resolution No. 2019-18, the Salinas Planning Commission unanimously (7-0) recommended that the City Council certify the Final EIR, adopt the CEQA findings, adopt the Statement of Overriding Considerations, and adopt the Mitigation Monitoring Reporting Program for the Project; and

WHEREAS, with direction from the City, the Applicant has prepared the proposed West Area Specific Plan (SPEC 2013-002), attached hereto as Exhibit B and incorporated herein by this reference to serve as guidance for implementing New Urbanism development in accordance with the 2002 General Plan within the Specific Plan boundary; and

WHEREAS, the proposed West Area Specific Plan has been found to be consistent with the goals, policies, and programs of the 2002 General Plan, as identified in the Project Findings herein incorporated by reference as Exhibit J; and

WHEREAS, on December 17, 2019 the Salinas City Council held a duly noticed and agenidzed public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, the Salinas City Council weighed the evidence presented at said public hearing, including the staff report which is on file at the Community Development

Department, together with the record of environmental review including the Draft EIR (all of which were made publicly available consistent with state law prior to the City Council's public hearing and consideration of the Project), public comments on said document and responses thereto, the Final EIR, and evidence and public testimony presented at the public hearing; and

WHEREAS, notice of the time and place of hearing for recommending certification of the Final EIR and recommending approval of the Project, including SPEC 2013-002, was given in the manner prescribed by the City; and

WHEREAS, the Salinas City Council has weighed the evidence presented at the public hearing, including the staff report, which is on file at the City of Salinas Community Development Department, together with the record of environmental review, and

WHEREAS, certain mitigation measures in the City's 2002 General Plan Final Program EIR and in the City's 2007 Final Supplement for the General Plan Final Program EIR are still valid and applicable to the Project and are herein incorporated by reference.

NOW, THEREFORE, BE IT RESOLVED that the Salinas City Council hereby finds and determines the following:

1. The foregoing recitals and the information contained in the Exhibits are true and correct.

2. That it has been provided with, and has reviewed, the information contained in the Final EIR, the staff report for the Project, written and oral testimony regarding the Project, the Project Findings, and other relevant evidence available in the administrative record (collectively, the "Record of Proceedings"), and hereby provides notification that the Record of Proceedings is on file with the City Clerk of the City of Salinas, 200 Lincoln Avenue, Salinas, CA 93901.

3. That it has been provided with, and has reviewed, the information contained in the Final EIR, the staff report and recommendations, and other relevant evidence in the Record of Proceedings, and having done so, recommends that the City Council adopt the Project Findings, including the Specific Plan findings, herein incorporated by reference as Exhibit J, and based on those findings, approves SPEC 2013-002.

NOW, THEREFORE, BE IT FURTHER RESOLVED that the Salinas City Council affirms the Planning Commission's findings and approves a Resolution approving SPEC 2013-002.

PASSED AND APPROVED this 17th day of December 2019, by the following vote:

AYES:

Errata Sheet to the Draft West Area Specific Plan

September 4, 2019

Introduction and Content

The Errata sheet consists of minor revisions to the Draft Specific Plan providing clarifications, some minor modifications as well as minor staff edits. The revisions to the Draft Specific do not change the intent or content of the document. The Errata sheet is in addition to typographical, re-ordering or similar non-substantive errors not listed.

Proposed changes are identified in Table 1, Errata Changes. Text deletions are shown with strikeout font and additions are shown with underlined font. Specific Plan table and figure modifications are listed and shown following Table 1 in the order that they are referenced in Table 1.

TABLE 1: Errata Changes

Section	Page	Modification
2.8.1	92	The design of all schools is encouraged to consider the New Urbanism design concepts, design standards and development regulations contained in the West Area Specific Plan to complement and promote compatibility with surrounding land uses. Fencing shall be black coated chain link.
4.8	166	If landscaping is used, evergreen plant material shall be spaced at an appropriated density to provide full screening. Fencing shall be black coated chain link.
2.5.3.6	88	A main pedestrian connection path will be located within a parking lot divider median landscaped with trees and shrubs in larger parking lots to enhance the safety and comfort of pedestrians. For parking lot lighting, see Appendix E, Light Standards.
4.5.5	156	Outdoor Energy Conservation and Parking Lot Lighting
4.8	166	Trees and landscaping planters shall be provided throughout the parking lots to provide shade and provide areas for bio-swales and bio-filters. For parking lot lighting, see Appendix E, Light Standards.
3.6	114	See Section 4.2.2 and Appendix E of this Specific Plan and Salinas Zoning Code Article V, Division 2: Parking, Loading and Outdoor Lighting.
3.6	116	See Section 4.2.2 and Appendix E of this Specific Plan and Salinas Zoning Code Article V, Division 2: Parking, Loading and Outdoor Lighting.
3.6	119	See Section 4.2.2 and Appendix E of this Specific Plan and Salinas Zoning Code Article V, Division 2: Parking, Loading and Outdoor Lighting.
6.4.1	231	Each of the two middle school sites is approximately 10 acres in size; the middle school site is approximately 21 acres in size. Improvement of school site frontages, ROW and parkway improvements are the responsibility of the owner, developer, entity, etc. developing the land adjacent to the site, subject to review and approval by the City Engineer and City Planner.
2.4.1	41	Figure updated to show current park shapes and locations.
1.3	25	Figure updated to show correct designation of the town square park
1.3	27	Figure updated to show correct district of the town square park
1.2.2.1	9	Figure updated to show north arrow.
4.2.2.1	136	Graphic updated to show dimension correctly.
4.2.2.1	136	Graphic updated to show dimension correctly.
4.2.2.1	137	Graphic added where it was missing.
4.2.3	139	Figure updated to show sound wall along Russell Road.
4.2.3.2	143	Figure updated to have consistent font

3.6	114	Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer.
3.6	114	Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.
3.6	117	Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer.
3.6	117	Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.
2.6	89	Inclusionary housing requirements (including the Ordinance) are further discussed in the Affordable Housing component for the West Area Specific Plan as contained in Appendix H of the Specific Plan. Regarding applicability of the Inclusionary Housing Ordinance, Parcelization Maps (see appendix B, Definitions) shall not be considered the first approval.
1.2.3.2	15	Table updated to show correct and updated APNs.
9.3	291	Parcelization Maps Parcelization Maps shall mean a parcel map processed administratively for the purpose of creating master parcels for sale, financing or phasing purposes and on which no development is permitted without further subdivisions or other entitlement approval.
3.11	129	A detailed and complete wall plan (including the design and color of all walls) for each neighborhood or Planning Area, and, when required, noise reduction calculations shall be submitted and approved by the City Planner and City Engineer before any sound walls are constructed within a neighborhood or Planning Area. The construction of walls along Russell Road shall be the responsibility of the developer.

4.2.3	141	A complete wall and fence plan (including the design and color of all walls and fences) for each neighborhood or neighborhood Planning Area and, when required, noise reduction calculations shall be submitted and approved by the City Planner and City Engineer prior to any walls or fences being constructed within a neighborhood or neighborhood Planning area. The construction of walls along Russell Road shall be the responsibility of the developer.
4.1	132	Residential architectural design is the key to New Urbanism neighborhoods of Salinas. Where the word "shall" is used, the design standard is mandatory, where "encouraged" or "should" is used, the design standard is discretionary and an alternative design solution which achieves a comparable result may be used if approved by the City Planner.
5.3.2.5	200	Both sides of Russell Road will consist of an 8-foot parkway, a path 8-feet wide, and an 8-foot landscaped area between the path and a perimeter wall, or Type 3 wall as applicable per Community Wall Plan on the adjacent property line. The owner, developer and/or entity developing along Russell Road shall be responsible for construction of walls, frontages, ROW/parkway improvements, and half the street width, as determined by the City Engineer.
7.3	240	The landscape and maintenance plan must be prepared by a qualified professional and is subject to approval by the City Engineer and the City Planner (see Section 4.6 and 7.4.9 for further discussion). The submittal for the map creating the basin(s) shall also include improvements of frontages, ROW/parkway, and half the street width, as determined by the City Engineer.
2.8.1	91	It is anticipated that the middle school will serve primarily students residing in the Plan Area. A third elementary school site had been made available for Santa Rita Union School District in the Central Area Specific Plan area across Natividad Road. As of the date of approval of this Specific Plan, a boundary adjustment had been initiated between Santa Rita Union School District and Alisal Union School District. If the districts finalize the boundary adjustment, Santa Rita Union School District would relinquish the third elementary school site to the Alisal Union School District.

8.4	270	With the exception of Rogge Road, these roads will be improved by the developer and/or shall be funded proportionately by the City's Traffic Fee Ordinance in place at the time of permit issuance, or as otherwise determined in the development agreement. Fair share cost of the traffic mitigation measure improvements identified in the West Area Specific Plan Final EIR shall be collected in the same manner as TFO fees.
9.7	303	m. Incorporation and development of the following APNs 211-214-025-000 and 211-214-026-000 in accordance with this Specific Plan.
6.4.1	232	Table 6-4 updated to show latest student generation rates per EIR comment letters from school districts.
8.7	280	Add "… or special districts" to footnote 1 on Table 8-1
9.3	292	Development Review Applications and Building Permits Following approval of each final map, project applicants within the Plan Area may apply for the applicable development review process or building permit through the Community Development Department and Salinas Permit Center as applicable. Building Permits may not be issued until approval of the final map and the applicable Development Review Application process (SPR, CUP, etc.) is completed. For projects subject to Site Plan Review (SPR), the Community Development Department shall approve, conditionally approve, or disapprove the site plan within 30 days of the application being deemed complete unless the Applicant requests an extension in writing. Other Development Review Application processes such as Conditional Use Permits are subject to the timelines established in the Permit Streamlining Act. All project structures must be consistent with the approved Specific Plan, City NPDES Permit/SWDS/SWSP requirements, final map, and applicable Salinas Zoning Code requirements and must comply with all California Building Code (including CalGreen) and Fire Code requirements and all other applicable codes adopted and enforced by the City. The applicable California Building Code and Fire Code (as may be amended) shall be those in effect at the time of the building permit submittal.
8.4	273	It is expected that ~~17~~ 19 additional police officers and associated equipment/vehicles…

Temporary Use of Land	**See Zoning Code Section 37-50.300 Temporary Use of Land**

(1) Architectural features can project two feet into front, corner or interior side yard setbacks that are 5 feet or more.
(2) To maintain the required densities, percentages and variety of lot sizes, once subdivided, no further subdivision shall be allowed without a "major" Specific Plan amendment and subsequent CEQA evaluation. This does not apply to dedicated school sites in accordance with Chapter 31 of the Salinas Municipal Code.
(3) Front and corner side yards and any additional yard space located in front of the street façade of a dwelling and side yard fence are required to be landscaped with a mix of vegetation and other pervious materials as approved by the City Engineer and City Planner. Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off-street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer. Parking in required front, corner or interior side yards is prohibited except on the approved driveway leading to required off-street parking (garage).
(4) Rear yard and interior side yard hardscape/impervious improvements are limited to a total of 50% of the total square footage of the yard or 500 square feet, whichever is less (not including building/structure footprints and driveways approved by the City Planner and City Engineer serving the required parking). Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.
(5) See Salinas Zoning Code Section 37-50.080: Exceptions to Height Limits.
(6) See Salinas Zoning Code Section 37-50.060: Density Bonus.
(7) Minimum lot sizes may be reduced when the exclusive use of such lots is intended for utility substations, pumping stations, and similar features.
(8) Refer to Section 4.2.2, Garages and Driveways of the Specific Plan. All garages shall have roll-up doors and must be set back a minimum of five feet from the street façade of the principal dwelling.
(9) Frontage minimum of 30 feet accommodates curved streets and knuckle corners.
(10) Standard 20-foot wide minimum public alley. Rear lot line measured at the edge of ROW.
(11) Rear lot line measured at center line of standard 20-foot-wide minimum alley easement.
(12) Minimum 20-foot driveway length to street property line as measured from garage door.
(13) No street-loaded garages allowed for duplex/triplex dwellings.
(14) An unenclosed porch or architectural entry feature shall be at least sixty square feet with a minimum unobstructed dimension of six feet.
(15) Subject to the approval of the City Planner and to promote eyes on the street and encourage an engaging streetscape, the front setback may be reduced to a minimum of five feet for an outdoor courtyard not exceeding a maximum of 100 square

feet (of pavers or pervious concrete) in area and surrounded by landscaping and enclosed by a wall exceeding thirty-six inches in height to a maximum of forty-two inches in height.
(16) If second story living area is provided, the rear setback shall be five feet or 15 feet, as applicable.
(17) Rear lot line measured from edge of the ROW.

(1) Architectural features can project two feet into front, corner or interior side yard setbacks that are 5 feet or more.

(2) To maintain the required densities, percentages and variety of lot sizes, once subdivided, no further subdivision shall be allowed without a "major" Specific Plan amendment and subsequent CEQA evaluation. This does not apply to subsequent subdivisions in accordance with Section 3.9.3, Mixed Use Commercial to Residential Flexibility, of this Specific Plan, or dedicated school sites in accordance with Chapter 31 of the Salinas Municipal Code. Front and corner side yards and any additional yard space located in front of the street façade of a dwelling and side yard fence are required to be landscaped with

a mix of vegetation and other pervious materials as approved by the City Engineer and City Planner. Pavers and pervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off-street parking, an entry walkway as approved by the City Engineer and City Planner not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling or an approved semi-private courtyard. Parking in required front, corner or interior side yards is prohibited except on the approved driveway leading to required off-street parking (garage).

(3) Front and corner side yards and any additional yard space located in front of the street façade of a dwelling and side yard fence are required to be landscaped with a mix of vegetation and other pervious materials as approved by the City Engineer and City Planner. Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off-street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer. Parking in required front, corner or interior side yards is prohibited except on the approved driveway leading to required off-street parking (garage).

(4) Rear yard and interior side yard hardscape/impervious improvements are limited to a total of 50% of the total square footage of the yard or 500 square feet, whichever is less (not including building/structure footprints and driveways approved by the City Planner and City Engineer serving the required parking). Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.

(5) See Salinas Zoning Code Section 37-50.080: Exceptions to Height Limits.

(6) See Salinas Zoning Code Section 37-50.060: Density Bonus.

(7) Minimum lot sizes may be reduced when the exclusive use of such lots is intended for utility substations, pumping stations, and similar features.

(8) Refer to Section 4.2.2, Garages and Driveways of the Specific Plan. All garages shall have roll-up doors and must be set back a minimum of five feet from the street façade of the principal dwelling.

(9) Frontage minimum of 30 feet accommodates curved streets and knuckle corners.

(10) Standard 20-foot-wide minimum public alley. Rear lot line measured at the edge of ROW. All garages must be set back a minimum of five feet from the street façade of the principal structure.

(11) Rear lot line measured at center line of standard 20-foot wide minimum alley easement.

(12) Minimum 20-foot driveway length to street property line as measured from garage door.

(13) No street-loaded garages allowed for duplex/triplex dwellings.

(14) An unenclosed porch or architectural entry feature shall be at least sixty square feet with a minimum unobstructed dimension of six feet.

(15) Subject to the approval of the City Planner and to promote eyes on the street and encourage an engaging streetscape, the front setback may be reduced to a minimum of five feet for an outdoor courtyard not exceeding a maximum of 100 square feet (of pavers or pervious concrete) in area and surrounded by landscaping and enclosed by a wall exceeding thirty-six inches in height to a maximum of forty-two inches in height. Rear lot line measured from edge of the ROW.

(16) If second story living area is provided, the rear setback shall be five feet or 15 feet, as applicable.

(17) Rear lot line measured from edge of the ROW.

(18) Where private drives and alleys are provided, curbs shall be painted red and appropriate signage for parking restrictions shall be provided as determined by the City Engineer, City Planner, and Fire Chief.

(19) The minimum lot frontage requirement for single-family attached dwellings shall be twenty feet except that the minimum lot frontage requirement may be waived for single-family attached dwellings (townhomes and rowhouses) located on lots, which do not front a street.

(20) 0 foot interior side yard setback if abutting a single-family attached dwelling.

(21) For lots that do not have street frontage (such as green court housing products, etc.) the location of required front, side, and rear yards will be determined by the City Planner.

(22) For Custom Dwellings located on a private drive, the alley easement development regulations shall apply.

(1) Architectural features can project two feet into front, corner or interior side yard setbacks that are five feet or more.
(2) See Salinas Zoning Code Section 37-50.080: Exceptions to Height Limits.
(3) See Salinas Zoning Code Section 37-50.060: Density Bonus.
(4) Minimum lot sizes may be reduced when the exclusive use of such lots is intended for utility substations, pumping stations, and similar features.
(5) Assumes shared parking with office/retail uses in addition to this required amount for one and two bedroom units in the mixed use Village Center, and two bedroom units built to a minimum of 30 du/nra in the NG-2.
(6) Subareas 1.6, 1.7 (eastern portion), 3.1 and 3.5 adjacent to the Village Center may be built at a minimum density of 30 du/nra to a maximum of 40 du/nra. This can be done only through commercial conversion and the total unit count for these subareas may exceed the maximum specified in Table 3-6.
(7) Five feet per story per building/maximum 20'.
(8) For lots that do not have street frontage (such as green court housing products, etc.) the location of required front, side, and rear yards will be determined by the City Planner.
(9) If alley easements are proposed, minimum lot dimensions shall increase to the centerline of the easement, as applicable.
(10) Carports may be located within five feet of an adjacent interior property line.
(11) Plus 10 dwelling units per net residential acre.

SUBJECT: NOTICE OF PREPARATION – WEST AREA SPECIFIC PLAN EIR

EIR CONSULTANT
Steve McMurtry, Principal Planner
De Novo Planning Group
1020 Suncast Lane, Suite 106
El Dorado Hills, CA 95762
Phone: (916) 580-9818

An Initial Study has been prepared for the proposed project and is attached to this Notice of Preparation (NOP). The Initial Study lists those issues that will require detailed analysis and technical studies that will need to be evaluated and/or prepared as part of the EIR. The EIR will consider potential environmental effects of the proposed project to determine the level of significance of the environmental effect, and will analyze these potential effects to the detail necessary to make a determination on the level of significance.

Those environmental issues that have been determined to be less than significant will have a discussion that is limited to a brief explanation of why those effects are not considered potentially significant. In addition, the EIR may also consider those environmental issues which are raised by responsible agencies, trustee agencies, and members of the public or related agencies during the NOP process.

We need to know the views of your agency or organization as to the scope and content of the environmental information germane to your agency's statutory responsibilities or of interest to your organization in connection with the proposed project. Specifically, we are requesting the following:

1. If you are a public agency, state whether your agency will be a responsible or trustee agency for the proposed project and list the permits or approvals from your agency that will be required for the project and its future actions;

2. Identify significant environmental effects and mitigation measures that you believe need to be explored in the EIR with supporting discussion of why you believe these effects may be significant;
3. Describe special studies and other information that you believe are necessary for the City of Salinas to analyze the significant environmental effects, alternatives, and mitigation measures you have identified;
4. For public agencies that provide infrastructure and public services, identify any facilities that must be provided (both on- and off-site) to provide services to the proposed project;
5. Indicate whether a member(s) from your agency would like to attend a scoping workshop/meeting for public agencies to discuss the scope and content of the EIR's environmental information;
6. Provide the name, title, and telephone number of the contact person from your agency or organization that we can contact regarding your comments.

Due to the time limits mandated by State law, your response must be sent and received by the City of Salinas by the following deadlines:

- For responsible agencies, not later than 30 days after you receive this notice.
- For all other agencies and organizations, not later than 30 days following the publication of this Notice of Preparation. The 30 day review period ends on Tuesday, November 10, 2015.

If we do not receive a response from your agency or organization, we will presume that your agency or organization has no response to make.

A responsible agency, trustee agency, or other public agency may request a meeting with the City of Salinas or its representatives in accordance with Section 15082(c) of the CEQA Guidelines. A public scoping meeting will be held during the public review period as follows:

SCOPING MEETING: October 29, 2015 at 6:30 p.m., at the McKinnon Elementary School, Multi-purpose room, 2100 McKinnon Street, Salinas, CA 93906.

Please send your response or questions to Gabriel Elliott, Project Manager at the City of Salinas located at 65 W. Alisal Street (Second Floor), Salinas, CA 93901. Contact information: email: gabriel.elliott@ci.salinas.ca.us; Telephone: (831) 775-4246.

EXHIBIT "H"

CEQA FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS OF THE CITY COUNCIL OF THE CITY OF SALINAS FOR THE WEST AREA SPECIFIC PLAN

I. INTRODUCTION

The City of Salinas (hereinafter "City"), as lead agency, prepared a Program Environmental Impact Report (hereinafter "EIR") for the West Area Specific Plan (hereinafter "Specific Plan" or "project"). In its entirety, the EIR consists of the February 27, 2019 Draft Program EIR (hereinafter "Draft EIR" or "DEIR") and the October 10, 2019 Final Program EIR (hereinafter "Final EIR" or "FEIR") (State Clearinghouse No. 2006021072).

The Applicant has submitted applications requesting approval of the West Area Specific Plan, Rezoning, and Development Agreement. As approved, the project will facilitate the City's future consideration of applications for individual projects to be proposed within the Specific Plan Area.

The EIR analyzes the impacts of the West Area Specific Plan and the anticipated subsequent filing of maps and other development applications in the future. Therefore, the EIR analyzes the total impacts of the West Area Specific Plan, including these applications yet unfiled, so that future filings will not require separate environmental analysis, as long as development proposed does not substantially deviate from the approved Specific Plan. The specific processes by which the City will review individual applications are set forth on pages ES-1 through pages ES-4 of the Draft EIR and are also described below in section III(D).

These findings, as well as the accompanying statement of overriding considerations in Section XI below, have been prepared in accordance with the California Environmental Quality Act (hereinafter "CEQA") (Pub. Resources Code, § 21000 et seq) and its implementing guidelines (hereinafter "CEQA Guidelines") (Cal. Code Regs., tit. 14, § 15000 et seq).

II. DEFINITIONS AND ACRONYMS

Like the EIR itself, these findings use a number of acronyms. Key acronyms are defined the first time they are introduced in the text of this document.

III. PROJECT DESCRIPTION

A. Location

As described in the DEIR, the City of Salinas is located in northern Monterey County, within the Salinas Valley between the Gabilan and Santa Lucia mountain ranges. Salinas is situated approximately 20 miles northeast of the City of Monterey, 60 miles south of San Jose, 100 miles south of San Francisco and 325 miles north of Los Angeles. Figure 2-1 in the Draft EIR displays the project regional location. Several regional transportation routes are located within or near Salinas, including U.S. Highway 101 (U.S. 101), State Routes 68 (SR 68) and 183 (SR 183), the

Union Pacific Railroad line and the Monterey Regional Airport in Monterey. Salinas Municipal Airport, a general aviation facility, is located in the southeastern portion of the city.

The Specific Plan Area is located within the incorporated boundary of the City of Salinas. It is bounded by San Juan Grade Road on the west, East Boronda Road (also referred to as "Boronda Road") on the south, Natividad Road on the east, and Rogge Road and the future extension of Russell Road on the north. Gabilan Creek is located east of the Specific Plan Area, while U.S. 101 and North Main Street are located to the west. Unincorporated land under the jurisdiction of the County of Monterey abuts the Specific Plan Area on the north and northeast (DEIR, p. 2.0-1).

B. Overview

The West Area Specific Plan establishes the land use planning and regulatory guidance, including the land use and zoning designations and policies, development regulations, and design standards, for the approximately 797-acre Specific Plan Area. The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to—the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the City of Salinas General Plan, as well as more specific policies and implementation measures contained in other documents. The City of Salinas Zoning Code requirements will apply to development applications and property within the Specific Plan Area unless specifically superseded by the development regulations or design standards contained in the Specific Plan.

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan (including the Specific Plan's goals) and related entitlements. Land uses in the approximate 797-acre Specific Plan Area include residential, mixed use commercial, community park, neighborhood parks, small parks, schools and open space (including supplemental storm water detention/retention basins). Implementation will involve development of the site under the New Urbanism Zoning Districts of Neighborhood Edge (NE)/Low Density Residential, Neighborhood General 1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, Village Center (VC) as well as the Public and Semipublic (PS), Parks (P), and Open Space (OS) Zoning Districts.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space areas (including supplemental storm water detention/retention basins) and 11 parks). It is anticipated that the Specific Plan Area will house up to 15,928 residents at project build-out.

C. Project Objectives

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan and related entitlements. The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and 11 parks. The Specific Plan goals are summarized as follows:

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.
- Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.
- Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.
- Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.
- Provide public services and infrastructure improvements that achieve and maintain City service standards.
- Provide an inviting tree-lined street system which incorporates traffic calming and other measures.
- Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater Future Growth Area (FGA) and City as a whole.
- Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.
- Provide for a reasonable jobs/housing balance.
- Provide opportunities for senior housing.
- Provide for a site/parcel-based post-construction Stormwater Control Measures (SCMs)/LID to the maximum extent practicable.

It is noted that there are additional project objectives that are not specifically presented in the Specific Plan, but are more overarching and are a response to, and driven by, the policy direction from the State Legislature and the Salinas City Council.

The State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by

producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The City of Salinas has recognized the need for additional housing supply for its citizens for many decades. Dating back to 1986, the City entered into the Boronda Memorandum of Understanding (MOU) with the County of Monterey to preserve the best agricultural land and to provide certain areas for future urban growth. Twenty years later, in 2006, the Greater Salinas Area MOU was adopted to preserve agricultural lands within Monterey County, and to provide future growth areas (FGSs) for Salinas. A year later, in 2007, applications for an amendment to the City's Sphere of Influence (to include the FGAs) and Pre-Zoning and Annexation (for the majority of the North of Boronda FGA consisting of approximately 2,400 acres) were submitted to the Monterey County Local Agency Formation Commission (LAFCO) for consideration. A Supplemental EIR for the Salinas General Plan Final Program EIR (SCH#2007031055) was also submitted in conjunction with the applications. The applications were approved by LAFCO on May 19, 2008. The North of Boronda FGA (which includes the West Area Specific Plan) was formally annexed to the incorporated City of Salinas on September 8, 2008 and zoned New Urbanism Interim (NI) with a Specific Plan Overlay. The West Area Specific Plan is a reflection of over twenty years of planning for new development, which is reflected by the City Council's approval of the FGA, including annexation of the land into the City limits.

The following two overarching project objectives are presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

Based on its own review of the EIR and other information and testimony received in connection with the project, as well as the statutory and planning policies described above, the City Council finds all of these objectives to be acceptable and persuasive from a public policy standpoint. In

choosing to approve the project, the City thus embraces these objectives and accords them weight in considering the feasibility of alternatives set forth in the EIR, and in invoking overriding considerations in approving the project. (See *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1507-1508.)

D. Discretionary Approvals

Project approval requires the City, as lead agency, to take discrete planning and regulatory actions to approve the overall project. In addition, certain "responsible agencies" may ultimately rely in part on the programmatic analysis in the Specific Plan Area in making decisions associated with future site-specific projects consistent with the Specific Plan. Described below are the discretionary actions necessary to carry out the project.

City of Salinas

In addition to certifying the Final EIR and adopting these Findings and the associated Statement of Overriding Considerations and Mitigation Monitoring Plan (CEQA requirements), the City itself must approve the following actions:

- Certification of the EIR and adoption of the Mitigation Monitoring and Reporting Program (MMRP);
- Approval of the Draft West Area Specific Plan;
- Approval of the rezoning of the Specific Plan area from NI with a Specific Plan Overlay to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay is also applicable to each Zoning District; and
- Approval of the Development Agreement;
- Subsequent Approvals: Parcel Maps, tentative maps, Final Maps, Subdivision Improvement Plans, Site Improvement Plans, Grading Permits, Building Permits, Conditional Use Permits, Business Permits, Encroachment Permits, etc.

Other Responsible/Trustee Agencies

The agencies below will also use the EIR, either as responsible agencies or as trustee agencies:

- California Department of Fish and Wildlife – Lake and Streambed Alteration Agreement (1600 permit);
- Cal Water – Approval of SB 610 Water Supply Assessment, Approval to serve the Specific Plan Area;
- Central Coast Region - Regional Water Quality Control Board – Clean Water Act Section 401 Water Quality Certification, National Pollution Discharge Elimination System (NPDES) general construction permit;
- Comcast/AT&T/SBC/Other – Approval to serve the Specific Plan Area, approval of telecommunications utility plans, Encroachment Permits;
- Johnson Canyon Landfill – Approval to serve the Specific Plan Area;
- Monterey Bay Air Resources District – Authority to Construct; Demolition permit;

- Monterey Bay Community Power – Approval to Serve the Specific Plan Area;
- Monterey One Water – Approval to serve the Specific Plan Area for wastewater services, and Encroachment Permit;
- Monterey County Health Department - Well demolition permit, Well construction permit;
- Monterey County Water Resources Agency – Approval to serve the Specific Plan Area, Encroachment Permit;
- Monterey-Salinas Transit – Approval to serve the Specific Plan Area, approval of bus stop locations and design;
- Pacific Gas and Electric Company – Approval to serve Specific Plan Area, approval of relocation plans, approval of electric and gas utility plans, Encroachment Permit;
- Salinas Valley Solid Waste Authority – Approval to serve the Specific Plan Area; and
- Santa Rita Union School District – Approval of site for the construction of two new elementary schools and one middle school

Federal Agencies

The following federal agencies also have approval authority over some aspects of the project, though these agencies are not subject to CEQA and instead are required to comply with the federal National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.):

- U.S. Army Corps of Engineers;
- U.S. Fish and Wildlife Service; and
- U.S. Federal Emergency Management Agency.

Future Projects

All individual future development projects proposed within the Specific Plan Area will be reviewed to determine their individual CEQA compliance requirements. The type of CEQA analysis required would be determined at the time a project is proposed.

It is noted that the Specific Plan provides a very high level of design detail for certain components of the project. To the extent that sufficient detail is available in the Specific Plan, a full project-level analysis is provided in this EIR. Examples of a full project level analysis would include topics that are related to the physical acreage affected (i.e., the project footprint), as opposed to the number of units, land uses/zoning, or other design parameters. Topics such as Biological Resources, Cultural Resources, and Hydrology/Water Quality are analyzed at a project-level analysis in this EIR given that these are physical environmental resources, and the area of impact is fully defined. Additionally, the Specific Plan includes a substantial level of detailed information that allows for a project-level analysis of topics such as Air Quality, Greenhouse Gases and Climate Change, Noise, Population and Housing, Transportation and Circulation, and Utilities. The analysis for these topics is driven by the number of units and square footage of development, which is detailed in the land use design and development projections. In some cases, there may be specific commercial uses that have design details developed at a later date that cannot reasonably be analyzed at a project-level at this time. Additionally, the design of the school facilities and other public facilities are not known at this time, so they are not able to be analyzed at a project-level.

This EIR examines the planning, construction and operation of the project. The program-level approach, with some project-level analysis, is appropriate for the project because it allows comprehensive consideration of the reasonably anticipated scope of the development plan; however, as discussed above, not all design aspects of the future development phases are known at this stage in the planning process. Subsequent individual development that requires further discretionary approvals will be examined in light of this EIR to determine whether additional environmental documentation must be prepared.

CEQA Guidelines Section 15168 states that a program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

1. Geographically,
2. As logical parts in the chain of contemplated actions,
3. In connection with issuance of rules, regulations, plans or other general criteria to govern the conduct of a continuing program, or
4. As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

According to CEQA Guidelines section 15168, subdivision (c)(5), "[a] program EIR will be most helpful in dealing with later activities if it provides a description of planned activities that would implement the program and deals with the effects of the program as specifically and comprehensively as possible." Later environmental documents (EIRs, mitigated negative declarations, or negative declarations) can incorporate by reference materials from the program EIR regarding regional influences, secondary impacts, cumulative impacts, broad alternatives, and other factors (CEQA Guidelines Section 15168[d][2]). These later documents need only focus on new impacts that have not been considered before (CEQA Guidelines Section 15168[d][3]).

Section 15168(c), entitled "Use with Later Activities," provides, in pertinent part, as follows: Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared:

1. If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration. That later analysis may tier from the program EIR as provided in Section 15152.
2. If the agency finds that pursuant to Section 15162, no subsequent EIR would be required, the agency can approve the activities as being within the scope of the project covered by the program EIR, and no new environmental document would be required. Whether a later activity is within the scope of a program EIR is a factual question that the lead agency determines based on substantial evidence in the record. Factors that an agency may consider in making that determination include, but are not limited to, consistency of the later activity with the type of allowable land use, overall planned density and building intensity, geographic area analyzed for environmental impacts, and covered infrastructure, as described in the program EIR.

3. An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into later activities in the program.
4. Where the later activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were within the scope of the program EIR.

Here, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e. tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether there are new environmental effects that were not covered by the program EIR). The City's expectation, at least at present, is that the checklist will conclude that most, or all, components of the Specific Plan can be developed with no new analysis of environmental effects given that there is a high level of resolution with regard to the project details that have been analysis in this program EIR. In some cases, however, a site-specific application (i.e., a proposed commercial use) may have specific issues associated with the project, or business, that this program EIR could not anticipate given the information that was available at this time. In those situations, the detailed site-specific information from that application could have site-specific effects not wholly anticipated in this EIR and would require some additional environmental review. (See also CEQA Guidelines section 15063, subd. (b)(1)(C).)

Future site-specific approvals may also be narrowed pursuant to the rules for tiering set forth in CEQA Guidelines Section 15152. "'[T]iering is a process by which agencies can adopt programs, plans, policies, or ordinances with EIRs focusing on 'the big picture,' and can then use streamlined CEQA review for individual projects that are consistent with such…[first tier decisions] and are…consistent with local agencies' governing general plans and zoning.'" (*Koster v. County of San Joaquin* (1996) 47 Cal.App.4th 29, 36.) Section 15152 provides that, where a first-tier EIR has "adequately addressed" the subject of cumulative impacts, such impacts need not be revisited in second- and third-tier documents. Furthermore, second- and third-tier documents may limit the examination of impacts to those that "were not examined as significant effects" in the prior EIR or "[a]re susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means." In general, significant environmental effects have been "adequately addressed" if the lead agency determines that:

a. they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental impact report; or
b. they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project.

Here, as noted above, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e., tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether all significant environmental impacts identified have been "adequately addressed" in the program EIR). Thus, if a new analysis is required for these site-specific actions, it would focus on impacts that cannot be "avoided or mitigated" by mitigation measures that either (i) were adopted in connection with the Specific Plan or (ii) were formulated based on information in this EIR.

In addition, because the EIR addresses the effects of rezoning the land within the proposed Specific Plan area, future environmental review can also be streamlined pursuant to Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183. These provisions, which are similar but not identical to the tiering provisions, generally limit the scope of necessary environmental review for site-specific approvals following the preparation of an EIR for a "zoning action." For such site-specific approvals, CEQA generally applies only to impacts that are "peculiar to the parcel or to the project" and have not been previously disclosed, except where "substantial new information" shows that previously identified impacts would be more significant than previously assumed. Notably, impacts are considered not to be "peculiar to the parcel or to the project" if they can be substantially mitigated pursuant to previously adopted, uniformly applied development policies or standards. As noted above, the City anticipates that, in assessing the extent to which the Specific Plan EIR has previously addressed significant impacts that might occur with individual projects, the City may conclude that in some instances (e.g., with respect to agricultural resources, cultural resources, geology, soils, and paleontological resources), no further analysis beyond that found in the program EIR will be necessary.

Finally, for purely residential projects consistent with the Specific Plan, the City intends to preserve its ability to treat such projects as exempt from CEQA pursuant to Government Code section 65457. Subdivision (a) of that statute provides that "[a]ny residential development project, including any subdivision, or any zoning change that is undertaken to implement and is consistent with a specific plan for which an [EIR] has been certified after January 1, 1980, is exempt from the requirements of [CEQA]." The statutes go on to say, moreover, that "if after adoption of the specific plan, an event as specified in Section 21166 of the Public Resources Code occurs, the exemption provided by this subdivision does not apply unless and until a supplemental [EIR] for the specific plan is prepared and certified in accordance with the provisions of [CEQA]. After a supplemental [EIR] is certified, the exemption … applies to projects undertaken pursuant to the specific plan." (See also CEQA Guidelines section 15182.)

When purely residential projects are proposed, the City will consider whether they qualify for this exemption or whether the West Area Specific Plan EIR must be updated through a supplement to this EIR or a subsequent EIR as required by Public Resources Code section 21166 and CEQA Guidelines sections 15162 and 15163.

IV. ENVIRONMENTAL REVIEW PROCESS

The Notice of Preparation (hereinafter "NOP") of an EIR was circulated for public review and comment from October 15, 2015 to November 13, 2015 in accordance with CEQA Guidelines section 15082. Written responses to the NOP were received from the following interests/agencies:

1. Northern Salinas Valley Mosquito Abetment District (October 21, 2015)
2. California Department of Transportation (October 28, 2015)
3. Monterey-Salinas Transit (November 16, 2015)
4. Monterey County Resource Management Agency (November 16, 2015)
5. California Natural Resource Agency Division of Land Resource Protection (November 10, 2015)
6. Salinas Union High School District (November 10, 2015)
7. Ohlone/Costanoan-Esselen Nation (January 11, 2016)
8. Santa Rita Union School District (January 29, 2016)
9. Transportation Agency of Monterey County (March 31, 2016)

As part of the early consultation process and pursuant to the CEQA Guidelines section 15083 regarding early public consultation, a scoping meeting was held at the City of Salinas Rotunda (City Council chamber) on October 29, 2015. No specific comments were made about the scope of issues to be addressed in the EIR. Questions and comments were primarily focused on the project description and the project consideration process.

Pursuant to CEQA Guidelines sections 15023, subdivision (c), and 15087, subdivision (f), the State Clearinghouse in the Office of Planning and Research was responsible for distributing environmental documents to State agencies, departments, boards, and commissions for review and comment. The City followed required procedures with regard to distribution of the appropriate notices and environmental documents to the State Clearinghouse. The State Clearinghouse was obligated to make, and did make, that information available to interested agencies for review and comment. The NOP was received by the State Clearinghouse (SCH # 2006021072) and a 30-day public review period ended on November 13, 2015. The NOP and all comments received on the NOP are presented in Appendix A of the Draft EIR.

An Initial Study was also prepared for the project. Included below is a brief summary of findings from the Initial Study on environmental topics that were either found to have no impact or be less than significant, or were found to be sufficiently addressed in the General Plan EIR, and thus are not included within individual sections of the Draft EIR. For full Initial Study Findings and individual topics found to be less than significant through the Initial Study process refer to Appendix A of the Draft EIR.

- **Aesthetics:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would allow development to occur in the City in both vacant and underdeveloped portions of the community, and that the introduction/expansion of urban uses into these areas has the potential to interrupt views of natural features, open space, the hillsides, and agricultural resources, reducing

the aesthetic value of these resources. Additionally, new development in the City was found to increase the amount of light and glare in the community, particularly in areas planned for nonresidential development, such as retail and general commercial. It was also found that future development under the General Plan has the potential to change the visual character of the City.

To minimize and mitigate the impacts on aesthetics, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following five mitigation measures: Mitigation Measure A1 requires the City to implement the City's Gateway Guidelines; Mitigation Measure A2 requires the City to strengthen and require compliance with the City's Design Guidelines; Mitigation Measure A3 requires the City to improve the Lighting Ordinance; Mitigation Measure A4 requires the City to implement landscaping requirements for all proposed projects; and Mitigation Measure A5 requires the City to review all discretionary projects for aesthetics impacts. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures A1 through A5, the potential citywide aesthetics impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that aesthetic impacts associated with the FGAs, which includes the West Area Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Agriculture and Forest Resources:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would result in the conversion of 3,525 acres of agriculture lands to urban uses. The *Final Environmental Impact Report* also indicates that General Plan buildout would result in agricultural activity in proximity to residential and other urban uses, which may result in conflicts between the uses. It is noted that agricultural activity can cause nuisances related to air quality and noise that may disturb surrounding development. Urban activities may also negatively affect nearby agricultural uses, as increased vandalism often occurs and the introduction of domestic animals may disturb certain agricultural activities.

  The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures AG1 through AG4, the impacts on potential compatibility issues would be reduced to a less than significant level; however, while the impacts on agricultural conversion would be reduced to the extent feasible, a significant and unavoidable impact would remain related to the loss of important farmland. Mitigation AG5 specifically addressed Agricultural

Land Conservation Easement Program, which states that the City will work with the County of Monterey and other local jurisdictions to create and implement an agricultural land conservation easement program, including such measures as securing the dedication of easements or by paying a mitigation fee that could be used to purchase easements through a mitigation bank. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a $750.00 per acre mitigation fee for agricultural lands currently designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance."

The City of Salinas certified the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), adopted a statement of overriding considerations relative to this significant and unavoidable impact, and approved the Salinas General Plan.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that agricultural impacts associated with the FGAs, which includes the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above-referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Geology and Soils:** Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Hazards and Hazardous Materials:** While the Draft EIR analyzes Hazards and Hazardous Materials, several topics were determined to not warrant additional analysis within the Chapter.

  The land uses proposed within the Specific Plan Area would not be expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Furthermore, the project is not located in the vicinity of an airport or private airstrip; therefore, it would not result in a safety hazard related to air traffic for people residing or working in the Specific Plan Area. These topics did not warrant additional analysis and were not addressed further in the EIR.

Separately, the City has adopted a Multi-hazard Emergency Plan, which serves as extensions of the California Emergency Plan and the Emergency Resource Management Plan. The purpose of the Multi-hazard Emergency Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Operations Center (EOC) in City Hall serves as the center of the City's emergency operations. The Plan also addresses evacuation and movement of people in the event of an emergency. The project does not impair implementation of or physically interfere with the Multi-hazard Emergency Plan. Implementation of the project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

Lastly, the project is not located in an area that is considered a high risk for wildfires. The project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Implementation of the proposed project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

- **Land Use and Planning:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the impacts would be reduced to a less than significant level with mitigation.

  Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

  The City certified the Final Supplemental EIR and approved annexation of the North of Boronda FGA, which includes the West Area Specific Plan. The project, as proposed, is consistent with the Greater Salinas Area Memorandum of Understanding (GSA MOU). All development under the project would be required to comply with the regulations, policies, and standards identifies in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). Implementation of the project would not result in any new significant adverse impacts beyond those addressed within these supporting documents. This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Mineral Resources:** It was determined in the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) that development of the FGA, including the Specific Plan Area, would not have a significant impact on mineral resources or mining activities. As such, implementation of the project would have no impact on mineral resources and this topic did not warrant additional analysis and is not addressed further in the EIR.

- **Population and Housing:** While the Draft EIR analyzes Population and Housing, several topics were determined to not warrant additional analysis within the Chapter.

The Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) noted that the General Plan would not result in the displacement of substantial numbers of existing housing units or persons since the majority of the FGA designated for future development consists of vacant, agricultural, or redevelopment of nonresidential land. Additionally, any individual units that require removal would be offset by the increase in housing by the development of approximately 18,397 additional dwelling units at General Plan buildout.

The project would necessitate the removal of some existing houses within the Specific Plan Area; however, removal of any individual units would be offset by the increase in housing by the development of approximately 4,340 additional dwelling units at Specific Plan buildout. As such, the project would not displace substantial numbers of existing housing or people. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Recreation:** While the project would increase the demand for parks and other recreational facilities based on the population growth, the amount of parkland and open space provided within the Specific Plan Area sufficiently meets the City's parkland requirements. Construction of the parks would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Transportation and Circulation:** While the Draft EIR analyzes Traffic and Circulation, several topics were determined to not warrant additional analysis within the Chapter.

  The project is not located in the vicinity of an airport or airstrip; therefore, it would not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks. Implementation of the project would have no impact relative to this environmental topic

The remaining issues areas and checklist questions are analyzed in the EIR. The EIR includes an analysis of the following issue areas:

- Air Quality
- Biological Resources
- Cultural Resources
- Greenhouse Gases and Climate Change
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Noise
- Population and Housing

- Public Services
- Transportation and Circulation
- Utilities

The City circulated the DEIR for public and agency review on February 27, 2019. A public review period of 45 days was provided on the DEIR and ended on April 15, 2019. This period satisfied the requirement for a 45-day public review period as set forth in Section 15105 of the CEQA Guidelines.

V. RECORD OF PROCEEDINGS

In accordance with Public Resources Code section 21167.6, subdivision (e), the record of proceedings for the City's decision on the project includes the following documents:

- The NOP and all other public notices issued by the City in conjunction with the project;

- All comments submitted by agencies or members of the public during the comment period on the NOP;

- The Draft EIR for the project (February 2019) and all appendices;

- All comments submitted by agencies or members of the public during the comment period on the Draft EIR;

- The Final EIR for the project, including comments received on the Draft EIR and the responses to those comments and appendices;

- Documents cited or referenced in the Draft EIR and Final EIR;

- The mitigation monitoring and reporting program for the project;

- All findings and resolutions adopted by the City Council in connection with the project and all documents cited or referred to therein;

- All reports, studies, memoranda, maps, staff reports, or other planning documents relating to the project prepared by the City, consultants to the City, or responsible or trustee agencies with respect to the City's compliance with the requirements of CEQA and with respect to the City's action on the project;

- The Draft West Area Specific Plan;

- All documents submitted to the City by other public agencies or members of the public in connection with the project, up through the close of the Planning Commission public hearing, and the close of the City Council public hearing;

- Any minutes and/or verbatim transcripts of all information sessions, public meetings, and public hearings held by the City in connection with the project;

- Any documentary or other evidence submitted to the City at such information sessions, public meetings, and public hearings;

- The City of Salinas General Plan and all environmental documents prepared in connection with the adoption of the General Plan;

- Any and all resolutions approved by the City regarding the project, and all staff reports, analyses, and summaries related to the adoption of those resolutions;

- Matters of common knowledge to the City, including, but not limited to federal, state, and local laws and regulations;

- Any documents expressly cited in these findings, in addition to those cited above; and

- Any other materials required for the record of proceedings by Public Resources Code section 21167.6, subdivision (e).

The documents constituting the record of proceedings are available for review by responsible agencies and interested members of the public during normal business hours at the City of Salinas Community Development Department, 65 West Alisal Street, Salinas, California 93901. The custodian of these documents is the Community Development Director. Without exception, any documents set forth above not found in the project files fall into one of two categories. Many of them reflect prior planning or legislative decisions of which the City Council was aware in approving the project. (See *City of Santa Cruz v. Local Agency Formation Commission* (1978) 76 Cal.App.3d 381, 391-392; *Dominey v. Department of Personnel Administration* (1988) 205 Cal.App.3d 729, 738, fn. 6.) Other documents informed the experts who provided advice to City Staff or consultants, who then provided advice to the City Council. For that reason, such documents form part of the underlying factual basis for the City Council's decisions relating to the approval of the project. (See Pub. Resources Code, § 21167.6(e)(10); *Browning-Ferris Industries v. City Council of City of San Jose* (1986) 181 Cal.App.3d 852, 866; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 153, 155.)

VI. CONSISTENCY WITH APPLICABLE PLANS

This section includes a review of the project's relationship to the General Plan, other land use related documents/agreements, and to regional plans and identifies whether inconsistencies with these plans may exist.

Consistency with the Salinas General Plan

The Salinas General Plan states the City's vision for the community's future and outlines goals, policies and implementation measures to achieve its vision. The General Plan also projects the population, dwelling units, and non-residential building square footage associated with the future

buildout of the Land Use Plan, also referred to as General Plan buildout. Typically, General Plan buildout is decades beyond the 20-year General Plan planning cycle.

As described in CEQA Guidelines section 15125, subdivision (d), an EIR must discuss any inconsistencies between a proposed project and applicable general plans, specific plans, and regional plans. Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan, area-wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, regional blueprint plans, plans for the reduction of greenhouse gas (GHG) emissions, habitat conservation plans, and natural community conservation plans.

New Urbanism principles, a component of the General Plan Land Use Element, were used to design a land use plan for the project that is compact and pedestrian-friendly, with a mixture of uses surrounding activity centers/neighborhood local points in the Specific Plan Area. Higher density residential uses are proposed around retail, recreation, and public uses and all of these core activity centers are proposed to be connected with pedestrian, bicycle, and transit systems.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, middle school, supplemental detention/retention basins and 11 parks). It is anticipated that Specific Plan Area will have up to 15,928 residents at project build-out. This is consistent with the expected intensity of development within the Specific Plan Area under General Plan buildout conditions as analyzed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

The Salinas General Plan requires the approval of Specific Plans prior to development of any land in the North of Boronda Future Growth Area (FGA). The West Area Specific Plan includes certain development regulations and design standards that are intended to be specific to the Specific Plan Area. Where there is a matter or issue not specifically covered by the Specific Plan development regulations and design standards, the Salinas Zoning Code would apply. Where there is a conflict between the Specific Plan and the Zoning Code, the Specific Plan would prevail.

The Specific Plan is intended to be adopted by the City Council and to serve as a tool for the City of Salinas to implement. The Specific Plan is to be used by designers, developers, builders, and planners, to guide development of the Specific Plan Area. The land use, development standards, and design guidelines are provided to ensure that all proposed developments remain consistent with the vision established by the Specific Plan as the project is built over time. The Specific Plan development concepts, design guidelines, and standards are in accordance with the City's General Plan, Municipal Ordinances, and City Specifications. The Specific Plan shall be used to review, process, and approve development proposals for individual parcels/project sites within the Specific Plan Area, including but not limited to site specific development applications and site improvement plans.

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that the General Plan may impact the related land use plans and policies that have

been adopted to avoid or mitigate an environmental effect. The Salinas Zoning Code, Salinas Redevelopment Plan, Greater Salinas Area Plan, Salinas Municipal Airport Master Plan, Monterey County Airport Land Use Plan, GSA MOU, are specifically mentioned. Of these seven documents, the project does not affect an existing Specific Plan, the Salinas Municipal Airport Master Plan, or the Monterey County Airport Land Use Plan, and the Salinas Redevelopment Plan is no longer in effect. These topics are not discussed further, but the other three are discussed below.

Salinas Zoning Code

The Specific Plan Area is currently zoned NI with a Specific Plan Overlay. The project includes a rezone to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay District is also applicable to each Zoning District. The purpose of the rezone is to ensure consistency between the proposed General Plan Land Use Designations and Zoning. With the approval of the rezoning application, the Specific Plan would be consistent with the Salinas Zoning Code.

City/County Greater Salinas Area Memorandum of Understanding

In 2006, the City and the County adopted the GSA MOU to allow for annexation and development of specific parcels that are located outside of the Future Growth Areas as illustrated in the General Plan. These areas were not contemplated for annexation and development at the time the General Plan was adopted. These areas include, but are not limited to, the "Unikool", Boronda Road, and Fresh Express sites.

The GSA MOU describes the intent of each agency to consider annexation of the subject growth areas and identifies framework conditions under which annexations could be considered. The following excerpt from the Preface of the GSA MOU identifies its general intent:

"This Memorandum of Understanding (MOU), by and between the County of Monterey (County) and the City of Salinas (City), is to set forth certain agreements between the parties to express their intent to jointly pursue action to assure orderly and appropriate land use development in the area designated in the General Plan of Monterey County as the Greater Salinas Area Plan area and in the City of Salinas. Specific objectives to be achieved through the implementation of the land use and associated policies included in this MOU are the preservation of certain agriculture land, the provision of future growth areas, and the provision of adequate financing for the services and facilities of benefit to the residents of the Greater Salinas Area Plan area and the City."

With the adoption of the GSA MOU, both the City and the County acknowledged that additional development outside the City's Future Growth Areas would be considered subject to amendment of the City's SOI and annexation of such areas to the City. The GSA MOU also includes a set of points of agreement that govern future annexations and associated development. Among other topics, the points of agreement address the future direction of City growth, agricultural mitigation, traffic impacts, and storm drainage. The GSA MOU states that the direction of future growth of the City shall be to the north and east of the current city limits, except as otherwise provided for in the GSA MOU.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following two mitigation measures: Mitigation Measure LU5 requires the City to continue to cooperate with the County of Monterey to implement the GSA-MOU, which directs that City growth generally to the north and east away from the most productive farmland; and Mitigation Measure LU6 requires the City to encourage City-centered growth and give priority to redevelopment and infill projects that reduce development pressure on agricultural lands. The City will also establish an incentive program to promote these projects, such as priority permit processing and density bonuses for such developments. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda FGA, which includes the WASP. The project as proposed is consistent with the GSA-MOU. All development under the project would be required to comply with the above-referenced regulations, policies, and standards.

Greater Salinas Area Plan

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that implementation of General Plan will result in development outside the existing City limits, into the Greater Salinas Planning Area. Development occurring outside of the City limits is subject to the Greater Salinas Area Plan. The implementation of the General Plan may conflict with the Greater Salinas Area Plan, resulting in a significant impact.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented Mitigation Measure LU2, which requires the City to be consistent with a portion of Draft Policy LU 3.4 of the Monterey County Draft General Plan, and to cooperate with LAFCO and the County of Monterey to direct growth outside the City limits to the Future Growth Area, on lands that are served or are planned to be served, with a full range of urban services, such as public water and sewer, an extensive road network, public transit, safety and emergency response services, parks, trails, and open space. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda Future Growth Area, which includes the Specific Plan. The project as proposed is consistent with the Greater Salinas Area Plan. All development

under the project would be required to comply with the above-referenced regulations, policies, and standards.

VII. FINDINGS REQUIRED UNDER CEQA

Public Resources Code section 21002 provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute provides that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects." Section 21002 goes on to provide that "in the event [that] specific economic, social, or other conditions make infeasible such project alternatives or such mitigation measures, individual projects may be approved in spite of one or more significant effects thereof."

The mandate and principles announced in Public Resources Code section 21002 are implemented, in part, through the requirement that agencies must adopt findings before approving projects for which EIRs are required. For each significant environmental effect identified in an EIR for a project, the approving agency must issue a written finding reaching one or more of three permissible conclusions. The first such finding is that changes or alterations have been required in, or incorporated into, the project, which avoid or substantially lessen the significant environmental effect as identified in the final EIR. The second permissible finding is that such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding, and that such changes have been adopted by, or can and should be adopted by, such other agency. The third potential conclusion is that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR. (CEQA Guidelines, § 15091, subd. (a).)

As explained elsewhere in these findings, "feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors. The concept of "feasibility" also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. (*Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1506-1509 (court upholds CEQA findings rejecting alternatives in reliance on project's objectives); see also *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1001 (*CNPS*) (an alternative "'may be found infeasible on the ground it is inconsistent with the project objectives as long as the finding is supported by substantial evidence in the record'") (quoting Kostka & Zischke, *Practice Under the Cal. Environmental Quality Act* [Cont.Ed.Bar 2d ed. 2009] (*Kostka*), § 17.309, p. 825); *In re Bay-Delta Programmatic Environmental Impact Report Coordinated Proceedings* (2008) 43 Cal.4th 1143, 1165, 1166 (*Bay-Delta*) ([i]n the CALFED program, feasibility is strongly linked to achievement of each of the primary program objectives"; "a lead agency may structure its EIR alternative analysis around a reasonable definition of underlying purpose and need not study alternatives that cannot achieve that basic goal).) Moreover, "'feasibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133

Cal.App.3d 410, 417 (*City of Del Mar*); see also *CNPS, supra,* 177 Cal.App.4th 957 (after weighing "'economic, environmental, social, and technological factors,' ... 'an agency may conclude that a mitigation measure or alternative is impractical or undesirable from a policy standpoint and reject it as infeasible on that ground) (quoting Kostka, *supra,* § 17.29, p. 824))

For purposes of these findings (including the table described in Section IX below), the term "avoid" refers to the effectiveness of one or more mitigation measures to reduce an otherwise significant effect to a less than significant level. In contrast, the term "substantially lessen" refers to the effectiveness of such measure or measures to substantially reduce the severity of a significant effect, but not to reduce that effect to a less than significant level.

As explained above, CEQA requires that the lead agency adopt feasible mitigation measures or, in some instances, feasible alternatives to substantially lessen or avoid significant environmental impacts that would otherwise occur. With respect to a proposed project for which significant impacts are not avoided or substantially lessened, a public agency, after adopting proper findings, may nevertheless approve the project if the agency first adopts a statement of overriding considerations setting forth the specific reasons that the agency found that the project's benefits outweigh its unavoidable adverse environmental effects. The City of Salinas' Statement of Overriding Considerations for the project is included herein in Section XI below.

VIII. MITIGATION MONITORING AND REPORTING PROGRAM

A Mitigation Monitoring and Reporting Program (hereinafter "MMRP") has been prepared for the project, and is being approved by the City Council by Resolution 2019-__(N.C.S.). The City will use the MMRP to track compliance with project mitigation measures. The MMRP will remain available for public review during the compliance period. The Final MMRP is Exhibit "B" of the aforementioned resolution and is approved in conjunction with these Findings of Fact.

IX. SIGNIFICANT EFFECTS AND MITIGATION MEASURES

The EIR identified a number of significant and potentially significant environmental effects (or impacts) that the project will cause or contribute to. Most of these significant effects can be fully avoided through the adoption of feasible mitigation measures. Other effects, however, cannot be avoided by the adoption of feasible mitigation measures or alternatives, and thus will be significant and unavoidable. Some of these unavoidable significant effects can be substantially lessened by the adoption of feasible mitigation measures. Other significant, unavoidable effects cannot be substantially lessened or avoided. For reasons set forth in Section XI however, the City Council has determined that overriding economic, social, and other considerations outweigh the significant, unavoidable effects of the project.

The City Council's findings with respect to the project's significant effects and mitigation measures are set forth in the Table of Impacts, Mitigation Measures, and CEQA Findings attached to these findings. The findings set forth in the table are hereby incorporated by reference.

This table does not attempt to describe the full analysis of each environmental impact contained in the EIR. Instead, the table provides a summary description of each impact, describes the

applicable mitigation measures identified in the Draft EIR or Final EIR and adopted by the City Council, and states the City Council's findings on the significance of each impact after imposition of the adopted mitigation measures. A full explanation of these environmental findings and conclusions can be found in the Draft and Final EIRs, and these findings hereby incorporate by reference the discussions and analyses in those documents supporting the Final EIR's determinations regarding mitigation measures and the projects' impacts and mitigation measures designed to address those impacts. In making these findings, the City Council ratifies, adopts, and incorporates into these findings the analyses and explanations in the Draft EIR and Final EIR, and ratifies, adopts, and incorporates in these findings the determinations and conclusions of the Draft EIR and Final EIR relating to environmental impacts and mitigation measures, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

By Resolution 2019-__(N.C.S.), the City Council adopts all of the mitigation measures identified in the table.

X. PROJECT ALTERNATIVES

A. Basis for Analysis of the Feasibility of Alternatives

Public Resources Code section 21002, a key provision of CEQA, provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute states that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects."

Where a lead agency has determined that, even after the adoption of all feasible mitigation measures, a project as proposed will still cause one or more significant environmental effects that cannot be substantially lessened or avoided, the agency, prior to approving the project as mitigated, must first determine whether, with respect to such impacts, there remain any project alternatives that are both environmentally superior and feasible within the meaning of CEQA. Although an EIR must evaluate this range of *potentially* feasible alternatives, an alternative may ultimately be deemed by the lead agency to be "infeasible" if it fails to fully promote the lead agency's underlying goals and objectives with respect to the project. (*City of Del Mar, supra,* 133 Cal.App.3d at p. 417) "'[F]easibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*Ibid*.; see also *CNPS, supra,* 177 Cal.App.4th at p. 1001.) Thus, even if a project alternative will avoid or substantially lessen any of the significant environmental effects of the project, the decision-makers may reject the alternative if they determine that specific considerations make the alternative infeasible.

Under CEQA Guidelines section 15126.6, the alternatives to be discussed in detail in an EIR should be able to "feasibly attain most of the basic objectives of the project [.]" For this reason, the Objectives described above provided the framework for defining possible offsite alternative project locations. (See *Bay-Delta, supra,* 43 Cal.4th at p. 1166). The project objectives are set out

above in section III.C. Based on the requirements of CEQA Guidelines section 15126.6 and the Project's Objectives, the following alternatives to the project were identified:

No Project (No Build) Alternative

The CEQA Guidelines (Section 15126.6[e]) require consideration of a no project alternative that represents the existing conditions, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved. For purposes of this analysis, the No Project (No Build) Alternative assumes that development of the Specific Plan Area would not occur, and the Specific Plan Area would remain in its current agricultural condition. It is noted that the No Project (No Build) Alternative would fail to meet the project objectives identified for the West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

Reduced Land Area Project Alternative

Under this alternative, the Specific Plan Area would be developed with the same components as described in the Project Description, but the area utilized for the development (i.e., the project footprint) would be reduced by approximately 20 percent. Under this alternative, approximately 162 acres of land in the northeast corner of the Specific Plan Area would be removed. This removed area would include the 52.85-acre Mortensen property (APN 21101108) and the 108.32-acre Madolora/Global property (APN 21101109), which are shown on Figure 5.0-1. The resultant Specific Plan Area would include approximately 635 acres. The proposed land uses within this area identified for removal under this alternative would be incorporated into the remaining 635 acres of the Specific Plan Area, which would increase the residential density of the Specific Plan Area under this alternative, while retaining the same number of residences, mixed use commercial areas, schools, parks, etc. as the project. This alternative would establish a site for a third 10.0-acre elementary school to be developed by the Santa Rita Union School District (District). However, if the District decides against the elementary school siting, the area would instead be residential units.

Under this alternative the average residential density (units per net acre) would increase from 9.0 to approximately 11.3 units/acre. It is assumed that the number of NE parcels would be reduced, and the number of NG-1 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

Reduced Residential Intensity/Density Project Alternative

Under this alternative, the Specific Plan Area would be developed with a reduction in the overall residential intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 25 percent reduction in the intensity/density of the residential components of the project while maintaining the approximately 797-acre project footprint. This would result in fewer residential lots, but larger lot sizes. This alternative would result in up to 3,255 residential units. This alternative would retain the approximately 571,500 square feet of mixed commercial uses, the five proposed schools (three elementary, one middle, and one high school), and the same acreage of parks and detention basins as the project.

Under this alternative, the average residential density (units per net acre) would decrease from 9.0 to approximately 6.8 units/acre. It is assumed that the number of NE parcels would be increased, and the number of NG-1 and NG-2 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

This alternative, based upon residential overall density, is inconsistent with the Salinas General Plan's standards for the Specific Plan Area, which require a minimum of 3,553 residential units within the Specific Plan Area, and the incorporation of New Urbanism concepts which mandates that new residential development have a minimum average density of 9 dwelling units per net residential acre. A General Plan Amendment would be required.

Smaller-scale Project Alternative

Under this alternative, the Specific Plan Area would be reduced by approximately 33 percent and the proposed residential and non-residential uses would also be reduced by approximately 33 percent. For the purposes of discussion, this alternative assumes that approximately 264 acres of land along the entire eastern boundary of the Specific Plan Area would be removed and remain as undeveloped agricultural land. The resultant Specific Plan Area under this alternative would be approximately 533 acres in size, and include up to 2,908 residential units, up to 382,905 square feet of commercial/mixed use building area, and up to 119 acres of public facilities (including two elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and up to 8 parks). The number of residential units under this alternative would not meet the minimum of 3,553 residential units as provided within the City of Salinas General Plan. The residential densities under this alternative would be similar to the project.

The City Council finds that that a good faith effort was made to evaluate all potentially feasible alternatives in the EIR that are reasonable alternatives to the project and could feasibly obtain the basic objectives of the project, even when the alternatives might impede the attainment of the project objectives and might be more costly. As a result, the scope of alternatives analyzed in the EIR is not unduly limited or narrow. The City Council also finds that all reasonable alternatives were reviewed, analyzed and discussed in the review process of the EIR and the ultimate decision on the project. (See, e.g., DEIR, pp. 6-5 to 6-55)

1. Significant, Unavoidable Impacts of the Project

The significant and unavoidable impacts of the project are set out in detail below in Section XI.A.

2. Scope of Necessary Findings and Considerations for Project Alternatives

As noted above, these findings address whether the various alternatives substantially lessen or avoid any of the significant unavoidable impacts associated with the project and also consider the feasibility of each alternative. Under CEQA, "[f]easible means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic,

environmental, legal, social, and technological factors." (CEQA Guidelines § 15364). As explained earlier, the concept of feasibility permits agency decision makers to consider the extent to which an alternative is able to meet some or all of a project's objectives. In addition, the definition of feasibility encompasses "desirability" to the extent that an agency's determination of infeasibility represents a reasonable balancing of competing economic, environmental, social, and technological factors supported by substantial evidence.

In identifying potentially feasible alternatives to the project, the following project objectives were considered:

1. Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.

2. Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.

3. Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.

4. Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.

5. Provide public services and infrastructure improvements that achieve and maintain City service standards.

6. Provide an inviting tree-lined street system which incorporates traffic calming and other measures.

7. Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater FGA and City as a whole.

8. Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.

9. Provide for a reasonable jobs/housing balance.

10. Provide opportunities for senior housing.

11. Provide for a site/parcel-based post-construction SCMs/LID to the maximum extent practicable.

As noted near the beginning of these findings, moreover, the City is keenly aware that the State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most

expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The following two overarching project objectives are therefore presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

B. No Project (No Build) Alternative

In general, a CEQA "No Project Alternative" must "discuss the existing conditions …, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services." (CEQA Guidelines, § 15126.6, subd. (e)(2).) When the proposed project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. In such an instance, the no project alternative consists of evaluating the projected impacts of the proposed plan to the impacts that would occur under the existing plan. "Typically, this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan. (*Id.*, subd. (e)(3)(A).)

1. Analysis of No Project (No Build) Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to air quality. As such, the project level and cumulative impacts would be greatly reduced when compared to the project.

Biological Resources

Under the No Project (No Build) Alternative, the West Area Specific Plan would not be constructed, no habitat would be removed, no wetlands disturbed, and no ground disturbing activities would occur. The Specific Plan Area would remain open to migration, foraging, nesting, and other uses by wildlife. Therefore, potential for impacts to biological resources would be eliminated under the No Project (No Build) Alternative. Impacts to biological resources would be reduced as compared to the project.

Cultural Resources

The No Project (No Build) Alternative would continue to result in ground disturbing activities associated with the agricultural operations (i.e., soil tilling); however, because the ground disturbance associated with farming has occurred for an extended period of time with no cultural resources being found it is anticipated that the continuation of these operations under this alternative would have a significantly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources, the No Project (No Build) Alternative would result in slightly less potential for impacts to cultural resources as the entire Specific Plan Area would continue to be used for agriculture production.

Greenhouse Gases and Climate Change

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to GHG reductions. As such, this impact would be reduced when compared to the project. This does not necessarily mean, however, that the No Project Alternative represents a better long-term policy outcome for climate than the project. California has a large housing need, and new housing will have to be built somewhere, if not the Specific Plan Area. As the California Supreme Court explained, "[g]iven the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced." (*Center for Biological Diversity v. California Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 220-221.)

Hazards and Hazardous Materials

Under the No Project (No Build) Alternative, no new land uses would be introduced to the Specific Plan Area, and the potential for hazardous material release in the Specific Plan Area would be reduced. Ongoing pesticide use would occur within the area to remain in agriculture, and this has the potential to generate negative health effects on existing residents located in the areas south and west of the Specific Plan Area. However, there would not be long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, because development would not occur. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the No Project (No Build) Alternative would result in less potential for impacts.

Hydrology and Water Quality

Under the No Project (No Build) Alternative, potential new water quality impacts from construction and operation of the West Area Specific Plan would be eliminated. Under this alternative, the land would be kept in its present state with the majority of the Specific Plan Area either fallow land or being used for agricultural purposes. The No Project (No Build) Alternative would have a greater chance of groundwater recharge because it would not introduce large areas of impervious surfaces as would the West Area Specific Plan. However, the beneficial impact of reducing the consumptive use of water by 2,078 acre-feet per year (AFY) (Cal Water, 2015) would not exist. This is a significant contribution in reducing overdraft in the Salinas Valley Ground Water basin.

The potential to result in the violation of water quality standards would be reduced under this alternative as compared with the project. However, there are some instances where the No Project (No Build) Alternative would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Nevertheless, overall, potential impacts related to hydrology and water quality would be reduced under this alternative.

Noise

Existing agricultural activities within the Specific Plan Area sometimes involve on-going noise sources such as agricultural equipment (e.g., tractors, harvesters, planters, etc.). Such noise sources are part of the existing ambient noise levels in the Specific Plan Area. Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and there would be no potential for new noise sources; however, existing noise from agricultural operations would continue. As such, this alternative would have less impact relative to the project.

Population and Housing

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and the Specific Plan Area would not accommodate the City's anticipated growth. Growth would still be anticipated to occur within the region, but it would not be accommodated in the FGA, which has undergone extensive planning efforts by the City and community for over a decade. This outcome would not be consistent with the FGA and General Plan. The City would need to look

to other undeveloped areas of the region to develop for new housing, which would be expected to have environmental impacts that have not yet been assessed, but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the No Project (No Build) Alternative, there would be no increased demand for police, fire, schools, parks, or other public services. Alternatively, this alternative would result in no new school or park facilities, which are designed to accommodate more than the demand that is generated by the West Area Specific Plan. Overall, this alternative would have a slightly greater impact to public services when compared to the project.

Transportation and Circulation

Under the No Project (No Build) Alternative, there would be no new traffic generated within the Specific Plan Area. This alternative would also not result in new traffic improvements on the City's roadway system and it would not result in payments of traffic impact fees into the City's Capital Improvement Program (CIP) that would be used for the roadway system. Existing deficiencies in the traffic system would not receive the benefit of improvements to improve existing deficiencies; however, this would be more than offset by the fact that there would be no new contribution to degrading traffic levels of service at a project and cumulative level. Overall, this alternative would have less of an overall traffic impact than the project. Still, the growth for which there is market demand would still be anticipated to occur somewhere else within the region, possibly in areas that could result in transportation effects worse than those of the West Area Specific Plan.

Utilities

Under the No Project (No Build) Alternative, the Specific Plan Area would not have an increased demand for wastewater, storm drainage, or solid waste disposal. There would be no new impacts on these utilities and there would be no need to construct new infrastructure. Therefore, overall, the impact on wastewater, solid waste, and storm drainage would be reduced under this alternative. In conclusion, the No Project (No Build) Alternative would not result in a beneficial impact to groundwater recharge. However, this alternative would decrease the amount of solid waste and wastewater generated at the site, and would not require construction of new utilities infrastructure. Overall, the No Project (No Build) Alternative would not add new impacts to wastewater, storm drainage, or solid waste disposal systems, but would not result in the beneficial impacts to the groundwater system.

2. Feasibility of No Project (No Build) Alternative

The No Project (No Build) Alternative is the environmentally superior alternative because it results in the least adverse environmental impacts when compared to the project. However, the No Project (No Build) Alternative would fail to meet the project objectives identified for the

West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

The City Council finds the No Project (No Build) Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the Project.

C. Reduced Land Area Project Alternative

1. Analysis of Reduced Land Area Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Land Area Project Alternative, the Specific Plan Area would be developed with a 20 percent smaller development area, with an overall increase in residential density. Although the number of users would be the same under this alternative as compared with the project, this alternative has reduced mobile emissions when compared to the project, due to the more compact design of this alternative. It was assumed that mobile emissions under this alternative would be reduced by approximately twenty percent (as compared to the project), the same amount as the reduction in the size of this alternative's footprint when compared to the project. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for reactive organic compounds (ROG), nitrogen oxides (NO_x), and respirable particulate matter (PM_{10}) at buildout.

This alternative would provide more compact development than the project, providing greater opportunities for non-motorized transportation choices (such as walking or cycling). This would slightly reduce vehicle miles travelled (VMT) as compared to the project, which would slightly the mobile source emissions.

The Reduced Land Area Project Alternative would have greater impacts with respect to Air Quality Impact 3.1-1, which is identified as "the potential to conflict with or obstruct implementation of the applicable air quality plan." This is because the Association of Monterey Bay Area Governments (AMBAG), in consultation with the City of Salinas, included the North of Boronda FGA (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The AMBAG 2018 Regional Growth Forecast feeds into the Monterey Bay Air Resources Board's (MBARD) 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as the future version of the Air Quality Management Plan (AQMP). Therefore, while an increase in density has the potential to reduce mobile source emissions if residents chose alternative transportation modes (i.e., walk/bike/transit instead of driving a vehicle), this is not guaranteed to occur given that the choice to drive is still convenient and economical for most residents under this residential density in a suburban environment. The increased residential density under this alternative was not specifically planned for in the MBARD planning documents and within the AMBAG forecasts. Nevertheless, due to the reduced footprint and slightly reduced VMT, this impact would be slightly reduced when compared to the West Area Specific Plan.

Biological Resources

Under the Reduced Land Area Project Alternative, less habitat would be removed, and fewer ground disturbing activities would occur. It is still anticipated that the drainage ditches along Boronda Road would be eliminated (i.e., fill activity). A portion of the Specific Plan Area (twenty percent) would remain open to migration, foraging, nesting, and other uses by wildlife. The balance of the Specific Plan Area (eighty percent of site) would be developed and no longer available for migration, foraging, nesting, and other uses by wildlife. This would still be a significant and unavoidable impact, and would be cumulatively considerable.

When compared to the Specific Plan, potential for impacts to biological resources would be reduced under the Reduced Land Area Project Alternative proportionate to the reduction in developed area estimated at twenty percent.

Cultural Resources

The Reduced Land Area Project Alternative would result in fewer ground disturbing activities and would have a slightly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Land Area Project Alternative would result in slightly less potential for impacts to cultural resources, as a portion of the Specific Plan Area would remain undeveloped.

Greenhouse Gases and Climate Change

The Reduced Land Area Project Alternative would not develop approximately 162 acres that is proposed to be developed under the project. This would provide more compact development, creating more opportunities for non-motorized transportation options (such as walking or cycling). This is likely to reduce overall VMT as compared to the project. This would reduce mobile-related GHG emissions by an amount approximately equivalent to proportional reduction in the size of the Specific Plan Area (twenty percent) under this alternative, as compared with the project. Total operational emissions would be reduced by approximately 11 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 16,785 (same as the project), this alternative would generate approximately 2.53 metric tons of carbon dioxide equivalent (MT CO_2e)/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. However, this value is below the per service population estimate for the project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, the emissions per capita under this alternative would be reduced as compared with the project. This impact would be slightly reduced when compared to the project.

Hazards and Hazardous Materials

Under the Reduced Land Area Project Alternative, the land area to be developed would be reduced by 20 percent and the potential for exposure to hazardous materials, or a release of hazardous materials would be reduced proportionately. Ongoing pesticide use would occur within the area to remain in agriculture, and this would have the potential to generate negative health effects on new residents in the development. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the Reduced Land Area Project Alternative would result in slightly less potential for impacts.

Hydrology and Water Quality

Implementation of the West Area Specific Plan has the potential to result in the violation of water quality standards and waste discharge of pollutants into surface waters during both construction and long-term operations. Construction operations could result in temporary increases in runoff, erosion, sedimentation, soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. The long-term operation of the West Area Specific Plan could result in long-term impacts to surface water quality from urban stormwater runoff and could enter groundwater or surface water systems. Additionally, the proposed project would result in new impervious surfaces that could reduce rainwater infiltration and groundwater recharge. Mitigation measures incorporated into the project would reduce potential water quality impacts to a less than significant level. The West Area Specific Plan would not place persons or structures in a flood hazard zone.

Under the Reduced Land Area Project Alternative, potential water quality impacts from construction and operation of the West Area Specific Plan would be reduced. Under this alternative, the developed area would be reduced by 20 percent when compared with the project. The Reduced Land Area Project Alternative would have a greater chance of groundwater recharge because it would reduce the amount of impervious surfaces by 20 percent as compared to the West Area Specific Plan. The areas that would not be developed (i.e., the 162 acres of land in the northeast corner of the Specific Plan Area) would remain under agricultural production. While the 162-acre agricultural area would provide opportunities for groundwater recharge, the agricultural uses would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping required for the 162-acres of agricultural use under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. The amount of total consumptive water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412

AFY less water than buildout of the proposed project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the proposed project.

Under this alternative, there are some instances where the undeveloped portions of the Specific Plan Area would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, while the potential to result in water quality violations would be reduced under this alternative when compared with the project, the higher amount of groundwater pumping under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the proposed project. There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 80 percent of the land area would be converted into a use that would not require intensive groundwater pumping. As such, potential impacts related to hydrology and water quality would be increased under this alternative when compared to the project.

Noise

Under the Reduced Land Area Project Alternative, development would be reduced by 20 percent when compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Receptors would be subject to ongoing agricultural noise under this alternative. It is noted that, despite this reduction in the size of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact. As such, this alternative would have a reduced impact relative to the project.

Population and Housing

Under the Reduced Land Area Project Alternative, the project footprint would be reduced by 20 percent when compared with the project. However, although the residential density would increase from approximately 9.0 to 11.3 residential units per acre under this alternative, the number of residences developed under this alternative would be the same as for the proposed project. Overall, this alternative would have a equal impacts when compared to the project.

Public Services

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, the demand for police, fire and other public services would be equal. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have equal impacts to public services when compared to the project.

Transportation

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, traffic generated in the Specific Plan Area would be equal.

This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts to this topic under this alternative.

The Reduced Land Area Project Alternative would have "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-7, which is identified as "impacts related to emergency access." The basis for this determination is that the increased density of the proposed project would increase congestion on existing and planned roadways as compared to the proposed project, given that fewer roadways would be developed under this alternative (because the APNs 211-011-008 and 211-011-009 would not be developed under this alternative). Specifically, Natividad Road (Major Arterial), Russell Road (Major Arterial), and Rogge Road would not be expanded with full frontage improvements under this alternative. Congestion is also expected to be slightly higher under this alternative compared to the proposed project, given the increased density of traffic (based on fewer roadway miles being developed under this alternative compared with the proposed project, and the increased density of the proposed project [to 11.3 residential units per acre under this alternative, compared to 9.0 residential units per acre under the proposed project]). This represents a slightly greater impact with respect to emergency access within the Specific Plan Area. It is noted that the significance determination under Transportation and Circulation Impact 3.10-7 would likely still be less than significant for the Reduced Land Area Alternative, similar to the proposed project; however, the roadway network will not have the same capacity as under the proposed project, so the determination remains "slightly greater."
Additionally, the Reduced Land Area Project Alternative would have a "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-8, which is identified as "conflict with adopted multi-modal circulation policies, plans, or programs" or a "decrease [in] the performance or safety of public transit, bicycle, or pedestrian facilities." The basis for this determination is that the following roadways would not be developed in full under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane);
- Rogge Road frontage improvements.

Since these roadways would not be developed in full, as planned for by the proposed project, connectivity with the remainder of the City and County, including other areas within the City's FGA, would be more limited under the Reduced Land Area Project Alternative as compared to the proposed project. Overall, this alternative would have slightly greater traffic impacts than the project.

Utilities

This alternative would not save as much groundwater when compared to the proposed project. The amount of total consumptive water usage reduced by this alternative when compared to the

existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412 AFY less water than buildout of the proposed project. This is due to the dramatically higher water usage under the current irrigated agricultural cultivation uses as compared with developed residential and/or commercial uses. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project.

Although this alternative would save less groundwater than the project, generate a similar amount of solid waste, and demand a similar amount of water, this alternative would reduce impacts to stormwater compared to the project. Overall, the demand for utilities would be reduced under this alternative when compared to the project.

2. Feasibility of Reduced Land Area Project Alternative

The Reduced Land Area Project Alternative would slightly reduce impacts to air quality, biological resources, cultural resources, GHG and climate change, hazards, hydrology, noise, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to groundwater supplies and recharge (cumulative and project-level), population and housing, emergency vehicle access, and conflicts with adopted multi-modal circulation policies, plans, or programs. Further, this alternative does not meet the following project objectives:

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole.

The Reduced Land Area Project Alternative does not fully meet the project objective to "Provide public services and infrastructure improvements that achieve and maintain City service standards" because the Reduced Land Area Project Alternative would develop fewer roadways, bicycle and pedestrian pathways, and other infrastructure improvements (such as well sites) when compared with the project.

Under this alternative, APNs 211-011-008 and 211-011-009, as shown in Figure 5.0-1 of the Draft EIR, would not be developed. The effect of this area not developing in accordance with the General Plan would be that the following roadways and infrastructure improvements would not be developed:

- Natividad Road (Major Arterial) expansion frontage improvements;
- Russell Road (Major Arterial) expansion;
- Rogge Road frontage improvements;
- The proposed water well #3 and water treatment site;
- The supplemental stormwater basins along Natividad Road; and
- Neighborhood Park WA-3 (3-acre park).

Therefore, based on the above list of roadways and infrastructure improvements that would not be developed under this alternative, the ability of the City to provide public services and infrastructure improvements in accordance with the adopted General Plan would be hampered under the Reduced Land Area Project Alternative.

The Reduced Land Area Project Alternative does not meet the project objective to "Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole" because this alternative would leave undeveloped a portion of the land that would be developed under project (i.e., APNs 211-011-008 and 211-011-009), as shown in Figure 5.0-1 of the Draft EIR. This is an area located adjacent to the future Central Area Specific Plan (within the City's FGA). If this area were to remain undeveloped, there would be fewer interconnected sidewalks/pathways and available open space areas for City residents, and connectivity would be limited between the West Area Specific Plan (the project) and the planned for Central Area Specific Plan (a planned Specific Plan Area that would be located just to the east of the proposed project). This reduced connectivity means that the Reduced Land Area Project Alternative would not establish an interconnected sidewalk/pathway and open space system that fully links with the greater FGA and with the City as a whole. Notably, this rationale is also the basis for determining that the Smaller-Scale Project Alternative would not meet this Specific Plan objective. Specifically, the following roadways would not be developed under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane); and
- Rogge Road frontage improvements.

The Reduced Land Area Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, hydrology and water quality, population and housing, public services, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects anticipated with the project would still occur under this Reduced Land Area Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts may occur to a lesser extent than under the project under this alternative, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to increased traffic noise levels at existing receptors would occur under the project and the Reduced Land Area Project Alternative as there is a possibility of not being able to feasibly install sounds walls in some locations that would be warranted. It is noted that, due to decreased noise levels associated with this alternative, the noise at existing receptors would likely decrease. However, the cumulative traffic noise level increases would exceed the Federal Interagency Committee on Noise (FICON) CEQA substantial increase criteria of 1.5 to 5 dB.

The City Council finds the Reduced Land Area Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

D. Reduced Residential Intensity/Density Project Alternative

1. Analysis of Reduced Residential Intensity/Density Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area, with an overall decrease in residential density.

It was assumed that overall criteria pollutant emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for ROG, NOx, and PM_{10} at buildout.

Although less compact development generally increases overall per capita VMT, the smaller number of residential units under this alternative as compared with the project would reduce overall air quality emissions, including under area sources, mobile sources, and energy sources. As such, this impact would be reduced when compared to the project.

Biological Resources

Under the Reduced Residential Intensity/Density Project Alternative, an equivalent amount of habitat would be removed as under the project, and a similar level of ground disturbing activities would occur as compared with the project. Therefore, there would be an approximately equal potential for impacts to biological resources under this alternative as compared with the project.

Cultural Resources

The Reduced Residential Intensity/Density Project Alternative would result in a similar level of ground disturbing activities and would have a similar potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Residential Intensity/Density Project Alternative would result in equal potential for impacts to cultural resources.

Greenhouse Gases and Climate Change

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area. It

was assumed that overall GHG emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. Total operational emissions would be reduced by approximately 25 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 12,803 under this alternative (this is equivalent to a 25 percent smaller residential population but the same number of workers, when compared to the project), this alternative would generate approximately 2.79 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035, but lower than the per service population estimate for the project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, this impact would be slightly reduced when compared to the project.

The slight reduction does not necessarily mean that the Reduced Residential Intensity/Density Project Alternative represents a better long-term policy outcome for climate than the project. California has a large housing need, and new housing will have to be built somewhere, if not in the Specific Plan Area. As the California Supreme Court explained, "[g]iven the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced." (*Center for Biological Diversity v. California Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 220-221.)

Hazards and Hazardous Materials

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential components would be reduced by 25 percent as compared with the project. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. Overall, given the reduction in the intensity-density of this alternative as compared with the project, it is expected that the Reduced Residential Intensity/Density Project Alternative would have a slightly reduced impact to this topic relative to the project.

Hydrology and Water Quality

Under the Reduced Residential Intensity/Density Project Alternative, potential water quality impacts from construction and operation would be slightly reduced. Under this alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project, although the footprint would remain the same. This would result in fewer residential lots, but larger lot sizes. Since the residential lot sizes under this alternative would be larger when

compared with the project, there would be less impervious surface, and therefore there would be a greater chance of groundwater recharge under this alternative. As such, potential impacts related to hydrology and water quality would be reduced under the Reduced Residential Intensity/Density Alternative when compared to the project.

Noise

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Despite this reduction in the size of intensity of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact. As such, this alternative would have less impact relative to the project.

Population and Housing

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project. Development of housing would still occur under this alternative, but fewer units would be built. Growth would still be anticipated to occur within the region, but it would not be fully accommodated in the North of Boronda FGA, which has undergone extensive planning efforts by the City and community for over a decade. This would not be consistent with the FGA and General Plan. The City would need to look to other undeveloped areas of the region to develop for new housing which would be expected to have environmental impacts that have not yet been assessed but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. The lower density of this alternative would also not meet the minimum number of residential units required for New Urbanism principles that are established in the General Plan for the Specific Plan Area. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent; therefore, the demand for police, fire and other public services would be reduced. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have a slightly reduced impact to public services when compared to the project.

Transportation and Circulation

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent; therefore, traffic generated in the Specific Plan Area would be reduced. This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway

system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts under this alternative. Overall, this alternative would have less of an overall traffic impact than the project.

Utilities

Under the Reduced Residential Intensity/Density Alternative, the Specific Plan Area would be developed with a reduction in the overall residential intensity/density while maintaining the approximate overall project footprint as in the project. For the purposes of discussion, this option considers a 25 percent reduction in the intensity/density of the residential components of the project while maintaining the approximately 797-acre project footprint. This would result in fewer residential lots, but larger lot sizes. This alternative would result in up to 3,255 residential units. This alternative would retain the approximately 571,500 square feet of mixed commercial uses, the five proposed schools (three elementary, one middle, and one high school), and the same acreage of parks and detention basins as the project.

The total quantity of infrastructure installed would not be reduced, but the demand for wastewater and solid waste services would be less than would be required for the project. For example, is expected that this alternative would generate approximately 0.8 million gallons per day (MGD) of wastewater and approximately 37,777 pounds per day (lbs/day) of solid waste, smaller than would be generated by the project, since this alternative would generate fewer residents when compared to the project.

Separately, the total storm drainage runoff under this alternative would be approximately the same when compared to the project, due to the project footprint remaining the same for this alternative when compared to the project. Additionally, this alternative would save approximately the same amount of groundwater when compared to the project, since the project footprint would remain the same for this alternative as compared to the project. Overall, the demand for wastewater and solid waste services would be less than would be required for the project, and the amount of storm drainage runoff would be approximately the same. Therefore, demand for utilities would be slightly reduced under this alternative when compared to the project.

2. Feasibility of Reduced Residential Intensity/Density Project Alternative

The Reduced Residential Intensity/Density Project Alternative would slightly reduce impacts to air quality, cultural resources, GHG and climate change, hydrology, noise, public services, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to conflicts with applicable air quality plans and population and housing. Further, this alternative does not meet the following project objectives:

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly;
- Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages;
- Provide a reasonable jobs/housing balance.

The Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly" because the Reduced Residential Intensity/Density Project Alternative would result in fewer lots with larger lot sizes than will occur under the project. Larger lot sizes are inherently not compact, and development of these larger lot sizes may result in larger block sizes, which are less conducive to travel by walking, bicycles, and transit. Based upon residential overall density, this alternative is inconsistent with the Salinas General Plan's standards for the Specific Plan Area, which require a minimum of 3,553 residential units within the Specific Plan Area, and the incorporation of New Urbanism concepts, which mandate that new residential development have a minimum average density of 9 dwelling units per net residential acre.

The Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages" because the Reduced Residential Intensity/Density Project Alternative would provide fewer medium- and high-density housing units than the project. The number of low-density housing options would increase compared to the project, and these units would replace otherwise varied density housing options.

Furthermore, the reduction in housing units under the Reduced Residential Intensity/Density Project Alternative would be less consistent than the project in meeting statewide legislative goals of building housing units in order to address the statewide housing crisis. Given the enormous unmet demand for housing in California, the City believes that it has an obligation to facilitate the construction of more, rather than fewer, housing units when opportunities for residential development arise.

Similarly, the Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Provide a reasonable jobs/housing balance" because the Reduced Residential Intensity/Density Project Alternative would result in 1,085 fewer housing units than the project, but the same amount of commercial uses. This would impact the jobs/housing balance because fewer residents would be live in the Specific Plan Area, which proximity is vital to ensuring the success of the businesses in the Specific Plan Area.

The Reduced Residential Intensity/Density Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, cultural resources, greenhouse gases and climate change, hydrology and water quality, hazards and hazardous materials, noise, public services, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, biological resources, hazards and hazardous materials, population and housing, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects which are anticipated with the project would still occur under this Reduced Residential Intensity/Density Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts

may occur to a lesser extent under this alternative than under the project, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to violation of an air quality standard would occur under both the project and the Reduced Residential Intensity/Density Project Alternative. As shown in Table 5.0-4 of Chapter 5.0 of the Draft EIR, the Reduced Residential Intensity/Density Project Alternative would exceed the threshold of significance for ROG, NOx, and PM_{10} at buildout. Although the emissions would be less than with the project, this alternative would also cause a violation of an air quality standard. This is considered a significant and unavoidable impact.

The City Council finds the Reduced Residential Intensity/Density Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

E. Smaller Scale Project Alternative

1. Analysis of Smaller Scale Project's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Smaller-scale Project Alternative, the overall size of the project would be scaled down by approximately 33 percent as compared with the project. This would reduce Specific Plan Area operational emissions by an approximately equivalent amount (33%) as compared to the project. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for ROG, NOx, and PM_{10} at buildout.

Nevertheless, overall air quality emissions under this alternative would be reduced compared to the project, due to the smaller size of this alternative, including for area sources, mobile sources, and energy sources. As such, this impact would be reduced when compared to the project.

Biological Resources

Under the Smaller-scale Project Alternative, an area of about 264 acres would not be developed, and fewer ground disturbing activities would occur. It is still anticipated that the drainage ditches along Boronda would be eliminated (i.e., fill activity). The 264 acres would remain open to migration, foraging, nesting, and other uses by wildlife. The balance of the Specific Plan Area would be developed and no longer available for migration, foraging, nesting, and other uses by wildlife. This would still be a significant and unavoidable impact, and would be cumulatively considerable.

When compared to the Specific Plan, potential for impacts to biological resources would be reduced under the Smaller-scale Project Alternative proportionate to the reduction in developed area.

Cultural Resources

The Smaller-scale Project Alternative would result in a reduced level of ground disturbing activities and would therefore have slightly less potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, this alternative would result in slightly less potential for impacts to cultural resources.

Greenhouse Gases and Climate Change

The Smaller-scale Project Alternative would reduce the level of development by approximately 33 percent as compared with the project. This would reduce Specific Plan Area operational GHG emissions by an approximately equivalent amount (33%) when compared to the project. Total operational emissions would be reduced by approximately 33% under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 11,190 under this alternative (this is equivalent to a 33% reduction in both residential and worker population, when compared to the project), this alternative would generate approximately 2.84 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. Additionally, this emissions-per-capita value would be the same as those generated by the project. Therefore, this impact would be equal when compared to the project.

Hazards and Hazardous Materials

The Smaller-scale Project Alternative would reduce the level of development by approximately 33 percent and the potential for exposure to hazardous materials, or a release of hazardous materials would be reduced proportionately. Ongoing pesticide use would occur within the area to remain in agriculture, and this would have the potential to generate negative health effects on new residents in the development. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the Smaller-scale Project Alternative would result in slightly less potential for impacts.

Hydrology and Water Quality

Under the Smaller-scale Project Alternative, potential water quality impacts from construction and operation would be reduced. Under this alternative, the overall level of development (including the size of the site and the overall development area per use) would be reduced by approximately 33 percent. An area of approximately 264 acres that would be developed as part of the project would not be developed as part of this alternative. The areas that would not be developed would remain under agricultural production, and while they would have better

recharge in those areas, they would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 66 percent of the land area would be converted into a use that would not require intensive groundwater pumping.

There are some instances where the 264 acres of Specific Plan Area that remains undeveloped would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, overall, while the potential to result in the violation of water quality standards would be reduced under this alternative when compared with the project, overdraft conditions would worsen in the Salinas Valley Ground Water basin under this alternative when compared to the project. As such, potential impacts related to hydrology and water quality would be increased under the Smaller-scale Project Alternative when compared to the West Area Specific Plan.

Noise

Under the Smaller-scale Project Alternative, the overall level of development would be reduced by 33 percent as compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Despite this reduction in the size and intensity of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact As such, this alternative would have less impact relative to the project.

Population and Housing

Under the Smaller-scale Project Alternative, the overall level of development would be reduced by 33 percent as compared with the project. Development of housing would still occur under this alternative, but fewer units would be built. Growth would still be anticipated to occur within the region, but it would not be fully accommodated in the FGA, which has undergone extensive planning efforts by the City and community for over a decade. This would not be consistent with the FGA and General Plan. The City would need to look to other undeveloped areas of the region to develop for new housing, which would be expected to have environmental impacts that have not yet been assessed but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the Smaller-scale Project Alternative, the overall level of development and the number of residential/non-residential uses would be reduced by 33 percent; therefore, the demand for police, fire and other public services would be reduced. This alternative would still result in development of public facilities (i.e., schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have a slightly reduced impact to public services when compared to the project.

Transportation and Circulation

Under the Smaller-scale Project Alternative, the overall level of development and the number of residential/non-residential uses would be reduced by 33 percent; therefore, traffic generated in the Specific Plan Area would be reduced. This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts. Overall, this alternative would have less of an overall traffic impact than the project.

Utilities

Under the Smaller-scale Project Alternative, the Specific Plan Area would be reduced by approximately 33 percent and the proposed residential and non-residential uses would also be reduced by approximately 33 percent. This alternative assumes that approximately 264 acres of land along the entire eastern boundary of the Specific Plan Area would be removed and remain as undeveloped agricultural land. The resultant Specific Plan Area under this alternative would be approximately 533 acres in size, and include up to 2,908 residential units, up to 382,905 square feet of commercial/mixed use building area, and up to 119 acres of public facilities (including two elementary schools, a high school, middle school, open space (including supplemental detention/retention basins) and up to 8 parks).

The total quantity of infrastructure installed would be reduced, and the demand for wastewater, stormwater, and solid waste services would be less than would be required for the project. For example, is expected that this alternative would generate approximately 0.7 MGD of wastewater and approximately 33,473 lbs/day of solid waste, less than what would be generated by the project, since this alternative would generate fewer residents when compared to the project.

Separately, the total storm drainage runoff under this alternative would be reduced by approximately 33% when compared to the project, due to the project footprint being reduced by 33% when compared to the project.

However, this alternative would not save as much groundwater when compared to the project. The amount of total water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,389 AFY, compared with the approximately 2,078 AFY estimated to be saved by the project. That is, buildout this alternative would save approximately 689 AFY less water than buildout of the project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project. However, in general, the demand for utilities would be reduced under this alternative when compared to the project.

2. Feasibility of Smaller-scale Project Alternative

The Smaller-scale Project Alternative would slightly reduce impacts to air quality, biological resources, cultural resources, GHG and climate change, hazards, hydrology, noise, public

services, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to conflicts with applicable air quality plans, groundwater supplies and recharge (cumulative and project-level), population and housing, emergency vehicle access, and conflicts with adopted multi-modal circulation policies, plans, or programs. Further, this alternative does not meet the following project objectives:

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole.

The Smaller-scale Project Alternative does not fully meet these two project objectives because, similar to the Reduced Land Area Project Alternative, this alternative would leave 33 percent of the Specific Plan Area undeveloped, which would include 264 acres of land along the entire eastern boundary of the Specific Plan Area. This eastern area is located adjacent to the future Central Area Specific Plan (within the City's FGA). This means that there would be fewer interconnected sidewalks/pathways and available open space areas for City residents, and that there would be limit connectivity between the West Area Specific Plan (the project) and the future Central Area Specific Plan (a planned Specific Plan Area that would be located just to the east of the proposed project). This reduced connectivity means that the Reduced Land Area Project Alternative would not establish an interconnected sidewalk/pathway and open space system which fully links with the greater FGA and the City as a whole. Specifically, the following roadways would not be developed under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane); and
- Rogge Road frontage improvements.

Furthermore, the reduction in housing units under the Reduced Residential Intensity/Density Project Alternative would be less consistent than the project in meeting statewide legislative goals of building housing units in order to address the statewide housing crisis. Given the enormous unmet demand for housing in California, the City believes that it has an obligation to facilitate the construction of more, rather than fewer, housing units when opportunities for residential development arise.

The Smaller-scale Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, public services, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, greenhouse gases and climate change, hydrology and water quality, population and housing, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects anticipated with the project would still occur under this Smaller-scale Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts may occur to a lesser extent under this alternative than under the project, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to violation of an air quality standard would occur under both the project and the Smaller-scale Project Alternative. As shown in Table 5.0-7 of Chapter 5.0 of the Draft EIR, the Smaller-scale Project Alternative would exceed the threshold of significance for ROG, NOx, and PM_{10} at buildout. Although the emissions would be less than the proposed project, this alternative would also cause a violation of an air quality standard. This is considered a significant and unavoidable impact.

The City Council finds the Smaller- scale Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

XI. STATEMENT OF OVERRIDING CONSIDERATIONS

As set forth in the preceding sections, the City of Salinas's approval of the West Area Specific Plan will result in a significant adverse environmental effect that cannot be avoided even with the adoption of all feasible mitigation measures; and there are no feasible project alternatives that would mitigate or substantially lessen all of these impacts. Despite the occurrence of these effects, however, the City Council, in accordance with CEQA Guidelines section 15093, chooses to approve the project because, in the Council's view, the economic, social, and other benefits that the project will produce will render the significant effects acceptable.

A. Significant and Unavoidable Impacts

The project will result in the following potentially significant and unavoidable impacts, even with the implementation of all feasible mitigation measures:

- **Air Quality Operation.** The Specific Plan would exceed the Monterey Bay Air Resources District (MBARD) thresholds of significance for operations for ROG, NO_x, and PM_{10}, even after mitigation. (DEIR, pp. 3.1-19 through 3.1-23)
- **Cumulative Air Quality.** As is currently proposed, the Specific Plan is expected to be built out under a staged approach, and all mitigation would be applicable to each stage. However, even with the application of mitigation measures, operational emissions levels would remain above the defined thresholds of significance. Exceedance of the threshold within an area designated as nonattainment would be a cumulatively considerable impact. (DEIR, pp. 3.1-31 through 3.1-32)
- **Wildlife Movement and Corridors.** Development of the project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. There are no mitigation measures that can fully mitigate this impact and, given the fact that once the land is converted, it will no longer be a viable migration corridor for any species. (DEIR, pp. 3.2-46 through 3.2-47)
- **Cumulative Biological Resources.** Development of the project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. Given the rareness of CTS and CRLF in the Bioregion, the incremental loss of movement habitat from the project, when considered alongside all

past, present, and probable future projects (inclusive of all communities within the Bioregion), is a significant and unavoidable cumulative impact, and the Specific Plan's incremental contribution to this impact is itself cumulatively considerable. (DEIR, pp. 3.2-52 through 3.2-53)

- **Greenhouse Gas Emissions.** The project would generate GHG emissions, directly and indirectly, that may have a significant impact on the environment. While mitigation measures would result in reduced GHGs, it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant. (DEIR, pp. 3.4-31 through 3.4-38)
- **Cumulative Greenhouse Gas Emissions.** Implementation of the project will still generate GHG emissions that would not otherwise exist without the project. Given the length of construction activities for a project of this size, the construction emissions would be a long-term release of approximately 168,734.3 MT CO_2e. The operational emissions would be a long-term release totaling approximately 51,939.2 MT CO2e per year without mitigation, and 47,684.9MT CO_2e per year with mitigation. Because it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant, implementation of the Specific Plan would have a cumulatively considerable contribution and significant and unavoidable impact to GHGs. (DEIR, pp. 3.4-48 through 3.4-49)
- **Traffic Noise at Existing Receptors.** The project would cause increased noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard at existing residential receptors. Additionally, traffic noise level increases would exceed the FICON CEQA substantial increase criteria of 1.5 to 5 dB, as outlined in Table 3.7-7. (DEIR, pp. 3.7-14 through 3.7-23)
- **Cumulative Traffic Noise.** The project would cause increased noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard at existing residential receptors. Therefore, there would be a cumulative exposure of existing and future noise-sensitive land uses to increased noise resulting from cumulative development. (DEIR, pp. 3.7-33 through 3.7-37)
- **School Facilities.** Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts. Development of a school within the proposed Specific Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1 and 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-19 through 3.9-21)
- **Park Facilities.** Project implementation may result in effects on parks, or require the construction of park facilities which may cause substantial adverse physical environmental impact. Development of 49.76 acres of park land within the Specific Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2 and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1 and 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-22 through 3.9-23)
- **Cumulative Public Facilitates.** The construction and operation of future public facilities required to serve cumulative development (including the West Area Specific Plan Area) could potentially cause significant impacts. Cumulative development, including

additional parks, schools, library, and other public facilities within the city and service area, would contribute to significant and unavoidable cumulative impacts that have been identified within this EIR related to: air quality (Impact 3.1-7), biological resources (Impact 3.2-12), greenhouse gases (Impact 3.4-4), noise (Impact 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-24 through 3.9-26)

- **Cumulative Plus Project Traffic.** Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan would conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. (DEIR, pp. 3.10-63 through 3.10-70)
- **Cumulative Plus Central Area Specific Plan Plus Project Traffic.** Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan would with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans (DEIR, pp. 3.10-76 through 3.10-81)

B. Overriding Considerations

In the City Council's judgment, the project and its benefits outweigh its unavoidable significant effects. The following statement identifies the specific reasons why, in the City Council's judgment, the benefits of the project as approved outweigh its unavoidable significant effects. Any one of these reasons is sufficient to justify approval of the project. Thus, even if a court were to conclude that not every reason is supported by substantial evidence, the City Council would stand by its determination that each individual reason is sufficient. The substantial evidence supporting the various benefits can be found in the preceding findings, which are incorporated by reference into this section (XI), and in the documents found in the Record of Proceedings, as defined in section V.

1. The project will substantially expand employment opportunities for local residents.

It is anticipated that local employment would be increased to provide administrative, management, and retail services. The project is expected to require both full-time and part-time employees. It is anticipated that the employment growth would be met both by existing residents and through the attraction of new residents. Data from U.S. Bureau of Labor Statistics (2018) indicates that the City has an unemployment rate of approximately 4.9%, as of November 2018, which is higher than the State and national averages at 4.2% and 3.7%, respectively (U.S. Bureau of Labor Statistics, 2018). Many of the newly created jobs are expected to be in the retail/commercial sector and would be opportunities well-suited for second wage earners in households, the younger workforce, and others, which generally depend on the local workforce. Due to the fact there is currently a surplus of unemployed workforce within the City, it is likely that current residents would fill the majority of new positions. Additional population growth induced by the creation of new businesses could be supported by the available housing within Salinas as well as new housing planned as part of the West Area Specific Plan.

The construction of new developments within the Specific Plan Area would increase temporary construction jobs in the area. New employment opportunities are critical to the residents of the

City as a basis to reduce the City's higher than average unemployment rate and to improve the balance between jobs and housing.

The creation of new jobs has a variety of other co-benefits that lead to improved quality of life. These benefits include enhancing overall economic activity in the City, which leads to increased revenue to fund and maintain city services and facilities such as public safety, parks, recreation centers and libraries and related programs that support a high quality of life. Benefits also include improving community health through crime reduction, improving economic productivity, decreasing traffic congestion and greenhouse gas emissions by reducing the number of residents that must travel out of the city to find employment.

2. The project will help attract economic investment.

Currently, Salinas lags behind the region in private economic investment. This lack of investment can be quantified in terms of the number of building permits pulled and the associated building valuation. For example, from June 1, 2018 to June 21, 2019, 1,765 permits with a building valuation of approximately $5,116,481.85 were pulled in Salinas.[1] This is a fraction, 10.0 percent, of the private investment in the City of Monterey totaling a valuation of $51,289,904 (422 permits).[2] This is especially significant considering Salinas (162,797) has more than five times the population of the City of Monterey (28,448).

The project streamlines opportunities for economic investment in the City by positioning the Specific Plan Area for development. The project creates the land use and zoning entitlements and provides specific guidance about how development is to proceed needed to catalyze economic development in the form of individual development projects.

3. The project will generate sales and property taxes for the City.

The project will generate substantial sales tax revenue from the planned commercial and retail uses and property tax revenue from the planned residential uses. The City can use this revenue to fund City programs that benefit the City's residents. The project has been designated with land uses that are intended to generate jobs and tax revenue for the City, while providing recreational facilities, retail opportunities, and housing opportunities.

4. The project will help improve the quality of life for City residents.

The City is experiencing significant retail leakage to surrounding communities and the region resulting in the loss of sales tax revenue. The 2008 Buxton Retail Leakage and Surplus Analysis, estimated that as much as $250 million in annual retail sales could be recaptured by the City through targeted retail development which offers goods and services now sought from businesses located outside the City. The City's total revenue per capita figures demonstrate the impacts of this leakage. In 2016, Salinas' total revenue per capita was $752 dollars compared to Monterey at $2,224 dollars per capita. (California Controller, 2016)

[1] CRW Systems. City of Salinas Permits Issued for the Period 6/1/2018 thru 6/1/2019. Provided by Kristy Parker, City of Salinas Permit Center Coordinator, on June 24, 2019.
[2] City of Monterey Permits Issued for the Period 6/1/2018 thru 6/1/2019. Provided by Lisa Feliciano, City of Monterey Permit Inspection Services Division, on June 14, 2018.

The project would include a central core area with retail and professional services. The retail and professional service uses would help increase annual retail sales and reduce retail leakage. Residents of the Specific Plan Area and the surrounding City and unincorporated areas could shop at the planned core area retail and professional service facilities located within the central core area.

The Specific Plan focuses on individual neighborhoods, parks, schools, and other civic gathering spaces; the tree-lined streets with pedestrian amenities; a Main Street and Town Square surrounded by shops and restaurants; and mixing of land uses that encourages residents to frequently walk and bicycle in their community. The Specific Plan also contains goals and policies which require and/or encourage the necessary services to enhance residents' quality of life. The Specific Plan includes design and management strategies that aim to specifically increase the quality of life for the future residents and employees of the Specific Plan Area. For example, the Specific Plan includes sections regarding traffic calming and landscaping in order to create safe and attractive streets, parks, and landscaped areas.

Quality of life is also an important factor in the ability of the City to attract and retain businesses. The Specific Plan addresses improving safety, improving access to open space and recreational opportunities, and the adequate provision of public services. If currently unemployed residents become employed and increase their earnings through new businesses resulting from development of the Specific Plan, it is expected that their income level and standard of living will improve.

5. The project will revitalize the local infrastructure.

The proposed Specific Plan circulation and infrastructure policies promote investment in infrastructure systems including water supply, wastewater and storm drainage conveyance and disposal facilities that are critical to support the proposed uses. Section 7.3.4.1 of the Specific Plan outlines the Public Facilities Impact Fee program. Section 7.5 of the Specific Plan includes funding policies that will govern the funding of infrastructure and public facilities for the Specific Plan Area.

6. The project will implement the Salinas General Plan.

The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to—the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the General Plan, as well as more specific policies and implementation measures contained in other documents.

The 2002 General Plan identifies areas for growth within the FGAs (which includes the Specific Plan Area). The Salinas General Plan Land Use Table LU-3 identifies the development capacity of the FGAs. This includes 15,873 residential units, resulting in an additional population of 58,253 within the City's FGAs. The proposed West Area Specific Plan development proposes 4,340 units with the potential to increase the population of the city by an estimated 16,101 persons, which is within the projections identified in the Salinas General Plan.

Additionally, the General Plan identified FGAs as areas of the City where future urban development will be directed. FGAs are established as a part of the General Plan maps, and include the Specific Plan Area, as well as other nearby areas. The General Plan provides development guidance within the FGAs so that they are developed as urban neighborhoods using the principles of New Urbanism. The principles of new urbanist design are further detailed in Chapter 37 (Zoning) of the City's Municipal Code. The Specific Plan Area is currently designated New Urbanism Interim (NI) by the City's zoning map**.** The purpose of the NI zoning district is to provide a transitional zone for the FGAs of the City located north of East Boronda Road (including the Specific Plan Area) that are within the City limits and are subject to the preparation of specific plans and subsequent subdivision maps.

The New Urbanism Districts promote the principles of New Urbanism and the creation of distinct identifiable neighborhoods that have Traditional Neighborhood Development (TND) characteristics as expressed in the Salinas General Plan and that are intended to guide the development of the North of Boronda FGA. The FGA is also subject to a Specific Plan Overlay. The Overlay requires that a Specific Plan be approved by the City prior to the development of any land located in the FGA. As such, an approved Specific Plan will ultimately regulate the development in the FGA. The New Urbanism districts identified in the City's zoning code and the West Area Specific Plan are as follows: Neighborhood Edge/Low Density Residential (NE), Neighborhood General 1/Medium Density Residential (NG-1), Neighborhood General 2/High Density Residential (NG-2), and Village Center (VC).

The development allowed by the project will be consistent with the development types and intensities identified in the General Plan and its associated Final Program EIR. The project does not change limits, amount, type, or intensity of development allowed in the Plan Area beyond what was analyzed in the certified Final Program EIR for the General Plan and Supplemental EIR for the Salinas General Plan Final Program EIR (SCH#2007031055).

7. The project will provide much-needed housing.

One of the core goals of the Specific Plan is to provide a variety of low-density, medium-density, and high-density housing and a variety of housing options for residents at various life stages. As emphasized earlier, the State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and

businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The City of Salinas has recognized the need for additional housing supply for its citizens for many decades. The project will provide much-needed housing in an area of the City that has been recognized and planned for future growth.

C. Conclusion

As explained above, the City Council has balanced these benefits and considerations against the significant unavoidable environmental effects of the project and has concluded that the impacts are outweighed by these benefits, among others. After balancing environmental costs against project benefits, the City Council has concluded that the benefits the City of Salinas community and economy will derive from the project outweigh the risks. The City Council believes the project benefits outlined above override the significant and unavoidable environmental costs associated with the project.

Attachment

Impacts, Mitigation Measures and CEQA Findings Summary Table

Exhibit I

WEST AREA SPECIFIC PLAN
CITY OF SALINAS, CALIFORNIA
TABLE OF IMPACTS, MITIGATION MEASURES, AND CEQA FINDINGS

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
AIR QUALITY			
Impact 3.1-1: The project has the potential to conflict with or obstruct implementation of the applicable air quality plan (Less than Significant) AMBAG, in consultation with the City of Salinas, included the North of Boronda Future Growth Area (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The 2018 Regional Growth Forecast provides the region's population, housing, and employment forecasts for inclusion for AMBAG's 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as for the future version of the AQMP. The City of Salinas has worked closely with AMBAG to ensure that City population estimates are included within AMBAG's 2018 Regional Growth Forecast, which will feed into the next AQMP. The population estimates for the West Area Specific Plan are included in these growth forecasts. As such, the City has met the action recommended by MBARD in the *CEQA Air Quality Guidelines* (MBARD, 2008a) to ensure consistency with the applicable air quality plan (i.e. "*Ensure that the jurisdiction's population forecasts are updated in the next AQMP by working with AMBAG or the appropriate local agency*."). The proposed project would not conflict with or obstruct the latest air quality plan. (DEIR, pp. 3.1-18 through 3.1-19)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.1-2: Project operation has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation (Potentially Significant) Buildout of the Plan Area is expected to exceed some of the MBARD operational criteria pollutant emissions thresholds, as modelled. Mitigation measures are provided below to reduce emissions to the maximum extent feasible. Upon full buildout, the Specific Plan would exceed the MBARD thresholds of significance for operations	**Mitigation Measure 3.1-1:** Prior to approval of development review permits including tentative maps, the project applicant(s) shall incorporate the following features into project plans and specifications, as directed by the City of Salinas: • Provide traffic calming measures wherever feasible, within the Specific Plan Area; • Provide preferential carpool/vanpool parking spaces;	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Even with implementation of Mitigation Measures 3.1-1 through 3.1-8, the Specific Plan would exceed the MBARD thresholds of significance for operations for ROG, NO_x, and PM_{10}. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
for ROG, NO_x, and PM_{10}, even after mitigation. (DEIR, pp. 3.1-19 through 3.1-23)	• Provide electric-vehicle parking spaces; • Require the use of low-VOC paint for all new building architectural coatings within the Specific Plan Area, consistent with or better than, what is required by the City's Municipal Code. **Mitigation Measure 3.1-2:** Prior to approval of development review permit(s), the project applicant(s) shall incorporate effective methods to encourage the use of cleaner alternative fuel vehicles and carpooling within the Specific Plan Area. Effective methods may include the installation of alternative fuel (e.g. electric) charging stations at locations spaced throughout the Specific Plan Area, consistent with or better than what is required by the City's Municipal Code and Specific Plan. Additionally, this can be achieved by providing preferential parking for alternatively-powered vehicles, including electric cars, and/or by providing carpool/vanpool parking spaces. **Mitigation Measure 3.1-3:** Prior to approval of development review permit(s), the project applicant(s) shall incorporate the use of alternative energy for the residential and mixed-use/commercial developments, including by implementing alternative energy (e.g. PV solar) building requirements, consistent with or better than, what is required by the City's Municipal Code. Project applicant(s) shall also ensure that pre-installed electrical hookups and/or charging stations, as applicable, are incorporated into all project plans and specifications. **Mitigation Measure 3.1-4:** Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that low-flow (high-efficiency) indoor water fixtures will be installed throughout the Specific Plan Area, including for bathroom and kitchen faucets, toilet fixtures, and showers, in both residential and non-residential buildings, in compliance with or better than the standards required within the most recent version of the California Green Building Standards Code. **Mitigation Measure 3.1-5:** Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that water-		outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	efficient irrigation systems will be installed throughout the Specific Plan Area, consistent with or better than the requirements contained within the State's Model Water Efficient Landscape Ordinance, the City's Water Conservation Ordinance and the Salinas Zoning Code Landscaping and Irrigation requirements. **Mitigation Measure 3.1-6:** Prior to approval of improvement plans or development review permits, as applicable, the project applicant(s) shall ensure that pedestrian/bicycle facilities (e.g. pedestrian paths, outdoor bike racks, etc.) are provided within the Specific Plan Area, in coordination with and subject to approval by the City of Salinas. The project proponent shall also provide bicycling parking near the entrance to commercial establishments within the Specific Plan Area, consistent with or better than the requirements contained within the City's Municipal Code. **Mitigation Measure 3.1-7:** Prior to the issuance of development review permit(s), the project applicant(s) shall incorporate of one or more of the following additional Specific Plan Area requirements, as determined by the City of Salinas: • Install secured bicycle storage facilities (bike lockers, cages, interior space, or similar as approved by the City Engineer) at all commercial and public facilities with 50 employees or more; • Incorporate a park-and-ride lot; • Install Level 2 electric vehicle (EV) charge stations at workplace sites with 50 or more employees (10% of total available parking spaces); and • Install publicly-available dual post Level 2 charge within commercial zones, and/or other zones as deemed acceptable by the City of Salinas. (Note: The 'level' of the charging station refers to the voltage that the electric vehicle charger uses. Level 1 charging is your typical traditional home outlet, while level 2 is a 240 Volt Portable Cordset or Wall-		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	mounted Charging Station (2-10 hours charging). **Mitigation Measure 3.1-8**: Prior to the approval of individual phases (i.e. tentative maps, commercial design review, etc.), the project applicant(s) shall develop an offsite mitigation program that provides funding to offset the project-generated air emissions that are still above the Air District's operational criteria pollutant thresholds after the adoption of other applicable air quality mitigation measures. The offsite mitigation program is subject to the review and approval of the Air District and the City of Salinas on a project-by-project basis (of phase-by-phase), and is intended to be in addition to offsets that are obtained through any on-site mitigation measures. Example projects that could be included in the offsite mitigation program may include, but are not limited to, the following: • Replace existing agricultural combustion-based generators/pumps with electric agricultural water pumps (in place of generators/pumps; • Replace combustion school buses with electric school buses within the local community; • Install adaptive traffic control systems; • Install solar photovoltaic (PV) systems.		
Impact 3.1-3: Project construction has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation (Potentially Significant) The Specific Plan maximum daily unmitigated emissions during construction of the Plan Area buildout in a single year is not expected to exceed the MBARD threshold of significance (82 pounds per day) for construction-generated PM_{10}. Nevertheless, since it is possible that future development proposed within the Plan Area could involve grading that exceeds 2.2 acres per day, MBARD recommends the implementation Mitigation Measure 3.1-9. (DEIR, pp. 3.1-23 through 3.1-25)	**Mitigation Measure 3.1-9**: Prior to the issuance of grading permits, the project applicant shall prepare a grading plan subject to review and approval by the City. In the event that ground-disturbance exceeds 2.2 acres per day for initial site preparation activities that involve extensive earth-moving activities (e.g., grubbing, excavation, rough grading), and 8.1 acres per day for activities that involve minimal earth-moving (e.g., finish grading), the required grading plans shall include the following measures to be implemented as needed to prevent visible dust emissions: • Water all active construction sites to prevent visible dust emissions. Frequency should be based on the type of operation, soil, and wind exposure; • Prohibit grading and earthmoving	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.1-9 be adopted. Mitigation Measure 3.1-9 requires preparation of a grading plan with measures to prevent visible dust emissions. Implementation of Mitigation Measure 3.1-9 would reduce this impact to a less-than-significant level.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	activities, and cover stock piles, during periods of high wind (over 15 mph); • Limit vehicle speed on construction sites to 15 mph. • Apply chemical soil stabilizers on inactive construction areas (disturbed lands within construction projects that are unused for at least four consecutive days); • Apply non-toxic binders (e.g., latex acrylic copolymer) to exposed areas after cut and fill operations and hydroseed area; • Maintain at least 1-foot of freeboard in each haul truck; • Provide windbreaks on the windward perimeter of construction projects where adjacent to open land; • Cover inactive storage piles; • Sweep streets if visible soil material is carried out from the construction site; and/or • Post a publicly visible sign written in English and Spanish which specifies the telephone number and person to contact regarding dust complaints. This person shall respond to complaints and take corrective action within 48 hours. The phone number of the Monterey Bay Air Resources District (MBARD) shall be visible to ensure compliance with Rule 402 (Nuisance). The sign shall be in accordance with MBARD and/or City requirements, as applicable; • Use cleaner construction equipment that conforms to EPA's Tier 3 or Tier 4 emission standards; and/or • Further, where feasible construction should include the use of alternative fuels such as compressed natural gas (CNG), propane, electricity or biodiesel.		
Impact 3.1-4: The proposed project has the potential to have carbon monoxide hotspot impacts (Less Than Significant) This project is located in an area that is designated	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
attainment-unclassified for carbon monoxide. Therefore, no project-level conformity analysis is necessary for CO. Substantial concentrations of carbon monoxide are not expected at or along any streets or intersections affected by the development of the Plan Area. (DEIR, pp. 3.1-25 and 3.1-26)			
Impact 3.1-5: The proposed project has the potential for public exposure to toxic air contaminants (Potentially Significant) While implementation of the West Area Specific Plan, in and of itself, would not result in an increased exposure of sensitive receptors to localized concentrations of TACs, there is a potential for future commercial business activity, as permitted under the West Area Specific Plan, to result in increased exposure of sensitive receptors to localized concentrations of TACs. The emission sources could be stationary sources and/or mobile source (i.e. diesel truck traffic). Because, at the Specific Plan level of land use planning, the City does not yet know the precise locations, configurations, and sizes of any future land uses within the Specific Plan that uses may generate sufficient levels of TACs to create the possibility of adverse health effects, it is premature, at the Specific Plan stage, to undertake an overall health risk assessment for the Specific Plan. Future health risk assessments will be performed where warranted, as required by Mitigation Measure 3.1-10. (DEIR, pp. 3.1-26 through 3.1-30)	**Mitigation Measure 3.1-10:** Prior to issuance of building permits or commencing operation of any commercial building/use that would emit toxic air contaminants (such as gas stations or dry cleaning operations), the project applicant shall, at a minimum, perform prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. The prioritization screening shall be performed in accordance with the California Air Pollution Control Officers Association Air Toxic "Hot Spots" Program guidance. The prioritization screening shall also be conducted consistent with the guidance provided by the Monterey Bay Air Resources District, which will be responsible for determining which facilities based on their prioritization screening score, must perform a health risk assessment. In determining the need to prepare a health risk assessment, the Monterey Bay Air Resources District considers the potency, toxicity, quantity, and volume of hazardous materials released from the facility, the proximity of the facility to potential receptors, and any other factors specific to the facility that indicate that it may pose a significant health risk. If a health risk assessment is warranted for a facility based on its prioritization score, the project applicant shall assess the facilities for the potential to expose the public to toxic air contaminants in excess of the applicable thresholds (utilizing an air dispersion modelling program such as AERMOD). As of the time of this writing, the commonly accepted threshold for cancer risk is 10 in a million for carcinogens, and the reference exposure level for non-carcinogens (HI = 1). Facilities that exceed the applicable threshold(s) have the potential to expose the public to toxic air contaminants levels that would be considered significant. Facilities that exceed the applicable threshold(s) must incorporate mitigation to reduce the risks from emission of toxic air contaminants to an acceptable level (i.e.,	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.1-10 be adopted. Mitigation Measure 3.1-10 requires performance of a prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. Implementation of Mitigation Measure 3.1-10 would reduce this impact to a less-than-significant level.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	to a level that does not exceed the applicable threshold[s]). Potential mitigation includes: reducing the size of the facility area; rearranging the site to reduce the potential for impacts on the nearest sensitive receptors; and utilizing products that reduce the level of toxic air contaminants, or removal of such products from the operational phase of the project.		
Impact 3.1-6: The proposed project has the potential for exposure to odors (Less than Significant) The Specific Plan does not propose sensitive receptors that could be exposed to odors in the vicinity; nor does it propose uses that would create odors that could expose receptors in the area. Therefore, operation of the proposed project would not result in significant objectionable odors. (DEIR, pp. 3.1-30 and 3.1-31)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.1-7: Cumulative impact on the region's air quality (Potentially Significant) As discussed under Impact 3.1-2, implementation of the Specific Plan would result in increased emissions primarily from vehicle miles travelled associated with project implementation and area sources. The MBARD has established operations-related emissions thresholds of significance and it was determined that the Specific Plan annual emissions of ROG, NOx, and PM_{10} at full buildout would exceed the MBARD's thresholds of significance for these pollutants, even with mitigation. As is currently proposed, the Specific Plan is expected to be built out under a staged approach, and all mitigation would be applicable to each stage. However, even with the application of mitigation measures, operational emissions levels would remain above the defined thresholds of significance. Exceedance of the threshold within an area designated as nonattainment would be a cumulatively considerable impact. (DEIR, pp. 3.1-31 and 3.1-32)	Implement Mitigation Measures 3.1-1 through 3.1-9.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council has directed that Mitigation Measures 3.1-1 through 3.1-9 be adopted. Implementation of Mitigation Measures 3.1-1 through 3.1-9, which have been required or incorporated into the Project, will substantially lessen the severity of the significant effect, but will not reduce this impact to a less-than-significant level. No mitigation is available to render the effects less than significant. The effects therefore remain significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
BIOLOGICAL RESOURCES			
Impact 3.2-1: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Invertebrates (Less Than Significant) Based on field surveys, habitat conditions, and records searches, there are no special status invertebrate species that have the potential to be present within the Specific Plan Area. The proposed project would not, directly or indirectly, have a substantial adverse effect on invertebrate species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-30)			
Impact 3.2-2: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Reptile and Amphibian (Potentially Significant) There are numerous locations for refugia (debris, burrows, crevices, barns, sheds, etc.) within the Plan Area that could be used by migrating California tiger salamander (CTS). Higher quality upland habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential refuge sites. It is noted that there is not any known CTS taking refuge in the Specific Plan Area during their estivation period. It is also theoretically possible that a breeding CTS would emerge from the breeding basin and migrate west of Natividad Road to find refugia in the Specific Plan Area. The areas with potential upland habitat in the Specific Plan Area include the farmland fringe, irrigation ditch, roadside ditch, and farmland residence. The paved roads, dirt roads, and tilled farmland provide	**Mitigation Measure 3.2-1:** Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CTS. This is may, or may not, include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS, CDFW, or the City's Community Development Director determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CTS habitat. **Mitigation Measure 3.2-2:** Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to California tiger salamander, the proposed project activities shall be compliant with all Avoidance and Minimization Measures imposed by the USFWS and/or CDFW during Construction Activities. Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CTS to be	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.2-1 through 3.2-4 be adopted. Mitigation Measure 3.2-1 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CTS even though they are well documented as a hybrid population. Mitigation Measure 3.2-2 would require activities to avoid and minimize impacts to CTS to the extent feasible. Mitigation Measure 3.2-3 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CRLF. Mitigation Measure 3.2-4 would require activities to avoid and minimize impacts to CRLF to the extent feasible. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
limited habitat because of the frequency of disturbance in these areas. Given that the entire Specific Plan Area is within the 1.3-mile migration radius, and there is potential aquatic breeding and upland habitat, the proposed project will affect this breeding population of CTS. There are numerous documented occurrences of California red-legged frog (CRLF) in the vicinity of the Specific Plan Area. Higher quality upland and aquatic habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential habitat within the drainage features (i.e. ditches). It is noted that there is not any known CRLF within the Specific Plan Area. The foothill yellow-legged frog (FYLF) is not documented in the vicinity of the Specific Plan Area. The ditches within the Specific Plan Area provide some limited habitat for FYLF. This species is known to occur in aquatic habitats, such as creeks or rivers in woodland, forest, mixed chaparral, and wet meadow habitats with rock and gravel substrate and low overhanging vegetation along the edge. They are usually found near riffles with rocks and sunny banks nearby. The conditions of the Plan Area, including the drainages, are not ideal for this species and they are presumed absent. (DEIR, pp. 3.2-30 through 3.2-38)	responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit traps to capture CTS migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CTS found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report. **Mitigation Measure 3.2-3:** Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CRLF. This may, or may not, include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS, CDFW, or the City's Community Development Director determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CRLF habitat. **Mitigation Measure 3.2-4:** Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to CRLF, the proposed project activities shall be compliant with all Avoidance and Minimization Measures imposed by the USFWS and CDFW during Construction Activities. Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CRLF to be responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	traps to capture CRLF migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CRLF found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report.		
Impact 3.2-3: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Birds (Potentially Significant) Construction activities in the Specific Plan Area would create temporary sources of noise and light that could affect nesting songbirds if they are located adjacent to the Specific Plan Area in the future. The ongoing activities associated with the operational phase (i.e., human and/or domesticated animal presence, light, noise, etc.) could disrupt nesting birds if they are located adjacent to the Specific Plan Area in the future. (DEIR, pp. 3.2-38 through 3.2-40)	**Mitigation Measure 3.2-5:** Building and grading permits and plans issued for development in the Specific Plan Area shall note the following: If construction activities occur during the avian breeding season (February 1 – September 15) then the project proponent shall conduct pre-construction surveys to prevent impacts to nesting birds. No more than 15 days prior to the start of construction a bird survey shall be conducted by a qualified biologist to identify any active nests within 300 feet of the construction zone, and shall be submitted to the City. If construction stops for a period of 15 days or more during the avian breeding season than an additional bird survey shall be conducted. The biologist will conduct a survey within 300 feet of the construction zone for all special-status birds protected by the federal and state ESA, MBTA and CFGC. The biologist shall map all nests that are within, and visible from, 300 feet of the construction zone. If nests are identified, the biologist shall map the location and establish a minimum 300-foot buffer zone around active nests. Construction activity shall be prohibited within the buffer zones until the young have fledged. Nests shall be monitored at least twice per week during the nesting season and a report submitted to the City and CDFW monthly.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-1 through 3.2-5 be adopted. Mitigation Measure 3.2-5 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CRLF. Mitigation Measure 3.2-4 requires a preconstruction survey of the Plan Area and immediate vicinity for all special-status birds protected by the federal and state ESA, MBTA and CFGC prior to construction. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.2-4: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Fish (Less Than Significant) field surveys, habitat conditions, and records searches, there are no fish species that have the potential to be present within the Specific Plan Area. The proposed project would not, directly or indirectly, have a substantial adverse effect on fish	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-41)			
Impact 3.2-5: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Mammals (Potentially Significant) The Specific Plan Area provides potential habitat for several special-status bats, including: Mexican free-tailed bat (*Tadarida brasiliensis),* California mastiff bat (*Eumops perotis californicus*), big brown bat (*Eptesicus fuscus),* Hoary bat (*Lasiurus cinereus),* spotted bat (*Euderma maculatum),* Townsend's big-eared bat (*Corynorhinus townsendii),* pallid bat (*Antrozous pallidus*), western pipistrelle (*Pipistrellus Hesperus),* small-footed myotis/bat (*Myotis ciliolabrum*), long-eared myotis/bat (*Myotis evotis*), California myotis (*Myotis californicus),* long-legged myotis/bat (*Myotis volans*), Yuma myotis/bat (*Myotis yumanensis*), and little brown bat *(Myotis lucifugus).* These species are not federal or State listed; however, most of them are considered California Species of Special Concern and/or are tracked by the CNDDB. Bats are found in a variety of habitats in the region, including buildings, bridges, mines, caves, tree cavities, under bark or rocks, etc. There is the potential for bats to roost in the two on-site farmland residence complexes along San Juan Grade Road, and/or the complexes located along Natividad Road. There is no evidence that bats are present in these locations at this time; however, they can become occupied at some future date. (DEIR, pp. 3.2-41 through 3.2-43)	**Mitigation Measure 3.2-6:** Grading and/or building permits and plans issued for development in the Specific Plan Area shall note the following: Fifteen days prior to construction activities within 200 feet of the residential complexes located along Natividad Road and San Juan Grade Road, the project applicant shall retain a qualified biologist familiar with bat biology to perform a preconstruction survey for roosting special-status bats; and shall be submitted to the City. The survey shall include a minimum of one daytime and one evening survey. The survey shall cover the trees, structures, and debris located within these complexes. If active roosting is observed, removal of the tree or building shall be avoided until the bats can be excluded. All active non-maternity roosting sites shall be fitted with passive exclusion devices, such as one-way flaps or doors, and all bats shall be allowed to leave voluntarily. Once it is confirmed that all bats have left the roost (minimum of five days), crews shall be allowed to continue work in the area. If a maternity roosting site is discovered, a minimum 50-foot buffer shall be established around the roost. The project applicant shall consult with the qualified biologist in order to determine if a greater buffer is warranted based on the bat species, roost location, and specific construction activities to be performed in the vicinity. The buffer shall stay in effect until all young are determined to be volant (i.e., able to fly and feed independently) by a qualified biologist. Once it is determined that all young are volant (generally by August 1st), passive exclusion devices shall be installed and all bats shall be allowed to leave voluntarily. Once it is determined by a qualified biologist that all bats have left the roost (minimum of five days), crews shall be allowed to work within the buffer zone. Project Improvement Plans will include this measure as a note in the plans.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-6 be adopted. Mitigation Measure 3.2-6 requires avoidance and minimization measures to avoid impacts to bat species. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.2-6: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS – Plants (Less Than Significant) The records search identified numerous special-status plants located within the region. Field surveys and habitat evaluations were performed in 2004 by Biotic Resources Group: March (26th and 31st), April (14th and 30th), May (17th), June (17th), July (26th). Additional field surveys were performed by De Novo Planning Group in 2015 September (11th) and in 2016 (April 18th). The collection of field surveys included surveys that coincided with the blooming period for special many status plants known to occur within the region. The conditions of the Specific Plan Area are highly disturbed due to the active agricultural operations. No special-status plants were observed within the Specific Plan Area during field surveys. The proposed project would not, directly or indirectly, have a substantial adverse effect on plant species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-43)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-7: The proposed project has the potential to have substantial adverse effect on federally - or state-protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means (Potentially Significant) The Specific Plan Area contains a roadside ditch located along the north side of East Boronda Road. The ditch was constructed to support agricultural operations, and drains agricultural runoff from most of the Specific Plan Area into the existing City storm water drainage system	**Mitigation Measure 3.2-7**: Prior to grading/building permit issuance in an area that would disturb the irrigation ditches and/or roadside ditches, the project applicant shall obtain a jurisdictional determination from the USACE and CDFW for the ditches that are proposed to be disturbed. If these regulatory agencies concur that these facilities are exempt, then no further mitigation is necessary. If it is determined that these facilities are not exempt, authorization for fill from the regulatory agencies (USACE-404 permit, RWQCB-401 certification, 1600 Streambed Alteration Agreement) will be	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-7 be adopted. Mitigation Measure 3.2-7 requires a 1:1 replacement of acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation or operations. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
The USACE has regulatory responsibility for navigable waters as well as "all other waters such as...streams ...wetlands...and natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce" (33 CFR 323.2) under Section 404 of the CWA. A formal jurisdictional determination must be made by the USACE relative to the protected wetlands and jurisdictional waters within the Specific Plan Area. The agricultural irrigation ditches are manmade and believed to solely function to drain upland agricultural runoff. As such, they are expected to be exempted from the USACE jurisdiction under the Irrigation Ditch Exemption pursuant to Federal Regulations (33 CFR 323.4(a)(3)). However, a final determination must be made by the USACE prior to any filling of these ditches for urban use. (DEIR, pp. 3.2-43 through 3.2-45)	necessary and a permit shall be adhered to throughout the construction phase. At a minimum, the project applicant shall replace on a "no net loss" basis (minimum 1:1 ratio) the acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation or operations, although a higher mitigation measure may be required by the USACE, RWQCB, and CDFW through their permitting processes. Wetland habitat shall be replaced at acreage and location agreeable to the USACE, RWQCB, and CDFW and as determined during the Section 401, 404, and 1600 permitting processes.		
Impact 3.2-8: The proposed project has the potential to have substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service (Less Than Significant) The records search and field surveys did not reveal the presence of any riparian habitat or sensitive natural communities within the Specific Plan Area. The conditions of the Specific Plan Area are highly disturbed due to the active agricultural operations. The proposed project would not result in a substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or UFWSF. (DEIR, pp. 3.2-45 and 3.2-46)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-9: The proposed project has the potential to interfere substantially with the movement of native fish or wildlife species or with established wildlife corridors, or impede the use of native wildlife nursery sites (Potentially Significant) The proposed project has the potential to interfere substantially with the movement of native fish or wildlife species or with established wildlife corridors, or impede the use of native wildlife nursery sites. Development of the proposed project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. (DEIR, pp.	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
3.2-46 through 3.2-47)			
Impact 3.2-10: The proposed project has the potential to conflict with an adopted Habitat Conservation Plan or Natural Community Conservation Plan (Less Than Significant) The proposed project is not subject to a Habitat Conservation Plan or Natural Community Conservation Plan. Therefore, the proposed project would not conflict with an adopted Habitat Conservation Plan or Natural Community Conservation Plan. (DEIR, pp. 3.2-47)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-11: The proposed project has the potential to conflict with local policies or ordinances protecting biological resources (Less Than Significant) The proposed project would not conflict with local policies or ordinances protecting biological resources. The project proponent is required to comply with the provisions of the City's General Plan and Municipal Code. The proposed project is generally consistent with the above relevant open space and conservation policies of the General Plan, as well as the City's Municipal Code. (DEIR, pp. 3.2-47 through 3.2-52)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-12: Cumulative loss of biological resources including habitats and special status species (Potentially Significant) The project would result in impacts to biological resources including habitats and special status species. Development of the proposed project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. Given the rareness of CTS and CRLF in the Bioregion, the incremental loss of movement habitat from the proposed project, when considered alongside all past, present, and probable future projects (inclusive of all communities within the Bioregion), is a significant and unavoidable cumulative impact, and the Specific Plan's incremental contribution to this impact is itself cumulatively considerable**.** (DEIR, pp. 3.2-52 and 3.2-53)	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
CULTURAL AND TRIBAL RESOURCES			
Impact 3.3-1: Project implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines	**Mitigation Measure 3.3-1:** In the event that evidence of archaeological or historical features or deposits (e.g., ceramic shard, trash scatters,	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
§15064.5 (Potentially Significant) No historical resources were found during field surveys for the proposed project. Additionally, there are no historical resources that have been identified in the Specific Plan Area on maps and files maintained by the Northwest Information Center (NWIC). There have been three previous cultural resource studies that examined approximately three-quarters of the Specific Plan Area and no historical resources were documented. The Monterey County Historic Property Data File Directory and National Register of Historic Resources do not list any historical resources in the Specific Plan Area. It is not anticipated that ground disturbing activities would result in impacts to historical resources given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of a previously unknown historical resource. Project implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5. (DEIR, pp. 3.3-12 and 3.3-13)	lithic scatters) are uncovered (discovered) during excavation and/or grading, all work shall stop in the area of the subject property until an appropriate data recovery program can be developed and implemented by a qualified archaeologist. This archaeologist shall determine whether the uncovered deposits or features qualify as either "historical resources" within the meaning of CEQA Guidelines section 15064.5, subdivision (a), "unique archaeological resources" as defined in Public Resources Code section 21083.2, subdivision (g), or "tribal cultural resources," as defined in Public Resources Code section 21074. If historical resources, unique archaeological resources, or tribal cultural resources are present, the project proponent shall preserve any such resources or implement any feasible mitigation measures identified by the archaeologist and imposed by the City. Recommended mitigation measures shall be reviewed by the City Planner and shall be approved if feasible in light of project design, logistics, and cost considerations and, if approved, shall be implemented and completed prior to commencing further work for which grading or building permits were issued, unless otherwise directed by the City Planner. Data recovery shall be an option if preservation in place is infeasible. Where resources have been determined to be "unique archaeological resources" but not "historical resources" or "tribal cultural resources," the project proponent's obligations shall be limited as set forth in Public Resources Code section 21083.2, subdivisions (d), (e), and (f). Grading/building permits and plans shall note this measure.		The City Council hereby directs that Mitigation Measure 3.3-1 be adopted. Implementation of Mitigation Measure 3.3-1 requires work to stop if an archaeological or historical feature or deposit is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-2: Project implementation may cause a substantial adverse change in the significance of archaeological resource pursuant to CEQA Guidelines §15064.5 (Potentially Significant) No archaeological resources were found during field surveys for the proposed project. Additionally, no archaeological resources have been identified in the Plan Area on maps and files maintained by the NWIC. There have been three previous cultural resource studies that examined approximately three-quarters of the Specific Plan Area and no archaeological resources were documented. The Monterey County Historic Property Data File Directory and National Register of Historic	Implement Mitigation Measure 3.3-1	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.3-1 be adopted. Implementation of Mitigation Measure 3.3-1 requires work to stop if an archaeological or historical feature or deposit is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Resources do not list any archaeological resources in the Specific Plan Area. It is not anticipated that ground disturbing activities would result in impacts to archaeological resources given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of a previously unknown archaeological resource. Project implementation may cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines §15064.5. (DEIR, pp. 3.3-13)			
Impact 3.3-3: Project implementation may directly or indirectly destroy a unique paleontological resource (Potentially Significant) A search of the University of California, Berkeley Museum of Paleontology collections database of Paleontology Localities did not identify any paleontological resources (fossils or fossil formations) within the Specific Plan Area. The Monterey County General Plan Draft EIR (2007) included a review of known fossil localities conducted by paleontologists in 2001. Twelve fossil sites were identified as having outstanding scientific value. For the most part, the fossils at these 12 sites reflect the type of assemblages found throughout the county (microorganisms or invertebrates); however, each has special characteristics that make it unique or rare, or in some way provide important stratigraphic or historic information. None of the 12 identified high value sites are located on or near the Specific Plan Area. Additionally, the Salinas General Plan Final EIR (2002) does not identify any high value sites in the Specific Plan area or in the City as a whole. However, unknown important paleontological resources have the potential to occur within the planning area including the undeveloped future growth areas, which include the Specific Plan Area. The construction of new development would involve grading and other earthwork that can disturb important fossils. Therefore, project implementation may directly or indirectly destroy a unique paleontological resource. (DEIR, pp. 3.3-13 and 3.3-14)	**Mitigation Measure 3.3-2**: If paleontological resources are discovered during the course of construction, work shall be halted immediately within 50 meters (165 feet) of the discovery, the City of Salinas shall be notified, and a qualified paleontologist shall be retained to determine the significance of the discovery. If the paleontological resource is considered significant, it should be excavated by a qualified paleontologist and given to a local agency, State University, or other applicable institution, where the resource could be curated and displayed for public education purposes. Grading/ building permits and plans shall note this measure.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.3-2 be adopted. Implementation of Mitigation Measure 3.3-2 requires work to stop if a paleontological resource is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-4: Project implementation may disturb human remains, including those interred outside of	**Mitigation Measure 3.3-3:** If human remains are found during construction within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
formal cemeteries (Potentially Significant) No human remains or known burial sites were found during field surveys for the proposed project. Additionally, there are no human remains or known burial sites that have been identified in the Plan Area on maps and files maintained by the NWIC. It is not anticipated that ground disturbing activities would result in impacts to human remains or known burial sites given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of previously unknown human remains or known burial sites. Project implementation may disturb human remains, including those interred outside of formal cemeteries. (DEIR, pp. 3.3-14 and 3.3-15)	Plan Area, or at off-site infrastructure improvement locations, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until a qualified archeological monitor and the coroner of Monterey County are contacted. If it is determined that the remains are Native American, the coroner shall contact the Native American Heritage Commission within 24 hours. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descendent (MLD) from the deceased Native American. The MLD may then make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and associated grave goods as provided in Public Resources Code section 5097.98. The landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further disturbance if: a) the Native American Heritage Commission is unable to identify a MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission; b) the descendent identified fails to make a recommendation; or c) the landowner or his authorized representative rejects the recommendation of the descendent, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner. Grading permit/building permits and plans shall note this measure.		environment. The City Council hereby directs that Mitigation Measure 3.3-3 be adopted. Implementation of Mitigation Measure 3.3-3 requires work to stop if human remains are found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-5: The project may contribute to cumulative impacts on known and undiscovered cultural resources (Less Than Significant) While there are extensive documented cultural resources in Salinas and unincorporated Monterey County, there are no cultural resources that were found during field surveys of the proposed project. Additionally, there are no cultural resources that have been identified in the Plan Area on maps and	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
files maintained by the NWIC. The Monterey County Historic Property Data File Directory and National Register of Historic Resources do not list any cultural resources in the Plan Area. Any significant discoveries during construction would be required to be preserved in place or mitigated through relocation or documentation; and the project is not anticipated to considerably contribute to a significant reduction in cultural resources. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts. The proposed project would not have cumulatively considerable impacts associated with cultural resources. (DEIR, pp. 3.3-15 and 3.3-16)			
GREENHOUSE GASES, CLIMATE CHANGE, AND ENERGY			
Impact 3.4-1: Potential to generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment (Potentially Significant) Short-term construction GHG emissions are a one-time release of GHGs and are not expected to significantly contribute to global climate change over the lifetime of the Specific Plan. Even after incorporation of the mitigation measures provided in Section 3.1: Air Quality, overall GHGs generated by the proposed project are expected to be greater than the applicable thresholds of 1,150 MT of CO_2e per year for construction emissions, 1.94 MT CO_2e/service population/year for operational emissions during Year 2035, and 0.80 MT CO_2e/service population/year for operational emissions during Year 2050. The project would generate GHG emissions, directly and indirectly, that may have a significant impact on the environment. (DEIR, pp. 3.4-31 through 3.4-38)	**Mitigation Measure 3.4-1**: Prior to the approval of the tentative maps and development review permits, as applicable, pursuant to CEQA Guidelines section 15183.5(b), Plans for the Reduction of Greenhouse Gas Emissions, the project applicant shall prepare a Greenhouse Gas Reduction Plan (GGRP) aimed at achieving specific performance standards. The GGRP shall include the following: 1) The GGRP shall achieve a per capita operational emissions level of 1.94 MT CO_2e/service population/year by year 2035, and 0.80 MT CO_2e/service population/year by year 2050. 2) Calculation of GHG emissions projection using an acceptable modeling tool such as the most recent version of CalEEMod. GHG reduction measures may include building and site energy reduction measures, measures to reduce project-generated vehicle miles traveled, or other measures. Off-site measures such as participation in a community-wide GHG reduction program(s), if any are adopted, or payment of GHG reduction fees (carbon offsets) into a qualified existing program, if one is in place, may be considered after all feasible on-site reduction measures are considered. The effectiveness of the GHG reduction measures included in the GGRP must be verifiable based	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Even with implementation of Mitigation Measure 3.4-1, it is possible that individual projects within the Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	on evidence presented in the GGRP. Representative GHG reduction measures which may be considered may include, but are not limited to: • Measures identified by the California Air Pollution Control Officers' Association in Quantifying Greenhouse Gas Mitigation Measures: A Resource for Local Government to Assess Emission Reductions from Greenhouse Gas Mitigation Measures or updates to this document as may occur from time to time. • Applicable measures identified in guidance from MBARD, if any, and/or in guidance provided by other regional air districts such as the Bay Area Air Quality Management District, Sacramento Metropolitan Air Quality Management District, San Luis Obispo County Air Pollution Control District, or other agencies with adopted GHG reduction guidance that is applicable on the date the project application is deemed complete by the City. If sufficient feasible GHG reduction measures are unavailable to reduce GHG emissions to below the threshold of significance, the project applicant shall include evidence in the GGRP to this effect. The GGRP shall be subject to review and approval of the City of Salinas Community Development Department prior to approval of the tentative map or development review application, as applicable. Implementation of this mitigation measure shall not be required if the City has a qualified GHG reduction plan in place on the date a future individual project application is deemed complete, the qualified GHG reduction plan reflects the most recent legislatively-adopted GHG reduction targets (e.g., the 2030 target set by SB 32), includes an inventory of projected GHG emissions from development within the Specific Plan Area, and includes GHG reduction measures applicable to development within the Specific Plan Area whose implementation is required as a condition of approval of such projects.		
Impact 3.4-2: Potential to conflict with an applicable plan, policy, or regulation adopted for the purpose of	Implement Mitigation Measure 3.4-1.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
reducing the emissions of greenhouse gases (Potentially Significant) The Specific Plan would generate GHG emissions that could conflict with the State's long-term GHG Reduction targets, even with implementation of Mitigation Measures 3.1-1 through 3.1-9 contained within Section 3.1: Air Quality. The Specific Plan would not interfere with the *2008 Monterey Bay Regional Energy Plan* objectives. (DEIR, pp. 3.4-38 through 3.4-42)			environment. The City Council hereby directs that Mitigation Measure 3.4-1 be adopted. Implementation of Mitigation Measure 3.4-1 would ensure that GHG reduction measures required pursuant to it are consistent with the intent of current and future statewide GHG reduction legislation and regulations, and with current and future expectations of local, regional, and State stakeholders regarding the City's effort to reduce GHG emissions from new development, including Executive Order B-30-15 and S-03-05. Therefore, with implementation of Mitigation Measure 3.4-1, new development of the Plan Area would consistent with Executive Orders B-30-15 (and SB 32) and S-03-05. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.4-3: Project implementation may result in the inefficient, wasteful, or unnecessary use of energy resources (Less Than Significant) The proposed project would use energy resources for the operation of project buildings (electricity and natural gas), for on-road vehicle trips (e.g. gasoline and diesel fuel) generated by the proposed project, and from off-road construction activities associated with the proposed project (e.g. diesel fuel). Each of these activities would require the use of energy resources. The proposed project would be in compliance with all applicable federal, State, and local regulations regulating energy usage. Overall, the incorporation of mitigation measures would ensure that the proposed project would avoid and reduce inefficient, wasteful, and unnecessary consumption of energy. The proposed project would comply with all existing energy standards, including those established by the City of Salinas, the local air district (MBARD), and the State of California, and would not be expected to result in significant adverse impacts on energy resources. (DEIR, pp. 3.4-42 through 3.4-48)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.4-4: Cumulative impact on climate change from increased project-related greenhouse gas emission (Potentially Significant) Implementation of the proposed project will generate GHG emissions that would not otherwise exist without the proposed project. Given the length of construction activities for a project of this size, the construction emissions would be a long-term release of approximately 168,734.3 MT CO_2e. The operational emissions would be a long-term release totaling approximately 51,939.2 MT CO2e per year without mitigation, and 47,684.9MT CO_2e	Implement Mitigation Measure 3.4-1.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council hereby directs that Mitigation Measure 3.4-1 be adopted. Implementation of Mitigation Measure 3.4-1 would ensure that GHG reduction measures required pursuant to it are consistent with the intent of current and future statewide GHG reduction legislation and regulations, and with current and future expectations of local, regional, and State stakeholders regarding the City's effort to reduce GHG emissions from new

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
per year with mitigation. The City of Salinas's planning efforts included targeted growth that accommodates the economic and social needs of the community, while recognizing and seeking to mitigate environmental impacts when growth occurs. The State of California continues to implement measures that are intended to reduce emissions on a State-wide scale (i.e. vehicle fuel efficiency standards in fleets, low carbon fuels, etc.) that are consistent with AB 32 and SB 32. These types of statewide measures will benefit the proposed project (and city as a whole) in the long-term as they come into effect; however, the City does not have the jurisdiction to create far-reaching (i.e. statewide) measures to reduce GHG emissions. (DEIR, pp. 3.4-48 through 3.4-49)			development, including Executive Order B-30-15 and S-03-05. Therefore, with implementation of Mitigation Measure 3.4-1, new development of the Plan Area would consistent with Executive Orders B-30-15 (and SB 32) and S-03-05. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
HAZARDS AND HAZARDOUS MATERIALS			
Impact 3.5-1: Potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment (Potentially Significant) The hazards assessments included site reconnaissance, interviews, historical land use research, database research, and soils testing. The project has the potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment. (DEIR, pp. 3.5-24 through 3.5-26)	**Mitigation Measure 3.5-1**: Prior to issuance of grading permits or building permits, (including the issuance of demolition permits for agricultural support buildings) as applicable, the applicant shall hire a qualified consultant to: 1) Provide a final evaluation of the soils around the agricultural operations support buildings (residences, warehouses, barns, etc.) before they are demolished. If toxic levels of residual agrichemicals or surface staining are found, the contaminated soil shall be excavated and disposed of at an off-site disposal facility permitted to accept such waste. Any contaminated areas shall be remediated by the project applicant in accordance with recommendations made by the Monterey County Health Department Hazardous Materials Management Services, Regional Water Quality Control Board, Department of Toxic Substances Control, or other appropriate federal, State, or local regulatory agencies. 2) Investigate structures for asbestos-containing materials and lead. If asbestos-containing materials and/or lead are found in the buildings, a Cal-OSHA certified ACBM and lead based paint contractor shall be retained to remove the asbestos-containing materials and lead in accordance with U.S. EPA and California	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.5-1 through 3.5-3 be adopted. Implementation of the Mitigation Measures 3.5-1 requires a final evaluation of the soils around the agricultural operations support buildings and investigation of structures for asbestos-containing materials and lead. Implementation of the Mitigation Measures 3.5-2 requires destruction of existing water wells. Implementation of the Mitigation Measures 3.5-2 requires that water wells serving the proposed building be constructed and tested for water quality under permit from the Monterey County Health Department Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Occupational Safety and Health Administration (Cal/OSHA) standards. In addition, all activities (construction or demolition) in the vicinity of these materials shall comply with Cal/OSHA asbestos and lead worker construction standards. Any ACBM and lead shall be disposed of properly at an appropriate offsite disposal facility. **Mitigation Measure 3.5-2**: Prior to the issuance of grading permits, existing water wells within the grading area shall be destroyed under permit from the City of Salinas and/or the Monterey County Health Department, as applicable. Any destruction of these facilities shall be in accordance with the Monterey County Well Standards for Abandonment/Destruction. The project applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate destruction of these facilities. **Mitigation Measure 3.5-3:** Prior to the issuance of building permits, the water well or wells that will be providing water for the applicable portion of the Specific Plan Area, shall be constructed and tested for water quality under permit from the Monterey County Health Department. The project applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate construction and operation of these facilities.		
Impact 3.5-2: Create a significant hazard to school sites due to siting or the placement of infrastructure (Potentially Significant) The proposed project does not pose significant hazards from existing natural gas transmission piping, and mitigation measures identified under Impact 3.5-1 would ensure water well construction and abandonment impacts would be less than significant. However, implementation of the project may create a significant hazard to school sites due to siting or the placement of infrastructure (i.e., the due to the citing of school sites near power lines). (DEIR, pp. 3.5-26 through 3.5-28)	**Mitigation Measure 3.5-4:** The property line of all school sites (even if it is a joint use agreement as described in subsection (o) of § 14010) shall be at least the following distance from the edge of respective power line easements as identified in the California Code of Regulations Title 5, Article 2. School Sites § 14010. Standards for School Site Selection (c). • 100 feet for power lines that are between 50 and 133 kV.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.5-4 be adopted. Implementation of Mitigation Measure 3.5-4 ensures all future electrical transmission alignments are required to comply with California Code of Regulations Title 5, Article 2 (School Sites) § 14010 (Standards for School Site Selection) setback requirements. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.5-3: Cumulative impact related to hazards and hazardous materials (Less Than Significant) The proposed project includes the approval and	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
subsequent implementation of an approximately 797-acre Specific Plan Area that includes residential, mixed use commercial, a community park, neighborhood parks, small parks, schools, and open space (with supplemental storm water detention/retention basins). These uses are not expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. The proposed Specific Plan land uses are not expected to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste. Mitigation measures have been included to minimize the risk of on-site hazards. (DEIR, pp. 3.5-28 through 3.5-29)			
HYDROLOGY AND WATER QUALITY			
Impact 3.6-1: The proposed project has the potential to violate water quality standards or waste discharge requirements during construction (Potentially Significant) Grading, excavation, removal of vegetation cover, and loading activities associated with construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. (DEIR, pp. 3.6-21 through 3.5-23)	**Mitigation Measure 3.6-1:** Prior to issuance of grading permits, the project proponent shall submit a Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) to the City of Salinas prior to submitting to the RWQCB to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit Order 2009-0009-DWQ amended by 2010-0014-DWQ & 2012-0006-DWQ). The SWPPP shall be designed with Best Management Practices (BMPs) that the RWQCB has deemed to be effective at reducing erosion, controlling sediment, and managing runoff. These include: covering disturbed areas with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. Sediment control BMPs, installing silt fences or placing straw wattles below slopes, installing berms and other temporary run-on and runoff diversions. These BMPs are only examples of what should be considered and shall not preclude the use of equally or more effective new or innovative approaches currently available or being developed. Final selection of BMPs will be subject to approval by City of Salinas. The SWPPP will be kept on site during construction activity and will be made available upon request	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.6-1 be adopted. Mitigation Measure 3.6-1 requires the use of BMPs during construction activities in order to reduce erosion, control sediment, and manage runoff from the Plan Area. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	to representatives of the RWQCB.		
Impact 3.6-2: The proposed project has the potential to violate water quality standards or waste discharge requirements during operation (Potentially Significant) The long-term operations of the proposed project (all phases) could result in long-term impacts to surface water quality from urban stormwater runoff. The proposed Project would result in new impervious areas associated with roadways, driveways, parking lots, buildings, and landscape areas. Normal activities in these developed areas include the use of various automotive petroleum products (i.e. oil, grease, and fuel), common household hazardous materials, heavy metals, pesticides, herbicides, fertilizers, and sediment. Within urban areas, these pollutants are generally called nonpoint source pollutants. The pollutants pollutant levels vary based on factors such as time between storm events, volume of storm event, type of uses, and density of people. The proposed project has the potential to violate water quality standards or waste discharge requirements during operation. (DEIR, pp. 3.6-23 through 3.6-26)	**Mitigation Measure 3.6-2:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention/retention basins designed to meet the applicable regulatory requirements and to reduce contaminant loadings to receiving waters to the maximum extent practicable. The Improvement Plans shall be consistent with the City's NPDES permit requirements at the time of permitting. The NPDES permit granted to the City of Salinas by the Central Coast RWQCB (CCRWQCB, 2012) requires the following: I. Erosion and Sediment Control BMPs – Erosion control and sediment control BMPs shall be designed, installed, and maintained to reduce the discharge of pollutants from construction sites to the maximum extent practical (MEP) and protect water quality; II. Erosion and sediment from slopes and channels shall be controlled by implementing an effective combination of erosion control (source control) and other sediment control BMPs; and II. Soil Stabilization – Stabilization of disturbed areas shall, at a minimum, be initiated immediately whenever any clearing, grading, excavating, or other earth disturbing activities have permanently ceased. Additionally, the Improvement Plans shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The City of Salinas Stormwater Standards for New and Redevelopment Projects (City of Salinas, 2013) require the following practices: I. Limit disturbance of creeks and natural drainage features and provide setbacks according to the City's latest NPDES permit; II. Minimize compaction of highly permeable	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.6-2 through 3.6-4 be adopted. Mitigation Measure 3.6-2 requires submittal of a Stormwater Control Plan that includes calculations, BMPs and plan of sufficient detail to confirm that contaminant loadings to receiving waters will be reduced to the maximum extent practicable. Mitigation Measures 3.6-3 and 3.6-4 require submittal of detailed plans and calculations for the water quality BMPs, water quality detention basins, and supplemental retention and peak flow control. The BMPs will be designed to meet regulatory requirements and to reduce peak flows during storm events below peak flows under pre-project conditions. The various RWQCBs have evaluated the effectiveness of the types of BMPs required by Mitigation Measures 3.6-2 through 3.6-4 and have determined that BMPs are known to be effective in protecting receiving waters. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	soils; and II. Limit clearing and grading of native vegetation to the minimum needed to build the project and provide fire protection. **Mitigation Measure 3.6-3:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention basins designed to prevent to the maximum extent practicable the creation of new sources of polluted runoff. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department. **Mitigation Measure 3.6-4:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department detailed plans and calculations for supplemental retention and peak flow control. BMPs will be designed to meet regulatory requirements and to reduce peak flows during storm events below peak flows under pre-project conditions. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department.		
Impact 3.6-3: The proposed project has the potential to substantially deplete groundwater supplies or interfere substantially with groundwater recharge (Potentially Significant) The proposed project, without mitigating features, would reduce infiltration of rainwater and runoff into the local groundwater system due to the increase in impermeable area. This may deplete groundwater supplies or interfere substantially with groundwater recharge. The total annual rainfall depth in an average year is approximately 16 inches and the project surface area is approximately 797 acres, producing an annual rainfall volume of approximately 1,060 AF. Nearly all of this area is currently in agriculture, while the proposed project could convert as much as 60 percent of the area to impervious surfaces, resulting in a reduction in groundwater recharge in the range of 400 to 600 AF. (DEIR, pp. 3.6-26 through 3.6-29)	**Mitigation Measure 3.6-5:** Prior to the approval of site improvement plans, the project applicant shall site, and design and include an Operation and Maintenance Plan for stormwater retention/infiltration basins and infiltration promoting BMPs sufficient to assure that there is no reduction in groundwater recharge. In order to assure there is no reduction in recharge, the plan shall result in circumstances which maintain infiltration to support baseflow and interflow to wetlands and surface waters, and deep vertical infiltration to groundwater. The site, design, and installation shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The contents of the site, design, and installation shall be included in a stormwater control plan. The stormwater control plan shall be reflected on the Improvement Plans, subject to review and approval by the Salinas Public Works Department.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.6-5 and 3.6-6 be adopted. Implementation of Mitigation Measure 3.6-5 requires an Operation and Maintenance Plan for stormwater retention/infiltration basins and infiltration promoting BMPs sufficient to assure that there is no reduction in groundwater recharge. Implementation of Mitigation Measure 3.6-6 requires an Operation and Maintenance Plan for post-construction BMPs and supplemental stormwater detention basins in accordance with City of Salinas stormwater development standards. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Mitigation Measure 3.6-6: Prior to the approval of site improvement plans, the project applicant shall site, design, and include an Operation and Maintenance Plan for post-construction BMPs and supplemental stormwater detention basins in accordance with City of Salinas stormwater development standards. Maintenance procedures (including frequency of procedure, cleaning schedules, applicant responsibility for each procedure, performance standards, or other means) and funding mechanisms shall be established for those facilities to assure adequate long-term performance and success in treating the water and controlling infiltration into the groundwater. The Improvement Plans and Operation and Maintenance Plan shall be subject to review and approval by the Salinas Public Works Department.		
Impact 3.6-4: The proposed project has the potential to alter the existing drainage pattern in a manner which would result in substantial erosion, siltation, flooding, or polluted runoff (Less than Significant) The proposed project will not alter drainage patterns in a manner which will cause flooding, erosion, or siltation. Surface runoff from the area will be managed via parcel-based LID measures, detention/retention basins, and flow reducing BMPs to prevent local flooding within the site. These features will also reduce peak flows from the Plan Area to receiving creeks and storm drains to amounts less than such flows under existing conditions. Sediment in the stormwater flows will be captured in detention ponds designed to prevent siltation. Flooding, erosion, or siltation is not anticipated by the proposed project given the storm drain design and best management practices that will be implemented. (DEIR, pp. 3.6-29 through 3.6-30)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-5: The proposed project has the potential to otherwise substantially degrade water quality (Potentially Significant) The proposed project would not otherwise substantially degrade water quality. The use of BMPs are intended to treat runoff close to the source during the construction and long term operational phase of the project to reduce stormwater quality impacts. (DEIR, pp. 3.6-30 through 3.6-31)	Implement **Mitigation Measure 3.6-1**.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.6-1 be adopted. Mitigation Measure 3.6-1 requires the use of BMPs during construction activities in order to reduce erosion, control sediment, and manage runoff from the Plan Area. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.6-6: Place housing or structures that would impede/redirect flows within a 100-year, or 200-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map (Less than Significant) The project would no place housing or structures that would impede/redirect flows within a 1-percent annual chance flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. Provided that the storm drain system and detention/retention facilities to be installed as part of the proposed development are adequately sized and properly installed and maintained, additional flooding and/or impedance or redirection of flows will not be induced by the proposed project. (DEIR, pp. 3.6-31)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-7: The proposed project has the potential to expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, seiche, tsunami, or mudflow (Less than Significant) The proposed project would not result in the exposure of people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, seiche, tsunami, or mudflow. (DEIR, pp. 3.6-31 through 3.6-32)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-8: Cumulative increases in peak stormwater runoff from the plan area (Less than Significant) With the design and construction of flood control improvements, the West Area Specific Plan would not increase peak stormwater runoff. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures would control peak stormwater runoff. The proposed project would not have cumulatively considerable impacts associated with stormwater runoff. (DEIR, pp. 3.6-	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
32 through 3.6-33)			
Impact 3.6-9: Cumulative impacts related to degradation of water quality (Less than Significant) The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures would control storm water quality. The proposed project would not have cumulatively considerable impacts associated with water quality. (DEIR, pp. 3.6-33 through 3.6-35)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-10: Cumulative impacts related to degradation of groundwater supply or recharge (Less than Significant) The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures require maintaining water quality standards and preserving the infiltration of rainwater within the aquifer. The proposed project would not have cumulatively considerable impacts associated with groundwater supply/recharge. (DEIR, pp. 3.6-35 through 3.6-36)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-11: Cumulative impacts related to flooding (Less than Significant) Future development in the area must be sited and designed in accordance with the aforementioned City flood damage regulations (i.e., Article VI, Flood Damage Prevention, of the City's Code). The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures require designs that ensure structures are outside the base flood elevation and that storm water flows are maintained to prevent downstream flooding. The proposed project would not have cumulatively considerable impacts associated with flooding. (DEIR, pp. 3.6-36 through 3.6-38)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
NOISE			
Impact 3.7-1: The proposed project has the potential to increase traffic noise levels at existing receptors (Potentially Significant) As shown in Tables 3.7-8 through 3.7-11, some noise-sensitive receptors located along the Plan Area roadways are currently exposed to exterior traffic noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard for residential uses. These receptors would continue to experience elevated exterior noise levels with implementation of the proposed project. As shown in Table 3.7-8, the segment of Natividad Road south of E. Boronda Road would experience unacceptable noise levels under Existing Plus Project conditions. The project would cause noise levels along this segment to increase by 1.6 dB. As shown in Table 3.7-9, the segment of Natividad Road south of E. Boronda Road would experience unacceptable noise levels under Existing Plus Project Plus CASP conditions. As shown in Table 3.7-10, the following roadway segments would experience unacceptable noise levels under Cumulative Plus Project conditions: • E. Boronda Road from San Juan Grade to McKinnon (2.4 dB increase); • E. Boronda Road from Independence to Hemmingway (1.8 dB increase); • E. Boronda Road from N. Sanborn to Williams (2.4 dB increase); • Natividad Road south of E. Boronda (3.7 dB increase); and • Natividad Road from E. Boronda to Future Russell Road (3.0 dB increase). As shown in Table 3.7-11, significant traffic noise increases are anticipated under the Cumulative Plus Project Plus CASP traffic condition include the following segments: • Constitution Blvd., South of E. Boronda – noise levels are predicted to increase by 3.5 dB from 62.2 dB to 65.7 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB,	Implement Mitigation Measures 3.7-1 and 3.7-8.	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Mitigation Measure 3.7-1 requires adherence to the requirements of the City of Salinas Municipal Code with respect to hours of operation during project construction. Mitigation Measure 3.7-2 requires all equipment to be fitted with factory equipped mufflers and in good working order. Mitigation Measure 3.7-3 requires sound walls for residents located along the primary Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. Mitigation Measure 3.7-4 requires 3-coat stucco and windows having a Sound Transmission Class (STC) 35, or higher, rating to be installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-5 requires mechanical ventilation for the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-6 requires the center of active play areas, such as football fields, soccer fields or other athletic fields, to be located at a minimum distance of 90-feet from the nearest residential property lines. Mitigation Measure 3.7-7 includes various project design requirements where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas. Mitigation Measure 3.7-8 includes various project design requirements fort the well and treatment plant facilities. Even with implementation of Mitigation Measures 3.7-1 through 3.7-8, there is the potential for noise levels to exceed the acceptable levels in some cases if encroachment into private property proves for the construction of sounds walls proves to be infeasible. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
as outlined in Table 3.7-7. • E. Boronda Road, Main to San Juan Grade – noise levels are predicted to increase by 1.5 dB from 66.5 dB to 68.1 dB L_{dn}. This would equal the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, San Juan Grade to McKinnon – noise levels are predicted to increase by 2.6 dB from 65.3 dB to 67.9 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, El Dorado to Natividad – noise levels are predicted to increase by 3.3 dB from 64.1 dB to 66.1 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Natividad to Independence – noise levels are predicted to increase by 2.6 dB from 66.6 dB to 69.3 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Independence to Hemmingway – noise levels are predicted to increase by 3.5 dB from 65.1 dB to 68.6 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Hemmingway to Constitution – noise levels are predicted to increase by 3.0 dB from 58.2 dB to 61.3 dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • E. Boronda Road, N. Sanborn to Williams – noise levels are predicted to increase by 3.1 dB from 59.6 dB to 62.7dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • Natividad Road., South of E. Boronda – noise levels are predicted to increase by 4.5 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • Natividad Road., E. Boronda to Future Russell Road – noise levels are predicted to increase by 3.8 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. However, it should be noted that this roadway segment is located between the West Area Specific Plan and Central Area Specific Plan projects and future sensitive receptors along this roadway would be constructed with noise control measures designed to achieve compliance with the City of Salinas exterior and interior noise level standards. • Russell Road, West of San Juan Grade – noise levels are predicted to increase by 1.9 dB from 67.5 dB to 69.4 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. (DEIR p. 3.7-14 through 3.7-23)			
Impact 3.7-2: The proposed project has the potential to increase noise levels associated with construction activities (Potentially Significant) Noise would also be generated during the construction phase by increased truck traffic on area roadways. The proposed project has the potential to increase noise levels associated with construction activities. (DEIR, pp. 3.7-23 and 3.7-24)	**Mitigation Measure 3.7-1:** Prior to the approval of site improvement plans and respective permits, plans shall note that construction activities shall adhere to the requirements of the City of Salinas Municipal Code with respect to hours of operation. **Mitigation Measure 3.7-2:** Prior to the approval of site improvement plans and respective permits, plans shall note that all equipment shall be fitted with factory equipped mufflers and in good working order. All stationary noise generating equipment (i.e. generators) shall be located at least 300 feet from a sensitive receptor. All construction staging areas shall be located at least 300 feet from a sensitive receptor.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.7-1 and 3.7-2 be adopted. Mitigation Measure 3.7-1 requires adherence to the requirements of the City of Salinas Municipal Code with respect to hours of operation during project construction. Mitigation Measure 3.7-2 requires all equipment to be fitted with factory equipped mufflers and in good working order. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.7-3: The proposed project has the potential to increase noise vibration association with construction activities (Less Than Significant) The proposed project would not increase noise vibration associated with construction activities. Therefore, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. (DEIR, pp. 3.7-24 and 3.7-25)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.7-4: The proposed project has the potential to expose new sensitive receptors to excessive transportation noise (Potentially Significant) Table 3.7-14 data indicate that noise barriers 6- to 8-feet in height would generally be sufficient to achieve compliance with the City of Salinas 60 dB L_{dn} exterior noise level standard for the proposed residential uses. However, for the residential uses located along E. Boronda Road and Natividad Road, sound walls of 6- to 8-feet in height would only reduce exterior noise levels to 62 to 65 dB L_{dn}. While these noise level do not meet the City's preferred 60 dB L_{dn} noise standards, they would comply with the City's conditionally acceptable standard of 60 to 70 dB L_{dn}. Predicted interior noise levels would exceed the City's 45 dB L_{dn} interior noise level standard at the first row of residential uses located closest to E. Boronda Road and Natividad Road. Therefore, additional interior noise control measures would be required for these residential uses along E. Boronda Road and Natividad Road. To reduce interior noise levels to 45 dB L_{dn}, or less, it is likely that second floor facades would require windows having a Sound Transmission Class (STC) 35 rating, or higher. Exterior walls would also likely require 3-coat stucco and RC-channels. This would specifically apply to the first row of homes along E. Boronda Road and Natividad Road and would not apply to facades facing away from the roadway. (DEIR, pp. 3.7-25 through 3.7-28)	**Mitigation Measure 3.7-3:** Prior to the approval of site improvement plans and respective permits, the plans shall note the location, design and constructions details of the eight-foot to nine-foot tall sound attenuation walls and/or landscaped berm/wall combinations, as applicable, that will be constructed along the primary Specific Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. At the City's discretion, wall heights which achieve the City's conditionally acceptable 60-70 dB L_{dn} noise standard may be allowed. See the Draft EIR Table 3.7-14 for specific noise barrier/wall heights along each roadway. Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of the wall is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti. These graffiti prevention best management practices may include, without limitation: (1) The use or the installation and maintenance of ant-graffiti materials and	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-3 through 3.7-5 be adopted. Mitigation Measure 3.7-3 requires sound walls for residents located along the primary Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. Mitigation Measure 3.7-4 requires 3-coat stucco and windows having a Sound Transmission Class (STC) 35, or higher, rating to be installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-5 requires mechanical ventilation for the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	surface treatments approved by the City on likely graffiti-attracting surfaces. (2) Installation and maintenance of landscaping to discourage defacement of and/or protect likely graffiti-attracting surfaces. (3) Installation and maintenance of lighting to protect likely graffiti-attracting surfaces. (4) Immediate removal of graffiti by appropriate means within seventy-two hours. (5) Incorporation of architectural or design elements or features to discourage graffiti defacement in accordance with the principles of Crime Prevention Through Environmental Design (CPTED). (6) Authorizing right of access by city employees or contract agents to remove graffiti if not removed within specified time periods. (7) Supplying the city at its request with paint (of the appropriate color and type), cleaning agents, and/or other materials acceptable to the city to abate or to deter graffiti. (8) Other requirements, as deemed reasonably feasible by the city planner, to deter, to protect or to reduce the potential for graffiti defacement. **Mitigation Measure 3.7-4:** Prior to the approval of building permits, the first row of residential dwellings located along E. Boronda Road and Natividad Road shall include windows having a Sound Transmission Class (STC) 35, or higher, rating installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Exterior walls shall also require 3-coat stucco and RC-channels, sheathing, or another acceptable construction application that effectively attenuates noise intrusion to the interior of the house. The exterior wall specifications would specifically apply to the first row of homes that abut E. Boronda Road and/or Natividad Road and only applies to the facades facing these roadways. These specifications do not apply to single story homes,		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	or the first floor of a two-story home, both of which are attenuated by the sound wall. These requirements shall be included in the building plans for the specific dwelling units and noted on the building permits. A detailed analysis of any additional interior mitigation measures shall be conducted when building plans are available and prior to building permit issuance to verify these requirements. These requirements shall also be noted in the site improvement plans prior to approval by the City. **Mitigation Measure 3.7-5:** Prior to the approval of building permits, mechanical ventilation shall be required in the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road, sufficient to allow residents, as desired for acoustical isolation, to keep their doors and windows closed and still maintain acceptable interior temperature and noise levels. This requirement shall be included in the building plans for the specific dwelling units and noted on the building permits. This requirement shall also be noted in the site improvement plans prior to approval by the City.		
Impact 3.7-5: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed park and school uses (Potentially Significant) Children playing at neighborhood parks or outdoor recreational fields (softball, soccer, basketball, tennis) are often considered potentially significant noise sources which could adversely affect adjacent noise-sensitive land uses. Typical noise levels associated with groups of approximately 50 children playing at 50 feet generally range from 55 to 60 dB L_{eq} and 70 to 75 dB L_{max}. It is expected that park activities would occur primarily during daytime hours. Therefore, noise levels from the playgrounds would need to comply with the City of Salinas exterior noise level standards of 60 dB L_{eq} and 70 dB L_{max} at the nearest residential uses. (DEIR, pp. 3.7-29 and 3.7-30)	**Mitigation Measure 3.7-6:** Prior to the approval of site improvement plans, as applicable, when parks or play areas are located near residential uses, the center of active play areas, such as football fields, soccer fields or other athletic fields, shall be located at a minimum distance of 90-feet from the nearest residential property lines. Large active play areas shall comply with the 60 dB L_{eq} and 70 dB L_{max} standards, and shall include these further noise level evaluations during the design phases of future park areas. Parks shall be designed such that residences front, or side in limited locations where approved by the City Planner, to the park. Minimum 6-foot tall sound walls and/or landscaped berms shall be constructed where school site directly abuts a residential property line in instances where site design (i.e., minimum distances, siting of activity areas, etc.) cannot achieve the 60 dB L_{eq} and 70 dB L_{max} noise standards. No wall shall be required where residential uses are fronted towards a park or school site and separated by a roadway or a walkway. Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-6 be adopted. Mitigation Measure 3.7-6 requires the center of active play areas, such as football fields, soccer fields or other athletic fields, to be located at a minimum distance of 90-feet from the nearest residential property lines. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of walls is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti (see mitigation 3.7.3 for further discussion of best management practices.)		
Impact 3.7-6: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed commercial mixed-uses (Potentially Significant) Mixed-use commercial land use activities can produce noise levels which affect adjacent sensitive land uses. The primary noise sources generally include truck deliveries, trash pickup, parking lot use, and heating, ventilation, and air conditioning (HVAC) equipment operation. These sources may result in noise levels exceeding the City's standards at nearby receptors. (DEIR, pp. 3.7-30 through 3.7-31)	**Mitigation Measure 3.7-7:** Prior to the approval of development review permits, the plans shall demonstrate: where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas, the following measures shall be included in the project design: • All HVAC equipment shall be located within mechanical rooms where possible or shielded from view with solid or grated barriers; • Emergency generators shall comply with the City's noise criteria at the nearest noise-sensitive receivers; • Delivery/loading activities shall comply with the Salinas Zoning Code standards and regulations; and • The applicant shall submit a noise study to verify that the appropriate noise control measures have been incorporated into the project design and will achieve compliance with the City's noise level standards.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-7 be adopted. Mitigation Measure 3.7-7 includes various project design requirements where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.7-7: The proposed project has the potential to expose sensitive receptors to substantial noise from	**Mitigation Measure 3.7-8:** The potential well and treatment plant sites are shown in the	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
proposed well sites (Potentially Significant) Typical noise levels for well sites at 50 feet are expected to be 60 dB L_{eq}. If a backup generator is present and running, a noise level of 70 dB L_{eq} at 50 feet would be expected. It is expected that wells could operate during daytime or nighttime hours. Long-term operation of the backup generator would only occur under emergency conditions and would therefore not be subject to the City of Salinas exterior noise level standards for Class A noise. However, weekly exercising of the generator may be subject to the City's 60 dB L_{eq} daytime exterior noise level standard at the nearest noise-sensitive residential receptors. (DEIR, pp. 3.7-32)	Specific Plan. The actual well and treatment plant facilities are subject to the approval of a Conditional Use Permit (CUP) by the City pursuant to the requirements of the Salinas Zoning Code and the West Area Specific Plan. The potential well and treatment plant sites and the CUP requirement for said facilities shall be clearly noted on the site improvement plans. Prior to approval of the CUP and subsequent issuance of the building permits for the well and treatment plant facilities, the plans shall demonstrate that the following measures shall be included in the project design: • The well and treatment facilities have been designed and will be built to not exceed a noise level of 55 dB L_{eq} at the nearest residential or school property line during normal operation of the facilities; • The generators shall not be permitted to exceed the City's daytime noise standard of 60 dB L_{eq}; • The generators shall be tested only during daytime hours; and • Additionally, that the well and treatment facilities/sites have been designed (in accordance with the West Area Specific Plan) to incorporate decorative screen walls, landscaping and other features to ensure compatibility with surrounding land uses.		environment. The City Council hereby directs that Mitigation Measure 3.7-8 be adopted. Mitigation Measure 3.7-8 includes various project design requirements fort the well and treatment plant facilities. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.7-8: Cumulative exposure of existing and future noise-sensitive land uses to increased noise resulting from cumulative development (Potentially Significant) Significant traffic noise increases under the Cumulative Plus Project Plus CASP traffic condition include the following segments: • Constitution Blvd., South of E. Boronda – noise levels are predicted to increase by 3.5 dB from 62.2 dB to 65.7 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Main to San Juan Grade – noise levels are predicted to increase by 1.5	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
dB from 66.5 dB to 68.1 dB L_{dn}. This would equal the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, San Juan Grade to McKinnon – noise levels are predicted to increase by 2.6 dB from 65.3 dB to 67.9 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, El Dorado to Natividad – noise levels are predicted to increase by 3.3 dB from 64.1 dB to 66.1 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Natividad to Independence – noise levels are predicted to increase by 2.6 dB from 66.6 dB to 69.3 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Independence to Hemmingway – noise levels are predicted to increase by 3.5 dB from 65.1 dB to 68.6 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Hemmingway to Constitution – noise levels are predicted to increase by 3.0 dB from 58.2 dB to 61.3 dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • E. Boronda Road, N. Sanborn to Williams – noise levels are predicted to increase by 3.1 dB from 59.6 dB to 62.7dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
receptors. • Natividad Road., South of E. Boronda – noise levels are predicted to increase by 4.5 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • Natividad Road., E. Boronda to Future Russell Road – noise levels are predicted to increase by 3.8 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. However, it should be noted that this roadway segment is located between the West Area Specific Plan and Central Area Specific Plan projects and future sensitive receptors along this roadway would be constructed with noise control measures designed to achieve compliance with the City of Salinas exterior and interior noise level standards. • Russell Road, West of San Juan Grade – noise levels are predicted to increase by 1.9 dB from 67.5 dB to 69.4 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. (DEIR, pp. 3.7-33 through 3.7-37)			
POPULATION AND HOUSING			
Impact 3.8-1: The proposed Project has the potential to induce substantial population growth in an area (Less Than Significant) The West Area Specific Plan proposes development on the 797-acre Specific Plan Area including housing units that would result in direct population growth. The project includes a maximum of 4,340 total residential units. The addition of 4,340 housing units at full buildout has the potential to increase the population of the city by an estimated 16,101 persons (based on a U.S. Census Bureau estimate of 3.71 persons per household) (U.S. Census Bureau, 2017). The 2002 General Plan identifies areas for growth within the FGAs (which includes the Specific Plan Area). The Salinas General Plan Land Use Table LU-3 identifies the development capacity of the FGAs.	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
This includes 15,873 residential units, resulting in an additional population of 58,253 within the City's FGAs. The proposed West Area Specific Plan development proposes 4,340 units with the potential to increase the population of the city by an estimated 16,101 persons, which is within the projections identified in the Salinas General Plan. Implementation of the West Area Specific Plan would increase employment in the area through development of a maximum of 571,500 square feet of commercial space. The Salinas General Plan designates land uses to ensure a balance between new residential development and job-creating uses. Within the FGAs (including the Specific Plan Area) the General Plan assumes a development capacity that includes 178,000 square feet of retail space, 30,000 square feet of office space, 599,000 square feet of general commercial space, and 2,613,000 square feet of mixed use area (Salinas General Plan pg. LU 37: Land Use Element Table LU-3 Development Capacity). The proposed maximum 571,500 square feet developable by the proposed project is within the development capacities stated in the Salinas General Plan. (DEIR, pp. 3.8-14 through 3.8-19)			
Impact 3.8-2: Cumulative impact on the potential to induce substantial population growth in an area (Less Than Significant) Development of the North of Boronda FGA is a component of the City's planned long-term growth as identified in the City's General Plan. Infrastructure needed to support development of the site and the FGAs, and the subsequent population, housing and employment increases expected through implementation of the West Area Specific Plan, have already been planned and evaluated. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts. The proposed project would not have cumulatively considerable impacts associated with population and housing. (DEIR, pp. 3.8-19 through 3.8-20)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
PUBLIC SERVICES			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.9-1: The proposed project may require the construction of fire department facilities which may cause substantial adverse physical environmental impacts (Potentially Significant) The site-specific environmental impact of constructing a new fire facility to serve the West Area Specific Plan will be reviewed under CEQA as part of the Central Area Specific Plan Draft EIR, which is expected to be circulated in 2019. The proposed project may require the construction of fire department facilities which may cause substantial adverse physical environmental impacts. (DEIR, pp. 3.9-16 through 3.9-18)	**Mitigation Measure 3.9-1:** Prior to the issuance of a Certificate of Occupancy for each dwelling unit (and prior to issuance of building permits for non-residential uses), the applicant shall pay all applicable project impact fees per the impact fee schedule.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.9-1 be adopted. Mitigation Measure 3.9-1 requires payment of the project impact fees for each dwelling unit. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.9-2: The proposed project may result in, or have the potential to require the construction of police department facilities which may cause substantial adverse physical environmental impacts (Less Than Significant) The proposed project would not result in, or have the potential to require the construction of police department facilities which may cause substantial adverse physical environmental impacts. Development of the Specific Plan Area did not directly trigger the need for a new facility; however, additional staffing and patrols are required to serve the proposed Specific Pan Area. The City collects impact fees from new development based upon projected impacts from the development. The City also reviews the adequacy of impact fees on an annual basis to ensure that the fee is commensurate with anticipated future facilities demands, assessed on a fair share basis for new development. (DEIR, pp. 3.9-18 through 3.9-19)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.9-3: Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts (Potentially Significant) Physical impacts from construction of the school sites within the Specific Plan Area would be related to relevant environmental topics included in this EIR, such as: air quality (Section 3.1), biological resources (Section 3.2), cultural resources (Section 3.3), greenhouse gas emissions and climate change (Section 3.4), hazards and hazardous materials (Section 3.5), hydrology and water quality (Section 3.6), noise (Section 3.7) population (Section 3.8), public services (Section 3.9), transportation (Section 3.10), and utilities (Section 3.11). A	**Mitigation Measure 3.9-2:** Prior to the issuance of building permits for each dwelling unit, the applicant shall pay applicable school fees mandated by SB 50 to the Salinas Union High School District (SUHSD), and Santa Rita Union School District (SRUSD) and provide documentation of said payment to the City. Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.9-2, 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34 be adopted. Mitigation Measure 3.9-2 requires payment of the applicable school fees. Under state law, the payment of school impact fees is deemed to be adequate mitigation for the need for new school facilities. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
detailed discussion of relevant operational and construction impacts can be found in each respective section of this EIR. Furthermore, site-specific environmental review would be required for each school by the responsible school district prior to approval of a design for the facility and would consider any site-specific impacts unknown at this time. Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts. Potential environmental impacts associated with the future construction of each school within the Plan Area are addressed throughout this EIR. This EIR analyzes the physical environmental effects that may occur as a result of development and introduction of new urban land uses within the Plan Area. Each future school, if constructed, would fall within the range of environmental impacts disclosed in this EIR, and would be subject to relevant mitigation measures included in this EIR. It is noted, however, that development of a school within the proposed Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-19 through 3.9-21)			
Impact 3.9-4: Project implementation may result in effects on parks, or has the potential to require the construction of park facilities which may cause substantial adverse physical environmental impacts (Potentially Significant) Physical impacts from construction of the park sites within the Specific Plan Area would be related to relevant environmental topics included in this EIR, such as: air quality (Section 3.1), biological resources (Section 3.2), cultural resources (Section 3.3), greenhouse gas emissions and climate change (Section 3.4), hazards and hazardous materials (Section 3.5), hydrology and water quality (Section 3.6), noise (Section 3.7) population (Section 3.8), public services (Section 3.9), transportation (Section 3.10), and utilities (Section 3.11). A detailed discussion of relevant operational and construction impacts can be found in each	Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	SU	Changes or alterations have been required in, or incorporated into the project, which mitigate the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
respective section of this EIR. Project implementation may result in effects on parks, or has the potential to require the construction of park facilities which may cause substantial adverse physical environmental impact. Potential environmental impacts associated with the future construction of park and other recreational facilities within the Plan Area are addressed throughout this EIR. This EIR analyzes the physical environmental effects that may occur as a result of development and introduction of new urban land uses within the Plan Area. Each future park, if constructed, would fall within the range of environmental impacts disclosed in this EIR, and would be subject to relevant mitigation measures included in this EIR. It is noted, however, that development of 49.76 acres of park land within the Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-22 through 3.9-23)			
Impact 3.9-5: Project implementation may result in effects on other public facilities (Less than Significant) Project implementation may result in effects on other public facilities. The West Area Specific Plan would result in new demand for public facilities, including library facilities and recreational facilities. The West Area Specific Plan does not propose a library or other public facility such as a community building within the Plan Area, therefore, it does not have a direct physical impact on the environment. The West Area Specific Plan would be responsible for paying the applicable impact fees, and ongoing revenues from the Specific Plan would be generated from property taxes, sales taxes, and other appropriate fees/payments. Such fees/payments would be the financial contribution for any new demand created by the West Area Specific Plan. (DEIR, pp. 3.9-23 through 3.9-24)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.9-6: Under cumulative conditions the proposed project may result in effects on public facilities (Potentially Significant) The construction and operation of future public	Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which mitigate the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
facilities required to serve cumulative development (including the West Area Specific Plan Area) could potentially cause significant impacts. Cumulative development including additional parks, schools, library, and other public facilities within the city and service area would contribute to significant and unavoidable cumulative impacts that have been identified within this EIR related to: air quality (Impact 3.1-7), biological resources (Impact 3.2-12), greenhouse gases (Impact 3.4-4), noise (Impact 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-24 through 3.9-26)			avoid the effects. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
TRANSPORTATION AND CIRCULATION			
Impact 3.10-1: Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan, without mitigations, results in unacceptable operation at eight of the study intersections, and two of the U.S. 101 ramp junctions. All study segments of U.S. 101 performed within the County CMP standards. (DEIR, pp. 3.10-42 through 3.10-46)	**Mitigation Measure 3.10-1**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal at San Juan Grade Road/Van Buren Avenue, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans for each stage of project development shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-2**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of the existing signal timing at San Juan Grade Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-1 through 3.10-9 be adopted. Mitigation Measures 3.10-1 through 3.10-9 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and ramps. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-3**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the signalization of the intersection at Hemingway Drive/East Boronda Road or equivalent traffic control (such as a roundabout), in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of roundabouts), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-4**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings at North Main Street/Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-5**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the widening of the intersection at Natividad Road/East Laurel Drive to add additional northbound and southbound through lanes, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of a roundabout), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-6**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal or equivalent traffic control (such as a roundabout) at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of a roundabout), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-7**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings and to add an eastbound left turn pocket at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. This mitigation includes the addition of an eastbound left turn pocket and optimization of the existing signal timing to better accommodate the expected changes in traffic distribution and volume with implementation of the proposed project. The final improvement plans shall note		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-8**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the addition a southbound left turn lane and optimization of the traffic signal's timing at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share requirement. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-9**: Each project applicant for development within the Specific Plan Area shall contribute its fair-share funding to the Transportation Agency for Monterey County (TAMC) Regional Development Impact Fee (RDIF) Program and the City of Salinas' Traffic Impact Fee (TIF) Program, as determined by the TAMC and the City of Salinas, respectively, in proportion to the area planned for development by each project applicant. These programs include improvements to U.S. 101 that would improve mainline and ramp junction operations, which would mitigate the proposed project's impact to the U.S. 101 ramp junctions affected by the proposed project (i.e. the Northbound Road Off-Ramp and Northbound West Laurel Drive Off-Ramp). Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.		
Impact 3.10-2: Under Existing Plus Project and Central Area Specific Plan conditions, implementation	**Mitigation Measure 3.10-10**: Each project applicant for development within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
of the proposed Specific Plan may conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Existing Plus Project and Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan would result in unacceptable operation at ten of the study intersections, and two of the U.S. 101 ramp junctions, under the Existing Plus Project and Central Area Specific Plan scenario. All study segments of U.S. 101 performed within the County CMP standards. (DEIR, pp. 3.10-53 through 3.10-56)	Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-11**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to convert the eastbound right turn lane to a shared through-right turn lane at Natividad Road/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-12**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for addition of an eastbound right turn pocket at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-13**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for the installation of a traffic signal at the intersection of Williams Road/East Boronda Road, in proportion to the area planned for		environment. The City Council hereby directs that Mitigation Measures 3.10-10 through 3.10-14 be adopted. Mitigation Measures 3.10-10 through 3.10-14 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and ramps. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-14**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at the South Sanborn/North Sanborn/John Street intersection, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.		
Impact 3.10-3: Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan under the cumulative Plus Project scenario would result in unacceptable operation at seventeen of the study intersections, and three of the freeway segments. All ramp junctions perform at or above the minimum standards set by the County CMP under this scenario. (DEIR, pp, 3.10-63 through 3.10-70)	**Mitigation Measure 3.10-15**: Each project applicant for development within the Specific Plan Area shall contribute its fair-share of funding to the TAMC Regional Development Impact Fee provides mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Southbound Ramps/Echo Valley Road/Crazy Horse Canyon Road. Regional fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-16**: Each project applicant for development within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-15 through 3.10-27 be adopted. Mitigation Measures 3.10-15 through 3.10-27 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and segments. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Plan Area shall contribute its fair-share of the TAMC Regional Development Impact Fee to provide mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Northbound Ramps/Crazy Horse Canyon Road. Total fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-17**: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Crazy Horse Canyon Road/San Juan Grade Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-18**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Natividad Road/Rogge Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-19**: Each project

	applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Natividad Road/Russell Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-20**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of southbound and westbound left turn lanes at the intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-21**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a southbound left turn lane at the intersection of Constitution Boulevard/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-22**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	for the installation of a traffic signal at the intersection of Old Stage Road/Williams Road/Private Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-23**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound through lane, the addition of a northbound right turn overlap phase, and the conversion of the westbound through lane to a westbound shared through-left turn lane at the intersection of North Main Street/East Bernal Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note these improvements and the fair-share funding requirement. **Mitigation Measure 3.10-24**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound and southbound through lanes at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Mitigation Measure 3.10-25: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of South Davis Road/Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-26**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane and a southbound left turn lane at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-27**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound left turn lane at the intersection of South Main Street/West Blanco Road/East Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		
Impact 3.10-4: Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by	**Mitigation Measure 3.10-28**: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan would result in unacceptable operation at twenty-two of the study intersections, and four of the freeway segments, under the cumulative Plus Project with Central Area Specific Plan scenario. All ramp junctions perform at or above the minimum standards set by the County CMP under this scenario. (DEIR, pp, 3.10-76 through 3.10-81)	installation of a traffic signal at intersection of Old Stage Road/Hebert Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-29**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of northbound and southbound through lanes on Natividad Road and for the conversion of the existing eastbound right turn lane on East Laurel Drive to a shared through-right turn lane, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-30**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of eastbound and southbound left turn lanes at Constitution Boulevard/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-31**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of North Sanborn Road/Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to		28 through 3.10-33 be adopted. Mitigation Measures 3.10-28 through 3.10-33 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and segments. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-32**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane at Williams Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-33**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a southbound left turn lane at the intersection of East Front Street/Sherwood Drive/Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		
Impact 3.10-5: Implementation of the proposed Specific Plan would not result in changes to air traffic patterns (Less than Significant) The nearest air facility to the Specific Plan boundaries is Salinas Municipal Airport, located approximately four miles to the southeast. Additionally, Marina Municipal Airport is located approximately six miles to the southwest. The Specific Plan Area contains no existing or planned airport facilities. The proposed land use changes to and development of the Specific Plan Area are expected to have no effect on the Salinas Municipal Airport or Marina Municipal Airport approach or departure zones, or any other airport approach or	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
departure zones. Implementation of the proposed Specific Plan would not result in changes to air traffic patterns. (DEIR, pp, 3.10-81 through 3.10-82)			
Impact 3.10-6: Implementation of the proposed Specific Plan would not substantially increase hazards due to a design feature (Less than Significant) Implementation of the proposed Specific Plan would not substantially increase hazards due to a design feature. Development within the Specific Plan Area would include new streets, access points, paths, and other circulation improvements that would be reviewed and checked for compliance with design and safety standards as part of the entitlement process conducted by the City of Salinas. (DEIR, pp, 3.10-82)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.10-7: Implementation of the proposed Specific Plan would not result in impacts related to emergency access (Less than Significant) Buildout of the proposed Specific Plan would result in increased development densities and land use intensities within the Specific Plan Area. As a result of buildout of the West Area Specific Plan, which includes the development of an internal transportation network within the Plan Area, the volume of users travelling within the Specific Plan Area is expected to increase. Emergency access along proposed and existing roadways must be accommodated in conjunction within the expected population and employment growth. Plans submitted for individual developments to be constructed in the Specific Plan Area would be reviewed for compliance with emergency access requirements by public safety officials during the City's entitlement process. Implementation of the proposed Specific Plan would not result in impacts related to emergency access. (DEIR, pp, 3.10-82)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.10-8: Implementation of the proposed Specific Plan would not conflict with adopted multi-modal circulation policies, plans, or programs, and would not decrease the performance or safety of public transit, bicycle, or pedestrian facilities (Less than Significant) Implementation of the Specific Plan would be consistent with, and would expand upon, the pedestrian and bicycle network identified in the 2002 *Salinas Bikeways Plan*. The Specific Plan	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
would improve the existing bicycle and pedestrian circulation infrastructure within the Specific Plan Area, as well as adjacent areas in the City of Salinas. The West Area Specific Plan is estimated to generate approximately 1,000 new transit trips on a daily basis, as well as 140 trips in the morning peak hour and 150 trips in the evening peak hour (Fehr & Peers, 2018). These new transit trips alone are not expected to overburden existing transit service in the area. Implementation of the proposed Specific Plan would not conflict with adopted multi-modal circulation policies, plans, or programs, and would not decrease the performance or safety of public transit, bicycle, or pedestrian facilities. (DEIR, pp, 3.10-83 through 3.10-84)			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
UTILITIES			
Impact 3.11-1: The proposed project has the potential to exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board (Less than Significant) Wastewater generated within the Plan Area would be conveyed by the City of Salinas wastewater conveyance system to M1W Regional Treatment Plant. M1W, a regional agency, owns and operates M1W Treatment Plant. The wastewater treatment system treats domestic wastewater from residential and commercial sources. Waste Discharge Requirements (WDRs) Order No. R3-2018-0017 provides waste discharge requirements for M1W Treatment Plant, and a supply capacity of up to 29.6 MGD. Implementation of West Area Specific Plan would be covered under the existing capacity and would not exceed the wastewater discharge requirements in this Order. (DEIR, pp. 3.11-9)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-2: The proposed project has the potential to result in a determination by the wastewater treatment and/or collection provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the provider's existing commitments (Less than Significant) The City of Salinas Sanitary Sewer Master Plan projects new development would increase the total wastewater discharge to an average dry weather flow to a maximum of approximately 22.1 MGD at full build-out of the entire City Sphere of Influence. The estimated wastewater discharge for full buildout of the proposed project would be approximately 1.0 MGD. The West Area Specific Plan would increase the amount of wastewater requiring treatment. The wastewater would be treated at M1W Treatment Plant. The (WDRs Order No. R3-2018-0017 allows M1W Treatment Plant to accept up to 29.6 MGD. Given a current demand of approximately 16 MGD (as provided by M1W Treatment Plant Engineer Jennifer Gonzalez), the M1W Treatment Plant currently has an additional capacity of approximately 11 MGD; given 1.0 MGD generated by the project, there is sufficient plant capacity. (DEIR, pp. 3.11-10 through 3.11-11)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.11-3: The proposed project has the potential to require or result in the construction of new wastewater treatment or collection facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) The West Area Specific Plan project does not trigger a need to expand the M1W Treatment Plant. There would be a network of sewer collection infrastructure installed throughout the Plan Area to serve the West Area Specific Plan. The potential for environmental impacts associated with the installation of the wastewater collection system, and all construction activities within the Plan Area, are addressed throughout this EIR. (DEIR, pp. 3.11-11 through 3.11-12)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-4: Cumulative impact on wastewater utilities (Less than Significant) The M1W plant is designed and constructed to handle 29.6 MGD; which is more than 4 MGD than the project 2055 demand, under the worst case scenario modelled. The 1.0 MGD expected to be generated by full buildout of the proposed project would thereby leave approximately 3.6 MGD available in 2055, under the worst case scenario modelled. Moreover, it is more than likely that this represents an overestimate of cumulative wastewater demand, given that this estimate utilizes the higher end of the range of projected wastewater at the M1W Regional Treatment Plant in the future. Additionally, buildout of the Specific Plan is expected to occur over an approximately 20 to 30 year timeframe; therefore buildout is expected to occur no later than approximately 2048 (at latest). Therefore, using the year 2055 as the analysis year serves as a conservative date for buildout of the proposed project. (DEIR, pp. 3.11-12 through 3.11-13)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-5: The proposed project has the potential to require construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) The proposed project would not require construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. The water infrastructure is sized to meet the	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
demand within the Plan Area. All offsite improvements are to be placed in or adjacent to existing streets to minimize potential impacts. Although the West Area Specific Plan would not require the expansion of existing water treatment facilities, the West Area Specific Plan may require the construction of a new centralized treatment facility within the Plan Area. This treatment facility would be specifically sized to serve the West Area Specific Plan and would not be upsized to ensure that it does not induce growth beyond what is anticipated by the West Area Specific Plan. (DEIR, pp. 3.11-37 through 3.11-38)			
Impact 3.11-6: The proposed project has the potential to have insufficient water supplies available to serve the project from existing entitlements and resources (Less than Significant) Water supplies are sufficient to meet the City's existing and projected future potable water demands, including those future water demands associated with the West Area Specific Plan, to the year 2035 under all hydrologic conditions. The three new groundwater wells would provide adequate groundwater for the proposed project. Additionally, the Cal Water Salinas District has sufficient water supply throughout its service area to serve the proposed project, even during the third year of a multi-year drought, and even if the proposed project's groundwater wells proved to not be sufficient to serve the entire Plan Area. Moreover, the development of the West Area Specific Plan would reduce consumption of groundwater (equivalent to increasing groundwater storage), when compared to the existing agricultural uses; this would also have the effect of reducing the potential for seawater intrusion into the groundwater basin, when compared to the existing agricultural uses. (DEIR, pp. 3.11-38 through 3.11-41)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-7: Cumulative Impact on Water Utilities (Less than Significant) There would be sufficient water resources available to provide supply for buildout of the cumulative scenario, so that no significant cumulative effect on the overall water supply would result. (DEIR, pp. 3.11-41 through 3.11-43)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.11-8: The proposed project has the potential to require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) No new or expanded existing off-site infrastructure is proposed or would be required. Proposed project storm water infrastructure would be developed on-site, with connections made to off-site existing storm drain pipes along existing rights-of-way (such as along McKinnon Street). Installation of storm drainage infrastructure would occur during the construction phase of the proposed project. The construction of the new on-site stormwater drainage facilities, which are associated with the proposed project, has the potential to cause environmental impacts. The potential for environmental impacts associated with the installation of the stormwater system, and all construction activities within the Plan Area, are addressed throughout this EIR. (DEIR, pp. 3.11-63)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-9: Cumulative Impact on Stormwater Facilities (Less than Significant) The West Area Specific Plan includes an extensive system of on-site stormwater collection, treatment and retention facilities to accommodate the increased stormwater flows that would originate in the Specific Plan Area. Surface runoff from the area will be managed via detention/retention basins and flow reducing Best Management Practices (BMPs) to prevent local flooding within the Specific Plan Area. These features will also reduce peak flows from the Specific Plan Area to receiving creeks and storm drains to amounts less than such flows under existing conditions. The construction, maintenance, and operation of all stormwater facilities are not anticipated to cause substantial adverse impacts. The proposed project would not have cumulatively considerable impacts associated with stormwater facilities. (DEIR, pp. 3.11-63 through 3.11-65)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-10: The proposed project would be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs and comply with federal, State, and local statutes and regulations related to solid waste (Less than	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Significant) The West Area Specific Plan would be required to comply with applicable State and local requirements including those pertaining to solid waste, construction waste diversion, and recycling. The addition of the volume of solid waste associated with the West Area Specific Plan, approximately 24.5 tons per day at total buildout, would increase the total to the Johnson Canyon Landfill; however, this increase would not cause an exceedance of the landfill's remaining capacity. (DEIR, pp. 3.11-72)			
Impact 3.11-11: Cumulative Impact on Solid Waste Facilities (Less than Significant) The Salinas Valley Solid Waste Authority service area is expected to add numerous developments through 2055. The Central Area Specific Plan, East Area Specific Plan, and the Economic Development Element (EDE) are three such areas, located within the City of Salinas. These new areas would generate an estimated 75 to 100 tons per day at total buildout. Buildout of other communities within the Salinas Valley Solid Waste Authority' service area would also affect Johnson County Landfill. These jurisdictions within the region are likely to generate new sources of solid waste that would need to be processed at the landfill. The Johnson Canyon Landfill has the capacity to serve nearly three times as much waste per day as it does currently and will have sufficient capacity to serve communities within the Salinas Valley Solid Waste Authority service area. Implementation of the proposed project would have a less than significant cumulative impact relative to this environmental topic. (DEIR, pp. 3.11-72 through 3.11-73)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
OTHER ISSUES			
Aesthetics The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would allow development to occur in the City in both vacant and underdeveloped portions of the community, and that the introduction/expansion of urban uses into these areas has the potential to interrupt views of natural features, open space, the hillsides, and agricultural resources, reducing the aesthetic value of these resources. Additionally, new development	To minimize and mitigate the impacts on aesthetics, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following five mitigation measures: Mitigation Measure A1 requires the City to implement the City's Gateway Guidelines; Mitigation Measure A2 requires the City to strengthen and require compliance with the City's Design Guidelines; Mitigation Measure A3 requires the City to improve the Lighting Ordinance; Mitigation Measure A4 requires the	LTS	Three of the five mitigation measures included in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), including Mitigation Measures A1, A2, and A3, are requirements for the City of Salinas to implement. These measures do not apply to the proposed project. Mitigation Measures A4 and A5 are requirements for both the City and for proposed projects or discretionary projects. The proposed project would be subject to Mitigation Measure A4, which requires consistency with the landscaping requirements. All landscaping in the Specific Plan Area would be subject to the City's landscaping requirements. The proposed project would also be

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
in the City was found to increase the amount of light and glare in the community, particularly in areas planned for nonresidential development, such as retail and general commercial. It was also found that future development under the General Plan has the potential to change the visual character of the City. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that aesthetic impacts associated with the FGAs, which includes the West Area Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the proposed project, would be required to comply with the above referenced regulations, policies, and standards. Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). (See the Initial Study)	City to implement landscaping requirements for all proposed projects; and Mitigation Measure A5 requires the City to review all discretionary projects for aesthetics impacts.		subject to Mitigation Measure A5, which requires the City of review the proposed project for aesthetics impacts. Impacts to aesthetics are analyzed in the Initial Study for the project. See Appendix A of the Draft EIR for the West Area Specific Plan Initial Study. Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Agriculture and Forest Resources The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would result in the conversion of 3,525 acres of agriculture lands to urban uses. The *Final Environmental Impact Report,* also indicates that General Plan buildout would result in agricultural activity in proximity to residential and other urban uses, which may result in conflicts between the uses. It is noted that agricultural activity can cause nuisances related to air quality and noise that may disturb surrounding development. Urban activities may also negatively affect nearby agricultural uses, as increased vandalism often occurs and the introduction of domestic animals may disturb certain agricultural activities. The City of Salinas certified the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), adopted a statement of overriding considerations relative to this significant and unavoidable impact, and approved the Salinas	The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures AG1 through AG4, the impacts on potential compatibility issues would be reduced to a less than significant level; however, while the impacts on agricultural conversion would be reduced to the extent feasible, a significant and unavoidable impact would remain related to the loss of important farmland. Mitigation AG5 specifically addressed Agricultural Land Conservation Easement Program, which states that the City will work with the County of Monterey and other local jurisdictions to create and implement an agricultural land conservation easement program, including such measures as securing the dedication of easements or by paying a mitigation fee that could be used to purchase easements through a mitigation bank. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a $750.00 per acre mitigation fee for agricultural lands currently	LTS	All of the five mitigation measures included in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), including Mitigation Measures AG1 through AG5, are requirements for the City of Salinas to implement. These measures do not apply to the proposed project. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a per acre mitigation fee for agricultural lands currently designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance." The project would be subject to this fee. Impacts to agricultural resources are analyzed in the Initial Study for the project. See Appendix A of the Draft EIR for the West Area Specific Plan Initial Study. Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
General Plan. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that agricultural impacts associated with the FGAs, which includes the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the proposed project, would be required to comply with the above-referenced regulations, policies, and standards. Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). (See the Initial Study)	designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance."		
Geology and Soils Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). (See the Initial Study)	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Hazards and Hazardous Materials While the Draft EIR analyzes Hazards and Hazardous Materials, several topics were determined to not warrant additional analysis within the Chapter. The land uses proposed within the Specific Plan Area would not be expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Furthermore, the proposed project is not located in the vicinity of an airport or private airstrip; therefore, it would not result in a safety hazard related to air traffic for people residing or working in the Specific Plan Area. These topics do not	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
warrant additional analysis and will not be addressed further in the EIR. Separately, the City has adopted a Multi-hazard Emergency Plan, which serves as extensions of the California Emergency Plan and the Emergency Resource Management Plan. The purpose of the Multi-hazard Emergency Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Operations Center (EOC) in City Hall serves as the center of the City's emergency operations. The Plan also addresses evacuation and movement of people in the event of an emergency. The proposed project does not impair implementation of or physically interfere with the Multi-hazard Emergency Plan. Implementation of the proposed project would have a less than significant impact relative to this environmental topic and will not be further analyzed or addressed further in the EIR. Lastly, the proposed project is not located in an area that is considered a high risk for wildfires. The proposed project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. (See the Initial Study)			
Land Use and Planning The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the impacts would be reduced to a **less than significant** level with mitigation. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified the Final Supplemental EIR and approved annexation of the North of Boronda FGA, which includes the West Area Specific Plan. The project, as proposed, is consistent with the Greater Salinas Area Memorandum of Understanding (GSA-MOU). All development under the proposed project would be required to comply with the regulations, policies, and standards identifies in the *Final Environmental*	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact Report, Salinas General Plan (Cotton Bridges Associates 2002), and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed within these supporting documents. (See the Initial Study)			
Mineral Resources It was determined in the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) that development of the FGA, including the Specific Plan Area, would not have a significant impact on mineral resources or mining activities. As such, implementation of the proposed project would have no impact on mineral resources. (See the Initial Study)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

EXHIBIT J

PROJECT FINDINGS FOR CONSIDERATION OF THE WEST AREA SPECIFIC PLAN (SPEC 2013-002), REZONING (RZ 2019-001), AND DEVELOPMENT AGREEMENT (DA 2019-001)

I. PROJECT DESCRIPTION AND APPROVALS

A. Project Location

The applicant, Brian Finegan, Esq. (representing multiple property owners and developers), is requesting a series of approvals that would enable the development of a 797-acre Specific Plan area ("project site") within the North of Boronda Future Growth Area (FGA) of the City . The project site is bounded by Boronda Road to the south, San Juan Grade Road to the west, Natividad Road to the east and Russell Road and Rogge Road to the north. Attachment 7 of the staff report, Project Site Location Map, shows the project site vicinity and the North of Boronda FGA.

The project site is bordered on the north primarily by existing residential development (the Bolsa Knolls area) and scattered residential and agricultural-related uses located in unincorporated Monterey County, on the east by agricultural uses in unincorporated Monterey County and the proposed Central Area Specific Plan area, on the south by existing residential and commercial development (Harden Ranch Specific Plan area), and on the west by existing residential development and commercial development (the Gateway Shopping Center Specific Plan). Attachment 8 of the staff report, Property Ownership/Existing Conditions Map, shows the project boundaries, owners and existing uses.

B. Project Description

The applicant is seeking the following approvals from the City Council: 1) Specific Plan (SPEC 2013-002); 2) Rezoning (RZ 2019-001); and 3) Development Agreement (2019-001), collectively referred to as the "Project". At build-out (estimated to occur over the next 20 to 30 years), the project would establish: 4,340 dwelling units provided as a mix of low, medium and high densities, a Village Center with up to 571,500 square feet of mixed-use commercial floor area, eleven parks, five schools (one high school, one middle school and three elementary schools), and other associated uses supporting the development including but not limited to open space and well-sites.

Specific Plan. A specific plan is a development guidance tool that is required for all new development proposed within the FGA pursuant to the General Plan. The draft *West Area Specific Plan* ("Specific Plan") prepared by the applicant under the direction of the City provides direction for the land uses, development regulations, design standards, circulation, infrastructure, storm water and water quality management, public financing and implementation and administration of the Specific Plan. The Specific Plan includes modifications to development regulations found in the City of Salinas Zoning Code to facilitate the New Urbanism development mandated under the General

Plan for this area. The changes to development regulations would apply only to development within the Specific Plan boundary, which is coterminous with the project site boundary. Attachment 11 of the staff report contains the Specific Plan and herein incorporated by reference. Table 1, Summary Land Use Plan, provides an overview of the project.

Table 1 Summary Land Use Plan

Land use		**Framework Acres**	**Projected Dwelling Units or Square Feet**
Residential Planning Areas	NE (Low)	227.72	1,361 du
	NG-1 (Medium)	188.44	1,803 du
	NG-2 (High)	59.84	1,085 du
	VC (Village Center)	4.55	91 du
	Total	**480.55**	**4,340 du**
Mixed use Village Center (1)		20.13	571,500 sq. ft.
Total Residential and Village Center		**500.68**	
High School		38.97	
Middle School		20.78	
Elementary School #1		10.98	
Elementary School #2		10.00	
Elementary School #3		10.00	
Community Park		30.83	
Neighborhood Parks (four)		12.52	
Small Parks (six)		6.41	
Supplemental Detention/Retention Basin Open Space		35.03	
Water Wells/Water Treatment		1.50	
Total Public Facilities		**177.02**	
Circulation Roadways (2)		118.85	
Total		**796.55**	

Rezone. The applicant is requesting approval of a rezone to establish zoning district classifications for the project site, which are consistent with the Salinas Zoning Code (and Map) and implement the existing General Plan land use designations for the project site. The existing zoning for the project site is New Urbanism Interim (NI) with a Specific Plan Overlay District. The proposed zoning

districts for the project site are Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC). The proposed districts align with New Urbanism (NU) zoning districts contained in Division 8 of the Salinas Zoning Code and correspond with the Residential Low Density, Residential Medium Density, Residential High Density and Mixed Use Land Use Designations, respectively contained in the General Plan. Additional zoning districts proposed for the project site include Parks (P), Open Space (OS), and Public/Semipublic (PS). The proposed districts are shown in Attachment 12 of the staff report, incorporated herein by reference. The above-referenced districts also include a Specific Plan Overlay District.

Development Agreement. A development agreement has been prepared pursuant to Government Code Section 65864. The development agreement allows the applicant to proceed with the project in accordance with existing policies, rules, and regulations, subject to the conditions of approval, thus vesting certain development rights in the property.

C. Project Objectives

The following key objectives are the basis for the formulation of the Specific Plan policies, design principles, regulations and development standards:

1. Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly;

2. Provide a variety of land uses in east walking distance of housing including a mixed use village, parks, and schools to lower vehicle miles traveled;

3. Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents;

4. Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages;

5. Provide public services and infrastructure improvements that achieve and maintain City service standards;

6. Provide an inviting tree-lined street system which incorporates traffic calming and other measures;

7. Establish an interconnected path and open space system throughout the development that links to the greater North of Boronda FGA and City as a whole;

8. Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements;

9. Provide for a reasonable jobs/housing balance;

10. Provide opportunities for senior housing and/or affordable housing; and

11. Provide for a site/parcel-based post construction Stormwater Control Measures (SCMs)/LID to the maximum extent practicable.

II. FINDINGS

For purposes of the following discussion, the Project is considered to be development of the project site as would be permitted upon the City's approval of the proposed Specific Plan, Rezone, and Development Agreement.

A. Specific Plan Findings

1. **Finding:** The proposed location of development and proposed conditions under which it will be operated and maintained is consistent with the goals and policies embodied in the Salinas General Plan and other applicable plans and policies adopted by the City Council.

   Evidence: The project site is located within the Future Growth Area (FGA) located north of East Boronda Road (referred to as the North of Boronda FGA). This area is designated under the General Plan to accommodate the anticipated future growth in the City. In accordance with the General Plan, the FGA is subject to the adoption of Specific Plans by the City Council prior to any development in this area. The Specific Plans are intended to specify the ultimate distribution, location and intensity of land uses in these areas in accordance with the total development capacities provided under the General Plan. As such, development of the project site has been planned for and has been anticipated by the City as part of a coordinated long-term development process for this area.

   The General Plan land use designations shown for land located with the FGA are illustrative in nature and subject to adjustment and refinement as part of the Specific Plan approval process. Under the Specific Plan, (encompassing approximately 797 acres of land), approximately 227.72 acres of land will be designated "Residential Low Density"; 188.44 acres of land will be designated "Residential Medium Density"; 59.84 acres of land will be designated "Residential High Density"; 24.68 acres of land will be designated "Mixed Use"; 49.76 acres of land will be designated "Park"; 35.03 acres of land will be designated "Open Space"; and 92.23 acres of land will be designated "Public/Semipublic". These proposed land uses are consistent with the land uses envisioned under the General Plan for this area.

The maximum number of dwelling units (without density bonus, conversion of commercial floor area, or accessory dwelling units) provided in the Plan Area is 4,340, which meets the overall minimum average density of nine dwelling units per net residential acre required under the General Plan for residential development in the FGA. The Specific Plan has also been designed and planned to ensure that 15%-25% of the dwelling units fall in the density range of 16-24 dwelling units per net residential acre, and 35%-45% fall in the density range of 7-14 dwelling units per net residential acre. These percentages are required under the General Plan to ensure a variety of dwelling types, specific densities and affordability levels are provided in the Plan Area.

The maximum square footage of proposed retail/commercial uses permitted under the Specific Plan is 571,500 square feet. Parks, schools (comprised of two existing schools and three proposed school sites) and open space (supplemental stormwater basins) are also provided in the Plan Area. These land uses and development intensities are consistent with the types of uses and development capacity anticipated for the North of Boronda FGA under the General Plan.

The Specific Plan has incorporated New Urbanism Design Principles, Crime Prevention Through Environmental Design (CPTED) and other design principles in accordance with the requirements of the General Plan to guide development in the FGA. Emphasis on pedestrian-friendly development through traffic calming, narrow streets, pedestrian linkages and dwellings oriented to the street promote walkability and foster a sense of community as envisioned under the General Plan. On-street bicycle lanes and routes will also be provided along the southerly and northerly greenways, East Boronda Road, Russell Road , San Juan Grade Road, McKinnon Street, El Dorado Drive and Natividad Road to promote the use of alternative forms of transportation and provide off-site connections to surrounding facilities. The Project also includes provisions for electrical vehicle charging to promote energy conservation and to reduce fossil fuel consumption as encouraged by the General Plan.

Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference.

2. **Finding:** The development will not be detrimental to the public health, safety, or welfare of persons residing or working in or adjacent to such a development, nor detrimental to properties or improvements in the vicinity or the general welfare of the City.

Evidence: The potential environmental effects of the Project were fully evaluated in the Final Program Environment Impact Report (EIR) prepared for the project. The project includes significant and unavoidable impacts as well as impacts that can be mitigated to a less than significant level. The full explanation (of environmental impacts) is discussed in Attachment 20 of the staff report, CEQA Findings and Statement of Overriding

Considerations, incorporated herein by reference.
The Specific Plan proposes land uses and improvements, which are generally compatible with and complementary to surrounding development located to the north, south, east and west of the Plan Area. It also includes standards, which implement design principles such as CPTED to promote "eyes on the street" through the use or porches and other elements to discourage criminal activity and promote safer neighborhoods.

The Specific Plan incorporates Low Impact Development (LID) and other features to ensure the Project is in compliance with the requirements of the General Plan, City's Storm Water Management Program and the City's National Pollutant Discharge Elimination System Permit.

Local demand for housing is high, particularly for affordable housing. The project will contribute to public welfare by providing dwelling units across a variety of housing types, densities and affordability levels. Market rate and inclusionary housing will be provided. The Project will be subject to City's Inclusionary Housing Ordinance.

3. **Finding:** The Specific Plan and resulting development will be consistent with the provisions of Article 8 of Chapter 3 of California Government Code, commencing with Section 65450 as may be subsequently amendment by the State of California.

Evidence: The California Government Code sections referenced above include Sections 65450 through 65457. Of these, Sections 65451, 65454 and 65455 are directly applicable to the adequacy of the Specific Plan and to discretionary actions related to its implementation.

California Government Code Section 65451 addresses the content requirements of a specific plan. The West Area Specific Plan has been reviewed by City staff and the City Attorney and found to be consistent with the content requirements in Section 65451.

California Government Code Section 65454 requires that a specific plan may not be adopted or amended unless it is consistent with the City's General Plan. As described in Finding "A.1" herein, and the proposed Planning Commission resolution recommending approval and adoption of the Specific Plan, the West Area Specific Plan has been found to be consistent with the Salinas General Plan.

California Government Code Section 654455 provides that no public works project may be approved, no tentative or parcel map may be approved, and no zoning ordinance may be adopted or amended within the areas covered by a specific plan unless it is consistent with the adopted specific plan. The on-site infrastructure needed for the Project has been designed to support the proposed uses and development in the Specific Plan area. Any parcel or tentative map proposed for the Project site will be required to be consistent with the Specific Plan in order to be approved. Development within the Specific Plan area will be subject to the

requirements of the Salinas Zoning Code except as modified by the Specific Plan. Should any conflict arise between the two regulations, the Specific Plan regulations will prevail.

B. Rezoning Findings

1. **Finding:** The amendment (Rezone) is consistent with the Salinas General Plan, any applicable specific plan, and other plans and policies adopted by the Salinas City Council.

   Evidence: The proposed amendment (Rezone) will facilitate the development of the West Area Specific Plan within the North of Boronda FGA, which is consistent with the City's General Plan policy to plan for and manage future growth within designated future growth areas of the City. The Project incorporates New Urbanism and other design principles and provides a variety of dwelling types and densities in accordance with the land use and housing mix required by the General Plan. The proposed Rezone will not conflict with other plans and policies of the Salinas City Council.

   Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference.

2. **Finding:** The amendment (Rezone) will not have the effect of reversing the policies of the Salinas General Plan, any applicable specific plan, and other plans and policies adopted by the Salinas City Council.

   Evidence: The proposed amendment (Rezone) will facilitate the approval and development of the proposed West Area Specific Plan. The Specific Plan provides specific policies to implement the General Plan, Zoning and other plans and policies adopted by the Salinas City Council. There are no policies in the Salinas General Plan that will be reversed as a result of this amendment.

   Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference as additional evidence of the project's consistency.

3. **Finding:** The amendment (Rezone) would not create an isolated district unrelated to adjacent zoning districts.

   Evidence: The proposed Rezone will enable the project site to be developed as a New Urbanism Specific Plan as envisioned under the General Plan. Upon annexation of the project site in 2008, the site was zoned New Urbanism Interim (NI) with a Specific Plan Overlay to provide an interim holding zone until such time specific plans were approved by the City Council for the North of Boronda FGA and the ultimate zoning districts for the area were established. As such, upon the approval of the Specific Plan and Rezone, the project site will be rezoned from the New Urbanism Interim (NI) with a Specific Plan Overlay zoning district to

Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1(NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC) as well as the Park (P), Open Space (OS) and Public/Semipublic zoning districts. The Specific Plan Overlay district will continue to be applicable to each of the districts as well. These districts are compatible with and complementary to the existing residential (low, medium and high density), commercial, park and open space districts located across the major arterial roads, which form the project boundaries.

The proposed Rezone will facilitate the development of a variety of dwelling types and densities, neighborhood commercial retail and services, parks and supporting uses necessary to serve the proposed Specific Plan community and surrounding area. For example, the various residential districts (NE, NG-1 and NG-2) and the Village Center (VC) district will allow the development of 4,340 dwelling units in the Plan Area. Additionally, other types of dwellings such as density bonus units and accessory dwelling units will also be permitted. The Parks (P) district will facilitate the development of 11 parks, which will provide a variety of recreational opportunities for residents of the plan area and the surrounding area. The Open Space (OS) district will facilitate the development of the supplemental detention/retention basins located throughout the site. These basins create open space, passive recreation opportunities and are intended to serve the storm water surface run-off needs of the West Area. The Public/Semipublic district will provide sites for two new elementary schools and one middle school. Lastly, the Village Center (VC) district will facilitate the development of the Specific Plan's town center. This area (including the town square and mixed-use commercial and residential development) is intended to be a destination and focal point for both residents of the Plan Area and surrounding area.

4. **Finding:** The City has the capability to provide public utilities, roads, and services to serve the uses allowed by the proposed Rezoning.

Evidence: The EIR and Specific Plan thoroughly analyzed the infrastructure including public utilities, roads, and services necessary to serve the Project. Respectively, sections 3.11, 3.10, and 3.9 of the EIR address these topics. Through adoption of the Specific Plan, Development Agreement, West Area Specific Plan Final Program Environmental Impact Report (FEIR) and associated Mitigation Monitoring and Reporting Program, the City will ensure the provision of public utilities, roads and services necessary to serve the proposed development is provided.

According to the fiscal impact analysis prepared for the project (Attachment 14), the cost of City services would be offset by increased revenues generated by the Project. No unfunded City services costs have been identified. The West Area Specific Plan is projected to generate an annual surplus of between approximately $1,541,619 to $3,376,303.

C. Development Agreement Findings

1. Finding: The Development Agreement is consistent with the Salinas General Plan, any applicable specific plan, and other applicable plans and policies adopted by the Salinas City Council.

Evidence: The Development Agreement is proposed in conjunction with the West Area Specific Plan in accordance with the Salinas General Plan. The Specific Plan implements the goals and policies of the General Plan by providing a comprehensively planned and orderly development in the North of Boronda FGA, designed to incorporate and implement the tenets of New Urbanism, CPTED and other design principles. Additionally, it provides potential employment and recreational opportunities for future and nearby residents and increased tax revenue and expansion to support City services. In this regard, the *Fiscal Impact Analysis* prepared for the Project (included as Attachment 14 to the staff report), is projected to generate an annual revenue surplus of approximately $1,541,619 to $3,376,303 to the City's General Fund. Most importantly; the project will provide critically needed housing in a variety of dwelling types, densities and affordability levels to address the City's housing shortage and overcrowding issues.

Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference.

2. Finding: A development agreement that includes a subdivision shall not be approved unless the agreement provided that any tentative map prepared for the subdivision will comply with the provisions of Government Code Section 66473.7.

Evidence: Government Code Section 66473.7 addresses the provision of adequate water supply. A Water Supply Assessment was prepared for the project, and is included in the Appendices of the West Area Specific Plan Final Program EIR as Appendix G. California Water Services Company (Cal Water), the water purveyor to the project site, has provided a "Can and Will Serve" letter for the subject project.

ORDINANCE NO. _____ (N.C.S.)

AN ORDINANCE AMENDING THE ZONING MAP (RZ 2019-001) BY RECLASSIFYING APPOXIMATELY 797 ACRES OF LAND FROM NEW URBANISM INTERIM WITH A SPECIFIC PLAN OVERLAY DISTRICT TO NEIGHBORHOOD EDGE/LOW DENSITY RESIDENTIAL, NEIGHBORHOOD GENERAL 1/MEDIUM DENSITY RESIDENTIAL, NEIGHBORHOOD GENERAL 2/HIGH DENSITY RESIDENTIAL, VILLAGE CENTER, PARK, OPEN SPACE AND PUBLIC/SEMIPUBLIC FOR THE WEST AREA SPECIFIC PLAN
(RELATED TO ER 2018-003, SPEC 2013-002, DA 2019-001)

WHEREAS, Brian Finegan, Esq. (representing multiple property owners and developers) submitted applications for the West Area Specific Plan project (Project), including requests for Specific Plan, Rezone, and Development Agreement approvals that would permit development of the approximately 797-acre project site shown in Exhibit A, attached hereto and herein incorporated by reference; and

WHEREAS, the Project site consists of the following thirteen parcels: 211-231-060-000, 211-231-061-000, 211-231-016-000,211-011-002-000, 211-231-012-000, 211-231-013-000, 211-231-003-000, 211-011-009-000, 211-231-059-000, 211-011-011-000, 211-011-008-000, 211-011-010-000 AND 211-011-001-000; and

WHEREAS, the City of Salinas (hereinafter "City"), as lead agency under the California Environmental Quality Act (Pub. Res. Act Section 21000 et seq.) and the State CEQA Guidelines (14 Cal. Code Regs. Section 15000 et seq.) (collectively "CEQA") has completed the Final Program Environmental Impact Report ("Final EIR") State Clearinghouse No. 2006021072 for the West Area Specific Plan in compliance with CEQA along with all supporting documentation and notices which are herein incorporated by reference as Exhibits C through I; and

WHEREAS, on December 4, 2019 the Salinas Planning Commission held a duly noticed and agendized public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, the Salinas Planning Commission weighed the evidence presented at said public hearing, including the staff report (and the project findings) which is on file at the Community Development Department, together with the record of environmental review including the Draft EIR (all of which were made publicly available consistent with state law prior to its public hearing and consideration of a recommendation to the City Council on the Project), public comments on said document and responses thereto, the Final EIR, and evidence and public testimony presented at the public hearing; and

WHEREAS, by Resolution No. 2019-18, the Salinas Planning Commission has recommended that the City Council certify the Final EIR, adopt the CEQA findings, adopt the Statement of Overriding Considerations, and adopt the Mitigation Monitoring Reporting Program for the Project herein incorporated by reference; and

WHEREAS, by Resolution No. 2019-19, the Salinas Planning Commission has recommended that the City Council approve the West Area Specific Plan (SPEC 2013-002), attached hereto a as Exhibit B and incorporated herein by this reference, and by so doing, recommends that the West Area Specific Plan be utilized as the land use and zoning; and

WHEREAS, by Resolution No. 2019-20, the Salinas Planning Commission has recommended that the City Council adopt an Ordinance to rezone (RZ 2019-001) the subject site from New Urbanism Interim (NI) with a Specific Plan Overlay to Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1(NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC) as well as the Park (P), Open Space (OS) and Public/Semipublic Districts with Specific Plan Overlay, applied across the Specific Plan area as shown in Exhibit K, incorporated herein by reference; and

WHEREAS, on December 17, 2019 the Salinas City Council held a duly noticed and agendized public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, the Salinas City Council weighed the evidence presented at said public hearing, including the staff report which is on file at the City of Salinas Community Development Department, the project findings herein incorporated as Exhibit J, together with the record of environmental review including the Draft EIR, public comments on said document and responses thereto, the Final EIR (all of which were made publicly available consistent with state law prior to its public hearing and consideration of the Project), and evidence and public testimony presented at the public hearing; and

WHEREAS, notice of time and place of hearing for recommending certification of the Final EIR and recommending approval of the Project, including RZ 2019-001, was given in the manner prescribed by the City; and

WHEREAS, by Resolution adopted December 17, 2019, herein incorporated by reference, the City Council certified the Final EIR, adopted the CEQA findings, adopted the Statement of Overriding Considerations, and adopted the Mitigation Monitoring Reporting Program for the Project (which includes RZ 2019-001); and

WHEREAS, the West Area Specific Plan contains modifications of standards contained in the City of Salinas Municipal Code that are applicable only within the West Area Specific Plan boundary, and which will become effective upon the City Council's approval of the Specific Plan and attached approvals; and

WHEREAS, the proposed Rezone would change the existing zoning designation from New Urbanism Interim (NI) with Specific Plan Overlay District for the project site to Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1(NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village

Center (VC) as well as the Park (P), Open Space (OS) and Public/Semipublic Districts with Specific Plan Overlay District, across the Specific Plan area as shown in Exhibit I, herein incorporated by reference; and

WHEREAS, the proposed Rezone has been found to be consistent with the goals, policies, and programs of the 2002 General Plan, and the proposed West Area Specific Plan, as identified in the Project Findings attached hereto as Exhibit J and herein incorporated by this reference; and

WHEREAS, certain mitigation measures in the City's 2002 General Plan Final Program EIR and in the City's 2007 Final Supplement for the General Plan Final Program EIR are still valid and applicable to the Project and are herein incorporated by reference.

NOW, THEREFORE, BE IT ORDAINED BY THE COUNCIL OF SALINAS, as follows:

SECTION 1. The foregoing recitals and the information contained in the Exhibits are true and correct.

SECTION 2. The Salinas City Council has been provided with, and has reviewed, the Final EIR for the project, the staff report for the Project, written and oral testimony regarding the Project, and other relevant evidence in the administrative record (collectively, the "Record of Proceedings"), and hereby provides notification that the Record of Proceedings is on file with the City Clerk of the City of Salinas, 200 Lincoln Avenue, Salinas, CA 93901.

SECTION 3. The Salinas City Council declares that it has been provided with and has reviewed the information contained in the Final Program Environmental Impact Report, the evidence in the record, the staff report and recommendations.

SECTION 4. The Salinas City Council has been provided with, and has reviewed, the Project Findings, attached hereto as Exhibit J and incorporated herein by this reference, and other relevant evidence in the Record of Proceedings.

SECTION 5. The City of Salinas's Zoning Map, a copy of which is on file with the City Clerk of the City of Salinas and which copy constitutes the original record, is hereby amended to reflect the following:

That certain real property located in the City of Salinas, County of Monterey, State of California, and shown and designated on that certain map attached hereto as Exhibit I and made a part hereof, entitled "Rezone Map – Rezone 2019-001" and which real property, approximately 797 acres, APNs: 211-231-060-000, 211-231-061-000, 211-231-016-000,211-011-002-000, 211-231-012-000, 211-231-013-000, 211-231-003-000, 211-011-009-000, 211-231-059-000, 211-011-011-000, 211-011-008-000, 211-011-010-000 and 211-011-001-000 located in the West Area Specific Plan area (as shown in Exhibit A) and now classified in the New Urbanism Interim (NI) Zoning District, is hereby reclassified as shown on the attached "Rezone Map – RZ 2019-001" into Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1(NG-1)/Medium Density Residential, Neighborhood General 2 (NG-

2)/High Density Residential, and Village Center (VC) as well as the Park (P), Open Space (OS) and Public/Semipublic Districts with Specific Plan Overlay District.

SECTION 6. The aforesaid map and all notation, references and other information shown thereon shall be as much a part of this ordinance as if the matters ad information shown on said map were fully described herein.

SECTION 7. This ordinance shall take effect and be in force thirty days from and after its adoption.

SECTION 8. If any section, subsection, sentence, clause or phrase of this ordinance is for any reason held to be invalid or unconstitutional by a decision of any court of any competent jurisdiction, such decision shall not affect the validity of the remaining portions of this ordinance. The Salinas City Council hereby declares that it would have passed this ordinance, and each and every section, subsection, clause and phrase thereof not declared invalid or unconstitutional without regard to whether any portion of the ordinance would be subsequently declared invalid or unconstitutional.

SECTION 9. The Salinas City Clerk is hereby directed to cause the following summary of this ordinance to be published by one (1) insertion in a newspaper of general circulation published and circulated in the City of Salinas and hereby designated for that purpose by the Salinas City Council:

> "The City of Salinas's Zoning Map has been amended by reclassifying approximately 797 acres, APNs: 211-231-060-000, 211-231-061-000, 211-231-016-000,211-011-002-000, 211-231-012-000, 211-231-013-000, 211-231-003-000, 211-011-009-000, 211-231-059-000, 211-011-011-000, 211-011-008-000, 211-011-010-000 and 211-011-001-000 located in the West Area Specific Plan area (as shown in Exhibit A) and now classified in the New Urbanism Interim (NI) Zoning District, is hereby reclassified as shown on the attached "Rezone Map – RZ 2019-001" into Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1(NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC) as well as the Park (P), Open Space (OS) and Public/Semipublic Districts with Specific Plan Overlay District. This Ordinance goes into effect 30 days after adoption. For additional detail concerning this amendment, contact the Community Development Department, 65 West Alisal Street, Salinas, CA 93901."

Errata Sheet to the Draft West Area Specific Plan

September 4, 2019

Introduction and Content

The Errata sheet consists of minor revisions to the Draft Specific Plan providing clarifications, some minor modifications as well as minor staff edits. The revisions to the Draft Specific do not change the intent or content of the document. The Errata sheet is in addition to typographical, re-ordering or similar non-substantive errors not listed.

Proposed changes are identified in Table 1, Errata Changes. Text deletions are shown with strikeout font and additions are shown with underlined font. Specific Plan table and figure modifications are listed and shown following Table 1 in the order that they are referenced in Table 1.

TABLE 1: Errata Changes

Section	Page	Modification
2.8.1	92	The design of all schools is encouraged to consider the New Urbanism design concepts, design standards and development regulations contained in the West Area Specific Plan to complement and promote compatibility with surrounding land uses. Fencing shall be black coated chain link.
4.8	166	If landscaping is used, evergreen plant material shall be spaced at an appropriated density to provide full screening. Fencing shall be black coated chain link.
2.5.3.6	88	A main pedestrian connection path will be located within a parking lot divider median landscaped with trees and shrubs in larger parking lots to enhance the safety and comfort of pedestrians. For parking lot lighting, see Appendix E, Light Standards.
4.5.5	156	Outdoor Energy Conservation and Parking Lot Lighting
4.8	166	Trees and landscaping planters shall be provided throughout the parking lots to provide shade and provide areas for bio-swales and bio-filters. For parking lot lighting, see Appendix E, Light Standards.
3.6	114	See Section 4.2.2 and Appendix E of this Specific Plan and Salinas Zoning Code Article V, Division 2: Parking, Loading and Outdoor Lighting.
3.6	116	See Section 4.2.2 and Appendix E of this Specific Plan and Salinas Zoning Code Article V, Division 2: Parking, Loading and Outdoor Lighting.
3.6	119	See Section 4.2.2 and Appendix E of this Specific Plan and Salinas Zoning Code Article V, Division 2: Parking, Loading and Outdoor Lighting.
6.4.1	231	Each of the two middle school sites is approximately 10 acres in size; the middle school site is approximately 21 acres in size. Improvement of school site frontages, ROW and parkway improvements are the responsibility of the owner, developer, entity, etc. developing the land adjacent to the site, subject to review and approval by the City Engineer and City Planner.
2.4.1	41	Figure updated to show current park shapes and locations.
1.3	25	Figure updated to show correct designation of the town square park
1.3	27	Figure updated to show correct district of the town square park
1.2.2.1	9	Figure updated to show north arrow.
4.2.2.1	136	Graphic updated to show dimension correctly.
4.2.2.1	136	Graphic updated to show dimension correctly.
4.2.2.1	137	Graphic added where it was missing.
4.2.3	139	Figure updated to show sound wall along Russell Road.
4.2.3.2	143	Figure updated to have consistent font

3.6	114	Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer.
3.6	114	Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.
3.6	117	Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer.
3.6	117	Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.
2.6	89	Inclusionary housing requirements (including the Ordinance) are further discussed in the Affordable Housing component for the West Area Specific Plan as contained in Appendix H of the Specific Plan. Regarding applicability of the Inclusionary Housing Ordinance, Parcelization Maps (see appendix B, Definitions) shall not be considered the first approval.
1.2.3.2	15	Table updated to show correct and updated APNs.
9.3	291	Parcelization Maps Parcelization Maps shall mean a parcel map processed administratively for the purpose of creating master parcels for sale, financing or phasing purposes and on which no development is permitted without further subdivisions or other entitlement approval.
3.11	129	A detailed and complete wall plan (including the design and color of all walls) for each neighborhood or Planning Area, and, when required, noise reduction calculations shall be submitted and approved by the City Planner and City Engineer before any sound walls are constructed within a neighborhood or Planning Area. The construction of walls along Russell Road shall be the responsibility of the developer.

4.2.3	141	A complete wall and fence plan (including the design and color of all walls and fences) for each neighborhood or neighborhood Planning Area and, when required, noise reduction calculations shall be submitted and approved by the City Planner and City Engineer prior to any walls or fences being constructed within a neighborhood or neighborhood Planning area. The construction of walls along Russell Road shall be the responsibility of the developer.
4.1	132	Residential architectural design is the key to New Urbanism neighborhoods of Salinas. Where the word "shall" is used, the design standard is mandatory, where "encouraged" or "should" is used, the design standard is discretionary and an alternative design solution which achieves a comparable result may be used if approved by the City Planner.
5.3.2.5	200	Both sides of Russell Road will consist of an 8-foot parkway, a path 8-feet wide, and an 8-foot landscaped area between the path and a perimeter wall, or Type 3 wall as applicable per Community Wall Plan on the adjacent property line. The owner, developer and/or entity developing along Russell Road shall be responsible for construction of walls, frontages, ROW/parkway improvements, and half the street width, as determined by the City Engineer.
7.3	240	The landscape and maintenance plan must be prepared by a qualified professional and is subject to approval by the City Engineer and the City Planner (see Section 4.6 and 7.4.9 for further discussion). The submittal for the map creating the basin(s) shall also include improvements of frontages, ROW/parkway, and half the street width, as determined by the City Engineer.
2.8.1	91	It is anticipated that the middle school will serve primarily students residing in the Plan Area. A third elementary school site had been made available for Santa Rita Union School District in the Central Area Specific Plan area across Natividad Road. As of the date of approval of this Specific Plan, a boundary adjustment had been initiated between Santa Rita Union School District and Alisal Union School District. If the districts finalize the boundary adjustment, Santa Rita Union School District would relinquish the third elementary school site to the Alisal Union School District.

8.4	270	With the exception of Rogge Road, these roads will be improved by the developer and/or shall be funded proportionately by the City's Traffic Fee Ordinance in place at the time of permit issuance, or as otherwise determined in the development agreement. Fair share cost of the traffic mitigation measure improvements identified in the West Area Specific Plan Final EIR shall be collected in the same manner as TFO fees.
9.7	303	m. Incorporation and development of the following APNs 211-214-025-000 and 211-214-026-000 in accordance with this Specific Plan.
6.4.1	232	Table 6-4 updated to show latest student generation rates per EIR comment letters from school districts.
8.7	280	Add "… or special districts" to footnote 1 on Table 8-1
9.3	292	Development Review Applications and Building Permits Following approval of each final map, project applicants within the Plan Area may apply for the applicable development review process or building permit through the Community Development Department and Salinas Permit Center as applicable. Building Permits may not be issued until approval of the final map and the applicable Development Review Application process (SPR, CUP, etc.) is completed. For projects subject to Site Plan Review (SPR), the Community Development Department shall approve, conditionally approve, or disapprove the site plan within 30 days of the application being deemed complete unless the Applicant requests an extension in writing. Other Development Review Application processes such as Conditional Use Permits are subject to the timelines established in the Permit Streamlining Act. All project structures must be consistent with the approved Specific Plan, City NPDES Permit/SWDS/SWSP requirements, final map, and applicable Salinas Zoning Code requirements and must comply with all California Building Code (including CalGreen) and Fire Code requirements and all other applicable codes adopted and enforced by the City. The applicable California Building Code and Fire Code (as may be amended) shall be those in effect at the time of the building permit submittal.

(1) Architectural features can project two feet into front, corner or interior side yard setbacks that are 5 feet or more.
(2) To maintain the required densities, percentages and variety of lot sizes, once subdivided, no further subdivision shall be allowed without a "major" Specific Plan amendment and subsequent CEQA evaluation. This does not apply to dedicated school sites in accordance with Chapter 31 of the Salinas Municipal Code.
(3) Front and corner side yards and any additional yard space located in front of the street façade of a dwelling and side yard fence are required to be landscaped with a mix of vegetation and other pervious materials as approved by the City Engineer and City Planner. Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off-street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer. Parking in required front, corner or interior side yards is prohibited except on the approved driveway leading to required off-street parking (garage).
(4) Rear yard and interior side yard hardscape/impervious improvements are limited to a total of 50% of the total square footage of the yard or 500 square feet, whichever is less (not including building/structure footprints and driveways approved by the City Planner and City Engineer serving the required parking). Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.
(5) See Salinas Zoning Code Section 37-50.080: Exceptions to Height Limits.
(6) See Salinas Zoning Code Section 37-50.060: Density Bonus.
(7) Minimum lot sizes may be reduced when the exclusive use of such lots is intended for utility substations, pumping stations, and similar features.
(8) Refer to Section 4.2.2, Garages and Driveways of the Specific Plan. All garages shall have roll-up doors and must be set back a minimum of five feet from the street façade of the principal dwelling.
(9) Frontage minimum of 30 feet accommodates curved streets and knuckle corners.
(10) Standard 20-foot wide minimum public alley. Rear lot line measured at the edge of ROW.
(11) Rear lot line measured at center line of standard 20-foot-wide minimum alley easement.
(12) Minimum 20-foot driveway length to street property line as measured from garage door.
(13) No street-loaded garages allowed for duplex/triplex dwellings.
(14) An unenclosed porch or architectural entry feature shall be at least sixty square feet with a minimum unobstructed dimension of six feet.
(15) Subject to the approval of the City Planner and to promote eyes on the street and encourage an engaging streetscape, the front setback may be reduced to a minimum of five feet for an outdoor courtyard not exceeding a maximum of 100 square

feet (of pavers or pervious concrete) in area and surrounded by landscaping and enclosed by a wall exceeding thirty-six inches in height to a maximum of forty-two inches in height.
(16) If second story living area is provided, the rear setback shall be five feet or 15 feet, as applicable.
(17) Rear lot line measured from edge of the ROW.

(1) Architectural features can project two feet into front, corner or interior side yard setbacks that are 5 feet or more.

(2) To maintain the required densities, percentages and variety of lot sizes, once subdivided, no further subdivision shall be allowed without a "major" Specific Plan amendment and subsequent CEQA evaluation. This does not apply to subsequent subdivisions in accordance with Section 3.9.3, Mixed Use Commercial to Residential Flexibility, of this Specific Plan, or dedicated school sites in accordance with Chapter 31 of the Salinas Municipal Code. Front and corner side yards and any additional yard space located in front of the street façade of a dwelling and side yard fence are required to be landscaped with

a mix of vegetation and other pervious materials as approved by the City Engineer and City Planner. Pavers and pervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off-street parking, an entry walkway as approved by the City Engineer and City Planner not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling or an approved semi-private courtyard. Parking in required front, corner or interior side yards is prohibited except on the approved driveway leading to required off-street parking (garage).

(3) Front and corner side yards and any additional yard space located in front of the street façade of a dwelling and side yard fence are required to be landscaped with a mix of vegetation and other pervious materials as approved by the City Engineer and City Planner. Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off-street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer. Parking in required front, corner or interior side yards is prohibited except on the approved driveway leading to required off-street parking (garage).

(4) Rear yard and interior side yard hardscape/impervious improvements are limited to a total of 50% of the total square footage of the yard or 500 square feet, whichever is less (not including building/structure footprints and driveways approved by the City Planner and City Engineer serving the required parking). Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.

(5) See Salinas Zoning Code Section 37-50.080: Exceptions to Height Limits.

(6) See Salinas Zoning Code Section 37-50.060: Density Bonus.

(7) Minimum lot sizes may be reduced when the exclusive use of such lots is intended for utility substations, pumping stations, and similar features.

(8) Refer to Section 4.2.2, Garages and Driveways of the Specific Plan. All garages shall have roll-up doors and must be set back a minimum of five feet from the street façade of the principal dwelling.

(9) Frontage minimum of 30 feet accommodates curved streets and knuckle corners.

(10) Standard 20-foot-wide minimum public alley. Rear lot line measured at the edge of ROW. All garages must be set back a minimum of five feet from the street façade of the principal structure.

(11) Rear lot line measured at center line of standard 20-foot wide minimum alley easement.

(12) Minimum 20-foot driveway length to street property line as measured from garage door.

(13) No street-loaded garages allowed for duplex/triplex dwellings.

(14) An unenclosed porch or architectural entry feature shall be at least sixty square feet with a minimum unobstructed dimension of six feet.

(15) Subject to the approval of the City Planner and to promote eyes on the street and encourage an engaging streetscape, the front setback may be reduced to a minimum of five feet for an outdoor courtyard not exceeding a maximum of 100 square feet (of pavers or pervious concrete) in area and surrounded by landscaping and enclosed by a wall exceeding thirty-six inches in height to a maximum of forty-two inches in height. Rear lot line measured from edge of the ROW.

(16) If second story living area is provided, the rear setback shall be five feet or 15 feet, as applicable.

(17) Rear lot line measured from edge of the ROW.

(18) Where private drives and alleys are provided, curbs shall be painted red and appropriate signage for parking restrictions shall be provided as determined by the City Engineer, City Planner, and Fire Chief.

(19) The minimum lot frontage requirement for single-family attached dwellings shall be twenty feet except that the minimum lot frontage requirement may be waived for single-family attached dwellings (townhomes and rowhouses) located on lots, which do not front a street.

(20) 0 foot interior side yard setback if abutting a single-family attached dwelling.

(21) For lots that do not have street frontage (such as green court housing products, etc.) the location of required front, side, and rear yards will be determined by the City Planner.

(22) For Custom Dwellings located on a private drive, the alley easement development regulations shall apply.

(1) Architectural features can project two feet into front, corner or interior side yard setbacks that are five feet or more.
(2) See Salinas Zoning Code Section 37-50.080: Exceptions to Height Limits.
(3) See Salinas Zoning Code Section 37-50.060: Density Bonus.
(4) Minimum lot sizes may be reduced when the exclusive use of such lots is intended for utility substations, pumping stations, and similar features.
(5) Assumes shared parking with office/retail uses in addition to this required amount for one and two bedroom units in the mixed use Village Center, and two bedroom units built to a minimum of 30 du/nra in the NG-2.
(6) Subareas 1.6, 1.7 (eastern portion), 3.1 and 3.5 adjacent to the Village Center may be built at a minimum density of 30 du/nra to a maximum of 40 du/nra. This can be done only through commercial conversion and the total unit count for these subareas may exceed the maximum specified in Table 3-6.
(7) Five feet per story per building/maximum 20'.
(8) For lots that do not have street frontage (such as green court housing products, etc.) the location of required front, side, and rear yards will be determined by the City Planner.
(9) If alley easements are proposed, minimum lot dimensions shall increase to the centerline of the easement, as applicable.
(10) Carports may be located within five feet of an adjacent interior property line.
(11) Plus 10 dwelling units per net residential acre.

SUBJECT: NOTICE OF PREPARATION – WEST AREA SPECIFIC PLAN EIR

EIR CONSULTANT
Steve McMurtry, Principal Planner
De Novo Planning Group
1020 Suncast Lane, Suite 106
El Dorado Hills, CA 95762
Phone: (916) 580-9818

An Initial Study has been prepared for the proposed project and is attached to this Notice of Preparation (NOP). The Initial Study lists those issues that will require detailed analysis and technical studies that will need to be evaluated and/or prepared as part of the EIR. The EIR will consider potential environmental effects of the proposed project to determine the level of significance of the environmental effect, and will analyze these potential effects to the detail necessary to make a determination on the level of significance.

Those environmental issues that have been determined to be less than significant will have a discussion that is limited to a brief explanation of why those effects are not considered potentially significant. In addition, the EIR may also consider those environmental issues which are raised by responsible agencies, trustee agencies, and members of the public or related agencies during the NOP process.

We need to know the views of your agency or organization as to the scope and content of the environmental information germane to your agency's statutory responsibilities or of interest to your organization in connection with the proposed project. Specifically, we are requesting the following:

1. If you are a public agency, state whether your agency will be a responsible or trustee agency for the proposed project and list the permits or approvals from your agency that will be required for the project and its future actions;

2. Identify significant environmental effects and mitigation measures that you believe need to be explored in the EIR with supporting discussion of why you believe these effects may be significant;
3. Describe special studies and other information that you believe are necessary for the City of Salinas to analyze the significant environmental effects, alternatives, and mitigation measures you have identified;
4. For public agencies that provide infrastructure and public services, identify any facilities that must be provided (both on- and off-site) to provide services to the proposed project;
5. Indicate whether a member(s) from your agency would like to attend a scoping workshop/meeting for public agencies to discuss the scope and content of the EIR's environmental information;
6. Provide the name, title, and telephone number of the contact person from your agency or organization that we can contact regarding your comments.

Due to the time limits mandated by State law, your response must be sent and received by the City of Salinas by the following deadlines:

- For responsible agencies, not later than 30 days after you receive this notice.
- For all other agencies and organizations, not later than 30 days following the publication of this Notice of Preparation. The 30 day review period ends on Tuesday, November 10, 2015.

If we do not receive a response from your agency or organization, we will presume that your agency or organization has no response to make.

A responsible agency, trustee agency, or other public agency may request a meeting with the City of Salinas or its representatives in accordance with Section 15082(c) of the CEQA Guidelines. A public scoping meeting will be held during the public review period as follows:

SCOPING MEETING: October 29, 2015 at 6:30 p.m., at the McKinnon Elementary School, Multi-purpose room, 2100 McKinnon Street, Salinas, CA 93906.

Please send your response or questions to Gabriel Elliott, Project Manager at the City of Salinas located at 65 W. Alisal Street (Second Floor), Salinas, CA 93901. Contact information: email: gabriel.elliott@ci.salinas.ca.us; Telephone: (831) 775-4246.

Present Land Use/Zoning/General Plan Designation:

GP= Mixed Use, Res Low, Res Medium, Res High, Public/Semipublic, Open Space and Park. Zoning= New Urbanism Interim

Project Description: *(please use a separate page if necessary)*

An application for adoption of a Specific Plan and rezoning of the Specific Plan Area from New Urbanism Interim (NI) with a Specific Plan Overlay, to Neighborhood Edge (NE)/Low Density Residential, Neighborhood General 1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, Village Center (VC), Public/Semipublic (PS), Parks (P), and Open Space (OS), with the applicable Specific Plan Overlay District. The West Area Specific Plan will provide for up to 4,340 new dwelling units, 571, 500 sq.ft. of commercial floor area, 5 schools, parks and associated infrastructure.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

Reviewing Agencies Checklist

Lead Agencies may recommend State Clearinghouse distribution by marking agencies below with and "**X**".

EXHIBIT "H"

CEQA FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS OF THE CITY COUNCIL OF THE CITY OF SALINAS FOR THE WEST AREA SPECIFIC PLAN

I. INTRODUCTION

The City of Salinas (hereinafter "City"), as lead agency, prepared a Program Environmental Impact Report (hereinafter "EIR") for the West Area Specific Plan (hereinafter "Specific Plan" or "project"). In its entirety, the EIR consists of the February 27, 2019 Draft Program EIR (hereinafter "Draft EIR" or "DEIR") and the October 10, 2019 Final Program EIR (hereinafter "Final EIR" or "FEIR") (State Clearinghouse No. 2006021072).

The Applicant has submitted applications requesting approval of the West Area Specific Plan, Rezoning, and Development Agreement. As approved, the project will facilitate the City's future consideration of applications for individual projects to be proposed within the Specific Plan Area.

The EIR analyzes the impacts of the West Area Specific Plan and the anticipated subsequent filing of maps and other development applications in the future. Therefore, the EIR analyzes the total impacts of the West Area Specific Plan, including these applications yet unfiled, so that future filings will not require separate environmental analysis, as long as development proposed does not substantially deviate from the approved Specific Plan. The specific processes by which the City will review individual applications are set forth on pages ES-1 through pages ES-4 of the Draft EIR and are also described below in section III(D).

These findings, as well as the accompanying statement of overriding considerations in Section XI below, have been prepared in accordance with the California Environmental Quality Act (hereinafter "CEQA") (Pub. Resources Code, § 21000 et seq) and its implementing guidelines (hereinafter "CEQA Guidelines") (Cal. Code Regs., tit. 14, § 15000 et seq).

II. DEFINITIONS AND ACRONYMS

Like the EIR itself, these findings use a number of acronyms. Key acronyms are defined the first time they are introduced in the text of this document.

III. PROJECT DESCRIPTION

A. Location

As described in the DEIR, the City of Salinas is located in northern Monterey County, within the Salinas Valley between the Gabilan and Santa Lucia mountain ranges. Salinas is situated approximately 20 miles northeast of the City of Monterey, 60 miles south of San Jose, 100 miles south of San Francisco and 325 miles north of Los Angeles. Figure 2-1 in the Draft EIR displays the project regional location. Several regional transportation routes are located within or near Salinas, including U.S. Highway 101 (U.S. 101), State Routes 68 (SR 68) and 183 (SR 183), the

Union Pacific Railroad line and the Monterey Regional Airport in Monterey. Salinas Municipal Airport, a general aviation facility, is located in the southeastern portion of the city.

The Specific Plan Area is located within the incorporated boundary of the City of Salinas. It is bounded by San Juan Grade Road on the west, East Boronda Road (also referred to as "Boronda Road") on the south, Natividad Road on the east, and Rogge Road and the future extension of Russell Road on the north. Gabilan Creek is located east of the Specific Plan Area, while U.S. 101 and North Main Street are located to the west. Unincorporated land under the jurisdiction of the County of Monterey abuts the Specific Plan Area on the north and northeast (DEIR, p. 2.0-1).

B. Overview

The West Area Specific Plan establishes the land use planning and regulatory guidance, including the land use and zoning designations and policies, development regulations, and design standards, for the approximately 797-acre Specific Plan Area. The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to—the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the City of Salinas General Plan, as well as more specific policies and implementation measures contained in other documents. The City of Salinas Zoning Code requirements will apply to development applications and property within the Specific Plan Area unless specifically superseded by the development regulations or design standards contained in the Specific Plan.

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan (including the Specific Plan's goals) and related entitlements. Land uses in the approximate 797-acre Specific Plan Area include residential, mixed use commercial, community park, neighborhood parks, small parks, schools and open space (including supplemental storm water detention/retention basins). Implementation will involve development of the site under the New Urbanism Zoning Districts of Neighborhood Edge (NE)/Low Density Residential, Neighborhood General 1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, Village Center (VC) as well as the Public and Semipublic (PS), Parks (P), and Open Space (OS) Zoning Districts.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space areas (including supplemental storm water detention/retention basins) and 11 parks). It is anticipated that the Specific Plan Area will house up to 15,928 residents at project build-out.

C. Project Objectives

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan and related entitlements. The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and 11 parks. The Specific Plan goals are summarized as follows:

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.
- Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.
- Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.
- Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.
- Provide public services and infrastructure improvements that achieve and maintain City service standards.
- Provide an inviting tree-lined street system which incorporates traffic calming and other measures.
- Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater Future Growth Area (FGA) and City as a whole.
- Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.
- Provide for a reasonable jobs/housing balance.
- Provide opportunities for senior housing.
- Provide for a site/parcel-based post-construction Stormwater Control Measures (SCMs)/LID to the maximum extent practicable.

It is noted that there are additional project objectives that are not specifically presented in the Specific Plan, but are more overarching and are a response to, and driven by, the policy direction from the State Legislature and the Salinas City Council.

The State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by

producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The City of Salinas has recognized the need for additional housing supply for its citizens for many decades. Dating back to 1986, the City entered into the Boronda Memorandum of Understanding (MOU) with the County of Monterey to preserve the best agricultural land and to provide certain areas for future urban growth. Twenty years later, in 2006, the Greater Salinas Area MOU was adopted to preserve agricultural lands within Monterey County, and to provide future growth areas (FGSs) for Salinas. A year later, in 2007, applications for an amendment to the City's Sphere of Influence (to include the FGAs) and Pre-Zoning and Annexation (for the majority of the North of Boronda FGA consisting of approximately 2,400 acres) were submitted to the Monterey County Local Agency Formation Commission (LAFCO) for consideration. A Supplemental EIR for the Salinas General Plan Final Program EIR (SCH#2007031055) was also submitted in conjunction with the applications. The applications were approved by LAFCO on May 19, 2008. The North of Boronda FGA (which includes the West Area Specific Plan) was formally annexed to the incorporated City of Salinas on September 8, 2008 and zoned New Urbanism Interim (NI) with a Specific Plan Overlay. The West Area Specific Plan is a reflection of over twenty years of planning for new development, which is reflected by the City Council's approval of the FGA, including annexation of the land into the City limits.

The following two overarching project objectives are presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

Based on its own review of the EIR and other information and testimony received in connection with the project, as well as the statutory and planning policies described above, the City Council finds all of these objectives to be acceptable and persuasive from a public policy standpoint. In

choosing to approve the project, the City thus embraces these objectives and accords them weight in considering the feasibility of alternatives set forth in the EIR, and in invoking overriding considerations in approving the project. (See *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1507-1508.)

D. Discretionary Approvals

Project approval requires the City, as lead agency, to take discrete planning and regulatory actions to approve the overall project. In addition, certain "responsible agencies" may ultimately rely in part on the programmatic analysis in the Specific Plan Area in making decisions associated with future site-specific projects consistent with the Specific Plan. Described below are the discretionary actions necessary to carry out the project.

City of Salinas

In addition to certifying the Final EIR and adopting these Findings and the associated Statement of Overriding Considerations and Mitigation Monitoring Plan (CEQA requirements), the City itself must approve the following actions:

- Certification of the EIR and adoption of the Mitigation Monitoring and Reporting Program (MMRP);
- Approval of the Draft West Area Specific Plan;
- Approval of the rezoning of the Specific Plan area from NI with a Specific Plan Overlay to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay is also applicable to each Zoning District; and
- Approval of the Development Agreement;
- Subsequent Approvals: Parcel Maps, tentative maps, Final Maps, Subdivision Improvement Plans, Site Improvement Plans, Grading Permits, Building Permits, Conditional Use Permits, Business Permits, Encroachment Permits, etc.

Other Responsible/Trustee Agencies

The agencies below will also use the EIR, either as responsible agencies or as trustee agencies:

- California Department of Fish and Wildlife – Lake and Streambed Alteration Agreement (1600 permit);
- Cal Water – Approval of SB 610 Water Supply Assessment, Approval to serve the Specific Plan Area;
- Central Coast Region - Regional Water Quality Control Board – Clean Water Act Section 401 Water Quality Certification, National Pollution Discharge Elimination System (NPDES) general construction permit;
- Comcast/AT&T/SBC/Other – Approval to serve the Specific Plan Area, approval of telecommunications utility plans, Encroachment Permits;
- Johnson Canyon Landfill – Approval to serve the Specific Plan Area;
- Monterey Bay Air Resources District – Authority to Construct; Demolition permit;

- Monterey Bay Community Power – Approval to Serve the Specific Plan Area;
- Monterey One Water – Approval to serve the Specific Plan Area for wastewater services, and Encroachment Permit;
- Monterey County Health Department - Well demolition permit, Well construction permit;
- Monterey County Water Resources Agency – Approval to serve the Specific Plan Area, Encroachment Permit;
- Monterey-Salinas Transit – Approval to serve the Specific Plan Area, approval of bus stop locations and design;
- Pacific Gas and Electric Company – Approval to serve Specific Plan Area, approval of relocation plans, approval of electric and gas utility plans, Encroachment Permit;
- Salinas Valley Solid Waste Authority – Approval to serve the Specific Plan Area; and
- Santa Rita Union School District – Approval of site for the construction of two new elementary schools and one middle school

Federal Agencies

The following federal agencies also have approval authority over some aspects of the project, though these agencies are not subject to CEQA and instead are required to comply with the federal National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.):

- U.S. Army Corps of Engineers;
- U.S. Fish and Wildlife Service; and
- U.S. Federal Emergency Management Agency.

Future Projects

All individual future development projects proposed within the Specific Plan Area will be reviewed to determine their individual CEQA compliance requirements. The type of CEQA analysis required would be determined at the time a project is proposed.

It is noted that the Specific Plan provides a very high level of design detail for certain components of the project. To the extent that sufficient detail is available in the Specific Plan, a full project-level analysis is provided in this EIR. Examples of a full project level analysis would include topics that are related to the physical acreage affected (i.e., the project footprint), as opposed to the number of units, land uses/zoning, or other design parameters. Topics such as Biological Resources, Cultural Resources, and Hydrology/Water Quality are analyzed at a project-level analysis in this EIR given that these are physical environmental resources, and the area of impact is fully defined. Additionally, the Specific Plan includes a substantial level of detailed information that allows for a project-level analysis of topics such as Air Quality, Greenhouse Gases and Climate Change, Noise, Population and Housing, Transportation and Circulation, and Utilities. The analysis for these topics is driven by the number of units and square footage of development, which is detailed in the land use design and development projections. In some cases, there may be specific commercial uses that have design details developed at a later date that cannot reasonably be analyzed at a project-level at this time. Additionally, the design of the school facilities and other public facilities are not known at this time, so they are not able to be analyzed at a project-level.

This EIR examines the planning, construction and operation of the project. The program-level approach, with some project-level analysis, is appropriate for the project because it allows comprehensive consideration of the reasonably anticipated scope of the development plan; however, as discussed above, not all design aspects of the future development phases are known at this stage in the planning process. Subsequent individual development that requires further discretionary approvals will be examined in light of this EIR to determine whether additional environmental documentation must be prepared.

CEQA Guidelines Section 15168 states that a program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

1. Geographically,
2. As logical parts in the chain of contemplated actions,
3. In connection with issuance of rules, regulations, plans or other general criteria to govern the conduct of a continuing program, or
4. As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

According to CEQA Guidelines section 15168, subdivision (c)(5), "[a] program EIR will be most helpful in dealing with later activities if it provides a description of planned activities that would implement the program and deals with the effects of the program as specifically and comprehensively as possible." Later environmental documents (EIRs, mitigated negative declarations, or negative declarations) can incorporate by reference materials from the program EIR regarding regional influences, secondary impacts, cumulative impacts, broad alternatives, and other factors (CEQA Guidelines Section 15168[d][2]). These later documents need only focus on new impacts that have not been considered before (CEQA Guidelines Section 15168[d][3]).

Section 15168(c), entitled "Use with Later Activities," provides, in pertinent part, as follows: Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared:

1. If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration. That later analysis may tier from the program EIR as provided in Section 15152.
2. If the agency finds that pursuant to Section 15162, no subsequent EIR would be required, the agency can approve the activities as being within the scope of the project covered by the program EIR, and no new environmental document would be required. Whether a later activity is within the scope of a program EIR is a factual question that the lead agency determines based on substantial evidence in the record. Factors that an agency may consider in making that determination include, but are not limited to, consistency of the later activity with the type of allowable land use, overall planned density and building intensity, geographic area analyzed for environmental impacts, and covered infrastructure, as described in the program EIR.

3. An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into later activities in the program.
4. Where the later activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were within the scope of the program EIR.

Here, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e. tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether there are new environmental effects that were not covered by the program EIR). The City's expectation, at least at present, is that the checklist will conclude that most, or all, components of the Specific Plan can be developed with no new analysis of environmental effects given that there is a high level of resolution with regard to the project details that have been analysis in this program EIR. In some cases, however, a site-specific application (i.e., a proposed commercial use) may have specific issues associated with the project, or business, that this program EIR could not anticipate given the information that was available at this time. In those situations, the detailed site-specific information from that application could have site-specific effects not wholly anticipated in this EIR and would require some additional environmental review. (See also CEQA Guidelines section 15063, subd. (b)(1)(C).)

Future site-specific approvals may also be narrowed pursuant to the rules for tiering set forth in CEQA Guidelines Section 15152. "'[T]iering is a process by which agencies can adopt programs, plans, policies, or ordinances with EIRs focusing on 'the big picture,' and can then use streamlined CEQA review for individual projects that are consistent with such…[first tier decisions] and are…consistent with local agencies' governing general plans and zoning.'" (*Koster v. County of San Joaquin* (1996) 47 Cal.App.4th 29, 36.) Section 15152 provides that, where a first-tier EIR has "adequately addressed" the subject of cumulative impacts, such impacts need not be revisited in second- and third-tier documents. Furthermore, second- and third-tier documents may limit the examination of impacts to those that "were not examined as significant effects" in the prior EIR or "[a]re susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means." In general, significant environmental effects have been "adequately addressed" if the lead agency determines that:

a. they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental impact report; or
b. they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project.

Here, as noted above, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e., tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether all significant environmental impacts identified have been "adequately addressed" in the program EIR). Thus, if a new analysis is required for these site-specific actions, it would focus on impacts that cannot be "avoided or mitigated" by mitigation measures that either (i) were adopted in connection with the Specific Plan or (ii) were formulated based on information in this EIR.

In addition, because the EIR addresses the effects of rezoning the land within the proposed Specific Plan area, future environmental review can also be streamlined pursuant to Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183. These provisions, which are similar but not identical to the tiering provisions, generally limit the scope of necessary environmental review for site-specific approvals following the preparation of an EIR for a "zoning action." For such site-specific approvals, CEQA generally applies only to impacts that are "peculiar to the parcel or to the project" and have not been previously disclosed, except where "substantial new information" shows that previously identified impacts would be more significant than previously assumed. Notably, impacts are considered not to be "peculiar to the parcel or to the project" if they can be substantially mitigated pursuant to previously adopted, uniformly applied development policies or standards. As noted above, the City anticipates that, in assessing the extent to which the Specific Plan EIR has previously addressed significant impacts that might occur with individual projects, the City may conclude that in some instances (e.g., with respect to agricultural resources, cultural resources, geology, soils, and paleontological resources), no further analysis beyond that found in the program EIR will be necessary.

Finally, for purely residential projects consistent with the Specific Plan, the City intends to preserve its ability to treat such projects as exempt from CEQA pursuant to Government Code section 65457. Subdivision (a) of that statute provides that "[a]ny residential development project, including any subdivision, or any zoning change that is undertaken to implement and is consistent with a specific plan for which an [EIR] has been certified after January 1, 1980, is exempt from the requirements of [CEQA]." The statutes go on to say, moreover, that "if after adoption of the specific plan, an event as specified in Section 21166 of the Public Resources Code occurs, the exemption provided by this subdivision does not apply unless and until a supplemental [EIR] for the specific plan is prepared and certified in accordance with the provisions of [CEQA]. After a supplemental [EIR] is certified, the exemption … applies to projects undertaken pursuant to the specific plan." (See also CEQA Guidelines section 15182.)

When purely residential projects are proposed, the City will consider whether they qualify for this exemption or whether the West Area Specific Plan EIR must be updated through a supplement to this EIR or a subsequent EIR as required by Public Resources Code section 21166 and CEQA Guidelines sections 15162 and 15163.

IV. ENVIRONMENTAL REVIEW PROCESS

The Notice of Preparation (hereinafter "NOP") of an EIR was circulated for public review and comment from October 15, 2015 to November 13, 2015 in accordance with CEQA Guidelines section 15082. Written responses to the NOP were received from the following interests/agencies:

1. Northern Salinas Valley Mosquito Abetment District (October 21, 2015)
2. California Department of Transportation (October 28, 2015)
3. Monterey-Salinas Transit (November 16, 2015)
4. Monterey County Resource Management Agency (November 16, 2015)
5. California Natural Resource Agency Division of Land Resource Protection (November 10, 2015)
6. Salinas Union High School District (November 10, 2015)
7. Ohlone/Costanoan-Esselen Nation (January 11, 2016)
8. Santa Rita Union School District (January 29, 2016)
9. Transportation Agency of Monterey County (March 31, 2016)

As part of the early consultation process and pursuant to the CEQA Guidelines section 15083 regarding early public consultation, a scoping meeting was held at the City of Salinas Rotunda (City Council chamber) on October 29, 2015. No specific comments were made about the scope of issues to be addressed in the EIR. Questions and comments were primarily focused on the project description and the project consideration process.

Pursuant to CEQA Guidelines sections 15023, subdivision (c), and 15087, subdivision (f), the State Clearinghouse in the Office of Planning and Research was responsible for distributing environmental documents to State agencies, departments, boards, and commissions for review and comment. The City followed required procedures with regard to distribution of the appropriate notices and environmental documents to the State Clearinghouse. The State Clearinghouse was obligated to make, and did make, that information available to interested agencies for review and comment. The NOP was received by the State Clearinghouse (SCH # 2006021072) and a 30-day public review period ended on November 13, 2015. The NOP and all comments received on the NOP are presented in Appendix A of the Draft EIR.

An Initial Study was also prepared for the project. Included below is a brief summary of findings from the Initial Study on environmental topics that were either found to have no impact or be less than significant, or were found to be sufficiently addressed in the General Plan EIR, and thus are not included within individual sections of the Draft EIR. For full Initial Study Findings and individual topics found to be less than significant through the Initial Study process refer to Appendix A of the Draft EIR.

- **Aesthetics:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would allow development to occur in the City in both vacant and underdeveloped portions of the community, and that the introduction/expansion of urban uses into these areas has the potential to interrupt views of natural features, open space, the hillsides, and agricultural resources, reducing

the aesthetic value of these resources. Additionally, new development in the City was found to increase the amount of light and glare in the community, particularly in areas planned for nonresidential development, such as retail and general commercial. It was also found that future development under the General Plan has the potential to change the visual character of the City.

To minimize and mitigate the impacts on aesthetics, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following five mitigation measures: Mitigation Measure A1 requires the City to implement the City's Gateway Guidelines; Mitigation Measure A2 requires the City to strengthen and require compliance with the City's Design Guidelines; Mitigation Measure A3 requires the City to improve the Lighting Ordinance; Mitigation Measure A4 requires the City to implement landscaping requirements for all proposed projects; and Mitigation Measure A5 requires the City to review all discretionary projects for aesthetics impacts. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures A1 through A5, the potential citywide aesthetics impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that aesthetic impacts associated with the FGAs, which includes the West Area Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Agriculture and Forest Resources:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would result in the conversion of 3,525 acres of agriculture lands to urban uses. The *Final Environmental Impact Report* also indicates that General Plan buildout would result in agricultural activity in proximity to residential and other urban uses, which may result in conflicts between the uses. It is noted that agricultural activity can cause nuisances related to air quality and noise that may disturb surrounding development. Urban activities may also negatively affect nearby agricultural uses, as increased vandalism often occurs and the introduction of domestic animals may disturb certain agricultural activities.

  The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures AG1 through AG4, the impacts on potential compatibility issues would be reduced to a less than significant level; however, while the impacts on agricultural conversion would be reduced to the extent feasible, a significant and unavoidable impact would remain related to the loss of important farmland. Mitigation AG5 specifically addressed Agricultural

Land Conservation Easement Program, which states that the City will work with the County of Monterey and other local jurisdictions to create and implement an agricultural land conservation easement program, including such measures as securing the dedication of easements or by paying a mitigation fee that could be used to purchase easements through a mitigation bank. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a $750.00 per acre mitigation fee for agricultural lands currently designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance."

The City of Salinas certified the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), adopted a statement of overriding considerations relative to this significant and unavoidable impact, and approved the Salinas General Plan.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that agricultural impacts associated with the FGAs, which includes the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above-referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Geology and Soils:** Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Hazards and Hazardous Materials:** While the Draft EIR analyzes Hazards and Hazardous Materials, several topics were determined to not warrant additional analysis within the Chapter.

  The land uses proposed within the Specific Plan Area would not be expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Furthermore, the project is not located in the vicinity of an airport or private airstrip; therefore, it would not result in a safety hazard related to air traffic for people residing or working in the Specific Plan Area. These topics did not warrant additional analysis and were not addressed further in the EIR.

Separately, the City has adopted a Multi-hazard Emergency Plan, which serves as extensions of the California Emergency Plan and the Emergency Resource Management Plan. The purpose of the Multi-hazard Emergency Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Operations Center (EOC) in City Hall serves as the center of the City's emergency operations. The Plan also addresses evacuation and movement of people in the event of an emergency. The project does not impair implementation of or physically interfere with the Multi-hazard Emergency Plan. Implementation of the project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

Lastly, the project is not located in an area that is considered a high risk for wildfires. The project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Implementation of the proposed project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

- **Land Use and Planning:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the impacts would be reduced to a less than significant level with mitigation.

  Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

  The City certified the Final Supplemental EIR and approved annexation of the North of Boronda FGA, which includes the West Area Specific Plan. The project, as proposed, is consistent with the Greater Salinas Area Memorandum of Understanding (GSA MOU). All development under the project would be required to comply with the regulations, policies, and standards identifies in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). Implementation of the project would not result in any new significant adverse impacts beyond those addressed within these supporting documents. This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Mineral Resources:** It was determined in the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) that development of the FGA, including the Specific Plan Area, would not have a significant impact on mineral resources or mining activities. As such, implementation of the project would have no impact on mineral resources and this topic did not warrant additional analysis and is not addressed further in the EIR.

- **Population and Housing:** While the Draft EIR analyzes Population and Housing, several topics were determined to not warrant additional analysis within the Chapter.

The Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) noted that the General Plan would not result in the displacement of substantial numbers of existing housing units or persons since the majority of the FGA designated for future development consists of vacant, agricultural, or redevelopment of nonresidential land. Additionally, any individual units that require removal would be offset by the increase in housing by the development of approximately 18,397 additional dwelling units at General Plan buildout.

The project would necessitate the removal of some existing houses within the Specific Plan Area; however, removal of any individual units would be offset by the increase in housing by the development of approximately 4,340 additional dwelling units at Specific Plan buildout. As such, the project would not displace substantial numbers of existing housing or people. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Recreation:** While the project would increase the demand for parks and other recreational facilities based on the population growth, the amount of parkland and open space provided within the Specific Plan Area sufficiently meets the City's parkland requirements. Construction of the parks would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Transportation and Circulation:** While the Draft EIR analyzes Traffic and Circulation, several topics were determined to not warrant additional analysis within the Chapter.

  The project is not located in the vicinity of an airport or airstrip; therefore, it would not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks. Implementation of the project would have no impact relative to this environmental topic

The remaining issues areas and checklist questions are analyzed in the EIR. The EIR includes an analysis of the following issue areas:

- Air Quality
- Biological Resources
- Cultural Resources
- Greenhouse Gases and Climate Change
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Noise
- Population and Housing

- Public Services
- Transportation and Circulation
- Utilities

The City circulated the DEIR for public and agency review on February 27, 2019. A public review period of 45 days was provided on the DEIR and ended on April 15, 2019. This period satisfied the requirement for a 45-day public review period as set forth in Section 15105 of the CEQA Guidelines.

V. RECORD OF PROCEEDINGS

In accordance with Public Resources Code section 21167.6, subdivision (e), the record of proceedings for the City's decision on the project includes the following documents:

- The NOP and all other public notices issued by the City in conjunction with the project;

- All comments submitted by agencies or members of the public during the comment period on the NOP;

- The Draft EIR for the project (February 2019) and all appendices;

- All comments submitted by agencies or members of the public during the comment period on the Draft EIR;

- The Final EIR for the project, including comments received on the Draft EIR and the responses to those comments and appendices;

- Documents cited or referenced in the Draft EIR and Final EIR;

- The mitigation monitoring and reporting program for the project;

- All findings and resolutions adopted by the City Council in connection with the project and all documents cited or referred to therein;

- All reports, studies, memoranda, maps, staff reports, or other planning documents relating to the project prepared by the City, consultants to the City, or responsible or trustee agencies with respect to the City's compliance with the requirements of CEQA and with respect to the City's action on the project;

- The Draft West Area Specific Plan;

- All documents submitted to the City by other public agencies or members of the public in connection with the project, up through the close of the Planning Commission public hearing, and the close of the City Council public hearing;

- Any minutes and/or verbatim transcripts of all information sessions, public meetings, and public hearings held by the City in connection with the project;

- Any documentary or other evidence submitted to the City at such information sessions, public meetings, and public hearings;

- The City of Salinas General Plan and all environmental documents prepared in connection with the adoption of the General Plan;

- Any and all resolutions approved by the City regarding the project, and all staff reports, analyses, and summaries related to the adoption of those resolutions;

- Matters of common knowledge to the City, including, but not limited to federal, state, and local laws and regulations;

- Any documents expressly cited in these findings, in addition to those cited above; and

- Any other materials required for the record of proceedings by Public Resources Code section 21167.6, subdivision (e).

The documents constituting the record of proceedings are available for review by responsible agencies and interested members of the public during normal business hours at the City of Salinas Community Development Department, 65 West Alisal Street, Salinas, California 93901. The custodian of these documents is the Community Development Director. Without exception, any documents set forth above not found in the project files fall into one of two categories. Many of them reflect prior planning or legislative decisions of which the City Council was aware in approving the project. (See *City of Santa Cruz v. Local Agency Formation Commission* (1978) 76 Cal.App.3d 381, 391-392; *Dominey v. Department of Personnel Administration* (1988) 205 Cal.App.3d 729, 738, fn. 6.) Other documents informed the experts who provided advice to City Staff or consultants, who then provided advice to the City Council. For that reason, such documents form part of the underlying factual basis for the City Council's decisions relating to the approval of the project. (See Pub. Resources Code, § 21167.6(e)(10); *Browning-Ferris Industries v. City Council of City of San Jose* (1986) 181 Cal.App.3d 852, 866; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 153, 155.)

VI. CONSISTENCY WITH APPLICABLE PLANS

This section includes a review of the project's relationship to the General Plan, other land use related documents/agreements, and to regional plans and identifies whether inconsistencies with these plans may exist.

Consistency with the Salinas General Plan

The Salinas General Plan states the City's vision for the community's future and outlines goals, policies and implementation measures to achieve its vision. The General Plan also projects the population, dwelling units, and non-residential building square footage associated with the future

buildout of the Land Use Plan, also referred to as General Plan buildout. Typically, General Plan buildout is decades beyond the 20-year General Plan planning cycle.

As described in CEQA Guidelines section 15125, subdivision (d), an EIR must discuss any inconsistencies between a proposed project and applicable general plans, specific plans, and regional plans. Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan, area-wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, regional blueprint plans, plans for the reduction of greenhouse gas (GHG) emissions, habitat conservation plans, and natural community conservation plans.

New Urbanism principles, a component of the General Plan Land Use Element, were used to design a land use plan for the project that is compact and pedestrian-friendly, with a mixture of uses surrounding activity centers/neighborhood local points in the Specific Plan Area. Higher density residential uses are proposed around retail, recreation, and public uses and all of these core activity centers are proposed to be connected with pedestrian, bicycle, and transit systems.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, middle school, supplemental detention/retention basins and 11 parks). It is anticipated that Specific Plan Area will have up to 15,928 residents at project build-out. This is consistent with the expected intensity of development within the Specific Plan Area under General Plan buildout conditions as analyzed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

The Salinas General Plan requires the approval of Specific Plans prior to development of any land in the North of Boronda Future Growth Area (FGA). The West Area Specific Plan includes certain development regulations and design standards that are intended to be specific to the Specific Plan Area. Where there is a matter or issue not specifically covered by the Specific Plan development regulations and design standards, the Salinas Zoning Code would apply. Where there is a conflict between the Specific Plan and the Zoning Code, the Specific Plan would prevail.

The Specific Plan is intended to be adopted by the City Council and to serve as a tool for the City of Salinas to implement. The Specific Plan is to be used by designers, developers, builders, and planners, to guide development of the Specific Plan Area. The land use, development standards, and design guidelines are provided to ensure that all proposed developments remain consistent with the vision established by the Specific Plan as the project is built over time. The Specific Plan development concepts, design guidelines, and standards are in accordance with the City's General Plan, Municipal Ordinances, and City Specifications. The Specific Plan shall be used to review, process, and approve development proposals for individual parcels/project sites within the Specific Plan Area, including but not limited to site specific development applications and site improvement plans.

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that the General Plan may impact the related land use plans and policies that have

been adopted to avoid or mitigate an environmental effect. The Salinas Zoning Code, Salinas Redevelopment Plan, Greater Salinas Area Plan, Salinas Municipal Airport Master Plan, Monterey County Airport Land Use Plan, GSA MOU, are specifically mentioned. Of these seven documents, the project does not affect an existing Specific Plan, the Salinas Municipal Airport Master Plan, or the Monterey County Airport Land Use Plan, and the Salinas Redevelopment Plan is no longer in effect. These topics are not discussed further, but the other three are discussed below.

Salinas Zoning Code

The Specific Plan Area is currently zoned NI with a Specific Plan Overlay. The project includes a rezone to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay District is also applicable to each Zoning District. The purpose of the rezone is to ensure consistency between the proposed General Plan Land Use Designations and Zoning. With the approval of the rezoning application, the Specific Plan would be consistent with the Salinas Zoning Code.

City/County Greater Salinas Area Memorandum of Understanding

In 2006, the City and the County adopted the GSA MOU to allow for annexation and development of specific parcels that are located outside of the Future Growth Areas as illustrated in the General Plan. These areas were not contemplated for annexation and development at the time the General Plan was adopted. These areas include, but are not limited to, the "Unikool", Boronda Road, and Fresh Express sites.

The GSA MOU describes the intent of each agency to consider annexation of the subject growth areas and identifies framework conditions under which annexations could be considered. The following excerpt from the Preface of the GSA MOU identifies its general intent:

"This Memorandum of Understanding (MOU), by and between the County of Monterey (County) and the City of Salinas (City), is to set forth certain agreements between the parties to express their intent to jointly pursue action to assure orderly and appropriate land use development in the area designated in the General Plan of Monterey County as the Greater Salinas Area Plan area and in the City of Salinas. Specific objectives to be achieved through the implementation of the land use and associated policies included in this MOU are the preservation of certain agriculture land, the provision of future growth areas, and the provision of adequate financing for the services and facilities of benefit to the residents of the Greater Salinas Area Plan area and the City."

With the adoption of the GSA MOU, both the City and the County acknowledged that additional development outside the City's Future Growth Areas would be considered subject to amendment of the City's SOI and annexation of such areas to the City. The GSA MOU also includes a set of points of agreement that govern future annexations and associated development. Among other topics, the points of agreement address the future direction of City growth, agricultural mitigation, traffic impacts, and storm drainage. The GSA MOU states that the direction of future growth of the City shall be to the north and east of the current city limits, except as otherwise provided for in the GSA MOU.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following two mitigation measures: Mitigation Measure LU5 requires the City to continue to cooperate with the County of Monterey to implement the GSA-MOU, which directs that City growth generally to the north and east away from the most productive farmland; and Mitigation Measure LU6 requires the City to encourage City-centered growth and give priority to redevelopment and infill projects that reduce development pressure on agricultural lands. The City will also establish an incentive program to promote these projects, such as priority permit processing and density bonuses for such developments. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda FGA, which includes the WASP. The project as proposed is consistent with the GSA-MOU. All development under the project would be required to comply with the above-referenced regulations, policies, and standards.

Greater Salinas Area Plan

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that implementation of General Plan will result in development outside the existing City limits, into the Greater Salinas Planning Area. Development occurring outside of the City limits is subject to the Greater Salinas Area Plan. The implementation of the General Plan may conflict with the Greater Salinas Area Plan, resulting in a significant impact.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented Mitigation Measure LU2, which requires the City to be consistent with a portion of Draft Policy LU 3.4 of the Monterey County Draft General Plan, and to cooperate with LAFCO and the County of Monterey to direct growth outside the City limits to the Future Growth Area, on lands that are served or are planned to be served, with a full range of urban services, such as public water and sewer, an extensive road network, public transit, safety and emergency response services, parks, trails, and open space. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda Future Growth Area, which includes the Specific Plan. The project as proposed is consistent with the Greater Salinas Area Plan. All development

under the project would be required to comply with the above-referenced regulations, policies, and standards.

VII. FINDINGS REQUIRED UNDER CEQA

Public Resources Code section 21002 provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute provides that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects." Section 21002 goes on to provide that "in the event [that] specific economic, social, or other conditions make infeasible such project alternatives or such mitigation measures, individual projects may be approved in spite of one or more significant effects thereof."

The mandate and principles announced in Public Resources Code section 21002 are implemented, in part, through the requirement that agencies must adopt findings before approving projects for which EIRs are required. For each significant environmental effect identified in an EIR for a project, the approving agency must issue a written finding reaching one or more of three permissible conclusions. The first such finding is that changes or alterations have been required in, or incorporated into, the project, which avoid or substantially lessen the significant environmental effect as identified in the final EIR. The second permissible finding is that such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding, and that such changes have been adopted by, or can and should be adopted by, such other agency. The third potential conclusion is that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR. (CEQA Guidelines, § 15091, subd. (a).)

As explained elsewhere in these findings, "feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors. The concept of "feasibility" also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. (*Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1506-1509 (court upholds CEQA findings rejecting alternatives in reliance on project's objectives); see also *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1001 (*CNPS*) (an alternative "'may be found infeasible on the ground it is inconsistent with the project objectives as long as the finding is supported by substantial evidence in the record'") (quoting Kostka & Zischke, *Practice Under the Cal. Environmental Quality Act* [Cont.Ed.Bar 2d ed. 2009] (*Kostka*), § 17.309, p. 825); *In re Bay-Delta Programmatic Environmental Impact Report Coordinated Proceedings* (2008) 43 Cal.4th 1143, 1165, 1166 (*Bay-Delta*) ([i]n the CALFED program, feasibility is strongly linked to achievement of each of the primary program objectives"; "a lead agency may structure its EIR alternative analysis around a reasonable definition of underlying purpose and need not study alternatives that cannot achieve that basic goal).) Moreover, "'feasibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133

Cal.App.3d 410, 417 (*City of Del Mar*); see also *CNPS, supra,* 177 Cal.App.4th 957 (after weighing "'economic, environmental, social, and technological factors,' ... 'an agency may conclude that a mitigation measure or alternative is impractical or undesirable from a policy standpoint and reject it as infeasible on that ground) (quoting Kostka, *supra,* § 17.29, p. 824))

For purposes of these findings (including the table described in Section IX below), the term "avoid" refers to the effectiveness of one or more mitigation measures to reduce an otherwise significant effect to a less than significant level. In contrast, the term "substantially lessen" refers to the effectiveness of such measure or measures to substantially reduce the severity of a significant effect, but not to reduce that effect to a less than significant level.

As explained above, CEQA requires that the lead agency adopt feasible mitigation measures or, in some instances, feasible alternatives to substantially lessen or avoid significant environmental impacts that would otherwise occur. With respect to a proposed project for which significant impacts are not avoided or substantially lessened, a public agency, after adopting proper findings, may nevertheless approve the project if the agency first adopts a statement of overriding considerations setting forth the specific reasons that the agency found that the project's benefits outweigh its unavoidable adverse environmental effects. The City of Salinas' Statement of Overriding Considerations for the project is included herein in Section XI below.

VIII. MITIGATION MONITORING AND REPORTING PROGRAM

A Mitigation Monitoring and Reporting Program (hereinafter "MMRP") has been prepared for the project, and is being approved by the City Council by Resolution 2019-__(N.C.S.). The City will use the MMRP to track compliance with project mitigation measures. The MMRP will remain available for public review during the compliance period. The Final MMRP is Exhibit "B" of the aforementioned resolution and is approved in conjunction with these Findings of Fact.

IX. SIGNIFICANT EFFECTS AND MITIGATION MEASURES

The EIR identified a number of significant and potentially significant environmental effects (or impacts) that the project will cause or contribute to. Most of these significant effects can be fully avoided through the adoption of feasible mitigation measures. Other effects, however, cannot be avoided by the adoption of feasible mitigation measures or alternatives, and thus will be significant and unavoidable. Some of these unavoidable significant effects can be substantially lessened by the adoption of feasible mitigation measures. Other significant, unavoidable effects cannot be substantially lessened or avoided. For reasons set forth in Section XI however, the City Council has determined that overriding economic, social, and other considerations outweigh the significant, unavoidable effects of the project.

The City Council's findings with respect to the project's significant effects and mitigation measures are set forth in the Table of Impacts, Mitigation Measures, and CEQA Findings attached to these findings. The findings set forth in the table are hereby incorporated by reference.

This table does not attempt to describe the full analysis of each environmental impact contained in the EIR. Instead, the table provides a summary description of each impact, describes the

applicable mitigation measures identified in the Draft EIR or Final EIR and adopted by the City Council, and states the City Council's findings on the significance of each impact after imposition of the adopted mitigation measures. A full explanation of these environmental findings and conclusions can be found in the Draft and Final EIRs, and these findings hereby incorporate by reference the discussions and analyses in those documents supporting the Final EIR's determinations regarding mitigation measures and the projects' impacts and mitigation measures designed to address those impacts. In making these findings, the City Council ratifies, adopts, and incorporates into these findings the analyses and explanations in the Draft EIR and Final EIR, and ratifies, adopts, and incorporates in these findings the determinations and conclusions of the Draft EIR and Final EIR relating to environmental impacts and mitigation measures, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

By Resolution 2019-__(N.C.S.), the City Council adopts all of the mitigation measures identified in the table.

X. PROJECT ALTERNATIVES

A. Basis for Analysis of the Feasibility of Alternatives

Public Resources Code section 21002, a key provision of CEQA, provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute states that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects."

Where a lead agency has determined that, even after the adoption of all feasible mitigation measures, a project as proposed will still cause one or more significant environmental effects that cannot be substantially lessened or avoided, the agency, prior to approving the project as mitigated, must first determine whether, with respect to such impacts, there remain any project alternatives that are both environmentally superior and feasible within the meaning of CEQA. Although an EIR must evaluate this range of *potentially* feasible alternatives, an alternative may ultimately be deemed by the lead agency to be "infeasible" if it fails to fully promote the lead agency's underlying goals and objectives with respect to the project. (*City of Del Mar, supra,* 133 Cal.App.3d at p. 417) "'[F]easibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*Ibid*.; see also *CNPS, supra,* 177 Cal.App.4th at p. 1001.) Thus, even if a project alternative will avoid or substantially lessen any of the significant environmental effects of the project, the decision-makers may reject the alternative if they determine that specific considerations make the alternative infeasible.

Under CEQA Guidelines section 15126.6, the alternatives to be discussed in detail in an EIR should be able to "feasibly attain most of the basic objectives of the project [.]" For this reason, the Objectives described above provided the framework for defining possible offsite alternative project locations. (See *Bay-Delta, supra,* 43 Cal.4th at p. 1166). The project objectives are set out

above in section III.C. Based on the requirements of CEQA Guidelines section 15126.6 and the Project's Objectives, the following alternatives to the project were identified:

No Project (No Build) Alternative

The CEQA Guidelines (Section 15126.6[e]) require consideration of a no project alternative that represents the existing conditions, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved. For purposes of this analysis, the No Project (No Build) Alternative assumes that development of the Specific Plan Area would not occur, and the Specific Plan Area would remain in its current agricultural condition. It is noted that the No Project (No Build) Alternative would fail to meet the project objectives identified for the West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

Reduced Land Area Project Alternative

Under this alternative, the Specific Plan Area would be developed with the same components as described in the Project Description, but the area utilized for the development (i.e., the project footprint) would be reduced by approximately 20 percent. Under this alternative, approximately 162 acres of land in the northeast corner of the Specific Plan Area would be removed. This removed area would include the 52.85-acre Mortensen property (APN 21101108) and the 108.32-acre Madolora/Global property (APN 21101109), which are shown on Figure 5.0-1. The resultant Specific Plan Area would include approximately 635 acres. The proposed land uses within this area identified for removal under this alternative would be incorporated into the remaining 635 acres of the Specific Plan Area, which would increase the residential density of the Specific Plan Area under this alternative, while retaining the same number of residences, mixed use commercial areas, schools, parks, etc. as the project. This alternative would establish a site for a third 10.0-acre elementary school to be developed by the Santa Rita Union School District (District). However, if the District decides against the elementary school siting, the area would instead be residential units.

Under this alternative the average residential density (units per net acre) would increase from 9.0 to approximately 11.3 units/acre. It is assumed that the number of NE parcels would be reduced, and the number of NG-1 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

Reduced Residential Intensity/Density Project Alternative

Under this alternative, the Specific Plan Area would be developed with a reduction in the overall residential intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 25 percent reduction in the intensity/density of the residential components of the project while maintaining the approximately 797-acre project footprint. This would result in fewer residential lots, but larger lot sizes. This alternative would result in up to 3,255 residential units. This alternative would retain the approximately 571,500 square feet of mixed commercial uses, the five proposed schools (three elementary, one middle, and one high school), and the same acreage of parks and detention basins as the project.

Under this alternative, the average residential density (units per net acre) would decrease from 9.0 to approximately 6.8 units/acre. It is assumed that the number of NE parcels would be increased, and the number of NG-1 and NG-2 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

This alternative, based upon residential overall density, is inconsistent with the Salinas General Plan's standards for the Specific Plan Area, which require a minimum of 3,553 residential units within the Specific Plan Area, and the incorporation of New Urbanism concepts which mandates that new residential development have a minimum average density of 9 dwelling units per net residential acre. A General Plan Amendment would be required.

Smaller-scale Project Alternative

Under this alternative, the Specific Plan Area would be reduced by approximately 33 percent and the proposed residential and non-residential uses would also be reduced by approximately 33 percent. For the purposes of discussion, this alternative assumes that approximately 264 acres of land along the entire eastern boundary of the Specific Plan Area would be removed and remain as undeveloped agricultural land. The resultant Specific Plan Area under this alternative would be approximately 533 acres in size, and include up to 2,908 residential units, up to 382,905 square feet of commercial/mixed use building area, and up to 119 acres of public facilities (including two elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and up to 8 parks). The number of residential units under this alternative would not meet the minimum of 3,553 residential units as provided within the City of Salinas General Plan. The residential densities under this alternative would be similar to the project.

The City Council finds that that a good faith effort was made to evaluate all potentially feasible alternatives in the EIR that are reasonable alternatives to the project and could feasibly obtain the basic objectives of the project, even when the alternatives might impede the attainment of the project objectives and might be more costly. As a result, the scope of alternatives analyzed in the EIR is not unduly limited or narrow. The City Council also finds that all reasonable alternatives were reviewed, analyzed and discussed in the review process of the EIR and the ultimate decision on the project. (See, e.g., DEIR, pp. 6-5 to 6-55)

1. Significant, Unavoidable Impacts of the Project

The significant and unavoidable impacts of the project are set out in detail below in Section XI.A.

2. Scope of Necessary Findings and Considerations for Project Alternatives

As noted above, these findings address whether the various alternatives substantially lessen or avoid any of the significant unavoidable impacts associated with the project and also consider the feasibility of each alternative. Under CEQA, "[f]easible means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic,

environmental, legal, social, and technological factors." (CEQA Guidelines § 15364). As explained earlier, the concept of feasibility permits agency decision makers to consider the extent to which an alternative is able to meet some or all of a project's objectives. In addition, the definition of feasibility encompasses "desirability" to the extent that an agency's determination of infeasibility represents a reasonable balancing of competing economic, environmental, social, and technological factors supported by substantial evidence.

In identifying potentially feasible alternatives to the project, the following project objectives were considered:

1. Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.

2. Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.

3. Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.

4. Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.

5. Provide public services and infrastructure improvements that achieve and maintain City service standards.

6. Provide an inviting tree-lined street system which incorporates traffic calming and other measures.

7. Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater FGA and City as a whole.

8. Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.

9. Provide for a reasonable jobs/housing balance.

10. Provide opportunities for senior housing.

11. Provide for a site/parcel-based post-construction SCMs/LID to the maximum extent practicable.

As noted near the beginning of these findings, moreover, the City is keenly aware that the State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most

expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The following two overarching project objectives are therefore presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

B. No Project (No Build) Alternative

In general, a CEQA "No Project Alternative" must "discuss the existing conditions …, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services." (CEQA Guidelines, § 15126.6, subd. (e)(2).) When the proposed project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. In such an instance, the no project alternative consists of evaluating the projected impacts of the proposed plan to the impacts that would occur under the existing plan. "Typically, this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan. (*Id.*, subd. (e)(3)(A).)

1. Analysis of No Project (No Build) Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to air quality. As such, the project level and cumulative impacts would be greatly reduced when compared to the project.

Biological Resources

Under the No Project (No Build) Alternative, the West Area Specific Plan would not be constructed, no habitat would be removed, no wetlands disturbed, and no ground disturbing activities would occur. The Specific Plan Area would remain open to migration, foraging, nesting, and other uses by wildlife. Therefore, potential for impacts to biological resources would be eliminated under the No Project (No Build) Alternative. Impacts to biological resources would be reduced as compared to the project.

Cultural Resources

The No Project (No Build) Alternative would continue to result in ground disturbing activities associated with the agricultural operations (i.e., soil tilling); however, because the ground disturbance associated with farming has occurred for an extended period of time with no cultural resources being found it is anticipated that the continuation of these operations under this alternative would have a significantly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources, the No Project (No Build) Alternative would result in slightly less potential for impacts to cultural resources as the entire Specific Plan Area would continue to be used for agriculture production.

Greenhouse Gases and Climate Change

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to GHG reductions. As such, this impact would be reduced when compared to the project. This does not necessarily mean, however, that the No Project Alternative represents a better long-term policy outcome for climate than the project. California has a large housing need, and new housing will have to be built somewhere, if not the Specific Plan Area. As the California Supreme Court explained, "[g]iven the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced." (*Center for Biological Diversity v. California Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 220-221.)

Hazards and Hazardous Materials

Under the No Project (No Build) Alternative, no new land uses would be introduced to the Specific Plan Area, and the potential for hazardous material release in the Specific Plan Area would be reduced. Ongoing pesticide use would occur within the area to remain in agriculture, and this has the potential to generate negative health effects on existing residents located in the areas south and west of the Specific Plan Area. However, there would not be long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, because development would not occur. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the No Project (No Build) Alternative would result in less potential for impacts.

Hydrology and Water Quality

Under the No Project (No Build) Alternative, potential new water quality impacts from construction and operation of the West Area Specific Plan would be eliminated. Under this alternative, the land would be kept in its present state with the majority of the Specific Plan Area either fallow land or being used for agricultural purposes. The No Project (No Build) Alternative would have a greater chance of groundwater recharge because it would not introduce large areas of impervious surfaces as would the West Area Specific Plan. However, the beneficial impact of reducing the consumptive use of water by 2,078 acre-feet per year (AFY) (Cal Water, 2015) would not exist. This is a significant contribution in reducing overdraft in the Salinas Valley Ground Water basin.

The potential to result in the violation of water quality standards would be reduced under this alternative as compared with the project. However, there are some instances where the No Project (No Build) Alternative would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Nevertheless, overall, potential impacts related to hydrology and water quality would be reduced under this alternative.

Noise

Existing agricultural activities within the Specific Plan Area sometimes involve on-going noise sources such as agricultural equipment (e.g., tractors, harvesters, planters, etc.). Such noise sources are part of the existing ambient noise levels in the Specific Plan Area. Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and there would be no potential for new noise sources; however, existing noise from agricultural operations would continue. As such, this alternative would have less impact relative to the project.

Population and Housing

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and the Specific Plan Area would not accommodate the City's anticipated growth. Growth would still be anticipated to occur within the region, but it would not be accommodated in the FGA, which has undergone extensive planning efforts by the City and community for over a decade. This outcome would not be consistent with the FGA and General Plan. The City would need to look

to other undeveloped areas of the region to develop for new housing, which would be expected to have environmental impacts that have not yet been assessed, but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the No Project (No Build) Alternative, there would be no increased demand for police, fire, schools, parks, or other public services. Alternatively, this alternative would result in no new school or park facilities, which are designed to accommodate more than the demand that is generated by the West Area Specific Plan. Overall, this alternative would have a slightly greater impact to public services when compared to the project.

Transportation and Circulation

Under the No Project (No Build) Alternative, there would be no new traffic generated within the Specific Plan Area. This alternative would also not result in new traffic improvements on the City's roadway system and it would not result in payments of traffic impact fees into the City's Capital Improvement Program (CIP) that would be used for the roadway system. Existing deficiencies in the traffic system would not receive the benefit of improvements to improve existing deficiencies; however, this would be more than offset by the fact that there would be no new contribution to degrading traffic levels of service at a project and cumulative level. Overall, this alternative would have less of an overall traffic impact than the project. Still, the growth for which there is market demand would still be anticipated to occur somewhere else within the region, possibly in areas that could result in transportation effects worse than those of the West Area Specific Plan.

Utilities

Under the No Project (No Build) Alternative, the Specific Plan Area would not have an increased demand for wastewater, storm drainage, or solid waste disposal. There would be no new impacts on these utilities and there would be no need to construct new infrastructure. Therefore, overall, the impact on wastewater, solid waste, and storm drainage would be reduced under this alternative. In conclusion, the No Project (No Build) Alternative would not result in a beneficial impact to groundwater recharge. However, this alternative would decrease the amount of solid waste and wastewater generated at the site, and would not require construction of new utilities infrastructure. Overall, the No Project (No Build) Alternative would not add new impacts to wastewater, storm drainage, or solid waste disposal systems, but would not result in the beneficial impacts to the groundwater system.

2. Feasibility of No Project (No Build) Alternative

The No Project (No Build) Alternative is the environmentally superior alternative because it results in the least adverse environmental impacts when compared to the project. However, the No Project (No Build) Alternative would fail to meet the project objectives identified for the

West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

The City Council finds the No Project (No Build) Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the Project.

C. Reduced Land Area Project Alternative

1. Analysis of Reduced Land Area Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Land Area Project Alternative, the Specific Plan Area would be developed with a 20 percent smaller development area, with an overall increase in residential density. Although the number of users would be the same under this alternative as compared with the project, this alternative has reduced mobile emissions when compared to the project, due to the more compact design of this alternative. It was assumed that mobile emissions under this alternative would be reduced by approximately twenty percent (as compared to the project), the same amount as the reduction in the size of this alternative's footprint when compared to the project. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for reactive organic compounds (ROG), nitrogen oxides (NO_x), and respirable particulate matter (PM_{10}) at buildout.

This alternative would provide more compact development than the project, providing greater opportunities for non-motorized transportation choices (such as walking or cycling). This would slightly reduce vehicle miles travelled (VMT) as compared to the project, which would slightly the mobile source emissions.

The Reduced Land Area Project Alternative would have greater impacts with respect to Air Quality Impact 3.1-1, which is identified as "the potential to conflict with or obstruct implementation of the applicable air quality plan." This is because the Association of Monterey Bay Area Governments (AMBAG), in consultation with the City of Salinas, included the North of Boronda FGA (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The AMBAG 2018 Regional Growth Forecast feeds into the Monterey Bay Air Resources Board's (MBARD) 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as the future version of the Air Quality Management Plan (AQMP). Therefore, while an increase in density has the potential to reduce mobile source emissions if residents chose alternative transportation modes (i.e., walk/bike/transit instead of driving a vehicle), this is not guaranteed to occur given that the choice to drive is still convenient and economical for most residents under this residential density in a suburban environment. The increased residential density under this alternative was not specifically planned for in the MBARD planning documents and within the AMBAG forecasts. Nevertheless, due to the reduced footprint and slightly reduced VMT, this impact would be slightly reduced when compared to the West Area Specific Plan.

Biological Resources

Under the Reduced Land Area Project Alternative, less habitat would be removed, and fewer ground disturbing activities would occur. It is still anticipated that the drainage ditches along Boronda Road would be eliminated (i.e., fill activity). A portion of the Specific Plan Area (twenty percent) would remain open to migration, foraging, nesting, and other uses by wildlife. The balance of the Specific Plan Area (eighty percent of site) would be developed and no longer available for migration, foraging, nesting, and other uses by wildlife. This would still be a significant and unavoidable impact, and would be cumulatively considerable.

When compared to the Specific Plan, potential for impacts to biological resources would be reduced under the Reduced Land Area Project Alternative proportionate to the reduction in developed area estimated at twenty percent.

Cultural Resources

The Reduced Land Area Project Alternative would result in fewer ground disturbing activities and would have a slightly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Land Area Project Alternative would result in slightly less potential for impacts to cultural resources, as a portion of the Specific Plan Area would remain undeveloped.

Greenhouse Gases and Climate Change

The Reduced Land Area Project Alternative would not develop approximately 162 acres that is proposed to be developed under the project. This would provide more compact development, creating more opportunities for non-motorized transportation options (such as walking or cycling). This is likely to reduce overall VMT as compared to the project. This would reduce mobile-related GHG emissions by an amount approximately equivalent to proportional reduction in the size of the Specific Plan Area (twenty percent) under this alternative, as compared with the project. Total operational emissions would be reduced by approximately 11 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 16,785 (same as the project), this alternative would generate approximately 2.53 metric tons of carbon dioxide equivalent (MT CO_2e)/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. However, this value is below the per service population estimate for the project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, the emissions per capita under this alternative would be reduced as compared with the project. This impact would be slightly reduced when compared to the project.

Hazards and Hazardous Materials

Under the Reduced Land Area Project Alternative, the land area to be developed would be reduced by 20 percent and the potential for exposure to hazardous materials, or a release of hazardous materials would be reduced proportionately. Ongoing pesticide use would occur within the area to remain in agriculture, and this would have the potential to generate negative health effects on new residents in the development. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the Reduced Land Area Project Alternative would result in slightly less potential for impacts.

Hydrology and Water Quality

Implementation of the West Area Specific Plan has the potential to result in the violation of water quality standards and waste discharge of pollutants into surface waters during both construction and long-term operations. Construction operations could result in temporary increases in runoff, erosion, sedimentation, soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. The long-term operation of the West Area Specific Plan could result in long-term impacts to surface water quality from urban stormwater runoff and could enter groundwater or surface water systems. Additionally, the proposed project would result in new impervious surfaces that could reduce rainwater infiltration and groundwater recharge. Mitigation measures incorporated into the project would reduce potential water quality impacts to a less than significant level. The West Area Specific Plan would not place persons or structures in a flood hazard zone.

Under the Reduced Land Area Project Alternative, potential water quality impacts from construction and operation of the West Area Specific Plan would be reduced. Under this alternative, the developed area would be reduced by 20 percent when compared with the project. The Reduced Land Area Project Alternative would have a greater chance of groundwater recharge because it would reduce the amount of impervious surfaces by 20 percent as compared to the West Area Specific Plan. The areas that would not be developed (i.e., the 162 acres of land in the northeast corner of the Specific Plan Area) would remain under agricultural production. While the 162-acre agricultural area would provide opportunities for groundwater recharge, the agricultural uses would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping required for the 162-acres of agricultural use under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. The amount of total consumptive water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412

AFY less water than buildout of the proposed project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the proposed project.

Under this alternative, there are some instances where the undeveloped portions of the Specific Plan Area would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, while the potential to result in water quality violations would be reduced under this alternative when compared with the project, the higher amount of groundwater pumping under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the proposed project. There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 80 percent of the land area would be converted into a use that would not require intensive groundwater pumping. As such, potential impacts related to hydrology and water quality would be increased under this alternative when compared to the project.

Noise

Under the Reduced Land Area Project Alternative, development would be reduced by 20 percent when compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Receptors would be subject to ongoing agricultural noise under this alternative. It is noted that, despite this reduction in the size of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact. As such, this alternative would have a reduced impact relative to the project.

Population and Housing

Under the Reduced Land Area Project Alternative, the project footprint would be reduced by 20 percent when compared with the project. However, although the residential density would increase from approximately 9.0 to 11.3 residential units per acre under this alternative, the number of residences developed under this alternative would be the same as for the proposed project. Overall, this alternative would have a equal impacts when compared to the project.

Public Services

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, the demand for police, fire and other public services would be equal. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have equal impacts to public services when compared to the project.

Transportation

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, traffic generated in the Specific Plan Area would be equal.

This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts to this topic under this alternative.

The Reduced Land Area Project Alternative would have "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-7, which is identified as "impacts related to emergency access." The basis for this determination is that the increased density of the proposed project would increase congestion on existing and planned roadways as compared to the proposed project, given that fewer roadways would be developed under this alternative (because the APNs 211-011-008 and 211-011-009 would not be developed under this alternative). Specifically, Natividad Road (Major Arterial), Russell Road (Major Arterial), and Rogge Road would not be expanded with full frontage improvements under this alternative. Congestion is also expected to be slightly higher under this alternative compared to the proposed project, given the increased density of traffic (based on fewer roadway miles being developed under this alternative compared with the proposed project, and the increased density of the proposed project [to 11.3 residential units per acre under this alternative, compared to 9.0 residential units per acre under the proposed project]). This represents a slightly greater impact with respect to emergency access within the Specific Plan Area. It is noted that the significance determination under Transportation and Circulation Impact 3.10-7 would likely still be less than significant for the Reduced Land Area Alternative, similar to the proposed project; however, the roadway network will not have the same capacity as under the proposed project, so the determination remains "slightly greater."
Additionally, the Reduced Land Area Project Alternative would have a "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-8, which is identified as "conflict with adopted multi-modal circulation policies, plans, or programs" or a "decrease [in] the performance or safety of public transit, bicycle, or pedestrian facilities." The basis for this determination is that the following roadways would not be developed in full under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane);
- Rogge Road frontage improvements.

Since these roadways would not be developed in full, as planned for by the proposed project, connectivity with the remainder of the City and County, including other areas within the City's FGA, would be more limited under the Reduced Land Area Project Alternative as compared to the proposed project. Overall, this alternative would have slightly greater traffic impacts than the project.

Utilities

This alternative would not save as much groundwater when compared to the proposed project. The amount of total consumptive water usage reduced by this alternative when compared to the

existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412 AFY less water than buildout of the proposed project. This is due to the dramatically higher water usage under the current irrigated agricultural cultivation uses as compared with developed residential and/or commercial uses. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project.

Although this alternative would save less groundwater than the project, generate a similar amount of solid waste, and demand a similar amount of water, this alternative would reduce impacts to stormwater compared to the project. Overall, the demand for utilities would be reduced under this alternative when compared to the project.

2. Feasibility of Reduced Land Area Project Alternative

The Reduced Land Area Project Alternative would slightly reduce impacts to air quality, biological resources, cultural resources, GHG and climate change, hazards, hydrology, noise, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to groundwater supplies and recharge (cumulative and project-level), population and housing, emergency vehicle access, and conflicts with adopted multi-modal circulation policies, plans, or programs. Further, this alternative does not meet the following project objectives:

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole.

The Reduced Land Area Project Alternative does not fully meet the project objective to "Provide public services and infrastructure improvements that achieve and maintain City service standards" because the Reduced Land Area Project Alternative would develop fewer roadways, bicycle and pedestrian pathways, and other infrastructure improvements (such as well sites) when compared with the project.

Under this alternative, APNs 211-011-008 and 211-011-009, as shown in Figure 5.0-1 of the Draft EIR, would not be developed. The effect of this area not developing in accordance with the General Plan would be that the following roadways and infrastructure improvements would not be developed:

- Natividad Road (Major Arterial) expansion frontage improvements;
- Russell Road (Major Arterial) expansion;
- Rogge Road frontage improvements;
- The proposed water well #3 and water treatment site;
- The supplemental stormwater basins along Natividad Road; and
- Neighborhood Park WA-3 (3-acre park).

Therefore, based on the above list of roadways and infrastructure improvements that would not be developed under this alternative, the ability of the City to provide public services and infrastructure improvements in accordance with the adopted General Plan would be hampered under the Reduced Land Area Project Alternative.

The Reduced Land Area Project Alternative does not meet the project objective to "Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole" because this alternative would leave undeveloped a portion of the land that would be developed under project (i.e., APNs 211-011-008 and 211-011-009), as shown in Figure 5.0-1 of the Draft EIR. This is an area located adjacent to the future Central Area Specific Plan (within the City's FGA). If this area were to remain undeveloped, there would be fewer interconnected sidewalks/pathways and available open space areas for City residents, and connectivity would be limited between the West Area Specific Plan (the project) and the planned for Central Area Specific Plan (a planned Specific Plan Area that would be located just to the east of the proposed project). This reduced connectivity means that the Reduced Land Area Project Alternative would not establish an interconnected sidewalk/pathway and open space system that fully links with the greater FGA and with the City as a whole. Notably, this rationale is also the basis for determining that the Smaller-Scale Project Alternative would not meet this Specific Plan objective. Specifically, the following roadways would not be developed under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane); and
- Rogge Road frontage improvements.

The Reduced Land Area Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, hydrology and water quality, population and housing, public services, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects anticipated with the project would still occur under this Reduced Land Area Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts may occur to a lesser extent than under the project under this alternative, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to increased traffic noise levels at existing receptors would occur under the project and the Reduced Land Area Project Alternative as there is a possibility of not being able to feasibly install sounds walls in some locations that would be warranted. It is noted that, due to decreased noise levels associated with this alternative, the noise at existing receptors would likely decrease. However, the cumulative traffic noise level increases would exceed the Federal Interagency Committee on Noise (FICON) CEQA substantial increase criteria of 1.5 to 5 dB.

The City Council finds the Reduced Land Area Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

D. Reduced Residential Intensity/Density Project Alternative

1. Analysis of Reduced Residential Intensity/Density Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area, with an overall decrease in residential density.

It was assumed that overall criteria pollutant emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for ROG, NOx, and PM_{10} at buildout.

Although less compact development generally increases overall per capita VMT, the smaller number of residential units under this alternative as compared with the project would reduce overall air quality emissions, including under area sources, mobile sources, and energy sources. As such, this impact would be reduced when compared to the project.

Biological Resources

Under the Reduced Residential Intensity/Density Project Alternative, an equivalent amount of habitat would be removed as under the project, and a similar level of ground disturbing activities would occur as compared with the project. Therefore, there would be an approximately equal potential for impacts to biological resources under this alternative as compared with the project.

Cultural Resources

The Reduced Residential Intensity/Density Project Alternative would result in a similar level of ground disturbing activities and would have a similar potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Residential Intensity/Density Project Alternative would result in equal potential for impacts to cultural resources.

Greenhouse Gases and Climate Change

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area. It

was assumed that overall GHG emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. Total operational emissions would be reduced by approximately 25 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 12,803 under this alternative (this is equivalent to a 25 percent smaller residential population but the same number of workers, when compared to the project), this alternative would generate approximately 2.79 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035, but lower than the per service population estimate for the project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, this impact would be slightly reduced when compared to the project.

The slight reduction does not necessarily mean that the Reduced Residential Intensity/Density Project Alternative represents a better long-term policy outcome for climate than the project. California has a large housing need, and new housing will have to be built somewhere, if not in the Specific Plan Area. As the California Supreme Court explained, "[g]iven the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced." (*Center for Biological Diversity v. California Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 220-221.)

Hazards and Hazardous Materials

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential components would be reduced by 25 percent as compared with the project. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. Overall, given the reduction in the intensity-density of this alternative as compared with the project, it is expected that the Reduced Residential Intensity/Density Project Alternative would have a slightly reduced impact to this topic relative to the project.

Hydrology and Water Quality

Under the Reduced Residential Intensity/Density Project Alternative, potential water quality impacts from construction and operation would be slightly reduced. Under this alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project, although the footprint would remain the same. This would result in fewer residential lots, but larger lot sizes. Since the residential lot sizes under this alternative would be larger when

compared with the project, there would be less impervious surface, and therefore there would be a greater chance of groundwater recharge under this alternative. As such, potential impacts related to hydrology and water quality would be reduced under the Reduced Residential Intensity/Density Alternative when compared to the project.

Noise

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Despite this reduction in the size of intensity of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact. As such, this alternative would have less impact relative to the project.

Population and Housing

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project. Development of housing would still occur under this alternative, but fewer units would be built. Growth would still be anticipated to occur within the region, but it would not be fully accommodated in the North of Boronda FGA, which has undergone extensive planning efforts by the City and community for over a decade. This would not be consistent with the FGA and General Plan. The City would need to look to other undeveloped areas of the region to develop for new housing which would be expected to have environmental impacts that have not yet been assessed but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. The lower density of this alternative would also not meet the minimum number of residential units required for New Urbanism principles that are established in the General Plan for the Specific Plan Area. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent; therefore, the demand for police, fire and other public services would be reduced. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have a slightly reduced impact to public services when compared to the project.

Transportation and Circulation

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent; therefore, traffic generated in the Specific Plan Area would be reduced. This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway

system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts under this alternative. Overall, this alternative would have less of an overall traffic impact than the project.

Utilities

Under the Reduced Residential Intensity/Density Alternative, the Specific Plan Area would be developed with a reduction in the overall residential intensity/density while maintaining the approximate overall project footprint as in the project. For the purposes of discussion, this option considers a 25 percent reduction in the intensity/density of the residential components of the project while maintaining the approximately 797-acre project footprint. This would result in fewer residential lots, but larger lot sizes. This alternative would result in up to 3,255 residential units. This alternative would retain the approximately 571,500 square feet of mixed commercial uses, the five proposed schools (three elementary, one middle, and one high school), and the same acreage of parks and detention basins as the project.

The total quantity of infrastructure installed would not be reduced, but the demand for wastewater and solid waste services would be less than would be required for the project. For example, is expected that this alternative would generate approximately 0.8 million gallons per day (MGD) of wastewater and approximately 37,777 pounds per day (lbs/day) of solid waste, smaller than would be generated by the project, since this alternative would generate fewer residents when compared to the project.

Separately, the total storm drainage runoff under this alternative would be approximately the same when compared to the project, due to the project footprint remaining the same for this alternative when compared to the project. Additionally, this alternative would save approximately the same amount of groundwater when compared to the project, since the project footprint would remain the same for this alternative as compared to the project. Overall, the demand for wastewater and solid waste services would be less than would be required for the project, and the amount of storm drainage runoff would be approximately the same. Therefore, demand for utilities would be slightly reduced under this alternative when compared to the project.

2. Feasibility of Reduced Residential Intensity/Density Project Alternative

The Reduced Residential Intensity/Density Project Alternative would slightly reduce impacts to air quality, cultural resources, GHG and climate change, hydrology, noise, public services, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to conflicts with applicable air quality plans and population and housing. Further, this alternative does not meet the following project objectives:

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly;
- Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages;
- Provide a reasonable jobs/housing balance.

The Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly" because the Reduced Residential Intensity/Density Project Alternative would result in fewer lots with larger lot sizes than will occur under the project. Larger lot sizes are inherently not compact, and development of these larger lot sizes may result in larger block sizes, which are less conducive to travel by walking, bicycles, and transit. Based upon residential overall density, this alternative is inconsistent with the Salinas General Plan's standards for the Specific Plan Area, which require a minimum of 3,553 residential units within the Specific Plan Area, and the incorporation of New Urbanism concepts, which mandate that new residential development have a minimum average density of 9 dwelling units per net residential acre.

The Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages" because the Reduced Residential Intensity/Density Project Alternative would provide fewer medium- and high-density housing units than the project. The number of low-density housing options would increase compared to the project, and these units would replace otherwise varied density housing options.

Furthermore, the reduction in housing units under the Reduced Residential Intensity/Density Project Alternative would be less consistent than the project in meeting statewide legislative goals of building housing units in order to address the statewide housing crisis. Given the enormous unmet demand for housing in California, the City believes that it has an obligation to facilitate the construction of more, rather than fewer, housing units when opportunities for residential development arise.

Similarly, the Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Provide a reasonable jobs/housing balance" because the Reduced Residential Intensity/Density Project Alternative would result in 1,085 fewer housing units than the project, but the same amount of commercial uses. This would impact the jobs/housing balance because fewer residents would be live in the Specific Plan Area, which proximity is vital to ensuring the success of the businesses in the Specific Plan Area.

The Reduced Residential Intensity/Density Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, cultural resources, greenhouse gases and climate change, hydrology and water quality, hazards and hazardous materials, noise, public services, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, biological resources, hazards and hazardous materials, population and housing, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects which are anticipated with the project would still occur under this Reduced Residential Intensity/Density Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts

may occur to a lesser extent under this alternative than under the project, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to violation of an air quality standard would occur under both the project and the Reduced Residential Intensity/Density Project Alternative. As shown in Table 5.0-4 of Chapter 5.0 of the Draft EIR, the Reduced Residential Intensity/Density Project Alternative would exceed the threshold of significance for ROG, NOx, and PM_{10} at buildout. Although the emissions would be less than with the project, this alternative would also cause a violation of an air quality standard. This is considered a significant and unavoidable impact.

The City Council finds the Reduced Residential Intensity/Density Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

E. Smaller Scale Project Alternative

1. Analysis of Smaller Scale Project's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Smaller-scale Project Alternative, the overall size of the project would be scaled down by approximately 33 percent as compared with the project. This would reduce Specific Plan Area operational emissions by an approximately equivalent amount (33%) as compared to the project. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for ROG, NOx, and PM_{10} at buildout.

Nevertheless, overall air quality emissions under this alternative would be reduced compared to the project, due to the smaller size of this alternative, including for area sources, mobile sources, and energy sources. As such, this impact would be reduced when compared to the project.

Biological Resources

Under the Smaller-scale Project Alternative, an area of about 264 acres would not be developed, and fewer ground disturbing activities would occur. It is still anticipated that the drainage ditches along Boronda would be eliminated (i.e., fill activity). The 264 acres would remain open to migration, foraging, nesting, and other uses by wildlife. The balance of the Specific Plan Area would be developed and no longer available for migration, foraging, nesting, and other uses by wildlife. This would still be a significant and unavoidable impact, and would be cumulatively considerable.

When compared to the Specific Plan, potential for impacts to biological resources would be reduced under the Smaller-scale Project Alternative proportionate to the reduction in developed area.

Cultural Resources

The Smaller-scale Project Alternative would result in a reduced level of ground disturbing activities and would therefore have slightly less potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, this alternative would result in slightly less potential for impacts to cultural resources.

Greenhouse Gases and Climate Change

The Smaller-scale Project Alternative would reduce the level of development by approximately 33 percent as compared with the project. This would reduce Specific Plan Area operational GHG emissions by an approximately equivalent amount (33%) when compared to the project. Total operational emissions would be reduced by approximately 33% under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 11,190 under this alternative (this is equivalent to a 33% reduction in both residential and worker population, when compared to the project), this alternative would generate approximately 2.84 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. Additionally, this emissions-per-capita value would be the same as those generated by the project. Therefore, this impact would be equal when compared to the project.

Hazards and Hazardous Materials

The Smaller-scale Project Alternative would reduce the level of development by approximately 33 percent and the potential for exposure to hazardous materials, or a release of hazardous materials would be reduced proportionately. Ongoing pesticide use would occur within the area to remain in agriculture, and this would have the potential to generate negative health effects on new residents in the development. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the Smaller-scale Project Alternative would result in slightly less potential for impacts.

Hydrology and Water Quality

Under the Smaller-scale Project Alternative, potential water quality impacts from construction and operation would be reduced. Under this alternative, the overall level of development (including the size of the site and the overall development area per use) would be reduced by approximately 33 percent. An area of approximately 264 acres that would be developed as part of the project would not be developed as part of this alternative. The areas that would not be developed would remain under agricultural production, and while they would have better

recharge in those areas, they would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 66 percent of the land area would be converted into a use that would not require intensive groundwater pumping.

There are some instances where the 264 acres of Specific Plan Area that remains undeveloped would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, overall, while the potential to result in the violation of water quality standards would be reduced under this alternative when compared with the project, overdraft conditions would worsen in the Salinas Valley Ground Water basin under this alternative when compared to the project. As such, potential impacts related to hydrology and water quality would be increased under the Smaller-scale Project Alternative when compared to the West Area Specific Plan.

Noise

Under the Smaller-scale Project Alternative, the overall level of development would be reduced by 33 percent as compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Despite this reduction in the size and intensity of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact As such, this alternative would have less impact relative to the project.

Population and Housing

Under the Smaller-scale Project Alternative, the overall level of development would be reduced by 33 percent as compared with the project. Development of housing would still occur under this alternative, but fewer units would be built. Growth would still be anticipated to occur within the region, but it would not be fully accommodated in the FGA, which has undergone extensive planning efforts by the City and community for over a decade. This would not be consistent with the FGA and General Plan. The City would need to look to other undeveloped areas of the region to develop for new housing, which would be expected to have environmental impacts that have not yet been assessed but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the Smaller-scale Project Alternative, the overall level of development and the number of residential/non-residential uses would be reduced by 33 percent; therefore, the demand for police, fire and other public services would be reduced. This alternative would still result in development of public facilities (i.e., schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have a slightly reduced impact to public services when compared to the project.

Transportation and Circulation

Under the Smaller-scale Project Alternative, the overall level of development and the number of residential/non-residential uses would be reduced by 33 percent; therefore, traffic generated in the Specific Plan Area would be reduced. This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts. Overall, this alternative would have less of an overall traffic impact than the project.

Utilities

Under the Smaller-scale Project Alternative, the Specific Plan Area would be reduced by approximately 33 percent and the proposed residential and non-residential uses would also be reduced by approximately 33 percent. This alternative assumes that approximately 264 acres of land along the entire eastern boundary of the Specific Plan Area would be removed and remain as undeveloped agricultural land. The resultant Specific Plan Area under this alternative would be approximately 533 acres in size, and include up to 2,908 residential units, up to 382,905 square feet of commercial/mixed use building area, and up to 119 acres of public facilities (including two elementary schools, a high school, middle school, open space (including supplemental detention/retention basins) and up to 8 parks).

The total quantity of infrastructure installed would be reduced, and the demand for wastewater, stormwater, and solid waste services would be less than would be required for the project. For example, is expected that this alternative would generate approximately 0.7 MGD of wastewater and approximately 33,473 lbs/day of solid waste, less than what would be generated by the project, since this alternative would generate fewer residents when compared to the project.

Separately, the total storm drainage runoff under this alternative would be reduced by approximately 33% when compared to the project, due to the project footprint being reduced by 33% when compared to the project.

However, this alternative would not save as much groundwater when compared to the project. The amount of total water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,389 AFY, compared with the approximately 2,078 AFY estimated to be saved by the project. That is, buildout this alternative would save approximately 689 AFY less water than buildout of the project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project. However, in general, the demand for utilities would be reduced under this alternative when compared to the project.

2. Feasibility of Smaller-scale Project Alternative

The Smaller-scale Project Alternative would slightly reduce impacts to air quality, biological resources, cultural resources, GHG and climate change, hazards, hydrology, noise, public

services, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to conflicts with applicable air quality plans, groundwater supplies and recharge (cumulative and project-level), population and housing, emergency vehicle access, and conflicts with adopted multi-modal circulation policies, plans, or programs. Further, this alternative does not meet the following project objectives:

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole.

The Smaller-scale Project Alternative does not fully meet these two project objectives because, similar to the Reduced Land Area Project Alternative, this alternative would leave 33 percent of the Specific Plan Area undeveloped, which would include 264 acres of land along the entire eastern boundary of the Specific Plan Area. This eastern area is located adjacent to the future Central Area Specific Plan (within the City's FGA). This means that there would be fewer interconnected sidewalks/pathways and available open space areas for City residents, and that there would be limit connectivity between the West Area Specific Plan (the project) and the future Central Area Specific Plan (a planned Specific Plan Area that would be located just to the east of the proposed project). This reduced connectivity means that the Reduced Land Area Project Alternative would not establish an interconnected sidewalk/pathway and open space system which fully links with the greater FGA and the City as a whole. Specifically, the following roadways would not be developed under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane); and
- Rogge Road frontage improvements.

Furthermore, the reduction in housing units under the Reduced Residential Intensity/Density Project Alternative would be less consistent than the project in meeting statewide legislative goals of building housing units in order to address the statewide housing crisis. Given the enormous unmet demand for housing in California, the City believes that it has an obligation to facilitate the construction of more, rather than fewer, housing units when opportunities for residential development arise.

The Smaller-scale Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, public services, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, greenhouse gases and climate change, hydrology and water quality, population and housing, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects anticipated with the project would still occur under this Smaller-scale Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts may occur to a lesser extent under this alternative than under the project, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to violation of an air quality standard would occur under both the project and the Smaller-scale Project Alternative. As shown in Table 5.0-7 of Chapter 5.0 of the Draft EIR, the Smaller-scale Project Alternative would exceed the threshold of significance for ROG, NOx, and PM_{10} at buildout. Although the emissions would be less than the proposed project, this alternative would also cause a violation of an air quality standard. This is considered a significant and unavoidable impact.

The City Council finds the Smaller- scale Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

XI. STATEMENT OF OVERRIDING CONSIDERATIONS

As set forth in the preceding sections, the City of Salinas's approval of the West Area Specific Plan will result in a significant adverse environmental effect that cannot be avoided even with the adoption of all feasible mitigation measures; and there are no feasible project alternatives that would mitigate or substantially lessen all of these impacts. Despite the occurrence of these effects, however, the City Council, in accordance with CEQA Guidelines section 15093, chooses to approve the project because, in the Council's view, the economic, social, and other benefits that the project will produce will render the significant effects acceptable.

A. Significant and Unavoidable Impacts

The project will result in the following potentially significant and unavoidable impacts, even with the implementation of all feasible mitigation measures:

- **Air Quality Operation.** The Specific Plan would exceed the Monterey Bay Air Resources District (MBARD) thresholds of significance for operations for ROG, NO_x, and PM_{10}, even after mitigation. (DEIR, pp. 3.1-19 through 3.1-23)
- **Cumulative Air Quality.** As is currently proposed, the Specific Plan is expected to be built out under a staged approach, and all mitigation would be applicable to each stage. However, even with the application of mitigation measures, operational emissions levels would remain above the defined thresholds of significance. Exceedance of the threshold within an area designated as nonattainment would be a cumulatively considerable impact. (DEIR, pp. 3.1-31 through 3.1-32)
- **Wildlife Movement and Corridors.** Development of the project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. There are no mitigation measures that can fully mitigate this impact and, given the fact that once the land is converted, it will no longer be a viable migration corridor for any species. (DEIR, pp. 3.2-46 through 3.2-47)
- **Cumulative Biological Resources.** Development of the project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. Given the rareness of CTS and CRLF in the Bioregion, the incremental loss of movement habitat from the project, when considered alongside all

past, present, and probable future projects (inclusive of all communities within the Bioregion), is a significant and unavoidable cumulative impact, and the Specific Plan's incremental contribution to this impact is itself cumulatively considerable. (DEIR, pp. 3.2-52 through 3.2-53)

- **Greenhouse Gas Emissions.** The project would generate GHG emissions, directly and indirectly, that may have a significant impact on the environment. While mitigation measures would result in reduced GHGs, it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant. (DEIR, pp. 3.4-31 through 3.4-38)
- **Cumulative Greenhouse Gas Emissions.** Implementation of the project will still generate GHG emissions that would not otherwise exist without the project. Given the length of construction activities for a project of this size, the construction emissions would be a long-term release of approximately 168,734.3 MT CO_2e. The operational emissions would be a long-term release totaling approximately 51,939.2 MT CO2e per year without mitigation, and 47,684.9MT CO_2e per year with mitigation. Because it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant, implementation of the Specific Plan would have a cumulatively considerable contribution and significant and unavoidable impact to GHGs. (DEIR, pp. 3.4-48 through 3.4-49)
- **Traffic Noise at Existing Receptors.** The project would cause increased noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard at existing residential receptors. Additionally, traffic noise level increases would exceed the FICON CEQA substantial increase criteria of 1.5 to 5 dB, as outlined in Table 3.7-7. (DEIR, pp. 3.7-14 through 3.7-23)
- **Cumulative Traffic Noise.** The project would cause increased noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard at existing residential receptors. Therefore, there would be a cumulative exposure of existing and future noise-sensitive land uses to increased noise resulting from cumulative development. (DEIR, pp. 3.7-33 through 3.7-37)
- **School Facilities.** Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts. Development of a school within the proposed Specific Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1 and 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-19 through 3.9-21)
- **Park Facilities.** Project implementation may result in effects on parks, or require the construction of park facilities which may cause substantial adverse physical environmental impact. Development of 49.76 acres of park land within the Specific Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2 and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1 and 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-22 through 3.9-23)
- **Cumulative Public Facilitates.** The construction and operation of future public facilities required to serve cumulative development (including the West Area Specific Plan Area) could potentially cause significant impacts. Cumulative development, including

additional parks, schools, library, and other public facilities within the city and service area, would contribute to significant and unavoidable cumulative impacts that have been identified within this EIR related to: air quality (Impact 3.1-7), biological resources (Impact 3.2-12), greenhouse gases (Impact 3.4-4), noise (Impact 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-24 through 3.9-26)

- **Cumulative Plus Project Traffic.** Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan would conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. (DEIR, pp. 3.10-63 through 3.10-70)
- **Cumulative Plus Central Area Specific Plan Plus Project Traffic.** Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan would with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans (DEIR, pp. 3.10-76 through 3.10-81)

B. Overriding Considerations

In the City Council's judgment, the project and its benefits outweigh its unavoidable significant effects. The following statement identifies the specific reasons why, in the City Council's judgment, the benefits of the project as approved outweigh its unavoidable significant effects. Any one of these reasons is sufficient to justify approval of the project. Thus, even if a court were to conclude that not every reason is supported by substantial evidence, the City Council would stand by its determination that each individual reason is sufficient. The substantial evidence supporting the various benefits can be found in the preceding findings, which are incorporated by reference into this section (XI), and in the documents found in the Record of Proceedings, as defined in section V.

1. The project will substantially expand employment opportunities for local residents.

It is anticipated that local employment would be increased to provide administrative, management, and retail services. The project is expected to require both full-time and part-time employees. It is anticipated that the employment growth would be met both by existing residents and through the attraction of new residents. Data from U.S. Bureau of Labor Statistics (2018) indicates that the City has an unemployment rate of approximately 4.9%, as of November 2018, which is higher than the State and national averages at 4.2% and 3.7%, respectively (U.S. Bureau of Labor Statistics, 2018). Many of the newly created jobs are expected to be in the retail/commercial sector and would be opportunities well-suited for second wage earners in households, the younger workforce, and others, which generally depend on the local workforce. Due to the fact there is currently a surplus of unemployed workforce within the City, it is likely that current residents would fill the majority of new positions. Additional population growth induced by the creation of new businesses could be supported by the available housing within Salinas as well as new housing planned as part of the West Area Specific Plan.

The construction of new developments within the Specific Plan Area would increase temporary construction jobs in the area. New employment opportunities are critical to the residents of the

City as a basis to reduce the City's higher than average unemployment rate and to improve the balance between jobs and housing.

The creation of new jobs has a variety of other co-benefits that lead to improved quality of life. These benefits include enhancing overall economic activity in the City, which leads to increased revenue to fund and maintain city services and facilities such as public safety, parks, recreation centers and libraries and related programs that support a high quality of life. Benefits also include improving community health through crime reduction, improving economic productivity, decreasing traffic congestion and greenhouse gas emissions by reducing the number of residents that must travel out of the city to find employment.

2. The project will help attract economic investment.

Currently, Salinas lags behind the region in private economic investment. This lack of investment can be quantified in terms of the number of building permits pulled and the associated building valuation. For example, from June 1, 2018 to June 21, 2019, 1,765 permits with a building valuation of approximately $5,116,481.85 were pulled in Salinas.[1] This is a fraction, 10.0 percent, of the private investment in the City of Monterey totaling a valuation of $51,289,904 (422 permits).[2] This is especially significant considering Salinas (162,797) has more than five times the population of the City of Monterey (28,448).

The project streamlines opportunities for economic investment in the City by positioning the Specific Plan Area for development. The project creates the land use and zoning entitlements and provides specific guidance about how development is to proceed needed to catalyze economic development in the form of individual development projects.

3. The project will generate sales and property taxes for the City.

The project will generate substantial sales tax revenue from the planned commercial and retail uses and property tax revenue from the planned residential uses. The City can use this revenue to fund City programs that benefit the City's residents. The project has been designated with land uses that are intended to generate jobs and tax revenue for the City, while providing recreational facilities, retail opportunities, and housing opportunities.

4. The project will help improve the quality of life for City residents.

The City is experiencing significant retail leakage to surrounding communities and the region resulting in the loss of sales tax revenue. The 2008 Buxton Retail Leakage and Surplus Analysis, estimated that as much as $250 million in annual retail sales could be recaptured by the City through targeted retail development which offers goods and services now sought from businesses located outside the City. The City's total revenue per capita figures demonstrate the impacts of this leakage. In 2016, Salinas' total revenue per capita was $752 dollars compared to Monterey at $2,224 dollars per capita. (California Controller, 2016)

[1] CRW Systems. City of Salinas Permits Issued for the Period 6/1/2018 thru 6/1/2019. Provided by Kristy Parker, City of Salinas Permit Center Coordinator, on June 24, 2019.
[2] City of Monterey Permits Issued for the Period 6/1/2018 thru 6/1/2019. Provided by Lisa Feliciano, City of Monterey Permit Inspection Services Division, on June 14, 2018.

The project would include a central core area with retail and professional services. The retail and professional service uses would help increase annual retail sales and reduce retail leakage. Residents of the Specific Plan Area and the surrounding City and unincorporated areas could shop at the planned core area retail and professional service facilities located within the central core area.

The Specific Plan focuses on individual neighborhoods, parks, schools, and other civic gathering spaces; the tree-lined streets with pedestrian amenities; a Main Street and Town Square surrounded by shops and restaurants; and mixing of land uses that encourages residents to frequently walk and bicycle in their community. The Specific Plan also contains goals and policies which require and/or encourage the necessary services to enhance residents' quality of life. The Specific Plan includes design and management strategies that aim to specifically increase the quality of life for the future residents and employees of the Specific Plan Area. For example, the Specific Plan includes sections regarding traffic calming and landscaping in order to create safe and attractive streets, parks, and landscaped areas.

Quality of life is also an important factor in the ability of the City to attract and retain businesses. The Specific Plan addresses improving safety, improving access to open space and recreational opportunities, and the adequate provision of public services. If currently unemployed residents become employed and increase their earnings through new businesses resulting from development of the Specific Plan, it is expected that their income level and standard of living will improve.

5. The project will revitalize the local infrastructure.

The proposed Specific Plan circulation and infrastructure policies promote investment in infrastructure systems including water supply, wastewater and storm drainage conveyance and disposal facilities that are critical to support the proposed uses. Section 7.3.4.1 of the Specific Plan outlines the Public Facilities Impact Fee program. Section 7.5 of the Specific Plan includes funding policies that will govern the funding of infrastructure and public facilities for the Specific Plan Area.

6. The project will implement the Salinas General Plan.

The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to—the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the General Plan, as well as more specific policies and implementation measures contained in other documents.

The 2002 General Plan identifies areas for growth within the FGAs (which includes the Specific Plan Area). The Salinas General Plan Land Use Table LU-3 identifies the development capacity of the FGAs. This includes 15,873 residential units, resulting in an additional population of 58,253 within the City's FGAs. The proposed West Area Specific Plan development proposes 4,340 units with the potential to increase the population of the city by an estimated 16,101 persons, which is within the projections identified in the Salinas General Plan.

Additionally, the General Plan identified FGAs as areas of the City where future urban development will be directed. FGAs are established as a part of the General Plan maps, and include the Specific Plan Area, as well as other nearby areas. The General Plan provides development guidance within the FGAs so that they are developed as urban neighborhoods using the principles of New Urbanism. The principles of new urbanist design are further detailed in Chapter 37 (Zoning) of the City's Municipal Code. The Specific Plan Area is currently designated New Urbanism Interim (NI) by the City's zoning map**.** The purpose of the NI zoning district is to provide a transitional zone for the FGAs of the City located north of East Boronda Road (including the Specific Plan Area) that are within the City limits and are subject to the preparation of specific plans and subsequent subdivision maps.

The New Urbanism Districts promote the principles of New Urbanism and the creation of distinct identifiable neighborhoods that have Traditional Neighborhood Development (TND) characteristics as expressed in the Salinas General Plan and that are intended to guide the development of the North of Boronda FGA. The FGA is also subject to a Specific Plan Overlay. The Overlay requires that a Specific Plan be approved by the City prior to the development of any land located in the FGA. As such, an approved Specific Plan will ultimately regulate the development in the FGA. The New Urbanism districts identified in the City's zoning code and the West Area Specific Plan are as follows: Neighborhood Edge/Low Density Residential (NE), Neighborhood General 1/Medium Density Residential (NG-1), Neighborhood General 2/High Density Residential (NG-2), and Village Center (VC).

The development allowed by the project will be consistent with the development types and intensities identified in the General Plan and its associated Final Program EIR. The project does not change limits, amount, type, or intensity of development allowed in the Plan Area beyond what was analyzed in the certified Final Program EIR for the General Plan and Supplemental EIR for the Salinas General Plan Final Program EIR (SCH#2007031055).

7. The project will provide much-needed housing.

One of the core goals of the Specific Plan is to provide a variety of low-density, medium-density, and high-density housing and a variety of housing options for residents at various life stages. As emphasized earlier, the State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and

businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The City of Salinas has recognized the need for additional housing supply for its citizens for many decades. The project will provide much-needed housing in an area of the City that has been recognized and planned for future growth.

C. Conclusion

As explained above, the City Council has balanced these benefits and considerations against the significant unavoidable environmental effects of the project and has concluded that the impacts are outweighed by these benefits, among others. After balancing environmental costs against project benefits, the City Council has concluded that the benefits the City of Salinas community and economy will derive from the project outweigh the risks. The City Council believes the project benefits outlined above override the significant and unavoidable environmental costs associated with the project.

Impacts, Mitigation Measures and CEQA Findings Summary Table

Exhibit I

WEST AREA SPECIFIC PLAN

CITY OF SALINAS, CALIFORNIA

TABLE OF IMPACTS, MITIGATION MEASURES, AND CEQA FINDINGS

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
AIR QUALITY			
Impact 3.1-1: The project has the potential to conflict with or obstruct implementation of the applicable air quality plan (Less than Significant) AMBAG, in consultation with the City of Salinas, included the North of Boronda Future Growth Area (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The 2018 Regional Growth Forecast provides the region's population, housing, and employment forecasts for inclusion for AMBAG's 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as for the future version of the AQMP. The City of Salinas has worked closely with AMBAG to ensure that City population estimates are included within AMBAG's 2018 Regional Growth Forecast, which will feed into the next AQMP. The population estimates for the West Area Specific Plan are included in these growth forecasts. As such, the City has met the action recommended by MBARD in the *CEQA Air Quality Guidelines* (MBARD, 2008a) to ensure consistency with the applicable air quality plan (i.e. "*Ensure that the jurisdiction's population forecasts are updated in the next AQMP by working with AMBAG or the appropriate local agency*."). The proposed project would not conflict with or obstruct the latest air quality plan. (DEIR, pp. 3.1-18 through 3.1-19)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.1-2: Project operation has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation (Potentially Significant) Buildout of the Plan Area is expected to exceed some of the MBARD operational criteria pollutant emissions thresholds, as modelled. Mitigation measures are provided below to reduce emissions to the maximum extent feasible. Upon full buildout, the Specific Plan would exceed the MBARD thresholds of significance for operations	**Mitigation Measure 3.1-1:** Prior to approval of development review permits including tentative maps, the project applicant(s) shall incorporate the following features into project plans and specifications, as directed by the City of Salinas: • Provide traffic calming measures wherever feasible, within the Specific Plan Area; • Provide preferential carpool/vanpool parking spaces;	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Even with implementation of Mitigation Measures 3.1-1 through 3.1-8, the Specific Plan would exceed the MBARD thresholds of significance for operations for ROG, NO_x, and PM_{10}. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
for ROG, NO_x, and PM_{10}, even after mitigation. (DEIR, pp. 3.1-19 through 3.1-23)	• Provide electric-vehicle parking spaces; • Require the use of low-VOC paint for all new building architectural coatings within the Specific Plan Area, consistent with or better than, what is required by the City's Municipal Code. **Mitigation Measure 3.1-2:** Prior to approval of development review permit(s), the project applicant(s) shall incorporate effective methods to encourage the use of cleaner alternative fuel vehicles and carpooling within the Specific Plan Area. Effective methods may include the installation of alternative fuel (e.g. electric) charging stations at locations spaced throughout the Specific Plan Area, consistent with or better than what is required by the City's Municipal Code and Specific Plan. Additionally, this can be achieved by providing preferential parking for alternatively-powered vehicles, including electric cars, and/or by providing carpool/vanpool parking spaces. **Mitigation Measure 3.1-3:** Prior to approval of development review permit(s), the project applicant(s) shall incorporate the use of alternative energy for the residential and mixed-use/commercial developments, including by implementing alternative energy (e.g. PV solar) building requirements, consistent with or better than, what is required by the City's Municipal Code. Project applicant(s) shall also ensure that pre-installed electrical hookups and/or charging stations, as applicable, are incorporated into all project plans and specifications. **Mitigation Measure 3.1-4:** Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that low-flow (high-efficiency) indoor water fixtures will be installed throughout the Specific Plan Area, including for bathroom and kitchen faucets, toilet fixtures, and showers, in both residential and non-residential buildings, in compliance with or better than the standards required within the most recent version of the California Green Building Standards Code. **Mitigation Measure 3.1-5:** Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that water-		outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	efficient irrigation systems will be installed throughout the Specific Plan Area, consistent with or better than the requirements contained within the State's Model Water Efficient Landscape Ordinance, the City's Water Conservation Ordinance and the Salinas Zoning Code Landscaping and Irrigation requirements. **Mitigation Measure 3.1-6:** Prior to approval of improvement plans or development review permits, as applicable, the project applicant(s) shall ensure that pedestrian/bicycle facilities (e.g. pedestrian paths, outdoor bike racks, etc.) are provided within the Specific Plan Area, in coordination with and subject to approval by the City of Salinas. The project proponent shall also provide bicycling parking near the entrance to commercial establishments within the Specific Plan Area, consistent with or better than the requirements contained within the City's Municipal Code. **Mitigation Measure 3.1-7:** Prior to the issuance of development review permit(s), the project applicant(s) shall incorporate of one or more of the following additional Specific Plan Area requirements, as determined by the City of Salinas: • Install secured bicycle storage facilities (bike lockers, cages, interior space, or similar as approved by the City Engineer) at all commercial and public facilities with 50 employees or more; • Incorporate a park-and-ride lot; • Install Level 2 electric vehicle (EV) charge stations at workplace sites with 50 or more employees (10% of total available parking spaces); and • Install publicly-available dual post Level 2 charge within commercial zones, and/or other zones as deemed acceptable by the City of Salinas. (Note: The 'level' of the charging station refers to the voltage that the electric vehicle charger uses. Level 1 charging is your typical traditional home outlet, while level 2 is a 240 Volt Portable Cordset or Wall-		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	mounted Charging Station (2-10 hours charging). **Mitigation Measure 3.1-8**: Prior to the approval of individual phases (i.e. tentative maps, commercial design review, etc.), the project applicant(s) shall develop an offsite mitigation program that provides funding to offset the project-generated air emissions that are still above the Air District's operational criteria pollutant thresholds after the adoption of other applicable air quality mitigation measures. The offsite mitigation program is subject to the review and approval of the Air District and the City of Salinas on a project-by-project basis (of phase-by-phase), and is intended to be in addition to offsets that are obtained through any on-site mitigation measures. Example projects that could be included in the offsite mitigation program may include, but are not limited to, the following: • Replace existing agricultural combustion-based generators/pumps with electric agricultural water pumps (in place of generators/pumps; • Replace combustion school buses with electric school buses within the local community; • Install adaptive traffic control systems; • Install solar photovoltaic (PV) systems.		
Impact 3.1-3: Project construction has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation (Potentially Significant) The Specific Plan maximum daily unmitigated emissions during construction of the Plan Area buildout in a single year is not expected to exceed the MBARD threshold of significance (82 pounds per day) for construction-generated PM_{10}. Nevertheless, since it is possible that future development proposed within the Plan Area could involve grading that exceeds 2.2 acres per day, MBARD recommends the implementation Mitigation Measure 3.1-9. (DEIR, pp. 3.1-23 through 3.1-25)	**Mitigation Measure 3.1-9**: Prior to the issuance of grading permits, the project applicant shall prepare a grading plan subject to review and approval by the City. In the event that ground-disturbance exceeds 2.2 acres per day for initial site preparation activities that involve extensive earth-moving activities (e.g., grubbing, excavation, rough grading), and 8.1 acres per day for activities that involve minimal earth-moving (e.g., finish grading), the required grading plans shall include the following measures to be implemented as needed to prevent visible dust emissions: • Water all active construction sites to prevent visible dust emissions. Frequency should be based on the type of operation, soil, and wind exposure; • Prohibit grading and earthmoving	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.1-9 be adopted. Mitigation Measure 3.1-9 requires preparation of a grading plan with measures to prevent visible dust emissions. Implementation of Mitigation Measure 3.1-9 would reduce this impact to a less-than-significant level.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	activities, and cover stock piles, during periods of high wind (over 15 mph); • Limit vehicle speed on construction sites to 15 mph. • Apply chemical soil stabilizers on inactive construction areas (disturbed lands within construction projects that are unused for at least four consecutive days); • Apply non-toxic binders (e.g., latex acrylic copolymer) to exposed areas after cut and fill operations and hydroseed area; • Maintain at least 1-foot of freeboard in each haul truck; • Provide windbreaks on the windward perimeter of construction projects where adjacent to open land; • Cover inactive storage piles; • Sweep streets if visible soil material is carried out from the construction site; and/or • Post a publicly visible sign written in English and Spanish which specifies the telephone number and person to contact regarding dust complaints. This person shall respond to complaints and take corrective action within 48 hours. The phone number of the Monterey Bay Air Resources District (MBARD) shall be visible to ensure compliance with Rule 402 (Nuisance). The sign shall be in accordance with MBARD and/or City requirements, as applicable; • Use cleaner construction equipment that conforms to EPA's Tier 3 or Tier 4 emission standards; and/or • Further, where feasible construction should include the use of alternative fuels such as compressed natural gas (CNG), propane, electricity or biodiesel.		
Impact 3.1-4: The proposed project has the potential to have carbon monoxide hotspot impacts (Less Than Significant) This project is located in an area that is designated	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
attainment-unclassified for carbon monoxide. Therefore, no project-level conformity analysis is necessary for CO. Substantial concentrations of carbon monoxide are not expected at or along any streets or intersections affected by the development of the Plan Area. (DEIR, pp. 3.1-25 and 3.1-26)			
Impact 3.1-5: The proposed project has the potential for public exposure to toxic air contaminants (Potentially Significant) While implementation of the West Area Specific Plan, in and of itself, would not result in an increased exposure of sensitive receptors to localized concentrations of TACs, there is a potential for future commercial business activity, as permitted under the West Area Specific Plan, to result in increased exposure of sensitive receptors to localized concentrations of TACs. The emission sources could be stationary sources and/or mobile source (i.e. diesel truck traffic). Because, at the Specific Plan level of land use planning, the City does not yet know the precise locations, configurations, and sizes of any future land uses within the Specific Plan that uses may generate sufficient levels of TACs to create the possibility of adverse health effects, it is premature, at the Specific Plan stage, to undertake an overall health risk assessment for the Specific Plan. Future health risk assessments will be performed where warranted, as required by Mitigation Measure 3.1-10. (DEIR, pp. 3.1-26 through 3.1-30)	**Mitigation Measure 3.1-10:** Prior to issuance of building permits or commencing operation of any commercial building/use that would emit toxic air contaminants (such as gas stations or dry cleaning operations), the project applicant shall, at a minimum, perform prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. The prioritization screening shall be performed in accordance with the California Air Pollution Control Officers Association Air Toxic "Hot Spots" Program guidance. The prioritization screening shall also be conducted consistent with the guidance provided by the Monterey Bay Air Resources District, which will be responsible for determining which facilities based on their prioritization screening score, must perform a health risk assessment. In determining the need to prepare a health risk assessment, the Monterey Bay Air Resources District considers the potency, toxicity, quantity, and volume of hazardous materials released from the facility, the proximity of the facility to potential receptors, and any other factors specific to the facility that indicate that it may pose a significant health risk. If a health risk assessment is warranted for a facility based on its prioritization score, the project applicant shall assess the facilities for the potential to expose the public to toxic air contaminants in excess of the applicable thresholds (utilizing an air dispersion modelling program such as AERMOD). As of the time of this writing, the commonly accepted threshold for cancer risk is 10 in a million for carcinogens, and the reference exposure level for non-carcinogens (HI = 1). Facilities that exceed the applicable threshold(s) have the potential to expose the public to toxic air contaminants levels that would be considered significant. Facilities that exceed the applicable threshold(s) must incorporate mitigation to reduce the risks from emission of toxic air contaminants to an acceptable level (i.e.,	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.1-10 be adopted. Mitigation Measure 3.1-10 requires performance of a prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. Implementation of Mitigation Measure 3.1-10 would reduce this impact to a less-than-significant level.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	to a level that does not exceed the applicable threshold[s]). Potential mitigation includes: reducing the size of the facility area; rearranging the site to reduce the potential for impacts on the nearest sensitive receptors; and utilizing products that reduce the level of toxic air contaminants, or removal of such products from the operational phase of the project.		
Impact 3.1-6: The proposed project has the potential for exposure to odors (Less than Significant) The Specific Plan does not propose sensitive receptors that could be exposed to odors in the vicinity; nor does it propose uses that would create odors that could expose receptors in the area. Therefore, operation of the proposed project would not result in significant objectionable odors. (DEIR, pp. 3.1-30 and 3.1-31)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.1-7: Cumulative impact on the region's air quality (Potentially Significant) As discussed under Impact 3.1-2, implementation of the Specific Plan would result in increased emissions primarily from vehicle miles travelled associated with project implementation and area sources. The MBARD has established operations-related emissions thresholds of significance and it was determined that the Specific Plan annual emissions of ROG, NOx, and PM_{10} at full buildout would exceed the MBARD's thresholds of significance for these pollutants, even with mitigation. As is currently proposed, the Specific Plan is expected to be built out under a staged approach, and all mitigation would be applicable to each stage. However, even with the application of mitigation measures, operational emissions levels would remain above the defined thresholds of significance. Exceedance of the threshold within an area designated as nonattainment would be a cumulatively considerable impact. (DEIR, pp. 3.1-31 and 3.1-32)	Implement Mitigation Measures 3.1-1 through 3.1-9.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council has directed that Mitigation Measures 3.1-1 through 3.1-9 be adopted. Implementation of Mitigation Measures 3.1-1 through 3.1-9, which have been required or incorporated into the Project, will substantially lessen the severity of the significant effect, but will not reduce this impact to a less-than-significant level. No mitigation is available to render the effects less than significant. The effects therefore remain significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
BIOLOGICAL RESOURCES			
Impact 3.2-1: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Invertebrates (Less Than Significant) Based on field surveys, habitat conditions, and records searches, there are no special status invertebrate species that have the potential to be present within the Specific Plan Area. The proposed project would not, directly or indirectly, have a substantial adverse effect on invertebrate species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-30)			
Impact 3.2-2: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Reptile and Amphibian (Potentially Significant) There are numerous locations for refugia (debris, burrows, crevices, barns, sheds, etc.) within the Plan Area that could be used by migrating California tiger salamander (CTS). Higher quality upland habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential refuge sites. It is noted that there is not any known CTS taking refuge in the Specific Plan Area during their estivation period. It is also theoretically possible that a breeding CTS would emerge from the breeding basin and migrate west of Natividad Road to find refugia in the Specific Plan Area. The areas with potential upland habitat in the Specific Plan Area include the farmland fringe, irrigation ditch, roadside ditch, and farmland residence. The paved roads, dirt roads, and tilled farmland provide	**Mitigation Measure 3.2-1:** Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CTS. This is may, or may not, include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS, CDFW, or the City's Community Development Director determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CTS habitat. **Mitigation Measure 3.2-2:** Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to California tiger salamander, the proposed project activities shall be compliant with all Avoidance and Minimization Measures imposed by the USFWS and/or CDFW during Construction Activities. Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CTS to be	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.2-1 through 3.2-4 be adopted. Mitigation Measure 3.2-1 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CTS even though they are well documented as a hybrid population. Mitigation Measure 3.2-2 would require activities to avoid and minimize impacts to CTS to the extent feasible. Mitigation Measure 3.2-3 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CRLF. Mitigation Measure 3.2-4 would require activities to avoid and minimize impacts to CRLF to the extent feasible. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
limited habitat because of the frequency of disturbance in these areas. Given that the entire Specific Plan Area is within the 1.3-mile migration radius, and there is potential aquatic breeding and upland habitat, the proposed project will affect this breeding population of CTS. There are numerous documented occurrences of California red-legged frog (CRLF) in the vicinity of the Specific Plan Area. Higher quality upland and aquatic habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential habitat within the drainage features (i.e. ditches). It is noted that there is not any known CRLF within the Specific Plan Area. The foothill yellow-legged frog (FYLF) is not documented in the vicinity of the Specific Plan Area. The ditches within the Specific Plan Area provide some limited habitat for FYLF. This species is known to occur in aquatic habitats, such as creeks or rivers in woodland, forest, mixed chaparral, and wet meadow habitats with rock and gravel substrate and low overhanging vegetation along the edge. They are usually found near riffles with rocks and sunny banks nearby. The conditions of the Plan Area, including the drainages, are not ideal for this species and they are presumed absent. (DEIR, pp. 3.2-30 through 3.2-38)	responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit traps to capture CTS migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CTS found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report. **Mitigation Measure 3.2-3:** Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CRLF. This may, or may not, include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS, CDFW, or the City's Community Development Director determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CRLF habitat. **Mitigation Measure 3.2-4:** Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to CRLF, the proposed project activities shall be compliant with all Avoidance and Minimization Measures imposed by the USFWS and CDFW during Construction Activities. Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CRLF to be responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	traps to capture CRLF migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CRLF found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report.		
Impact 3.2-3: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Birds (Potentially Significant) Construction activities in the Specific Plan Area would create temporary sources of noise and light that could affect nesting songbirds if they are located adjacent to the Specific Plan Area in the future. The ongoing activities associated with the operational phase (i.e., human and/or domesticated animal presence, light, noise, etc.) could disrupt nesting birds if they are located adjacent to the Specific Plan Area in the future. (DEIR, pp. 3.2-38 through 3.2-40)	**Mitigation Measure 3.2-5:** Building and grading permits and plans issued for development in the Specific Plan Area shall note the following: If construction activities occur during the avian breeding season (February 1 – September 15) then the project proponent shall conduct pre-construction surveys to prevent impacts to nesting birds. No more than 15 days prior to the start of construction a bird survey shall be conducted by a qualified biologist to identify any active nests within 300 feet of the construction zone, and shall be submitted to the City. If construction stops for a period of 15 days or more during the avian breeding season than an additional bird survey shall be conducted. The biologist will conduct a survey within 300 feet of the construction zone for all special-status birds protected by the federal and state ESA, MBTA and CFGC. The biologist shall map all nests that are within, and visible from, 300 feet of the construction zone. If nests are identified, the biologist shall map the location and establish a minimum 300-foot buffer zone around active nests. Construction activity shall be prohibited within the buffer zones until the young have fledged. Nests shall be monitored at least twice per week during the nesting season and a report submitted to the City and CDFW monthly.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-1 through 3.2-5 be adopted. Mitigation Measure 3.2-5 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CRLF. Mitigation Measure 3.2-4 requires a preconstruction survey of the Plan Area and immediate vicinity for all special-status birds protected by the federal and state ESA, MBTA and CFGC prior to construction. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.2-4: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Fish (Less Than Significant) field surveys, habitat conditions, and records searches, there are no fish species that have the potential to be present within the Specific Plan Area. The proposed project would not, directly or indirectly, have a substantial adverse effect on fish	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-41)			
Impact 3.2-5: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Mammals (Potentially Significant) The Specific Plan Area provides potential habitat for several special-status bats, including: Mexican free-tailed bat (*Tadarida brasiliensis),* California mastiff bat (*Eumops perotis californicus*), big brown bat (*Eptesicus fuscus),* Hoary bat (*Lasiurus cinereus),* spotted bat (*Euderma maculatum),* Townsend's big-eared bat (*Corynorhinus townsendii),* pallid bat (*Antrozous pallidus*), western pipistrelle (*Pipistrellus Hesperus),* small-footed myotis/bat (*Myotis ciliolabrum*), long-eared myotis/bat (*Myotis evotis*), California myotis (*Myotis californicus),* long-legged myotis/bat (*Myotis volans*), Yuma myotis/bat (*Myotis yumanensis*), and little brown bat *(Myotis lucifugus).* These species are not federal or State listed; however, most of them are considered California Species of Special Concern and/or are tracked by the CNDDB. Bats are found in a variety of habitats in the region, including buildings, bridges, mines, caves, tree cavities, under bark or rocks, etc. There is the potential for bats to roost in the two on-site farmland residence complexes along San Juan Grade Road, and/or the complexes located along Natividad Road. There is no evidence that bats are present in these locations at this time; however, they can become occupied at some future date. (DEIR, pp. 3.2-41 through 3.2-43)	**Mitigation Measure 3.2-6:** Grading and/or building permits and plans issued for development in the Specific Plan Area shall note the following: Fifteen days prior to construction activities within 200 feet of the residential complexes located along Natividad Road and San Juan Grade Road, the project applicant shall retain a qualified biologist familiar with bat biology to perform a preconstruction survey for roosting special-status bats; and shall be submitted to the City. The survey shall include a minimum of one daytime and one evening survey. The survey shall cover the trees, structures, and debris located within these complexes. If active roosting is observed, removal of the tree or building shall be avoided until the bats can be excluded. All active non-maternity roosting sites shall be fitted with passive exclusion devices, such as one-way flaps or doors, and all bats shall be allowed to leave voluntarily. Once it is confirmed that all bats have left the roost (minimum of five days), crews shall be allowed to continue work in the area. If a maternity roosting site is discovered, a minimum 50-foot buffer shall be established around the roost. The project applicant shall consult with the qualified biologist in order to determine if a greater buffer is warranted based on the bat species, roost location, and specific construction activities to be performed in the vicinity. The buffer shall stay in effect until all young are determined to be volant (i.e., able to fly and feed independently) by a qualified biologist. Once it is determined that all young are volant (generally by August 1st), passive exclusion devices shall be installed and all bats shall be allowed to leave voluntarily. Once it is determined by a qualified biologist that all bats have left the roost (minimum of five days), crews shall be allowed to work within the buffer zone. Project Improvement Plans will include this measure as a note in the plans.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-6 be adopted. Mitigation Measure 3.2-6 requires avoidance and minimization measures to avoid impacts to bat species. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.2-6: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS – Plants (Less Than Significant) The records search identified numerous special-status plants located within the region. Field surveys and habitat evaluations were performed in 2004 by Biotic Resources Group: March (26th and 31st), April (14th and 30th), May (17th), June (17th), July (26th). Additional field surveys were performed by De Novo Planning Group in 2015 September (11th) and in 2016 (April 18th). The collection of field surveys included surveys that coincided with the blooming period for special many status plants known to occur within the region. The conditions of the Specific Plan Area are highly disturbed due to the active agricultural operations. No special-status plants were observed within the Specific Plan Area during field surveys. The proposed project would not, directly or indirectly, have a substantial adverse effect on plant species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-43)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-7: The proposed project has the potential to have substantial adverse effect on federally - or state-protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means (Potentially Significant) The Specific Plan Area contains a roadside ditch located along the north side of East Boronda Road. The ditch was constructed to support agricultural operations, and drains agricultural runoff from most of the Specific Plan Area into the existing City storm water drainage system	**Mitigation Measure 3.2-7**: Prior to grading/building permit issuance in an area that would disturb the irrigation ditches and/or roadside ditches, the project applicant shall obtain a jurisdictional determination from the USACE and CDFW for the ditches that are proposed to be disturbed. If these regulatory agencies concur that these facilities are exempt, then no further mitigation is necessary. If it is determined that these facilities are not exempt, authorization for fill from the regulatory agencies (USACE-404 permit, RWQCB-401 certification, 1600 Streambed Alteration Agreement) will be	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-7 be adopted. Mitigation Measure 3.2-7 requires a 1:1 replacement of acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation or operations. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
The USACE has regulatory responsibility for navigable waters as well as "all other waters such as...streams ...wetlands...and natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce" (33 CFR 323.2) under Section 404 of the CWA. A formal jurisdictional determination must be made by the USACE relative to the protected wetlands and jurisdictional waters within the Specific Plan Area. The agricultural irrigation ditches are manmade and believed to solely function to drain upland agricultural runoff. As such, they are expected to be exempted from the USACE jurisdiction under the Irrigation Ditch Exemption pursuant to Federal Regulations (33 CFR 323.4(a)(3)). However, a final determination must be made by the USACE prior to any filling of these ditches for urban use. (DEIR, pp. 3.2-43 through 3.2-45)	necessary and a permit shall be adhered to throughout the construction phase. At a minimum, the project applicant shall replace on a "no net loss" basis (minimum 1:1 ratio) the acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation or operations, although a higher mitigation measure may be required by the USACE, RWQCB, and CDFW through their permitting processes. Wetland habitat shall be replaced at acreage and location agreeable to the USACE, RWQCB, and CDFW and as determined during the Section 401, 404, and 1600 permitting processes.		
Impact 3.2-8: The proposed project has the potential to have substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service (Less Than Significant) The records search and field surveys did not reveal the presence of any riparian habitat or sensitive natural communities within the Specific Plan Area. The conditions of the Specific Plan Area are highly disturbed due to the active agricultural operations. The proposed project would not result in a substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or UFWSF. (DEIR, pp. 3.2-45 and 3.2-46)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-9: The proposed project has the potential to interfere substantially with the movement of native fish or wildlife species or with established wildlife corridors, or impede the use of native wildlife nursery sites (Potentially Significant) The proposed project has the potential to interfere substantially with the movement of native fish or wildlife species or with established wildlife corridors, or impede the use of native wildlife nursery sites. Development of the proposed project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. (DEIR, pp.	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
3.2-46 through 3.2-47)			
Impact 3.2-10: The proposed project has the potential to conflict with an adopted Habitat Conservation Plan or Natural Community Conservation Plan (Less Than Significant) The proposed project is not subject to a Habitat Conservation Plan or Natural Community Conservation Plan. Therefore, the proposed project would not conflict with an adopted Habitat Conservation Plan or Natural Community Conservation Plan. (DEIR, pp. 3.2-47)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-11: The proposed project has the potential to conflict with local policies or ordinances protecting biological resources (Less Than Significant) The proposed project would not conflict with local policies or ordinances protecting biological resources. The project proponent is required to comply with the provisions of the City's General Plan and Municipal Code. The proposed project is generally consistent with the above relevant open space and conservation policies of the General Plan, as well as the City's Municipal Code. (DEIR, pp. 3.2-47 through 3.2-52)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-12: Cumulative loss of biological resources including habitats and special status species (Potentially Significant) The project would result in impacts to biological resources including habitats and special status species. Development of the proposed project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. Given the rareness of CTS and CRLF in the Bioregion, the incremental loss of movement habitat from the proposed project, when considered alongside all past, present, and probable future projects (inclusive of all communities within the Bioregion), is a significant and unavoidable cumulative impact, and the Specific Plan's incremental contribution to this impact is itself cumulatively considerable**.** (DEIR, pp. 3.2-52 and 3.2-53)	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
CULTURAL AND TRIBAL RESOURCES			
Impact 3.3-1: Project implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines	**Mitigation Measure 3.3-1:** In the event that evidence of archaeological or historical features or deposits (e.g., ceramic shard, trash scatters,	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
§15064.5 (Potentially Significant) No historical resources were found during field surveys for the proposed project. Additionally, there are no historical resources that have been identified in the Specific Plan Area on maps and files maintained by the Northwest Information Center (NWIC). There have been three previous cultural resource studies that examined approximately three-quarters of the Specific Plan Area and no historical resources were documented. The Monterey County Historic Property Data File Directory and National Register of Historic Resources do not list any historical resources in the Specific Plan Area. It is not anticipated that ground disturbing activities would result in impacts to historical resources given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of a previously unknown historical resource. Project implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5. (DEIR, pp. 3.3-12 and 3.3-13)	lithic scatters) are uncovered (discovered) during excavation and/or grading, all work shall stop in the area of the subject property until an appropriate data recovery program can be developed and implemented by a qualified archaeologist. This archaeologist shall determine whether the uncovered deposits or features qualify as either "historical resources" within the meaning of CEQA Guidelines section 15064.5, subdivision (a), "unique archaeological resources" as defined in Public Resources Code section 21083.2, subdivision (g), or "tribal cultural resources," as defined in Public Resources Code section 21074. If historical resources, unique archaeological resources, or tribal cultural resources are present, the project proponent shall preserve any such resources or implement any feasible mitigation measures identified by the archaeologist and imposed by the City. Recommended mitigation measures shall be reviewed by the City Planner and shall be approved if feasible in light of project design, logistics, and cost considerations and, if approved, shall be implemented and completed prior to commencing further work for which grading or building permits were issued, unless otherwise directed by the City Planner. Data recovery shall be an option if preservation in place is infeasible. Where resources have been determined to be "unique archaeological resources" but not "historical resources" or "tribal cultural resources," the project proponent's obligations shall be limited as set forth in Public Resources Code section 21083.2, subdivisions (d), (e), and (f). Grading/building permits and plans shall note this measure.		The City Council hereby directs that Mitigation Measure 3.3-1 be adopted. Implementation of Mitigation Measure 3.3-1 requires work to stop if an archaeological or historical feature or deposit is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-2: Project implementation may cause a substantial adverse change in the significance of archaeological resource pursuant to CEQA Guidelines §15064.5 (Potentially Significant) No archaeological resources were found during field surveys for the proposed project. Additionally, no archaeological resources have been identified in the Plan Area on maps and files maintained by the NWIC. There have been three previous cultural resource studies that examined approximately three-quarters of the Specific Plan Area and no archaeological resources were documented. The Monterey County Historic Property Data File Directory and National Register of Historic	Implement Mitigation Measure 3.3-1	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.3-1 be adopted. Implementation of Mitigation Measure 3.3-1 requires work to stop if an archaeological or historical feature or deposit is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Resources do not list any archaeological resources in the Specific Plan Area. It is not anticipated that ground disturbing activities would result in impacts to archaeological resources given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of a previously unknown archaeological resource. Project implementation may cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines §15064.5. (DEIR, pp. 3.3-13)			
Impact 3.3-3: Project implementation may directly or indirectly destroy a unique paleontological resource (Potentially Significant) A search of the University of California, Berkeley Museum of Paleontology collections database of Paleontology Localities did not identify any paleontological resources (fossils or fossil formations) within the Specific Plan Area. The Monterey County General Plan Draft EIR (2007) included a review of known fossil localities conducted by paleontologists in 2001. Twelve fossil sites were identified as having outstanding scientific value. For the most part, the fossils at these 12 sites reflect the type of assemblages found throughout the county (microorganisms or invertebrates); however, each has special characteristics that make it unique or rare, or in some way provide important stratigraphic or historic information. None of the 12 identified high value sites are located on or near the Specific Plan Area. Additionally, the Salinas General Plan Final EIR (2002) does not identify any high value sites in the Specific Plan area or in the City as a whole. However, unknown important paleontological resources have the potential to occur within the planning area including the undeveloped future growth areas, which include the Specific Plan Area. The construction of new development would involve grading and other earthwork that can disturb important fossils. Therefore, project implementation may directly or indirectly destroy a unique paleontological resource. (DEIR, pp. 3.3-13 and 3.3-14)	**Mitigation Measure 3.3-2**: If paleontological resources are discovered during the course of construction, work shall be halted immediately within 50 meters (165 feet) of the discovery, the City of Salinas shall be notified, and a qualified paleontologist shall be retained to determine the significance of the discovery. If the paleontological resource is considered significant, it should be excavated by a qualified paleontologist and given to a local agency, State University, or other applicable institution, where the resource could be curated and displayed for public education purposes. Grading/ building permits and plans shall note this measure.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.3-2 be adopted. Implementation of Mitigation Measure 3.3-2 requires work to stop if a paleontological resource is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-4: Project implementation may disturb human remains, including those interred outside of	**Mitigation Measure 3.3-3:** If human remains are found during construction within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
formal cemeteries (Potentially Significant) No human remains or known burial sites were found during field surveys for the proposed project. Additionally, there are no human remains or known burial sites that have been identified in the Plan Area on maps and files maintained by the NWIC. It is not anticipated that ground disturbing activities would result in impacts to human remains or known burial sites given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of previously unknown human remains or known burial sites. Project implementation may disturb human remains, including those interred outside of formal cemeteries. (DEIR, pp. 3.3-14 and 3.3-15)	Plan Area, or at off-site infrastructure improvement locations, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until a qualified archeological monitor and the coroner of Monterey County are contacted. If it is determined that the remains are Native American, the coroner shall contact the Native American Heritage Commission within 24 hours. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descendent (MLD) from the deceased Native American. The MLD may then make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and associated grave goods as provided in Public Resources Code section 5097.98. The landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further disturbance if: a) the Native American Heritage Commission is unable to identify a MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission; b) the descendent identified fails to make a recommendation; or c) the landowner or his authorized representative rejects the recommendation of the descendent, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner. Grading permit/building permits and plans shall note this measure.		environment. The City Council hereby directs that Mitigation Measure 3.3-3 be adopted. Implementation of Mitigation Measure 3.3-3 requires work to stop if human remains are found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-5: The project may contribute to cumulative impacts on known and undiscovered cultural resources (Less Than Significant) While there are extensive documented cultural resources in Salinas and unincorporated Monterey County, there are no cultural resources that were found during field surveys of the proposed project. Additionally, there are no cultural resources that have been identified in the Plan Area on maps and	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
files maintained by the NWIC. The Monterey County Historic Property Data File Directory and National Register of Historic Resources do not list any cultural resources in the Plan Area. Any significant discoveries during construction would be required to be preserved in place or mitigated through relocation or documentation; and the project is not anticipated to considerably contribute to a significant reduction in cultural resources. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts. The proposed project would not have cumulatively considerable impacts associated with cultural resources. (DEIR, pp. 3.3-15 and 3.3-16)			
GREENHOUSE GASES, CLIMATE CHANGE, AND ENERGY			
Impact 3.4-1: Potential to generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment (Potentially Significant) Short-term construction GHG emissions are a one-time release of GHGs and are not expected to significantly contribute to global climate change over the lifetime of the Specific Plan. Even after incorporation of the mitigation measures provided in Section 3.1: Air Quality, overall GHGs generated by the proposed project are expected to be greater than the applicable thresholds of 1,150 MT of CO_2e per year for construction emissions, 1.94 MT CO_2e/service population/year for operational emissions during Year 2035, and 0.80 MT CO_2e/service population/year for operational emissions during Year 2050. The project would generate GHG emissions, directly and indirectly, that may have a significant impact on the environment. (DEIR, pp. 3.4-31 through 3.4-38)	**Mitigation Measure 3.4-1**: Prior to the approval of the tentative maps and development review permits, as applicable, pursuant to CEQA Guidelines section 15183.5(b), Plans for the Reduction of Greenhouse Gas Emissions, the project applicant shall prepare a Greenhouse Gas Reduction Plan (GGRP) aimed at achieving specific performance standards. The GGRP shall include the following: 1) The GGRP shall achieve a per capita operational emissions level of 1.94 MT CO_2e/service population/year by year 2035, and 0.80 MT CO_2e/service population/year by year 2050. 2) Calculation of GHG emissions projection using an acceptable modeling tool such as the most recent version of CalEEMod. GHG reduction measures may include building and site energy reduction measures, measures to reduce project-generated vehicle miles traveled, or other measures. Off-site measures such as participation in a community-wide GHG reduction program(s), if any are adopted, or payment of GHG reduction fees (carbon offsets) into a qualified existing program, if one is in place, may be considered after all feasible on-site reduction measures are considered. The effectiveness of the GHG reduction measures included in the GGRP must be verifiable based	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Even with implementation of Mitigation Measure 3.4-1, it is possible that individual projects within the Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	on evidence presented in the GGRP. Representative GHG reduction measures which may be considered may include, but are not limited to: • Measures identified by the California Air Pollution Control Officers' Association in Quantifying Greenhouse Gas Mitigation Measures: A Resource for Local Government to Assess Emission Reductions from Greenhouse Gas Mitigation Measures or updates to this document as may occur from time to time. • Applicable measures identified in guidance from MBARD, if any, and/or in guidance provided by other regional air districts such as the Bay Area Air Quality Management District, Sacramento Metropolitan Air Quality Management District, San Luis Obispo County Air Pollution Control District, or other agencies with adopted GHG reduction guidance that is applicable on the date the project application is deemed complete by the City. If sufficient feasible GHG reduction measures are unavailable to reduce GHG emissions to below the threshold of significance, the project applicant shall include evidence in the GGRP to this effect. The GGRP shall be subject to review and approval of the City of Salinas Community Development Department prior to approval of the tentative map or development review application, as applicable. Implementation of this mitigation measure shall not be required if the City has a qualified GHG reduction plan in place on the date a future individual project application is deemed complete, the qualified GHG reduction plan reflects the most recent legislatively-adopted GHG reduction targets (e.g., the 2030 target set by SB 32), includes an inventory of projected GHG emissions from development within the Specific Plan Area, and includes GHG reduction measures applicable to development within the Specific Plan Area whose implementation is required as a condition of approval of such projects.		
Impact 3.4-2: Potential to conflict with an applicable plan, policy, or regulation adopted for the purpose of	Implement Mitigation Measure 3.4-1.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
reducing the emissions of greenhouse gases (Potentially Significant) The Specific Plan would generate GHG emissions that could conflict with the State's long-term GHG Reduction targets, even with implementation of Mitigation Measures 3.1-1 through 3.1-9 contained within Section 3.1: Air Quality. The Specific Plan would not interfere with the *2008 Monterey Bay Regional Energy Plan* objectives. (DEIR, pp. 3.4-38 through 3.4-42)			environment. The City Council hereby directs that Mitigation Measure 3.4-1 be adopted. Implementation of Mitigation Measure 3.4-1 would ensure that GHG reduction measures required pursuant to it are consistent with the intent of current and future statewide GHG reduction legislation and regulations, and with current and future expectations of local, regional, and State stakeholders regarding the City's effort to reduce GHG emissions from new development, including Executive Order B-30-15 and S-03-05. Therefore, with implementation of Mitigation Measure 3.4-1, new development of the Plan Area would consistent with Executive Orders B-30-15 (and SB 32) and S-03-05. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.4-3: Project implementation may result in the inefficient, wasteful, or unnecessary use of energy resources (Less Than Significant) The proposed project would use energy resources for the operation of project buildings (electricity and natural gas), for on-road vehicle trips (e.g. gasoline and diesel fuel) generated by the proposed project, and from off-road construction activities associated with the proposed project (e.g. diesel fuel). Each of these activities would require the use of energy resources. The proposed project would be in compliance with all applicable federal, State, and local regulations regulating energy usage. Overall, the incorporation of mitigation measures would ensure that the proposed project would avoid and reduce inefficient, wasteful, and unnecessary consumption of energy. The proposed project would comply with all existing energy standards, including those established by the City of Salinas, the local air district (MBARD), and the State of California, and would not be expected to result in significant adverse impacts on energy resources. (DEIR, pp. 3.4-42 through 3.4-48)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.4-4: Cumulative impact on climate change from increased project-related greenhouse gas emission (Potentially Significant) Implementation of the proposed project will generate GHG emissions that would not otherwise exist without the proposed project. Given the length of construction activities for a project of this size, the construction emissions would be a long-term release of approximately 168,734.3 MT CO_2e. The operational emissions would be a long-term release totaling approximately 51,939.2 MT CO2e per year without mitigation, and 47,684.9MT CO_2e	Implement Mitigation Measure 3.4-1.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council hereby directs that Mitigation Measure 3.4-1 be adopted. Implementation of Mitigation Measure 3.4-1 would ensure that GHG reduction measures required pursuant to it are consistent with the intent of current and future statewide GHG reduction legislation and regulations, and with current and future expectations of local, regional, and State stakeholders regarding the City's effort to reduce GHG emissions from new

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
per year with mitigation. The City of Salinas's planning efforts included targeted growth that accommodates the economic and social needs of the community, while recognizing and seeking to mitigate environmental impacts when growth occurs. The State of California continues to implement measures that are intended to reduce emissions on a State-wide scale (i.e. vehicle fuel efficiency standards in fleets, low carbon fuels, etc.) that are consistent with AB 32 and SB 32. These types of statewide measures will benefit the proposed project (and city as a whole) in the long-term as they come into effect; however, the City does not have the jurisdiction to create far-reaching (i.e. statewide) measures to reduce GHG emissions. (DEIR, pp. 3.4-48 through 3.4-49)			development, including Executive Order B-30-15 and S-03-05. Therefore, with implementation of Mitigation Measure 3.4-1, new development of the Plan Area would consistent with Executive Orders B-30-15 (and SB 32) and S-03-05. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
HAZARDS AND HAZARDOUS MATERIALS			
Impact 3.5-1: Potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment (Potentially Significant) The hazards assessments included site reconnaissance, interviews, historical land use research, database research, and soils testing. The project has the potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment. (DEIR, pp. 3.5-24 through 3.5-26)	**Mitigation Measure 3.5-1**: Prior to issuance of grading permits or building permits, (including the issuance of demolition permits for agricultural support buildings) as applicable, the applicant shall hire a qualified consultant to: 1) Provide a final evaluation of the soils around the agricultural operations support buildings (residences, warehouses, barns, etc.) before they are demolished. If toxic levels of residual agrichemicals or surface staining are found, the contaminated soil shall be excavated and disposed of at an off-site disposal facility permitted to accept such waste. Any contaminated areas shall be remediated by the project applicant in accordance with recommendations made by the Monterey County Health Department Hazardous Materials Management Services, Regional Water Quality Control Board, Department of Toxic Substances Control, or other appropriate federal, State, or local regulatory agencies. 2) Investigate structures for asbestos-containing materials and lead. If asbestos-containing materials and/or lead are found in the buildings, a Cal-OSHA certified ACBM and lead based paint contractor shall be retained to remove the asbestos-containing materials and lead in accordance with U.S. EPA and California	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.5-1 through 3.5-3 be adopted. Implementation of the Mitigation Measures 3.5-1 requires a final evaluation of the soils around the agricultural operations support buildings and investigation of structures for asbestos-containing materials and lead. Implementation of the Mitigation Measures 3.5-2 requires destruction of existing water wells. Implementation of the Mitigation Measures 3.5-2 requires that water wells serving the proposed building be constructed and tested for water quality under permit from the Monterey County Health Department Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Occupational Safety and Health Administration (Cal/OSHA) standards. In addition, all activities (construction or demolition) in the vicinity of these materials shall comply with Cal/OSHA asbestos and lead worker construction standards. Any ACBM and lead shall be disposed of properly at an appropriate offsite disposal facility. **Mitigation Measure 3.5-2**: Prior to the issuance of grading permits, existing water wells within the grading area shall be destroyed under permit from the City of Salinas and/or the Monterey County Health Department, as applicable. Any destruction of these facilities shall be in accordance with the Monterey County Well Standards for Abandonment/Destruction. The project applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate destruction of these facilities. **Mitigation Measure 3.5-3:** Prior to the issuance of building permits, the water well or wells that will be providing water for the applicable portion of the Specific Plan Area, shall be constructed and tested for water quality under permit from the Monterey County Health Department. The project applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate construction and operation of these facilities.		
Impact 3.5-2: Create a significant hazard to school sites due to siting or the placement of infrastructure (Potentially Significant) The proposed project does not pose significant hazards from existing natural gas transmission piping, and mitigation measures identified under Impact 3.5-1 would ensure water well construction and abandonment impacts would be less than significant. However, implementation of the project may create a significant hazard to school sites due to siting or the placement of infrastructure (i.e., the due to the citing of school sites near power lines). (DEIR, pp. 3.5-26 through 3.5-28)	**Mitigation Measure 3.5-4:** The property line of all school sites (even if it is a joint use agreement as described in subsection (o) of § 14010) shall be at least the following distance from the edge of respective power line easements as identified in the California Code of Regulations Title 5, Article 2. School Sites § 14010. Standards for School Site Selection (c). • 100 feet for power lines that are between 50 and 133 kV.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.5-4 be adopted. Implementation of Mitigation Measure 3.5-4 ensures all future electrical transmission alignments are required to comply with California Code of Regulations Title 5, Article 2 (School Sites) § 14010 (Standards for School Site Selection) setback requirements. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.5-3: Cumulative impact related to hazards and hazardous materials (Less Than Significant) The proposed project includes the approval and	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
subsequent implementation of an approximately 797-acre Specific Plan Area that includes residential, mixed use commercial, a community park, neighborhood parks, small parks, schools, and open space (with supplemental storm water detention/retention basins). These uses are not expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. The proposed Specific Plan land uses are not expected to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste. Mitigation measures have been included to minimize the risk of on-site hazards. (DEIR, pp. 3.5-28 through 3.5-29)			
HYDROLOGY AND WATER QUALITY			
Impact 3.6-1: The proposed project has the potential to violate water quality standards or waste discharge requirements during construction (Potentially Significant) Grading, excavation, removal of vegetation cover, and loading activities associated with construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. (DEIR, pp. 3.6-21 through 3.5-23)	**Mitigation Measure 3.6-1:** Prior to issuance of grading permits, the project proponent shall submit a Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) to the City of Salinas prior to submitting to the RWQCB to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit Order 2009-0009-DWQ amended by 2010-0014-DWQ & 2012-0006-DWQ). The SWPPP shall be designed with Best Management Practices (BMPs) that the RWQCB has deemed to be effective at reducing erosion, controlling sediment, and managing runoff. These include: covering disturbed areas with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. Sediment control BMPs, installing silt fences or placing straw wattles below slopes, installing berms and other temporary run-on and runoff diversions. These BMPs are only examples of what should be considered and shall not preclude the use of equally or more effective new or innovative approaches currently available or being developed. Final selection of BMPs will be subject to approval by City of Salinas. The SWPPP will be kept on site during construction activity and will be made available upon request	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.6-1 be adopted. Mitigation Measure 3.6-1 requires the use of BMPs during construction activities in order to reduce erosion, control sediment, and manage runoff from the Plan Area. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	to representatives of the RWQCB.		
Impact 3.6-2: The proposed project has the potential to violate water quality standards or waste discharge requirements during operation (Potentially Significant) The long-term operations of the proposed project (all phases) could result in long-term impacts to surface water quality from urban stormwater runoff. The proposed Project would result in new impervious areas associated with roadways, driveways, parking lots, buildings, and landscape areas. Normal activities in these developed areas include the use of various automotive petroleum products (i.e. oil, grease, and fuel), common household hazardous materials, heavy metals, pesticides, herbicides, fertilizers, and sediment. Within urban areas, these pollutants are generally called nonpoint source pollutants. The pollutants pollutant levels vary based on factors such as time between storm events, volume of storm event, type of uses, and density of people. The proposed project has the potential to violate water quality standards or waste discharge requirements during operation. (DEIR, pp. 3.6-23 through 3.6-26)	**Mitigation Measure 3.6-2:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention/retention basins designed to meet the applicable regulatory requirements and to reduce contaminant loadings to receiving waters to the maximum extent practicable. The Improvement Plans shall be consistent with the City's NPDES permit requirements at the time of permitting. The NPDES permit granted to the City of Salinas by the Central Coast RWQCB (CCRWQCB, 2012) requires the following: I. Erosion and Sediment Control BMPs – Erosion control and sediment control BMPs shall be designed, installed, and maintained to reduce the discharge of pollutants from construction sites to the maximum extent practical (MEP) and protect water quality; II. Erosion and sediment from slopes and channels shall be controlled by implementing an effective combination of erosion control (source control) and other sediment control BMPs; and II. Soil Stabilization – Stabilization of disturbed areas shall, at a minimum, be initiated immediately whenever any clearing, grading, excavating, or other earth disturbing activities have permanently ceased. Additionally, the Improvement Plans shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The City of Salinas Stormwater Standards for New and Redevelopment Projects (City of Salinas, 2013) require the following practices: I. Limit disturbance of creeks and natural drainage features and provide setbacks according to the City's latest NPDES permit; II. Minimize compaction of highly permeable	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.6-2 through 3.6-4 be adopted. Mitigation Measure 3.6-2 requires submittal of a Stormwater Control Plan that includes calculations, BMPs and plan of sufficient detail to confirm that contaminant loadings to receiving waters will be reduced to the maximum extent practicable. Mitigation Measures 3.6-3 and 3.6-4 require submittal of detailed plans and calculations for the water quality BMPs, water quality detention basins, and supplemental retention and peak flow control. The BMPs will be designed to meet regulatory requirements and to reduce peak flows during storm events below peak flows under pre-project conditions. The various RWQCBs have evaluated the effectiveness of the types of BMPs required by Mitigation Measures 3.6-2 through 3.6-4 and have determined that BMPs are known to be effective in protecting receiving waters. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	soils; and II. Limit clearing and grading of native vegetation to the minimum needed to build the project and provide fire protection. **Mitigation Measure 3.6-3:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention basins designed to prevent to the maximum extent practicable the creation of new sources of polluted runoff. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department. **Mitigation Measure 3.6-4:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department detailed plans and calculations for supplemental retention and peak flow control. BMPs will be designed to meet regulatory requirements and to reduce peak flows during storm events below peak flows under pre-project conditions. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department.		
Impact 3.6-3: The proposed project has the potential to substantially deplete groundwater supplies or interfere substantially with groundwater recharge (Potentially Significant) The proposed project, without mitigating features, would reduce infiltration of rainwater and runoff into the local groundwater system due to the increase in impermeable area. This may deplete groundwater supplies or interfere substantially with groundwater recharge. The total annual rainfall depth in an average year is approximately 16 inches and the project surface area is approximately 797 acres, producing an annual rainfall volume of approximately 1,060 AF. Nearly all of this area is currently in agriculture, while the proposed project could convert as much as 60 percent of the area to impervious surfaces, resulting in a reduction in groundwater recharge in the range of 400 to 600 AF. (DEIR, pp. 3.6-26 through 3.6-29)	**Mitigation Measure 3.6-5:** Prior to the approval of site improvement plans, the project applicant shall site, and design and include an Operation and Maintenance Plan for stormwater retention/infiltration basins and infiltration promoting BMPs sufficient to assure that there is no reduction in groundwater recharge. In order to assure there is no reduction in recharge, the plan shall result in circumstances which maintain infiltration to support baseflow and interflow to wetlands and surface waters, and deep vertical infiltration to groundwater. The site, design, and installation shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The contents of the site, design, and installation shall be included in a stormwater control plan. The stormwater control plan shall be reflected on the Improvement Plans, subject to review and approval by the Salinas Public Works Department.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.6-5 and 3.6-6 be adopted. Implementation of Mitigation Measure 3.6-5 requires an Operation and Maintenance Plan for stormwater retention/infiltration basins and infiltration promoting BMPs sufficient to assure that there is no reduction in groundwater recharge. Implementation of Mitigation Measure 3.6-6 requires an Operation and Maintenance Plan for post-construction BMPs and supplemental stormwater detention basins in accordance with City of Salinas stormwater development standards. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Mitigation Measure 3.6-6: Prior to the approval of site improvement plans, the project applicant shall site, design, and include an Operation and Maintenance Plan for post-construction BMPs and supplemental stormwater detention basins in accordance with City of Salinas stormwater development standards. Maintenance procedures (including frequency of procedure, cleaning schedules, applicant responsibility for each procedure, performance standards, or other means) and funding mechanisms shall be established for those facilities to assure adequate long-term performance and success in treating the water and controlling infiltration into the groundwater. The Improvement Plans and Operation and Maintenance Plan shall be subject to review and approval by the Salinas Public Works Department.		
Impact 3.6-4: The proposed project has the potential to alter the existing drainage pattern in a manner which would result in substantial erosion, siltation, flooding, or polluted runoff (Less than Significant) The proposed project will not alter drainage patterns in a manner which will cause flooding, erosion, or siltation. Surface runoff from the area will be managed via parcel-based LID measures, detention/retention basins, and flow reducing BMPs to prevent local flooding within the site. These features will also reduce peak flows from the Plan Area to receiving creeks and storm drains to amounts less than such flows under existing conditions. Sediment in the stormwater flows will be captured in detention ponds designed to prevent siltation. Flooding, erosion, or siltation is not anticipated by the proposed project given the storm drain design and best management practices that will be implemented. (DEIR, pp. 3.6-29 through 3.6-30)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-5: The proposed project has the potential to otherwise substantially degrade water quality (Potentially Significant) The proposed project would not otherwise substantially degrade water quality. The use of BMPs are intended to treat runoff close to the source during the construction and long term operational phase of the project to reduce stormwater quality impacts. (DEIR, pp. 3.6-30 through 3.6-31)	Implement **Mitigation Measure 3.6-1**.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.6-1 be adopted. Mitigation Measure 3.6-1 requires the use of BMPs during construction activities in order to reduce erosion, control sediment, and manage runoff from the Plan Area. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.6-6: Place housing or structures that would impede/redirect flows within a 100-year, or 200-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map (Less than Significant) The project would no place housing or structures that would impede/redirect flows within a 1-percent annual chance flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. Provided that the storm drain system and detention/retention facilities to be installed as part of the proposed development are adequately sized and properly installed and maintained, additional flooding and/or impedance or redirection of flows will not be induced by the proposed project. (DEIR, pp. 3.6-31)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-7: The proposed project has the potential to expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, seiche, tsunami, or mudflow (Less than Significant) The proposed project would not result in the exposure of people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, seiche, tsunami, or mudflow. (DEIR, pp. 3.6-31 through 3.6-32)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-8: Cumulative increases in peak stormwater runoff from the plan area (Less than Significant) With the design and construction of flood control improvements, the West Area Specific Plan would not increase peak stormwater runoff. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures would control peak stormwater runoff. The proposed project would not have cumulatively considerable impacts associated with stormwater runoff. (DEIR, pp. 3.6-	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
32 through 3.6-33)			
Impact 3.6-9: Cumulative impacts related to degradation of water quality (Less than Significant) The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures would control storm water quality. The proposed project would not have cumulatively considerable impacts associated with water quality. (DEIR, pp. 3.6-33 through 3.6-35)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-10: Cumulative impacts related to degradation of groundwater supply or recharge (Less than Significant) The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures require maintaining water quality standards and preserving the infiltration of rainwater within the aquifer. The proposed project would not have cumulatively considerable impacts associated with groundwater supply/recharge. (DEIR, pp. 3.6-35 through 3.6-36)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-11: Cumulative impacts related to flooding (Less than Significant) Future development in the area must be sited and designed in accordance with the aforementioned City flood damage regulations (i.e., Article VI, Flood Damage Prevention, of the City's Code). The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures require designs that ensure structures are outside the base flood elevation and that storm water flows are maintained to prevent downstream flooding. The proposed project would not have cumulatively considerable impacts associated with flooding. (DEIR, pp. 3.6-36 through 3.6-38)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
NOISE			
Impact 3.7-1: The proposed project has the potential to increase traffic noise levels at existing receptors (Potentially Significant) As shown in Tables 3.7-8 through 3.7-11, some noise-sensitive receptors located along the Plan Area roadways are currently exposed to exterior traffic noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard for residential uses. These receptors would continue to experience elevated exterior noise levels with implementation of the proposed project. As shown in Table 3.7-8, the segment of Natividad Road south of E. Boronda Road would experience unacceptable noise levels under Existing Plus Project conditions. The project would cause noise levels along this segment to increase by 1.6 dB. As shown in Table 3.7-9, the segment of Natividad Road south of E. Boronda Road would experience unacceptable noise levels under Existing Plus Project Plus CASP conditions. As shown in Table 3.7-10, the following roadway segments would experience unacceptable noise levels under Cumulative Plus Project conditions: • E. Boronda Road from San Juan Grade to McKinnon (2.4 dB increase); • E. Boronda Road from Independence to Hemmingway (1.8 dB increase); • E. Boronda Road from N. Sanborn to Williams (2.4 dB increase); • Natividad Road south of E. Boronda (3.7 dB increase); and • Natividad Road from E. Boronda to Future Russell Road (3.0 dB increase). As shown in Table 3.7-11, significant traffic noise increases are anticipated under the Cumulative Plus Project Plus CASP traffic condition include the following segments: • Constitution Blvd., South of E. Boronda – noise levels are predicted to increase by 3.5 dB from 62.2 dB to 65.7 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB,	Implement Mitigation Measures 3.7-1 and 3.7-8.	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Mitigation Measure 3.7-1 requires adherence to the requirements of the City of Salinas Municipal Code with respect to hours of operation during project construction. Mitigation Measure 3.7-2 requires all equipment to be fitted with factory equipped mufflers and in good working order. Mitigation Measure 3.7-3 requires sound walls for residents located along the primary Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. Mitigation Measure 3.7-4 requires 3-coat stucco and windows having a Sound Transmission Class (STC) 35, or higher, rating to be installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-5 requires mechanical ventilation for the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-6 requires the center of active play areas, such as football fields, soccer fields or other athletic fields, to be located at a minimum distance of 90-feet from the nearest residential property lines. Mitigation Measure 3.7-7 includes various project design requirements where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas. Mitigation Measure 3.7-8 includes various project design requirements fort the well and treatment plant facilities. Even with implementation of Mitigation Measures 3.7-1 through 3.7-8, there is the potential for noise levels to exceed the acceptable levels in some cases if encroachment into private property proves for the construction of sounds walls proves to be infeasible. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
as outlined in Table 3.7-7. • E. Boronda Road, Main to San Juan Grade – noise levels are predicted to increase by 1.5 dB from 66.5 dB to 68.1 dB L_{dn}. This would equal the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, San Juan Grade to McKinnon – noise levels are predicted to increase by 2.6 dB from 65.3 dB to 67.9 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, El Dorado to Natividad – noise levels are predicted to increase by 3.3 dB from 64.1 dB to 66.1 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Natividad to Independence – noise levels are predicted to increase by 2.6 dB from 66.6 dB to 69.3 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Independence to Hemmingway – noise levels are predicted to increase by 3.5 dB from 65.1 dB to 68.6 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Hemmingway to Constitution – noise levels are predicted to increase by 3.0 dB from 58.2 dB to 61.3 dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • E. Boronda Road, N. Sanborn to Williams – noise levels are predicted to increase by 3.1 dB from 59.6 dB to 62.7dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • Natividad Road., South of E. Boronda – noise levels are predicted to increase by 4.5 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • Natividad Road., E. Boronda to Future Russell Road – noise levels are predicted to increase by 3.8 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. However, it should be noted that this roadway segment is located between the West Area Specific Plan and Central Area Specific Plan projects and future sensitive receptors along this roadway would be constructed with noise control measures designed to achieve compliance with the City of Salinas exterior and interior noise level standards. • Russell Road, West of San Juan Grade – noise levels are predicted to increase by 1.9 dB from 67.5 dB to 69.4 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. (DEIR p. 3.7-14 through 3.7-23)			
Impact 3.7-2: The proposed project has the potential to increase noise levels associated with construction activities (Potentially Significant) Noise would also be generated during the construction phase by increased truck traffic on area roadways. The proposed project has the potential to increase noise levels associated with construction activities. (DEIR, pp. 3.7-23 and 3.7-24)	**Mitigation Measure 3.7-1:** Prior to the approval of site improvement plans and respective permits, plans shall note that construction activities shall adhere to the requirements of the City of Salinas Municipal Code with respect to hours of operation. **Mitigation Measure 3.7-2:** Prior to the approval of site improvement plans and respective permits, plans shall note that all equipment shall be fitted with factory equipped mufflers and in good working order. All stationary noise generating equipment (i.e. generators) shall be located at least 300 feet from a sensitive receptor. All construction staging areas shall be located at least 300 feet from a sensitive receptor.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.7-1 and 3.7-2 be adopted. Mitigation Measure 3.7-1 requires adherence to the requirements of the City of Salinas Municipal Code with respect to hours of operation during project construction. Mitigation Measure 3.7-2 requires all equipment to be fitted with factory equipped mufflers and in good working order. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.7-3: The proposed project has the potential to increase noise vibration association with construction activities (Less Than Significant) The proposed project would not increase noise vibration associated with construction activities. Therefore, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. (DEIR, pp. 3.7-24 and 3.7-25)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.7-4: The proposed project has the potential to expose new sensitive receptors to excessive transportation noise (Potentially Significant) Table 3.7-14 data indicate that noise barriers 6- to 8-feet in height would generally be sufficient to achieve compliance with the City of Salinas 60 dB L_{dn} exterior noise level standard for the proposed residential uses. However, for the residential uses located along E. Boronda Road and Natividad Road, sound walls of 6- to 8-feet in height would only reduce exterior noise levels to 62 to 65 dB L_{dn}. While these noise level do not meet the City's preferred 60 dB L_{dn} noise standards, they would comply with the City's conditionally acceptable standard of 60 to 70 dB L_{dn}. Predicted interior noise levels would exceed the City's 45 dB L_{dn} interior noise level standard at the first row of residential uses located closest to E. Boronda Road and Natividad Road. Therefore, additional interior noise control measures would be required for these residential uses along E. Boronda Road and Natividad Road. To reduce interior noise levels to 45 dB L_{dn}, or less, it is likely that second floor facades would require windows having a Sound Transmission Class (STC) 35 rating, or higher. Exterior walls would also likely require 3-coat stucco and RC-channels. This would specifically apply to the first row of homes along E. Boronda Road and Natividad Road and would not apply to facades facing away from the roadway. (DEIR, pp. 3.7-25 through 3.7-28)	**Mitigation Measure 3.7-3:** Prior to the approval of site improvement plans and respective permits, the plans shall note the location, design and constructions details of the eight-foot to nine-foot tall sound attenuation walls and/or landscaped berm/wall combinations, as applicable, that will be constructed along the primary Specific Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. At the City's discretion, wall heights which achieve the City's conditionally acceptable 60-70 dB L_{dn} noise standard may be allowed. See the Draft EIR Table 3.7-14 for specific noise barrier/wall heights along each roadway. Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of the wall is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti. These graffiti prevention best management practices may include, without limitation: (1) The use or the installation and maintenance of ant-graffiti materials and	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-3 through 3.7-5 be adopted. Mitigation Measure 3.7-3 requires sound walls for residents located along the primary Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. Mitigation Measure 3.7-4 requires 3-coat stucco and windows having a Sound Transmission Class (STC) 35, or higher, rating to be installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-5 requires mechanical ventilation for the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	surface treatments approved by the City on likely graffiti-attracting surfaces. (2) Installation and maintenance of landscaping to discourage defacement of and/or protect likely graffiti-attracting surfaces. (3) Installation and maintenance of lighting to protect likely graffiti-attracting surfaces. (4) Immediate removal of graffiti by appropriate means within seventy-two hours. (5) Incorporation of architectural or design elements or features to discourage graffiti defacement in accordance with the principles of Crime Prevention Through Environmental Design (CPTED). (6) Authorizing right of access by city employees or contract agents to remove graffiti if not removed within specified time periods. (7) Supplying the city at its request with paint (of the appropriate color and type), cleaning agents, and/or other materials acceptable to the city to abate or to deter graffiti. (8) Other requirements, as deemed reasonably feasible by the city planner, to deter, to protect or to reduce the potential for graffiti defacement. **Mitigation Measure 3.7-4:** Prior to the approval of building permits, the first row of residential dwellings located along E. Boronda Road and Natividad Road shall include windows having a Sound Transmission Class (STC) 35, or higher, rating installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Exterior walls shall also require 3-coat stucco and RC-channels, sheathing, or another acceptable construction application that effectively attenuates noise intrusion to the interior of the house. The exterior wall specifications would specifically apply to the first row of homes that abut E. Boronda Road and/or Natividad Road and only applies to the facades facing these roadways. These specifications do not apply to single story homes,		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	or the first floor of a two-story home, both of which are attenuated by the sound wall. These requirements shall be included in the building plans for the specific dwelling units and noted on the building permits. A detailed analysis of any additional interior mitigation measures shall be conducted when building plans are available and prior to building permit issuance to verify these requirements. These requirements shall also be noted in the site improvement plans prior to approval by the City. **Mitigation Measure 3.7-5:** Prior to the approval of building permits, mechanical ventilation shall be required in the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road, sufficient to allow residents, as desired for acoustical isolation, to keep their doors and windows closed and still maintain acceptable interior temperature and noise levels. This requirement shall be included in the building plans for the specific dwelling units and noted on the building permits. This requirement shall also be noted in the site improvement plans prior to approval by the City.		
Impact 3.7-5: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed park and school uses (Potentially Significant) Children playing at neighborhood parks or outdoor recreational fields (softball, soccer, basketball, tennis) are often considered potentially significant noise sources which could adversely affect adjacent noise-sensitive land uses. Typical noise levels associated with groups of approximately 50 children playing at 50 feet generally range from 55 to 60 dB L_{eq} and 70 to 75 dB L_{max}. It is expected that park activities would occur primarily during daytime hours. Therefore, noise levels from the playgrounds would need to comply with the City of Salinas exterior noise level standards of 60 dB L_{eq} and 70 dB L_{max} at the nearest residential uses. (DEIR, pp. 3.7-29 and 3.7-30)	**Mitigation Measure 3.7-6:** Prior to the approval of site improvement plans, as applicable, when parks or play areas are located near residential uses, the center of active play areas, such as football fields, soccer fields or other athletic fields, shall be located at a minimum distance of 90-feet from the nearest residential property lines. Large active play areas shall comply with the 60 dB L_{eq} and 70 dB L_{max} standards, and shall include these further noise level evaluations during the design phases of future park areas. Parks shall be designed such that residences front, or side in limited locations where approved by the City Planner, to the park. Minimum 6-foot tall sound walls and/or landscaped berms shall be constructed where school site directly abuts a residential property line in instances where site design (i.e., minimum distances, siting of activity areas, etc.) cannot achieve the 60 dB L_{eq} and 70 dB L_{max} noise standards. No wall shall be required where residential uses are fronted towards a park or school site and separated by a roadway or a walkway. Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-6 be adopted. Mitigation Measure 3.7-6 requires the center of active play areas, such as football fields, soccer fields or other athletic fields, to be located at a minimum distance of 90-feet from the nearest residential property lines. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of walls is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti (see mitigation 3.7.3 for further discussion of best management practices.)		
Impact 3.7-6: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed commercial mixed-uses (Potentially Significant) Mixed-use commercial land use activities can produce noise levels which affect adjacent sensitive land uses. The primary noise sources generally include truck deliveries, trash pickup, parking lot use, and heating, ventilation, and air conditioning (HVAC) equipment operation. These sources may result in noise levels exceeding the City's standards at nearby receptors. (DEIR, pp. 3.7-30 through 3.7-31)	**Mitigation Measure 3.7-7:** Prior to the approval of development review permits, the plans shall demonstrate: where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas, the following measures shall be included in the project design: • All HVAC equipment shall be located within mechanical rooms where possible or shielded from view with solid or grated barriers; • Emergency generators shall comply with the City's noise criteria at the nearest noise-sensitive receivers; • Delivery/loading activities shall comply with the Salinas Zoning Code standards and regulations; and • The applicant shall submit a noise study to verify that the appropriate noise control measures have been incorporated into the project design and will achieve compliance with the City's noise level standards.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-7 be adopted. Mitigation Measure 3.7-7 includes various project design requirements where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.7-7: The proposed project has the potential to expose sensitive receptors to substantial noise from	**Mitigation Measure 3.7-8:** The potential well and treatment plant sites are shown in the	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
proposed well sites (Potentially Significant) Typical noise levels for well sites at 50 feet are expected to be 60 dB L_{eq}. If a backup generator is present and running, a noise level of 70 dB L_{eq} at 50 feet would be expected. It is expected that wells could operate during daytime or nighttime hours. Long-term operation of the backup generator would only occur under emergency conditions and would therefore not be subject to the City of Salinas exterior noise level standards for Class A noise. However, weekly exercising of the generator may be subject to the City's 60 dB L_{eq} daytime exterior noise level standard at the nearest noise-sensitive residential receptors. (DEIR, pp. 3.7-32)	Specific Plan. The actual well and treatment plant facilities are subject to the approval of a Conditional Use Permit (CUP) by the City pursuant to the requirements of the Salinas Zoning Code and the West Area Specific Plan. The potential well and treatment plant sites and the CUP requirement for said facilities shall be clearly noted on the site improvement plans. Prior to approval of the CUP and subsequent issuance of the building permits for the well and treatment plant facilities, the plans shall demonstrate that the following measures shall be included in the project design: • The well and treatment facilities have been designed and will be built to not exceed a noise level of 55 dB L_{eq} at the nearest residential or school property line during normal operation of the facilities; • The generators shall not be permitted to exceed the City's daytime noise standard of 60 dB L_{eq}; • The generators shall be tested only during daytime hours; and • Additionally, that the well and treatment facilities/sites have been designed (in accordance with the West Area Specific Plan) to incorporate decorative screen walls, landscaping and other features to ensure compatibility with surrounding land uses.		environment. The City Council hereby directs that Mitigation Measure 3.7-8 be adopted. Mitigation Measure 3.7-8 includes various project design requirements fort the well and treatment plant facilities. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.7-8: Cumulative exposure of existing and future noise-sensitive land uses to increased noise resulting from cumulative development (Potentially Significant) Significant traffic noise increases under the Cumulative Plus Project Plus CASP traffic condition include the following segments: • Constitution Blvd., South of E. Boronda – noise levels are predicted to increase by 3.5 dB from 62.2 dB to 65.7 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Main to San Juan Grade – noise levels are predicted to increase by 1.5	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
dB from 66.5 dB to 68.1 dB L_{dn}. This would equal the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, San Juan Grade to McKinnon – noise levels are predicted to increase by 2.6 dB from 65.3 dB to 67.9 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, El Dorado to Natividad – noise levels are predicted to increase by 3.3 dB from 64.1 dB to 66.1 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Natividad to Independence – noise levels are predicted to increase by 2.6 dB from 66.6 dB to 69.3 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Independence to Hemmingway – noise levels are predicted to increase by 3.5 dB from 65.1 dB to 68.6 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Hemmingway to Constitution – noise levels are predicted to increase by 3.0 dB from 58.2 dB to 61.3 dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • E. Boronda Road, N. Sanborn to Williams – noise levels are predicted to increase by 3.1 dB from 59.6 dB to 62.7dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
receptors. • Natividad Road., South of E. Boronda – noise levels are predicted to increase by 4.5 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • Natividad Road., E. Boronda to Future Russell Road – noise levels are predicted to increase by 3.8 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. However, it should be noted that this roadway segment is located between the West Area Specific Plan and Central Area Specific Plan projects and future sensitive receptors along this roadway would be constructed with noise control measures designed to achieve compliance with the City of Salinas exterior and interior noise level standards. • Russell Road, West of San Juan Grade – noise levels are predicted to increase by 1.9 dB from 67.5 dB to 69.4 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. (DEIR, pp. 3.7-33 through 3.7-37)			
POPULATION AND HOUSING			
Impact 3.8-1: The proposed Project has the potential to induce substantial population growth in an area (Less Than Significant) The West Area Specific Plan proposes development on the 797-acre Specific Plan Area including housing units that would result in direct population growth. The project includes a maximum of 4,340 total residential units. The addition of 4,340 housing units at full buildout has the potential to increase the population of the city by an estimated 16,101 persons (based on a U.S. Census Bureau estimate of 3.71 persons per household) (U.S. Census Bureau, 2017). The 2002 General Plan identifies areas for growth within the FGAs (which includes the Specific Plan Area). The Salinas General Plan Land Use Table LU-3 identifies the development capacity of the FGAs.	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
This includes 15,873 residential units, resulting in an additional population of 58,253 within the City's FGAs. The proposed West Area Specific Plan development proposes 4,340 units with the potential to increase the population of the city by an estimated 16,101 persons, which is within the projections identified in the Salinas General Plan. Implementation of the West Area Specific Plan would increase employment in the area through development of a maximum of 571,500 square feet of commercial space. The Salinas General Plan designates land uses to ensure a balance between new residential development and job-creating uses. Within the FGAs (including the Specific Plan Area) the General Plan assumes a development capacity that includes 178,000 square feet of retail space, 30,000 square feet of office space, 599,000 square feet of general commercial space, and 2,613,000 square feet of mixed use area (Salinas General Plan pg. LU 37: Land Use Element Table LU-3 Development Capacity). The proposed maximum 571,500 square feet developable by the proposed project is within the development capacities stated in the Salinas General Plan. (DEIR, pp. 3.8-14 through 3.8-19)			
Impact 3.8-2: Cumulative impact on the potential to induce substantial population growth in an area (Less Than Significant) Development of the North of Boronda FGA is a component of the City's planned long-term growth as identified in the City's General Plan. Infrastructure needed to support development of the site and the FGAs, and the subsequent population, housing and employment increases expected through implementation of the West Area Specific Plan, have already been planned and evaluated. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts. The proposed project would not have cumulatively considerable impacts associated with population and housing. (DEIR, pp. 3.8-19 through 3.8-20)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
PUBLIC SERVICES			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.9-1: The proposed project may require the construction of fire department facilities which may cause substantial adverse physical environmental impacts (Potentially Significant) The site-specific environmental impact of constructing a new fire facility to serve the West Area Specific Plan will be reviewed under CEQA as part of the Central Area Specific Plan Draft EIR, which is expected to be circulated in 2019. The proposed project may require the construction of fire department facilities which may cause substantial adverse physical environmental impacts. (DEIR, pp. 3.9-16 through 3.9-18)	**Mitigation Measure 3.9-1:** Prior to the issuance of a Certificate of Occupancy for each dwelling unit (and prior to issuance of building permits for non-residential uses), the applicant shall pay all applicable project impact fees per the impact fee schedule.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.9-1 be adopted. Mitigation Measure 3.9-1 requires payment of the project impact fees for each dwelling unit. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.9-2: The proposed project may result in, or have the potential to require the construction of police department facilities which may cause substantial adverse physical environmental impacts (Less Than Significant) The proposed project would not result in, or have the potential to require the construction of police department facilities which may cause substantial adverse physical environmental impacts. Development of the Specific Plan Area did not directly trigger the need for a new facility; however, additional staffing and patrols are required to serve the proposed Specific Pan Area. The City collects impact fees from new development based upon projected impacts from the development. The City also reviews the adequacy of impact fees on an annual basis to ensure that the fee is commensurate with anticipated future facilities demands, assessed on a fair share basis for new development. (DEIR, pp. 3.9-18 through 3.9-19)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.9-3: Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts (Potentially Significant) Physical impacts from construction of the school sites within the Specific Plan Area would be related to relevant environmental topics included in this EIR, such as: air quality (Section 3.1), biological resources (Section 3.2), cultural resources (Section 3.3), greenhouse gas emissions and climate change (Section 3.4), hazards and hazardous materials (Section 3.5), hydrology and water quality (Section 3.6), noise (Section 3.7) population (Section 3.8), public services (Section 3.9), transportation (Section 3.10), and utilities (Section 3.11). A	**Mitigation Measure 3.9-2:** Prior to the issuance of building permits for each dwelling unit, the applicant shall pay applicable school fees mandated by SB 50 to the Salinas Union High School District (SUHSD), and Santa Rita Union School District (SRUSD) and provide documentation of said payment to the City. Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.9-2, 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34 be adopted. Mitigation Measure 3.9-2 requires payment of the applicable school fees. Under state law, the payment of school impact fees is deemed to be adequate mitigation for the need for new school facilities. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
detailed discussion of relevant operational and construction impacts can be found in each respective section of this EIR. Furthermore, site-specific environmental review would be required for each school by the responsible school district prior to approval of a design for the facility and would consider any site-specific impacts unknown at this time. Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts. Potential environmental impacts associated with the future construction of each school within the Plan Area are addressed throughout this EIR. This EIR analyzes the physical environmental effects that may occur as a result of development and introduction of new urban land uses within the Plan Area. Each future school, if constructed, would fall within the range of environmental impacts disclosed in this EIR, and would be subject to relevant mitigation measures included in this EIR. It is noted, however, that development of a school within the proposed Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-19 through 3.9-21)			
Impact 3.9-4: Project implementation may result in effects on parks, or has the potential to require the construction of park facilities which may cause substantial adverse physical environmental impacts (Potentially Significant) Physical impacts from construction of the park sites within the Specific Plan Area would be related to relevant environmental topics included in this EIR, such as: air quality (Section 3.1), biological resources (Section 3.2), cultural resources (Section 3.3), greenhouse gas emissions and climate change (Section 3.4), hazards and hazardous materials (Section 3.5), hydrology and water quality (Section 3.6), noise (Section 3.7) population (Section 3.8), public services (Section 3.9), transportation (Section 3.10), and utilities (Section 3.11). A detailed discussion of relevant operational and construction impacts can be found in each	Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	SU	Changes or alterations have been required in, or incorporated into the project, which mitigate the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
respective section of this EIR. Project implementation may result in effects on parks, or has the potential to require the construction of park facilities which may cause substantial adverse physical environmental impact. Potential environmental impacts associated with the future construction of park and other recreational facilities within the Plan Area are addressed throughout this EIR. This EIR analyzes the physical environmental effects that may occur as a result of development and introduction of new urban land uses within the Plan Area. Each future park, if constructed, would fall within the range of environmental impacts disclosed in this EIR, and would be subject to relevant mitigation measures included in this EIR. It is noted, however, that development of 49.76 acres of park land within the Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-22 through 3.9-23)			
Impact 3.9-5: Project implementation may result in effects on other public facilities (Less than Significant) Project implementation may result in effects on other public facilities. The West Area Specific Plan would result in new demand for public facilities, including library facilities and recreational facilities. The West Area Specific Plan does not propose a library or other public facility such as a community building within the Plan Area, therefore, it does not have a direct physical impact on the environment. The West Area Specific Plan would be responsible for paying the applicable impact fees, and ongoing revenues from the Specific Plan would be generated from property taxes, sales taxes, and other appropriate fees/payments. Such fees/payments would be the financial contribution for any new demand created by the West Area Specific Plan. (DEIR, pp. 3.9-23 through 3.9-24)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.9-6: Under cumulative conditions the proposed project may result in effects on public facilities (Potentially Significant) The construction and operation of future public	Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which mitigate the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
facilities required to serve cumulative development (including the West Area Specific Plan Area) could potentially cause significant impacts. Cumulative development including additional parks, schools, library, and other public facilities within the city and service area would contribute to significant and unavoidable cumulative impacts that have been identified within this EIR related to: air quality (Impact 3.1-7), biological resources (Impact 3.2-12), greenhouse gases (Impact 3.4-4), noise (Impact 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-24 through 3.9-26)			avoid the effects. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
TRANSPORTATION AND CIRCULATION			
Impact 3.10-1: Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan, without mitigations, results in unacceptable operation at eight of the study intersections, and two of the U.S. 101 ramp junctions. All study segments of U.S. 101 performed within the County CMP standards. (DEIR, pp. 3.10-42 through 3.10-46)	**Mitigation Measure 3.10-1**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal at San Juan Grade Road/Van Buren Avenue, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans for each stage of project development shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-2**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of the existing signal timing at San Juan Grade Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-1 through 3.10-9 be adopted. Mitigation Measures 3.10-1 through 3.10-9 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and ramps. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-3**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the signalization of the intersection at Hemingway Drive/East Boronda Road or equivalent traffic control (such as a roundabout), in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of roundabouts), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-4**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings at North Main Street/Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-5**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the widening of the intersection at Natividad Road/East Laurel Drive to add additional northbound and southbound through lanes, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of a roundabout), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-6**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal or equivalent traffic control (such as a roundabout) at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of a roundabout), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-7**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings and to add an eastbound left turn pocket at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. This mitigation includes the addition of an eastbound left turn pocket and optimization of the existing signal timing to better accommodate the expected changes in traffic distribution and volume with implementation of the proposed project. The final improvement plans shall note		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-8**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the addition a southbound left turn lane and optimization of the traffic signal's timing at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share requirement. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-9**: Each project applicant for development within the Specific Plan Area shall contribute its fair-share funding to the Transportation Agency for Monterey County (TAMC) Regional Development Impact Fee (RDIF) Program and the City of Salinas' Traffic Impact Fee (TIF) Program, as determined by the TAMC and the City of Salinas, respectively, in proportion to the area planned for development by each project applicant. These programs include improvements to U.S. 101 that would improve mainline and ramp junction operations, which would mitigate the proposed project's impact to the U.S. 101 ramp junctions affected by the proposed project (i.e. the Northbound Road Off-Ramp and Northbound West Laurel Drive Off-Ramp). Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.		
Impact 3.10-2: Under Existing Plus Project and Central Area Specific Plan conditions, implementation	**Mitigation Measure 3.10-10**: Each project applicant for development within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
of the proposed Specific Plan may conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Existing Plus Project and Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan would result in unacceptable operation at ten of the study intersections, and two of the U.S. 101 ramp junctions, under the Existing Plus Project and Central Area Specific Plan scenario. All study segments of U.S. 101 performed within the County CMP standards. (DEIR, pp. 3.10-53 through 3.10-56)	Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-11**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to convert the eastbound right turn lane to a shared through-right turn lane at Natividad Road/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-12**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for addition of an eastbound right turn pocket at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-13**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for the installation of a traffic signal at the intersection of Williams Road/East Boronda Road, in proportion to the area planned for		environment. The City Council hereby directs that Mitigation Measures 3.10-10 through 3.10-14 be adopted. Mitigation Measures 3.10-10 through 3.10-14 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and ramps. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-14**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at the South Sanborn/North Sanborn/John Street intersection, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.		
Impact 3.10-3: Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan under the cumulative Plus Project scenario would result in unacceptable operation at seventeen of the study intersections, and three of the freeway segments. All ramp junctions perform at or above the minimum standards set by the County CMP under this scenario. (DEIR, pp, 3.10-63 through 3.10-70)	**Mitigation Measure 3.10-15**: Each project applicant for development within the Specific Plan Area shall contribute its fair-share of funding to the TAMC Regional Development Impact Fee provides mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Southbound Ramps/Echo Valley Road/Crazy Horse Canyon Road. Regional fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-16**: Each project applicant for development within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-15 through 3.10-27 be adopted. Mitigation Measures 3.10-15 through 3.10-27 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and segments. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Plan Area shall contribute its fair-share of the TAMC Regional Development Impact Fee to provide mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Northbound Ramps/Crazy Horse Canyon Road. Total fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-17**: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Crazy Horse Canyon Road/San Juan Grade Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-18**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Natividad Road/Rogge Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-19**: Each project

	for the installation of a traffic signal at the intersection of Old Stage Road/Williams Road/Private Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-23**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound through lane, the addition of a northbound right turn overlap phase, and the conversion of the westbound through lane to a westbound shared through-left turn lane at the intersection of North Main Street/East Bernal Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note these improvements and the fair-share funding requirement. **Mitigation Measure 3.10-24**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound and southbound through lanes at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Mitigation Measure 3.10-25: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of South Davis Road/Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-26**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane and a southbound left turn lane at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-27**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound left turn lane at the intersection of South Main Street/West Blanco Road/East Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		
Impact 3.10-4: Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by	**Mitigation Measure 3.10-28**: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan would result in unacceptable operation at twenty-two of the study intersections, and four of the freeway segments, under the cumulative Plus Project with Central Area Specific Plan scenario. All ramp junctions perform at or above the minimum standards set by the County CMP under this scenario. (DEIR, pp, 3.10-76 through 3.10-81)	installation of a traffic signal at intersection of Old Stage Road/Hebert Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-29**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of northbound and southbound through lanes on Natividad Road and for the conversion of the existing eastbound right turn lane on East Laurel Drive to a shared through-right turn lane, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-30**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of eastbound and southbound left turn lanes at Constitution Boulevard/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-31**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of North Sanborn Road/Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to		28 through 3.10-33 be adopted. Mitigation Measures 3.10-28 through 3.10-33 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and segments. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-32**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane at Williams Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-33**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a southbound left turn lane at the intersection of East Front Street/Sherwood Drive/Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		
Impact 3.10-5: Implementation of the proposed Specific Plan would not result in changes to air traffic patterns (Less than Significant) The nearest air facility to the Specific Plan boundaries is Salinas Municipal Airport, located approximately four miles to the southeast. Additionally, Marina Municipal Airport is located approximately six miles to the southwest. The Specific Plan Area contains no existing or planned airport facilities. The proposed land use changes to and development of the Specific Plan Area are expected to have no effect on the Salinas Municipal Airport or Marina Municipal Airport approach or departure zones, or any other airport approach or	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
departure zones. Implementation of the proposed Specific Plan would not result in changes to air traffic patterns. (DEIR, pp, 3.10-81 through 3.10-82)			
Impact 3.10-6: Implementation of the proposed Specific Plan would not substantially increase hazards due to a design feature (Less than Significant) Implementation of the proposed Specific Plan would not substantially increase hazards due to a design feature. Development within the Specific Plan Area would include new streets, access points, paths, and other circulation improvements that would be reviewed and checked for compliance with design and safety standards as part of the entitlement process conducted by the City of Salinas. (DEIR, pp, 3.10-82)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.10-7: Implementation of the proposed Specific Plan would not result in impacts related to emergency access (Less than Significant) Buildout of the proposed Specific Plan would result in increased development densities and land use intensities within the Specific Plan Area. As a result of buildout of the West Area Specific Plan, which includes the development of an internal transportation network within the Plan Area, the volume of users travelling within the Specific Plan Area is expected to increase. Emergency access along proposed and existing roadways must be accommodated in conjunction within the expected population and employment growth. Plans submitted for individual developments to be constructed in the Specific Plan Area would be reviewed for compliance with emergency access requirements by public safety officials during the City's entitlement process. Implementation of the proposed Specific Plan would not result in impacts related to emergency access. (DEIR, pp, 3.10-82)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.10-8: Implementation of the proposed Specific Plan would not conflict with adopted multi-modal circulation policies, plans, or programs, and would not decrease the performance or safety of public transit, bicycle, or pedestrian facilities (Less than Significant) Implementation of the Specific Plan would be consistent with, and would expand upon, the pedestrian and bicycle network identified in the 2002 *Salinas Bikeways Plan*. The Specific Plan	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
would improve the existing bicycle and pedestrian circulation infrastructure within the Specific Plan Area, as well as adjacent areas in the City of Salinas. The West Area Specific Plan is estimated to generate approximately 1,000 new transit trips on a daily basis, as well as 140 trips in the morning peak hour and 150 trips in the evening peak hour (Fehr & Peers, 2018). These new transit trips alone are not expected to overburden existing transit service in the area. Implementation of the proposed Specific Plan would not conflict with adopted multi-modal circulation policies, plans, or programs, and would not decrease the performance or safety of public transit, bicycle, or pedestrian facilities. (DEIR, pp, 3.10-83 through 3.10-84)			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
UTILITIES			
Impact 3.11-1: The proposed project has the potential to exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board (Less than Significant) Wastewater generated within the Plan Area would be conveyed by the City of Salinas wastewater conveyance system to M1W Regional Treatment Plant. M1W, a regional agency, owns and operates M1W Treatment Plant. The wastewater treatment system treats domestic wastewater from residential and commercial sources. Waste Discharge Requirements (WDRs) Order No. R3-2018-0017 provides waste discharge requirements for M1W Treatment Plant, and a supply capacity of up to 29.6 MGD. Implementation of West Area Specific Plan would be covered under the existing capacity and would not exceed the wastewater discharge requirements in this Order. (DEIR, pp. 3.11-9)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-2: The proposed project has the potential to result in a determination by the wastewater treatment and/or collection provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the provider's existing commitments (Less than Significant) The City of Salinas Sanitary Sewer Master Plan projects new development would increase the total wastewater discharge to an average dry weather flow to a maximum of approximately 22.1 MGD at full build-out of the entire City Sphere of Influence. The estimated wastewater discharge for full buildout of the proposed project would be approximately 1.0 MGD. The West Area Specific Plan would increase the amount of wastewater requiring treatment. The wastewater would be treated at M1W Treatment Plant. The (WDRs Order No. R3-2018-0017 allows M1W Treatment Plant to accept up to 29.6 MGD. Given a current demand of approximately 16 MGD (as provided by M1W Treatment Plant Engineer Jennifer Gonzalez), the M1W Treatment Plant currently has an additional capacity of approximately 11 MGD; given 1.0 MGD generated by the project, there is sufficient plant capacity. (DEIR, pp. 3.11-10 through 3.11-11)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.11-3: The proposed project has the potential to require or result in the construction of new wastewater treatment or collection facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) The West Area Specific Plan project does not trigger a need to expand the M1W Treatment Plant. There would be a network of sewer collection infrastructure installed throughout the Plan Area to serve the West Area Specific Plan. The potential for environmental impacts associated with the installation of the wastewater collection system, and all construction activities within the Plan Area, are addressed throughout this EIR. (DEIR, pp. 3.11-11 through 3.11-12)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-4: Cumulative impact on wastewater utilities (Less than Significant) The M1W plant is designed and constructed to handle 29.6 MGD; which is more than 4 MGD than the project 2055 demand, under the worst case scenario modelled. The 1.0 MGD expected to be generated by full buildout of the proposed project would thereby leave approximately 3.6 MGD available in 2055, under the worst case scenario modelled. Moreover, it is more than likely that this represents an overestimate of cumulative wastewater demand, given that this estimate utilizes the higher end of the range of projected wastewater at the M1W Regional Treatment Plant in the future. Additionally, buildout of the Specific Plan is expected to occur over an approximately 20 to 30 year timeframe; therefore buildout is expected to occur no later than approximately 2048 (at latest). Therefore, using the year 2055 as the analysis year serves as a conservative date for buildout of the proposed project. (DEIR, pp. 3.11-12 through 3.11-13)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-5: The proposed project has the potential to require construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) The proposed project would not require construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. The water infrastructure is sized to meet the	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
demand within the Plan Area. All offsite improvements are to be placed in or adjacent to existing streets to minimize potential impacts. Although the West Area Specific Plan would not require the expansion of existing water treatment facilities, the West Area Specific Plan may require the construction of a new centralized treatment facility within the Plan Area. This treatment facility would be specifically sized to serve the West Area Specific Plan and would not be upsized to ensure that it does not induce growth beyond what is anticipated by the West Area Specific Plan. (DEIR, pp. 3.11-37 through 3.11-38)			
Impact 3.11-6: The proposed project has the potential to have insufficient water supplies available to serve the project from existing entitlements and resources (Less than Significant) Water supplies are sufficient to meet the City's existing and projected future potable water demands, including those future water demands associated with the West Area Specific Plan, to the year 2035 under all hydrologic conditions. The three new groundwater wells would provide adequate groundwater for the proposed project. Additionally, the Cal Water Salinas District has sufficient water supply throughout its service area to serve the proposed project, even during the third year of a multi-year drought, and even if the proposed project's groundwater wells proved to not be sufficient to serve the entire Plan Area. Moreover, the development of the West Area Specific Plan would reduce consumption of groundwater (equivalent to increasing groundwater storage), when compared to the existing agricultural uses; this would also have the effect of reducing the potential for seawater intrusion into the groundwater basin, when compared to the existing agricultural uses. (DEIR, pp. 3.11-38 through 3.11-41)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-7: Cumulative Impact on Water Utilities (Less than Significant) There would be sufficient water resources available to provide supply for buildout of the cumulative scenario, so that no significant cumulative effect on the overall water supply would result. (DEIR, pp. 3.11-41 through 3.11-43)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.11-8: The proposed project has the potential to require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) No new or expanded existing off-site infrastructure is proposed or would be required. Proposed project storm water infrastructure would be developed on-site, with connections made to off-site existing storm drain pipes along existing rights-of-way (such as along McKinnon Street). Installation of storm drainage infrastructure would occur during the construction phase of the proposed project. The construction of the new on-site stormwater drainage facilities, which are associated with the proposed project, has the potential to cause environmental impacts. The potential for environmental impacts associated with the installation of the stormwater system, and all construction activities within the Plan Area, are addressed throughout this EIR. (DEIR, pp. 3.11-63)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-9: Cumulative Impact on Stormwater Facilities (Less than Significant) The West Area Specific Plan includes an extensive system of on-site stormwater collection, treatment and retention facilities to accommodate the increased stormwater flows that would originate in the Specific Plan Area. Surface runoff from the area will be managed via detention/retention basins and flow reducing Best Management Practices (BMPs) to prevent local flooding within the Specific Plan Area. These features will also reduce peak flows from the Specific Plan Area to receiving creeks and storm drains to amounts less than such flows under existing conditions. The construction, maintenance, and operation of all stormwater facilities are not anticipated to cause substantial adverse impacts. The proposed project would not have cumulatively considerable impacts associated with stormwater facilities. (DEIR, pp. 3.11-63 through 3.11-65)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-10: The proposed project would be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs and comply with federal, State, and local statutes and regulations related to solid waste (Less than	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Significant) The West Area Specific Plan would be required to comply with applicable State and local requirements including those pertaining to solid waste, construction waste diversion, and recycling. The addition of the volume of solid waste associated with the West Area Specific Plan, approximately 24.5 tons per day at total buildout, would increase the total to the Johnson Canyon Landfill; however, this increase would not cause an exceedance of the landfill's remaining capacity. (DEIR, pp. 3.11-72)			
Impact 3.11-11: Cumulative Impact on Solid Waste Facilities (Less than Significant) The Salinas Valley Solid Waste Authority service area is expected to add numerous developments through 2055. The Central Area Specific Plan, East Area Specific Plan, and the Economic Development Element (EDE) are three such areas, located within the City of Salinas. These new areas would generate an estimated 75 to 100 tons per day at total buildout. Buildout of other communities within the Salinas Valley Solid Waste Authority' service area would also affect Johnson County Landfill. These jurisdictions within the region are likely to generate new sources of solid waste that would need to be processed at the landfill. The Johnson Canyon Landfill has the capacity to serve nearly three times as much waste per day as it does currently and will have sufficient capacity to serve communities within the Salinas Valley Solid Waste Authority service area. Implementation of the proposed project would have a less than significant cumulative impact relative to this environmental topic. (DEIR, pp. 3.11-72 through 3.11-73)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
OTHER ISSUES			
Aesthetics The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would allow development to occur in the City in both vacant and underdeveloped portions of the community, and that the introduction/expansion of urban uses into these areas has the potential to interrupt views of natural features, open space, the hillsides, and agricultural resources, reducing the aesthetic value of these resources. Additionally, new development	To minimize and mitigate the impacts on aesthetics, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following five mitigation measures: Mitigation Measure A1 requires the City to implement the City's Gateway Guidelines; Mitigation Measure A2 requires the City to strengthen and require compliance with the City's Design Guidelines; Mitigation Measure A3 requires the City to improve the Lighting Ordinance; Mitigation Measure A4 requires the	LTS	Three of the five mitigation measures included in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), including Mitigation Measures A1, A2, and A3, are requirements for the City of Salinas to implement. These measures do not apply to the proposed project. Mitigation Measures A4 and A5 are requirements for both the City and for proposed projects or discretionary projects. The proposed project would be subject to Mitigation Measure A4, which requires consistency with the landscaping requirements. All landscaping in the Specific Plan Area would be subject to the City's landscaping requirements. The proposed project would also be

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
in the City was found to increase the amount of light and glare in the community, particularly in areas planned for nonresidential development, such as retail and general commercial. It was also found that future development under the General Plan has the potential to change the visual character of the City. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that aesthetic impacts associated with the FGAs, which includes the West Area Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the proposed project, would be required to comply with the above referenced regulations, policies, and standards. Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). (See the Initial Study)	City to implement landscaping requirements for all proposed projects; and Mitigation Measure A5 requires the City to review all discretionary projects for aesthetics impacts.		subject to Mitigation Measure A5, which requires the City of review the proposed project for aesthetics impacts. Impacts to aesthetics are analyzed in the Initial Study for the project. See Appendix A of the Draft EIR for the West Area Specific Plan Initial Study. Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Agriculture and Forest Resources The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would result in the conversion of 3,525 acres of agriculture lands to urban uses. The *Final Environmental Impact Report,* also indicates that General Plan buildout would result in agricultural activity in proximity to residential and other urban uses, which may result in conflicts between the uses. It is noted that agricultural activity can cause nuisances related to air quality and noise that may disturb surrounding development. Urban activities may also negatively affect nearby agricultural uses, as increased vandalism often occurs and the introduction of domestic animals may disturb certain agricultural activities. The City of Salinas certified the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), adopted a statement of overriding considerations relative to this significant and unavoidable impact, and approved the Salinas	The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures AG1 through AG4, the impacts on potential compatibility issues would be reduced to a less than significant level; however, while the impacts on agricultural conversion would be reduced to the extent feasible, a significant and unavoidable impact would remain related to the loss of important farmland. Mitigation AG5 specifically addressed Agricultural Land Conservation Easement Program, which states that the City will work with the County of Monterey and other local jurisdictions to create and implement an agricultural land conservation easement program, including such measures as securing the dedication of easements or by paying a mitigation fee that could be used to purchase easements through a mitigation bank. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a $750.00 per acre mitigation fee for agricultural lands currently	LTS	All of the five mitigation measures included in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), including Mitigation Measures AG1 through AG5, are requirements for the City of Salinas to implement. These measures do not apply to the proposed project. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a per acre mitigation fee for agricultural lands currently designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance." The project would be subject to this fee. Impacts to agricultural resources are analyzed in the Initial Study for the project. See Appendix A of the Draft EIR for the West Area Specific Plan Initial Study. Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
General Plan. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that agricultural impacts associated with the FGAs, which includes the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the proposed project, would be required to comply with the above-referenced regulations, policies, and standards. Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). (See the Initial Study)	designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance."		
Geology and Soils Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). (See the Initial Study)	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Hazards and Hazardous Materials While the Draft EIR analyzes Hazards and Hazardous Materials, several topics were determined to not warrant additional analysis within the Chapter. The land uses proposed within the Specific Plan Area would not be expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Furthermore, the proposed project is not located in the vicinity of an airport or private airstrip; therefore, it would not result in a safety hazard related to air traffic for people residing or working in the Specific Plan Area. These topics do not	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
warrant additional analysis and will not be addressed further in the EIR. Separately, the City has adopted a Multi-hazard Emergency Plan, which serves as extensions of the California Emergency Plan and the Emergency Resource Management Plan. The purpose of the Multi-hazard Emergency Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Operations Center (EOC) in City Hall serves as the center of the City's emergency operations. The Plan also addresses evacuation and movement of people in the event of an emergency. The proposed project does not impair implementation of or physically interfere with the Multi-hazard Emergency Plan. Implementation of the proposed project would have a less than significant impact relative to this environmental topic and will not be further analyzed or addressed further in the EIR. Lastly, the proposed project is not located in an area that is considered a high risk for wildfires. The proposed project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. (See the Initial Study)			
Land Use and Planning The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the impacts would be reduced to a **less than significant** level with mitigation. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified the Final Supplemental EIR and approved annexation of the North of Boronda FGA, which includes the West Area Specific Plan. The project, as proposed, is consistent with the Greater Salinas Area Memorandum of Understanding (GSA-MOU). All development under the proposed project would be required to comply with the regulations, policies, and standards identifies in the *Final Environmental*	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact Report, Salinas General Plan (Cotton Bridges Associates 2002), and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed within these supporting documents. (See the Initial Study)			
Mineral Resources It was determined in the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) that development of the FGA, including the Specific Plan Area, would not have a significant impact on mineral resources or mining activities. As such, implementation of the proposed project would have no impact on mineral resources. (See the Initial Study)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

EXHIBIT J

PROJECT FINDINGS FOR CONSIDERATION OF THE WEST AREA SPECIFIC PLAN (SPEC 2013-002), REZONING (RZ 2019-001), AND DEVELOPMENT AGREEMENT (DA 2019-001)

I. PROJECT DESCRIPTION AND APPROVALS

A. Project Location

The applicant, Brian Finegan, Esq. (representing multiple property owners and developers), is requesting a series of approvals that would enable the development of a 797-acre Specific Plan area ("project site") within the North of Boronda Future Growth Area (FGA) of the City . The project site is bounded by Boronda Road to the south, San Juan Grade Road to the west, Natividad Road to the east and Russell Road and Rogge Road to the north. Attachment 7 of the staff report, Project Site Location Map, shows the project site vicinity and the North of Boronda FGA.

The project site is bordered on the north primarily by existing residential development (the Bolsa Knolls area) and scattered residential and agricultural-related uses located in unincorporated Monterey County, on the east by agricultural uses in unincorporated Monterey County and the proposed Central Area Specific Plan area, on the south by existing residential and commercial development (Harden Ranch Specific Plan area), and on the west by existing residential development and commercial development (the Gateway Shopping Center Specific Plan). Attachment 8 of the staff report, Property Ownership/Existing Conditions Map, shows the project boundaries, owners and existing uses.

B. Project Description

The applicant is seeking the following approvals from the City Council: 1) Specific Plan (SPEC 2013-002); 2) Rezoning (RZ 2019-001); and 3) Development Agreement (2019-001), collectively referred to as the "Project". At build-out (estimated to occur over the next 20 to 30 years), the project would establish: 4,340 dwelling units provided as a mix of low, medium and high densities, a Village Center with up to 571,500 square feet of mixed-use commercial floor area, eleven parks, five schools (one high school, one middle school and three elementary schools), and other associated uses supporting the development including but not limited to open space and well-sites.

Specific Plan. A specific plan is a development guidance tool that is required for all new development proposed within the FGA pursuant to the General Plan. The draft *West Area Specific Plan* ("Specific Plan") prepared by the applicant under the direction of the City provides direction for the land uses, development regulations, design standards, circulation, infrastructure, storm water and water quality management, public financing and implementation and administration of the Specific Plan. The Specific Plan includes modifications to development regulations found in the City of Salinas Zoning Code to facilitate the New Urbanism development mandated under the General

Plan for this area. The changes to development regulations would apply only to development within the Specific Plan boundary, which is coterminous with the project site boundary. Attachment 11 of the staff report contains the Specific Plan and herein incorporated by reference. Table 1, Summary Land Use Plan, provides an overview of the project.

Table 1 Summary Land Use Plan

Land use		**Framework Acres**	**Projected Dwelling Units or Square Feet**
Residential Planning Areas	NE (Low)	227.72	1,361 du
	NG-1 (Medium)	188.44	1,803 du
	NG-2 (High)	59.84	1,085 du
	VC (Village Center)	4.55	91 du
	Total	**480.55**	**4,340 du**
Mixed use Village Center (1)		20.13	571,500 sq. ft.
Total Residential and Village Center		**500.68**	
High School		38.97	
Middle School		20.78	
Elementary School #1		10.98	
Elementary School #2		10.00	
Elementary School #3		10.00	
Community Park		30.83	
Neighborhood Parks (four)		12.52	
Small Parks (six)		6.41	
Supplemental Detention/Retention Basin Open Space		35.03	
Water Wells/Water Treatment		1.50	
Total Public Facilities		**177.02**	
Circulation Roadways (2)		118.85	
Total		**796.55**	

Rezone. The applicant is requesting approval of a rezone to establish zoning district classifications for the project site, which are consistent with the Salinas Zoning Code (and Map) and implement the existing General Plan land use designations for the project site. The existing zoning for the project site is New Urbanism Interim (NI) with a Specific Plan Overlay District. The proposed zoning

districts for the project site are Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC). The proposed districts align with New Urbanism (NU) zoning districts contained in Division 8 of the Salinas Zoning Code and correspond with the Residential Low Density, Residential Medium Density, Residential High Density and Mixed Use Land Use Designations, respectively contained in the General Plan. Additional zoning districts proposed for the project site include Parks (P), Open Space (OS), and Public/Semipublic (PS). The proposed districts are shown in Attachment 12 of the staff report, incorporated herein by reference. The above-referenced districts also include a Specific Plan Overlay District.

Development Agreement. A development agreement has been prepared pursuant to Government Code Section 65864. The development agreement allows the applicant to proceed with the project in accordance with existing policies, rules, and regulations, subject to the conditions of approval, thus vesting certain development rights in the property.

C. Project Objectives

The following key objectives are the basis for the formulation of the Specific Plan policies, design principles, regulations and development standards:

1. Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly;

2. Provide a variety of land uses in east walking distance of housing including a mixed use village, parks, and schools to lower vehicle miles traveled;

3. Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents;

4. Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages;

5. Provide public services and infrastructure improvements that achieve and maintain City service standards;

6. Provide an inviting tree-lined street system which incorporates traffic calming and other measures;

7. Establish an interconnected path and open space system throughout the development that links to the greater North of Boronda FGA and City as a whole;

8. Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements;

9. Provide for a reasonable jobs/housing balance;

10. Provide opportunities for senior housing and/or affordable housing; and

11. Provide for a site/parcel-based post construction Stormwater Control Measures (SCMs)/LID to the maximum extent practicable.

II. FINDINGS

For purposes of the following discussion, the Project is considered to be development of the project site as would be permitted upon the City's approval of the proposed Specific Plan, Rezone, and Development Agreement.

A. Specific Plan Findings

1. **Finding:** The proposed location of development and proposed conditions under which it will be operated and maintained is consistent with the goals and policies embodied in the Salinas General Plan and other applicable plans and policies adopted by the City Council.

   Evidence: The project site is located within the Future Growth Area (FGA) located north of East Boronda Road (referred to as the North of Boronda FGA). This area is designated under the General Plan to accommodate the anticipated future growth in the City. In accordance with the General Plan, the FGA is subject to the adoption of Specific Plans by the City Council prior to any development in this area. The Specific Plans are intended to specify the ultimate distribution, location and intensity of land uses in these areas in accordance with the total development capacities provided under the General Plan. As such, development of the project site has been planned for and has been anticipated by the City as part of a coordinated long-term development process for this area.

   The General Plan land use designations shown for land located with the FGA are illustrative in nature and subject to adjustment and refinement as part of the Specific Plan approval process. Under the Specific Plan, (encompassing approximately 797 acres of land), approximately 227.72 acres of land will be designated "Residential Low Density"; 188.44 acres of land will be designated "Residential Medium Density"; 59.84 acres of land will be designated "Residential High Density"; 24.68 acres of land will be designated "Mixed Use"; 49.76 acres of land will be designated "Park"; 35.03 acres of land will be designated "Open Space"; and 92.23 acres of land will be designated "Public/Semipublic". These proposed land uses are consistent with the land uses envisioned under the General Plan for this area.

The maximum number of dwelling units (without density bonus, conversion of commercial floor area, or accessory dwelling units) provided in the Plan Area is 4,340, which meets the overall minimum average density of nine dwelling units per net residential acre required under the General Plan for residential development in the FGA. The Specific Plan has also been designed and planned to ensure that 15%-25% of the dwelling units fall in the density range of 16-24 dwelling units per net residential acre, and 35%-45% fall in the density range of 7-14 dwelling units per net residential acre. These percentages are required under the General Plan to ensure a variety of dwelling types, specific densities and affordability levels are provided in the Plan Area.

The maximum square footage of proposed retail/commercial uses permitted under the Specific Plan is 571,500 square feet. Parks, schools (comprised of two existing schools and three proposed school sites) and open space (supplemental stormwater basins) are also provided in the Plan Area. These land uses and development intensities are consistent with the types of uses and development capacity anticipated for the North of Boronda FGA under the General Plan.

The Specific Plan has incorporated New Urbanism Design Principles, Crime Prevention Through Environmental Design (CPTED) and other design principles in accordance with the requirements of the General Plan to guide development in the FGA. Emphasis on pedestrian-friendly development through traffic calming, narrow streets, pedestrian linkages and dwellings oriented to the street promote walkability and foster a sense of community as envisioned under the General Plan. On-street bicycle lanes and routes will also be provided along the southerly and northerly greenways, East Boronda Road, Russell Road , San Juan Grade Road, McKinnon Street, El Dorado Drive and Natividad Road to promote the use of alternative forms of transportation and provide off-site connections to surrounding facilities. The Project also includes provisions for electrical vehicle charging to promote energy conservation and to reduce fossil fuel consumption as encouraged by the General Plan.

Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference.

2. **Finding:** The development will not be detrimental to the public health, safety, or welfare of persons residing or working in or adjacent to such a development, nor detrimental to properties or improvements in the vicinity or the general welfare of the City.

Evidence: The potential environmental effects of the Project were fully evaluated in the Final Program Environment Impact Report (EIR) prepared for the project. The project includes significant and unavoidable impacts as well as impacts that can be mitigated to a less than significant level. The full explanation (of environmental impacts) is discussed in Attachment 20 of the staff report, CEQA Findings and Statement of Overriding

Considerations, incorporated herein by reference.
The Specific Plan proposes land uses and improvements, which are generally compatible with and complementary to surrounding development located to the north, south, east and west of the Plan Area. It also includes standards, which implement design principles such as CPTED to promote "eyes on the street" through the use or porches and other elements to discourage criminal activity and promote safer neighborhoods.

The Specific Plan incorporates Low Impact Development (LID) and other features to ensure the Project is in compliance with the requirements of the General Plan, City's Storm Water Management Program and the City's National Pollutant Discharge Elimination System Permit.

Local demand for housing is high, particularly for affordable housing. The project will contribute to public welfare by providing dwelling units across a variety of housing types, densities and affordability levels. Market rate and inclusionary housing will be provided. The Project will be subject to City's Inclusionary Housing Ordinance.

3. **Finding:** The Specific Plan and resulting development will be consistent with the provisions of Article 8 of Chapter 3 of California Government Code, commencing with Section 65450 as may be subsequently amendment by the State of California.

Evidence: The California Government Code sections referenced above include Sections 65450 through 65457. Of these, Sections 65451, 65454 and 65455 are directly applicable to the adequacy of the Specific Plan and to discretionary actions related to its implementation.

California Government Code Section 65451 addresses the content requirements of a specific plan. The West Area Specific Plan has been reviewed by City staff and the City Attorney and found to be consistent with the content requirements in Section 65451.

California Government Code Section 65454 requires that a specific plan may not be adopted or amended unless it is consistent with the City's General Plan. As described in Finding "A.1" herein, and the proposed Planning Commission resolution recommending approval and adoption of the Specific Plan, the West Area Specific Plan has been found to be consistent with the Salinas General Plan.

California Government Code Section 654455 provides that no public works project may be approved, no tentative or parcel map may be approved, and no zoning ordinance may be adopted or amended within the areas covered by a specific plan unless it is consistent with the adopted specific plan. The on-site infrastructure needed for the Project has been designed to support the proposed uses and development in the Specific Plan area. Any parcel or tentative map proposed for the Project site will be required to be consistent with the Specific Plan in order to be approved. Development within the Specific Plan area will be subject to the

requirements of the Salinas Zoning Code except as modified by the Specific Plan. Should any conflict arise between the two regulations, the Specific Plan regulations will prevail.

B. Rezoning Findings

1. **Finding:** The amendment (Rezone) is consistent with the Salinas General Plan, any applicable specific plan, and other plans and policies adopted by the Salinas City Council.

   Evidence: The proposed amendment (Rezone) will facilitate the development of the West Area Specific Plan within the North of Boronda FGA, which is consistent with the City's General Plan policy to plan for and manage future growth within designated future growth areas of the City. The Project incorporates New Urbanism and other design principles and provides a variety of dwelling types and densities in accordance with the land use and housing mix required by the General Plan. The proposed Rezone will not conflict with other plans and policies of the Salinas City Council.

   Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference.

2. **Finding:** The amendment (Rezone) will not have the effect of reversing the policies of the Salinas General Plan, any applicable specific plan, and other plans and policies adopted by the Salinas City Council.

   Evidence: The proposed amendment (Rezone) will facilitate the approval and development of the proposed West Area Specific Plan. The Specific Plan provides specific policies to implement the General Plan, Zoning and other plans and policies adopted by the Salinas City Council. There are no policies in the Salinas General Plan that will be reversed as a result of this amendment.

   Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference as additional evidence of the project's consistency.

3. **Finding:** The amendment (Rezone) would not create an isolated district unrelated to adjacent zoning districts.

   Evidence: The proposed Rezone will enable the project site to be developed as a New Urbanism Specific Plan as envisioned under the General Plan. Upon annexation of the project site in 2008, the site was zoned New Urbanism Interim (NI) with a Specific Plan Overlay to provide an interim holding zone until such time specific plans were approved by the City Council for the North of Boronda FGA and the ultimate zoning districts for the area were established. As such, upon the approval of the Specific Plan and Rezone, the project site will be rezoned from the New Urbanism Interim (NI) with a Specific Plan Overlay zoning district to

Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1(NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC) as well as the Park (P), Open Space (OS) and Public/Semipublic zoning districts. The Specific Plan Overlay district will continue to be applicable to each of the districts as well. These districts are compatible with and complementary to the existing residential (low, medium and high density), commercial, park and open space districts located across the major arterial roads, which form the project boundaries.

The proposed Rezone will facilitate the development of a variety of dwelling types and densities, neighborhood commercial retail and services, parks and supporting uses necessary to serve the proposed Specific Plan community and surrounding area. For example, the various residential districts (NE, NG-1 and NG-2) and the Village Center (VC) district will allow the development of 4,340 dwelling units in the Plan Area. Additionally, other types of dwellings such as density bonus units and accessory dwelling units will also be permitted. The Parks (P) district will facilitate the development of 11 parks, which will provide a variety of recreational opportunities for residents of the plan area and the surrounding area. The Open Space (OS) district will facilitate the development of the supplemental detention/retention basins located throughout the site. These basins create open space, passive recreation opportunities and are intended to serve the storm water surface run-off needs of the West Area. The Public/Semipublic district will provide sites for two new elementary schools and one middle school. Lastly, the Village Center (VC) district will facilitate the development of the Specific Plan's town center. This area (including the town square and mixed-use commercial and residential development) is intended to be a destination and focal point for both residents of the Plan Area and surrounding area.

4. **Finding:** The City has the capability to provide public utilities, roads, and services to serve the uses allowed by the proposed Rezoning.

Evidence: The EIR and Specific Plan thoroughly analyzed the infrastructure including public utilities, roads, and services necessary to serve the Project. Respectively, sections 3.11, 3.10, and 3.9 of the EIR address these topics. Through adoption of the Specific Plan, Development Agreement, West Area Specific Plan Final Program Environmental Impact Report (FEIR) and associated Mitigation Monitoring and Reporting Program, the City will ensure the provision of public utilities, roads and services necessary to serve the proposed development is provided.

According to the fiscal impact analysis prepared for the project (Attachment 14), the cost of City services would be offset by increased revenues generated by the Project. No unfunded City services costs have been identified. The West Area Specific Plan is projected to generate an annual surplus of between approximately $1,541,619 to $3,376,303.

C. Development Agreement Findings

1. Finding: The Development Agreement is consistent with the Salinas General Plan, any applicable specific plan, and other applicable plans and policies adopted by the Salinas City Council.

Evidence: The Development Agreement is proposed in conjunction with the West Area Specific Plan in accordance with the Salinas General Plan. The Specific Plan implements the goals and policies of the General Plan by providing a comprehensively planned and orderly development in the North of Boronda FGA, designed to incorporate and implement the tenets of New Urbanism, CPTED and other design principles. Additionally, it provides potential employment and recreational opportunities for future and nearby residents and increased tax revenue and expansion to support City services. In this regard, the *Fiscal Impact Analysis* prepared for the Project (included as Attachment 14 to the staff report), is projected to generate an annual revenue surplus of approximately $1,541,619 to $3,376,303 to the City's General Fund. Most importantly; the project will provide critically needed housing in a variety of dwelling types, densities and affordability levels to address the City's housing shortage and overcrowding issues.

Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference.

2. Finding: A development agreement that includes a subdivision shall not be approved unless the agreement provided that any tentative map prepared for the subdivision will comply with the provisions of Government Code Section 66473.7.

Evidence: Government Code Section 66473.7 addresses the provision of adequate water supply. A Water Supply Assessment was prepared for the project, and is included in the Appendices of the West Area Specific Plan Final Program EIR as Appendix G. California Water Services Company (Cal Water), the water purveyor to the project site, has provided a "Can and Will Serve" letter for the subject project.

Exhibit K Rezone Map – Rezone 2019-001

Attachment 5

ORDINANCE NO. _____ (N.C.S.)

AN ORDINANCE APPROVING THE DEVELOPMENT AGREEMENT FOR THE WEST AREA SPECIFIC PLAN PROJECT (DA 2019-001)
(RELATED TO EIR 2018-003, SPEC 2019-002, RZ 2019-001)

WHEREAS, Brian Finegan, Esq. (representing multiple property owners and developers) submitted applications for the West Area Specific Plan project (Project), including requests for Specific Plan, Rezone, and Development Agreement approvals that would permit development of the 797-acre project site shown in Exhibit A, herein incorporated by reference; and

WHEREAS, the City of Salinas (hereinafter "City"), as lead agency under the California Environmental Quality Act (Pub. Res. Act Section 21000 et seq.) and the State CEQA Guidelines (14 Cal. Code Regs. Section 15000 et seq.) (collectively "CEQA") has completed the Final Program Environmental Impact Report ("Final EIR") State Clearinghouse No. 2006021072 for the West Area Specific Plan in compliance with CEQA along with all supporting documentation and notices which are herein incorporated by reference as Exhibits C through I; and

WHEREAS, on December 4, 2019 the Salinas Planning Commission held a duly noticed and agendized public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, the Salinas Planning Commission weighed the evidence presented at said public hearing, including the staff report (and the project findings) which is on file at the Community Development Department, together with the record of environmental review including the Draft EIR, project findings, public comments on said document and responses thereto, the Final EIR (all of which were made publicly available consistent with state law prior to its public hearing and consideration of recommendations on the Project to the City Council), and evidence and public testimony presented at the public hearing; and

WHEREAS, by Resolution No. 2019-18, the Salinas Planning Commission recommended that the City Council certify the Final EIR, adopt the CEQA findings, adopt the Statement of Overriding Considerations, and adopt the Mitigation Monitoring Reporting Program for the Project; and

WHEREAS, by Resolution No. 2019-19, the Salinas Planning Commission recommended that the City Council approve the West Area Specific Plan (SPEC 2013-002), herein incorporated by reference as Exhibit B, and by so doing, recommends that the West Area Specific Plan be utilized as the land use and zoning implementation document for the Project; and

WHEREAS, by Resolution No. 2019-20, the Salinas Planning Commission recommended that the City Council adopt an Ordinance to rezone (RZ 2019-001) the subject site from New Urbanism Interim (NI) with a Specific Plan Overlay to**:** Neighborhood Edge

(NE)/Low Density Residential, Neighborhood General-1(NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC) as well as the Park (P), Open Space (OS) and Public/Semipublic Districts with Specific Plan Overlay, applied across the Specific Plan area as shown in Exhibit K, incorporated herein by reference; and

WHEREAS, by Resolution 2019-21, the Salinas Planning Commission recommended that the City Council adopt a Development Agreement (DA 2019-001), herein incorporated by reference: and

WHEREAS, on December 17, 2019 the Salinas City Council held a duly noticed and agendized public hearing to consider the Final EIR (ER 2018-003); the proposed West Area Specific Plan (SPEC 2013-002); Rezone (RZ 2019-001); and the proposed Development Agreement (DA 2019-001); and

WHEREAS, the Salinas City Council weighed the evidence presented at said public hearing, including the staff report which is on file at the City of Salinas Community Development Department, the project findings herein incorporated as Exhibit J, together with the record of environmental review including the Draft EIR, public comments on said document and responses thereto, the Final EIR (all of which were made publicly available consistent with state law prior to its public hearing and consideration of the Project), and evidence and public testimony presented at the public hearing; and

WHEREAS, notice of time and place of hearing for recommending certification of the Final EIR and recommending approval of the Project, DA 2019-001, was given in the manner prescribed by the City; and

WHEREAS, by Resolution adopted December 17, 2019, herein incorporated by reference, the City Council certified the Final EIR, adopted the CEQA findings, adopted the Statement of Overriding Considerations, and adopted the Mitigation Monitoring Reporting Program for the Project (which includes DA 2019-001); and

WHEREAS, the Salinas City Council has reviewed the proposed Development Agreement as shown in Exhibit L to determine its consistency with the following: California law; the goals, policies, and programs of the City of Salinas General Plan; the Salinas Municipal Code and all other applicable plans and policies adopted by the Salinas City Council; and the proposed West Area Specific Plan; and

WHEREAS, the West Area Specific Plan contains modifications of standards contained in the City of Salinas Municipal Code that are applicable only within the West Area Specific Plan boundary, and which will become effective upon the City Council's approval of the Specific Plan and attached approvals; and

WHEREAS, certain mitigation measures in the City's 2002 General Plan Final Program EIR and in the City's 2007 Final Supplement for the General Plan Final Program EIR are still valid and applicable to the Project and are herein incorporated by reference.

NOW, THEREFORE, BE IT ORDAINED BY THE COUNCIL OF SALINAS, as follows:

SECTION 1. The Salinas City Council finds and declares that the foregoing recitals are true and correct.

SECTION 2. The Salinas City Council has been provided with, and has reviewed, the Final EIR for the project, the staff report for the Project, written and oral testimony regarding the Project, and other relevant evidence in the administrative record (collectively, the "Record of Proceedings"), and hereby provides notification that the Record of Proceedings is on file with the City Clerk of the City of Salinas, 200 Lincoln Avenue, Salinas, CA 93901

SECTION 3. The Salinas City Council declares that it has been provided with and had reviewed the information contained in the Final Program Environmental Impact Report, the evidence in the record, the staff report and recommendations.

SECTION 4. The Salinas City Council has been provided with, and has reviewed, the Project Findings, attached hereto as Exhibit J and incorporated herein by this reference, and other relevant evidence in the Record of Proceedings.

SECTION 5. The Development Agreement between the City of Salinas and the applicable property owners/developers attached hereto as Exhibit L, and all of its terms and conditions, is herein incorporated by reference, and is herby approved.

SECTION 6. This ordinance shall take effect and be in force thirty days from and after its adoption.

SECTION 7. If any section, subsection, sentence, clause or phrase of this ordinance is for any reason held to be invalid or unconstitutional by a decision of any court of any competent jurisdiction, such decision shall not affect the validity of the remaining portions of this ordinance. The Salinas City Council hereby declares that it would have passed this ordinance, and each and every section, subsection, clause and phrase thereof not declared invalid or unconstitutional without regard to whether any portion of the ordinance would be subsequently declared invalid or unconstitutional.

SECTION 8. The City Clerk is hereby directed to cause the following summary of this ordinance to be published by one (1) insertion in a newspaper of general circulation published and circulated in the City of Salinas and hereby designated for that purpose by the Salinas City Council:

> "The Salinas City Council has approved a Development Agreement between the City and multiple property owners/developers, with respect to the development of the West Area Specific Plan, a 797 acre mixed use / residential New Urbanism project area bound by Boronda Road on the south, Russell Road and Rogge Road on the north, San Juan Grade Road on the west and Natividad Road on the east in the City of Salinas. This

Ordinance goes into effect 30 days after adoption. For additional detail concerning this amendment, contact the Community Development Department, 65 West Alisal Street, Salinas, CA 93901."

PASSED AND ADOPTED this 17th day of December 2019 by the following vote:

Errata Sheet to the Draft West Area Specific Plan

September 4, 2019

Introduction and Content

The Errata sheet consists of minor revisions to the Draft Specific Plan providing clarifications, some minor modifications as well as minor staff edits. The revisions to the Draft Specific do not change the intent or content of the document. The Errata sheet is in addition to typographical, re-ordering or similar non-substantive errors not listed.

Proposed changes are identified in Table 1, Errata Changes. Text deletions are shown with strikeout font and additions are shown with underlined font. Specific Plan table and figure modifications are listed and shown following Table 1 in the order that they are referenced in Table 1.

TABLE 1: Errata Changes

Section	Page	Modification
2.8.1	92	The design of all schools is encouraged to consider the New Urbanism design concepts, design standards and development regulations contained in the West Area Specific Plan to complement and promote compatibility with surrounding land uses. Fencing shall be black coated chain link.
4.8	166	If landscaping is used, evergreen plant material shall be spaced at an appropriated density to provide full screening. Fencing shall be black coated chain link.
2.5.3.6	88	A main pedestrian connection path will be located within a parking lot divider median landscaped with trees and shrubs in larger parking lots to enhance the safety and comfort of pedestrians. For parking lot lighting, see Appendix E, Light Standards.
4.5.5	156	Outdoor Energy Conservation and Parking Lot Lighting
4.8	166	Trees and landscaping planters shall be provided throughout the parking lots to provide shade and provide areas for bio-swales and bio-filters. For parking lot lighting, see Appendix E, Light Standards.
3.6	114	See Section 4.2.2 and Appendix E of this Specific Plan and Salinas Zoning Code Article V, Division 2: Parking, Loading and Outdoor Lighting.
3.6	116	See Section 4.2.2 and Appendix E of this Specific Plan and Salinas Zoning Code Article V, Division 2: Parking, Loading and Outdoor Lighting.
3.6	119	See Section 4.2.2 and Appendix E of this Specific Plan and Salinas Zoning Code Article V, Division 2: Parking, Loading and Outdoor Lighting.
6.4.1	231	Each of the two middle school sites is approximately 10 acres in size; the middle school site is approximately 21 acres in size. Improvement of school site frontages, ROW and parkway improvements are the responsibility of the owner, developer, entity, etc. developing the land adjacent to the site, subject to review and approval by the City Engineer and City Planner.
2.4.1	41	Figure updated to show current park shapes and locations.
1.3	25	Figure updated to show correct designation of the town square park
1.3	27	Figure updated to show correct district of the town square park
1.2.2.1	9	Figure updated to show north arrow.
4.2.2.1	136	Graphic updated to show dimension correctly.
4.2.2.1	136	Graphic updated to show dimension correctly.
4.2.2.1	137	Graphic added where it was missing.
4.2.3	139	Figure updated to show sound wall along Russell Road.
4.2.3.2	143	Figure updated to have consistent font

3.6	114	Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer.
3.6	114	Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.
3.6	117	Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer.
3.6	117	Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.
2.6	89	Inclusionary housing requirements (including the Ordinance) are further discussed in the Affordable Housing component for the West Area Specific Plan as contained in Appendix H of the Specific Plan. Regarding applicability of the Inclusionary Housing Ordinance, Parcelization Maps (see appendix B, Definitions) shall not be considered the first approval.
1.2.3.2	15	Table updated to show correct and updated APNs.
9.3	291	Parcelization Maps Parcelization Maps shall mean a parcel map processed administratively for the purpose of creating master parcels for sale, financing or phasing purposes and on which no development is permitted without further subdivisions or other entitlement approval.
3.11	129	A detailed and complete wall plan (including the design and color of all walls) for each neighborhood or Planning Area, and, when required, noise reduction calculations shall be submitted and approved by the City Planner and City Engineer before any sound walls are constructed within a neighborhood or Planning Area. The construction of walls along Russell Road shall be the responsibility of the developer.

4.2.3	141	A complete wall and fence plan (including the design and color of all walls and fences) for each neighborhood or neighborhood Planning Area and, when required, noise reduction calculations shall be submitted and approved by the City Planner and City Engineer prior to any walls or fences being constructed within a neighborhood or neighborhood Planning area. The construction of walls along Russell Road shall be the responsibility of the developer.
4.1	132	Residential architectural design is the key to New Urbanism neighborhoods of Salinas. Where the word "shall" is used, the design standard is mandatory, where "encouraged" or "should" is used, the design standard is discretionary and an alternative design solution which achieves a comparable result may be used if approved by the City Planner.
5.3.2.5	200	Both sides of Russell Road will consist of an 8-foot parkway, a path 8-feet wide, and an 8-foot landscaped area between the path and a perimeter wall, or Type 3 wall as applicable per Community Wall Plan on the adjacent property line. The owner, developer and/or entity developing along Russell Road shall be responsible for construction of walls, frontages, ROW/parkway improvements, and half the street width, as determined by the City Engineer.
7.3	240	The landscape and maintenance plan must be prepared by a qualified professional and is subject to approval by the City Engineer and the City Planner (see Section 4.6 and 7.4.9 for further discussion). The submittal for the map creating the basin(s) shall also include improvements of frontages, ROW/parkway, and half the street width, as determined by the City Engineer.
2.8.1	91	It is anticipated that the middle school will serve primarily students residing in the Plan Area. A third elementary school site had been made available for Santa Rita Union School District in the Central Area Specific Plan area across Natividad Road. As of the date of approval of this Specific Plan, a boundary adjustment had been initiated between Santa Rita Union School District and Alisal Union School District. If the districts finalize the boundary adjustment, Santa Rita Union School District would relinquish the third elementary school site to the Alisal Union School District.

8.4	270	With the exception of Rogge Road, these roads will be improved by the developer and/or shall be funded proportionately by the City's Traffic Fee Ordinance in place at the time of permit issuance, or as otherwise determined in the development agreement. Fair share cost of the traffic mitigation measure improvements identified in the West Area Specific Plan Final EIR shall be collected in the same manner as TFO fees.
9.7	303	m. Incorporation and development of the following APNs 211-214-025-000 and 211-214-026-000 in accordance with this Specific Plan.
6.4.1	232	Table 6-4 updated to show latest student generation rates per EIR comment letters from school districts.
8.7	280	Add "… or special districts" to footnote 1 on Table 8-1
9.3	292	Development Review Applications and Building Permits Following approval of each final map, project applicants within the Plan Area may apply for the applicable development review process or building permit through the Community Development Department and Salinas Permit Center as applicable. Building Permits may not be issued until approval of the final map and the applicable Development Review Application process (SPR, CUP, etc.) is completed. For projects subject to Site Plan Review (SPR), the Community Development Department shall approve, conditionally approve, or disapprove the site plan within 30 days of the application being deemed complete unless the Applicant requests an extension in writing. Other Development Review Application processes such as Conditional Use Permits are subject to the timelines established in the Permit Streamlining Act. All project structures must be consistent with the approved Specific Plan, City NPDES Permit/SWDS/SWSP requirements, final map, and applicable Salinas Zoning Code requirements and must comply with all California Building Code (including CalGreen) and Fire Code requirements and all other applicable codes adopted and enforced by the City. The applicable California Building Code and Fire Code (as may be amended) shall be those in effect at the time of the building permit submittal.
8.4	273	It is expected that ~~17~~ 19 additional police officers and associated equipment/vehicles…

Temporary Use of Land	**See Zoning Code Section 37-50.300 Temporary Use of Land**

(1) Architectural features can project two feet into front, corner or interior side yard setbacks that are 5 feet or more.
(2) To maintain the required densities, percentages and variety of lot sizes, once subdivided, no further subdivision shall be allowed without a "major" Specific Plan amendment and subsequent CEQA evaluation. This does not apply to dedicated school sites in accordance with Chapter 31 of the Salinas Municipal Code.
(3) Front and corner side yards and any additional yard space located in front of the street façade of a dwelling and side yard fence are required to be landscaped with a mix of vegetation and other pervious materials as approved by the City Engineer and City Planner. Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off-street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer. Parking in required front, corner or interior side yards is prohibited except on the approved driveway leading to required off-street parking (garage).
(4) Rear yard and interior side yard hardscape/impervious improvements are limited to a total of 50% of the total square footage of the yard or 500 square feet, whichever is less (not including building/structure footprints and driveways approved by the City Planner and City Engineer serving the required parking). Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.
(5) See Salinas Zoning Code Section 37-50.080: Exceptions to Height Limits.
(6) See Salinas Zoning Code Section 37-50.060: Density Bonus.
(7) Minimum lot sizes may be reduced when the exclusive use of such lots is intended for utility substations, pumping stations, and similar features.
(8) Refer to Section 4.2.2, Garages and Driveways of the Specific Plan. All garages shall have roll-up doors and must be set back a minimum of five feet from the street façade of the principal dwelling.
(9) Frontage minimum of 30 feet accommodates curved streets and knuckle corners.
(10) Standard 20-foot wide minimum public alley. Rear lot line measured at the edge of ROW.
(11) Rear lot line measured at center line of standard 20-foot-wide minimum alley easement.
(12) Minimum 20-foot driveway length to street property line as measured from garage door.
(13) No street-loaded garages allowed for duplex/triplex dwellings.
(14) An unenclosed porch or architectural entry feature shall be at least sixty square feet with a minimum unobstructed dimension of six feet.
(15) Subject to the approval of the City Planner and to promote eyes on the street and encourage an engaging streetscape, the front setback may be reduced to a minimum of five feet for an outdoor courtyard not exceeding a maximum of 100 square

feet (of pavers or pervious concrete) in area and surrounded by landscaping and enclosed by a wall exceeding thirty-six inches in height to a maximum of forty-two inches in height.
(16) If second story living area is provided, the rear setback shall be five feet or 15 feet, as applicable.
(17) Rear lot line measured from edge of the ROW.

(1) Architectural features can project two feet into front, corner or interior side yard setbacks that are 5 feet or more.

(2) To maintain the required densities, percentages and variety of lot sizes, once subdivided, no further subdivision shall be allowed without a "major" Specific Plan amendment and subsequent CEQA evaluation. This does not apply to subsequent subdivisions in accordance with Section 3.9.3, Mixed Use Commercial to Residential Flexibility, of this Specific Plan, or dedicated school sites in accordance with Chapter 31 of the Salinas Municipal Code. Front and corner side yards and any additional yard space located in front of the street façade of a dwelling and side yard fence are required to be landscaped with

a mix of vegetation and other pervious materials as approved by the City Engineer and City Planner. Pavers and pervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off-street parking, an entry walkway as approved by the City Engineer and City Planner not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling or an approved semi-private courtyard. Parking in required front, corner or interior side yards is prohibited except on the approved driveway leading to required off-street parking (garage).

(3) Front and corner side yards and any additional yard space located in front of the street façade of a dwelling and side yard fence are required to be landscaped with a mix of vegetation and other pervious materials as approved by the City Engineer and City Planner. Pavers and pervious or impervious paving or concrete are prohibited in these areas, except for an approved driveway leading to required off-street parking, an entry walkway not exceeding four feet in width providing pedestrian access to the main entry feature/porch of the dwelling unit or an approved semi-private courtyard; subject to approval by the City Planner and City Engineer. Parking in required front, corner or interior side yards is prohibited except on the approved driveway leading to required off-street parking (garage).

(4) Rear yard and interior side yard hardscape/impervious improvements are limited to a total of 50% of the total square footage of the yard or 500 square feet, whichever is less (not including building/structure footprints and driveways approved by the City Planner and City Engineer serving the required parking). Pavers and pervious paving or concrete will count toward the hardscape maximum coverage except for the driveway serving the required off-street parking. This provision applies to yard space that is outside of the required setback.

(5) See Salinas Zoning Code Section 37-50.080: Exceptions to Height Limits.

(6) See Salinas Zoning Code Section 37-50.060: Density Bonus.

(7) Minimum lot sizes may be reduced when the exclusive use of such lots is intended for utility substations, pumping stations, and similar features.

(8) Refer to Section 4.2.2, Garages and Driveways of the Specific Plan. All garages shall have roll-up doors and must be set back a minimum of five feet from the street façade of the principal dwelling.

(9) Frontage minimum of 30 feet accommodates curved streets and knuckle corners.

(10) Standard 20-foot-wide minimum public alley. Rear lot line measured at the edge of ROW. All garages must be set back a minimum of five feet from the street façade of the principal structure.

(11) Rear lot line measured at center line of standard 20-foot wide minimum alley easement.

(12) Minimum 20-foot driveway length to street property line as measured from garage door.

(13) No street-loaded garages allowed for duplex/triplex dwellings.

(14) An unenclosed porch or architectural entry feature shall be at least sixty square feet with a minimum unobstructed dimension of six feet.

(15) Subject to the approval of the City Planner and to promote eyes on the street and encourage an engaging streetscape, the front setback may be reduced to a minimum of five feet for an outdoor courtyard not exceeding a maximum of 100 square feet (of pavers or pervious concrete) in area and surrounded by landscaping and enclosed by a wall exceeding thirty-six inches in height to a maximum of forty-two inches in height. Rear lot line measured from edge of the ROW.

(16) If second story living area is provided, the rear setback shall be five feet or 15 feet, as applicable.

(17) Rear lot line measured from edge of the ROW.

(18) Where private drives and alleys are provided, curbs shall be painted red and appropriate signage for parking restrictions shall be provided as determined by the City Engineer, City Planner, and Fire Chief.

(19) The minimum lot frontage requirement for single-family attached dwellings shall be twenty feet except that the minimum lot frontage requirement may be waived for single-family attached dwellings (townhomes and rowhouses) located on lots, which do not front a street.

(20) 0 foot interior side yard setback if abutting a single-family attached dwelling.

(21) For lots that do not have street frontage (such as green court housing products, etc.) the location of required front, side, and rear yards will be determined by the City Planner.

(22) For Custom Dwellings located on a private drive, the alley easement development regulations shall apply.

SUBJECT: NOTICE OF PREPARATION – WEST AREA SPECIFIC PLAN EIR

EIR CONSULTANT
Steve McMurtry, Principal Planner
De Novo Planning Group
1020 Suncast Lane, Suite 106
El Dorado Hills, CA 95762
Phone: (916) 580-9818

An Initial Study has been prepared for the proposed project and is attached to this Notice of Preparation (NOP). The Initial Study lists those issues that will require detailed analysis and technical studies that will need to be evaluated and/or prepared as part of the EIR. The EIR will consider potential environmental effects of the proposed project to determine the level of significance of the environmental effect, and will analyze these potential effects to the detail necessary to make a determination on the level of significance.

Those environmental issues that have been determined to be less than significant will have a discussion that is limited to a brief explanation of why those effects are not considered potentially significant. In addition, the EIR may also consider those environmental issues which are raised by responsible agencies, trustee agencies, and members of the public or related agencies during the NOP process.

We need to know the views of your agency or organization as to the scope and content of the environmental information germane to your agency's statutory responsibilities or of interest to your organization in connection with the proposed project. Specifically, we are requesting the following:

1. If you are a public agency, state whether your agency will be a responsible or trustee agency for the proposed project and list the permits or approvals from your agency that will be required for the project and its future actions;

2. Identify significant environmental effects and mitigation measures that you believe need to be explored in the EIR with supporting discussion of why you believe these effects may be significant;
3. Describe special studies and other information that you believe are necessary for the City of Salinas to analyze the significant environmental effects, alternatives, and mitigation measures you have identified;
4. For public agencies that provide infrastructure and public services, identify any facilities that must be provided (both on- and off-site) to provide services to the proposed project;
5. Indicate whether a member(s) from your agency would like to attend a scoping workshop/meeting for public agencies to discuss the scope and content of the EIR's environmental information;
6. Provide the name, title, and telephone number of the contact person from your agency or organization that we can contact regarding your comments.

Due to the time limits mandated by State law, your response must be sent and received by the City of Salinas by the following deadlines:

- For responsible agencies, not later than 30 days after you receive this notice.
- For all other agencies and organizations, not later than 30 days following the publication of this Notice of Preparation. The 30 day review period ends on Tuesday, November 10, 2015.

If we do not receive a response from your agency or organization, we will presume that your agency or organization has no response to make.

A responsible agency, trustee agency, or other public agency may request a meeting with the City of Salinas or its representatives in accordance with Section 15082(c) of the CEQA Guidelines. A public scoping meeting will be held during the public review period as follows:

SCOPING MEETING: October 29, 2015 at 6:30 p.m., at the McKinnon Elementary School, Multi-purpose room, 2100 McKinnon Street, Salinas, CA 93906.

Please send your response or questions to Gabriel Elliott, Project Manager at the City of Salinas located at 65 W. Alisal Street (Second Floor), Salinas, CA 93901. Contact information: email: gabriel.elliott@ci.salinas.ca.us; Telephone: (831) 775-4246.

Present Land Use/Zoning/General Plan Designation:

GP= Mixed Use, Res Low, Res Medium, Res High, Public/Semipublic, Open Space and Park. Zoning= New Urbanism Interim

Project Description: *(please use a separate page if necessary)*

An application for adoption of a Specific Plan and rezoning of the Specific Plan Area from New Urbanism Interim (NI) with a Specific Plan Overlay, to Neighborhood Edge (NE)/Low Density Residential, Neighborhood General 1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, Village Center (VC), Public/Semipublic (PS), Parks (P), and Open Space (OS), with the applicable Specific Plan Overlay District. The West Area Specific Plan will provide for up to 4,340 new dwelling units, 571, 500 sq.ft. of commercial floor area, 5 schools, parks and associated infrastructure.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

EXHIBIT "H"

CEQA FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS OF THE CITY COUNCIL OF THE CITY OF SALINAS FOR THE WEST AREA SPECIFIC PLAN

I. INTRODUCTION

The City of Salinas (hereinafter "City"), as lead agency, prepared a Program Environmental Impact Report (hereinafter "EIR") for the West Area Specific Plan (hereinafter "Specific Plan" or "project"). In its entirety, the EIR consists of the February 27, 2019 Draft Program EIR (hereinafter "Draft EIR" or "DEIR") and the October 10, 2019 Final Program EIR (hereinafter "Final EIR" or "FEIR") (State Clearinghouse No. 2006021072).

The Applicant has submitted applications requesting approval of the West Area Specific Plan, Rezoning, and Development Agreement. As approved, the project will facilitate the City's future consideration of applications for individual projects to be proposed within the Specific Plan Area.

The EIR analyzes the impacts of the West Area Specific Plan and the anticipated subsequent filing of maps and other development applications in the future. Therefore, the EIR analyzes the total impacts of the West Area Specific Plan, including these applications yet unfiled, so that future filings will not require separate environmental analysis, as long as development proposed does not substantially deviate from the approved Specific Plan. The specific processes by which the City will review individual applications are set forth on pages ES-1 through pages ES-4 of the Draft EIR and are also described below in section III(D).

These findings, as well as the accompanying statement of overriding considerations in Section XI below, have been prepared in accordance with the California Environmental Quality Act (hereinafter "CEQA") (Pub. Resources Code, § 21000 et seq) and its implementing guidelines (hereinafter "CEQA Guidelines") (Cal. Code Regs., tit. 14, § 15000 et seq).

II. DEFINITIONS AND ACRONYMS

Like the EIR itself, these findings use a number of acronyms. Key acronyms are defined the first time they are introduced in the text of this document.

III. PROJECT DESCRIPTION

A. Location

As described in the DEIR, the City of Salinas is located in northern Monterey County, within the Salinas Valley between the Gabilan and Santa Lucia mountain ranges. Salinas is situated approximately 20 miles northeast of the City of Monterey, 60 miles south of San Jose, 100 miles south of San Francisco and 325 miles north of Los Angeles. Figure 2-1 in the Draft EIR displays the project regional location. Several regional transportation routes are located within or near Salinas, including U.S. Highway 101 (U.S. 101), State Routes 68 (SR 68) and 183 (SR 183), the

Union Pacific Railroad line and the Monterey Regional Airport in Monterey. Salinas Municipal Airport, a general aviation facility, is located in the southeastern portion of the city.

The Specific Plan Area is located within the incorporated boundary of the City of Salinas. It is bounded by San Juan Grade Road on the west, East Boronda Road (also referred to as "Boronda Road") on the south, Natividad Road on the east, and Rogge Road and the future extension of Russell Road on the north. Gabilan Creek is located east of the Specific Plan Area, while U.S. 101 and North Main Street are located to the west. Unincorporated land under the jurisdiction of the County of Monterey abuts the Specific Plan Area on the north and northeast (DEIR, p. 2.0-1).

B. Overview

The West Area Specific Plan establishes the land use planning and regulatory guidance, including the land use and zoning designations and policies, development regulations, and design standards, for the approximately 797-acre Specific Plan Area. The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to—the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the City of Salinas General Plan, as well as more specific policies and implementation measures contained in other documents. The City of Salinas Zoning Code requirements will apply to development applications and property within the Specific Plan Area unless specifically superseded by the development regulations or design standards contained in the Specific Plan.

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan (including the Specific Plan's goals) and related entitlements. Land uses in the approximate 797-acre Specific Plan Area include residential, mixed use commercial, community park, neighborhood parks, small parks, schools and open space (including supplemental storm water detention/retention basins). Implementation will involve development of the site under the New Urbanism Zoning Districts of Neighborhood Edge (NE)/Low Density Residential, Neighborhood General 1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, Village Center (VC) as well as the Public and Semipublic (PS), Parks (P), and Open Space (OS) Zoning Districts.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space areas (including supplemental storm water detention/retention basins) and 11 parks). It is anticipated that the Specific Plan Area will house up to 15,928 residents at project build-out.

C. Project Objectives

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan and related entitlements. The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and 11 parks. The Specific Plan goals are summarized as follows:

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.
- Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.
- Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.
- Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.
- Provide public services and infrastructure improvements that achieve and maintain City service standards.
- Provide an inviting tree-lined street system which incorporates traffic calming and other measures.
- Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater Future Growth Area (FGA) and City as a whole.
- Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.
- Provide for a reasonable jobs/housing balance.
- Provide opportunities for senior housing.
- Provide for a site/parcel-based post-construction Stormwater Control Measures (SCMs)/LID to the maximum extent practicable.

It is noted that there are additional project objectives that are not specifically presented in the Specific Plan, but are more overarching and are a response to, and driven by, the policy direction from the State Legislature and the Salinas City Council.

The State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by

producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The City of Salinas has recognized the need for additional housing supply for its citizens for many decades. Dating back to 1986, the City entered into the Boronda Memorandum of Understanding (MOU) with the County of Monterey to preserve the best agricultural land and to provide certain areas for future urban growth. Twenty years later, in 2006, the Greater Salinas Area MOU was adopted to preserve agricultural lands within Monterey County, and to provide future growth areas (FGSs) for Salinas. A year later, in 2007, applications for an amendment to the City's Sphere of Influence (to include the FGAs) and Pre-Zoning and Annexation (for the majority of the North of Boronda FGA consisting of approximately 2,400 acres) were submitted to the Monterey County Local Agency Formation Commission (LAFCO) for consideration. A Supplemental EIR for the Salinas General Plan Final Program EIR (SCH#2007031055) was also submitted in conjunction with the applications. The applications were approved by LAFCO on May 19, 2008. The North of Boronda FGA (which includes the West Area Specific Plan) was formally annexed to the incorporated City of Salinas on September 8, 2008 and zoned New Urbanism Interim (NI) with a Specific Plan Overlay. The West Area Specific Plan is a reflection of over twenty years of planning for new development, which is reflected by the City Council's approval of the FGA, including annexation of the land into the City limits.

The following two overarching project objectives are presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

Based on its own review of the EIR and other information and testimony received in connection with the project, as well as the statutory and planning policies described above, the City Council finds all of these objectives to be acceptable and persuasive from a public policy standpoint. In

choosing to approve the project, the City thus embraces these objectives and accords them weight in considering the feasibility of alternatives set forth in the EIR, and in invoking overriding considerations in approving the project. (See *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1507-1508.)

D. Discretionary Approvals

Project approval requires the City, as lead agency, to take discrete planning and regulatory actions to approve the overall project. In addition, certain "responsible agencies" may ultimately rely in part on the programmatic analysis in the Specific Plan Area in making decisions associated with future site-specific projects consistent with the Specific Plan. Described below are the discretionary actions necessary to carry out the project.

City of Salinas

In addition to certifying the Final EIR and adopting these Findings and the associated Statement of Overriding Considerations and Mitigation Monitoring Plan (CEQA requirements), the City itself must approve the following actions:

- Certification of the EIR and adoption of the Mitigation Monitoring and Reporting Program (MMRP);
- Approval of the Draft West Area Specific Plan;
- Approval of the rezoning of the Specific Plan area from NI with a Specific Plan Overlay to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay is also applicable to each Zoning District; and
- Approval of the Development Agreement;
- Subsequent Approvals: Parcel Maps, tentative maps, Final Maps, Subdivision Improvement Plans, Site Improvement Plans, Grading Permits, Building Permits, Conditional Use Permits, Business Permits, Encroachment Permits, etc.

Other Responsible/Trustee Agencies

The agencies below will also use the EIR, either as responsible agencies or as trustee agencies:

- California Department of Fish and Wildlife – Lake and Streambed Alteration Agreement (1600 permit);
- Cal Water – Approval of SB 610 Water Supply Assessment, Approval to serve the Specific Plan Area;
- Central Coast Region - Regional Water Quality Control Board – Clean Water Act Section 401 Water Quality Certification, National Pollution Discharge Elimination System (NPDES) general construction permit;
- Comcast/AT&T/SBC/Other – Approval to serve the Specific Plan Area, approval of telecommunications utility plans, Encroachment Permits;
- Johnson Canyon Landfill – Approval to serve the Specific Plan Area;
- Monterey Bay Air Resources District – Authority to Construct; Demolition permit;

- Monterey Bay Community Power – Approval to Serve the Specific Plan Area;
- Monterey One Water – Approval to serve the Specific Plan Area for wastewater services, and Encroachment Permit;
- Monterey County Health Department - Well demolition permit, Well construction permit;
- Monterey County Water Resources Agency – Approval to serve the Specific Plan Area, Encroachment Permit;
- Monterey-Salinas Transit – Approval to serve the Specific Plan Area, approval of bus stop locations and design;
- Pacific Gas and Electric Company – Approval to serve Specific Plan Area, approval of relocation plans, approval of electric and gas utility plans, Encroachment Permit;
- Salinas Valley Solid Waste Authority – Approval to serve the Specific Plan Area; and
- Santa Rita Union School District – Approval of site for the construction of two new elementary schools and one middle school

Federal Agencies

The following federal agencies also have approval authority over some aspects of the project, though these agencies are not subject to CEQA and instead are required to comply with the federal National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.):

- U.S. Army Corps of Engineers;
- U.S. Fish and Wildlife Service; and
- U.S. Federal Emergency Management Agency.

Future Projects

All individual future development projects proposed within the Specific Plan Area will be reviewed to determine their individual CEQA compliance requirements. The type of CEQA analysis required would be determined at the time a project is proposed.

It is noted that the Specific Plan provides a very high level of design detail for certain components of the project. To the extent that sufficient detail is available in the Specific Plan, a full project-level analysis is provided in this EIR. Examples of a full project level analysis would include topics that are related to the physical acreage affected (i.e., the project footprint), as opposed to the number of units, land uses/zoning, or other design parameters. Topics such as Biological Resources, Cultural Resources, and Hydrology/Water Quality are analyzed at a project-level analysis in this EIR given that these are physical environmental resources, and the area of impact is fully defined. Additionally, the Specific Plan includes a substantial level of detailed information that allows for a project-level analysis of topics such as Air Quality, Greenhouse Gases and Climate Change, Noise, Population and Housing, Transportation and Circulation, and Utilities. The analysis for these topics is driven by the number of units and square footage of development, which is detailed in the land use design and development projections. In some cases, there may be specific commercial uses that have design details developed at a later date that cannot reasonably be analyzed at a project-level at this time. Additionally, the design of the school facilities and other public facilities are not known at this time, so they are not able to be analyzed at a project-level.

This EIR examines the planning, construction and operation of the project. The program-level approach, with some project-level analysis, is appropriate for the project because it allows comprehensive consideration of the reasonably anticipated scope of the development plan; however, as discussed above, not all design aspects of the future development phases are known at this stage in the planning process. Subsequent individual development that requires further discretionary approvals will be examined in light of this EIR to determine whether additional environmental documentation must be prepared.

CEQA Guidelines Section 15168 states that a program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

1. Geographically,
2. As logical parts in the chain of contemplated actions,
3. In connection with issuance of rules, regulations, plans or other general criteria to govern the conduct of a continuing program, or
4. As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

According to CEQA Guidelines section 15168, subdivision (c)(5), "[a] program EIR will be most helpful in dealing with later activities if it provides a description of planned activities that would implement the program and deals with the effects of the program as specifically and comprehensively as possible." Later environmental documents (EIRs, mitigated negative declarations, or negative declarations) can incorporate by reference materials from the program EIR regarding regional influences, secondary impacts, cumulative impacts, broad alternatives, and other factors (CEQA Guidelines Section 15168[d][2]). These later documents need only focus on new impacts that have not been considered before (CEQA Guidelines Section 15168[d][3]).

Section 15168(c), entitled "Use with Later Activities," provides, in pertinent part, as follows: Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared:

1. If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration. That later analysis may tier from the program EIR as provided in Section 15152.
2. If the agency finds that pursuant to Section 15162, no subsequent EIR would be required, the agency can approve the activities as being within the scope of the project covered by the program EIR, and no new environmental document would be required. Whether a later activity is within the scope of a program EIR is a factual question that the lead agency determines based on substantial evidence in the record. Factors that an agency may consider in making that determination include, but are not limited to, consistency of the later activity with the type of allowable land use, overall planned density and building intensity, geographic area analyzed for environmental impacts, and covered infrastructure, as described in the program EIR.

3. An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into later activities in the program.
4. Where the later activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were within the scope of the program EIR.

Here, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e. tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether there are new environmental effects that were not covered by the program EIR). The City's expectation, at least at present, is that the checklist will conclude that most, or all, components of the Specific Plan can be developed with no new analysis of environmental effects given that there is a high level of resolution with regard to the project details that have been analysis in this program EIR. In some cases, however, a site-specific application (i.e., a proposed commercial use) may have specific issues associated with the project, or business, that this program EIR could not anticipate given the information that was available at this time. In those situations, the detailed site-specific information from that application could have site-specific effects not wholly anticipated in this EIR and would require some additional environmental review. (See also CEQA Guidelines section 15063, subd. (b)(1)(C).)

Future site-specific approvals may also be narrowed pursuant to the rules for tiering set forth in CEQA Guidelines Section 15152. "'[T]iering is a process by which agencies can adopt programs, plans, policies, or ordinances with EIRs focusing on 'the big picture,' and can then use streamlined CEQA review for individual projects that are consistent with such…[first tier decisions] and are…consistent with local agencies' governing general plans and zoning.'" (*Koster v. County of San Joaquin* (1996) 47 Cal.App.4th 29, 36.) Section 15152 provides that, where a first-tier EIR has "adequately addressed" the subject of cumulative impacts, such impacts need not be revisited in second- and third-tier documents. Furthermore, second- and third-tier documents may limit the examination of impacts to those that "were not examined as significant effects" in the prior EIR or "[a]re susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means." In general, significant environmental effects have been "adequately addressed" if the lead agency determines that:

a. they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental impact report; or
b. they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project.

Here, as noted above, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e., tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether all significant environmental impacts identified have been "adequately addressed" in the program EIR). Thus, if a new analysis is required for these site-specific actions, it would focus on impacts that cannot be "avoided or mitigated" by mitigation measures that either (i) were adopted in connection with the Specific Plan or (ii) were formulated based on information in this EIR.

In addition, because the EIR addresses the effects of rezoning the land within the proposed Specific Plan area, future environmental review can also be streamlined pursuant to Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183. These provisions, which are similar but not identical to the tiering provisions, generally limit the scope of necessary environmental review for site-specific approvals following the preparation of an EIR for a "zoning action." For such site-specific approvals, CEQA generally applies only to impacts that are "peculiar to the parcel or to the project" and have not been previously disclosed, except where "substantial new information" shows that previously identified impacts would be more significant than previously assumed. Notably, impacts are considered not to be "peculiar to the parcel or to the project" if they can be substantially mitigated pursuant to previously adopted, uniformly applied development policies or standards. As noted above, the City anticipates that, in assessing the extent to which the Specific Plan EIR has previously addressed significant impacts that might occur with individual projects, the City may conclude that in some instances (e.g., with respect to agricultural resources, cultural resources, geology, soils, and paleontological resources), no further analysis beyond that found in the program EIR will be necessary.

Finally, for purely residential projects consistent with the Specific Plan, the City intends to preserve its ability to treat such projects as exempt from CEQA pursuant to Government Code section 65457. Subdivision (a) of that statute provides that "[a]ny residential development project, including any subdivision, or any zoning change that is undertaken to implement and is consistent with a specific plan for which an [EIR] has been certified after January 1, 1980, is exempt from the requirements of [CEQA]." The statutes go on to say, moreover, that "if after adoption of the specific plan, an event as specified in Section 21166 of the Public Resources Code occurs, the exemption provided by this subdivision does not apply unless and until a supplemental [EIR] for the specific plan is prepared and certified in accordance with the provisions of [CEQA]. After a supplemental [EIR] is certified, the exemption … applies to projects undertaken pursuant to the specific plan." (See also CEQA Guidelines section 15182.)

When purely residential projects are proposed, the City will consider whether they qualify for this exemption or whether the West Area Specific Plan EIR must be updated through a supplement to this EIR or a subsequent EIR as required by Public Resources Code section 21166 and CEQA Guidelines sections 15162 and 15163.

IV. ENVIRONMENTAL REVIEW PROCESS

The Notice of Preparation (hereinafter "NOP") of an EIR was circulated for public review and comment from October 15, 2015 to November 13, 2015 in accordance with CEQA Guidelines section 15082. Written responses to the NOP were received from the following interests/agencies:

1. Northern Salinas Valley Mosquito Abetment District (October 21, 2015)
2. California Department of Transportation (October 28, 2015)
3. Monterey-Salinas Transit (November 16, 2015)
4. Monterey County Resource Management Agency (November 16, 2015)
5. California Natural Resource Agency Division of Land Resource Protection (November 10, 2015)
6. Salinas Union High School District (November 10, 2015)
7. Ohlone/Costanoan-Esselen Nation (January 11, 2016)
8. Santa Rita Union School District (January 29, 2016)
9. Transportation Agency of Monterey County (March 31, 2016)

As part of the early consultation process and pursuant to the CEQA Guidelines section 15083 regarding early public consultation, a scoping meeting was held at the City of Salinas Rotunda (City Council chamber) on October 29, 2015. No specific comments were made about the scope of issues to be addressed in the EIR. Questions and comments were primarily focused on the project description and the project consideration process.

Pursuant to CEQA Guidelines sections 15023, subdivision (c), and 15087, subdivision (f), the State Clearinghouse in the Office of Planning and Research was responsible for distributing environmental documents to State agencies, departments, boards, and commissions for review and comment. The City followed required procedures with regard to distribution of the appropriate notices and environmental documents to the State Clearinghouse. The State Clearinghouse was obligated to make, and did make, that information available to interested agencies for review and comment. The NOP was received by the State Clearinghouse (SCH # 2006021072) and a 30-day public review period ended on November 13, 2015. The NOP and all comments received on the NOP are presented in Appendix A of the Draft EIR.

An Initial Study was also prepared for the project. Included below is a brief summary of findings from the Initial Study on environmental topics that were either found to have no impact or be less than significant, or were found to be sufficiently addressed in the General Plan EIR, and thus are not included within individual sections of the Draft EIR. For full Initial Study Findings and individual topics found to be less than significant through the Initial Study process refer to Appendix A of the Draft EIR.

- **Aesthetics:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would allow development to occur in the City in both vacant and underdeveloped portions of the community, and that the introduction/expansion of urban uses into these areas has the potential to interrupt views of natural features, open space, the hillsides, and agricultural resources, reducing

the aesthetic value of these resources. Additionally, new development in the City was found to increase the amount of light and glare in the community, particularly in areas planned for nonresidential development, such as retail and general commercial. It was also found that future development under the General Plan has the potential to change the visual character of the City.

To minimize and mitigate the impacts on aesthetics, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following five mitigation measures: Mitigation Measure A1 requires the City to implement the City's Gateway Guidelines; Mitigation Measure A2 requires the City to strengthen and require compliance with the City's Design Guidelines; Mitigation Measure A3 requires the City to improve the Lighting Ordinance; Mitigation Measure A4 requires the City to implement landscaping requirements for all proposed projects; and Mitigation Measure A5 requires the City to review all discretionary projects for aesthetics impacts. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures A1 through A5, the potential citywide aesthetics impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that aesthetic impacts associated with the FGAs, which includes the West Area Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Agriculture and Forest Resources:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would result in the conversion of 3,525 acres of agriculture lands to urban uses. The *Final Environmental Impact Report* also indicates that General Plan buildout would result in agricultural activity in proximity to residential and other urban uses, which may result in conflicts between the uses. It is noted that agricultural activity can cause nuisances related to air quality and noise that may disturb surrounding development. Urban activities may also negatively affect nearby agricultural uses, as increased vandalism often occurs and the introduction of domestic animals may disturb certain agricultural activities.

  The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures AG1 through AG4, the impacts on potential compatibility issues would be reduced to a less than significant level; however, while the impacts on agricultural conversion would be reduced to the extent feasible, a significant and unavoidable impact would remain related to the loss of important farmland. Mitigation AG5 specifically addressed Agricultural

Land Conservation Easement Program, which states that the City will work with the County of Monterey and other local jurisdictions to create and implement an agricultural land conservation easement program, including such measures as securing the dedication of easements or by paying a mitigation fee that could be used to purchase easements through a mitigation bank. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a $750.00 per acre mitigation fee for agricultural lands currently designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance."

The City of Salinas certified the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), adopted a statement of overriding considerations relative to this significant and unavoidable impact, and approved the Salinas General Plan.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that agricultural impacts associated with the FGAs, which includes the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above-referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Geology and Soils:** Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Hazards and Hazardous Materials:** While the Draft EIR analyzes Hazards and Hazardous Materials, several topics were determined to not warrant additional analysis within the Chapter.

  The land uses proposed within the Specific Plan Area would not be expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Furthermore, the project is not located in the vicinity of an airport or private airstrip; therefore, it would not result in a safety hazard related to air traffic for people residing or working in the Specific Plan Area. These topics did not warrant additional analysis and were not addressed further in the EIR.

Separately, the City has adopted a Multi-hazard Emergency Plan, which serves as extensions of the California Emergency Plan and the Emergency Resource Management Plan. The purpose of the Multi-hazard Emergency Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Operations Center (EOC) in City Hall serves as the center of the City's emergency operations. The Plan also addresses evacuation and movement of people in the event of an emergency. The project does not impair implementation of or physically interfere with the Multi-hazard Emergency Plan. Implementation of the project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

Lastly, the project is not located in an area that is considered a high risk for wildfires. The project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Implementation of the proposed project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

- **Land Use and Planning:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the impacts would be reduced to a less than significant level with mitigation.

  Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

  The City certified the Final Supplemental EIR and approved annexation of the North of Boronda FGA, which includes the West Area Specific Plan. The project, as proposed, is consistent with the Greater Salinas Area Memorandum of Understanding (GSA MOU). All development under the project would be required to comply with the regulations, policies, and standards identifies in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). Implementation of the project would not result in any new significant adverse impacts beyond those addressed within these supporting documents. This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Mineral Resources:** It was determined in the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) that development of the FGA, including the Specific Plan Area, would not have a significant impact on mineral resources or mining activities. As such, implementation of the project would have no impact on mineral resources and this topic did not warrant additional analysis and is not addressed further in the EIR.

- **Population and Housing:** While the Draft EIR analyzes Population and Housing, several topics were determined to not warrant additional analysis within the Chapter.

The Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) noted that the General Plan would not result in the displacement of substantial numbers of existing housing units or persons since the majority of the FGA designated for future development consists of vacant, agricultural, or redevelopment of nonresidential land. Additionally, any individual units that require removal would be offset by the increase in housing by the development of approximately 18,397 additional dwelling units at General Plan buildout.

The project would necessitate the removal of some existing houses within the Specific Plan Area; however, removal of any individual units would be offset by the increase in housing by the development of approximately 4,340 additional dwelling units at Specific Plan buildout. As such, the project would not displace substantial numbers of existing housing or people. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Recreation:** While the project would increase the demand for parks and other recreational facilities based on the population growth, the amount of parkland and open space provided within the Specific Plan Area sufficiently meets the City's parkland requirements. Construction of the parks would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Transportation and Circulation:** While the Draft EIR analyzes Traffic and Circulation, several topics were determined to not warrant additional analysis within the Chapter.

  The project is not located in the vicinity of an airport or airstrip; therefore, it would not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks. Implementation of the project would have no impact relative to this environmental topic

The remaining issues areas and checklist questions are analyzed in the EIR. The EIR includes an analysis of the following issue areas:

- Air Quality
- Biological Resources
- Cultural Resources
- Greenhouse Gases and Climate Change
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Noise
- Population and Housing

- Public Services
- Transportation and Circulation
- Utilities

The City circulated the DEIR for public and agency review on February 27, 2019. A public review period of 45 days was provided on the DEIR and ended on April 15, 2019. This period satisfied the requirement for a 45-day public review period as set forth in Section 15105 of the CEQA Guidelines.

V. RECORD OF PROCEEDINGS

In accordance with Public Resources Code section 21167.6, subdivision (e), the record of proceedings for the City's decision on the project includes the following documents:

- The NOP and all other public notices issued by the City in conjunction with the project;

- All comments submitted by agencies or members of the public during the comment period on the NOP;

- The Draft EIR for the project (February 2019) and all appendices;

- All comments submitted by agencies or members of the public during the comment period on the Draft EIR;

- The Final EIR for the project, including comments received on the Draft EIR and the responses to those comments and appendices;

- Documents cited or referenced in the Draft EIR and Final EIR;

- The mitigation monitoring and reporting program for the project;

- All findings and resolutions adopted by the City Council in connection with the project and all documents cited or referred to therein;

- All reports, studies, memoranda, maps, staff reports, or other planning documents relating to the project prepared by the City, consultants to the City, or responsible or trustee agencies with respect to the City's compliance with the requirements of CEQA and with respect to the City's action on the project;

- The Draft West Area Specific Plan;

- All documents submitted to the City by other public agencies or members of the public in connection with the project, up through the close of the Planning Commission public hearing, and the close of the City Council public hearing;

- Any minutes and/or verbatim transcripts of all information sessions, public meetings, and public hearings held by the City in connection with the project;

- Any documentary or other evidence submitted to the City at such information sessions, public meetings, and public hearings;

- The City of Salinas General Plan and all environmental documents prepared in connection with the adoption of the General Plan;

- Any and all resolutions approved by the City regarding the project, and all staff reports, analyses, and summaries related to the adoption of those resolutions;

- Matters of common knowledge to the City, including, but not limited to federal, state, and local laws and regulations;

- Any documents expressly cited in these findings, in addition to those cited above; and

- Any other materials required for the record of proceedings by Public Resources Code section 21167.6, subdivision (e).

The documents constituting the record of proceedings are available for review by responsible agencies and interested members of the public during normal business hours at the City of Salinas Community Development Department, 65 West Alisal Street, Salinas, California 93901. The custodian of these documents is the Community Development Director. Without exception, any documents set forth above not found in the project files fall into one of two categories. Many of them reflect prior planning or legislative decisions of which the City Council was aware in approving the project. (See *City of Santa Cruz v. Local Agency Formation Commission* (1978) 76 Cal.App.3d 381, 391-392; *Dominey v. Department of Personnel Administration* (1988) 205 Cal.App.3d 729, 738, fn. 6.) Other documents informed the experts who provided advice to City Staff or consultants, who then provided advice to the City Council. For that reason, such documents form part of the underlying factual basis for the City Council's decisions relating to the approval of the project. (See Pub. Resources Code, § 21167.6(e)(10); *Browning-Ferris Industries v. City Council of City of San Jose* (1986) 181 Cal.App.3d 852, 866; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 153, 155.)

VI. CONSISTENCY WITH APPLICABLE PLANS

This section includes a review of the project's relationship to the General Plan, other land use related documents/agreements, and to regional plans and identifies whether inconsistencies with these plans may exist.

Consistency with the Salinas General Plan

The Salinas General Plan states the City's vision for the community's future and outlines goals, policies and implementation measures to achieve its vision. The General Plan also projects the population, dwelling units, and non-residential building square footage associated with the future

buildout of the Land Use Plan, also referred to as General Plan buildout. Typically, General Plan buildout is decades beyond the 20-year General Plan planning cycle.

As described in CEQA Guidelines section 15125, subdivision (d), an EIR must discuss any inconsistencies between a proposed project and applicable general plans, specific plans, and regional plans. Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan, area-wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, regional blueprint plans, plans for the reduction of greenhouse gas (GHG) emissions, habitat conservation plans, and natural community conservation plans.

New Urbanism principles, a component of the General Plan Land Use Element, were used to design a land use plan for the project that is compact and pedestrian-friendly, with a mixture of uses surrounding activity centers/neighborhood local points in the Specific Plan Area. Higher density residential uses are proposed around retail, recreation, and public uses and all of these core activity centers are proposed to be connected with pedestrian, bicycle, and transit systems.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, middle school, supplemental detention/retention basins and 11 parks). It is anticipated that Specific Plan Area will have up to 15,928 residents at project build-out. This is consistent with the expected intensity of development within the Specific Plan Area under General Plan buildout conditions as analyzed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

The Salinas General Plan requires the approval of Specific Plans prior to development of any land in the North of Boronda Future Growth Area (FGA). The West Area Specific Plan includes certain development regulations and design standards that are intended to be specific to the Specific Plan Area. Where there is a matter or issue not specifically covered by the Specific Plan development regulations and design standards, the Salinas Zoning Code would apply. Where there is a conflict between the Specific Plan and the Zoning Code, the Specific Plan would prevail.

The Specific Plan is intended to be adopted by the City Council and to serve as a tool for the City of Salinas to implement. The Specific Plan is to be used by designers, developers, builders, and planners, to guide development of the Specific Plan Area. The land use, development standards, and design guidelines are provided to ensure that all proposed developments remain consistent with the vision established by the Specific Plan as the project is built over time. The Specific Plan development concepts, design guidelines, and standards are in accordance with the City's General Plan, Municipal Ordinances, and City Specifications. The Specific Plan shall be used to review, process, and approve development proposals for individual parcels/project sites within the Specific Plan Area, including but not limited to site specific development applications and site improvement plans.

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that the General Plan may impact the related land use plans and policies that have

been adopted to avoid or mitigate an environmental effect. The Salinas Zoning Code, Salinas Redevelopment Plan, Greater Salinas Area Plan, Salinas Municipal Airport Master Plan, Monterey County Airport Land Use Plan, GSA MOU, are specifically mentioned. Of these seven documents, the project does not affect an existing Specific Plan, the Salinas Municipal Airport Master Plan, or the Monterey County Airport Land Use Plan, and the Salinas Redevelopment Plan is no longer in effect. These topics are not discussed further, but the other three are discussed below.

Salinas Zoning Code

The Specific Plan Area is currently zoned NI with a Specific Plan Overlay. The project includes a rezone to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay District is also applicable to each Zoning District. The purpose of the rezone is to ensure consistency between the proposed General Plan Land Use Designations and Zoning. With the approval of the rezoning application, the Specific Plan would be consistent with the Salinas Zoning Code.

City/County Greater Salinas Area Memorandum of Understanding

In 2006, the City and the County adopted the GSA MOU to allow for annexation and development of specific parcels that are located outside of the Future Growth Areas as illustrated in the General Plan. These areas were not contemplated for annexation and development at the time the General Plan was adopted. These areas include, but are not limited to, the "Unikool", Boronda Road, and Fresh Express sites.

The GSA MOU describes the intent of each agency to consider annexation of the subject growth areas and identifies framework conditions under which annexations could be considered. The following excerpt from the Preface of the GSA MOU identifies its general intent:

"This Memorandum of Understanding (MOU), by and between the County of Monterey (County) and the City of Salinas (City), is to set forth certain agreements between the parties to express their intent to jointly pursue action to assure orderly and appropriate land use development in the area designated in the General Plan of Monterey County as the Greater Salinas Area Plan area and in the City of Salinas. Specific objectives to be achieved through the implementation of the land use and associated policies included in this MOU are the preservation of certain agriculture land, the provision of future growth areas, and the provision of adequate financing for the services and facilities of benefit to the residents of the Greater Salinas Area Plan area and the City."

With the adoption of the GSA MOU, both the City and the County acknowledged that additional development outside the City's Future Growth Areas would be considered subject to amendment of the City's SOI and annexation of such areas to the City. The GSA MOU also includes a set of points of agreement that govern future annexations and associated development. Among other topics, the points of agreement address the future direction of City growth, agricultural mitigation, traffic impacts, and storm drainage. The GSA MOU states that the direction of future growth of the City shall be to the north and east of the current city limits, except as otherwise provided for in the GSA MOU.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following two mitigation measures: Mitigation Measure LU5 requires the City to continue to cooperate with the County of Monterey to implement the GSA-MOU, which directs that City growth generally to the north and east away from the most productive farmland; and Mitigation Measure LU6 requires the City to encourage City-centered growth and give priority to redevelopment and infill projects that reduce development pressure on agricultural lands. The City will also establish an incentive program to promote these projects, such as priority permit processing and density bonuses for such developments. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda FGA, which includes the WASP. The project as proposed is consistent with the GSA-MOU. All development under the project would be required to comply with the above-referenced regulations, policies, and standards.

Greater Salinas Area Plan

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that implementation of General Plan will result in development outside the existing City limits, into the Greater Salinas Planning Area. Development occurring outside of the City limits is subject to the Greater Salinas Area Plan. The implementation of the General Plan may conflict with the Greater Salinas Area Plan, resulting in a significant impact.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented Mitigation Measure LU2, which requires the City to be consistent with a portion of Draft Policy LU 3.4 of the Monterey County Draft General Plan, and to cooperate with LAFCO and the County of Monterey to direct growth outside the City limits to the Future Growth Area, on lands that are served or are planned to be served, with a full range of urban services, such as public water and sewer, an extensive road network, public transit, safety and emergency response services, parks, trails, and open space. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda Future Growth Area, which includes the Specific Plan. The project as proposed is consistent with the Greater Salinas Area Plan. All development

under the project would be required to comply with the above-referenced regulations, policies, and standards.

VII. FINDINGS REQUIRED UNDER CEQA

Public Resources Code section 21002 provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute provides that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects." Section 21002 goes on to provide that "in the event [that] specific economic, social, or other conditions make infeasible such project alternatives or such mitigation measures, individual projects may be approved in spite of one or more significant effects thereof."

The mandate and principles announced in Public Resources Code section 21002 are implemented, in part, through the requirement that agencies must adopt findings before approving projects for which EIRs are required. For each significant environmental effect identified in an EIR for a project, the approving agency must issue a written finding reaching one or more of three permissible conclusions. The first such finding is that changes or alterations have been required in, or incorporated into, the project, which avoid or substantially lessen the significant environmental effect as identified in the final EIR. The second permissible finding is that such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding, and that such changes have been adopted by, or can and should be adopted by, such other agency. The third potential conclusion is that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR. (CEQA Guidelines, § 15091, subd. (a).)

As explained elsewhere in these findings, "feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors. The concept of "feasibility" also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. (*Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1506-1509 (court upholds CEQA findings rejecting alternatives in reliance on project's objectives); see also *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1001 (*CNPS*) (an alternative "'may be found infeasible on the ground it is inconsistent with the project objectives as long as the finding is supported by substantial evidence in the record'") (quoting Kostka & Zischke, *Practice Under the Cal. Environmental Quality Act* [Cont.Ed.Bar 2d ed. 2009] (*Kostka*), § 17.309, p. 825); *In re Bay-Delta Programmatic Environmental Impact Report Coordinated Proceedings* (2008) 43 Cal.4th 1143, 1165, 1166 (*Bay-Delta*) ([i]n the CALFED program, feasibility is strongly linked to achievement of each of the primary program objectives"; "a lead agency may structure its EIR alternative analysis around a reasonable definition of underlying purpose and need not study alternatives that cannot achieve that basic goal).) Moreover, "'feasibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133

Cal.App.3d 410, 417 (*City of Del Mar*); see also *CNPS, supra,* 177 Cal.App.4th 957 (after weighing "'economic, environmental, social, and technological factors,' ... 'an agency may conclude that a mitigation measure or alternative is impractical or undesirable from a policy standpoint and reject it as infeasible on that ground) (quoting Kostka, *supra,* § 17.29, p. 824))

For purposes of these findings (including the table described in Section IX below), the term "avoid" refers to the effectiveness of one or more mitigation measures to reduce an otherwise significant effect to a less than significant level. In contrast, the term "substantially lessen" refers to the effectiveness of such measure or measures to substantially reduce the severity of a significant effect, but not to reduce that effect to a less than significant level.

As explained above, CEQA requires that the lead agency adopt feasible mitigation measures or, in some instances, feasible alternatives to substantially lessen or avoid significant environmental impacts that would otherwise occur. With respect to a proposed project for which significant impacts are not avoided or substantially lessened, a public agency, after adopting proper findings, may nevertheless approve the project if the agency first adopts a statement of overriding considerations setting forth the specific reasons that the agency found that the project's benefits outweigh its unavoidable adverse environmental effects. The City of Salinas' Statement of Overriding Considerations for the project is included herein in Section XI below.

VIII. MITIGATION MONITORING AND REPORTING PROGRAM

A Mitigation Monitoring and Reporting Program (hereinafter "MMRP") has been prepared for the project, and is being approved by the City Council by Resolution 2019-__(N.C.S.). The City will use the MMRP to track compliance with project mitigation measures. The MMRP will remain available for public review during the compliance period. The Final MMRP is Exhibit "B" of the aforementioned resolution and is approved in conjunction with these Findings of Fact.

IX. SIGNIFICANT EFFECTS AND MITIGATION MEASURES

The EIR identified a number of significant and potentially significant environmental effects (or impacts) that the project will cause or contribute to. Most of these significant effects can be fully avoided through the adoption of feasible mitigation measures. Other effects, however, cannot be avoided by the adoption of feasible mitigation measures or alternatives, and thus will be significant and unavoidable. Some of these unavoidable significant effects can be substantially lessened by the adoption of feasible mitigation measures. Other significant, unavoidable effects cannot be substantially lessened or avoided. For reasons set forth in Section XI however, the City Council has determined that overriding economic, social, and other considerations outweigh the significant, unavoidable effects of the project.

The City Council's findings with respect to the project's significant effects and mitigation measures are set forth in the Table of Impacts, Mitigation Measures, and CEQA Findings attached to these findings. The findings set forth in the table are hereby incorporated by reference.

This table does not attempt to describe the full analysis of each environmental impact contained in the EIR. Instead, the table provides a summary description of each impact, describes the

applicable mitigation measures identified in the Draft EIR or Final EIR and adopted by the City Council, and states the City Council's findings on the significance of each impact after imposition of the adopted mitigation measures. A full explanation of these environmental findings and conclusions can be found in the Draft and Final EIRs, and these findings hereby incorporate by reference the discussions and analyses in those documents supporting the Final EIR's determinations regarding mitigation measures and the projects' impacts and mitigation measures designed to address those impacts. In making these findings, the City Council ratifies, adopts, and incorporates into these findings the analyses and explanations in the Draft EIR and Final EIR, and ratifies, adopts, and incorporates in these findings the determinations and conclusions of the Draft EIR and Final EIR relating to environmental impacts and mitigation measures, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

By Resolution 2019-__(N.C.S.), the City Council adopts all of the mitigation measures identified in the table.

X. PROJECT ALTERNATIVES

A. Basis for Analysis of the Feasibility of Alternatives

Public Resources Code section 21002, a key provision of CEQA, provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute states that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects."

Where a lead agency has determined that, even after the adoption of all feasible mitigation measures, a project as proposed will still cause one or more significant environmental effects that cannot be substantially lessened or avoided, the agency, prior to approving the project as mitigated, must first determine whether, with respect to such impacts, there remain any project alternatives that are both environmentally superior and feasible within the meaning of CEQA. Although an EIR must evaluate this range of *potentially* feasible alternatives, an alternative may ultimately be deemed by the lead agency to be "infeasible" if it fails to fully promote the lead agency's underlying goals and objectives with respect to the project. (*City of Del Mar, supra,* 133 Cal.App.3d at p. 417) "'[F]easibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*Ibid*.; see also *CNPS, supra,* 177 Cal.App.4th at p. 1001.) Thus, even if a project alternative will avoid or substantially lessen any of the significant environmental effects of the project, the decision-makers may reject the alternative if they determine that specific considerations make the alternative infeasible.

Under CEQA Guidelines section 15126.6, the alternatives to be discussed in detail in an EIR should be able to "feasibly attain most of the basic objectives of the project [.]" For this reason, the Objectives described above provided the framework for defining possible offsite alternative project locations. (See *Bay-Delta, supra,* 43 Cal.4th at p. 1166). The project objectives are set out

above in section III.C. Based on the requirements of CEQA Guidelines section 15126.6 and the Project's Objectives, the following alternatives to the project were identified:

No Project (No Build) Alternative

The CEQA Guidelines (Section 15126.6[e]) require consideration of a no project alternative that represents the existing conditions, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved. For purposes of this analysis, the No Project (No Build) Alternative assumes that development of the Specific Plan Area would not occur, and the Specific Plan Area would remain in its current agricultural condition. It is noted that the No Project (No Build) Alternative would fail to meet the project objectives identified for the West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

Reduced Land Area Project Alternative

Under this alternative, the Specific Plan Area would be developed with the same components as described in the Project Description, but the area utilized for the development (i.e., the project footprint) would be reduced by approximately 20 percent. Under this alternative, approximately 162 acres of land in the northeast corner of the Specific Plan Area would be removed. This removed area would include the 52.85-acre Mortensen property (APN 21101108) and the 108.32-acre Madolora/Global property (APN 21101109), which are shown on Figure 5.0-1. The resultant Specific Plan Area would include approximately 635 acres. The proposed land uses within this area identified for removal under this alternative would be incorporated into the remaining 635 acres of the Specific Plan Area, which would increase the residential density of the Specific Plan Area under this alternative, while retaining the same number of residences, mixed use commercial areas, schools, parks, etc. as the project. This alternative would establish a site for a third 10.0-acre elementary school to be developed by the Santa Rita Union School District (District). However, if the District decides against the elementary school siting, the area would instead be residential units.

Under this alternative the average residential density (units per net acre) would increase from 9.0 to approximately 11.3 units/acre. It is assumed that the number of NE parcels would be reduced, and the number of NG-1 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

Reduced Residential Intensity/Density Project Alternative

Under this alternative, the Specific Plan Area would be developed with a reduction in the overall residential intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 25 percent reduction in the intensity/density of the residential components of the project while maintaining the approximately 797-acre project footprint. This would result in fewer residential lots, but larger lot sizes. This alternative would result in up to 3,255 residential units. This alternative would retain the approximately 571,500 square feet of mixed commercial uses, the five proposed schools (three elementary, one middle, and one high school), and the same acreage of parks and detention basins as the project.

Under this alternative, the average residential density (units per net acre) would decrease from 9.0 to approximately 6.8 units/acre. It is assumed that the number of NE parcels would be increased, and the number of NG-1 and NG-2 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

This alternative, based upon residential overall density, is inconsistent with the Salinas General Plan's standards for the Specific Plan Area, which require a minimum of 3,553 residential units within the Specific Plan Area, and the incorporation of New Urbanism concepts which mandates that new residential development have a minimum average density of 9 dwelling units per net residential acre. A General Plan Amendment would be required.

Smaller-scale Project Alternative

Under this alternative, the Specific Plan Area would be reduced by approximately 33 percent and the proposed residential and non-residential uses would also be reduced by approximately 33 percent. For the purposes of discussion, this alternative assumes that approximately 264 acres of land along the entire eastern boundary of the Specific Plan Area would be removed and remain as undeveloped agricultural land. The resultant Specific Plan Area under this alternative would be approximately 533 acres in size, and include up to 2,908 residential units, up to 382,905 square feet of commercial/mixed use building area, and up to 119 acres of public facilities (including two elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and up to 8 parks). The number of residential units under this alternative would not meet the minimum of 3,553 residential units as provided within the City of Salinas General Plan. The residential densities under this alternative would be similar to the project.

The City Council finds that that a good faith effort was made to evaluate all potentially feasible alternatives in the EIR that are reasonable alternatives to the project and could feasibly obtain the basic objectives of the project, even when the alternatives might impede the attainment of the project objectives and might be more costly. As a result, the scope of alternatives analyzed in the EIR is not unduly limited or narrow. The City Council also finds that all reasonable alternatives were reviewed, analyzed and discussed in the review process of the EIR and the ultimate decision on the project. (See, e.g., DEIR, pp. 6-5 to 6-55)

1. Significant, Unavoidable Impacts of the Project

The significant and unavoidable impacts of the project are set out in detail below in Section XI.A.

2. Scope of Necessary Findings and Considerations for Project Alternatives

As noted above, these findings address whether the various alternatives substantially lessen or avoid any of the significant unavoidable impacts associated with the project and also consider the feasibility of each alternative. Under CEQA, "[f]easible means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic,

environmental, legal, social, and technological factors." (CEQA Guidelines § 15364). As explained earlier, the concept of feasibility permits agency decision makers to consider the extent to which an alternative is able to meet some or all of a project's objectives. In addition, the definition of feasibility encompasses "desirability" to the extent that an agency's determination of infeasibility represents a reasonable balancing of competing economic, environmental, social, and technological factors supported by substantial evidence.

In identifying potentially feasible alternatives to the project, the following project objectives were considered:

1. Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.

2. Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.

3. Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.

4. Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.

5. Provide public services and infrastructure improvements that achieve and maintain City service standards.

6. Provide an inviting tree-lined street system which incorporates traffic calming and other measures.

7. Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater FGA and City as a whole.

8. Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.

9. Provide for a reasonable jobs/housing balance.

10. Provide opportunities for senior housing.

11. Provide for a site/parcel-based post-construction SCMs/LID to the maximum extent practicable.

As noted near the beginning of these findings, moreover, the City is keenly aware that the State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most

expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The following two overarching project objectives are therefore presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

B. No Project (No Build) Alternative

In general, a CEQA "No Project Alternative" must "discuss the existing conditions …, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services." (CEQA Guidelines, § 15126.6, subd. (e)(2).) When the proposed project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. In such an instance, the no project alternative consists of evaluating the projected impacts of the proposed plan to the impacts that would occur under the existing plan. "Typically, this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan. (*Id.*, subd. (e)(3)(A).)

1. Analysis of No Project (No Build) Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to air quality. As such, the project level and cumulative impacts would be greatly reduced when compared to the project.

Biological Resources

Under the No Project (No Build) Alternative, the West Area Specific Plan would not be constructed, no habitat would be removed, no wetlands disturbed, and no ground disturbing activities would occur. The Specific Plan Area would remain open to migration, foraging, nesting, and other uses by wildlife. Therefore, potential for impacts to biological resources would be eliminated under the No Project (No Build) Alternative. Impacts to biological resources would be reduced as compared to the project.

Cultural Resources

The No Project (No Build) Alternative would continue to result in ground disturbing activities associated with the agricultural operations (i.e., soil tilling); however, because the ground disturbance associated with farming has occurred for an extended period of time with no cultural resources being found it is anticipated that the continuation of these operations under this alternative would have a significantly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources, the No Project (No Build) Alternative would result in slightly less potential for impacts to cultural resources as the entire Specific Plan Area would continue to be used for agriculture production.

Greenhouse Gases and Climate Change

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to GHG reductions. As such, this impact would be reduced when compared to the project. This does not necessarily mean, however, that the No Project Alternative represents a better long-term policy outcome for climate than the project. California has a large housing need, and new housing will have to be built somewhere, if not the Specific Plan Area. As the California Supreme Court explained, "[g]iven the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced." (*Center for Biological Diversity v. California Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 220-221.)

Hazards and Hazardous Materials

Under the No Project (No Build) Alternative, no new land uses would be introduced to the Specific Plan Area, and the potential for hazardous material release in the Specific Plan Area would be reduced. Ongoing pesticide use would occur within the area to remain in agriculture, and this has the potential to generate negative health effects on existing residents located in the areas south and west of the Specific Plan Area. However, there would not be long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, because development would not occur. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the No Project (No Build) Alternative would result in less potential for impacts.

Hydrology and Water Quality

Under the No Project (No Build) Alternative, potential new water quality impacts from construction and operation of the West Area Specific Plan would be eliminated. Under this alternative, the land would be kept in its present state with the majority of the Specific Plan Area either fallow land or being used for agricultural purposes. The No Project (No Build) Alternative would have a greater chance of groundwater recharge because it would not introduce large areas of impervious surfaces as would the West Area Specific Plan. However, the beneficial impact of reducing the consumptive use of water by 2,078 acre-feet per year (AFY) (Cal Water, 2015) would not exist. This is a significant contribution in reducing overdraft in the Salinas Valley Ground Water basin.

The potential to result in the violation of water quality standards would be reduced under this alternative as compared with the project. However, there are some instances where the No Project (No Build) Alternative would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Nevertheless, overall, potential impacts related to hydrology and water quality would be reduced under this alternative.

Noise

Existing agricultural activities within the Specific Plan Area sometimes involve on-going noise sources such as agricultural equipment (e.g., tractors, harvesters, planters, etc.). Such noise sources are part of the existing ambient noise levels in the Specific Plan Area. Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and there would be no potential for new noise sources; however, existing noise from agricultural operations would continue. As such, this alternative would have less impact relative to the project.

Population and Housing

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and the Specific Plan Area would not accommodate the City's anticipated growth. Growth would still be anticipated to occur within the region, but it would not be accommodated in the FGA, which has undergone extensive planning efforts by the City and community for over a decade. This outcome would not be consistent with the FGA and General Plan. The City would need to look

to other undeveloped areas of the region to develop for new housing, which would be expected to have environmental impacts that have not yet been assessed, but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the No Project (No Build) Alternative, there would be no increased demand for police, fire, schools, parks, or other public services. Alternatively, this alternative would result in no new school or park facilities, which are designed to accommodate more than the demand that is generated by the West Area Specific Plan. Overall, this alternative would have a slightly greater impact to public services when compared to the project.

Transportation and Circulation

Under the No Project (No Build) Alternative, there would be no new traffic generated within the Specific Plan Area. This alternative would also not result in new traffic improvements on the City's roadway system and it would not result in payments of traffic impact fees into the City's Capital Improvement Program (CIP) that would be used for the roadway system. Existing deficiencies in the traffic system would not receive the benefit of improvements to improve existing deficiencies; however, this would be more than offset by the fact that there would be no new contribution to degrading traffic levels of service at a project and cumulative level. Overall, this alternative would have less of an overall traffic impact than the project. Still, the growth for which there is market demand would still be anticipated to occur somewhere else within the region, possibly in areas that could result in transportation effects worse than those of the West Area Specific Plan.

Utilities

Under the No Project (No Build) Alternative, the Specific Plan Area would not have an increased demand for wastewater, storm drainage, or solid waste disposal. There would be no new impacts on these utilities and there would be no need to construct new infrastructure. Therefore, overall, the impact on wastewater, solid waste, and storm drainage would be reduced under this alternative. In conclusion, the No Project (No Build) Alternative would not result in a beneficial impact to groundwater recharge. However, this alternative would decrease the amount of solid waste and wastewater generated at the site, and would not require construction of new utilities infrastructure. Overall, the No Project (No Build) Alternative would not add new impacts to wastewater, storm drainage, or solid waste disposal systems, but would not result in the beneficial impacts to the groundwater system.

2. Feasibility of No Project (No Build) Alternative

The No Project (No Build) Alternative is the environmentally superior alternative because it results in the least adverse environmental impacts when compared to the project. However, the No Project (No Build) Alternative would fail to meet the project objectives identified for the

West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

The City Council finds the No Project (No Build) Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the Project.

C. Reduced Land Area Project Alternative

1. Analysis of Reduced Land Area Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Land Area Project Alternative, the Specific Plan Area would be developed with a 20 percent smaller development area, with an overall increase in residential density. Although the number of users would be the same under this alternative as compared with the project, this alternative has reduced mobile emissions when compared to the project, due to the more compact design of this alternative. It was assumed that mobile emissions under this alternative would be reduced by approximately twenty percent (as compared to the project), the same amount as the reduction in the size of this alternative's footprint when compared to the project. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for reactive organic compounds (ROG), nitrogen oxides (NO_x), and respirable particulate matter (PM_{10}) at buildout.

This alternative would provide more compact development than the project, providing greater opportunities for non-motorized transportation choices (such as walking or cycling). This would slightly reduce vehicle miles travelled (VMT) as compared to the project, which would slightly the mobile source emissions.

The Reduced Land Area Project Alternative would have greater impacts with respect to Air Quality Impact 3.1-1, which is identified as "the potential to conflict with or obstruct implementation of the applicable air quality plan." This is because the Association of Monterey Bay Area Governments (AMBAG), in consultation with the City of Salinas, included the North of Boronda FGA (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The AMBAG 2018 Regional Growth Forecast feeds into the Monterey Bay Air Resources Board's (MBARD) 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as the future version of the Air Quality Management Plan (AQMP). Therefore, while an increase in density has the potential to reduce mobile source emissions if residents chose alternative transportation modes (i.e., walk/bike/transit instead of driving a vehicle), this is not guaranteed to occur given that the choice to drive is still convenient and economical for most residents under this residential density in a suburban environment. The increased residential density under this alternative was not specifically planned for in the MBARD planning documents and within the AMBAG forecasts. Nevertheless, due to the reduced footprint and slightly reduced VMT, this impact would be slightly reduced when compared to the West Area Specific Plan.

Biological Resources

Under the Reduced Land Area Project Alternative, less habitat would be removed, and fewer ground disturbing activities would occur. It is still anticipated that the drainage ditches along Boronda Road would be eliminated (i.e., fill activity). A portion of the Specific Plan Area (twenty percent) would remain open to migration, foraging, nesting, and other uses by wildlife. The balance of the Specific Plan Area (eighty percent of site) would be developed and no longer available for migration, foraging, nesting, and other uses by wildlife. This would still be a significant and unavoidable impact, and would be cumulatively considerable.

When compared to the Specific Plan, potential for impacts to biological resources would be reduced under the Reduced Land Area Project Alternative proportionate to the reduction in developed area estimated at twenty percent.

Cultural Resources

The Reduced Land Area Project Alternative would result in fewer ground disturbing activities and would have a slightly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Land Area Project Alternative would result in slightly less potential for impacts to cultural resources, as a portion of the Specific Plan Area would remain undeveloped.

Greenhouse Gases and Climate Change

The Reduced Land Area Project Alternative would not develop approximately 162 acres that is proposed to be developed under the project. This would provide more compact development, creating more opportunities for non-motorized transportation options (such as walking or cycling). This is likely to reduce overall VMT as compared to the project. This would reduce mobile-related GHG emissions by an amount approximately equivalent to proportional reduction in the size of the Specific Plan Area (twenty percent) under this alternative, as compared with the project. Total operational emissions would be reduced by approximately 11 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 16,785 (same as the project), this alternative would generate approximately 2.53 metric tons of carbon dioxide equivalent (MT CO_2e)/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. However, this value is below the per service population estimate for the project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, the emissions per capita under this alternative would be reduced as compared with the project. This impact would be slightly reduced when compared to the project.

Hazards and Hazardous Materials

Under the Reduced Land Area Project Alternative, the land area to be developed would be reduced by 20 percent and the potential for exposure to hazardous materials, or a release of hazardous materials would be reduced proportionately. Ongoing pesticide use would occur within the area to remain in agriculture, and this would have the potential to generate negative health effects on new residents in the development. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the Reduced Land Area Project Alternative would result in slightly less potential for impacts.

Hydrology and Water Quality

Implementation of the West Area Specific Plan has the potential to result in the violation of water quality standards and waste discharge of pollutants into surface waters during both construction and long-term operations. Construction operations could result in temporary increases in runoff, erosion, sedimentation, soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. The long-term operation of the West Area Specific Plan could result in long-term impacts to surface water quality from urban stormwater runoff and could enter groundwater or surface water systems. Additionally, the proposed project would result in new impervious surfaces that could reduce rainwater infiltration and groundwater recharge. Mitigation measures incorporated into the project would reduce potential water quality impacts to a less than significant level. The West Area Specific Plan would not place persons or structures in a flood hazard zone.

Under the Reduced Land Area Project Alternative, potential water quality impacts from construction and operation of the West Area Specific Plan would be reduced. Under this alternative, the developed area would be reduced by 20 percent when compared with the project. The Reduced Land Area Project Alternative would have a greater chance of groundwater recharge because it would reduce the amount of impervious surfaces by 20 percent as compared to the West Area Specific Plan. The areas that would not be developed (i.e., the 162 acres of land in the northeast corner of the Specific Plan Area) would remain under agricultural production. While the 162-acre agricultural area would provide opportunities for groundwater recharge, the agricultural uses would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping required for the 162-acres of agricultural use under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. The amount of total consumptive water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412

AFY less water than buildout of the proposed project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the proposed project.

Under this alternative, there are some instances where the undeveloped portions of the Specific Plan Area would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, while the potential to result in water quality violations would be reduced under this alternative when compared with the project, the higher amount of groundwater pumping under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the proposed project. There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 80 percent of the land area would be converted into a use that would not require intensive groundwater pumping. As such, potential impacts related to hydrology and water quality would be increased under this alternative when compared to the project.

Noise

Under the Reduced Land Area Project Alternative, development would be reduced by 20 percent when compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Receptors would be subject to ongoing agricultural noise under this alternative. It is noted that, despite this reduction in the size of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact. As such, this alternative would have a reduced impact relative to the project.

Population and Housing

Under the Reduced Land Area Project Alternative, the project footprint would be reduced by 20 percent when compared with the project. However, although the residential density would increase from approximately 9.0 to 11.3 residential units per acre under this alternative, the number of residences developed under this alternative would be the same as for the proposed project. Overall, this alternative would have a equal impacts when compared to the project.

Public Services

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, the demand for police, fire and other public services would be equal. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have equal impacts to public services when compared to the project.

Transportation

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, traffic generated in the Specific Plan Area would be equal.

This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts to this topic under this alternative.

The Reduced Land Area Project Alternative would have "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-7, which is identified as "impacts related to emergency access." The basis for this determination is that the increased density of the proposed project would increase congestion on existing and planned roadways as compared to the proposed project, given that fewer roadways would be developed under this alternative (because the APNs 211-011-008 and 211-011-009 would not be developed under this alternative). Specifically, Natividad Road (Major Arterial), Russell Road (Major Arterial), and Rogge Road would not be expanded with full frontage improvements under this alternative. Congestion is also expected to be slightly higher under this alternative compared to the proposed project, given the increased density of traffic (based on fewer roadway miles being developed under this alternative compared with the proposed project, and the increased density of the proposed project [to 11.3 residential units per acre under this alternative, compared to 9.0 residential units per acre under the proposed project]). This represents a slightly greater impact with respect to emergency access within the Specific Plan Area. It is noted that the significance determination under Transportation and Circulation Impact 3.10-7 would likely still be less than significant for the Reduced Land Area Alternative, similar to the proposed project; however, the roadway network will not have the same capacity as under the proposed project, so the determination remains "slightly greater."
Additionally, the Reduced Land Area Project Alternative would have a "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-8, which is identified as "conflict with adopted multi-modal circulation policies, plans, or programs" or a "decrease [in] the performance or safety of public transit, bicycle, or pedestrian facilities." The basis for this determination is that the following roadways would not be developed in full under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane);
- Rogge Road frontage improvements.

Since these roadways would not be developed in full, as planned for by the proposed project, connectivity with the remainder of the City and County, including other areas within the City's FGA, would be more limited under the Reduced Land Area Project Alternative as compared to the proposed project. Overall, this alternative would have slightly greater traffic impacts than the project.

Utilities

This alternative would not save as much groundwater when compared to the proposed project. The amount of total consumptive water usage reduced by this alternative when compared to the

existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412 AFY less water than buildout of the proposed project. This is due to the dramatically higher water usage under the current irrigated agricultural cultivation uses as compared with developed residential and/or commercial uses. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project.

Although this alternative would save less groundwater than the project, generate a similar amount of solid waste, and demand a similar amount of water, this alternative would reduce impacts to stormwater compared to the project. Overall, the demand for utilities would be reduced under this alternative when compared to the project.

2. Feasibility of Reduced Land Area Project Alternative

The Reduced Land Area Project Alternative would slightly reduce impacts to air quality, biological resources, cultural resources, GHG and climate change, hazards, hydrology, noise, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to groundwater supplies and recharge (cumulative and project-level), population and housing, emergency vehicle access, and conflicts with adopted multi-modal circulation policies, plans, or programs. Further, this alternative does not meet the following project objectives:

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole.

The Reduced Land Area Project Alternative does not fully meet the project objective to "Provide public services and infrastructure improvements that achieve and maintain City service standards" because the Reduced Land Area Project Alternative would develop fewer roadways, bicycle and pedestrian pathways, and other infrastructure improvements (such as well sites) when compared with the project.

Under this alternative, APNs 211-011-008 and 211-011-009, as shown in Figure 5.0-1 of the Draft EIR, would not be developed. The effect of this area not developing in accordance with the General Plan would be that the following roadways and infrastructure improvements would not be developed:

- Natividad Road (Major Arterial) expansion frontage improvements;
- Russell Road (Major Arterial) expansion;
- Rogge Road frontage improvements;
- The proposed water well #3 and water treatment site;
- The supplemental stormwater basins along Natividad Road; and
- Neighborhood Park WA-3 (3-acre park).

Therefore, based on the above list of roadways and infrastructure improvements that would not be developed under this alternative, the ability of the City to provide public services and infrastructure improvements in accordance with the adopted General Plan would be hampered under the Reduced Land Area Project Alternative.

The Reduced Land Area Project Alternative does not meet the project objective to "Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole" because this alternative would leave undeveloped a portion of the land that would be developed under project (i.e., APNs 211-011-008 and 211-011-009), as shown in Figure 5.0-1 of the Draft EIR. This is an area located adjacent to the future Central Area Specific Plan (within the City's FGA). If this area were to remain undeveloped, there would be fewer interconnected sidewalks/pathways and available open space areas for City residents, and connectivity would be limited between the West Area Specific Plan (the project) and the planned for Central Area Specific Plan (a planned Specific Plan Area that would be located just to the east of the proposed project). This reduced connectivity means that the Reduced Land Area Project Alternative would not establish an interconnected sidewalk/pathway and open space system that fully links with the greater FGA and with the City as a whole. Notably, this rationale is also the basis for determining that the Smaller-Scale Project Alternative would not meet this Specific Plan objective. Specifically, the following roadways would not be developed under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane); and
- Rogge Road frontage improvements.

The Reduced Land Area Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, hydrology and water quality, population and housing, public services, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects anticipated with the project would still occur under this Reduced Land Area Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts may occur to a lesser extent than under the project under this alternative, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to increased traffic noise levels at existing receptors would occur under the project and the Reduced Land Area Project Alternative as there is a possibility of not being able to feasibly install sounds walls in some locations that would be warranted. It is noted that, due to decreased noise levels associated with this alternative, the noise at existing receptors would likely decrease. However, the cumulative traffic noise level increases would exceed the Federal Interagency Committee on Noise (FICON) CEQA substantial increase criteria of 1.5 to 5 dB.

The City Council finds the Reduced Land Area Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

D. Reduced Residential Intensity/Density Project Alternative

1. Analysis of Reduced Residential Intensity/Density Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area, with an overall decrease in residential density.

It was assumed that overall criteria pollutant emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for ROG, NOx, and PM_{10} at buildout.

Although less compact development generally increases overall per capita VMT, the smaller number of residential units under this alternative as compared with the project would reduce overall air quality emissions, including under area sources, mobile sources, and energy sources. As such, this impact would be reduced when compared to the project.

Biological Resources

Under the Reduced Residential Intensity/Density Project Alternative, an equivalent amount of habitat would be removed as under the project, and a similar level of ground disturbing activities would occur as compared with the project. Therefore, there would be an approximately equal potential for impacts to biological resources under this alternative as compared with the project.

Cultural Resources

The Reduced Residential Intensity/Density Project Alternative would result in a similar level of ground disturbing activities and would have a similar potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Residential Intensity/Density Project Alternative would result in equal potential for impacts to cultural resources.

Greenhouse Gases and Climate Change

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area. It

was assumed that overall GHG emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. Total operational emissions would be reduced by approximately 25 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.
