Monterey County has a state designation of Nonattainment for ozone and PM_{10}. As shown in Table 3.1-9, operation of the project would generate ozone precursors (ROG and NO_x) and PM exhaust in excess of the MBARD's numeric thresholds for operational emissions. The MBARD developed these project-level thresholds based on the emissions that would exceed a CAAQS or contribute substantially to an existing or projected violation of a CAAQS. Ambient levels of these criteria pollutants are likely to decrease in the future, based on current and future implementation of federal and/or state regulatory requirements, such as

improvements to the statewide vehicle fleet over time (including the long-term replacement of internal combustion engine vehicles with electric vehicles in coming decades).

As shown in the table provided in Appendix B, almost all tools available to measure criteria pollutant emissions were designed to be used at the national, state, regional, and/or city-levels. These tools are not well suited to analyze small or localized changes in pollutant concentrations associated with individual projects. Accordingly, they are not recommended by the MBARD for CEQA analyses. Instead, the following analysis of health effects is presented qualitatively.

Ozone

O_3 is not emitted directly into the air but is formed through complex chemical reactions between precursor emissions of volatile organic compounds (VOC) (also known as ROG) and oxides of nitrogen (NO_x) in the presence of sunlight. The reactivity of O_3 causes health problems because it damages lung tissue, reduces lung function and sensitizes the lungs to other irritants. Scientific evidence indicates that ambient levels of O_3 not only affect people with impaired respiratory systems, such as asthmatics, but healthy adults and children as well. Exposure to O_3 for several hours at relatively low concentrations has been found to significantly reduce lung function and induce respiratory inflammation in normal, healthy people during exercise. This decrease in lung function generally is accompanied by symptoms including chest pain, coughing, sneezing and pulmonary congestion.

Studies show associations between short-term ozone exposure and non-accidental mortality, including deaths from respiratory issues. Studies also suggest long-term exposure to ozone may increase the risk of respiratory-related deaths (U.S. Environmental Protection Agency 2019a). The concentration of ozone at which health effects are observed depends on an individual's sensitivity, level of exertion (i.e., breathing rate), and duration of exposure. Studies show large individual differences in the intensity of symptomatic responses, with one study finding no symptoms to the least responsive individual after a 2-hour exposure to 400 parts per billion of ozone and a 50 percent decrement in forced airway volume in the most responsive individual. Although the results vary, evidence suggest that sensitive populations (e.g., asthmatics) may be affected on days when the 8-hour maximum ozone concentration reaches 80 parts per billion (U.S. Environmental Protection Agency 2019b).

The project would generate emissions of ROG and NOx during project operational activities, as shown in Table 3.1-9. Although the exact effects of project-level emissions on local health are not precisely known, it is likely that the increases in ROG and NOx generated by the proposed project would especially affect people with impaired respiratory systems, but also healthy adults and children located in the immediate vicinity of the Specific Plan Area. However, the increases of these pollutants generated by the proposed project are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the proposed project in comparison to Monterey County as a whole. Instead, the increases in ROG and NOx generated by the proposed project when combined with the existing ROG and NOx emitted regionally, would affect

people, especially those with impaired respiratory systems located in the immediate vicinity of the Specific Plan Area.

Particulate Matter

Based on studies of human populations exposed to high concentrations of particles (sometimes in the presence of SO_2) and laboratory studies of animals and humans, PM can cause major effects of concern for human health. These include effects on breathing and respiratory symptoms, aggravation of existing respiratory and cardiovascular disease, alterations in the body's defense systems against foreign materials, damage to lung tissue, carcinogenesis and premature death. Small particulate pollution has health impacts even at very low concentrations – indeed no threshold has been identified below which no damage to health is observed. The major subgroups of the population that appear to be most sensitive to the effects of particulate matter include individuals with chronic obstructive pulmonary or cardiovascular disease or influenza, asthmatics, the elderly and children.

Numerous studies have linked PM exposure to premature death in people with preexisting heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms. Studies show that every 1 microgram per cubic meter reduction in $PM_{2.5}$ results in a one percent reduction in mortality rate for individuals over 30 years old (Bay Area Air Quality Management District, 2017). Long-term exposures, such as those experienced by people living for many years in areas with high particle levels, have been associated with problems such as reduced lung function and the development of chronic bronchitis – and even premature death. Additionally, depending on its composition, both PM_{10} and $PM_{2.5}$ can also affect water quality and acidity, deplete soil nutrients, damage sensitive forests and crops, affect ecosystem diversity, and contribute to acid rain (U.S. Environmental Protection Agency 2019c).

The project would generate emissions of PM during project operational activities, as shown in Table 3.1-9. Although the exact effects of such emissions on local health are not known, it is likely that the increases in PM generated by the proposed project would especially affect people with impaired respiratory systems, but also healthy adults and children located in the immediate vicinity of the Specific Plan Area. However, the increases of these pollutants generated by the proposed project are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the project in comparison the Monterey County as a whole. Instead, the increases in PM generated by the proposed project when combined with the existing PM emitted regionally, would affect people, especially those with impaired respiratory systems located in the immediate vicinity of the Specific Plan Area.

Discussion

As previously discussed, the magnitude and locations of any potential changes in ambient air quality, and thus health consequences, from these additional emissions cannot be quantified with a high level of certainty due to the dynamic and complex nature of pollutant formation and distribution (e.g., meteorology, emissions sources, sunlight exposure), as well as the variabilities in the receptors that reside in a particular area. Additionally, MBARD has

not established any methodology or thresholds (quantitative or qualitative) for assessing the health effects from criteria pollutants. From a qualitative perspective, it is well documented from scientific studies that criteria pollutants can have adverse health effects. The federal and state governments have established the NAAQS or CAAQS as an attempt to regionally, and cumulatively, assess and control the health effects that criteria pollutants have within Air Basins. It is anticipated that public health will continue to be affected by the emission of criteria pollutants, especially by those with impaired respiratory systems in the City of Salinas and the surrounding region so long as the region does not attain the CAAQS or NAAQS. However, the increases of these pollutants generated by the proposed project are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the project in comparison the Monterey County as a whole. Instead, the increases in criteria pollutants generated by the proposed project when combined with the existing criteria pollutants emitted regionally, would affect people, especially those with impaired respiratory systems located in the immediate vicinity of the Specific Plan Area.

Page 3.1-23 of the Draft EIR is amended as follows:

Mitigation Measure 3.1-7*: Prior to the issuance of development review permit(s), the project applicant(s) shall incorporate of one or more of the following additional Plan Area requirements, as determined by the City of Salinas:*

- *Install secured bicycle storage facilities (bike lockers, cages, interior space, or similar as approved by the City Engineer) at all commercial and public facilities with 50 employees or more;*
- *Incorporate park-and-ride lots~~.~~;*
- *Install Level 2 electric vehicle (EV) charge stations at workplace sites with 50 or more employees (10% of total available parking spaces); and*
- *Install publicly-available dual post Level 2 charge stations throughout the Plan Area.*

Mitigation Measure 3.1-8*: Prior to the approval of individual phases (i.e. tentative maps, commercial design review, etc.), the project applicant(s) shall develop an offsite mitigation program that provides funding to offset the project-generated air emissions that are still above the Air District's operational criteria pollutant thresholds after the adoption of other applicable air quality mitigation measures. The offsite mitigation program is subject to the review and approval of the Air District and the City of Salinas on a project-by-project basis (of phase-by-phase), and is intended to be in addition to offsets that are obtained through any on-site mitigation measures. Example projects that could be included in the offsite mitigation program may include, but are not limited to, the following:*

- *Replace existing agricultural combustion-based generators/pumps with electric agricultural water pumps (in place of generators/pumps;*
- *Replace combustion school buses with electric school buses within the local community;*

- *Install adaptive traffic control systems;*
- *Install solar photovoltaic (PV) systems.*

Page 3.1-24 of the Draft EIR is amended as follows:

CalEEMod (v.2016.3.2) was used to estimate construction emissions for the Specific Plan. Construction of the land uses proposed under the Specific Plan would occur over an approximately 20-year period, with construction expected to start as early as 2020, continuing through 2040, with buildout occurring by approximately 2040. Construction activities would be market-driven, and are therefore expected to wax and wane over the course of the expected 20-year buildout timeframe. Table 3.1-11, below, provides the unmitigated and mitigated construction PM_{10} emissions, as modelled within CalEEMod (v.2016.3.2).

TABLE 3.1-11: PM_{10} CONSTRUCTION EMISSIONS

	Unmitigated	*Mitigated*
MBARD Threshold	*≤ 82 lbs/day*	*≤ 82 lbs/day*
Maximum Daily	~~20.6~~ 46.3	~~10.7~~ 46.3
Threshold Exceeded?	**No**	**No**

SOURCES: CALEEMOD (V.2016.3.2)

PROJECT EFFECTS ON PUBLIC HEALTH

Monterey County has a state designation of Nonattainment for ozone and PM_{10}. As shown in Table 3.1-11, construction of the project would generate PM_{10} exhaust in excess of the MBARD's numeric threshold for construction emissions. The MBARD developed this project-level threshold based on the emissions that would exceed a CAAQS or contribute substantially to an existing or projected violation of a CAAQS. Ambient levels of these criteria pollutants are likely to decrease in the future, based on current and future implementation of federal and/or state regulatory requirements, such as improvements to the statewide vehicle fleet over time (including the long-term replacement of internal combustion engine vehicles with electric vehicles in coming decades).

As shown in the table provided in Appendix B, almost all tools available to measure criteria pollutant emissions were designed to be used at the national, state, regional, and/or city-levels. These tools are not well suited to analyze small or localized changes in pollutant concentrations associated with individual projects. Accordingly, they are not recommended by the MBARD for CEQA analyses. Instead, the following analysis of health effects is presented qualitatively.

Ozone

O_3 is not emitted directly into the air but is formed through complex chemical reactions between precursor emissions of volatile organic compounds (VOC) (also known as ROG) and oxides of nitrogen (NO_x) in the presence of sunlight. The reactivity of O_3 causes health problems because it damages lung tissue, reduces lung function and sensitizes the lungs to

other irritants. Scientific evidence indicates that ambient levels of O_3 not only affect people with impaired respiratory systems, such as asthmatics, but healthy adults and children as well. Exposure to O_3 for several hours at relatively low concentrations has been found to significantly reduce lung function and induce respiratory inflammation in normal, healthy people during exercise. This decrease in lung function generally is accompanied by symptoms including chest pain, coughing, sneezing and pulmonary congestion.

Studies show associations between short-term ozone exposure and non-accidental mortality, including deaths from respiratory issues. Studies also suggest long-term exposure to ozone may increase the risk of respiratory-related deaths (U.S. Environmental Protection Agency 2019a). The concentration of ozone at which health effects are observed depends on an individual's sensitivity, level of exertion (i.e., breathing rate), and duration of exposure. Studies show large individual differences in the intensity of symptomatic responses, with one study finding no symptoms to the least responsive individual after a 2-hour exposure to 400 parts per billion of ozone and a 50 percent decrement in forced airway volume in the most responsive individual. Although the results vary, evidence suggest that sensitive populations (e.g., asthmatics) may be affected on days when the 8-hour maximum ozone concentration reaches 80 parts per billion (U.S. Environmental Protection Agency 2019b).

As previously stated, precursors of ozone (ROG and NO_x) are accommodated in the emission inventories of State- and federally-required air plans and would not have a significant impact on the attainment and maintenance of ozone AAQS. Therefore, only the MBARD construction air emissions threshold for PM_{10} is applicable for the purposes of this impact analysis. Although the exact effects of ROG and NO_x emissions on local health are not known, it is likely that the increases in ROG and NOx generated by the proposed project would especially affect people with impaired respiratory systems, but also healthy adults and children located in the immediate vicinity of the Specific Plan Area. However, the increases of these pollutants generated by the proposed project are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the proposed project in comparison to Monterey County as a whole. Instead, the increases in ROG and NOx generated by the proposed project when combined with the existing ROG and NOx emitted regionally, would affect people, especially those with impaired respiratory systems located in the immediate vicinity of the Specific Plan Area.

Particulate Matter

Based on studies of human populations exposed to high concentrations of particles (sometimes in the presence of SO_2) and laboratory studies of animals and humans, PM can cause major effects of concern for human health. These include effects on breathing and respiratory symptoms, aggravation of existing respiratory and cardiovascular disease, alterations in the body's defense systems against foreign materials, damage to lung tissue, carcinogenesis and premature death. Small particulate pollution has health impacts even at very low concentrations – indeed no threshold has been identified below which no damage to health is observed. The major subgroups of the population that appear to be most

sensitive to the effects of particulate matter include individuals with chronic obstructive pulmonary or cardiovascular disease or influenza, asthmatics, the elderly and children.

Numerous studies have linked PM exposure to premature death in people with preexisting heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms. Studies show that every 1 microgram per cubic meter reduction in $PM_{2.5}$ results in a one percent reduction in mortality rate for individuals over 30 years old (Bay Area Air Quality Management District, 2017). Long-term exposures, such as those experienced by people living for many years in areas with high particle levels, have been associated with problems such as reduced lung function and the development of chronic bronchitis – and even premature death. Additionally, depending on its composition, both PM_{10} and $PM_{2.5}$ can also affect water quality and acidity, deplete soil nutrients, damage sensitive forests and crops, affect ecosystem diversity, and contribute to acid rain (U.S. Environmental Protection Agency 2019c).

The project would generate emissions of PM during project construction activities, as shown in Table 3.1-11. Although the exact effects of such emissions on local health are not known, it is likely that the increases in PM generated by the proposed project would especially affect people with impaired respiratory systems, but also healthy adults and children located in the immediate vicinity of the Specific Plan Area. However, the increases of these pollutants generated by the proposed project are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the project in comparison the Monterey County as a whole. Instead, the increases in PM generated by the proposed project when combined with the existing PM emitted regionally, would affect people, especially those with impaired respiratory systems located in the immediate vicinity of the Specific Plan Area.

Discussion

As previously discussed, the magnitude and locations of any potential changes in ambient air quality, and thus health consequences, from these additional emissions cannot be quantified with a high level of certainty due to the dynamic and complex nature of pollutant formation and distribution (e.g., meteorology, emissions sources, sunlight exposure). However, it is known that public health will continue to be affected in the City of Salinas and the surrounding region so long as the region does not attain the CAAQS or NAAQS. However, the increases of these pollutants generated by the proposed project are not on their own likely to generate an increase in the number of days exceeding the NAAQS or CAAQS standards, based on the size of the project in comparison the Monterey County as a whole.

Page 3.1-24 through 3.1-25 of the Draft EIR is amended as follows:

Mitigation Measure 3.1-~~8~~9*: Prior to the issuance of grading permits, the project applicant shall prepare a grading plan subject to review and approval by the City. In the event that ground-disturbance exceeds 2.2 acres per day for initial site preparation activities that involve extensive earth-moving activities (e.g., grubbing, excavation, rough grading), and 8.1 acres per day for activities that involve minimal earth-moving (e.g., finish grading), the*

required grading plans shall include the following measures to be implemented as needed to prevent visible dust emissions:

- *Water all active construction sites to prevent visible dust emissions. Frequency should be based on the type of operation, soil, and wind exposure;*
- *Prohibit grading and earthmoving activities, and cover stock piles, during periods of high wind (over 15 mph);*
- *Limit vehicle speed on construction sites to 15 mph.*
- *Apply chemical soil stabilizers on inactive construction areas (disturbed lands within construction projects that are unused for at least four consecutive days);*
- *Apply non-toxic binders (e.g., latex acrylic copolymer) to exposed areas after cut and fill operations and hydroseed area;*
- *Maintain at least 1-foot of freeboard in each haul truck;*
- *Provide windbreaks on the windward perimeter of construction projects where adjacent to open land;*
- *Cover inactive storage piles;*
- *Sweep streets if visible soil material is carried out from the construction site; ~~and/or~~*
- *Post a publicly visible sign written in English and Spanish which specifies the telephone number and person to contact regarding dust complaints. This person shall respond to complaints and take corrective action within 48 hours. The phone number of the Monterey Bay Air Resources District (MBARD) shall be visible to ensure compliance with Rule 402 (Nuisance). The sign shall be in accordance with MBARD and/or City requirements, as applicable;*
- *Use cleaner construction equipment that conforms to EPA's Tier 3 or Tier 4 emission standards; and/or*
- *Further, where feasible construction should include the use of alternative fuels such as compressed natural gas (CNG), propane, electricity or biodiesel.*

Mitigation Measure 3.1-~~9~~10*: Prior to issuance of building permits or commencing operation of any commercial building/use that would emit toxic air contaminants (such as gas stations or dry cleaning operations), the project applicant shall, at a minimum, perform prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. The prioritization screening shall be performed in accordance with the California Air Pollution Control Officers Association Air Toxic "Hot Spots" Program guidance. The prioritization screening shall also be conducted consistent with the guidance provided by the Monterey Bay Air Resources District, which will be responsible for determining which facilities based on their prioritization screening score, must perform a health risk assessment. In determining the need to prepare a health risk assessment, the Monterey Bay Air Resources District considers the potency, toxicity, quantity, and volume of hazardous materials released from the facility, the proximity of the facility to potential receptors, and any other factors specific to the facility that indicate that it may pose a significant health risk.*

If a health risk assessment is warranted for a facility based on its prioritization score, the project applicant shall assess the facilities for the potential to expose the public to toxic air contaminants in excess of the applicable thresholds (utilizing an air dispersion modelling program such as AERMOD). As of the time of this writing, the commonly accepted threshold for cancer risk is 10 in a million for carcinogens, and the reference exposure level for non-carcinogens (HI = 1). Facilities that exceed the applicable threshold(s) have the potential to expose the public to toxic air contaminants levels that would be considered significant. Facilities that exceed the applicable threshold(s) must incorporate mitigation to reduce the risks from emission of toxic air contaminants to an acceptable level (i.e., to a level that does not exceed the applicable threshold[s]). Potential mitigation includes: reducing the size of the facility area; rearranging the site to reduce the potential for impacts on the nearest sensitive receptors; and utilizing products that reduce the level of toxic air contaminants, or removal of such products from the operational phase of the project.

Page 3.1-25 of the Draft EIR is amended as follows:

Impact 3.1-4: The proposed project has the potential to have carbon monoxide hotspot impacts (Less than Significant)

Very high levels of CO are not likely to occur outdoors. However, when CO levels are elevated outdoors, they can be of particular concern for people with some types of heart disease. These people already have a reduced ability for getting oxygenated blood to their hearts in situations where the heart needs more oxygen than usual. They are especially vulnerable to the effects of CO when exercising or under increased stress. In these situations, short-term exposure to elevated CO may result in reduced oxygen to the heart accompanied by chest pain also known as angina (USEPA, 2016). Such acute effects may occur under current ambient conditions for some sensitive individuals, while increases in ambient CO levels could increase the risk of such incidences.

SECTION 3.2 BIOLOGICAL RESOURCES

Page 3.2-33 of the Draft EIR is amended as follows:

CONCLUSION

As previously noted, there are numerous locations for refugia (debris, burrows, crevices, barns, sheds, etc.) within the Specific Plan Area that could be used by migrating CTS. Higher quality upland habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential refuge sites. It is noted that there is not any known CTS taking refuge in the Specific Plan Area during their estivation period. It is also theoretically possible that a breeding CTS would emerge from the breeding basin and migrate west of Natividad Road to find refugia in the Specific Plan Area. The areas with potential upland habitat in the Specific Plan Area includes the farmland fringe, irrigation ditch, roadside ditch, and farmland residence. The paved roads, dirt roads, and tilled farmland provide limited habitat because of the frequency of disturbance in these areas.

Given that the entire Specific Plan Area is within the 1.3-mile migration radius, and there is potential aquatic breeding and upland habitat, the proposed project will affect this breeding population of CTS.

It is noted that this population has been genetically evaluated and has been determined to be a hybrid population ~~which does not receive the same legal protections as~~ and is not a distinct population segment (DPS). ~~As of the writing of this EIR, neither the USFWS nor the California Fish and Game Commission had officially listed this metapopulation under either ESA or CESA. While it is anticipated that the proposed project would eliminate all potential for refuge in the Specific Plan Area, it is not ruled a significant impact because this metapopulation is not protected. Regardless, there is the potential for a species status to change at some future time and present a new impact that could not have been determined at this time.~~

Mitigation measures are presented ~~to ensure a final concurrence is obtained from the~~ that require consultation with the regulatory agencies to ensure that there is no illegal take for CTS ~~even though they are well documented as a hybrid population~~. Additionally, the regulatory agencies have established avoidance, minimization, and mitigation measures that they impose on projects through the regulatory permitting process. These measures ~~are presented that~~ would require activities to avoid and minimize impacts to CTS ~~to the extent feasible. Such avoidance and minimization measures include conducting environmental education training for all construction personnel covering the California tiger salamander, the importance of avoiding adverse effects to the species. A biologist(s) would be responsible for overseeing any hand excavation of burrows using hand trowels and spades. Burrows would be excavated to the terminus of the tunnels, or to where the burrow is less than or equal to 0.5 inch in diameter. If ground disturbing activities in suitable habitat (Farmland Fringe, Irrigation Ditch, Roadside Ditch, and Farmland Residence) are projected to extend beyond the first rain of the rainy season, the applicant will erect drift fencing around the work areas, prior to commencing work, to prevent California tiger salamanders from entering these sites. Drift fencing will be installed and inspected by the biologist(s) no less than 72 hours prior to the first rain event of the rainy season. If weather conditions necessitate the installation of drift fencing, the approved biologist(s) will oversee the installation of pit traps to capture California tiger salamanders migrating during the rain events. The biologist(s) will check pit traps twice daily, once in the morning prior to the start of construction and once at the end of the work day. Any California tiger salamanders captured in pit traps or uncovered in burrows will be transferred immediately to a site designated by the USFWS and CDFW. Transported animals must be kept cool and moist. A post-construction report detailing compliance with the avoidance/minimization measures will be provided to the USFWS and CDFW within 90 calendar days of completion of the project. The report will include: dates of project groundbreaking and completion, information concerning the success of the project in meeting minimization measures, such as the capture and offsite transport of California tiger salamanders, an explanation of failure to meet such measures, if any, known project effects on the California tiger salamander, observed incidences of injury to or mortality of the species, and any other relevant~~

~~information.~~ Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CTS to be responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit traps to capture CTS migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CTS found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report. The regulatory agencies may also require compensatory mitigation for any take, including habitat loss. The determination of compensatory mitigation, including the appropriate ratio, is determined through the regulatory permit process in consultation with the USFWS and CDFW. By law, CDFW may not issue an incidental take permit unless "[t]he impacts of the authorized take shall be minimized and fully mitigated." (Cal. Fish & G. Code § 2018(b)(2).) Similarly, USFWS may not issue incidental take authorization where a proposed federal action would jeopardize the continued existence of an endangered or threatened species or designated or proposed critical habitat; and the agency must issue "reasonable and prudent measures … necessary or appropriate to minimize such impact." (16 USCA § 1536(a)(4), (b)(4).) These legal requirements operate as performance standards that will ensure that any potentially significant effects are rendered less than significant.

With implementation of the following measures, the proposed project would not, directly or indirectly, have a substantial adverse effect on amphibian or reptile species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. This potential impact is reduced to a ***less than significant*** level.

MITIGATION MEASURES

Mitigation Measure 3.2-1*: Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CTS. This is anticipated to include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS or CDFW determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CTS habitat.* ~~shall consult with the USFWS and CDFW for concurrence and a final confirmation that a take permit is not necessary for impacts to the hybrid population of California tiger salamander located along Natividad Road. The regulatory agency concurrence confirmation shall be provided to the City of Salinas for the project file. If the status of this metapopulation were to change and become protected prior to construction,~~

~~or the regulatory agencies do not concur that the metapopulation does not require a take permit, then the project applicant shall initiate a consultation with the agencies and obtain the appropriate take permits.~~

Mitigation Measure 3.2-2*: Prior* to *issuance of grading and/or building permits, in order to avoid and minimize impacts to California tiger salamander to the extent feasible, the proposed project activities shall be compliant with* all ~~*the following*~~ *Avoidance and Minimization Measures imposed by the USFWS and/or CDFW during Construction Activities.* ~~*These measures are intended to apply, regardless of the consultation process with regulatory agencies.*~~ *Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CTS to be responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit traps to capture CTS migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CTS found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report.*

~~*f) Prior to excavation work or other ground disturbance, a qualified biologist(s) will conduct environmental education training for all construction personnel covering the California tiger salamander, the importance of avoiding adverse effects to the species. New personnel who are added to the project after the training is first conducted also will be required to be trained.*~~

~~*g) The biologist(s) will oversee the hand excavation of any burrows located in suitable habitat that are within the project footprint (Farmland Fringe, Irrigation Ditch, Roadside Ditch, and Farmland Residence). These excavations will be performed carefully using hand-trowels and spades. Burrows will be excavated to the terminus of the tunnels, or to where the burrow is less than or equal to 0.5 inch in diameter.*~~

~~*h) If ground disturbing activities in suitable habitat (Farmland Fringe, Irrigation Ditch, Roadside Ditch, and Farmland Residence) are projected to extend beyond the first rain of the rainy season, the applicant will erect drift fencing around the work areas, prior to commencing work, to prevent California tiger salamanders from entering these sites. Drift fencing will be installed and inspected by the biologist(s) no less than 72 hours prior to the first rain event of the rainy season. If weather conditions necessitate the installation of drift fencing, the approved biologist(s) will oversee the installation of pit traps to capture California tiger salamanders migrating during the rain events. The biologist(s) will check pit traps twice daily, once in the morning prior to the start of construction and once at the end of the work day.*~~

~~*i) Any California tiger salamanders captured in pit traps or uncovered in burrows will be transferred immediately to a site designated by the USFWS and CDFW. Transported animals must be kept cool and moist.*~~

~~*j) A post-construction report detailing compliance with the avoidance/minimization measures will be provided to the USFWS and CDFW within 90 calendar days of completion of the project for which the grading and/or building permit was required. The report will include:*~~

~~*g. Dates of project groundbreaking and completion.*~~

~~*h. Information concerning the success of the project in meeting minimization measures, such as the capture and offsite transport of California tiger salamanders.*~~

~~*i. An explanation of failure to meet such measures, if any.*~~

~~*j. Known project effects on the California tiger salamander.*~~

~~*k. Observed incidences of injury to or mortality of the species.*~~

~~*l. Any other relevant information.*~~

Page 3.2-35 of the Draft EIR is amended as follows:

CONCLUSION

As previously noted, there are numerous documented occurrences of CRLF in the vicinity of the Specific Plan Area. Higher quality upland and aquatic habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential habitat within the drainage features (i.e. ditches). It is noted that there is not any known CRLF within the Specific Plan Area. The areas with potential upland habitat in the Specific Plan Area includes the irrigation ditches and roadside ditches. The paved roads, dirt roads, tilled farmland, farmland fringe, and farmland residences provide very limited to no habitat. The proposed project would eliminate all potential use of the land within the Specific Plan Area.

The following mitigation measures are presented ~~to ensure a final concurrence is obtained from~~ <u>that require consultation with</u> the regulatory agencies to ensure that there is no illegal take for CRLF. Additionally, <u>the regulatory agencies have established avoidance, minimization, and mitigation</u> measures <u>that they impose on projects through the regulatory permitting process. These measures would require activities</u> ~~are presented~~ to avoid and minimize impacts to CRLF ~~to the extent feasible~~. <u>Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CRLF to be responsible for any monitoring, 3) erecting drift fencing around the work areas, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours, 5) relocation of any CRLF found immediately to a site designated by the USFWS and CDFW per</u>

protocol; and 6) post construction report. The regulatory agencies may also require compensatory mitigation for any take, including habitat loss. The determination of compensatory mitigation, including the appropriate ratio, is determined through the regulatory permit process in consultation with the USFWS and CDFW. By law, CDFW may not issue an incidental take permit unless "[t]he impacts of the authorized take shall be minimized and fully mitigated." (Cal. Fish & G. Code § 2018(b)(2).) Similarly, USFWS may not issue incidental take authorization where a proposed federal action would jeopardize the continued existence of an endangered or threatened species or designated or proposed critical habitat; and the agency must issue "reasonable and prudent measures … necessary or appropriate to minimize such impact." (16 USCA § 1536(a)(4), (b)(4).) These legal requirements operate as performance standards that will ensure that any potentially significant effects are rendered less than significant. ~~Such avoidance and minimization measures include conducting environmental education training for all construction personnel covering the California red-legged frog, the importance of avoiding adverse effects to the species. A biologist(s) will monitor construction activities located in suitable habitat that is within the project footprint (Irrigation Ditch, Roadside Ditch). The applicant will erect drift fencing around the work areas, prior to commencing work, to prevent California red-legged frog from entering the construction site. Drift fencing will be installed and inspected by the biologist(s). A post-construction report detailing compliance with the avoidance/minimization measures will be provided to the USFWS and CDFW within 90 calendar days of completion of the project. The report will include: Dates of project groundbreaking and completion, Information concerning the success of the project in meeting minimization measures, such as the capture and offsite transport of California red-legged frog. An explanation of failure to meet such measures, if any, known project effects on the California red-legged frog, observed incidences of injury to or mortality of the species, and any other relevant information.~~

With implementation of the following measures, the proposed project would not, directly or indirectly, have a substantial adverse effect on amphibian or reptile species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. This potential impact is reduced to a ***less than significant*** level.

MITIGATION MEASURES

Mitigation Measure 3.2-3*: Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CRLF. This is anticipated to include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS or CDFW determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed*

to be viable CRLF habitat ~~shall consult with the USFWS for concurrence and a final confirmation that a take permit is not necessary for impacts to the California red-legged frog that is documented in the region, and has the potential to utilize the surrounding drainages. The regulatory agency concurrence confirmation shall be provided to the City of Salinas for the project file. If the regulatory agency does not concur that the project does not require a take permit, then the project applicant shall initiate a consultation with the agency and obtain the appropriate take permit.~~

***Mitigation Measure 3.2-4**: Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to CRLF to the extent feasible, the proposed project activities shall be compliant with all ~~the following~~ Avoidance and Minimization Measures imposed by the USFWS and/or CDFW during Construction Activities. ~~These measures are intended to apply, regardless of the consultation process with regulatory agencies.~~ Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CTS to be responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit traps to capture CTS migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CTS found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report.*

~~*e. Prior to excavation work or other ground disturbance, a biologist(s) will conduct environmental education training for all construction personnel covering the California red-legged frog, the importance of avoiding adverse effects to the species. New personnel who are added to the project after the training is first conducted also will be required to be trained.*~~

~~*f. The biologist(s) will monitor construction activities located in suitable habitat that is within the project footprint (Irrigation Ditch, Roadside Ditch).*~~

~~*g. The applicant will erect drift fencing around the work areas, prior to commencing work, to prevent California red-legged frog from entering the construction site. Drift fencing will be installed and inspected by the biologist(s).*~~

~~*h. A post-construction report detailing compliance with the avoidance/minimization measures will be provided to the U.S. Fish and Wildlife Service within 90 calendar days of completion of the project, for which the grading/building permit was required. The report will include:*~~

- ~~*Dates of project groundbreaking and completion.*~~

- ~~*Information concerning the success of the project in meeting minimization measures, such as the capture and offsite transport of.*~~
- ~~*An explanation of failure to meet such measures, if any.*~~
- ~~*Known project effects on the California red-legged frog.*~~
- ~~*Observed incidences of injury to or mortality of the species.*~~
- ~~*Any other relevant information.*~~

~~*If proposed construction activities may result in the "take" (harass, harm, pursue, wound, kill, trap, or capture) of California red-legged frog or California tiger salamander, the project proponent shall obtain state and federal Incidental Take Permits, and comply with all stipulated conditions to protect special-status amphibians.*~~

SECTION 3.3 CULTURAL AND TRIBAL RESOURCES

Page 3.3-1 of the Draft EIR is amended as follows:

> One comment was received during the public review period for the Notice of Preparation regarding environmental impacts associated with cultural resources. The Ohlone/Costanoan-Esselen Nation (OCEN) responded with a letter dated January 11, 2016. The OCEN requested to be included in ongoing project consultation. The letter did not identify any cultural resources in the Specific Plan Area. The comment letter~~s~~, along with the SB-18 consultation records, are ~~is~~ included in **Appendix A** of this EIR.

Page 3.3-11 of the Draft EIR is amended as follows:

> Letters were sent to: the Native American Heritage Commission; Ms. Jakki Kehl; Tony Cerda, Chairperson, Coastanoan Rumsen Carmel Tribe; Ms. Louise Miranda-Ramirez, Chairperson, Ohlone Coastanoan-Esselen Nation; Ms. Ramona Garibay, Representative, Trina Marine Ruano Family; Mr. Valentine Lopez, Amah Mutsun Tribal Band; Ms. Irene Zwierlein, Chairperson, Amah Mutsun Tribal Band of Mission San Juan Bautista; Ms. Christianne Arias, Vice Chairperson Ohlone/Coastanoan-Esselen Nation; Mr. Edward Ketchum, Amah Mutsun Tribal Band; Ms. Pauline Martinez-Arias, Tribal Council Women, Ohlone/Coastanoan-Esselen Nation; Ms. Ann Marie Sayers, Chairperson, Indian Canyon Mutsun Band of Coastanoan; Ms. Linda G. Yamane; and, Ms. Michelle Zimmer, Amah Mutsun Tribal Band of Mission San Juan Bautista regarding the West Area Specific Plan Area. The Native American Heritage Commission responded with a letter dated August 12, 2015. The Ohlone/Costanoan-Esselen Nation (OCEN) responded with a letter dated January 11, 2016. Consultation was requested by, and meetings were held with, the Ohlone Coastanoan-Esselen Nation (Ms. Louise J. Miranda-Ramirez). The tribal consultation records, along with t~~T~~he ~~C~~comment letter~~s~~ received (from OCEN, dated January 11, 2016) is~~are~~ included in **Appendix A** of this EIR.

3.0 3.0 ERRATA

Page 3.3-15 of the Draft EIR is amended as follows:

Mitigation Measure 3.3-3*: If human remains are found during construction within the Specific Plan Area, or at off-site infrastructure improvement locations, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until a qualified archeological monitor and the coroner of Monterey County are contacted. If it is determined that the remains are Native American, the coroner shall contact the Native American Heritage Commission within 24 hours. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descendent (MLD) from the deceased Native American. The MLD may then make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and associated grave goods as provided in Public Resources Code section 5097.98. The landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further disturbance if:*

The landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further disturbance if:

d) the Native American Heritage Commission is unable to identify a MLD or the MLD failed to make a recommendation within ~~24~~48 hours after being notified by the commission;
e) the descendent identified fails to make a recommendation; or
f) the landowner or his authorized representative rejects the recommendation of the descendent, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.

SECTION 3.4 GHG, CLIMATE CHANGE, AND ENERGY

SOURCES: CALEEMOD (V.2016.3.2)

As presented in the table, short-term construction emissions of GHGs ~~associated are estimated to be a total of 204,297 MT CO_2e. This reflects~~would be at a low of 388 in 2020 and a high of ~~11,883~~8,072 MT CO_2e in 202~~0~~1, emitted during each of the construction years (2020 through 2040). Construction GHG emissions tend to be highest during years when building construction activities would occur, as opposed to site preparation or other construction activities. As shown in Table 3.4-1, the proposed project's construction emissions would exceed the mass emissions threshold of 1,150 MT CO_2e/year for nearly all years of construction.

Long-Term Operational GHG Emissions: The long-term operational GHG emissions estimate for the Specific Plan incorporates potential area source and vehicle emissions, and emissions associated with utility and water usage, and wastewater and solid waste generation.

Estimated GHG emissions associated with the Specific Plan in 2035 are summarized in Table 3.4-2 and 3.4-3, below. Although buildout of the Specific Plan Area is not expected until at least 2040, for the sake of a conservative analysis, the Specific Plan Area operational emissions were modelled for full buildout by 2035, in order to provide a conservative analysis (due to federal and State requirements having the effect of reducing mobile and built-environment GHG emissions over time). As shown in the following tables, the annual 2035 GHG emissions associated with the Specific Plan would be approximately ~~51,939.2~~43,649.4 MT CO_2e without any mitigation incorporated and ~~47,684.9~~39,273.3 MT CO_2e with mitigation incorporated into the proposed project (as provided by CalEEMod).

These mitigation measures therefore represent a decrease of ~~4,254.34~~4,376.1 MT CO_2e in year 2035.

SOURCES: CALEEMOD (V.2016.3.2)

Estimated GHG emissions associated with the Specific Plan in 2050 are summarized in Table 3.4-4 and 3.4-5, below. It should be noted that the same RPS standard as estimated for year 2035 was estimated for year 2050. Additionally, CalEEMod is highly limited to the extent that it can account for year 2050 reductions in GHG emissions, given the long timeframe involved. Given emerging technologies (such as affordable electric vehicles) and the high likelihood of increased federal and/or State regulation between 2035 and 2050, per capita emissions are likely to decrease further over this timeframe. Therefore, the year 2050 emissions results represent a conservative estimate. As shown in the following tables, the annual 2050 GHG emissions associated with the Specific Plan would be approximately 42,522.0~~50,825.0~~ MT CO_2e without any mitigation incorporated and 38,364.1~~46,779.4~~ MT CO_2e with mitigation incorporated into the proposed project (as provided by CalEEMod). These mitigation measures therefore represent a decrease of 4,045.6~~4,157.9~~ MT CO_2e in year 2050.

It should also be noted that the proposed project incorporates some features into the design of the Specific Plan Area that CalEEMod considers as "mitigation". Therefore, the

unmitigated scenario (in Table 3.4-2) below further acts as a conservative estimate of unmitigated Specific Plan Area emissions.

SOURCES: CALEEMOD (V.2016.3.2)

The significance thresholds for GHG emissions should be related to compliance with AB 32 and SB 32, and the City of Salinas, as lead agency, has chosen to utilize a threshold of significance for GHG emissions based on the guidance from the MBARD and the City of Salinas, and as required by the Newhall Ranch decision. This threshold was independently derived by De Novo Planning Group, based on statewide GHG emissions and future-year employment and population projections. The rationale for using this threshold is outlined in the previous subsection, entitled "Thresholds of Significance".

As provided by the West Area Specific Plan, the proposed project is anticipated to include approximately 15,928 residents at project buildout. The proposed project would also have approximately 857 employees at project buildout (based on 571,500 total square feet of mixed use commercial at project buildout[2], and an employment density factor of 667 square

[2] As provided by the West Area Specific Plan: see Table 3 of the Initial Study for Salinas West Area Specific Plan (proposed project).

feet per worker[3]). Therefore, with a total projected service population of 16,785, unmitigated operational GHG emissions of 43,649.4~~51,939.2~~ MT CO_2e (in Year 2035), and mitigated operational GHG emissions of 39,273.3~~47,684.9~~ MT CO_2e (in Year 2035), the proposed project would generate approximately 2.60~~3.09~~ MT CO_2e/service population/year (in Year 2035), for operational emissions, under the unmitigated scenario. Under the mitigated scenario, the proposed project would generate approximately ~~2.84~~2.34 MT CO_2e/service population/year (in Year 2035). These values are above the derived threshold of 1.94 MT CO_2e/service population/year for Year 2035.

For the purposes of this analysis, the service population in Year 2050 is assumed to be same as in Year 2035. Under such a scenario, unmitigated GHG emissions per service population in Year 2050 would be approximately ~~3.03~~2.53 MT CO_2e/service population/year, and mitigated GHG emissions ~~remain~~would be ~~2.79~~2.29 MT CO_2e/service population/year. However, the service population threshold applied for Year 2050 is lower than in Year 2035, at 0.80 MT CO_2e/service population/year (and therefore more difficult at to achieve as compared to Year 2035). The GHG emissions modelled for Year 2050 would exceed this threshold by a substantial margin.

Page 3.4-48 through 3.4-49 have been amended as follows:

As described in Impact 3.4-2, implementation of the proposed project will still generate GHG emissions that would not otherwise exist without the proposed project. Given the length of construction activities for a project of this size, the construction emissions would be a ~~long-term~~maximum annual release of approximately 8,072~~168,734.3~~ MT CO_2e. The operational emissions would be a long-term release totaling approximately 43,649.4~~51,939.2~~ MT CO2e per year in 2035 without mitigation, and 39,273.3~~47,684.9~~ MT CO_2e per year in 2035 with mitigation. The City of Salinas must weigh the economic and social benefits of development against the environment impacts associated with development. The City of Salinas's planning efforts included targeted growth that accommodates the economic and social needs of the community, while recognizing and seeking to mitigate environmental impacts when growth occurs. The use of New Urbanism principles, which emphasize compact, walkable communities, and which were incorporated into the design of the proposed project, would help minimize GHG emissions generated by the proposed project. Further, the proposed project would be required to implement mitigation measures that are intended to reduce GHG emissions to the maximum extent feasible. The State of California continues to implement measures that are intended to reduce emissions on a State-wide scale (i.e. vehicle fuel efficiency standards in fleets, low carbon fuels, etc.) that are consistent with AB 32 and SB 32. These types of statewide measures will benefit the proposed project (and city as a whole) in the long-term as they come into effect; however, the City does not have the jurisdiction to create far-reaching (i.e. statewide) measures to reduce GHG emissions. On a project-by-project case, the City of Salinas evaluates a project and the

[3] As provided in Table 2 of the City of Salinas Nexus Studies Overview and Summary (February, 2016), for the "Retail/Restaurant/Personal Services" land use type.

potential to impose project-specific mitigation, which has been done through this GHG analysis. However, because it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant, implementation of the Specific Plan would have a ***cumulatively considerable contribution*** and ***significant and unavoidable*** impact to GHGs.

SECTION 3.6 HYDROLOGY AND WATER QUALITY

Page 3.6-19 of the Draft EIR is amended as follows:

Reclamation Ditch Watershed Impact Fee/Draft Nexus Study Summary Report

The Monterey County Water Resources Agency (MCWRA) oversees the development and implementation of water quality, water supply, and flood control projects in Monterey County, including operation and maintenance of the Reclamation Ditch. The Reclamation Ditch is part of a complex drainage system within the lower Salinas Valley. The final draft (August 2006) of the MCWRA's *Reclamation Ditch Watershed Impact Fee/Nexus Study Summary Report* ("Draft Nexus Study"), while not adopted, provides useful background information related to the current state of the Reclamation Ditch system.

The MCWRA has imposed regulations for floodplains in the County. Pertinent regulations include the following:

1. Lands within the FEMA FIRM identified 1-percent annual chance flood floodplain, Special Flood Hazards Areas (SFHA), and areas within 200 feet of a river or with 50 feet of a watercourse are subject to these regulations.
2. No construction is allowed within regulatory floodways or Zones AE.
3. Any encroachment into a regulatory floodway shall not result in any increase of base flood elevations.
4. All construction shall have the lowest floor, including basement, elevated to at least one foot above the base flood elevation.

(Note: All development in City of Salinas, including development in the Reclamation Ditch Watershed, must meet city flood damage prevention regulations.)

Currently, the Reclamation Ditch has taken on a new mission - as an important source of reclaimed irrigation and drinking water. The MCWRA and Monterey One Water (M1W), have entered into a Water Recycling Agreement which include consideration of the financing, design, construction, operation, maintenance, and replacement of New Source Water Facilities to provide approximately 4,381 acre-feet per year of additional recycled water to MCWRA for use in the existing Castroville Seawater Intrusion Project (CSIP), a coastal irrigation project. In addition, M1W would be provided approximately 4,320 AFY of new source water to provide drinking water. The project is reflected in the report entitled Monterey County Water Resources Agency New Source Water Supply Study (September 28, 2018). The report is available on MCWRA's website. The report provides that the Reclamation Ditch is expected to supply 272 acre-feet of recyclable water in a normal year.

3.0 3.0 ERRATA

Although the Reclamation Ditch will remain an important collector and conveyor of drainage water, that drainage water, at least above the diversion point, will be considered a resource to be enhanced rather than an impediment to be decreased.

SECTION 3.7 NOISE

Page 3.7-28 of the Draft EIR is amended as follows:

> ***Mitigation Measure 3.7-4:*** *Prior to the approval of building permits, the first row of residential dwellings located along E. Boronda Road and Natividad Road shall include windows having a Sound Transmission Class (STC) 35, or higher, rating installed in second floor facades and rooms that have windows or doors that ~~face~~abut E. Boronda Road and/or Natividad Road. Exterior walls shall also require 3-coat stucco and RC-channels, sheathing, or another acceptable construction application that effectively attenuates noise intrusion to the interior of the house. The exterior wall specifications would specifically apply to the first row of homes that abut E. Boronda Road and/or Natividad Road and ~~does~~only applies~~not apply~~ to the facades facing ~~away from the~~these roadways. These specifications do not apply to single story homes, or the first floor of a two-story home, both of which are attenuated by the sound wall. These requirements shall be included in the building plans for the specific dwelling units and noted on the building permits. A detailed analysis of any additional interior mitigation measures shall be conducted when building plans are available and prior to building permit issuance to verify these requirements. These requirements shall also be noted in the site improvement plans prior to approval by the City.*
>
> ***Mitigation Measure 3.7-5:*** *Prior to the approval of building permits, mechanical ventilation shall be required in the first row of all residential dwellings that ~~face~~abut E. Boronda Road and/or Natividad Road, sufficient to allow residents, as desired for acoustical isolation, to keep their doors and windows closed and still maintain acceptable interior temperature and noise levels. This requirement shall be included in the building plans for the specific dwelling units and noted on the building permits. This requirement shall also be noted in the site improvement plans prior to approval by the City.*

Page 3.7-31 of the Draft EIR is amended as follows:

> ***Mitigation Measure 3.7-7:*** *Prior to the approval of development review permits, the plans shall demonstrate: where commercial, business professional, office, or similar uses ~~face~~abut residential uses or where loading docks or truck circulation routes abut residential areas, the following measures shall be included in the project design:*
>
> - *All HVAC equipment shall be located within mechanical rooms where possible or shielded from view with solid or grated barriers;*
> - *Emergency generators shall comply with the City's noise criteria at the nearest noise-sensitive receivers;*

- *Delivery/loading activities shall comply with the Salinas Zoning Code standards and regulations; and*

The applicant shall submit a noise study to verify that the appropriate noise control measures have been incorporated into the project design and will achieve compliance with the City's noise level standards.

SOURCE: SALINAS UNION HIGH SCHOOL DISTRICT: 2018 SCHOOL FACILITY NEEDS ANALYSIS AND JUSTIFICATION REPORT; SANTA RITA UNION SCHOOL DISTRICT SCHOOL FACILITIES NEEDS ANALYSIS MARCH 6, 2018.

NOTE: TABLE ASSUMES (HIGH) SINGLE FAMILY (SF) DETACHED UNITS FOR ALL SF UNITS, DUE TO LACK OF DETAILED LOT COUNTS FOR ATTACHED AND DETACHED SFU'S.

The proposed project is expected to generate approximately ~~between 1,927 and 2,354~~3,216 additional students for the SUHSD and SRUSD, as shown in Table 3.9-9. It is also important to understand that special legal principles apply to impacts to school facilities. According to

Government Code Section 65996, the development fees authorized by Senate Bill 50 (1998) (described earlier) are deemed to be "full and complete school facilities mitigation" for impact caused by new development. The legislation also recognized the need for the fee to be adjusted periodically to keep pace with inflation. The legislation indicated that in January 2000, and every two years thereafter, the State Allocation Board would increase the maximum fees according to the adjustment for inflation in the statewide index for school construction. However, even where applicants have agreed to pay school impact mitigation fees, if the proposed development requires the construction or expansion of additional facilities that would cause other physical environmental impacts, then those physical impacts to non-school resources may be analyzed under CEQA (Gov. Code § 65995(i)).

SECTION 3.10 TRANSPORTATION AND CIRCULATION

Pages 3.10-43 through 3.10-46 of the Draft EIR is amended as follows:

- **North Sanborn Road/Boronda Road (#35): Implement** Mitigation Measure 3.10-~~5~~6 - Install a traffic signal or roundabout. Traffic signal mitigation was found to improve level of service to C in the morning peak hour and LOS B during the evening peak hour, with 22.8 seconds of delay and 15.1 seconds of delay, respectively. As this impact is a result of project traffic, the project applicant shall be responsible for its funding and implementation at the project approval stage. Alternatively, a roundabout that would reduce traffic to the same LOS (or better) is also acceptable. With the implementation of the identified mitigation measure, the impact would be less than significant**.**

- **Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way (#38):** Mitigation Measure 3.10-~~6~~7: Optimize existing signal timings and add an eastbound left turn pocket. The proposed mitigation is to add an eastbound left turn pocket and optimize the existing signal timing to better accommodate the expected changes in traffic distribution and volume in the with-project scenario. The proposed mitigation was found to improve LOS in the morning and evening peak periods to LOS B, with 18.0 seconds of delay and 18.3 seconds of delay, respectively. As this impact is a result of project traffic, the project applicant shall be responsible for its funding and implementation at the project approval stage. With the implementation of the identified mitigation measure, the impact would be less than significant.

- **Salinas Street/North Main Street/West Market Street/East Market Street (#55):** Mitigation Measure 3.10-~~7~~8: Add a southbound left turn lane and optimize the traffic signal timing. The implementation of this mitigation measure would improve intersection operation to LOS D in both the morning and evening peak hours, with 45.5 and 35.9 seconds of delay per vehicle, respectively. As this impact is a result of project traffic, the project applicant shall be responsible for its funding and implementation at the project approval stage. With the implementation of the identified mitigation measure, the impact would be less than significant**.**

- **U.S 101 Ramp Junctions:** Mitigation Measure~~s 3.10-8 and~~ 3.10-9**:** Contribution to the TAMC RDIF Program and payment of the City of Salinas's Traffic Impact Fees. The proposed mitigation for this impact is the project requirements to contribute to the TAMC Regional Development Impact Fee (RDIF) Program and the City of Salinas's Traffic Impact Fee (TIF) Program. These programs include improvements to U.S. 101 that would improve mainline and ramp junction operations, which would mitigate this project impact to a less than significant level**.**

CONCLUSION

Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans. With implementation of these mitigation measures, the impacts to the above eight intersections and two ramp junctions are considered less than significant, and no further mitigation is required.

MITIGATION MEASURES

Mitigation Measure 3.10-1*: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal at San Juan Grade Road/Van Buren Avenue, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans for each stage of project development shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

Mitigation Measure 3.10-2*: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of the existing signal timing at San Juan Grade Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

Mitigation Measure 3.10-3*: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the signalization of the intersection at Hemingway Drive/East Boronda Road or equivalent traffic control (such as a roundabout), in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be*

determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.

***Mitigation Measure 3.10-4**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings at North Main Street/West Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

***Mitigation Measure 3.10-6**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal or equivalent traffic control (such as a roundabout) at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

***Mitigation Measure 3.10-7**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings and to add an eastbound left turn pocket at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. This mitigation includes the addition of an eastbound left turn pocket and optimization of the existing signal timing to better accommodate the expected changes in traffic distribution and volume with implementation of the proposed project. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

***Mitigation Measure 3.10-8**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the addition a southbound left turn lane and optimization of the traffic signal's timing at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share requirement. This*

measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.

Page 3.10-55 through 3.10-56 of the Draft EIR is amended as follows:

***Mitigation Measure 3.10-10**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

***Mitigation Measure 3.10-11**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to convert the eastbound right turn lane to a shared through-right turn lane at Natividad Road/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

***Mitigation Measure 3.10-12**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for addition of an eastbound right turn pocket at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

***Mitigation Measure 3.10-13**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for the installation of a traffic signal at the intersection of Williams Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

***Mitigation Measure 3.10-14**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing*

and splits at the South Sanborn/North Sanborn/John Street intersection, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.

Pages 3.10-67 through 3.10-70 of the Draft EIR is amended as follows:

Mitigation Measure 3.10-15*: Each project applicant for development within the Specific Plan Area shall contribute its fair-share of funding to the TAMC Regional Development Impact Fee provides mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Southbound Ramps/Echo Valley Road/Crazy Horse Canyon Road. Regional fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

Mitigation Measure 3.10-16*: Each project applicant for development within the Specific Plan Area shall contribute its fair-share of the TAMC Regional Development Impact Fee to provide mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Northbound Ramps/Crazy Horse Canyon Road. Total fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

Mitigation Measure 3.10-17*: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Crazy Horse Canyon Road/San Juan Grade Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

Mitigation Measure 3.10-18*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Natividad Road/Rogge Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This*

measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.

Mitigation Measure 3.10-19*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Natividad Road/Russell Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

Mitigation Measure 3.10-20*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of southbound and westbound left turn lanes at the intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

Mitigation Measure 3.10-21*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a southbound left turn lane at the intersection of Constitution Boulevard/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

Mitigation Measure 3.10-22*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at the intersection of Old Stage Road/Williams Road/Private Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

Mitigation Measure 3.10-23*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound through lane, the addition of a northbound right turn overlap phase, and the conversion of the westbound through lane to a westbound shared through-left turn lane at the intersection*

of North Main Street/East Bernal Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note these improvements and the fair-share funding requirement.

***Mitigation Measure 3.10-24**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound and southbound through lanes at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

***Mitigation Measure 3.10-25**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of South Davis Road/Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

***Mitigation Measure 3.10-26**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane and a southbound left turn lane at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

***Mitigation Measure 3.10-27**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound left turn lane at the intersection of South Main Street/West Blanco Road/East Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

~~***Mitigation Measure 3.10-28**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound left turn lane at the intersection of South Main Street/West Blanco Road/East Blanco Road, in proportion to the area planned for development by such project applicant, in accordance~~

~~*with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*~~

Page 3.10-57 of the Draft EIR is amended as follows:

The results of the intersection analysis for this scenario are shown in **Error! Reference source not found.** 3.10-21 below. As shown, although the worst movements at the Hebert Road/San Juan Grade Road intersection (i.e. Intersection #6) would operate at LOS E during the PM period, the intersection does not satisfy peak hour traffic signal warrants. Therefore, there would not be significant impact at this intersection under Cumulative Plus Project conditions and there would be no mitigation required.

Separately, although the North Main Street/West Laurel Drive intersection (i.e. Intersection #32) would operate at LOS D during the AM period and a LOS F during the PM period, the proposed project does not increase vehicular delay this intersection, compared with the Cumulative No Project condition. The proposed project adds a small amount of traffic at this intersection to movements that experience low delay, thereby making average delay decrease by a small amount at this intersection (161.8 seconds during the PM peak hour under the Cumulative No Project condition versus 158.6 seconds under the Cumulative Plus Project condition) (see Appendix I for more detail). Since the proposed project does not result in an increase in delay at this intersection under the Existing Plus Project conditions, this results in a less than significant impact and no mitigation is required for this intersection.

Page 3.10-65 of the Draft EIR is amended as follows:

- **Crazy Horse Canyon Road/San Juan Grade Road (#5)**: Mitigation Measure 3.10-~~30~~17: Install traffic signal. However, while the project would make a fair-share contribution to mitigate its contribution to this impact, there is no mechanism to ensure the full funding and completion of the improvement. Thus, this cumulative impact is considered significant and unavoidable.

- **Hebert Road/San Juan Grade Road (#6):** No ~~feasible~~ mitigation is ~~available~~required for this intersection. While the worst movement at this intersection would operate at LOS E under this scenario, this intersection does not satisfy peak hour traffic signal warrants (from the MUTCD). Thus, this cumulative impact is considered less than significant.~~Furthermore, there is no mechanism to ensure the full funding and completion of an improvement, should one become available. Thus, this cumulative impact is considered significant and unavoidable.~~

Page 3.10-66 of the Draft EIR is amended as follows:

- **North Main Street/West Laurel Drive (#32)**: ~~No feasible mitigation is available~~.The proposed project does not increase vehicular delay at this intersection, compared with the

Cumulative No Project condition. ~~Furthermore, there is no mechanism to ensure the full funding and completion of an improvement, should one become available.~~Thus, this cumulative impact is considered significant and unavoidable~~less than significant~~.

- **Natividad Road/East Laurel Drive (#33)**: Implement previously identified Mitigation Measures 3.10-5~~:~~ and 3.10-11 (Install northbound and southbound through lanes, and convert the eastbound right turn lane to a shared through-right turn lane at Natividad Road/East Laurel Drive). However, under cumulative conditions, the degradations in service levels are considered to be significant adverse cumulative impacts based on the City's significance thresholds. Thus, this cumulative impact is considered significant and unavoidable.

CUMULATIVE PLUS PROJECT WITH CENTRAL AREA SPECIFIC PLAN

The Cumulative Conditions Plus Project with Central Area Specific Plan scenario models the overall change in traffic volumes in Salinas as a result of forecast development, with the addition of the proposed project and the Central Area Specific Plan. The intent is to understand how the proposed project combined the Central Area Specific Plan will influence travel behavior in light of future conditions, and to identify possible significant future impacts.

Intersections

The results of the intersection operations analysis for the Cumulative Plus Project and Central Area Specific Plan conditions are shown in Table 3.10-26 below. Overall, twenty-two intersections were found to operate below the local LOS thresholds set by the City. As shown, although the worst movements at the Hebert Road/San Juan Grade Road intersection (i.e. Intersection #6) would operate at LOS E during the PM period, the intersection does not satisfy peak hour traffic signal warrants. Therefore, there would not be significant impact at this intersection under Cumulative Plus Project with Central Area Specific Plan conditions and there would be no mitigation required.

Separately, although the North Main Street/West Laurel Drive intersection (i.e. Intersection #32) would operate LOS F during the AM and PM periods, the proposed project does not increase vehicular delay this intersection, compared with the Cumulative No Project condition. The proposed project adds a small amount of traffic to movements that experience low delay, thereby making average delay decrease by a small amount at this intersection (161.8 seconds during the PM peak hour under the Cumulative No Project condition versus 161.3 seconds under the Cumulative Plus Project Plus Central Area Specific Plan condition) (see Appendix I for more detail). Since the proposed project does not result in an increase in delay at this intersection under this scenario, there is a less than significant impact for this intersection and no mitigation is required.

Page 3.10-78 of the Draft EIR is amended as follows:

Hebert Road/San Juan Grade Road (#6): ~~No feasible mitigation is available. The cumulative impact would be considered significant and unavoidable.~~ No mitigation is required for this intersection. While the worst movement at this intersection would operate at LOS E, this intersection does not satisfy peak hour traffic signal warrants (from the MUTCD). Thus, this cumulative impact is considered less than significant.

Page 3.10-79 of the Draft EIR is amended as follows:

- **North Main Street & West Laurel Drive (#32):** The proposed project does not increase vehicular delay at this intersection, compared with the Cumulative No Project condition. Thus, this cumulative impact would be less than significant. Nevertheless, this intersection would be required to i~~I~~mplement the previously identified Mitigation Measure 3.10-4 **-** Optimize existing signal timings. ~~With the implementation of the identified mitigation measure, the impact would be less than significant.~~

- **Natividad Road/East Laurel Drive (#33)**: ~~Mitigation Measure 3.10-30: Convert the existing eastbound right turn lane to a shared through-right turn lane. In addition, i~~Implement previously identified Mitigation Measure 3.10-5, which requires funding for the installation of northbound and southbound through lanes, and Mitigation Measure 3.10-11, which requires the conversion of the eastbound right turn lane to a shared-right turn lane. However, even with implementation of these mitigation measures, this cumulative impact would be significant and unavoidable.

- **Constitution Boulevard/East Laurel Drive (#34)**: Mitigation Measure 3.10-~~31~~29: Install an eastbound left turn lane. In addition, implement Mitigation Measure 3.10-21: Install southbound left turn lane. However, this cumulative impact is considered significant and unavoidable.

- **North Sanborn Road/Boronda Road (#35):** Mitigation Measure 3.10-~~32~~30: Install a westbound left turn lane. With the implementation of the identified mitigation measure, the cumulative impact would be less than significant.

Page 3.10-79 of the Draft EIR is amended as follows:

- **Williams Road/East Boronda Road (#40)**: Mitigation Measure 3.10-~~33~~31: Install an eastbound left turn lane. With the implementation of the identified mitigation measure, the cumulative impact would be less than significant.

- **East Front Street/Sherwood Drive/Market Street (#51)**: Mitigation Measure 3.10-~~34~~32: Install a southbound left turn lane. With the implementation of the identified mitigation measure, the cumulative impact would be less than significant.

Page 3.10-81 through 3.10-82 of the Draft EIR is amended as follows:

Mitigation Measure 3.10-2~~8~~9*: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Old Stage Road/Hebert Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.*

Mitigation Measure 3.10-~~30~~29*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of northbound and southbound through lanes on Natividad Road and for the conversion of the existing eastbound right turn lane on East Laurel Drive to a shared through-right turn lane, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

Mitigation Measure 3.10-~~31~~30*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of eastbound and southbound left turn lanes at Constitution Boulevard/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

Mitigation Measure 3.10-~~32~~31*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of North Sanborn Road/Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

Mitigation Measure 3.10-~~33~~32*: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane at Williams Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

***Mitigation Measure 3.10-~~3~~433**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a southbound left turn lane at the intersection of East Front Street/Sherwood Drive/Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*

SECTION 3.11 UTILITIES

Pages 3.11-28 through 3.11-29 of the Draft EIR is amended as follows:

~~**Salinas Valley Groundwater Project Phase II**. A conceptual design for Phase II of the Salinas Valley Water Project has been developed by MCWRA. Under this plan additional winter flood flows would be diverted from the Salinas River. These diversions, up to 135,000 AFY, could be directly used by urban customers. A technical memorandum was completed in 2013. Phase II incorporates two surface water diversion points and will be accompanied by conveyance and delivery facilities.~~

Pure Water Monterey Project. The approved Pure Water Monterey Groundwater Replenishment Project will serve northern Monterey County. The project will provide both purified recycled water for recharge of the Seaside Groundwater Basin that serves as drinking water supply, and recycled water to augment the existing Castroville Seawater Intrusion Project's crop irrigation supply. The project is jointly sponsored by the M1W and the Monterey Peninsula Water Management District, and also includes participation by the City of Salinas, the Marina Coast Water District, and the MCWRA. CEQA documentation has been completed for this project.

The project includes collection of a variety of new source waters and conveyance of that water to the M1W regional wastewater treatment plant (regional plant) for treatment and recycling. New source waters include: 1) water from the City of Salinas agricultural wash water system; 2) stormwater flows from the southern part of Salinas and the Lake El Estero facility in Monterey; 3) surface water and agricultural tile drain water that is captured in the Reclamation Ditch and Tembladero Slough; and 4) surface water and agricultural tile drain water that flows in the Blanco Drain. The project would enable California American Water Company to reduce its diversions from the Carmel River system by up to 3,500 acre-feet per year by injecting the same amount of purified recycled water into the Seaside Groundwater Basin. The project would also provide additional recycled water for agricultural irrigation in northern Salinas Valley through the Castroville Seawater Intrusion Project's agricultural irrigation system. It is anticipated that in normal and wet years approximately 4,500 to 4,750 acre-feet per year of additional recycled water supply could be created for agricultural irrigation purposes. In drought conditions, the project could provide up to 5,900 acre-feet per year for crop irrigation (Denise Duffy & Associates, 2016). It is this latter source of new agricultural water that would replace an

equivalent volume that is now pumped from the groundwater basin and contributes to groundwater overdraft and seawater intrusion.

Other Water Supply Projects. The Cal Water UWMP includes discussion of new water supply projects from which Cal Water may be able to obtain water supply that would reduce its need to pump groundwater from the groundwater basin. These include Monterey Peninsula Water Supply Project (referenced in the UWMP as the former named Coastal Water Project) and the DeepWater Desal project in Moss Landing.

The Monterey Peninsula Water Supply Project is designed to supply supplemental water to consumers on the Monterey Peninsula. The primary purpose is to enable California American Water, the primary water purveyor for these customers, to reduce California American Water's diversion of water from the Carmel River as mandated by the State. Therefore, this project is not expected to have significant potential to reduce groundwater extraction within the Salinas Valley.

The DeepWater Desal project, proposed for a location in Moss Landing, is in the planning and environmental review stages. If approved, the project is projected to be operational in 2021. If the project proceeds as proposed, it could become a source of municipal water supply for the City of Salinas, thereby potentially reducing the volume of groundwater extracted to serve demand in the city.

Recommendations to Address the Expansion of Seawater Intrusion in the Salinas Valley Groundwater Basin

In October 2017, the MCWRA prepared a report (entitled Recommendations to Address the Expansion of Seawater Intrusion in the Salinas Valley Groundwater Basin) to discuss the current knowledge and related background information surrounding seawater intrusion pathways and potential impacts on the Salinas Valley Groundwater Basin. Within this report, the MCRWA provided six recommendations with the aim to slow or halt seawater intrusion and impacts related thereto, within the Salinas Valley Groundwater Basin, with each focused on a component that influences, or could be impacts by, the advancement of seawater intrusion. The recommendations include, in no particular order:

1. An immediate moratorium on groundwater extractions from new wells in the Pressure 400-Foot Aquifer within an identified Area of Impact4, except for the following use categories:

a. Wells operating under the auspices of the Castroville Seawater Intrusion Project; and,

b. Monitoring wells owned and maintained by the Agency or other water management agencies.

2. Enhancement and expansion of the Castroville Seawater Intrusion Project (CSIP) Service Area. The expansion should include, at a minimum, lands served by wells currently extracting groundwater within the Area of Impact.

3. Following expansion of the CSIP Service Area, termination of all pumping from existing wells Pressure 180-Foot or Pressure 400-Foot Aquifer wells within the Area of Impact, except for the following use categories:

a. Municipal water supply wells;

b. Wells operating under the auspices of the Castroville Seawater Intrusion Project; and,

c. Monitoring wells owned and maintained by the Agency or other water management agencies.

4. Initiate and diligently proceed with destruction of wells in Agency Zone 2B, in accordance with Agency Ordinance No. 3790, to protect the Salinas Valley Groundwater Basin against further seawater intrusion.

5. An immediate moratorium on groundwater extractions from new wells within the entirety of the Deep Aquifers of the 180/400 Foot Aquifer and Monterey Subbasins until such time as an investigation of the Deep Aquifers is completed and data pertaining to the hydraulic properties and long-term viability of the Deep Aquifers are available for knowledge-based water resource planning and decision making.

a. Monitoring wells, public agency wells, municipal water supply wells, wells for which a construction permit has already been issued, and well repairs should be considered for exemption from this recommendation.

b. The moratorium should include a prohibition of:

i. Replacement wells, unless it can be demonstrated that the installation of such a well will not result in further expansion of the seawater intrusion front; and,

ii. Deepening of wells from overlying aquifers into the Deep Aquifers, deepening of wells within the Deep Aquifers, and other activities that would expand the length, depth, or capacity of an existing well.

6. Initiate and diligently proceed with an investigation to determine the hydraulic properties and long-term viability of the Deep Aquifers.

The MCWRA as identified an Area of Impact, encompassing an area of the 180/400 Foot Aquifer and Monterey Subbasins that meets the following criterion:

- That portion of the 180/400 Foot Aquifer and Monterey Subbasins in which chloride concentrations in either the Pressure 180-Foot Aquifer or the Pressure 400-Foot Aquifer are 250 milligrams per liter (mg/L) or greater.

The location of areas where chloride concentrations in groundwater are 250 mg/L chloride concentration or greater will be defined by the most recently published data from the Agency; currently this is data from 2015. The use of the 250 mg/L threshold is applicable only to identifying the Area of Impact as it pertains to these recommendations. The Agency will continue to define the extent of seawater intrusion as the area in which chloride concentrations are 500 mg/L or greater.

It should be noted that the report recommends consideration of an exemption for new municipal water supply wells in the entirety of the Deep Aquifers.

SECTION 4.0 OTHER CEQA-REQUIRED TOPICS

Pages 4.0-9 through 4.0-10 of the Draft EIR is amended as follows:

As described in Impact 3.4-2, implementation of the proposed project will still generate GHG emissions that would not otherwise exist without the proposed project. Given the length of construction activities for a project of this size, the construction emissions would be a ~~long-term~~maximum annual release of approximately 8,072~~168,734.3~~ MT CO_2e. The operational emissions would be a long-term release totaling approximately 43,649.4~~51,939.2~~ MT CO2e per year in 2035 without mitigation, and 39,273.3~~47,684.9~~ MT CO_2e per year in 2035 with mitigation.

As described in Impact 3.4-2 in Section 3.4, implementation of the proposed project will still generate GHG emissions that would not otherwise exist without the proposed project. Given the length of construction activities for a project of this size, the construction emissions would be a ~~long-term~~maximum annual release of approximately 8,072~~168,734.3~~ MT CO_2e. The operational emissions would be a long-term release totaling approximately 43,649.4~~51,939.2~~ MT CO2e per year in 2035 without mitigation, and 39,273.3~~47,684.9~~ MT CO_2e per year in 2035 with mitigation. The City of Salinas must weigh the economic and social benefits of development against the environment impacts associated with development. The City of Salinas's planning efforts included targeted growth that accommodates the economic and social needs of the community, while recognizing and seeking to mitigate environmental impacts when growth occurs. The use of New Urbanism principles, which emphasize compact, walkable communities, and which were incorporated into the design of the proposed project, would help minimize GHG emissions generated by the proposed project. Further, the proposed project would be required to implement mitigation measures that are intended to reduce GHG emissions to the maximum extent feasible. The State of California continues to implement measures that are intended to reduce emissions on a State-wide scale (i.e. vehicle fuel efficiency standards in fleets, low carbon fuels, etc.) that are consistent with AB 32 and SB 32. These types of statewide

measures will benefit the proposed project (and city as a whole) in the long-term as they come into effect; however, the City does not have the jurisdiction to create far-reaching (i.e. statewide) measures to reduce GHG emissions. On a project-by-project case, the City of Salinas evaluates a project and the potential to impose project-specific mitigation, which has been done through this GHG analysis. However, because it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant, implementation of the Specific Plan would have a ***cumulatively considerable contribution*** and ***significant and unavoidable*** impact to greenhouse gases.

SECTION 5.0 ALTERNATIVES

Pages 5.0-48 and 5.0-49 of the Draft EIR is amended as follows:

TABLE 5.0-10: COMPARISON OF ALTERNATIVE PROJECT IMPACTS TO THE WEST AREA SPECIFIC PLAN

SOURCE: CALEEMOD (V.2016.3.2)

Pages 5.0-18 and 5.0-19 of the Draft EIR are amended a follows:

This alternative would provide more compact development than the proposed project, providing greater opportunities for non-motorized transportation choices (such as walking or cycling). This would slightly reduce vehicle miles travelled (VMT) as compared to the proposed project, which would slightly the mobile source emissions. The Reduced Land Area Project Alternative would have greater impacts with respect to Air Quality Impact 3.1-1, which is identified as "the potential to conflict with or obstruct implementation of the applicable air quality plan." This is because the Association of Monterey Bay Area Governments (AMBAG), in consultation with the City of Salinas, included the North of Boronda FGA (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The AMBAG 2018 Regional Growth Forecast feeds into the Monterey Bay Air Resources Board's (MBARD) 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as the future version of the Air Quality Management Plan (AQMP). Therefore, while an increase in density has the potential to reduce mobile source emissions if residents chose alternative transportation modes (i.e. walk/bike/transit instead of driving a vehicle), this is not guaranteed to occur given that the choice to drive is still convenient and economical for most residents under this residential density in a suburban environment. The increased residential density under this alternative was not specifically planned for in the MBARD planning documents and within the AMBAG

forecasts. ~~As such,~~ Nevertheless, due to the reduced footprint and slightly reduced VMT, this impact would be slightly reduced when compared to the West Area Specific Plan.

Page 5.0-21 of the Draft EIR is amended as follows:

The Reduced Land Area Project Alternative would not develop approximately 162 acres that is proposed to be developed under the proposed project. This would provide more compact development, creating more opportunities for non-motorized transportation options (such as walking or cycling). This is likely to reduce overall vehicle miles travelled (VMT) as compared to the proposed project. This would reduce mobile-related GHG emissions by an amount approximately equivalent to proportional reduction in the size of the Specific Plan Area (twenty percent) under this alternative, as compared with the proposed project. Estimated mitigation operational GHG emissions at Specific Plan Area buildout are shown in Table 5.0-3. As shown, total operational emissions would be reduced by approximately ~~11~~13% under this scenario, as compared to the proposed project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

SOURCES: CALEEMOD (V.2016.3.2)

With a total projected service population of 16,785 (same as the proposed project), this alternative would generate approximately ~~2.53~~2.02 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. However, this value is below the

per service population estimate for the proposed project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, the emissions per capita under this alternative would be reduced as compared with the proposed project. This impact would be slightly reduced when compared to the proposed project.

Page 5.0-23 of the Draft EIR is amended a follows:

Under the Reduced Land Area Project Alternative, potential water quality impacts from construction and operation of the West Area Specific Plan would be reduced. Under this alternative, the developed area would be reduced by 20 percent when compared with the project. The Reduced Land Area Project Alternative would have a greater chance of groundwater recharge because it would reduce the amount of impervious surfaces by 20 percent as compared to the West Area Specific Plan. The areas that would not be developed (i.e., the 162 acres of land in the northeast corner of the Specific Plan Area) would remain under agricultural production. ~~and w~~While ~~they~~ the 162-acre agricultural area would ~~have better recharge in those areas~~provide opportunities for groundwater recharge, the agricultural uses would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping required for the 162-acres of agricultural use under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. The amount of total consumptive water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412 AFY less water than buildout of the proposed project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the proposed project.

~~There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 80 percent of the land area would be converted into a use that would not require intensive groundwater pumping.~~

Under this alternative, there are some instances where the undeveloped portions of the Specific Plan Area would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, while the potential to result in water quality violations would be reduced under this alternative when compared with the project, overdraft conditions would worsen in the Salinas Valley Ground Water basin under this alternative because this alternative would increase groundwater pumping when compared to the project. As such, potential impacts related to hydrology and water quality would be increased under this alternative when compared to the project.

Page 5.0-24 of the Draft EIR is amended as follows:

Population and Housing

The City anticipates growth within the community over time, and has responded to the anticipated growth by establishing a Future Growth Area (FGA). The FGA was established through a community process that focused on allowing new development to specific areas of the city that have been determined to have adequate infrastructure and resources to accommodate the growth. The Specific Plan Area is within the North of Boronda FGA, and the West Area Specific Plan is a planning document that implements the City's intent to focus new development, and the growth that goes along with the new development, into the FGA. The West Area Specific Plan would not displace substantial numbers of existing housing and/or substantial numbers of people, but would instead provide new housing consistent with the City's General Plan. The West Area Specific Plan does not divide the community, but rather, it is an extension of the existing community.

Under the Reduced Land Area Project Alternative, the project footprint~~development~~ would be reduced by 20 percent when compared with the proposed project. However, although the residential density would increase from approximately 9.0 to 11.3 residential units per acre under this alternative, the number of residences developed under this alternative would be the same as for the proposed project.~~Development of housing would still occur under this alternative, but fewer units would be built. Growth would still be anticipated to occur within the region, but it would not be fully accommodated in the North of Boronda FGA which has undergone extensive planning efforts by the City and community for over a decade. This would not be consistent with the FGA and General Plan. The City would need to look to other undeveloped areas of the region to develop for new housing which would be expected to have environmental impacts that have not yet been assessed but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region.~~ Overall, this alternative would have an equal ~~greater~~ impact when compared to the proposed project.

Pages 5.0-25 and 5.0-26 of the Draft EIR are amended as follows:

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be ~~reduced~~ equal under the Reduced Land Area Project Alternative; therefore, the demand for police, fire and other public services would be ~~reduced~~equal. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have a ~~slightly reduced~~equal impacts to public services when compared to the project.

Pages 5.0-26 and 5.0-27 of the Draft EIR are amended as follows:

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be ~~reduced~~ equal under the Reduced Land Area Project Alternative; therefore, traffic generated in the Specific Plan

Area would be ~~reduced~~equal. This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts to this topic under this alternative.

The Reduced Land Area Project Alternative would have "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-7, which is identified as "impacts related to emergency access." The basis for this determination is that the increased density of the proposed project would increase congestion on existing and planned roadways as compared to the proposed project, given that fewer roadways would be developed under this alternative (because the APNs 211-011-008 and 211-011-009 would not be developed under this alternative). Specifically, Natividad Road (Major Arterial), Russell Road (Major Arterial), and Rogge Road would not be expanded with full frontage improvements under this alternative. Congestion is also expected to be slightly higher under this alternative compared to the proposed project, given the increased density of traffic (based on fewer roadway miles being developed under this alternative compared with the proposed project, and the increased density of the proposed project (to 11.3 residential units per acre under this alternative, compared to 9.0 residential units per acre under the proposed project). This represents a slightly greater impact with respect to emergency access within the Specific Plan Area. It is noted that the significance determination under Transportation and Circulation Impact 3.10-7 would likely still be less than significant for the Reduced Land Area Alternative, similar to the proposed project, however, the roadway network will not have the same capacity as under the proposed project so the determination remains "slightly greater."

Additionally, the Reduced Land Area Project Alternative would have a "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-8, which is identified as "conflict with adopted multi-modal circulation policies, plans, or programs" or a "decrease [in] the performance or safety of public transit, bicycle, or pedestrian facilities." The basis for this determination is that the following roadways would not be developed in full under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane);
- Rogge Road frontage improvements.

Since these roadways would not be developed in full, as planned for by the proposed project, connectivity with the remainder of the City and County, including other areas within the City's FGA, would be more limited under the Reduced Land Area Project Alternative as compared to the proposed project. Overall, this alternative would have ~~less of an overall~~slightly greater traffic impacts than the project.

Utilities

Implementation of the West Area Specific Plan could result in potentially significant impacts to the utility systems including wastewater, water, storm water drainage, and solid waste providers. Mitigation measures have been incorporated into the project to ensure that capacity is available and any impacts from increased demand are reduced.

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. The total quantity of infrastructure installed would be reduced, but the demand for wastewater and solid waste services would be approximately the same as the proposed project, given that the number of residential and non-residential users of such utilities would remain the same under this alternative as in the proposed project. That is, it is expected that this alternative would generate approximately 1.0 MGD of wastewater and approximately 48,922 lbs/day of solid waste, similar to the proposed project, since this alternative would generate approximately the same number of residents and workers as the proposed project.

Separately, the total storm drainage runoff under this alternative would be reduced compared to the proposed project, due to the reduction in impervious surfaces.

This alternative would not save as much groundwater when compared to the proposed project. The amount of total consumptive water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412 AFY less water than buildout of the proposed project. This is due to the dramatically higher water usage under the current irrigated agricultural cultivation uses as compared with developed residential and/or commercial uses. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project.

With a total projected service population of ~~12,803~~11,947 under this alternative (this is equivalent to a 25% smaller residential population but the same number of workers, when compared to the proposed project), this alternative would generate approximately ~~2.79~~2.74 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value are above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035, but lower than the per service population estimate for the proposed project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, this impact would be slightly reduced when compared to the proposed project.

SOURCE: CALEEMOD (V.2016.3.2)

With a total projected service population of ~~11,190~~10,608 under this alternative (this is equivalent to a 33% reduction in both residential and worker population, when compared to the proposed project), this alternative would generate approximately ~~2.84~~2.47 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. Additionally, this emissions per capita value would be the same as those generated by the proposed project. Therefore, this impact would be equal when compared to the proposed project.

APPENDIX B

Appendix B of the Draft EIR includes additional information regarding models and tools for correlating project-generated criteria pollutant emissions to health end points. The following table is an addition to Appendix B.

ANALYSIS OF MODELS AND TOOLS TO CORRELATE PROJECT-GENERATED CRITERIA POLLUTANT EMISSIONS TO HEALTH END POINTS

TOOL	CREATED BY	DESCRIPTION	RESOLUTION	POLLUTANTS ANALYZED	PROJECT-LEVEL CEQA APPLICABILITY
AERMOD Modeling System[4,5]	AERMIC	A steady-state plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of both surface and elevated sources, and both simple and complex terrain. The modeling system incorporates air dispersion based on a planetary boundary layer turbulence structure and scaling concepts, including treatment of both surface and elevated sources, and both simple and complex terrain.	Project-level	SO_2, ROG, NO_2, Lead, $PM_{2.5}$, PM_{10}, NH_3	This model operates at the project-level and provides air dispersion modeling for a project's emissions on the surrounding environment. However, even with supplementary (i.e. additional software), the model cannot estimate specific health effects on receptors from the air dispersion modeling. Moreover, it cannot model the (complex) chemical reactions that occur between the ozone precursors (e.g. NOx and ROG) that generate ozone. Therefore, this model is not recommended for project-level CEQA analysis.
AirCounts[6]	Abt Assoc.	Online tool that helps large and medium-sized cities quickly estimate the health benefits of $PM_{2.5}$ emission reductions and economic value of those benefits. The tool estimates the number of deaths (mortality) avoided and economic value related to user-specified regional, annual $PM_{2.5}$ emissions reduction.	City-level	Primary $PM_{2.5}$	This tool is only illustrative, as it is limited to certain cities and does not target specific sectors. The tool is not sector specific, and includes limited California data. It cannot provide results at a project-level. Therefore, the tool is not recommended for project-level CEQA analysis.
Air Pollution Emission Experiments and Policy analysis (APEEP) model[7]	Mueller and Mendelsohn2006, 2009	The Air Pollution Emission Experiments and Policy (APEEP) analysis model (Muller and Mendelsohn 2006, 2009) is a traditional integrated assessment model. Like other integrated assessment models, APEEP connects emissions of air pollution through air-quality modeling to exposures, physical effects, and monetary damages. Making these links requires the use of findings reported in the peer-reviewed literature across several scientific disciplines. The air-quality models in APEEP use the emission data provided by EPA to estimate corresponding ambient concentrations in each county in the coterminous	National or county-level	SO_2, ROG, NO_x, Ozone, $PM_{2.5}$, PM_{10}	The model operates at the national scale but may be applied at the county-level (although it is not clear how this adjustment should be made). It cannot provide results at a project-level. The tool is also not commercially available. Therefore, the tool is not recommended for project-level CEQA analysis.

[4] See: https://www.epa.gov/scram/air-quality-dispersion-modeling-preferred-and-recommended-models

[5] Note: May require additional software to estimate the level of each specific pollutant at the modeled receptors.

TOOL	CREATED BY	DESCRIPTION	RESOLUTION	POLLUTANTS ANALYZED	PROJECT-LEVEL CEQA APPLICABILITY
		states.			
CALINE3/ CAL3QHC/ CAL3QHCR[1, 2]	USEPA	A steady-state Gaussian dispersion model designed to determine air pollution concentrations at receptor locations downwind of highways located in relatively uncomplicated terrain. CALINE3 is incorporated into the more refined CAL3QHC and CAL3QHCR models. CAL3QHCR is a more refined version based on CAL3QHC that requires local meteorological data.	Project-level	SO_2, ROG, NO_2, Lead, $PM_{2.5}$, PM_{10}	This model operates at the project-level and provides air dispersion modeling for a project's emissions on the surrounding environment. However, even with supplementary (i.e. additional software), the model cannot estimate specific health effects on receptors from the air dispersion modeling. Moreover, it cannot model the (complex) chemical reactions that occur between the ozone precursors (e.g. NOx and ROG) that generate ozone. Therefore, this model is not recommended for project-level CEQA analysis.
Complex Terrain Dispersion Model Plus Algorithms for Unstable Situations (CTDMPLUS)[1, 2]	USEPA	A refined point source gaussian air quality model for use in all stability conditions for complex terrain. The purpose of the model is to provide a practical, refined plum model for elevated point sources near complex terrain.	Project-level	SO_2, ROG, NO_2, Lead, $PM_{2.5}$, PM_{10}	This model operates at the project-level and provides air dispersion modeling for a project's emissions on the surrounding environment. However, even with supplementary (i.e. additional software), the model cannot estimate specific health effects on receptors from the air dispersion modeling. Moreover, it cannot model the (complex) chemical reactions that occur between the ozone precursors (e.g. NOx and ROG) that generate ozone. Therefore, this model is not recommended for project-level CEQA analysis.
Co-Benefits Risk Assessment (COBRA)[8]	USEPA	Preliminary screening tool that contains baseline emission estimates of a variety of air pollutants for a single year. COBRA is targeted to state and local governments as a screening assessment for clean energy policies. EPA's CO–Benefits Risk Assessment (COBRA) screening model is a free tool that helps state and local governments: • Explore how changes in air pollution from clean energy policies and programs; • Estimate the economic value of the health benefits associated with clean energy policies and programs to compare against program costs; • Map and visually represent the air quality, human health, and health-related economic benefits from reductions in emissions of particulate matter ($PM_{2.5}$), sulfur dioxide ($S0_2$),	National, regional, state, or county-levels	$PM_{2.5}$, SO_2, NO_x, NH_3, and ROG	COBRA is a preliminary screening tool only and cannot be used at sub-county resolution. It cannot provide results at a project-level. It also does not account for secondary emission changes resulting from market responses. Accordingly, the tool is not recommended for project-level CEQA analysis.

TOOL	CREATED BY	DESCRIPTION	RESOLUTION	POLLUTANTS ANALYZED	PROJECT-LEVEL CEQA APPLICABILITY
		nitrogen oxides (NO_X), ammonia (NH_3), and volatile organic compounds (VOCs) that result from clean energy policies and programs.			
Environmental Benefits and Mapping Program-Community Edition (BenMAP-CE)[9]	USEPA	The USEPA's detailed model for estimating the health impacts from air pollution. It relies on input concentrations and applies concentration-response (C-R) health impact functions, which relate a change in the concentration of a pollutant with a change in the incidence of a health endpoint, including premature mortality, heart attacks, chronic respiratory illnesses, asthma exacerbation and other adverse health effects. Detailed inputs are required for air quality changes (concentrations from AERMOD), population, baseline incidence rates, and effect estimates.	National, County, City, and sub-regional levels	Ozone, PM, NO_2, SO_2, CO	This model cannot provide results at a project-level. Accordingly, the tool is not recommended for project-level CEQA analysis.
Fast Scenario Screening Tool (TM5-FASST)[10]	Joint Research Centre (Italy)	A tool that allows users to evaluate how air pollutant emissions affect large scale pollutant concentrations and their impact on human health (mortality and years of life lost) and crop yield from national to regional air quality policies, such as climate policies. The target policy domains are national to regional air quality policies, or air pollutant scenarios linked to other policy domains (e.g. climate policy). The tool is web-based and does not require coding or modelling. Users must gain access through publishers.	Global and national-levels	$PM_{2.5}$, Ozone, NO_x, NH_3, CO, ROG, CH_4, SO_2	This tool is applicable at national to global scales. It cannot provide results a project-level. Accordingly, the tool is not recommended for project-level CEQA analysis.
Long-range Energy Alternatives Planning System-Integrated Benefits Calculator (LEAP-IBC)[11]	Climate and Clean Air Coalition (CCAC)	A calculator that allows users to rapidly estimate the impacts of reducing emissions on health, climate, and agriculture. The tool uses sensitivity coefficients that link gridded emissions of air pollutants and precursors to health, climate and agricultural impacts at a national level. The tool is primarily used for policy analysis. The tool is currently Excel-based and is available through the developers only. A web-based interface is currently under development.	National-level	$PM_{2.5}$, Ozone, NO_2	This tool is applicable at national scale. Accordingly, the tool is not recommended for project-level CEQA analysis.
Methodology for Estimating Premature Deaths Associated with	California Air Resources Board	The staff report identifies a relative risk of premature death associated with $PM_{2.5}$ exposure based on a review of all relevant scientific literature, and a new relative risk factor was developed. This new factor is a 10% increase in risk of	National	$PM_{2.5}$	The primary author of the CARB staff report notes that the analysis method is not suited for small projects and may yield unreliable results due to various uncertainties. The tool also cannot provide

TOOL	CREATED BY	DESCRIPTION	RESOLUTION	POLLUTANTS ANALYZED	PROJECT-LEVEL CEQA APPLICABILITY
Long-Term Exposure to Fine Airborne Particulate Matter in California[12]		premature death per 10 µg/m^3 increase in exposure to $PM_{2.5}$ concentrations (uncertainty interval: 3% to 20%)			results on a project-level. Accordingly, the tool is not recommended for project-level CEQA analysis.
Multi-Pollutant Evaluation Method (MPEM)[13]	BAAQMD	Estimates the impacts of control measures on pollutant concentration, population exposures, and health outcomes for criteria, toxic, and GHG pollutants. Monetizes the value of total health benefits from reductions in $PM_{2.5}$, ozone, and certain carcinogens, and the social value of GHG reductions. MPEM was designed for development of a Clean Air Plan for the San Francisco Bay Area. The inputs are specific to the SF region and are not appropriate for projects outside BAAQMD.	Regional level in the SFBAAB	Ozone, PM, air toxics, GHG	This tool is designed to support the BAAQMD in regional planning and emissions analysis within the San Francisco Bay Area Air Basin (SFBAAB). The model applies changes in pollutant concentrations over a four-square kilometer grid. The tool also cannot provide results on a project-level. Additionally, this tool is only applicable for the SFBAAB. Accordingly, the tool is not recommended for project-level CEQA analysis.
Offshore and Coastal Dispersion Model Version 5 (OCD)[1, 2]	USEPA	A straight-line Gaussian model developed to determine the impact of offshore emissions from point, area or line sources on the air quality of coastal regions. OCD incorporates overwater plume transport and dispersion as well as changes that occur as the plume crosses the shoreline. Hourly meteorological data are needed from both offshore and onshore locations.	Project-level	SO_2, ROG, NO_2, Lead, $PM_{2.5}$, PM_{10}	This model operates at the project-level and provides air dispersion modeling for a project's emissions on the surrounding environment. However, even with supplementary (i.e. additional software), the model cannot estimate specific health effects on receptors from the air dispersion modeling. Moreover, it cannot model the (complex) chemical reactions that occur between the ozone precursors (e.g. NOx and ROG) that generate ozone. Therefore, this model is not recommended for project-level CEQA analysis.
Response Surface Model (RSM)-based Benefit-per-Ton Estimates[14]	USEPA	Consists of tables reporting the monetized $PM_{2.5}$-related health benefits from reducing $PM_{2.5}$ precursors from certain source types nationally and for 9 US cities/regions. Applying these estimates simply involves multiplying the emissions reduction by the relevant benefit per-ton metric. The resulting value is the PM mortality risk estimate at a 3% discount rate.	National or regional (San Joaquin County only) levels	SOx, VOC, NH_3, NO_x	RSM includes regional values specific to San Joaquin County. The values are also dated. Accordingly, the tool is not recommended for project-level CEQA analysis.
Sector-based Benefit-per-Ton	USEPA	Two specific sets of Benefit-per-ton (BPT) estimates for 17 key source categories are available. Both are a reduced-form approach based on BenMAP modeling. Applying these factors involves multiplying the emissions reduction (in	National-scale	$PM_{2.5}$, SO_2, NO_x	The BPT estimates do not account for project-specific emissions or receptor locations, local dispersion characteristics, or regional photochemistry. The resultant health effects are therefore reflective of

APPENDIX B

Appendix B of the Draft EIR includes revised output files from updated CalEEMod model runs.

3.0 3.0 ERRATA

This page left intentionally blank.

This document is the Final Mitigation Monitoring and Reporting Program (FMMRP) for the Salinas West Area Specific Plan Project (Project). This FMMRP has been prepared pursuant to Section 21081.6 of the California Public Resources Code, which requires public agencies to "adopt a reporting and monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment." A FMMRP is required for the proposed project because the EIR has identified significant adverse impacts, and measures have been identified to mitigate those impacts.

The numbering of the individual mitigation measures follows the numbering sequence as found in the Draft EIR, some of which were revised after the Draft EIR were prepared. These revisions are shown in Chapter 3.0 of the Final EIR. All revisions to mitigation measures that were necessary as a result of responding to public comments and incorporating staff-initiated revisions have been incorporated into this FMMRP. The FMMRP also includes mitigation measures which are required by the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

4.1 MITIGATION MONITORING AND REPORTING PROGRAM

The FMMRP, as outlined in the following table, describes mitigation timing, monitoring responsibilities, and compliance verification responsibility for all mitigation measures identified in this Final EIR.

The City of Salinas will be the primary agency responsible for implementing the mitigation measures and will continue to monitor mitigation measures that are required to be implemented during the operation of the Project.

The FMMRP is presented in tabular form on the following pages. The components of the FMMRP are described briefly below:

- **Mitigation Measures**: The mitigation measures are taken from the Draft EIR in the same order that they appear in that document.
- **Mitigation Timing**: Identifies at which stage of the Project mitigation must be completed.
- **Monitoring Responsibility**: Identifies the agency that is responsible for mitigation monitoring.
- **Compliance Verification**: This is a space that is available for the monitor to date and initial when the monitoring or mitigation implementation took place.

TABLE 4.0-1: MITIGATION MONITORING AND REPORTING PROGRAM

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
AIR QUALITY				
Impact 3.1-2: Project operation has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation	***Mitigation Measure 3.1-1:*** *Prior to approval of development review permits including tentative maps, the project applicant(s) shall incorporate the following features into project plans and specifications, as directed by the City of Salinas:* • *Provide traffic calming measures wherever feasible, within the Specific Plan Area;* • *Provide preferential carpool/vanpool parking spaces;* • *Provide electric-vehicle parking spaces;* • *Require the use of low-VOC paint for all new building architectural coatings within the Specific Plan Area, consistent with or better than, what is required by the City's Municipal Code.*	City of Salinas Community Development Department	Prior to approval of development review permits including tentative maps	
	Mitigation Measure 3.1-2: *Prior to approval of development review permit(s), the project applicant(s) shall incorporate effective methods to encourage the use of cleaner alternative fuel vehicles and carpooling within the Specific Plan Area. Effective methods may include the installation of alternative fuel (e.g. electric) charging stations at locations spaced throughout the Specific Plan Area, consistent with or better than what is required by the City's Municipal Code and Specific Plan. Additionally, this can be achieved by providing preferential parking for alternatively-powered vehicles, including electric cars, and/or by providing carpool/vanpool parking spaces.*	City of Salinas Community Development Department	Prior to approval of development review permit(s)	
	Mitigation Measure 3.1-3: *Prior to approval of development review permit(s), the project applicant(s) shall incorporate the use of alternative energy for the residential and mixed-use/commercial developments, including by implementing alternative energy (e.g. PV solar) building requirements, consistent with or better than, what is required by the City's Municipal Code. Project applicant(s) shall also ensure that pre-installed electrical hookups and/or charging stations, as applicable, are incorporated into all project plans and specifications.*	City of Salinas Community Development Department	Prior to approval of development review permit(s)	
	Mitigation Measure 3.1-4: *Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that low-flow (high-efficiency) indoor water fixtures will be installed throughout the Specific Plan Area, including for bathroom and kitchen faucets, toilet fixtures,*	City of Salinas Community Development	Prior to the issuance of building permits	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	and showers, in both residential and non-residential buildings, in compliance with or better than the standards required within the most recent version of the California Green Building Standards Code.	Department		
	Mitigation Measure 3.1-5: *Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that water-efficient irrigation systems will be installed throughout the Specific Plan Area, consistent with or better than the requirements contained within the State's Model Water Efficient Landscape Ordinance, the City's Water Conservation Ordinance and the Salinas Zoning Code Landscaping and Irrigation requirements.*	City of Salinas Community Development Department	Prior to the issuance of building permits	
	Mitigation Measure 3.1-6: *Prior to approval of improvement plans or development review permits, as applicable, the project applicant(s) shall ensure that pedestrian/bicycle facilities (e.g. pedestrian paths, outdoor bike racks, etc.) are provided within the Specific Plan Area, in coordination with and subject to approval by the City of Salinas. The project proponent shall also provide bicycling parking near the entrance to commercial establishments within the Specific Plan Area, consistent with or better than the requirements contained within the City's Municipal Code.*	City of Salinas Community Development Department	Prior to approval of improvement plans or development review permits, as applicable	
	Mitigation Measure 3.1-7: *Prior to the issuance of development review permit(s), the project applicant(s) shall incorporate of one or more of the following additional Specific Plan Area requirements, as determined by the City of Salinas:* • *Install secured bicycle storage facilities (bike lockers, cages, interior space, or similar as approved by the City Engineer) at all commercial and public facilities with 50 employees or more;* • *Incorporate a park-and-ride lot;* • *Install Level 2 electric vehicle (EV) charge stations at workplace sites with 50 or more employees (10% of total available parking spaces); and* • *Install publicly-available dual post Level 2 charge stations within commercial zones, and/or other zones as deemed acceptable by the City of Salinas. (Note: The 'level' of the charging station refers to the voltage that the electric vehicle charger uses. Level 1 charging is your typical traditional home outlet, while level 2 is a 240 Volt Portable Cordset or Wall-mounted Charging Station (2-10 hours*	City of Salinas Community Development Department	Prior to approval of development review permit(s)	
		City of Salinas Community Development Department	Prior to approval of development view permits including	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	charging). ***Mitigation Measure 3.1-8:*** *Prior to the approval of individual phases (i.e. tentative maps, commercial design review, etc.), the project applicant(s) shall develop an offsite mitigation program that provides funding to offset the project-generated air emissions that are still above the Air District's operational criteria pollutant thresholds after the adoption of other applicable air quality mitigation measures. The offsite mitigation program is subject to the review and approval of the Air District and the City of Salinas on a project-by-project basis (of phase-by-phase), and is intended to be in addition to offsets that are obtained through any on-site mitigation measures. Example projects that could be included in the offsite mitigation program may include, but are not limited to, the following:* • *Replace existing agricultural combustion-based generators/pumps with electric agricultural water pumps (in place of generators/pumps;* • *Replace combustion school buses with electric school buses within the local community;* • *Install adaptive traffic control systems;* • *Install solar photovoltaic (PV) systems.*		tentative maps	
Impact 3.1-3: Project construction has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation	***Mitigation Measure 3.1-9:*** *Prior to the issuance of grading permits, the project applicant shall prepare a grading plan subject to review and approval by the City. In the event that ground-disturbance exceeds 2.2 acres per day for initial site preparation activities that involve extensive earth-moving activities (e.g., grubbing, excavation, rough grading), and 8.1 acres per day for activities that involve minimal earth-moving (e.g., finish grading), the required grading plans shall include the following measures to be implemented as needed to prevent visible dust emissions:* • *Water all active construction sites to prevent visible dust emissions. Frequency should be based on the type of operation, soil, and wind exposure;* • *Prohibit grading and earthmoving activities, and cover stock piles, during periods of high wind (over 15 mph);* • *Limit vehicle speed on construction sites to 15 mph.* • *Apply chemical soil stabilizers on inactive construction areas (disturbed lands within construction projects that are unused for at least four consecutive days);* • *Apply non-toxic binders (e.g., latex acrylic copolymer) to exposed areas*	City of Salinas Community Development Department Monterey Bay Air Resources District	Prior to the issuance of grading permits	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	after cut and fill operations and hydroseed area; • *Maintain at least 1-foot of freeboard in each haul truck;* • *Provide windbreaks on the windward perimeter of construction projects where adjacent to open land;* • *Cover inactive storage piles;* • *Sweep streets if visible soil material is carried out from the construction site;* • *Post a publicly visible sign written in English and Spanish which specifies the telephone number and person to contact regarding dust complaints. This person shall respond to complaints and take corrective action within 48 hours. The phone number of the Monterey Bay Air Resources District (MBARD) shall be visible to ensure compliance with Rule 402 (Nuisance). The sign shall be in accordance with MBARD and/or City requirements, as applicable;* • *Use cleaner construction equipment that conforms to EPA's Tier 3 or Tier 4 emission standards; and/or* • *Further, where feasible construction should include the use of alternative fuels such as compressed natural gas (CNG), propane, electricity or biodiesel.*			
Impact 3.1-5: The proposed project has the potential for public exposure to toxic air contaminants	***Mitigation Measure 3.1-10:*** *Prior to issuance of building permits or commencing operation of any commercial building/use that would emit toxic air contaminants (such as gas stations or dry cleaning operations), the project applicant shall, at a minimum, perform prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. The prioritization screening shall be performed in accordance with the California Air Pollution Control Officers Association Air Toxic "Hot Spots" Program guidance. The prioritization screening shall also be conducted consistent with the guidance provided by the Monterey Bay Air Resources District, which will be responsible for determining which facilities based on their prioritization screening score, must perform a health risk assessment. In determining the need to prepare a health risk assessment, the Monterey Bay Air Resources District considers the potency, toxicity, quantity, and volume of hazardous materials released from the facility, the proximity of the facility to potential receptors, and any other factors specific to the facility that indicate that it may pose a significant health risk.* *If a health risk assessment is warranted for a facility based on its prioritization score, the project applicant shall assess the facilities for the*	City of Salinas Community Development Department Monterey Bay Air Resources District	Prior to issuance of building permits or commencing operation of any commercial building/use that would emit toxic air contaminants (such as gas stations or dry cleaning operations)	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	potential to expose the public to toxic air contaminants in excess of the applicable thresholds (utilizing an air dispersion modelling program such as AERMOD). As of the time of this writing, the commonly accepted threshold for cancer risk is 10 in a million for carcinogens, and the reference exposure level for non-carcinogens (HI = 1). Facilities that exceed the applicable threshold(s) have the potential to expose the public to toxic air contaminants levels that would be considered significant. Facilities that exceed the applicable threshold(s) must incorporate mitigation to reduce the risks from emission of toxic air contaminants to an acceptable level (i.e., to a level that does not exceed the applicable threshold[s]). Potential mitigation includes: reducing the size of the facility area; rearranging the site to reduce the potential for impacts on the nearest sensitive receptors; and utilizing products that reduce the level of toxic air contaminants, or removal of such products from the operational phase of the project.			
Impact 3.1-7: Cumulative impact on the region's air quality	*Implement Mitigation Measures 3.1-1 through 3.1-10.*	See Mitigation Measures 3.1-1 through 3.1-8	See Mitigation Measures 3.1-1 through 3.1-8	
BIOLOGICAL RESOURCES				
Impact 3.2-2: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Reptile and Amphibian	***Mitigation Measure 3.2-1:*** *Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CTS. The project applicant's qualified biologist shall report the conclusions reached through such consultation to the City's Community Development Director. If either USFWS, CDFW, or the City's Community Development Director determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CTS habitat.* ***Mitigation Measure 3.2-2:*** *Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to California tiger*	City of Salinas Community Development Department California Department of Fish and Wildlife U.S. Fish and Wildlife Service Qualified Biologist City of Salinas	Prior to issuance of grading and/or building permits Prior to

Impact 3.2-3: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Birds	***Mitigation Measure 3.2-5:*** *Building and grading permits and plans issued for development in the Specific Plan Area shall note the following: If construction activities occur during the avian breeding season (February 1 – September 15) then the project proponent shall conduct pre-construction surveys to prevent impacts to nesting birds. No more than 15 days prior to the start of construction a bird survey shall be conducted by a qualified biologist to identify any active nests within 300 feet of the construction zone, and shall be submitted to the City. If construction stops for a period of 15 days or more during the avian breeding season than an additional bird survey shall be conducted. The biologist will conduct a survey within 300 feet of the construction zone for all special-status birds protected by the federal and state ESA, MBTA and CFGC. The biologist shall map all nests that are within, and visible from, 300 feet of the construction zone. If nests are identified, the biologist shall map the location and establish a minimum 300-foot buffer zone around active nests. Construction activity shall be prohibited within the buffer zones until the young have fledged. Nests shall be monitored at least twice per week during the nesting season and a report submitted to the City and CDFW monthly.*	City of Salinas Community Development Department Qualified Biologist California Department of Fish and Wildlife	In conjunction with issuance of building and grading permits and plans	
Impact 3.2-5: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a	***Mitigation Measure 3.2-6:*** *Grading and/or building permits and plans issued for development in the Specific Plan Area shall note the following: Fifteen days prior to construction activities within 200 feet of the residential complexes located along Natividad Road and San Juan Grade Road, the project applicant shall retain a qualified biologist familiar with bat biology to perform a preconstruction survey for roosting special-status bats; and shall be submitted to the City. The survey shall include a minimum of one daytime and one evening survey. The survey shall cover the trees, structures,*	City of Salinas Community Development Department Qualified Biologist	In conjunction with issuance of building and/or grading permits and plans	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Mammals	*and debris located within these complexes. If active roosting is observed, removal of the tree or building shall be avoided until the bats can be excluded. All active non-maternity roosting sites shall be fitted with passive exclusion devices, such as one-way flaps or doors, and all bats shall be allowed to leave voluntarily. Once it is confirmed that all bats have left the roost (minimum of five days), crews shall be allowed to continue work in the area. If a maternity roosting site is discovered, a minimum 50-foot buffer shall be established around the roost. The project applicant shall consult with the qualified biologist in order to determine if a greater buffer is warranted based on the bat species, roost location, and specific construction activities to be performed in the vicinity. The buffer shall stay in effect until all young are determined to be volant (i.e., able to fly and feed independently) by a qualified biologist. Once it is determined that all young are volant (generally by August 1st), passive exclusion devices shall be installed and all bats shall be allowed to leave voluntarily. Once it is determined by a qualified biologist that all bats have left the roost (minimum of five days), crews shall be allowed to work within the buffer zone. Project Improvement Plans will include this measure as a note in the plans.*			
Impact 3.2-7: The proposed project has the potential to have substantial adverse effect on federally - or state- protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means	***Mitigation Measure 3.2-7:*** *Prior to grading/building permit issuance in an area that would disturb the irrigation ditches and/or roadside ditches, the project applicant shall obtain a jurisdictional determination from the USACE and CDFW for the ditches that are proposed to be disturbed. If these regulatory agencies concur that these facilities are exempt, then no further mitigation is necessary. If it is determined that these facilities are not exempt, authorization for fill from the regulatory agencies (USACE-404 permit, RWQCB-401 certification, 1600 Streambed Alteration Agreement) will be necessary and a permit shall be adhered to throughout the construction phase. At a minimum, the project applicant shall replace on a "no net loss" basis (minimum 1:1 ratio) the acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation or operations, although a higher mitigation measure may be required by the USACE, RWQCB, and CDFW through their permitting processes. Wetland habitat shall be replaced at acreage and location agreeable to the USACE, RWQCB, and CDFW and as determined during the Section 401, 404, and 1600 permitting processes.*	City of Salinas Community Development Department U.S. Army Corps of Engineers Regional Water Quality Control Board California Department of Fish and Wildlife	Prior to grading / building permit issuance in an area that would disturb the irrigation ditches and/or roadside ditches	
CULTURAL AND TRIBAL RESOURCES				

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
Impact 3.3-1: Project implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5	***Mitigation Measure 3.3-1:*** *In the event that evidence of archaeological or historical features or deposits (e.g., ceramic shard, trash scatters, lithic scatters) are uncovered (discovered) during excavation and/or grading, all work shall stop in the area of the subject property until an appropriate data recovery program can be developed and implemented by a qualified archaeologist. This archaeologist shall determine whether the uncovered deposits or features qualify as either "historical resources" within the meaning of CEQA Guidelines section 15064.5, subdivision (a), "unique archaeological resources" as defined in Public Resources Code section 21083.2, subdivision (g), or "tribal cultural resources," as defined in Public Resources Code section 21074. If historical resources, unique archaeological resources, or tribal cultural resources are present, the project proponent shall preserve any such resources or implement any feasible mitigation measures identified by the archaeologist and imposed by the City. Recommended mitigation measures shall be reviewed by the City Planner and shall be approved if feasible in light of project design, logistics, and cost considerations and, if approved, shall be implemented and completed prior to commencing further work for which grading or building permits were issued, unless otherwise directed by the City Planner. Data recovery shall be an option if preservation in place is infeasible. Where resources have been determined to be "unique archaeological resources" but not "historical resources" or "tribal cultural resources," the project proponent's obligations shall be limited as set forth in Public Resources Code section 21083.2, subdivisions (d), (e), and (f). Grading/building permits and plans shall note this measure.*	City of Salinas Community Development Department Qualified Archaeologist	In the event that evidence of archaeological or historical features or deposits (e.g., ceramic shard, trash scatters, lithic scatters) are uncovered (discovered) during excavation and/or grading	
Impact 3.3-2: Project implementation may cause a substantial adverse change in the significance of archaeological resource pursuant to CEQA Guidelines §15064.5	*Implement Mitigation Measure 3.3-1.*	See Mitigation Measure 3.3-1	See Mitigation Measure 3.3-1	
Impact 3.3-3: Project implementation may directly or indirectly destroy a unique paleontological resource	***Mitigation Measure 3.3-2:*** *If paleontological resources are discovered during the course of construction, work shall be halted immediately within 50 meters (165 feet) of the discovery, the City of Salinas shall be notified, and a qualified paleontologist shall be retained to determine the significance of the discovery. If the paleontological resource is considered significant, it should be excavated by a qualified paleontologist and given to a local agency, State University, or other applicable institution, where the resource could be*	City of Salinas Community Development Department Qualified	If paleontological resources are discovered during the course of	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	curated and displayed for public education purposes. Grading/ building permits and plans shall note this measure.	Paleontologist	construction	
Impact 3.3-4: Project implementation may disturb human remains, including those interred outside of formal cemeteries	***Mitigation Measure 3.3-3****: If human remains are found during construction within the Specific Plan Area, or at off-site infrastructure improvement locations, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until a qualified archeological monitor and the coroner of Monterey County are contacted. If it is determined that the remains are Native American, the coroner shall contact the Native American Heritage Commission within 24 hours. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descendent (MLD) from the deceased Native American. The MLD may then make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and associated grave goods as provided in Public Resources Code section 5097.98. The landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further disturbance if:* *a) the Native American Heritage Commission is unable to identify a MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission;* *b) the descendent identified fails to make a recommendation; or* *c) the landowner or his authorized representative rejects the recommendation of the descendent, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.* *Grading permit/building permit plans shall note this measure.*	City of Salinas Community Development Department Monterey County Coroner Native American Heritage Commission	If human remains are discovered during the course of construction within the Specific Plan Area	
GREENHOUSE GASES AND CLIMATE CHANGE				
Impact 3.4-1: Potential to generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment	***Mitigation Measure 3.4-1****: Prior to the approval of the tentative maps and development review permits, as applicable, pursuant to CEQA Guidelines section 15183.5(b), Plans for the Reduction of Greenhouse Gas Emissions, the project applicant shall prepare a Greenhouse Gas Reduction Plan (GGRP) aimed at achieving specific performance standards. The GGRP shall include the following:*	City of Salinas Community Development Department	Prior to the approval of the tentative maps and development review permits	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	1) The GGRP shall achieve a per capita operational emissions level of 1.94 MT CO_2e/service population/year by year 2035, and 0.80 MT CO_2e/service population/year by year 2050. *2) Calculation of GHG emissions projection using an acceptable modeling tool such as the most recent version of CalEEMod.* *GHG reduction measures may include building and site energy reduction measures, measures to reduce project-generated vehicle miles traveled, or other measures. Off-site measures such as participation in a community-wide GHG reduction program(s), if any are adopted, or payment of GHG reduction fees (carbon offsets) into a qualified existing program, if one is in place, may be considered after all feasible on-site reduction measures are considered. The effectiveness of the GHG reduction measures included in the GGRP must be verifiable based on evidence presented in the GGRP. Representative GHG reduction measures which may be considered may include, but are not limited to:* • *Measures identified by the California Air Pollution Control Officers' Association in Quantifying Greenhouse Gas Mitigation Measures: A Resource for Local Government to Assess Emission Reductions from Greenhouse Gas Mitigation Measures or updates to this document as may occur from time to time.* • *Applicable measures identified in guidance from MBARD, if any, and/or in guidance provided by other regional air districts such as the Bay Area Air Quality Management District, Sacramento Metropolitan Air Quality Management District, San Luis Obispo County Air Pollution Control District, or other agencies with adopted GHG reduction guidance that is applicable on the date the project application is deemed complete by the City.* *If sufficient feasible GHG reduction measures are unavailable to reduce GHG emissions to below the threshold of significance, the project applicant shall include evidence in the GGRP to this effect. The GGRP shall be subject to review and approval of the City of Salinas Community Development Department prior to approval of the tentative map or development review application, as applicable.* *Implementation of this mitigation measure shall not be required if the City has a qualified GHG reduction plan in place on the date a future individual project application is deemed complete, the qualified GHG reduction plan*			

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	reflects the most recent legislatively-adopted GHG reduction targets (e.g., the 2030 target set by SB 32), includes an inventory of projected GHG emissions from development within the Specific Plan Area, and includes GHG reduction measures applicable to development within the Specific Plan Area whose implementation is required as a condition of approval of such projects.			
HAZARDS AND HAZARDOUS MATERIALS				
Impact 3.5-1: Potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment	***Mitigation Measure 3.5-1****: Prior to issuance of grading permits or building permits, (including the issuance of demolition permits for agricultural support buildings) as applicable, the applicant shall hire a qualified consultant to:* *1) Provide a final evaluation of the soils around the agricultural operations support buildings (residences, warehouses, barns, etc.) before they are demolished. If toxic levels of residual agrichemicals or surface staining are found, the contaminated soil shall be excavated and disposed of at an off-site disposal facility permitted to accept such waste. Any contaminated areas shall be remediated by the project applicant in accordance with recommendations made by the Monterey County Health Department Hazardous Materials Management Services, Regional Water Quality Control Board, Department of Toxic Substances Control, or other appropriate federal, State, or local regulatory agencies.* *2) Investigate structures for asbestos-containing materials and lead. If asbestos-containing materials and/or lead are found in the buildings, a Cal-OSHA certified ACBM and lead based paint contractor shall be retained to remove the asbestos-containing materials and lead in accordance with U.S. EPA and California Occupational Safety and Health Administration (Cal/OSHA) standards. In addition, all activities (construction or demolition) in the vicinity of these materials shall comply with Cal/OSHA asbestos and lead worker construction standards. Any ACBM and lead shall be disposed of properly at an appropriate offsite disposal facility.* ***Mitigation Measure 3.5-2:*** *Prior to the issuance of grading permits, existing water wells within the grading area shall be destroyed under permit from the City of Salinas and/or the Monterey County Health Department, as applicable. Any destruction of these facilities shall be in accordance with the Monterey County Well Standards for Abandonment/Destruction. The project*	City of Salinas Community Development Department City of Salinas Community Development Department Monterey	Prior to issuance of grading permits or building permits, (including the issuance of demolition permits for agricultural support buildings) as applicable Prior to the issuance of grading permits	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate destruction of these facilities. ***Mitigation Measure 3.5-3:*** *Prior to the issuance of building permits, the water well or wells that will be providing water for the applicable portion of the Specific Plan Area, shall be constructed and tested for water quality under permit from the Monterey County Health Department. The project applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate construction and operation of these facilities.*	County Health Department City of Salinas Community Development Department Monterey County Health Department	Prior to the issuance of building permits	
Impact 3.5-2: Create a significant hazard to school sites due to siting or the placement of infrastructure	***Mitigation Measure 3.5-4:*** *The property line of all school sites (even if it is a joint use agreement as described in subsection (o) of § 14010) shall be at least the following distance from the edge of respective power line easements as identified in the California Code of Regulations Title 5, Article 2. School Sites § 14010. Standards for School Site Selection (c).* • *100 feet for power lines that are between 50 and 133 kV.*	City of Salinas Community Development Department	Prior to approval of improvement plans for any school site	
HYDROLOGY AND WATER QUALITY				
Impact 3.6-1: The proposed project has the potential to violate water quality standards or waste discharge requirements during construction	***Mitigation Measure 3.6-1:*** *Prior to issuance of grading permits, the project proponent shall submit a Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) to the City of Salinas prior to submitting to the RWQCB to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit Order 2009-0009-DWQ amended by 2010-0014-DWQ & 2012-0006-DWQ). The SWPPP shall be designed with Best Management Practices (BMPs) that the RWQCB has deemed to be effective at reducing erosion, controlling sediment, and managing runoff. These include: covering disturbed areas with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. Sediment control BMPs, installing silt fences or placing straw wattles below slopes, installing berms and other temporary run-on and runoff diversions. These BMPs are only examples of what should be considered and shall not preclude the use of equally or more effective new or innovative approaches currently available or being developed. Final selection of BMPs will be subject to approval by City*	City of Salinas Public Works Department Regional Water Quality Control Board	Prior to issuance of grading permits	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	of Salinas. The SWPPP will be kept on site during construction activity and will be made available upon request to representatives of the RWQCB.			
Impact 3.6-2: The proposed project has the potential to violate water quality standards or waste discharge requirements during operation	***Mitigation Measure 3.6-2:*** *Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention/retention basins designed to meet the applicable regulatory requirements and to reduce contaminant loadings to receiving waters to the maximum extent practicable.* *The Improvement Plans shall be consistent with the City's NPDES permit requirements at the time of permitting. The NPDES permit granted to the City of Salinas by the Central Coast RWQCB (RWQCB – Central Coast Region, 2012) requires the following:* *I. Erosion and Sediment Control BMPs – Erosion control and sediment control BMPs shall be designed, installed, and maintained to reduce the discharge of pollutants from construction sites to the maximum extent practical (MEP) and protect water quality;* *II. Erosion and sediment from slopes and channels shall be controlled by implementing an effective combination of erosion control (source control) and other sediment control BMPs; and* *III. Soil Stabilization – Stabilization of disturbed areas shall, at a minimum, be initiated immediately whenever any clearing, grading, excavating, or other earth disturbing activities have permanently ceased.* *Additionally, the Improvement Plans shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The City of Salinas Stormwater Standards for New and Redevelopment Projects (City of Salinas, 2013a) require the following practices:* *I. Limit disturbance of creeks and natural drainage features and provide setbacks according to the City's latest NPDES permit;* *II. Minimize compaction of highly permeable soils; and* *III. Limit clearing and grading of native vegetation to the minimum needed to build the project and provide fire protection.*	City of Salinas Public Works Department	Prior to the approval of site improvement plans	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Mitigation Measure 3.6-3: *Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention basins designed to prevent to the maximum extent practicable the creation of new sources of polluted runoff. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department.* ***Mitigation Measure 3.6-4:*** *Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department detailed plans and calculations for supplemental retention and peak flow control. BMPs will be designed to meet regulatory requirements and to reduce peak flows during storm events below peak flows under pre-project conditions. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department.*	City of Salinas Public Works Department City of Salinas Public Works Department	Prior to the approval of site improvement plans Prior to the approval of site improvement plans	
Impact 3.6-3: The proposed project has the potential to substantially deplete groundwater supplies or interfere substantially with groundwater recharge	***Mitigation Measure 3.6-5:*** *Prior to the approval of site improvement plans, the project applicant shall site, and design and include an Operation and Maintenance Plan for stormwater retention/infiltration basins and infiltration promoting BMPs sufficient to assure that there is no reduction in groundwater recharge. In order to assure there is no reduction in recharge, the plan shall result in circumstances which maintain infiltration to support baseflow and interflow to wetlands and surface waters, and deep vertical infiltration to groundwater. The site, design, and installation shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The contents of the site, design, and installation shall be included in a stormwater control plan. The stormwater control plan shall be reflected on the Improvement Plans, subject to review and approval by the Salinas Public Works Department.* ***Mitigation Measure 3.6-6:*** *Prior to the approval of site improvement plans, the project applicant shall site, design, and include an Operation and Maintenance Plan for post-construction BMPs and supplemental stormwater detention basins in accordance with City of Salinas stormwater development standards. Maintenance procedures (including frequency of procedure, cleaning schedules, applicant responsibility for each procedure, performance standards, or other means) and funding mechanisms shall be established for those facilities to assure adequate long-term performance and success in treating the water and controlling infiltration into the groundwater. The Improvement Plans and Operation and Maintenance Plan shall be subject to*	City of Salinas Public Works Department City of Salinas Public Works Department	Prior to the approval of site improvement plans Prior to the approval of site improvement plans	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	review and approval by the Salinas Public Works Department.			
Impact 3.6-5: The proposed project has the potential to otherwise substantially degrade water quality	*Implement Mitigation Measure 3.6-1.*	See Mitigation Measure 3.6-1	See Mitigation Measure 3.6-1	

4.0 FINAL MITIGATION MONITORING AND REPORTING PROGRAM

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
NOISE				
Impact 3.7-1: The proposed project has the potential to increase traffic noise levels at existing receptors	*Implement Mitigation Measures 3.7-1 and 3.7-8.*	See Mitigation Measures 3.7-1 through 3.7-8	See Mitigation Measures 3.7-1 through 3.7-8	
Impact 3.7-2: The proposed project has the potential to increase noise levels associated with construction activities	***Mitigation Measure 3.7-1:*** *Prior to the approval of site improvement plans and respective permits, plans shall note that construction activities shall adhere to the requirements of the City of Salinas Municipal Code with respect to hours of operation.* ***Mitigation Measure 3.7-2:*** *Prior to the approval of site improvement plans and respective permits, plans shall note that all equipment shall be fitted with factory equipped mufflers and in good working order. All stationary noise generating equipment (i.e. generators) shall be located at least 300 feet from a sensitive receptor. All construction staging areas shall be located at least 300 feet from a sensitive receptor.*	City of Salinas Community Development Department City of Salinas Community Development Department	Prior to the approval of site improvement plans Prior to the approval of site improvement plans	
Impact 3.7-4: The proposed project has the potential to expose new sensitive receptors to excessive transportation noise	***Mitigation Measure 3.7-3:*** *Prior to the approval of site improvement plans and respective permits, the plans shall note the location, design and constructions details of the eight-foot to nine-foot tall sound attenuation walls and/or landscaped berm/wall combinations, as applicable, that will be constructed along the primary Specific Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. At the City's discretion, wall heights which achieve the City's conditionally acceptable 60-70 dB L_{dn} noise standard may be allowed. See the Draft EIR Table 3.7-14 for specific noise barrier/wall heights along each roadway. Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of the wall is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's*	City of Salinas Community Development Department	Prior to approval of improvement plans and respective permits	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti. These graffiti prevention best management practices may include, without limitation: *(1) The use or the installation and maintenance of ant-graffiti materials and surface treatments approved by the City on likely graffiti-attracting surfaces.* *(2) Installation and maintenance of landscaping to discourage defacement of and/or protect likely graffiti-attracting surfaces.* *(3) Installation and maintenance of lighting to protect likely graffiti-attracting surfaces.* *(4) Immediate removal of graffiti by appropriate means within seventy-two hours.* *(5) Incorporation of architectural or design elements or features to discourage graffiti defacement in accordance with the principles of Crime Prevention Through Environmental Design (CPTED).* *(6) Authorizing right of access by city employees or contract agents to remove graffiti if not removed within specified time periods.* *(7) Supplying the city at its request with paint (of the appropriate color and type), cleaning agents, and/or other materials acceptable to the city to abate or to deter graffiti.* *(8) Other requirements, as deemed reasonably feasible by the city planner, to deter, to protect or to reduce the potential for graffiti defacement.* ***Mitigation Measure 3.7-4:*** *Prior to the approval of building permits, the first row of residential dwellings located along E. Boronda Road and Natividad Road shall include windows having a Sound Transmission Class (STC) 35, or higher, rating installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Exterior walls shall also require 3-coat stucco and RC-channels, sheathing, or another acceptable construction application that effectively attenuates noise intrusion to the interior of the house. The exterior wall specifications would specifically apply to the first row of homes that abut E. Boronda Road and/or Natividad Road and only applies to the facades facing these roadways. These specifications do not apply to single story homes, or the first floor of a two-story home, both of which are attenuated by the sound wall. These requirements shall be included in the building plans for the specific dwelling units and noted on the building permits. A detailed analysis of any additional interior mitigation measures shall be conducted when building plans are*	City of Salinas Community Development Department	Prior to approval of building permits	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	available and prior to building permit issuance to verify these requirements. These requirements shall also be noted in the site improvement plans prior to approval by the City. ***Mitigation Measure 3.7-5:*** *Prior to the approval of building permits, mechanical ventilation shall be required in the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road, sufficient to allow residents, as desired for acoustical isolation, to keep their doors and windows closed and still maintain acceptable interior temperature and noise levels. This requirement shall be included in the building plans for the specific dwelling units and noted on the building permits. This requirement shall also be noted in the site improvement plans prior to approval by the City.*	City of Salinas Community Development Department	Prior to approval of building permits	
Impact 3.7-5: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed park and school uses	***Mitigation Measure 3.7-6:*** *Prior to the approval of site improvement plans, as applicable, when parks or play areas are located near residential uses, the center of active play areas, such as football fields, soccer fields or other athletic fields, shall be located at a minimum distance of 90-feet from the nearest residential property lines. Large active play areas shall comply with the 60 dB L_{eq} and 70 dB L_{max} standards, and shall include these further noise level evaluations during the design phases of future park areas.* *Parks shall be designed such that residences front, or side in limited locations where approved by the City Planner, to the park. Minimum 6-foot tall sound walls and/or landscaped berms shall be constructed where school site directly abuts a residential property line in instances where site design (i.e., minimum distances, siting of activity areas, etc.) cannot achieve the 60 dB L_{eq} and 70 dB L_{max} noise standards. No wall shall be required where residential uses are fronted towards a park or school site and separated by a roadway or a walkway.* *Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of walls is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may*	City of Salinas Community Development Department	Prior to the approval of site improvement plans	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti (see mitigation 3.7.3 for further discussion of best management practices.)			
Impact 3.7-6: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed commercial mixed-uses	***Mitigation Measure 3.7-7:*** *Prior to the approval of development review permits, the plans shall demonstrate: where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas, the following measures shall be included in the project design:* • *All HVAC equipment shall be located within mechanical rooms where possible or shielded from view with solid or grated barriers;* • *Emergency generators shall comply with the City's noise criteria at the nearest noise-sensitive receivers;* • *Delivery/loading activities shall comply with the Salinas Zoning Code standards and regulations; and* *The applicant shall submit a noise study to verify that the appropriate noise control measures have been incorporated into the project design and will achieve compliance with the City's noise level standards.*	City of Salinas Community Development Department	Prior to the approval of development review permits	
Impact 3.7-7: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed well sites	***Mitigation Measure 3.7-8:*** *The potential well and treatment plant sites are shown in the Specific Plan. The actual well and treatment plant facilities are subject to the approval of a Conditional Use Permit (CUP) by the City pursuant to the requirements of the Salinas Zoning Code and the West Area Specific Plan. The potential well and treatment plant sites and the CUP requirement for said facilities shall be clearly noted on the site improvement plans.* *Prior to approval of the CUP and subsequent issuance of the building permits for the well and treatment plant facilities, the plans shall demonstrate that the following measures shall be included in the project design:* • *The well and treatment facilities have been designed and will be built to not exceed a noise level of 55 dB L_{eq} at the nearest residential or school property line during normal operation of the facilities;* • *The generators shall not be permitted to exceed the City's daytime noise standard of 60 dB L_{eq};*	City of Salinas Community Development Department	Prior to approval of the CUP and subsequent issuance of the building permits for the well and treatment plant facilities	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	• *The generators shall be tested only during daytime hours; and* *Additionally, that the well and treatment facilities/sites have been designed (in accordance with the West Area Specific Plan) to incorporate decorative screen walls, landscaping and other features to ensure compatibility with surrounding land uses.*			
PUBLIC SERVICES AND RECREATION				
Impact 3.9-1: The proposed project may require the construction of fire department facilities which may cause substantial adverse physical environmental impacts	***Mitigation Measure 3.9-1:*** *Prior to the issuance of a Certificate of Occupancy for each dwelling unit (and prior to issuance of building permits for non-residential uses), the applicant shall pay all applicable project impact fees per the impact fee schedule.*	City of Salinas Community Development Department	Prior to the issuance of a Certificate of Occupancy for each dwelling unit (and prior to issuance of building permits for non-residential uses)	
Impact 3.9-3: Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts	***Mitigation Measure 3.9-2:*** *Prior to the issuance of building permits for each dwelling unit, the applicant shall pay applicable school fees mandated by SB 50 to the Salinas Union High School District (SUHSD), and Santa Rita Union School District (SRUSD) and provide documentation of said payment to the City.*	City of Salinas Community Development Department	Prior to the issuance of building permits for each dwelling unit	
TRANSPORTATION AND CIRCULATION				
Impact 3.10-1: Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans	***Mitigation Measure 3.10-1:*** *Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal at San Juan Grade Road/Van Buren Avenue, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans for each stage of project development shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems*	City of Salinas Public Works Department	Prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	(ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.		development	
	Mitigation Measure 3.10-2: *Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of the existing signal timing at San Juan Grade Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.*	City of Salinas Public Works Department	Prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development	
	Mitigation Measure 3.10-3: *Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the signalization of the intersection at Hemingway Drive/East Boronda Road or equivalent traffic control (such as a roundabout), in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of roundabouts), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.*	City of Salinas Public Works Department	Prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development	
	Mitigation Measure 3.10-4: *Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings at North Main Street/Laurel Drive, in proportion to the area planned for development by such project applicant, in*	City of Salinas Public Works	Prior to issuance of

	as specified by the City of Salinas Public Works Department.			
	Mitigation Measure 3.10-7: *Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings and to add an eastbound left turn pocket at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. This mitigation includes the addition of an eastbound left turn pocket and optimization of the existing signal timing to better accommodate the expected changes in traffic distribution and volume with implementation of the proposed project. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.*	City of Salinas Public Works Department	Prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development	
	Mitigation Measure 3.10-8: *Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the addition a southbound left turn lane and optimization of the traffic signal's timing at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share requirement. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.*	City of Salinas Public Works Department	Prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development	
	Mitigation Measure 3.10-9: *Each project applicant for development within the Specific Plan Area shall contribute its fair-share funding to the Transportation Agency for Monterey County (TAMC) Regional Development*	City of Salinas Public Works	Prior to issuance of	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
	Impact Fee (RDIF) Program and the City of Salinas' Traffic Impact Fee (TIF) Program, as determined by the TAMC and the City of Salinas, respectively, in proportion to the area planned for development by each project applicant. These programs include improvements to U.S. 101 that would improve mainline and ramp junction operations, which would mitigate the proposed project's impact to the U.S. 101 ramp junctions affected by the proposed project (i.e. the Northbound Road Off-Ramp and Northbound West Laurel Drive Off-Ramp. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.	Department	Certificate of Occupancy for residential and prior to building permit issuance for non-residential development	
Impact 3.10-2: Under Existing Plus Project and Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans	***Mitigation Measure 3.10-10:*** *Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.*	City of Salinas Public Works Department	Prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development	
	Mitigation Measure 3.10-11: *Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to convert the eastbound right turn lane to a shared through-right turn lane at Natividad Road/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.*	City of Salinas Community Development Department	Prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development

			development	

ENVIRONMENTAL IMPACT	*MITIGATION MEASURE*	*MONITORING RESPONSIBILITY*	*TIMING*	*VERIFICATION (DATE/INITIALS)*
OTHER ISSUES DISCUSSED IN THE INITIAL STUDY				
AESTHETICS				
a) Have a substantial adverse effect on a scenic vista? b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway? c) Substantially degrade the existing visual character or quality of the site and its surroundings? d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	***Mitigation Measure A4:*** *The City will implement Implementation Program CD4 on an ongoing basis. Implementation Program CD4 requires the City to implement landscaping requirements for public and private development and redevelopment projects to promote greater visual and functional compatibility with residential development and pedestrian/bicycle use.* ***Mitigation Measure A5:*** *The City will implement Implementation Program CD5 on an ongoing basis. Implementation Program CD5 requires the City to review discretionary development proposals for potential aesthetics impacts per the California Environmental Quality Act (CEQA). The standards established in the Zoning Code, the City's Design Guidelines, Landscaping Standards, Lighting Ordinance, Gateway Guidelines, the projects incorporation of Traditional Neighborhood Development (TND) characteristics, and the projects potential to damage or block scenic resources and views will be used to determine the significance of impacts. If potential impacts are identified, mitigation in the form of project redesign (e.g., bulk, height, architectural details, lighting) will be required to reduce the impact to a level less than significant.*

CEQA FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS OF THE CITY COUNCIL OF THE CITY OF SALINAS FOR THE WEST AREA SPECIFIC PLAN

I. INTRODUCTION

The City of Salinas (hereinafter "City"), as lead agency, prepared a Program Environmental Impact Report (hereinafter "EIR") for the West Area Specific Plan (hereinafter "Specific Plan" or "project"). In its entirety, the EIR consists of the February 27, 2019 Draft Program EIR (hereinafter "Draft EIR" or "DEIR") and the October 10, 2019 Final Program EIR (hereinafter "Final EIR" or "FEIR") (State Clearinghouse No. 2006021072).

The Applicant has submitted applications requesting approval of the West Area Specific Plan, Rezoning, and Development Agreement. As approved, the project will facilitate the City's future consideration of applications for individual projects to be proposed within the Specific Plan Area.

The EIR analyzes the impacts of the West Area Specific Plan and the anticipated subsequent filing of maps and other development applications in the future. Therefore, the EIR analyzes the total impacts of the West Area Specific Plan, including these applications yet unfiled, so that future filings will not require separate environmental analysis, as long as development proposed does not substantially deviate from the approved Specific Plan. The specific processes by which the City will review individual applications are set forth on pages ES-1 through pages ES-4 of the Draft EIR and are also described below in section III(D).

These findings, as well as the accompanying statement of overriding considerations in Section XI below, have been prepared in accordance with the California Environmental Quality Act (hereinafter "CEQA") (Pub. Resources Code, § 21000 et seq) and its implementing guidelines (hereinafter "CEQA Guidelines") (Cal. Code Regs., tit. 14, § 15000 et seq).

II. DEFINITIONS AND ACRONYMS

Like the EIR itself, these findings use a number of acronyms. Key acronyms are defined the first time they are introduced in the text of this document.

III. PROJECT DESCRIPTION

A. Location

As described in the DEIR, the City of Salinas is located in northern Monterey County, within the Salinas Valley between the Gabilan and Santa Lucia mountain ranges. Salinas is situated approximately 20 miles northeast of the City of Monterey, 60 miles south of San Jose, 100 miles south of San Francisco and 325 miles north of Los Angeles. Figure 2-1 in the Draft EIR displays the project regional location. Several regional transportation routes are located within or near Salinas, including U.S. Highway 101 (U.S. 101), State Routes 68 (SR 68) and 183 (SR 183), the

Union Pacific Railroad line and the Monterey Regional Airport in Monterey. Salinas Municipal Airport, a general aviation facility, is located in the southeastern portion of the city.

The Specific Plan Area is located within the incorporated boundary of the City of Salinas. It is bounded by San Juan Grade Road on the west, East Boronda Road (also referred to as "Boronda Road") on the south, Natividad Road on the east, and Rogge Road and the future extension of Russell Road on the north. Gabilan Creek is located east of the Specific Plan Area, while U.S. 101 and North Main Street are located to the west. Unincorporated land under the jurisdiction of the County of Monterey abuts the Specific Plan Area on the north and northeast (DEIR, p. 2.0-1).

B. Overview

The West Area Specific Plan establishes the land use planning and regulatory guidance, including the land use and zoning designations and policies, development regulations, and design standards, for the approximately 797-acre Specific Plan Area. The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to—the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the City of Salinas General Plan, as well as more specific policies and implementation measures contained in other documents. The City of Salinas Zoning Code requirements will apply to development applications and property within the Specific Plan Area unless specifically superseded by the development regulations or design standards contained in the Specific Plan.

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan (including the Specific Plan's goals) and related entitlements. Land uses in the approximate 797-acre Specific Plan Area include residential, mixed use commercial, community park, neighborhood parks, small parks, schools and open space (including supplemental storm water detention/retention basins). Implementation will involve development of the site under the New Urbanism Zoning Districts of Neighborhood Edge (NE)/Low Density Residential, Neighborhood General 1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, Village Center (VC) as well as the Public and Semipublic (PS), Parks (P), and Open Space (OS) Zoning Districts.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space areas (including supplemental storm water detention/retention basins) and 11 parks). It is anticipated that the Specific Plan Area will house up to 15,928 residents at project build-out.

C. Project Objectives

The underlying purpose of the project is the approval and subsequent implementation of the West Area Specific Plan and related entitlements. The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and 11 parks. The Specific Plan goals are summarized as follows:

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.
- Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.
- Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.
- Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.
- Provide public services and infrastructure improvements that achieve and maintain City service standards.
- Provide an inviting tree-lined street system which incorporates traffic calming and other measures.
- Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater Future Growth Area (FGA) and City as a whole.
- Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.
- Provide for a reasonable jobs/housing balance.
- Provide opportunities for senior housing.
- Provide for a site/parcel-based post-construction Stormwater Control Measures (SCMs)/LID to the maximum extent practicable.

It is noted that there are additional project objectives that are not specifically presented in the Specific Plan, but are more overarching and are a response to, and driven by, the policy direction from the State Legislature and the Salinas City Council.

The State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by

producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The City of Salinas has recognized the need for additional housing supply for its citizens for many decades. Dating back to 1986, the City entered into the Boronda Memorandum of Understanding (MOU) with the County of Monterey to preserve the best agricultural land and to provide certain areas for future urban growth. Twenty years later, in 2006, the Greater Salinas Area MOU was adopted to preserve agricultural lands within Monterey County, and to provide future growth areas (FGSs) for Salinas. A year later, in 2007, applications for an amendment to the City's Sphere of Influence (to include the FGAs) and Pre-Zoning and Annexation (for the majority of the North of Boronda FGA consisting of approximately 2,400 acres) were submitted to the Monterey County Local Agency Formation Commission (LAFCO) for consideration. A Supplemental EIR for the Salinas General Plan Final Program EIR (SCH#2007031055) was also submitted in conjunction with the applications. The applications were approved by LAFCO on May 19, 2008. The North of Boronda FGA (which includes the West Area Specific Plan) was formally annexed to the incorporated City of Salinas on September 8, 2008 and zoned New Urbanism Interim (NI) with a Specific Plan Overlay. The West Area Specific Plan is a reflection of over twenty years of planning for new development, which is reflected by the City Council's approval of the FGA, including annexation of the land into the City limits.

The following two overarching project objectives are presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

Based on its own review of the EIR and other information and testimony received in connection with the project, as well as the statutory and planning policies described above, the City Council finds all of these objectives to be acceptable and persuasive from a public policy standpoint. In

choosing to approve the project, the City thus embraces these objectives and accords them weight in considering the feasibility of alternatives set forth in the EIR, and in invoking overriding considerations in approving the project. (See *Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1507-1508.)

D. Discretionary Approvals

Project approval requires the City, as lead agency, to take discrete planning and regulatory actions to approve the overall project. In addition, certain "responsible agencies" may ultimately rely in part on the programmatic analysis in the Specific Plan Area in making decisions associated with future site-specific projects consistent with the Specific Plan. Described below are the discretionary actions necessary to carry out the project.

City of Salinas

In addition to certifying the Final EIR and adopting these Findings and the associated Statement of Overriding Considerations and Mitigation Monitoring Plan (CEQA requirements), the City itself must approve the following actions:

- Certification of the EIR and adoption of the Mitigation Monitoring and Reporting Program (MMRP);
- Approval of the Draft West Area Specific Plan;
- Approval of the rezoning of the Specific Plan area from NI with a Specific Plan Overlay to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay is also applicable to each Zoning District; and
- Approval of the Development Agreement;
- Subsequent Approvals: Parcel Maps, tentative maps, Final Maps, Subdivision Improvement Plans, Site Improvement Plans, Grading Permits, Building Permits, Conditional Use Permits, Business Permits, Encroachment Permits, etc.

Other Responsible/Trustee Agencies

The agencies below will also use the EIR, either as responsible agencies or as trustee agencies:

- California Department of Fish and Wildlife – Lake and Streambed Alteration Agreement (1600 permit);
- Cal Water – Approval of SB 610 Water Supply Assessment, Approval to serve the Specific Plan Area;
- Central Coast Region - Regional Water Quality Control Board – Clean Water Act Section 401 Water Quality Certification, National Pollution Discharge Elimination System (NPDES) general construction permit;
- Comcast/AT&T/SBC/Other – Approval to serve the Specific Plan Area, approval of telecommunications utility plans, Encroachment Permits;
- Johnson Canyon Landfill – Approval to serve the Specific Plan Area;
- Monterey Bay Air Resources District – Authority to Construct; Demolition permit;

- Monterey Bay Community Power – Approval to Serve the Specific Plan Area;
- Monterey One Water – Approval to serve the Specific Plan Area for wastewater services, and Encroachment Permit;
- Monterey County Health Department - Well demolition permit, Well construction permit;
- Monterey County Water Resources Agency – Approval to serve the Specific Plan Area, Encroachment Permit;
- Monterey-Salinas Transit – Approval to serve the Specific Plan Area, approval of bus stop locations and design;
- Pacific Gas and Electric Company – Approval to serve Specific Plan Area, approval of relocation plans, approval of electric and gas utility plans, Encroachment Permit;
- Salinas Valley Solid Waste Authority – Approval to serve the Specific Plan Area; and
- Santa Rita Union School District – Approval of site for the construction of two new elementary schools and one middle school

Federal Agencies

The following federal agencies also have approval authority over some aspects of the project, though these agencies are not subject to CEQA and instead are required to comply with the federal National Environmental Policy Act (NEPA) (42 U.S.C. § 4321 et seq.):

- U.S. Army Corps of Engineers;
- U.S. Fish and Wildlife Service; and
- U.S. Federal Emergency Management Agency.

Future Projects

All individual future development projects proposed within the Specific Plan Area will be reviewed to determine their individual CEQA compliance requirements. The type of CEQA analysis required would be determined at the time a project is proposed.

It is noted that the Specific Plan provides a very high level of design detail for certain components of the project. To the extent that sufficient detail is available in the Specific Plan, a full project-level analysis is provided in this EIR. Examples of a full project level analysis would include topics that are related to the physical acreage affected (i.e., the project footprint), as opposed to the number of units, land uses/zoning, or other design parameters. Topics such as Biological Resources, Cultural Resources, and Hydrology/Water Quality are analyzed at a project-level analysis in this EIR given that these are physical environmental resources, and the area of impact is fully defined. Additionally, the Specific Plan includes a substantial level of detailed information that allows for a project-level analysis of topics such as Air Quality, Greenhouse Gases and Climate Change, Noise, Population and Housing, Transportation and Circulation, and Utilities. The analysis for these topics is driven by the number of units and square footage of development, which is detailed in the land use design and development projections. In some cases, there may be specific commercial uses that have design details developed at a later date that cannot reasonably be analyzed at a project-level at this time. Additionally, the design of the school facilities and other public facilities are not known at this time, so they are not able to be analyzed at a project-level.

This EIR examines the planning, construction and operation of the project. The program-level approach, with some project-level analysis, is appropriate for the project because it allows comprehensive consideration of the reasonably anticipated scope of the development plan; however, as discussed above, not all design aspects of the future development phases are known at this stage in the planning process. Subsequent individual development that requires further discretionary approvals will be examined in light of this EIR to determine whether additional environmental documentation must be prepared.

CEQA Guidelines Section 15168 states that a program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either:

1. Geographically,
2. As logical parts in the chain of contemplated actions,
3. In connection with issuance of rules, regulations, plans or other general criteria to govern the conduct of a continuing program, or
4. As individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

According to CEQA Guidelines section 15168, subdivision (c)(5), "[a] program EIR will be most helpful in dealing with later activities if it provides a description of planned activities that would implement the program and deals with the effects of the program as specifically and comprehensively as possible." Later environmental documents (EIRs, mitigated negative declarations, or negative declarations) can incorporate by reference materials from the program EIR regarding regional influences, secondary impacts, cumulative impacts, broad alternatives, and other factors (CEQA Guidelines Section 15168[d][2]). These later documents need only focus on new impacts that have not been considered before (CEQA Guidelines Section 15168[d][3]).

Section 15168(c), entitled "Use with Later Activities," provides, in pertinent part, as follows:
Subsequent activities in the program must be examined in the light of the program EIR to determine whether an additional environmental document must be prepared:

1. If a later activity would have effects that were not examined in the program EIR, a new Initial Study would need to be prepared leading to either an EIR or a Negative Declaration. That later analysis may tier from the program EIR as provided in Section 15152.
2. If the agency finds that pursuant to Section 15162, no subsequent EIR would be required, the agency can approve the activities as being within the scope of the project covered by the program EIR, and no new environmental document would be required. Whether a later activity is within the scope of a program EIR is a factual question that the lead agency determines based on substantial evidence in the record. Factors that an agency may consider in making that determination include, but are not limited to, consistency of the later activity with the type of allowable land use, overall planned density and building intensity, geographic area analyzed for environmental impacts, and covered infrastructure, as described in the program EIR.

3. An agency shall incorporate feasible mitigation measures and alternatives developed in the program EIR into later activities in the program.
4. Where the later activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were within the scope of the program EIR.

Here, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e. tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether there are new environmental effects that were not covered by the program EIR). The City's expectation, at least at present, is that the checklist will conclude that most, or all, components of the Specific Plan can be developed with no new analysis of environmental effects given that there is a high level of resolution with regard to the project details that have been analysis in this program EIR. In some cases, however, a site-specific application (i.e., a proposed commercial use) may have specific issues associated with the project, or business, that this program EIR could not anticipate given the information that was available at this time. In those situations, the detailed site-specific information from that application could have site-specific effects not wholly anticipated in this EIR and would require some additional environmental review. (See also CEQA Guidelines section 15063, subd. (b)(1)(C).)

Future site-specific approvals may also be narrowed pursuant to the rules for tiering set forth in CEQA Guidelines Section 15152. "'[T]iering is a process by which agencies can adopt programs, plans, policies, or ordinances with EIRs focusing on 'the big picture,' and can then use streamlined CEQA review for individual projects that are consistent with such…[first tier decisions] and are…consistent with local agencies' governing general plans and zoning.'" (*Koster v. County of San Joaquin* (1996) 47 Cal.App.4th 29, 36.) Section 15152 provides that, where a first-tier EIR has "adequately addressed" the subject of cumulative impacts, such impacts need not be revisited in second- and third-tier documents. Furthermore, second- and third-tier documents may limit the examination of impacts to those that "were not examined as significant effects" in the prior EIR or "[a]re susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means." In general, significant environmental effects have been "adequately addressed" if the lead agency determines that:

a. they have been mitigated or avoided as a result of the prior environmental impact report and findings adopted in connection with that prior environmental impact report; or
b. they have been examined at a sufficient level of detail in the prior environmental impact report to enable those effects to be mitigated or avoided by site specific revisions, the imposition of conditions, or by other means in connection with the approval of the later project.

Here, as noted above, the City anticipates preparing a written checklist or similar device whenever landowners within the Specific Plan area submit applications for site-specific approvals (i.e., tentative maps, conditional use permits, or other discretionary entitlements). The checklist would serve in part as a consistency checklist to determine if the application for site specific approval is consistent with the General Plan, Specific Plan, Conditions of Approval, and Mitigation Measures, and it would also include a review of the project details relative to what was anticipated and analyzed in the program EIR (i.e., whether all significant environmental impacts identified have been "adequately addressed" in the program EIR). Thus, if a new analysis is required for these site-specific actions, it would focus on impacts that cannot be "avoided or mitigated" by mitigation measures that either (i) were adopted in connection with the Specific Plan or (ii) were formulated based on information in this EIR.

In addition, because the EIR addresses the effects of rezoning the land within the proposed Specific Plan area, future environmental review can also be streamlined pursuant to Public Resources Code Section 21083.3 and CEQA Guidelines Section 15183. These provisions, which are similar but not identical to the tiering provisions, generally limit the scope of necessary environmental review for site-specific approvals following the preparation of an EIR for a "zoning action." For such site-specific approvals, CEQA generally applies only to impacts that are "peculiar to the parcel or to the project" and have not been previously disclosed, except where "substantial new information" shows that previously identified impacts would be more significant than previously assumed. Notably, impacts are considered not to be "peculiar to the parcel or to the project" if they can be substantially mitigated pursuant to previously adopted, uniformly applied development policies or standards. As noted above, the City anticipates that, in assessing the extent to which the Specific Plan EIR has previously addressed significant impacts that might occur with individual projects, the City may conclude that in some instances (e.g., with respect to agricultural resources, cultural resources, geology, soils, and paleontological resources), no further analysis beyond that found in the program EIR will be necessary.

Finally, for purely residential projects consistent with the Specific Plan, the City intends to preserve its ability to treat such projects as exempt from CEQA pursuant to Government Code section 65457. Subdivision (a) of that statute provides that "[a]ny residential development project, including any subdivision, or any zoning change that is undertaken to implement and is consistent with a specific plan for which an [EIR] has been certified after January 1, 1980, is exempt from the requirements of [CEQA]." The statutes go on to say, moreover, that "if after adoption of the specific plan, an event as specified in Section 21166 of the Public Resources Code occurs, the exemption provided by this subdivision does not apply unless and until a supplemental [EIR] for the specific plan is prepared and certified in accordance with the provisions of [CEQA]. After a supplemental [EIR] is certified, the exemption … applies to projects undertaken pursuant to the specific plan." (See also CEQA Guidelines section 15182.)

When purely residential projects are proposed, the City will consider whether they qualify for this exemption or whether the West Area Specific Plan EIR must be updated through a supplement to this EIR or a subsequent EIR as required by Public Resources Code section 21166 and CEQA Guidelines sections 15162 and 15163.

IV. ENVIRONMENTAL REVIEW PROCESS

The Notice of Preparation (hereinafter "NOP") of an EIR was circulated for public review and comment from October 15, 2015 to November 13, 2015 in accordance with CEQA Guidelines section 15082. Written responses to the NOP were received from the following interests/agencies:

1. Northern Salinas Valley Mosquito Abetment District (October 21, 2015)
2. California Department of Transportation (October 28, 2015)
3. Monterey-Salinas Transit (November 16, 2015)
4. Monterey County Resource Management Agency (November 16, 2015)
5. California Natural Resource Agency Division of Land Resource Protection (November 10, 2015)
6. Salinas Union High School District (November 10, 2015)
7. Ohlone/Costanoan-Esselen Nation (January 11, 2016)
8. Santa Rita Union School District (January 29, 2016)
9. Transportation Agency of Monterey County (March 31, 2016)

As part of the early consultation process and pursuant to the CEQA Guidelines section 15083 regarding early public consultation, a scoping meeting was held at the City of Salinas Rotunda (City Council chamber) on October 29, 2015. No specific comments were made about the scope of issues to be addressed in the EIR. Questions and comments were primarily focused on the project description and the project consideration process.

Pursuant to CEQA Guidelines sections 15023, subdivision (c), and 15087, subdivision (f), the State Clearinghouse in the Office of Planning and Research was responsible for distributing environmental documents to State agencies, departments, boards, and commissions for review and comment. The City followed required procedures with regard to distribution of the appropriate notices and environmental documents to the State Clearinghouse. The State Clearinghouse was obligated to make, and did make, that information available to interested agencies for review and comment. The NOP was received by the State Clearinghouse (SCH # 2006021072) and a 30-day public review period ended on November 13, 2015. The NOP and all comments received on the NOP are presented in Appendix A of the Draft EIR.

An Initial Study was also prepared for the project. Included below is a brief summary of findings from the Initial Study on environmental topics that were either found to have no impact or be less than significant, or were found to be sufficiently addressed in the General Plan EIR, and thus are not included within individual sections of the Draft EIR. For full Initial Study Findings and individual topics found to be less than significant through the Initial Study process refer to Appendix A of the Draft EIR.

- **Aesthetics:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would allow development to occur in the City in both vacant and underdeveloped portions of the community, and that the introduction/expansion of urban uses into these areas has the potential to interrupt views of natural features, open space, the hillsides, and agricultural resources, reducing

the aesthetic value of these resources. Additionally, new development in the City was found to increase the amount of light and glare in the community, particularly in areas planned for nonresidential development, such as retail and general commercial. It was also found that future development under the General Plan has the potential to change the visual character of the City.

To minimize and mitigate the impacts on aesthetics, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following five mitigation measures: Mitigation Measure A1 requires the City to implement the City's Gateway Guidelines; Mitigation Measure A2 requires the City to strengthen and require compliance with the City's Design Guidelines; Mitigation Measure A3 requires the City to improve the Lighting Ordinance; Mitigation Measure A4 requires the City to implement landscaping requirements for all proposed projects; and Mitigation Measure A5 requires the City to review all discretionary projects for aesthetics impacts. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures A1 through A5, the potential citywide aesthetics impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that aesthetic impacts associated with the FGAs, which includes the West Area Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Agriculture and Forest Resources:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would result in the conversion of 3,525 acres of agriculture lands to urban uses. The *Final Environmental Impact Report* also indicates that General Plan buildout would result in agricultural activity in proximity to residential and other urban uses, which may result in conflicts between the uses. It is noted that agricultural activity can cause nuisances related to air quality and noise that may disturb surrounding development. Urban activities may also negatively affect nearby agricultural uses, as increased vandalism often occurs and the introduction of domestic animals may disturb certain agricultural activities.

  The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures AG1 through AG4, the impacts on potential compatibility issues would be reduced to a less than significant level; however, while the impacts on agricultural conversion would be reduced to the extent feasible, a significant and unavoidable impact would remain related to the loss of important farmland. Mitigation AG5 specifically addressed Agricultural

Land Conservation Easement Program, which states that the City will work with the County of Monterey and other local jurisdictions to create and implement an agricultural land conservation easement program, including such measures as securing the dedication of easements or by paying a mitigation fee that could be used to purchase easements through a mitigation bank. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a $750.00 per acre mitigation fee for agricultural lands currently designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance."

The City of Salinas certified the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), adopted a statement of overriding considerations relative to this significant and unavoidable impact, and approved the Salinas General Plan.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that agricultural impacts associated with the FGAs, which includes the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

Any future development under the approved General Plan, which includes all development under the project, would be required to comply with the above-referenced regulations, policies, and standards. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Geology and Soils:** Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and was not addressed further in the EIR.

- **Hazards and Hazardous Materials:** While the Draft EIR analyzes Hazards and Hazardous Materials, several topics were determined to not warrant additional analysis within the Chapter.

  The land uses proposed within the Specific Plan Area would not be expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Furthermore, the project is not located in the vicinity of an airport or private airstrip; therefore, it would not result in a safety hazard related to air traffic for people residing or working in the Specific Plan Area. These topics did not warrant additional analysis and were not addressed further in the EIR.

Separately, the City has adopted a Multi-hazard Emergency Plan, which serves as extensions of the California Emergency Plan and the Emergency Resource Management Plan. The purpose of the Multi-hazard Emergency Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Operations Center (EOC) in City Hall serves as the center of the City's emergency operations. The Plan also addresses evacuation and movement of people in the event of an emergency. The project does not impair implementation of or physically interfere with the Multi-hazard Emergency Plan. Implementation of the project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

Lastly, the project is not located in an area that is considered a high risk for wildfires. The project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. Implementation of the proposed project would have a less than significant impact relative to this environmental topic and is not further analyzed or addressed further in the EIR.

- **Land Use and Planning:** The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the impacts would be reduced to a less than significant level with mitigation.

  Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

  The City certified the Final Supplemental EIR and approved annexation of the North of Boronda FGA, which includes the West Area Specific Plan. The project, as proposed, is consistent with the Greater Salinas Area Memorandum of Understanding (GSA MOU). All development under the project would be required to comply with the regulations, policies, and standards identifies in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). Implementation of the project would not result in any new significant adverse impacts beyond those addressed within these supporting documents. This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Mineral Resources:** It was determined in the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) that development of the FGA, including the Specific Plan Area, would not have a significant impact on mineral resources or mining activities. As such, implementation of the project would have no impact on mineral resources and this topic did not warrant additional analysis and is not addressed further in the EIR.

- **Population and Housing:** While the Draft EIR analyzes Population and Housing, several topics were determined to not warrant additional analysis within the Chapter.

The Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) noted that the General Plan would not result in the displacement of substantial numbers of existing housing units or persons since the majority of the FGA designated for future development consists of vacant, agricultural, or redevelopment of nonresidential land. Additionally, any individual units that require removal would be offset by the increase in housing by the development of approximately 18,397 additional dwelling units at General Plan buildout.

The project would necessitate the removal of some existing houses within the Specific Plan Area; however, removal of any individual units would be offset by the increase in housing by the development of approximately 4,340 additional dwelling units at Specific Plan buildout. As such, the project would not displace substantial numbers of existing housing or people. Implementation of the project would not result in any new significant adverse impacts beyond those addressed in the in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Recreation:** While the project would increase the demand for parks and other recreational facilities based on the population growth, the amount of parkland and open space provided within the Specific Plan Area sufficiently meets the City's parkland requirements. Construction of the parks would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). This topic did not warrant additional analysis and is not addressed further in the EIR.

- **Transportation and Circulation:** While the Draft EIR analyzes Traffic and Circulation, several topics were determined to not warrant additional analysis within the Chapter.

  The project is not located in the vicinity of an airport or airstrip; therefore, it would not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks. Implementation of the project would have no impact relative to this environmental topic

The remaining issues areas and checklist questions are analyzed in the EIR. The EIR includes an analysis of the following issue areas:

- Air Quality
- Biological Resources
- Cultural Resources
- Greenhouse Gases and Climate Change
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Noise
- Population and Housing

- Public Services
- Transportation and Circulation
- Utilities

The City circulated the DEIR for public and agency review on February 27, 2019. A public review period of 45 days was provided on the DEIR and ended on April 15, 2019. This period satisfied the requirement for a 45-day public review period as set forth in Section 15105 of the CEQA Guidelines.

V. RECORD OF PROCEEDINGS

In accordance with Public Resources Code section 21167.6, subdivision (e), the record of proceedings for the City's decision on the project includes the following documents:

- The NOP and all other public notices issued by the City in conjunction with the project;

- All comments submitted by agencies or members of the public during the comment period on the NOP;

- The Draft EIR for the project (February 2019) and all appendices;

- All comments submitted by agencies or members of the public during the comment period on the Draft EIR;

- The Final EIR for the project, including comments received on the Draft EIR and the responses to those comments and appendices;

- Documents cited or referenced in the Draft EIR and Final EIR;

- The mitigation monitoring and reporting program for the project;

- All findings and resolutions adopted by the City Council in connection with the project and all documents cited or referred to therein;

- All reports, studies, memoranda, maps, staff reports, or other planning documents relating to the project prepared by the City, consultants to the City, or responsible or trustee agencies with respect to the City's compliance with the requirements of CEQA and with respect to the City's action on the project;

- The Draft West Area Specific Plan;

- All documents submitted to the City by other public agencies or members of the public in connection with the project, up through the close of the Planning Commission public hearing, and the close of the City Council public hearing;

- Any minutes and/or verbatim transcripts of all information sessions, public meetings, and public hearings held by the City in connection with the project;

- Any documentary or other evidence submitted to the City at such information sessions, public meetings, and public hearings;

- The City of Salinas General Plan and all environmental documents prepared in connection with the adoption of the General Plan;

- Any and all resolutions approved by the City regarding the project, and all staff reports, analyses, and summaries related to the adoption of those resolutions;

- Matters of common knowledge to the City, including, but not limited to federal, state, and local laws and regulations;

- Any documents expressly cited in these findings, in addition to those cited above; and

- Any other materials required for the record of proceedings by Public Resources Code section 21167.6, subdivision (e).

The documents constituting the record of proceedings are available for review by responsible agencies and interested members of the public during normal business hours at the City of Salinas Community Development Department, 65 West Alisal Street, Salinas, California 93901. The custodian of these documents is the Community Development Director. Without exception, any documents set forth above not found in the project files fall into one of two categories. Many of them reflect prior planning or legislative decisions of which the City Council was aware in approving the project. (See *City of Santa Cruz v. Local Agency Formation Commission* (1978) 76 Cal.App.3d 381, 391-392; *Dominey v. Department of Personnel Administration* (1988) 205 Cal.App.3d 729, 738, fn. 6.) Other documents informed the experts who provided advice to City Staff or consultants, who then provided advice to the City Council. For that reason, such documents form part of the underlying factual basis for the City Council's decisions relating to the approval of the project. (See Pub. Resources Code, § 21167.6(e)(10); *Browning-Ferris Industries v. City Council of City of San Jose* (1986) 181 Cal.App.3d 852, 866; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 153, 155.)

VI. CONSISTENCY WITH APPLICABLE PLANS

This section includes a review of the project's relationship to the General Plan, other land use related documents/agreements, and to regional plans and identifies whether inconsistencies with these plans may exist.

Consistency with the Salinas General Plan

The Salinas General Plan states the City's vision for the community's future and outlines goals, policies and implementation measures to achieve its vision. The General Plan also projects the population, dwelling units, and non-residential building square footage associated with the future

buildout of the Land Use Plan, also referred to as General Plan buildout. Typically, General Plan buildout is decades beyond the 20-year General Plan planning cycle.

As described in CEQA Guidelines section 15125, subdivision (d), an EIR must discuss any inconsistencies between a proposed project and applicable general plans, specific plans, and regional plans. Such regional plans include, but are not limited to, the applicable air quality attainment or maintenance plan, area-wide waste treatment and water quality control plans, regional transportation plans, regional housing allocation plans, regional blueprint plans, plans for the reduction of greenhouse gas (GHG) emissions, habitat conservation plans, and natural community conservation plans.

New Urbanism principles, a component of the General Plan Land Use Element, were used to design a land use plan for the project that is compact and pedestrian-friendly, with a mixture of uses surrounding activity centers/neighborhood local points in the Specific Plan Area. Higher density residential uses are proposed around retail, recreation, and public uses and all of these core activity centers are proposed to be connected with pedestrian, bicycle, and transit systems.

The quantifiable objectives of the project include the development of up to 4,340 residential dwelling units (with a minimum of 3,553 required under the General Plan), up to 571,500 square feet of commercial/mixed use building area, and up to 177 acres of public facilities (including three elementary schools, a high school, middle school, supplemental detention/retention basins and 11 parks). It is anticipated that Specific Plan Area will have up to 15,928 residents at project build-out. This is consistent with the expected intensity of development within the Specific Plan Area under General Plan buildout conditions as analyzed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002).

The Salinas General Plan requires the approval of Specific Plans prior to development of any land in the North of Boronda Future Growth Area (FGA). The West Area Specific Plan includes certain development regulations and design standards that are intended to be specific to the Specific Plan Area. Where there is a matter or issue not specifically covered by the Specific Plan development regulations and design standards, the Salinas Zoning Code would apply. Where there is a conflict between the Specific Plan and the Zoning Code, the Specific Plan would prevail.

The Specific Plan is intended to be adopted by the City Council and to serve as a tool for the City of Salinas to implement. The Specific Plan is to be used by designers, developers, builders, and planners, to guide development of the Specific Plan Area. The land use, development standards, and design guidelines are provided to ensure that all proposed developments remain consistent with the vision established by the Specific Plan as the project is built over time. The Specific Plan development concepts, design guidelines, and standards are in accordance with the City's General Plan, Municipal Ordinances, and City Specifications. The Specific Plan shall be used to review, process, and approve development proposals for individual parcels/project sites within the Specific Plan Area, including but not limited to site specific development applications and site improvement plans.

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that the General Plan may impact the related land use plans and policies that have

been adopted to avoid or mitigate an environmental effect. The Salinas Zoning Code, Salinas Redevelopment Plan, Greater Salinas Area Plan, Salinas Municipal Airport Master Plan, Monterey County Airport Land Use Plan, GSA MOU, are specifically mentioned. Of these seven documents, the project does not affect an existing Specific Plan, the Salinas Municipal Airport Master Plan, or the Monterey County Airport Land Use Plan, and the Salinas Redevelopment Plan is no longer in effect. These topics are not discussed further, but the other three are discussed below.

Salinas Zoning Code

The Specific Plan Area is currently zoned NI with a Specific Plan Overlay. The project includes a rezone to NE/Low Density Residential, NG-1/Medium Density Residential, NG-2/High Density Residential, VC, PS, P and OS. A Specific Plan Overlay District is also applicable to each Zoning District. The purpose of the rezone is to ensure consistency between the proposed General Plan Land Use Designations and Zoning. With the approval of the rezoning application, the Specific Plan would be consistent with the Salinas Zoning Code.

City/County Greater Salinas Area Memorandum of Understanding

In 2006, the City and the County adopted the GSA MOU to allow for annexation and development of specific parcels that are located outside of the Future Growth Areas as illustrated in the General Plan. These areas were not contemplated for annexation and development at the time the General Plan was adopted. These areas include, but are not limited to, the "Unikool", Boronda Road, and Fresh Express sites.

The GSA MOU describes the intent of each agency to consider annexation of the subject growth areas and identifies framework conditions under which annexations could be considered. The following excerpt from the Preface of the GSA MOU identifies its general intent:

"This Memorandum of Understanding (MOU), by and between the County of Monterey (County) and the City of Salinas (City), is to set forth certain agreements between the parties to express their intent to jointly pursue action to assure orderly and appropriate land use development in the area designated in the General Plan of Monterey County as the Greater Salinas Area Plan area and in the City of Salinas. Specific objectives to be achieved through the implementation of the land use and associated policies included in this MOU are the preservation of certain agriculture land, the provision of future growth areas, and the provision of adequate financing for the services and facilities of benefit to the residents of the Greater Salinas Area Plan area and the City."

With the adoption of the GSA MOU, both the City and the County acknowledged that additional development outside the City's Future Growth Areas would be considered subject to amendment of the City's SOI and annexation of such areas to the City. The GSA MOU also includes a set of points of agreement that govern future annexations and associated development. Among other topics, the points of agreement address the future direction of City growth, agricultural mitigation, traffic impacts, and storm drainage. The GSA MOU states that the direction of future growth of the City shall be to the north and east of the current city limits, except as otherwise provided for in the GSA MOU.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following two mitigation measures: Mitigation Measure LU5 requires the City to continue to cooperate with the County of Monterey to implement the GSA-MOU, which directs that City growth generally to the north and east away from the most productive farmland; and Mitigation Measure LU6 requires the City to encourage City-centered growth and give priority to redevelopment and infill projects that reduce development pressure on agricultural lands. The City will also establish an incentive program to promote these projects, such as priority permit processing and density bonuses for such developments. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda FGA, which includes the WASP. The project as proposed is consistent with the GSA-MOU. All development under the project would be required to comply with the above-referenced regulations, policies, and standards.

Greater Salinas Area Plan

The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that implementation of General Plan will result in development outside the existing City limits, into the Greater Salinas Planning Area. Development occurring outside of the City limits is subject to the Greater Salinas Area Plan. The implementation of the General Plan may conflict with the Greater Salinas Area Plan, resulting in a significant impact.

To minimize and mitigate the potential impacts, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented Mitigation Measure LU2, which requires the City to be consistent with a portion of Draft Policy LU 3.4 of the Monterey County Draft General Plan, and to cooperate with LAFCO and the County of Monterey to direct growth outside the City limits to the Future Growth Area, on lands that are served or are planned to be served, with a full range of urban services, such as public water and sewer, an extensive road network, public transit, safety and emergency response services, parks, trails, and open space. The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of this mitigation measure, the impact would be reduced to a less than significant level.

Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified this EIR and approved annexation of the North of Boronda Future Growth Area, which includes the Specific Plan. The project as proposed is consistent with the Greater Salinas Area Plan. All development

under the project would be required to comply with the above-referenced regulations, policies, and standards.

VII. FINDINGS REQUIRED UNDER CEQA

Public Resources Code section 21002 provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute provides that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects." Section 21002 goes on to provide that "in the event [that] specific economic, social, or other conditions make infeasible such project alternatives or such mitigation measures, individual projects may be approved in spite of one or more significant effects thereof."

The mandate and principles announced in Public Resources Code section 21002 are implemented, in part, through the requirement that agencies must adopt findings before approving projects for which EIRs are required. For each significant environmental effect identified in an EIR for a project, the approving agency must issue a written finding reaching one or more of three permissible conclusions. The first such finding is that changes or alterations have been required in, or incorporated into, the project, which avoid or substantially lessen the significant environmental effect as identified in the final EIR. The second permissible finding is that such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding, and that such changes have been adopted by, or can and should be adopted by, such other agency. The third potential conclusion is that specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the final EIR. (CEQA Guidelines, § 15091, subd. (a).)

As explained elsewhere in these findings, "feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, legal, and technological factors. The concept of "feasibility" also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project. (*Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1506-1509 (court upholds CEQA findings rejecting alternatives in reliance on project's objectives); see also *California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal.App.4th 957, 1001 (*CNPS*) (an alternative "'may be found infeasible on the ground it is inconsistent with the project objectives as long as the finding is supported by substantial evidence in the record'") (quoting Kostka & Zischke, *Practice Under the Cal. Environmental Quality Act* [Cont.Ed.Bar 2d ed. 2009] (*Kostka*), § 17.309, p. 825); *In re Bay-Delta Programmatic Environmental Impact Report Coordinated Proceedings* (2008) 43 Cal.4th 1143, 1165, 1166 (*Bay-Delta*) ([i]n the CALFED program, feasibility is strongly linked to achievement of each of the primary program objectives"; "a lead agency may structure its EIR alternative analysis around a reasonable definition of underlying purpose and need not study alternatives that cannot achieve that basic goal).) Moreover, "'feasibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133

Cal.App.3d 410, 417 (*City of Del Mar*); see also *CNPS, supra,* 177 Cal.App.4th 957 (after weighing "'economic, environmental, social, and technological factors,' ... 'an agency may conclude that a mitigation measure or alternative is impractical or undesirable from a policy standpoint and reject it as infeasible on that ground) (quoting Kostka, *supra,* § 17.29, p. 824))

For purposes of these findings (including the table described in Section IX below), the term "avoid" refers to the effectiveness of one or more mitigation measures to reduce an otherwise significant effect to a less than significant level. In contrast, the term "substantially lessen" refers to the effectiveness of such measure or measures to substantially reduce the severity of a significant effect, but not to reduce that effect to a less than significant level.

As explained above, CEQA requires that the lead agency adopt feasible mitigation measures or, in some instances, feasible alternatives to substantially lessen or avoid significant environmental impacts that would otherwise occur. With respect to a proposed project for which significant impacts are not avoided or substantially lessened, a public agency, after adopting proper findings, may nevertheless approve the project if the agency first adopts a statement of overriding considerations setting forth the specific reasons that the agency found that the project's benefits outweigh its unavoidable adverse environmental effects. The City of Salinas' Statement of Overriding Considerations for the project is included herein in Section XI below.

VIII. MITIGATION MONITORING AND REPORTING PROGRAM

A Mitigation Monitoring and Reporting Program (hereinafter "MMRP") has been prepared for the project, and is being approved by the City Council by Resolution 2019-__(N.C.S.). The City will use the MMRP to track compliance with project mitigation measures. The MMRP will remain available for public review during the compliance period. The Final MMRP is Exhibit "B" of the aforementioned resolution and is approved in conjunction with these Findings of Fact.

IX. SIGNIFICANT EFFECTS AND MITIGATION MEASURES

The EIR identified a number of significant and potentially significant environmental effects (or impacts) that the project will cause or contribute to. Most of these significant effects can be fully avoided through the adoption of feasible mitigation measures. Other effects, however, cannot be avoided by the adoption of feasible mitigation measures or alternatives, and thus will be significant and unavoidable. Some of these unavoidable significant effects can be substantially lessened by the adoption of feasible mitigation measures. Other significant, unavoidable effects cannot be substantially lessened or avoided. For reasons set forth in Section XI however, the City Council has determined that overriding economic, social, and other considerations outweigh the significant, unavoidable effects of the project.

The City Council's findings with respect to the project's significant effects and mitigation measures are set forth in the Table of Impacts, Mitigation Measures, and CEQA Findings attached to these findings. The findings set forth in the table are hereby incorporated by reference.

This table does not attempt to describe the full analysis of each environmental impact contained in the EIR. Instead, the table provides a summary description of each impact, describes the

applicable mitigation measures identified in the Draft EIR or Final EIR and adopted by the City Council, and states the City Council's findings on the significance of each impact after imposition of the adopted mitigation measures. A full explanation of these environmental findings and conclusions can be found in the Draft and Final EIRs, and these findings hereby incorporate by reference the discussions and analyses in those documents supporting the Final EIR's determinations regarding mitigation measures and the projects' impacts and mitigation measures designed to address those impacts. In making these findings, the City Council ratifies, adopts, and incorporates into these findings the analyses and explanations in the Draft EIR and Final EIR, and ratifies, adopts, and incorporates in these findings the determinations and conclusions of the Draft EIR and Final EIR relating to environmental impacts and mitigation measures, except to the extent any such determinations and conclusions are specifically and expressly modified by these findings.

By Resolution 2019-__(N.C.S.), the City Council adopts all of the mitigation measures identified in the table.

X. PROJECT ALTERNATIVES

A. Basis for Analysis of the Feasibility of Alternatives

Public Resources Code section 21002, a key provision of CEQA, provides that "public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects of such projects[.]" The same statute states that the procedures required by CEQA "are intended to assist public agencies in systematically identifying both the significant effects of proposed projects and the feasible alternatives or feasible mitigation measures which will avoid or substantially lessen such significant effects."

Where a lead agency has determined that, even after the adoption of all feasible mitigation measures, a project as proposed will still cause one or more significant environmental effects that cannot be substantially lessened or avoided, the agency, prior to approving the project as mitigated, must first determine whether, with respect to such impacts, there remain any project alternatives that are both environmentally superior and feasible within the meaning of CEQA. Although an EIR must evaluate this range of *potentially* feasible alternatives, an alternative may ultimately be deemed by the lead agency to be "infeasible" if it fails to fully promote the lead agency's underlying goals and objectives with respect to the project. (*City of Del Mar, supra,* 133 Cal.App.3d at p. 417) "'[F]easibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*Ibid*.; see also *CNPS, supra,* 177 Cal.App.4th at p. 1001.) Thus, even if a project alternative will avoid or substantially lessen any of the significant environmental effects of the project, the decision-makers may reject the alternative if they determine that specific considerations make the alternative infeasible.

Under CEQA Guidelines section 15126.6, the alternatives to be discussed in detail in an EIR should be able to "feasibly attain most of the basic objectives of the project [.]" For this reason, the Objectives described above provided the framework for defining possible offsite alternative project locations. (See *Bay-Delta, supra,* 43 Cal.4th at p. 1166). The project objectives are set out

above in section III.C. Based on the requirements of CEQA Guidelines section 15126.6 and the Project's Objectives, the following alternatives to the project were identified:

No Project (No Build) Alternative

The CEQA Guidelines (Section 15126.6[e]) require consideration of a no project alternative that represents the existing conditions, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved. For purposes of this analysis, the No Project (No Build) Alternative assumes that development of the Specific Plan Area would not occur, and the Specific Plan Area would remain in its current agricultural condition. It is noted that the No Project (No Build) Alternative would fail to meet the project objectives identified for the West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

Reduced Land Area Project Alternative

Under this alternative, the Specific Plan Area would be developed with the same components as described in the Project Description, but the area utilized for the development (i.e., the project footprint) would be reduced by approximately 20 percent. Under this alternative, approximately 162 acres of land in the northeast corner of the Specific Plan Area would be removed. This removed area would include the 52.85-acre Mortensen property (APN 21101108) and the 108.32-acre Madolora/Global property (APN 21101109), which are shown on Figure 5.0-1. The resultant Specific Plan Area would include approximately 635 acres. The proposed land uses within this area identified for removal under this alternative would be incorporated into the remaining 635 acres of the Specific Plan Area, which would increase the residential density of the Specific Plan Area under this alternative, while retaining the same number of residences, mixed use commercial areas, schools, parks, etc. as the project. This alternative would establish a site for a third 10.0-acre elementary school to be developed by the Santa Rita Union School District (District). However, if the District decides against the elementary school siting, the area would instead be residential units.

Under this alternative the average residential density (units per net acre) would increase from 9.0 to approximately 11.3 units/acre. It is assumed that the number of NE parcels would be reduced, and the number of NG-1 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

Reduced Residential Intensity/Density Project Alternative

Under this alternative, the Specific Plan Area would be developed with a reduction in the overall residential intensity/density while maintaining the approximate overall project footprint. For the purposes of discussion, this option considers a 25 percent reduction in the intensity/density of the residential components of the project while maintaining the approximately 797-acre project footprint. This would result in fewer residential lots, but larger lot sizes. This alternative would result in up to 3,255 residential units. This alternative would retain the approximately 571,500 square feet of mixed commercial uses, the five proposed schools (three elementary, one middle, and one high school), and the same acreage of parks and detention basins as the project.

Under this alternative, the average residential density (units per net acre) would decrease from 9.0 to approximately 6.8 units/acre. It is assumed that the number of NE parcels would be increased, and the number of NG-1 and NG-2 parcels would increase. The proposed Village Center would remain unchanged under this alternative, and would still include up to 571,500 square feet of mixed use commercial floor area and a minimum of 91 dwelling units.

This alternative, based upon residential overall density, is inconsistent with the Salinas General Plan's standards for the Specific Plan Area, which require a minimum of 3,553 residential units within the Specific Plan Area, and the incorporation of New Urbanism concepts which mandates that new residential development have a minimum average density of 9 dwelling units per net residential acre. A General Plan Amendment would be required.

Smaller-scale Project Alternative

Under this alternative, the Specific Plan Area would be reduced by approximately 33 percent and the proposed residential and non-residential uses would also be reduced by approximately 33 percent. For the purposes of discussion, this alternative assumes that approximately 264 acres of land along the entire eastern boundary of the Specific Plan Area would be removed and remain as undeveloped agricultural land. The resultant Specific Plan Area under this alternative would be approximately 533 acres in size, and include up to 2,908 residential units, up to 382,905 square feet of commercial/mixed use building area, and up to 119 acres of public facilities (including two elementary schools, a high school, a middle school, open space (including supplemental detention/retention basins) and up to 8 parks). The number of residential units under this alternative would not meet the minimum of 3,553 residential units as provided within the City of Salinas General Plan. The residential densities under this alternative would be similar to the project.

The City Council finds that that a good faith effort was made to evaluate all potentially feasible alternatives in the EIR that are reasonable alternatives to the project and could feasibly obtain the basic objectives of the project, even when the alternatives might impede the attainment of the project objectives and might be more costly. As a result, the scope of alternatives analyzed in the EIR is not unduly limited or narrow. The City Council also finds that all reasonable alternatives were reviewed, analyzed and discussed in the review process of the EIR and the ultimate decision on the project. (See, e.g., DEIR, pp. 6-5 to 6-55)

1. Significant, Unavoidable Impacts of the Project

The significant and unavoidable impacts of the project are set out in detail below in Section XI.A.

2. Scope of Necessary Findings and Considerations for Project Alternatives

As noted above, these findings address whether the various alternatives substantially lessen or avoid any of the significant unavoidable impacts associated with the project and also consider the feasibility of each alternative. Under CEQA, "[f]easible means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic,

environmental, legal, social, and technological factors." (CEQA Guidelines § 15364). As explained earlier, the concept of feasibility permits agency decision makers to consider the extent to which an alternative is able to meet some or all of a project's objectives. In addition, the definition of feasibility encompasses "desirability" to the extent that an agency's determination of infeasibility represents a reasonable balancing of competing economic, environmental, social, and technological factors supported by substantial evidence.

In identifying potentially feasible alternatives to the project, the following project objectives were considered:

1. Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly.

2. Provide a variety of land uses in easy walking distance of housing including a mixed use village, parks, and schools to reduce vehicle miles traveled.

3. Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents.

4. Provide a variety of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages.

5. Provide public services and infrastructure improvements that achieve and maintain City service standards.

6. Provide an inviting tree-lined street system which incorporates traffic calming and other measures.

7. Establish an interconnected sidewalk/path and open space system throughout the development which links to the greater FGA and City as a whole.

8. Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements.

9. Provide for a reasonable jobs/housing balance.

10. Provide opportunities for senior housing.

11. Provide for a site/parcel-based post-construction SCMs/LID to the maximum extent practicable.

As noted near the beginning of these findings, moreover, the City is keenly aware that the State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most

expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The following two overarching project objectives are therefore presented here as a response to: 1) the State Legislature's declaration of a housing crisis in California, 2) the State Legislature's policy direction for the provision of more housing, 3) the Salinas City Council's more than 30 years of planning for urban development within the FGAs, which includes the West Area Specific Plan, and 4) the Salinas City Council's policy direction as provided in the approved FGAs and General Plan:

- Objective 1: Respond to the State Legislature's declaration of a housing crisis in California, and their policy direction that local governmental agencies provide more housing, by including provisions for the construction of new housing supply within the West Area Specific Plan.
- Objective 2: Respond to the Salinas City Council's long-term vision and policy direction for new urban development to be focused in the Future Growth Areas, by including provisions the construction of new urban development consistent with the City of Salinas General Plan.

B. No Project (No Build) Alternative

In general, a CEQA "No Project Alternative" must "discuss the existing conditions …, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services." (CEQA Guidelines, § 15126.6, subd. (e)(2).) When the proposed project is the revision of an existing land use or regulatory plan, policy or ongoing operation, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future. In such an instance, the no project alternative consists of evaluating the projected impacts of the proposed plan to the impacts that would occur under the existing plan. "Typically, this is a situation where other projects initiated under the existing plan will continue while the new plan is developed. Thus, the projected impacts of the proposed plan or alternative plans would be compared to the impacts that would occur under the existing plan. (*Id.*, subd. (e)(3)(A).)

1. Analysis of No Project (No Build) Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to air quality. As such, the project level and cumulative impacts would be greatly reduced when compared to the project.

Biological Resources

Under the No Project (No Build) Alternative, the West Area Specific Plan would not be constructed, no habitat would be removed, no wetlands disturbed, and no ground disturbing activities would occur. The Specific Plan Area would remain open to migration, foraging, nesting, and other uses by wildlife. Therefore, potential for impacts to biological resources would be eliminated under the No Project (No Build) Alternative. Impacts to biological resources would be reduced as compared to the project.

Cultural Resources

The No Project (No Build) Alternative would continue to result in ground disturbing activities associated with the agricultural operations (i.e., soil tilling); however, because the ground disturbance associated with farming has occurred for an extended period of time with no cultural resources being found it is anticipated that the continuation of these operations under this alternative would have a significantly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources, the No Project (No Build) Alternative would result in slightly less potential for impacts to cultural resources as the entire Specific Plan Area would continue to be used for agriculture production.

Greenhouse Gases and Climate Change

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed, and there would be no net change in emissions and no potential for a conflict with any adopted plans or policies related to GHG reductions. As such, this impact would be reduced when compared to the project. This does not necessarily mean, however, that the No Project Alternative represents a better long-term policy outcome for climate than the project. California has a large housing need, and new housing will have to be built somewhere, if not the Specific Plan Area. As the California Supreme Court explained, "[g]iven the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced." (*Center for Biological Diversity v. California Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 220-221.)

Hazards and Hazardous Materials

Under the No Project (No Build) Alternative, no new land uses would be introduced to the Specific Plan Area, and the potential for hazardous material release in the Specific Plan Area would be reduced. Ongoing pesticide use would occur within the area to remain in agriculture, and this has the potential to generate negative health effects on existing residents located in the areas south and west of the Specific Plan Area. However, there would not be long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, because development would not occur. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the No Project (No Build) Alternative would result in less potential for impacts.

Hydrology and Water Quality

Under the No Project (No Build) Alternative, potential new water quality impacts from construction and operation of the West Area Specific Plan would be eliminated. Under this alternative, the land would be kept in its present state with the majority of the Specific Plan Area either fallow land or being used for agricultural purposes. The No Project (No Build) Alternative would have a greater chance of groundwater recharge because it would not introduce large areas of impervious surfaces as would the West Area Specific Plan. However, the beneficial impact of reducing the consumptive use of water by 2,078 acre-feet per year (AFY) (Cal Water, 2015) would not exist. This is a significant contribution in reducing overdraft in the Salinas Valley Ground Water basin.

The potential to result in the violation of water quality standards would be reduced under this alternative as compared with the project. However, there are some instances where the No Project (No Build) Alternative would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Nevertheless, overall, potential impacts related to hydrology and water quality would be reduced under this alternative.

Noise

Existing agricultural activities within the Specific Plan Area sometimes involve on-going noise sources such as agricultural equipment (e.g., tractors, harvesters, planters, etc.). Such noise sources are part of the existing ambient noise levels in the Specific Plan Area. Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and there would be no potential for new noise sources; however, existing noise from agricultural operations would continue. As such, this alternative would have less impact relative to the project.

Population and Housing

Under the No Project (No Build) Alternative, the Specific Plan Area would not be developed and the Specific Plan Area would not accommodate the City's anticipated growth. Growth would still be anticipated to occur within the region, but it would not be accommodated in the FGA, which has undergone extensive planning efforts by the City and community for over a decade. This outcome would not be consistent with the FGA and General Plan. The City would need to look

to other undeveloped areas of the region to develop for new housing, which would be expected to have environmental impacts that have not yet been assessed, but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the No Project (No Build) Alternative, there would be no increased demand for police, fire, schools, parks, or other public services. Alternatively, this alternative would result in no new school or park facilities, which are designed to accommodate more than the demand that is generated by the West Area Specific Plan. Overall, this alternative would have a slightly greater impact to public services when compared to the project.

Transportation and Circulation

Under the No Project (No Build) Alternative, there would be no new traffic generated within the Specific Plan Area. This alternative would also not result in new traffic improvements on the City's roadway system and it would not result in payments of traffic impact fees into the City's Capital Improvement Program (CIP) that would be used for the roadway system. Existing deficiencies in the traffic system would not receive the benefit of improvements to improve existing deficiencies; however, this would be more than offset by the fact that there would be no new contribution to degrading traffic levels of service at a project and cumulative level. Overall, this alternative would have less of an overall traffic impact than the project. Still, the growth for which there is market demand would still be anticipated to occur somewhere else within the region, possibly in areas that could result in transportation effects worse than those of the West Area Specific Plan.

Utilities

Under the No Project (No Build) Alternative, the Specific Plan Area would not have an increased demand for wastewater, storm drainage, or solid waste disposal. There would be no new impacts on these utilities and there would be no need to construct new infrastructure. Therefore, overall, the impact on wastewater, solid waste, and storm drainage would be reduced under this alternative. In conclusion, the No Project (No Build) Alternative would not result in a beneficial impact to groundwater recharge. However, this alternative would decrease the amount of solid waste and wastewater generated at the site, and would not require construction of new utilities infrastructure. Overall, the No Project (No Build) Alternative would not add new impacts to wastewater, storm drainage, or solid waste disposal systems, but would not result in the beneficial impacts to the groundwater system.

2. Feasibility of No Project (No Build) Alternative

The No Project (No Build) Alternative is the environmentally superior alternative because it results in the least adverse environmental impacts when compared to the project. However, the No Project (No Build) Alternative would fail to meet the project objectives identified for the

West Area Specific Plan and is inconsistent with the goals of the General Plan for the future growth areas of the City.

The City Council finds the No Project (No Build) Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the Project.

C. Reduced Land Area Project Alternative

1. Analysis of Reduced Land Area Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Land Area Project Alternative, the Specific Plan Area would be developed with a 20 percent smaller development area, with an overall increase in residential density. Although the number of users would be the same under this alternative as compared with the project, this alternative has reduced mobile emissions when compared to the project, due to the more compact design of this alternative. It was assumed that mobile emissions under this alternative would be reduced by approximately twenty percent (as compared to the project), the same amount as the reduction in the size of this alternative's footprint when compared to the project. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for reactive organic compounds (ROG), nitrogen oxides (NO_x), and respirable particulate matter (PM_{10}) at buildout.

This alternative would provide more compact development than the project, providing greater opportunities for non-motorized transportation choices (such as walking or cycling). This would slightly reduce vehicle miles travelled (VMT) as compared to the project, which would slightly the mobile source emissions.

The Reduced Land Area Project Alternative would have greater impacts with respect to Air Quality Impact 3.1-1, which is identified as "the potential to conflict with or obstruct implementation of the applicable air quality plan." This is because the Association of Monterey Bay Area Governments (AMBAG), in consultation with the City of Salinas, included the North of Boronda FGA (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The AMBAG 2018 Regional Growth Forecast feeds into the Monterey Bay Air Resources Board's (MBARD) 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as the future version of the Air Quality Management Plan (AQMP). Therefore, while an increase in density has the potential to reduce mobile source emissions if residents chose alternative transportation modes (i.e., walk/bike/transit instead of driving a vehicle), this is not guaranteed to occur given that the choice to drive is still convenient and economical for most residents under this residential density in a suburban environment. The increased residential density under this alternative was not specifically planned for in the MBARD planning documents and within the AMBAG forecasts. Nevertheless, due to the reduced footprint and slightly reduced VMT, this impact would be slightly reduced when compared to the West Area Specific Plan.

Biological Resources

Under the Reduced Land Area Project Alternative, less habitat would be removed, and fewer ground disturbing activities would occur. It is still anticipated that the drainage ditches along Boronda Road would be eliminated (i.e., fill activity). A portion of the Specific Plan Area (twenty percent) would remain open to migration, foraging, nesting, and other uses by wildlife. The balance of the Specific Plan Area (eighty percent of site) would be developed and no longer available for migration, foraging, nesting, and other uses by wildlife. This would still be a significant and unavoidable impact, and would be cumulatively considerable.

When compared to the Specific Plan, potential for impacts to biological resources would be reduced under the Reduced Land Area Project Alternative proportionate to the reduction in developed area estimated at twenty percent.

Cultural Resources

The Reduced Land Area Project Alternative would result in fewer ground disturbing activities and would have a slightly reduced potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Land Area Project Alternative would result in slightly less potential for impacts to cultural resources, as a portion of the Specific Plan Area would remain undeveloped.

Greenhouse Gases and Climate Change

The Reduced Land Area Project Alternative would not develop approximately 162 acres that is proposed to be developed under the project. This would provide more compact development, creating more opportunities for non-motorized transportation options (such as walking or cycling). This is likely to reduce overall VMT as compared to the project. This would reduce mobile-related GHG emissions by an amount approximately equivalent to proportional reduction in the size of the Specific Plan Area (twenty percent) under this alternative, as compared with the project. Total operational emissions would be reduced by approximately 11 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 16,785 (same as the project), this alternative would generate approximately 2.53 metric tons of carbon dioxide equivalent (MT CO_2e)/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. However, this value is below the per service population estimate for the project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, the emissions per capita under this alternative would be reduced as compared with the project. This impact would be slightly reduced when compared to the project.

Hazards and Hazardous Materials

Under the Reduced Land Area Project Alternative, the land area to be developed would be reduced by 20 percent and the potential for exposure to hazardous materials, or a release of hazardous materials would be reduced proportionately. Ongoing pesticide use would occur within the area to remain in agriculture, and this would have the potential to generate negative health effects on new residents in the development. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the Reduced Land Area Project Alternative would result in slightly less potential for impacts.

Hydrology and Water Quality

Implementation of the West Area Specific Plan has the potential to result in the violation of water quality standards and waste discharge of pollutants into surface waters during both construction and long-term operations. Construction operations could result in temporary increases in runoff, erosion, sedimentation, soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. The long-term operation of the West Area Specific Plan could result in long-term impacts to surface water quality from urban stormwater runoff and could enter groundwater or surface water systems. Additionally, the proposed project would result in new impervious surfaces that could reduce rainwater infiltration and groundwater recharge. Mitigation measures incorporated into the project would reduce potential water quality impacts to a less than significant level. The West Area Specific Plan would not place persons or structures in a flood hazard zone.

Under the Reduced Land Area Project Alternative, potential water quality impacts from construction and operation of the West Area Specific Plan would be reduced. Under this alternative, the developed area would be reduced by 20 percent when compared with the project. The Reduced Land Area Project Alternative would have a greater chance of groundwater recharge because it would reduce the amount of impervious surfaces by 20 percent as compared to the West Area Specific Plan. The areas that would not be developed (i.e., the 162 acres of land in the northeast corner of the Specific Plan Area) would remain under agricultural production. While the 162-acre agricultural area would provide opportunities for groundwater recharge, the agricultural uses would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping required for the 162-acres of agricultural use under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. The amount of total consumptive water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412

AFY less water than buildout of the proposed project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the proposed project.

Under this alternative, there are some instances where the undeveloped portions of the Specific Plan Area would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, while the potential to result in water quality violations would be reduced under this alternative when compared with the project, the higher amount of groundwater pumping under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the proposed project. There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 80 percent of the land area would be converted into a use that would not require intensive groundwater pumping. As such, potential impacts related to hydrology and water quality would be increased under this alternative when compared to the project.

Noise

Under the Reduced Land Area Project Alternative, development would be reduced by 20 percent when compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Receptors would be subject to ongoing agricultural noise under this alternative. It is noted that, despite this reduction in the size of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact. As such, this alternative would have a reduced impact relative to the project.

Population and Housing

Under the Reduced Land Area Project Alternative, the project footprint would be reduced by 20 percent when compared with the project. However, although the residential density would increase from approximately 9.0 to 11.3 residential units per acre under this alternative, the number of residences developed under this alternative would be the same as for the proposed project. Overall, this alternative would have a equal impacts when compared to the project.

Public Services

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, the demand for police, fire and other public services would be equal. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have equal impacts to public services when compared to the project.

Transportation

Under the Reduced Land Area Project Alternative, the development area would be reduced by 20 percent. Residential and non-residential development would be equal under the Reduced Land Area Project Alternative; therefore, traffic generated in the Specific Plan Area would be equal.

This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts to this topic under this alternative.

The Reduced Land Area Project Alternative would have "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-7, which is identified as "impacts related to emergency access." The basis for this determination is that the increased density of the proposed project would increase congestion on existing and planned roadways as compared to the proposed project, given that fewer roadways would be developed under this alternative (because the APNs 211-011-008 and 211-011-009 would not be developed under this alternative). Specifically, Natividad Road (Major Arterial), Russell Road (Major Arterial), and Rogge Road would not be expanded with full frontage improvements under this alternative. Congestion is also expected to be slightly higher under this alternative compared to the proposed project, given the increased density of traffic (based on fewer roadway miles being developed under this alternative compared with the proposed project, and the increased density of the proposed project [to 11.3 residential units per acre under this alternative, compared to 9.0 residential units per acre under the proposed project]). This represents a slightly greater impact with respect to emergency access within the Specific Plan Area. It is noted that the significance determination under Transportation and Circulation Impact 3.10-7 would likely still be less than significant for the Reduced Land Area Alternative, similar to the proposed project; however, the roadway network will not have the same capacity as under the proposed project, so the determination remains "slightly greater."
Additionally, the Reduced Land Area Project Alternative would have a "slightly greater" impact with respect to Transportation and Circulation Impact 3.10-8, which is identified as "conflict with adopted multi-modal circulation policies, plans, or programs" or a "decrease [in] the performance or safety of public transit, bicycle, or pedestrian facilities." The basis for this determination is that the following roadways would not be developed in full under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane);
- Rogge Road frontage improvements.

Since these roadways would not be developed in full, as planned for by the proposed project, connectivity with the remainder of the City and County, including other areas within the City's FGA, would be more limited under the Reduced Land Area Project Alternative as compared to the proposed project. Overall, this alternative would have slightly greater traffic impacts than the project.

Utilities

This alternative would not save as much groundwater when compared to the proposed project. The amount of total consumptive water usage reduced by this alternative when compared to the

existing uses in the Specific Plan Area would be approximately 1,666 AFY, compared with the approximately 2,078 AFY estimated to be saved by the proposed project. That is, buildout this alternative would save approximately 412 AFY less water than buildout of the proposed project. This is due to the dramatically higher water usage under the current irrigated agricultural cultivation uses as compared with developed residential and/or commercial uses. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project.

Although this alternative would save less groundwater than the project, generate a similar amount of solid waste, and demand a similar amount of water, this alternative would reduce impacts to stormwater compared to the project. Overall, the demand for utilities would be reduced under this alternative when compared to the project.

2. Feasibility of Reduced Land Area Project Alternative

The Reduced Land Area Project Alternative would slightly reduce impacts to air quality, biological resources, cultural resources, GHG and climate change, hazards, hydrology, noise, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to groundwater supplies and recharge (cumulative and project-level), population and housing, emergency vehicle access, and conflicts with adopted multi-modal circulation policies, plans, or programs. Further, this alternative does not meet the following project objectives:

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole.

The Reduced Land Area Project Alternative does not fully meet the project objective to "Provide public services and infrastructure improvements that achieve and maintain City service standards" because the Reduced Land Area Project Alternative would develop fewer roadways, bicycle and pedestrian pathways, and other infrastructure improvements (such as well sites) when compared with the project.

Under this alternative, APNs 211-011-008 and 211-011-009, as shown in Figure 5.0-1 of the Draft EIR, would not be developed. The effect of this area not developing in accordance with the General Plan would be that the following roadways and infrastructure improvements would not be developed:

- Natividad Road (Major Arterial) expansion frontage improvements;
- Russell Road (Major Arterial) expansion;
- Rogge Road frontage improvements;
- The proposed water well #3 and water treatment site;
- The supplemental stormwater basins along Natividad Road; and
- Neighborhood Park WA-3 (3-acre park).

Therefore, based on the above list of roadways and infrastructure improvements that would not be developed under this alternative, the ability of the City to provide public services and infrastructure improvements in accordance with the adopted General Plan would be hampered under the Reduced Land Area Project Alternative.

The Reduced Land Area Project Alternative does not meet the project objective to "Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole" because this alternative would leave undeveloped a portion of the land that would be developed under project (i.e., APNs 211-011-008 and 211-011-009), as shown in Figure 5.0-1 of the Draft EIR. This is an area located adjacent to the future Central Area Specific Plan (within the City's FGA). If this area were to remain undeveloped, there would be fewer interconnected sidewalks/pathways and available open space areas for City residents, and connectivity would be limited between the West Area Specific Plan (the project) and the planned for Central Area Specific Plan (a planned Specific Plan Area that would be located just to the east of the proposed project). This reduced connectivity means that the Reduced Land Area Project Alternative would not establish an interconnected sidewalk/pathway and open space system that fully links with the greater FGA and with the City as a whole. Notably, this rationale is also the basis for determining that the Smaller-Scale Project Alternative would not meet this Specific Plan objective. Specifically, the following roadways would not be developed under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane); and
- Rogge Road frontage improvements.

The Reduced Land Area Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, hydrology and water quality, population and housing, public services, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects anticipated with the project would still occur under this Reduced Land Area Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts may occur to a lesser extent than under the project under this alternative, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to increased traffic noise levels at existing receptors would occur under the project and the Reduced Land Area Project Alternative as there is a possibility of not being able to feasibly install sounds walls in some locations that would be warranted. It is noted that, due to decreased noise levels associated with this alternative, the noise at existing receptors would likely decrease. However, the cumulative traffic noise level increases would exceed the Federal Interagency Committee on Noise (FICON) CEQA substantial increase criteria of 1.5 to 5 dB.

The City Council finds the Reduced Land Area Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

D. Reduced Residential Intensity/Density Project Alternative

1. Analysis of Reduced Residential Intensity/Density Project Alternative's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area, with an overall decrease in residential density.

It was assumed that overall criteria pollutant emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for ROG, NOx, and PM_{10} at buildout.

Although less compact development generally increases overall per capita VMT, the smaller number of residential units under this alternative as compared with the project would reduce overall air quality emissions, including under area sources, mobile sources, and energy sources. As such, this impact would be reduced when compared to the project.

Biological Resources

Under the Reduced Residential Intensity/Density Project Alternative, an equivalent amount of habitat would be removed as under the project, and a similar level of ground disturbing activities would occur as compared with the project. Therefore, there would be an approximately equal potential for impacts to biological resources under this alternative as compared with the project.

Cultural Resources

The Reduced Residential Intensity/Density Project Alternative would result in a similar level of ground disturbing activities and would have a similar potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, the Reduced Residential Intensity/Density Project Alternative would result in equal potential for impacts to cultural resources.

Greenhouse Gases and Climate Change

Under the Reduced Residential Intensity/Density Project Alternative, there would be a 25 percent reduction in the intensity/density of the residential portions of the Specific Plan Area. It

was assumed that overall GHG emissions under this alternative would be reduced by approximately 25 percent when compared to the project, consistent with the reduction in the intensity/density of the residential portions of the Specific Plan Area under this alternative. Total operational emissions would be reduced by approximately 25 percent under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 12,803 under this alternative (this is equivalent to a 25 percent smaller residential population but the same number of workers, when compared to the project), this alternative would generate approximately 2.79 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035, but lower than the per service population estimate for the project of 2.84 MT CO_2e/service population/year (in Year 2035). Therefore, this impact would be slightly reduced when compared to the project.

The slight reduction does not necessarily mean that the Reduced Residential Intensity/Density Project Alternative represents a better long-term policy outcome for climate than the project. California has a large housing need, and new housing will have to be built somewhere, if not in the Specific Plan Area. As the California Supreme Court explained, "[g]iven the reality of growth, some greenhouse gas emissions from new housing and commercial developments are inevitable. The critical CEQA question is the cumulative significance of a project's greenhouse gas emissions, and from a climate change point of view it does not matter where in the state those emissions are produced." (*Center for Biological Diversity v. California Dept. of Fish and Wildlife* (2015) 62 Cal.4th 204, 220-221.)

Hazards and Hazardous Materials

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential components would be reduced by 25 percent as compared with the project. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. Overall, given the reduction in the intensity-density of this alternative as compared with the project, it is expected that the Reduced Residential Intensity/Density Project Alternative would have a slightly reduced impact to this topic relative to the project.

Hydrology and Water Quality

Under the Reduced Residential Intensity/Density Project Alternative, potential water quality impacts from construction and operation would be slightly reduced. Under this alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project, although the footprint would remain the same. This would result in fewer residential lots, but larger lot sizes. Since the residential lot sizes under this alternative would be larger when

compared with the project, there would be less impervious surface, and therefore there would be a greater chance of groundwater recharge under this alternative. As such, potential impacts related to hydrology and water quality would be reduced under the Reduced Residential Intensity/Density Alternative when compared to the project.

Noise

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Despite this reduction in the size of intensity of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact. As such, this alternative would have less impact relative to the project.

Population and Housing

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent when compared with the project. Development of housing would still occur under this alternative, but fewer units would be built. Growth would still be anticipated to occur within the region, but it would not be fully accommodated in the North of Boronda FGA, which has undergone extensive planning efforts by the City and community for over a decade. This would not be consistent with the FGA and General Plan. The City would need to look to other undeveloped areas of the region to develop for new housing which would be expected to have environmental impacts that have not yet been assessed but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. The lower density of this alternative would also not meet the minimum number of residential units required for New Urbanism principles that are established in the General Plan for the Specific Plan Area. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent; therefore, the demand for police, fire and other public services would be reduced. This alternative would still result in development of public facilities (i.e. schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have a slightly reduced impact to public services when compared to the project.

Transportation and Circulation

Under the Reduced Residential Intensity/Density Project Alternative, the intensity/density of the residential uses would be reduced by 25 percent; therefore, traffic generated in the Specific Plan Area would be reduced. This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway

system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts under this alternative. Overall, this alternative would have less of an overall traffic impact than the project.

Utilities

Under the Reduced Residential Intensity/Density Alternative, the Specific Plan Area would be developed with a reduction in the overall residential intensity/density while maintaining the approximate overall project footprint as in the project. For the purposes of discussion, this option considers a 25 percent reduction in the intensity/density of the residential components of the project while maintaining the approximately 797-acre project footprint. This would result in fewer residential lots, but larger lot sizes. This alternative would result in up to 3,255 residential units. This alternative would retain the approximately 571,500 square feet of mixed commercial uses, the five proposed schools (three elementary, one middle, and one high school), and the same acreage of parks and detention basins as the project.

The total quantity of infrastructure installed would not be reduced, but the demand for wastewater and solid waste services would be less than would be required for the project. For example, is expected that this alternative would generate approximately 0.8 million gallons per day (MGD) of wastewater and approximately 37,777 pounds per day (lbs/day) of solid waste, smaller than would be generated by the project, since this alternative would generate fewer residents when compared to the project.

Separately, the total storm drainage runoff under this alternative would be approximately the same when compared to the project, due to the project footprint remaining the same for this alternative when compared to the project. Additionally, this alternative would save approximately the same amount of groundwater when compared to the project, since the project footprint would remain the same for this alternative as compared to the project. Overall, the demand for wastewater and solid waste services would be less than would be required for the project, and the amount of storm drainage runoff would be approximately the same. Therefore, demand for utilities would be slightly reduced under this alternative when compared to the project.

2. Feasibility of Reduced Residential Intensity/Density Project Alternative

The Reduced Residential Intensity/Density Project Alternative would slightly reduce impacts to air quality, cultural resources, GHG and climate change, hydrology, noise, public services, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to conflicts with applicable air quality plans and population and housing. Further, this alternative does not meet the following project objectives:

- Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly;
- Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages;
- Provide a reasonable jobs/housing balance.

The Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly" because the Reduced Residential Intensity/Density Project Alternative would result in fewer lots with larger lot sizes than will occur under the project. Larger lot sizes are inherently not compact, and development of these larger lot sizes may result in larger block sizes, which are less conducive to travel by walking, bicycles, and transit. Based upon residential overall density, this alternative is inconsistent with the Salinas General Plan's standards for the Specific Plan Area, which require a minimum of 3,553 residential units within the Specific Plan Area, and the incorporation of New Urbanism concepts, which mandate that new residential development have a minimum average density of 9 dwelling units per net residential acre.

The Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages" because the Reduced Residential Intensity/Density Project Alternative would provide fewer medium- and high-density housing units than the project. The number of low-density housing options would increase compared to the project, and these units would replace otherwise varied density housing options.

Furthermore, the reduction in housing units under the Reduced Residential Intensity/Density Project Alternative would be less consistent than the project in meeting statewide legislative goals of building housing units in order to address the statewide housing crisis. Given the enormous unmet demand for housing in California, the City believes that it has an obligation to facilitate the construction of more, rather than fewer, housing units when opportunities for residential development arise.

Similarly, the Reduced Residential Intensity/Density Project Alternative does not fully meet the project objective to "Provide a reasonable jobs/housing balance" because the Reduced Residential Intensity/Density Project Alternative would result in 1,085 fewer housing units than the project, but the same amount of commercial uses. This would impact the jobs/housing balance because fewer residents would be live in the Specific Plan Area, which proximity is vital to ensuring the success of the businesses in the Specific Plan Area.

The Reduced Residential Intensity/Density Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, cultural resources, greenhouse gases and climate change, hydrology and water quality, hazards and hazardous materials, noise, public services, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, biological resources, hazards and hazardous materials, population and housing, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects which are anticipated with the project would still occur under this Reduced Residential Intensity/Density Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts

may occur to a lesser extent under this alternative than under the project, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to violation of an air quality standard would occur under both the project and the Reduced Residential Intensity/Density Project Alternative. As shown in Table 5.0-4 of Chapter 5.0 of the Draft EIR, the Reduced Residential Intensity/Density Project Alternative would exceed the threshold of significance for ROG, NOx, and PM_{10} at buildout. Although the emissions would be less than with the project, this alternative would also cause a violation of an air quality standard. This is considered a significant and unavoidable impact.

The City Council finds the Reduced Residential Intensity/Density Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

E. Smaller Scale Project Alternative

1. Analysis of Smaller Scale Project's Ability to Reduce Significant Unavoidable Project Impacts

Air Quality

Under the Smaller-scale Project Alternative, the overall size of the project would be scaled down by approximately 33 percent as compared with the project. This would reduce Specific Plan Area operational emissions by an approximately equivalent amount (33%) as compared to the project. However, project operational activities under this alternative would still exceed the threshold of significance and generate a significant and unavoidable impact for ROG, NOx, and PM_{10} at buildout.

Nevertheless, overall air quality emissions under this alternative would be reduced compared to the project, due to the smaller size of this alternative, including for area sources, mobile sources, and energy sources. As such, this impact would be reduced when compared to the project.

Biological Resources

Under the Smaller-scale Project Alternative, an area of about 264 acres would not be developed, and fewer ground disturbing activities would occur. It is still anticipated that the drainage ditches along Boronda would be eliminated (i.e., fill activity). The 264 acres would remain open to migration, foraging, nesting, and other uses by wildlife. The balance of the Specific Plan Area would be developed and no longer available for migration, foraging, nesting, and other uses by wildlife. This would still be a significant and unavoidable impact, and would be cumulatively considerable.

When compared to the Specific Plan, potential for impacts to biological resources would be reduced under the Smaller-scale Project Alternative proportionate to the reduction in developed area.

Cultural Resources

The Smaller-scale Project Alternative would result in a reduced level of ground disturbing activities and would therefore have slightly less potential to disturb or destroy cultural, historic, and archaeological resources, as well as paleontological resources. While the West Area Specific Plan is not anticipated to result in significant impacts to cultural resources with mitigation, this alternative would result in slightly less potential for impacts to cultural resources.

Greenhouse Gases and Climate Change

The Smaller-scale Project Alternative would reduce the level of development by approximately 33 percent as compared with the project. This would reduce Specific Plan Area operational GHG emissions by an approximately equivalent amount (33%) when compared to the project. Total operational emissions would be reduced by approximately 33% under this scenario, as compared to the project. However, Specific Plan Area operational activities under this alternative would be expected to generate a significant and unavoidable impact on operational greenhouse gases.

With a total projected service population of 11,190 under this alternative (this is equivalent to a 33% reduction in both residential and worker population, when compared to the project), this alternative would generate approximately 2.84 MT CO_2e/service population/year in the mitigated scenario (in Year 2035). This value is above the derived per capita GHG threshold of 1.94 MT CO_2e/service population/year for Year 2035. Additionally, this emissions-per-capita value would be the same as those generated by the project. Therefore, this impact would be equal when compared to the project.

Hazards and Hazardous Materials

The Smaller-scale Project Alternative would reduce the level of development by approximately 33 percent and the potential for exposure to hazardous materials, or a release of hazardous materials would be reduced proportionately. Ongoing pesticide use would occur within the area to remain in agriculture, and this would have the potential to generate negative health effects on new residents in the development. Similar to the project, new development would introduce new sensitive receptors into an area that contains land that has historically utilized chemicals for agricultural production. Any negative health effects associated with the residuals of these chemicals would be alleviated through compliance with state and federal regulations that require remediation when above certain thresholds. There would be a long-term potential for hazards associated with use and generation of household and commercial hazardous wastes, although compliance with state and federal regulations would be required. While the West Area Specific Plan is not anticipated to result in significant impacts associated with hazards and hazardous materials, the Smaller-scale Project Alternative would result in slightly less potential for impacts.

Hydrology and Water Quality

Under the Smaller-scale Project Alternative, potential water quality impacts from construction and operation would be reduced. Under this alternative, the overall level of development (including the size of the site and the overall development area per use) would be reduced by approximately 33 percent. An area of approximately 264 acres that would be developed as part of the project would not be developed as part of this alternative. The areas that would not be developed would remain under agricultural production, and while they would have better

recharge in those areas, they would continue to require intensive groundwater pumping for the agricultural production. The higher amount of groundwater pumping under this alternative would result in a greater impact on the Salinas Valley Ground Water basin, when compared to the project. There would still be some benefit on the Salinas Valley Ground Water basin under this alternative because 66 percent of the land area would be converted into a use that would not require intensive groundwater pumping.

There are some instances where the 264 acres of Specific Plan Area that remains undeveloped would have greater discharges of certain pollutants (such as erosion, sedimentation, pesticides release, etc.) when compared to the project. Additionally, overall, while the potential to result in the violation of water quality standards would be reduced under this alternative when compared with the project, overdraft conditions would worsen in the Salinas Valley Ground Water basin under this alternative when compared to the project. As such, potential impacts related to hydrology and water quality would be increased under the Smaller-scale Project Alternative when compared to the West Area Specific Plan.

Noise

Under the Smaller-scale Project Alternative, the overall level of development would be reduced by 33 percent as compared with the project. As a result of less development, noise levels associated with traffic, stationary sources, and construction would be expected to be reduced under this alternative. Despite this reduction in the size and intensity of development under this alternative, it is expected that some noise levels associated with traffic, stationary sources, and construction would still generate a significant and unavoidable impact As such, this alternative would have less impact relative to the project.

Population and Housing

Under the Smaller-scale Project Alternative, the overall level of development would be reduced by 33 percent as compared with the project. Development of housing would still occur under this alternative, but fewer units would be built. Growth would still be anticipated to occur within the region, but it would not be fully accommodated in the FGA, which has undergone extensive planning efforts by the City and community for over a decade. This would not be consistent with the FGA and General Plan. The City would need to look to other undeveloped areas of the region to develop for new housing, which would be expected to have environmental impacts that have not yet been assessed but could well be worse than those of the West Area Specific Plan, particularly with respect to prime agricultural land, which is abundant in the region. Overall, this alternative would have a greater impact when compared to the project.

Public Services

Under the Smaller-scale Project Alternative, the overall level of development and the number of residential/non-residential uses would be reduced by 33 percent; therefore, the demand for police, fire and other public services would be reduced. This alternative would still result in development of public facilities (i.e., schools and parks) and would be required to pay the appropriate public safety impact fees. Overall, this alternative would have a slightly reduced impact to public services when compared to the project.

Transportation and Circulation

Under the Smaller-scale Project Alternative, the overall level of development and the number of residential/non-residential uses would be reduced by 33 percent; therefore, traffic generated in the Specific Plan Area would be reduced. This alternative would still result in new traffic improvements on the City's roadway system to accommodate the new traffic generated. It would also still result in payments of traffic impact fees into the City's CIP program that would be used for the roadway system. Existing deficiencies in the traffic system would receive some benefit of improvements to improve existing deficiencies; however, there would still be significant and unavoidable cumulative impacts. Overall, this alternative would have less of an overall traffic impact than the project.

Utilities

Under the Smaller-scale Project Alternative, the Specific Plan Area would be reduced by approximately 33 percent and the proposed residential and non-residential uses would also be reduced by approximately 33 percent. This alternative assumes that approximately 264 acres of land along the entire eastern boundary of the Specific Plan Area would be removed and remain as undeveloped agricultural land. The resultant Specific Plan Area under this alternative would be approximately 533 acres in size, and include up to 2,908 residential units, up to 382,905 square feet of commercial/mixed use building area, and up to 119 acres of public facilities (including two elementary schools, a high school, middle school, open space (including supplemental detention/retention basins) and up to 8 parks).

The total quantity of infrastructure installed would be reduced, and the demand for wastewater, stormwater, and solid waste services would be less than would be required for the project. For example, is expected that this alternative would generate approximately 0.7 MGD of wastewater and approximately 33,473 lbs/day of solid waste, less than what would be generated by the project, since this alternative would generate fewer residents when compared to the project.

Separately, the total storm drainage runoff under this alternative would be reduced by approximately 33% when compared to the project, due to the project footprint being reduced by 33% when compared to the project.

However, this alternative would not save as much groundwater when compared to the project. The amount of total water usage reduced by this alternative when compared to the existing uses in the Specific Plan Area would be approximately 1,389 AFY, compared with the approximately 2,078 AFY estimated to be saved by the project. That is, buildout this alternative would save approximately 689 AFY less water than buildout of the project. This would increase risks to the groundwater basin associated with seawater intrusion, when compared to the project. However, in general, the demand for utilities would be reduced under this alternative when compared to the project.

2. Feasibility of Smaller-scale Project Alternative

The Smaller-scale Project Alternative would slightly reduce impacts to air quality, biological resources, cultural resources, GHG and climate change, hazards, hydrology, noise, public

services, transportation, and utilities compared to the project. However, this alternative would potentially worsen impacts related to conflicts with applicable air quality plans, groundwater supplies and recharge (cumulative and project-level), population and housing, emergency vehicle access, and conflicts with adopted multi-modal circulation policies, plans, or programs. Further, this alternative does not meet the following project objectives:

- Provide public services and infrastructure improvements that achieve and maintain City service standards;
- Establish an interconnected sidewalk/pathway and open space system throughout the development which links to the greater FGA and City as a whole.

The Smaller-scale Project Alternative does not fully meet these two project objectives because, similar to the Reduced Land Area Project Alternative, this alternative would leave 33 percent of the Specific Plan Area undeveloped, which would include 264 acres of land along the entire eastern boundary of the Specific Plan Area. This eastern area is located adjacent to the future Central Area Specific Plan (within the City's FGA). This means that there would be fewer interconnected sidewalks/pathways and available open space areas for City residents, and that there would be limit connectivity between the West Area Specific Plan (the project) and the future Central Area Specific Plan (a planned Specific Plan Area that would be located just to the east of the proposed project). This reduced connectivity means that the Reduced Land Area Project Alternative would not establish an interconnected sidewalk/pathway and open space system which fully links with the greater FGA and the City as a whole. Specifically, the following roadways would not be developed under this alternative:

- Natividad Road (Major Arterial) expansion frontage improvements (proposed Class II bike lane);
- Russell Road (Major Arterial) expansion (proposed Class II Bike Lane); and
- Rogge Road frontage improvements.

Furthermore, the reduction in housing units under the Reduced Residential Intensity/Density Project Alternative would be less consistent than the project in meeting statewide legislative goals of building housing units in order to address the statewide housing crisis. Given the enormous unmet demand for housing in California, the City believes that it has an obligation to facilitate the construction of more, rather than fewer, housing units when opportunities for residential development arise.

The Smaller-scale Project Alternative would lessen many of the potentially significant environmental effects of the project. For example, some of the potentially significant impacts related to the following topics would be reduced or slightly reduced under this alternative: air quality, biological resources, cultural resources, greenhouse gases and climate change, hazards and hazardous materials, hydrology and water quality, noise, public services, transportation and circulation, and utilities. It is noted, however, that this alternative would also result in greater, slightly greater, or equal impacts as compared to the project in the following topics: air quality plan consistency, greenhouse gases and climate change, hydrology and water quality, population and housing, transportation and circulation, and utilities.

Ultimately, the significant and unavoidable environmental effects anticipated with the project would still occur under this Smaller-scale Project Alternative due to the location, size and scope of the alternative. The significant and unavoidable impacts may occur to a lesser extent under this alternative than under the project, but the impacts would still be significant and unavoidable. For example, a significant and unavoidable impact related to violation of an air quality standard would occur under both the project and the Smaller-scale Project Alternative. As shown in Table 5.0-7 of Chapter 5.0 of the Draft EIR, the Smaller-scale Project Alternative would exceed the threshold of significance for ROG, NOx, and PM_{10} at buildout. Although the emissions would be less than the proposed project, this alternative would also cause a violation of an air quality standard. This is considered a significant and unavoidable impact.

The City Council finds the Smaller- scale Project Alternative to be infeasible for the above stated reasons, and rejects it as a viable alternative to the project.

XI. STATEMENT OF OVERRIDING CONSIDERATIONS

As set forth in the preceding sections, the City of Salinas's approval of the West Area Specific Plan will result in a significant adverse environmental effect that cannot be avoided even with the adoption of all feasible mitigation measures; and there are no feasible project alternatives that would mitigate or substantially lessen all of these impacts. Despite the occurrence of these effects, however, the City Council, in accordance with CEQA Guidelines section 15093, chooses to approve the project because, in the Council's view, the economic, social, and other benefits that the project will produce will render the significant effects acceptable.

A. Significant and Unavoidable Impacts

The project will result in the following potentially significant and unavoidable impacts, even with the implementation of all feasible mitigation measures:

- **Air Quality Operation.** The Specific Plan would exceed the Monterey Bay Air Resources District (MBARD) thresholds of significance for operations for ROG, NO_x, and PM_{10}, even after mitigation. (DEIR, pp. 3.1-19 through 3.1-23)
- **Cumulative Air Quality.** As is currently proposed, the Specific Plan is expected to be built out under a staged approach, and all mitigation would be applicable to each stage. However, even with the application of mitigation measures, operational emissions levels would remain above the defined thresholds of significance. Exceedance of the threshold within an area designated as nonattainment would be a cumulatively considerable impact. (DEIR, pp. 3.1-31 through 3.1-32)
- **Wildlife Movement and Corridors.** Development of the project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. There are no mitigation measures that can fully mitigate this impact and, given the fact that once the land is converted, it will no longer be a viable migration corridor for any species. (DEIR, pp. 3.2-46 through 3.2-47)
- **Cumulative Biological Resources.** Development of the project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. Given the rareness of CTS and CRLF in the Bioregion, the incremental loss of movement habitat from the project, when considered alongside all

past, present, and probable future projects (inclusive of all communities within the Bioregion), is a significant and unavoidable cumulative impact, and the Specific Plan's incremental contribution to this impact is itself cumulatively considerable. (DEIR, pp. 3.2-52 through 3.2-53)

- **Greenhouse Gas Emissions.** The project would generate GHG emissions, directly and indirectly, that may have a significant impact on the environment. While mitigation measures would result in reduced GHGs, it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant. (DEIR, pp. 3.4-31 through 3.4-38)
- **Cumulative Greenhouse Gas Emissions.** Implementation of the project will still generate GHG emissions that would not otherwise exist without the project. Given the length of construction activities for a project of this size, the construction emissions would be a long-term release of approximately 168,734.3 MT CO_2e. The operational emissions would be a long-term release totaling approximately 51,939.2 MT CO2e per year without mitigation, and 47,684.9MT CO_2e per year with mitigation. Because it is possible that individual projects within the Specific Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant, implementation of the Specific Plan would have a cumulatively considerable contribution and significant and unavoidable impact to GHGs. (DEIR, pp. 3.4-48 through 3.4-49)
- **Traffic Noise at Existing Receptors.** The project would cause increased noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard at existing residential receptors. Additionally, traffic noise level increases would exceed the FICON CEQA substantial increase criteria of 1.5 to 5 dB, as outlined in Table 3.7-7. (DEIR, pp. 3.7-14 through 3.7-23)
- **Cumulative Traffic Noise.** The project would cause increased noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard at existing residential receptors. Therefore, there would be a cumulative exposure of existing and future noise-sensitive land uses to increased noise resulting from cumulative development. (DEIR, pp. 3.7-33 through 3.7-37)
- **School Facilities.** Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts. Development of a school within the proposed Specific Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1 and 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-19 through 3.9-21)
- **Park Facilities.** Project implementation may result in effects on parks, or require the construction of park facilities which may cause substantial adverse physical environmental impact. Development of 49.76 acres of park land within the Specific Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2 and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1 and 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-22 through 3.9-23)
- **Cumulative Public Facilitates.** The construction and operation of future public facilities required to serve cumulative development (including the West Area Specific Plan Area) could potentially cause significant impacts. Cumulative development, including

additional parks, schools, library, and other public facilities within the city and service area, would contribute to significant and unavoidable cumulative impacts that have been identified within this EIR related to: air quality (Impact 3.1-7), biological resources (Impact 3.2-12), greenhouse gases (Impact 3.4-4), noise (Impact 3.7-8), and transportation and circulation (Impacts 3.10-3 and 3.10-4). (DEIR, pp. 3.9-24 through 3.9-26)

- **Cumulative Plus Project Traffic.** Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan would conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. (DEIR, pp. 3.10-63 through 3.10-70)
- **Cumulative Plus Central Area Specific Plan Plus Project Traffic.** Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan would with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans (DEIR, pp. 3.10-76 through 3.10-81)

B. Overriding Considerations

In the City Council's judgment, the project and its benefits outweigh its unavoidable significant effects. The following statement identifies the specific reasons why, in the City Council's judgment, the benefits of the project as approved outweigh its unavoidable significant effects. Any one of these reasons is sufficient to justify approval of the project. Thus, even if a court were to conclude that not every reason is supported by substantial evidence, the City Council would stand by its determination that each individual reason is sufficient. The substantial evidence supporting the various benefits can be found in the preceding findings, which are incorporated by reference into this section (XI), and in the documents found in the Record of Proceedings, as defined in section V.

1. The project will substantially expand employment opportunities for local residents.

It is anticipated that local employment would be increased to provide administrative, management, and retail services. The project is expected to require both full-time and part-time employees. It is anticipated that the employment growth would be met both by existing residents and through the attraction of new residents. Data from U.S. Bureau of Labor Statistics (2018) indicates that the City has an unemployment rate of approximately 4.9%, as of November 2018, which is higher than the State and national averages at 4.2% and 3.7%, respectively (U.S. Bureau of Labor Statistics, 2018). Many of the newly created jobs are expected to be in the retail/commercial sector and would be opportunities well-suited for second wage earners in households, the younger workforce, and others, which generally depend on the local workforce. Due to the fact there is currently a surplus of unemployed workforce within the City, it is likely that current residents would fill the majority of new positions. Additional population growth induced by the creation of new businesses could be supported by the available housing within Salinas as well as new housing planned as part of the West Area Specific Plan.

The construction of new developments within the Specific Plan Area would increase temporary construction jobs in the area. New employment opportunities are critical to the residents of the

City as a basis to reduce the City's higher than average unemployment rate and to improve the balance between jobs and housing.

The creation of new jobs has a variety of other co-benefits that lead to improved quality of life. These benefits include enhancing overall economic activity in the City, which leads to increased revenue to fund and maintain city services and facilities such as public safety, parks, recreation centers and libraries and related programs that support a high quality of life. Benefits also include improving community health through crime reduction, improving economic productivity, decreasing traffic congestion and greenhouse gas emissions by reducing the number of residents that must travel out of the city to find employment.

2. The project will help attract economic investment.

Currently, Salinas lags behind the region in private economic investment. This lack of investment can be quantified in terms of the number of building permits pulled and the associated building valuation. For example, from June 1, 2018 to June 21, 2019, 1,765 permits with a building valuation of approximately $5,116,481.85 were pulled in Salinas.[1] This is a fraction, 10.0 percent, of the private investment in the City of Monterey totaling a valuation of $51,289,904 (422 permits).[2] This is especially significant considering Salinas (162,797) has more than five times the population of the City of Monterey (28,448).

The project streamlines opportunities for economic investment in the City by positioning the Specific Plan Area for development. The project creates the land use and zoning entitlements and provides specific guidance about how development is to proceed needed to catalyze economic development in the form of individual development projects.

3. The project will generate sales and property taxes for the City.

The project will generate substantial sales tax revenue from the planned commercial and retail uses and property tax revenue from the planned residential uses. The City can use this revenue to fund City programs that benefit the City's residents. The project has been designated with land uses that are intended to generate jobs and tax revenue for the City, while providing recreational facilities, retail opportunities, and housing opportunities.

4. The project will help improve the quality of life for City residents.

The City is experiencing significant retail leakage to surrounding communities and the region resulting in the loss of sales tax revenue. The 2008 Buxton Retail Leakage and Surplus Analysis, estimated that as much as $250 million in annual retail sales could be recaptured by the City through targeted retail development which offers goods and services now sought from businesses located outside the City. The City's total revenue per capita figures demonstrate the impacts of this leakage. In 2016, Salinas' total revenue per capita was $752 dollars compared to Monterey at $2,224 dollars per capita. (California Controller, 2016)

[1] CRW Systems. City of Salinas Permits Issued for the Period 6/1/2018 thru 6/1/2019. Provided by Kristy Parker, City of Salinas Permit Center Coordinator, on June 24, 2019.
[2] City of Monterey Permits Issued for the Period 6/1/2018 thru 6/1/2019. Provided by Lisa Feliciano, City of Monterey Permit Inspection Services Division, on June 14, 2018.

The project would include a central core area with retail and professional services. The retail and professional service uses would help increase annual retail sales and reduce retail leakage. Residents of the Specific Plan Area and the surrounding City and unincorporated areas could shop at the planned core area retail and professional service facilities located within the central core area.

The Specific Plan focuses on individual neighborhoods, parks, schools, and other civic gathering spaces; the tree-lined streets with pedestrian amenities; a Main Street and Town Square surrounded by shops and restaurants; and mixing of land uses that encourages residents to frequently walk and bicycle in their community. The Specific Plan also contains goals and policies which require and/or encourage the necessary services to enhance residents' quality of life. The Specific Plan includes design and management strategies that aim to specifically increase the quality of life for the future residents and employees of the Specific Plan Area. For example, the Specific Plan includes sections regarding traffic calming and landscaping in order to create safe and attractive streets, parks, and landscaped areas.

Quality of life is also an important factor in the ability of the City to attract and retain businesses. The Specific Plan addresses improving safety, improving access to open space and recreational opportunities, and the adequate provision of public services. If currently unemployed residents become employed and increase their earnings through new businesses resulting from development of the Specific Plan, it is expected that their income level and standard of living will improve.

5. The project will revitalize the local infrastructure.

The proposed Specific Plan circulation and infrastructure policies promote investment in infrastructure systems including water supply, wastewater and storm drainage conveyance and disposal facilities that are critical to support the proposed uses. Section 7.3.4.1 of the Specific Plan outlines the Public Facilities Impact Fee program. Section 7.5 of the Specific Plan includes funding policies that will govern the funding of infrastructure and public facilities for the Specific Plan Area.

6. The project will implement the Salinas General Plan.

The Specific Plan will serve as a bridge between the Salinas General Plan and individual development applications in the Specific Plan Area, applying—and adding greater specificity to—the goals, policies and concepts of the General Plan for that area. The Specific Plan provides a complete blueprint for development of the Specific Plan Area, including:

- A description of proposed land uses,
- Policies, regulations and standards to support the Specific Plan,
- Infrastructure needed to support the Specific Plan, and
- Implementation and administrative processes needed for plan development.

The Specific Plan has been crafted to be consistent with overall community goals as expressed in the General Plan, as well as more specific policies and implementation measures contained in other documents.

The 2002 General Plan identifies areas for growth within the FGAs (which includes the Specific Plan Area). The Salinas General Plan Land Use Table LU-3 identifies the development capacity of the FGAs. This includes 15,873 residential units, resulting in an additional population of 58,253 within the City's FGAs. The proposed West Area Specific Plan development proposes 4,340 units with the potential to increase the population of the city by an estimated 16,101 persons, which is within the projections identified in the Salinas General Plan.

Additionally, the General Plan identified FGAs as areas of the City where future urban development will be directed. FGAs are established as a part of the General Plan maps, and include the Specific Plan Area, as well as other nearby areas. The General Plan provides development guidance within the FGAs so that they are developed as urban neighborhoods using the principles of New Urbanism. The principles of new urbanist design are further detailed in Chapter 37 (Zoning) of the City's Municipal Code. The Specific Plan Area is currently designated New Urbanism Interim (NI) by the City's zoning map**.** The purpose of the NI zoning district is to provide a transitional zone for the FGAs of the City located north of East Boronda Road (including the Specific Plan Area) that are within the City limits and are subject to the preparation of specific plans and subsequent subdivision maps.

The New Urbanism Districts promote the principles of New Urbanism and the creation of distinct identifiable neighborhoods that have Traditional Neighborhood Development (TND) characteristics as expressed in the Salinas General Plan and that are intended to guide the development of the North of Boronda FGA. The FGA is also subject to a Specific Plan Overlay. The Overlay requires that a Specific Plan be approved by the City prior to the development of any land located in the FGA. As such, an approved Specific Plan will ultimately regulate the development in the FGA. The New Urbanism districts identified in the City's zoning code and the West Area Specific Plan are as follows: Neighborhood Edge/Low Density Residential (NE), Neighborhood General 1/Medium Density Residential (NG-1), Neighborhood General 2/High Density Residential (NG-2), and Village Center (VC).

The development allowed by the project will be consistent with the development types and intensities identified in the General Plan and its associated Final Program EIR. The project does not change limits, amount, type, or intensity of development allowed in the Plan Area beyond what was analyzed in the certified Final Program EIR for the General Plan and Supplemental EIR for the Salinas General Plan Final Program EIR (SCH#2007031055).

7. The project will provide much-needed housing.

One of the core goals of the Specific Plan is to provide a variety of low-density, medium-density, and high-density housing and a variety of housing options for residents at various life stages. As emphasized earlier, the State Legislature has declared that "California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and

businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives." (Government Code section 65589.5.) The Legislature notes that "California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing." The Legislature further found that "Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration." The legislative intent of Government Code section 65589.5 is to "significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled." The State Legislature established its policy direction in the statute as follows: "It is the policy of the state that this section should be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing."

The City of Salinas has recognized the need for additional housing supply for its citizens for many decades. The project will provide much-needed housing in an area of the City that has been recognized and planned for future growth.

C. Conclusion

As explained above, the City Council has balanced these benefits and considerations against the significant unavoidable environmental effects of the project and has concluded that the impacts are outweighed by these benefits, among others. After balancing environmental costs against project benefits, the City Council has concluded that the benefits the City of Salinas community and economy will derive from the project outweigh the risks. The City Council believes the project benefits outlined above override the significant and unavoidable environmental costs associated with the project.

Attachment

Impacts, Mitigation Measures and CEQA Findings Summary Table

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
AIR QUALITY			
Impact 3.1-1: The project has the potential to conflict with or obstruct implementation of the applicable air quality plan (Less than Significant) AMBAG, in consultation with the City of Salinas, included the North of Boronda Future Growth Area (inclusive of the West Area Specific Plan) within the AMBAG 2018 Regional Growth Forecast. The 2018 Regional Growth Forecast provides the region's population, housing, and employment forecasts for inclusion for AMBAG's 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) as well as for the future version of the AQMP. The City of Salinas has worked closely with AMBAG to ensure that City population estimates are included within AMBAG's 2018 Regional Growth Forecast, which will feed into the next AQMP. The population estimates for the West Area Specific Plan are included in these growth forecasts. As such, the City has met the action recommended by MBARD in the *CEQA Air Quality Guidelines* (MBARD, 2008a) to ensure consistency with the applicable air quality plan (i.e. "*Ensure that the jurisdiction's population forecasts are updated in the next AQMP by working with AMBAG or the appropriate local agency*."). The proposed project would not conflict with or obstruct the latest air quality plan. (DEIR, pp. 3.1-18 through 3.1-19)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.1-2: Project operation has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation (Potentially Significant) Buildout of the Plan Area is expected to exceed some of the MBARD operational criteria pollutant emissions thresholds, as modelled. Mitigation measures are provided below to reduce emissions to the maximum extent feasible. Upon full buildout, the Specific Plan would exceed the MBARD thresholds of significance for operations	**Mitigation Measure 3.1-1:** Prior to approval of development review permits including tentative maps, the project applicant(s) shall incorporate the following features into project plans and specifications, as directed by the City of Salinas: • Provide traffic calming measures wherever feasible, within the Specific Plan Area; • Provide preferential carpool/vanpool parking spaces;	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Even with implementation of Mitigation Measures 3.1-1 through 3.1-8, the Specific Plan would exceed the MBARD thresholds of significance for operations for ROG, NO_x, and PM_{10}. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
for ROG, NO_x, and PM_{10}, even after mitigation. (DEIR, pp. 3.1-19 through 3.1-23)	• Provide electric-vehicle parking spaces; • Require the use of low-VOC paint for all new building architectural coatings within the Specific Plan Area, consistent with or better than, what is required by the City's Municipal Code. **Mitigation Measure 3.1-2:** Prior to approval of development review permit(s), the project applicant(s) shall incorporate effective methods to encourage the use of cleaner alternative fuel vehicles and carpooling within the Specific Plan Area. Effective methods may include the installation of alternative fuel (e.g. electric) charging stations at locations spaced throughout the Specific Plan Area, consistent with or better than what is required by the City's Municipal Code and Specific Plan. Additionally, this can be achieved by providing preferential parking for alternatively-powered vehicles, including electric cars, and/or by providing carpool/vanpool parking spaces. **Mitigation Measure 3.1-3:** Prior to approval of development review permit(s), the project applicant(s) shall incorporate the use of alternative energy for the residential and mixed-use/commercial developments, including by implementing alternative energy (e.g. PV solar) building requirements, consistent with or better than, what is required by the City's Municipal Code. Project applicant(s) shall also ensure that pre-installed electrical hookups and/or charging stations, as applicable, are incorporated into all project plans and specifications. **Mitigation Measure 3.1-4:** Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that low-flow (high-efficiency) indoor water fixtures will be installed throughout the Specific Plan Area, including for bathroom and kitchen faucets, toilet fixtures, and showers, in both residential and non-residential buildings, in compliance with or better than the standards required within the most recent version of the California Green Building Standards Code. **Mitigation Measure 3.1-5:** Prior to the issuance of building permits, the project applicant(s) shall provide plans that demonstrate that water-		outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	efficient irrigation systems will be installed throughout the Specific Plan Area, consistent with or better than the requirements contained within the State's Model Water Efficient Landscape Ordinance, the City's Water Conservation Ordinance and the Salinas Zoning Code Landscaping and Irrigation requirements. **Mitigation Measure 3.1-6:** Prior to approval of improvement plans or development review permits, as applicable, the project applicant(s) shall ensure that pedestrian/bicycle facilities (e.g. pedestrian paths, outdoor bike racks, etc.) are provided within the Specific Plan Area, in coordination with and subject to approval by the City of Salinas. The project proponent shall also provide bicycling parking near the entrance to commercial establishments within the Specific Plan Area, consistent with or better than the requirements contained within the City's Municipal Code. **Mitigation Measure 3.1-7:** Prior to the issuance of development review permit(s), the project applicant(s) shall incorporate of one or more of the following additional Specific Plan Area requirements, as determined by the City of Salinas: • Install secured bicycle storage facilities (bike lockers, cages, interior space, or similar as approved by the City Engineer) at all commercial and public facilities with 50 employees or more; • Incorporate a park-and-ride lot; • Install Level 2 electric vehicle (EV) charge stations at workplace sites with 50 or more employees (10% of total available parking spaces); and • Install publicly-available dual post Level 2 charge within commercial zones, and/or other zones as deemed acceptable by the City of Salinas. (Note: The 'level' of the charging station refers to the voltage that the electric vehicle charger uses. Level 1 charging is your typical traditional home outlet, while level 2 is a 240 Volt Portable Cordset or Wall-		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	mounted Charging Station (2-10 hours charging). **Mitigation Measure 3.1-8**: Prior to the approval of individual phases (i.e. tentative maps, commercial design review, etc.), the project applicant(s) shall develop an offsite mitigation program that provides funding to offset the project-generated air emissions that are still above the Air District's operational criteria pollutant thresholds after the adoption of other applicable air quality mitigation measures. The offsite mitigation program is subject to the review and approval of the Air District and the City of Salinas on a project-by-project basis (of phase-by-phase), and is intended to be in addition to offsets that are obtained through any on-site mitigation measures. Example projects that could be included in the offsite mitigation program may include, but are not limited to, the following: • Replace existing agricultural combustion-based generators/pumps with electric agricultural water pumps (in place of generators/pumps; • Replace combustion school buses with electric school buses within the local community; • Install adaptive traffic control systems; • Install solar photovoltaic (PV) systems.		
Impact 3.1-3: Project construction has the potential to cause a violation of an air quality standard or contribute substantially to an existing or projected air quality violation (Potentially Significant) The Specific Plan maximum daily unmitigated emissions during construction of the Plan Area buildout in a single year is not expected to exceed the MBARD threshold of significance (82 pounds per day) for construction-generated PM_{10}. Nevertheless, since it is possible that future development proposed within the Plan Area could involve grading that exceeds 2.2 acres per day, MBARD recommends the implementation Mitigation Measure 3.1-9. (DEIR, pp. 3.1-23 through 3.1-25)	**Mitigation Measure 3.1-9**: Prior to the issuance of grading permits, the project applicant shall prepare a grading plan subject to review and approval by the City. In the event that ground-disturbance exceeds 2.2 acres per day for initial site preparation activities that involve extensive earth-moving activities (e.g., grubbing, excavation, rough grading), and 8.1 acres per day for activities that involve minimal earth-moving (e.g., finish grading), the required grading plans shall include the following measures to be implemented as needed to prevent visible dust emissions: • Water all active construction sites to prevent visible dust emissions. Frequency should be based on the type of operation, soil, and wind exposure; • Prohibit grading and earthmoving	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.1-9 be adopted. Mitigation Measure 3.1-9 requires preparation of a grading plan with measures to prevent visible dust emissions. Implementation of Mitigation Measure 3.1-9 would reduce this impact to a less-than-significant level.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	activities, and cover stock piles, during periods of high wind (over 15 mph); • Limit vehicle speed on construction sites to 15 mph. • Apply chemical soil stabilizers on inactive construction areas (disturbed lands within construction projects that are unused for at least four consecutive days); • Apply non-toxic binders (e.g., latex acrylic copolymer) to exposed areas after cut and fill operations and hydroseed area; • Maintain at least 1-foot of freeboard in each haul truck; • Provide windbreaks on the windward perimeter of construction projects where adjacent to open land; • Cover inactive storage piles; • Sweep streets if visible soil material is carried out from the construction site; and/or • Post a publicly visible sign written in English and Spanish which specifies the telephone number and person to contact regarding dust complaints. This person shall respond to complaints and take corrective action within 48 hours. The phone number of the Monterey Bay Air Resources District (MBARD) shall be visible to ensure compliance with Rule 402 (Nuisance). The sign shall be in accordance with MBARD and/or City requirements, as applicable; • Use cleaner construction equipment that conforms to EPA's Tier 3 or Tier 4 emission standards; and/or • Further, where feasible construction should include the use of alternative fuels such as compressed natural gas (CNG), propane, electricity or biodiesel.		
Impact 3.1-4: The proposed project has the potential to have carbon monoxide hotspot impacts (Less Than Significant) This project is located in an area that is designated	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
attainment-unclassified for carbon monoxide. Therefore, no project-level conformity analysis is necessary for CO. Substantial concentrations of carbon monoxide are not expected at or along any streets or intersections affected by the development of the Plan Area. (DEIR, pp. 3.1-25 and 3.1-26)			
Impact 3.1-5: The proposed project has the potential for public exposure to toxic air contaminants (Potentially Significant) While implementation of the West Area Specific Plan, in and of itself, would not result in an increased exposure of sensitive receptors to localized concentrations of TACs, there is a potential for future commercial business activity, as permitted under the West Area Specific Plan, to result in increased exposure of sensitive receptors to localized concentrations of TACs. The emission sources could be stationary sources and/or mobile source (i.e. diesel truck traffic). Because, at the Specific Plan level of land use planning, the City does not yet know the precise locations, configurations, and sizes of any future land uses within the Specific Plan that uses may generate sufficient levels of TACs to create the possibility of adverse health effects, it is premature, at the Specific Plan stage, to undertake an overall health risk assessment for the Specific Plan. Future health risk assessments will be performed where warranted, as required by Mitigation Measure 3.1-10. (DEIR, pp. 3.1-26 through 3.1-30)	**Mitigation Measure 3.1-10:** Prior to issuance of building permits or commencing operation of any commercial building/use that would emit toxic air contaminants (such as gas stations or dry cleaning operations), the project applicant shall, at a minimum, perform prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. The prioritization screening shall be performed in accordance with the California Air Pollution Control Officers Association Air Toxic "Hot Spots" Program guidance. The prioritization screening shall also be conducted consistent with the guidance provided by the Monterey Bay Air Resources District, which will be responsible for determining which facilities based on their prioritization screening score, must perform a health risk assessment. In determining the need to prepare a health risk assessment, the Monterey Bay Air Resources District considers the potency, toxicity, quantity, and volume of hazardous materials released from the facility, the proximity of the facility to potential receptors, and any other factors specific to the facility that indicate that it may pose a significant health risk. If a health risk assessment is warranted for a facility based on its prioritization score, the project applicant shall assess the facilities for the potential to expose the public to toxic air contaminants in excess of the applicable thresholds (utilizing an air dispersion modelling program such as AERMOD). As of the time of this writing, the commonly accepted threshold for cancer risk is 10 in a million for carcinogens, and the reference exposure level for non-carcinogens (HI = 1). Facilities that exceed the applicable threshold(s) have the potential to expose the public to toxic air contaminants levels that would be considered significant. Facilities that exceed the applicable threshold(s) must incorporate mitigation to reduce the risks from emission of toxic air contaminants to an acceptable level (i.e.,	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.1-10 be adopted. Mitigation Measure 3.1-10 requires performance of a prioritization screening in accordance with the Air Toxics "Hot Spots" Program, Facility Prioritization Guidelines (July 1990) and the Air Toxics "Hot Spots" Information and Assessment Act. Implementation of Mitigation Measure 3.1-10 would reduce this impact to a less-than-significant level.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	to a level that does not exceed the applicable threshold[s]). Potential mitigation includes: reducing the size of the facility area; rearranging the site to reduce the potential for impacts on the nearest sensitive receptors; and utilizing products that reduce the level of toxic air contaminants, or removal of such products from the operational phase of the project.		
Impact 3.1-6: The proposed project has the potential for exposure to odors (Less than Significant) The Specific Plan does not propose sensitive receptors that could be exposed to odors in the vicinity; nor does it propose uses that would create odors that could expose receptors in the area. Therefore, operation of the proposed project would not result in significant objectionable odors. (DEIR, pp. 3.1-30 and 3.1-31)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.1-7: Cumulative impact on the region's air quality (Potentially Significant) As discussed under Impact 3.1-2, implementation of the Specific Plan would result in increased emissions primarily from vehicle miles travelled associated with project implementation and area sources. The MBARD has established operations-related emissions thresholds of significance and it was determined that the Specific Plan annual emissions of ROG, NOx, and PM_{10} at full buildout would exceed the MBARD's thresholds of significance for these pollutants, even with mitigation. As is currently proposed, the Specific Plan is expected to be built out under a staged approach, and all mitigation would be applicable to each stage. However, even with the application of mitigation measures, operational emissions levels would remain above the defined thresholds of significance. Exceedance of the threshold within an area designated as nonattainment would be a cumulatively considerable impact. (DEIR, pp. 3.1-31 and 3.1-32)	Implement Mitigation Measures 3.1-1 through 3.1-9.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council has directed that Mitigation Measures 3.1-1 through 3.1-9 be adopted. Implementation of Mitigation Measures 3.1-1 through 3.1-9, which have been required or incorporated into the Project, will substantially lessen the severity of the significant effect, but will not reduce this impact to a less-than-significant level. No mitigation is available to render the effects less than significant. The effects therefore remain significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
BIOLOGICAL RESOURCES			
Impact 3.2-1: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Invertebrates (Less Than Significant) Based on field surveys, habitat conditions, and records searches, there are no special status invertebrate species that have the potential to be present within the Specific Plan Area. The proposed project would not, directly or indirectly, have a substantial adverse effect on invertebrate species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-30)			
Impact 3.2-2: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Reptile and Amphibian (Potentially Significant) There are numerous locations for refugia (debris, burrows, crevices, barns, sheds, etc.) within the Plan Area that could be used by migrating California tiger salamander (CTS). Higher quality upland habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential refuge sites. It is noted that there is not any known CTS taking refuge in the Specific Plan Area during their estivation period. It is also theoretically possible that a breeding CTS would emerge from the breeding basin and migrate west of Natividad Road to find refugia in the Specific Plan Area. The areas with potential upland habitat in the Specific Plan Area include the farmland fringe, irrigation ditch, roadside ditch, and farmland residence. The paved roads, dirt roads, and tilled farmland provide	**Mitigation Measure 3.2-1:** Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CTS. This is may, or may not, include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS, CDFW, or the City's Community Development Director determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CTS habitat. **Mitigation Measure 3.2-2:** Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to California tiger salamander, the proposed project activities shall be compliant with all Avoidance and Minimization Measures imposed by the USFWS and/or CDFW during Construction Activities. Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CTS to be	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.2-1 through 3.2-4 be adopted. Mitigation Measure 3.2-1 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CTS even though they are well documented as a hybrid population. Mitigation Measure 3.2-2 would require activities to avoid and minimize impacts to CTS to the extent feasible. Mitigation Measure 3.2-3 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CRLF. Mitigation Measure 3.2-4 would require activities to avoid and minimize impacts to CRLF to the extent feasible. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
limited habitat because of the frequency of disturbance in these areas. Given that the entire Specific Plan Area is within the 1.3-mile migration radius, and there is potential aquatic breeding and upland habitat, the proposed project will affect this breeding population of CTS. There are numerous documented occurrences of California red-legged frog (CRLF) in the vicinity of the Specific Plan Area. Higher quality upland and aquatic habitat is found to the east; however, the Specific Plan Area cannot be completely discounted as having potential habitat within the drainage features (i.e. ditches). It is noted that there is not any known CRLF within the Specific Plan Area. The foothill yellow-legged frog (FYLF) is not documented in the vicinity of the Specific Plan Area. The ditches within the Specific Plan Area provide some limited habitat for FYLF. This species is known to occur in aquatic habitats, such as creeks or rivers in woodland, forest, mixed chaparral, and wet meadow habitats with rock and gravel substrate and low overhanging vegetation along the edge. They are usually found near riffles with rocks and sunny banks nearby. The conditions of the Plan Area, including the drainages, are not ideal for this species and they are presumed absent. (DEIR, pp. 3.2-30 through 3.2-38)	responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit traps to capture CTS migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CTS found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report. **Mitigation Measure 3.2-3:** Prior to issuance of grading and/or building permits, the project applicant, assisted by a qualified biologist, shall consult with the USFWS and CDFW to obtain the appropriate regulatory approvals and authorizations regarding CRLF. This may, or may not, include the need to submit an application for incidental take to both the USFWS (Section 7 Consultation) and CDFW (2081 incidental take permit). If either USFWS, CDFW, or the City's Community Development Director determines that an incidental take permit is required, the project applicant shall obtain such a permit before engaging in any grading or other site-treatment activities in areas deemed to be viable CRLF habitat. **Mitigation Measure 3.2-4:** Prior to issuance of grading and/or building permits, in order to avoid and minimize impacts to CRLF, the proposed project activities shall be compliant with all Avoidance and Minimization Measures imposed by the USFWS and CDFW during Construction Activities. Examples of standard avoidance and minimization measures include: 1) conducting environmental education training for all construction personnel, 2) having a biologist with a scientific collecting permit for CRLF to be responsible for overseeing any hand excavation of burrows using hand-trowels and spades per the regulatory agency protocols, 3) erecting drift fencing around the work areas if occurring during the migration/breeding season, 4) inspection of drift fencing by biologist with a scientific collecting permit every 72 hours during the migration/breeding season 5) installation of pit		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	traps to capture CRLF migrating during the rain events with a check twice daily (morning prior to construction start and evening after construction ends), 6) relocation of any CRLF found immediately to a site designated by the USFWS and CDFW per protocol; and 7) post construction report.		
Impact 3.2-3: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Birds (Potentially Significant) Construction activities in the Specific Plan Area would create temporary sources of noise and light that could affect nesting songbirds if they are located adjacent to the Specific Plan Area in the future. The ongoing activities associated with the operational phase (i.e., human and/or domesticated animal presence, light, noise, etc.) could disrupt nesting birds if they are located adjacent to the Specific Plan Area in the future. (DEIR, pp. 3.2-38 through 3.2-40)	**Mitigation Measure 3.2-5:** Building and grading permits and plans issued for development in the Specific Plan Area shall note the following: If construction activities occur during the avian breeding season (February 1 – September 15) then the project proponent shall conduct pre-construction surveys to prevent impacts to nesting birds. No more than 15 days prior to the start of construction a bird survey shall be conducted by a qualified biologist to identify any active nests within 300 feet of the construction zone, and shall be submitted to the City. If construction stops for a period of 15 days or more during the avian breeding season than an additional bird survey shall be conducted. The biologist will conduct a survey within 300 feet of the construction zone for all special-status birds protected by the federal and state ESA, MBTA and CFGC. The biologist shall map all nests that are within, and visible from, 300 feet of the construction zone. If nests are identified, the biologist shall map the location and establish a minimum 300-foot buffer zone around active nests. Construction activity shall be prohibited within the buffer zones until the young have fledged. Nests shall be monitored at least twice per week during the nesting season and a report submitted to the City and CDFW monthly.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-1 through 3.2-5 be adopted. Mitigation Measure 3.2-5 would ensure a final concurrence is obtained from the regulatory agencies to ensure that there is no illegal take for CRLF. Mitigation Measure 3.2-4 requires a preconstruction survey of the Plan Area and immediate vicinity for all special-status birds protected by the federal and state ESA, MBTA and CFGC prior to construction. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.2-4: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Fish (Less Than Significant) field surveys, habitat conditions, and records searches, there are no fish species that have the potential to be present within the Specific Plan Area. The proposed project would not, directly or indirectly, have a substantial adverse effect on fish	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-41)			
Impact 3.2-5: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS - Mammals (Potentially Significant) The Specific Plan Area provides potential habitat for several special-status bats, including: Mexican free-tailed bat (*Tadarida brasiliensis),* California mastiff bat (*Eumops perotis californicus*), big brown bat (*Eptesicus fuscus),* Hoary bat (*Lasiurus cinereus),* spotted bat (*Euderma maculatum),* Townsend's big-eared bat (*Corynorhinus townsendii),* pallid bat (*Antrozous pallidus*), western pipistrelle (*Pipistrellus Hesperus),* small-footed myotis/bat (*Myotis ciliolabrum*), long-eared myotis/bat (*Myotis evotis*), California myotis (*Myotis californicus),* long-legged myotis/bat (*Myotis volans*), Yuma myotis/bat (*Myotis yumanensis*), and little brown bat *(Myotis lucifugus).* These species are not federal or State listed; however, most of them are considered California Species of Special Concern and/or are tracked by the CNDDB. Bats are found in a variety of habitats in the region, including buildings, bridges, mines, caves, tree cavities, under bark or rocks, etc. There is the potential for bats to roost in the two on-site farmland residence complexes along San Juan Grade Road, and/or the complexes located along Natividad Road. There is no evidence that bats are present in these locations at this time; however, they can become occupied at some future date. (DEIR, pp. 3.2-41 through 3.2-43)	**Mitigation Measure 3.2-6:** Grading and/or building permits and plans issued for development in the Specific Plan Area shall note the following: Fifteen days prior to construction activities within 200 feet of the residential complexes located along Natividad Road and San Juan Grade Road, the project applicant shall retain a qualified biologist familiar with bat biology to perform a preconstruction survey for roosting special-status bats; and shall be submitted to the City. The survey shall include a minimum of one daytime and one evening survey. The survey shall cover the trees, structures, and debris located within these complexes. If active roosting is observed, removal of the tree or building shall be avoided until the bats can be excluded. All active non-maternity roosting sites shall be fitted with passive exclusion devices, such as one-way flaps or doors, and all bats shall be allowed to leave voluntarily. Once it is confirmed that all bats have left the roost (minimum of five days), crews shall be allowed to continue work in the area. If a maternity roosting site is discovered, a minimum 50-foot buffer shall be established around the roost. The project applicant shall consult with the qualified biologist in order to determine if a greater buffer is warranted based on the bat species, roost location, and specific construction activities to be performed in the vicinity. The buffer shall stay in effect until all young are determined to be volant (i.e., able to fly and feed independently) by a qualified biologist. Once it is determined that all young are volant (generally by August 1st), passive exclusion devices shall be installed and all bats shall be allowed to leave voluntarily. Once it is determined by a qualified biologist that all bats have left the roost (minimum of five days), crews shall be allowed to work within the buffer zone. Project Improvement Plans will include this measure as a note in the plans.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-6 be adopted. Mitigation Measure 3.2-6 requires avoidance and minimization measures to avoid impacts to bat species. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.2-6: The proposed project has the potential to, directly or indirectly, have a substantial adverse effect through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS – Plants (Less Than Significant) The records search identified numerous special-status plants located within the region. Field surveys and habitat evaluations were performed in 2004 by Biotic Resources Group: March (26th and 31st), April (14th and 30th), May (17th), June (17th), July (26th). Additional field surveys were performed by De Novo Planning Group in 2015 September (11th) and in 2016 (April 18th). The collection of field surveys included surveys that coincided with the blooming period for special many status plants known to occur within the region. The conditions of the Specific Plan Area are highly disturbed due to the active agricultural operations. No special-status plants were observed within the Specific Plan Area during field surveys. The proposed project would not, directly or indirectly, have a substantial adverse effect on plant species through habitat modifications or reductions, cause populations to drop below self-sustaining levels, substantially eliminate a community, or substantially reduce the number of, or restrict the range of, an endangered, rare or threatened species, including those considered candidate, sensitive, or special status in local or regional plans, policies, regulations, or by the CDFW or USFWS. (DEIR, pp. 3.2-43)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-7: The proposed project has the potential to have substantial adverse effect on federally - or state-protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means (Potentially Significant) The Specific Plan Area contains a roadside ditch located along the north side of East Boronda Road. The ditch was constructed to support agricultural operations, and drains agricultural runoff from most of the Specific Plan Area into the existing City storm water drainage system	**Mitigation Measure 3.2-7**: Prior to grading/building permit issuance in an area that would disturb the irrigation ditches and/or roadside ditches, the project applicant shall obtain a jurisdictional determination from the USACE and CDFW for the ditches that are proposed to be disturbed. If these regulatory agencies concur that these facilities are exempt, then no further mitigation is necessary. If it is determined that these facilities are not exempt, authorization for fill from the regulatory agencies (USACE-404 permit, RWQCB-401 certification, 1600 Streambed Alteration Agreement) will be	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.2-7 be adopted. Mitigation Measure 3.2-7 requires a 1:1 replacement of acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation or operations. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
The USACE has regulatory responsibility for navigable waters as well as "all other waters such as...streams ...wetlands...and natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce" (33 CFR 323.2) under Section 404 of the CWA. A formal jurisdictional determination must be made by the USACE relative to the protected wetlands and jurisdictional waters within the Specific Plan Area. The agricultural irrigation ditches are manmade and believed to solely function to drain upland agricultural runoff. As such, they are expected to be exempted from the USACE jurisdiction under the Irrigation Ditch Exemption pursuant to Federal Regulations (33 CFR 323.4(a)(3)). However, a final determination must be made by the USACE prior to any filling of these ditches for urban use. (DEIR, pp. 3.2-43 through 3.2-45)	necessary and a permit shall be adhered to throughout the construction phase. At a minimum, the project applicant shall replace on a "no net loss" basis (minimum 1:1 ratio) the acreage and function of all wetlands and other waters that would be removed, lost, or degraded as a result of project implementation or operations, although a higher mitigation measure may be required by the USACE, RWQCB, and CDFW through their permitting processes. Wetland habitat shall be replaced at acreage and location agreeable to the USACE, RWQCB, and CDFW and as determined during the Section 401, 404, and 1600 permitting processes.		
Impact 3.2-8: The proposed project has the potential to have substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service (Less Than Significant) The records search and field surveys did not reveal the presence of any riparian habitat or sensitive natural communities within the Specific Plan Area. The conditions of the Specific Plan Area are highly disturbed due to the active agricultural operations. The proposed project would not result in a substantial adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or UFWSF. (DEIR, pp. 3.2-45 and 3.2-46)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-9: The proposed project has the potential to interfere substantially with the movement of native fish or wildlife species or with established wildlife corridors, or impede the use of native wildlife nursery sites (Potentially Significant) The proposed project has the potential to interfere substantially with the movement of native fish or wildlife species or with established wildlife corridors, or impede the use of native wildlife nursery sites. Development of the proposed project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. (DEIR, pp.	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
3.2-46 through 3.2-47)			
Impact 3.2-10: The proposed project has the potential to conflict with an adopted Habitat Conservation Plan or Natural Community Conservation Plan (Less Than Significant) The proposed project is not subject to a Habitat Conservation Plan or Natural Community Conservation Plan. Therefore, the proposed project would not conflict with an adopted Habitat Conservation Plan or Natural Community Conservation Plan. (DEIR, pp. 3.2-47)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-11: The proposed project has the potential to conflict with local policies or ordinances protecting biological resources (Less Than Significant) The proposed project would not conflict with local policies or ordinances protecting biological resources. The project proponent is required to comply with the provisions of the City's General Plan and Municipal Code. The proposed project is generally consistent with the above relevant open space and conservation policies of the General Plan, as well as the City's Municipal Code. (DEIR, pp. 3.2-47 through 3.2-52)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.2-12: Cumulative loss of biological resources including habitats and special status species (Potentially Significant) The project would result in impacts to biological resources including habitats and special status species. Development of the proposed project would eliminate any movement habitat through the Specific Plan Area, along with any upland habitat adjacent to the movement corridors. Given the rareness of CTS and CRLF in the Bioregion, the incremental loss of movement habitat from the proposed project, when considered alongside all past, present, and probable future projects (inclusive of all communities within the Bioregion), is a significant and unavoidable cumulative impact, and the Specific Plan's incremental contribution to this impact is itself cumulatively considerable**.** (DEIR, pp. 3.2-52 and 3.2-53)	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
CULTURAL AND TRIBAL RESOURCES			
Impact 3.3-1: Project implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines	**Mitigation Measure 3.3-1:** In the event that evidence of archaeological or historical features or deposits (e.g., ceramic shard, trash scatters,	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
§15064.5 (Potentially Significant) No historical resources were found during field surveys for the proposed project. Additionally, there are no historical resources that have been identified in the Specific Plan Area on maps and files maintained by the Northwest Information Center (NWIC). There have been three previous cultural resource studies that examined approximately three-quarters of the Specific Plan Area and no historical resources were documented. The Monterey County Historic Property Data File Directory and National Register of Historic Resources do not list any historical resources in the Specific Plan Area. It is not anticipated that ground disturbing activities would result in impacts to historical resources given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of a previously unknown historical resource. Project implementation may cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5. (DEIR, pp. 3.3-12 and 3.3-13)	lithic scatters) are uncovered (discovered) during excavation and/or grading, all work shall stop in the area of the subject property until an appropriate data recovery program can be developed and implemented by a qualified archaeologist. This archaeologist shall determine whether the uncovered deposits or features qualify as either "historical resources" within the meaning of CEQA Guidelines section 15064.5, subdivision (a), "unique archaeological resources" as defined in Public Resources Code section 21083.2, subdivision (g), or "tribal cultural resources," as defined in Public Resources Code section 21074. If historical resources, unique archaeological resources, or tribal cultural resources are present, the project proponent shall preserve any such resources or implement any feasible mitigation measures identified by the archaeologist and imposed by the City. Recommended mitigation measures shall be reviewed by the City Planner and shall be approved if feasible in light of project design, logistics, and cost considerations and, if approved, shall be implemented and completed prior to commencing further work for which grading or building permits were issued, unless otherwise directed by the City Planner. Data recovery shall be an option if preservation in place is infeasible. Where resources have been determined to be "unique archaeological resources" but not "historical resources" or "tribal cultural resources," the project proponent's obligations shall be limited as set forth in Public Resources Code section 21083.2, subdivisions (d), (e), and (f). Grading/building permits and plans shall note this measure.		The City Council hereby directs that Mitigation Measure 3.3-1 be adopted. Implementation of Mitigation Measure 3.3-1 requires work to stop if an archaeological or historical feature or deposit is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-2: Project implementation may cause a substantial adverse change in the significance of archaeological resource pursuant to CEQA Guidelines §15064.5 (Potentially Significant) No archaeological resources were found during field surveys for the proposed project. Additionally, no archaeological resources have been identified in the Plan Area on maps and files maintained by the NWIC. There have been three previous cultural resource studies that examined approximately three-quarters of the Specific Plan Area and no archaeological resources were documented. The Monterey County Historic Property Data File Directory and National Register of Historic	Implement Mitigation Measure 3.3-1	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.3-1 be adopted. Implementation of Mitigation Measure 3.3-1 requires work to stop if an archaeological or historical feature or deposit is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Resources do not list any archaeological resources in the Specific Plan Area. It is not anticipated that ground disturbing activities would result in impacts to archaeological resources given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of a previously unknown archaeological resource. Project implementation may cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines §15064.5. (DEIR, pp. 3.3-13)			
Impact 3.3-3: Project implementation may directly or indirectly destroy a unique paleontological resource (Potentially Significant) A search of the University of California, Berkeley Museum of Paleontology collections database of Paleontology Localities did not identify any paleontological resources (fossils or fossil formations) within the Specific Plan Area. The Monterey County General Plan Draft EIR (2007) included a review of known fossil localities conducted by paleontologists in 2001. Twelve fossil sites were identified as having outstanding scientific value. For the most part, the fossils at these 12 sites reflect the type of assemblages found throughout the county (microorganisms or invertebrates); however, each has special characteristics that make it unique or rare, or in some way provide important stratigraphic or historic information. None of the 12 identified high value sites are located on or near the Specific Plan Area. Additionally, the Salinas General Plan Final EIR (2002) does not identify any high value sites in the Specific Plan area or in the City as a whole. However, unknown important paleontological resources have the potential to occur within the planning area including the undeveloped future growth areas, which include the Specific Plan Area. The construction of new development would involve grading and other earthwork that can disturb important fossils. Therefore, project implementation may directly or indirectly destroy a unique paleontological resource. (DEIR, pp. 3.3-13 and 3.3-14)	**Mitigation Measure 3.3-2**: If paleontological resources are discovered during the course of construction, work shall be halted immediately within 50 meters (165 feet) of the discovery, the City of Salinas shall be notified, and a qualified paleontologist shall be retained to determine the significance of the discovery. If the paleontological resource is considered significant, it should be excavated by a qualified paleontologist and given to a local agency, State University, or other applicable institution, where the resource could be curated and displayed for public education purposes. Grading/ building permits and plans shall note this measure.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.3-2 be adopted. Implementation of Mitigation Measure 3.3-2 requires work to stop if a paleontological resource is found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-4: Project implementation may disturb human remains, including those interred outside of	**Mitigation Measure 3.3-3:** If human remains are found during construction within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
formal cemeteries (Potentially Significant) No human remains or known burial sites were found during field surveys for the proposed project. Additionally, there are no human remains or known burial sites that have been identified in the Plan Area on maps and files maintained by the NWIC. It is not anticipated that ground disturbing activities would result in impacts to human remains or known burial sites given that none are believed to be present. However, as with most projects in California that involve ground disturbing activities, there is the potential for discovery of previously unknown human remains or known burial sites. Project implementation may disturb human remains, including those interred outside of formal cemeteries. (DEIR, pp. 3.3-14 and 3.3-15)	Plan Area, or at off-site infrastructure improvement locations, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until a qualified archeological monitor and the coroner of Monterey County are contacted. If it is determined that the remains are Native American, the coroner shall contact the Native American Heritage Commission within 24 hours. The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descendent (MLD) from the deceased Native American. The MLD may then make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and associated grave goods as provided in Public Resources Code section 5097.98. The landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further disturbance if: a) the Native American Heritage Commission is unable to identify a MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission; b) the descendent identified fails to make a recommendation; or c) the landowner or his authorized representative rejects the recommendation of the descendent, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner. Grading permit/building permits and plans shall note this measure.		environment. The City Council hereby directs that Mitigation Measure 3.3-3 be adopted. Implementation of Mitigation Measure 3.3-3 requires work to stop if human remains are found during construction, as well as steps to follow once construction has stopped. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.3-5: The project may contribute to cumulative impacts on known and undiscovered cultural resources (Less Than Significant) While there are extensive documented cultural resources in Salinas and unincorporated Monterey County, there are no cultural resources that were found during field surveys of the proposed project. Additionally, there are no cultural resources that have been identified in the Plan Area on maps and	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
files maintained by the NWIC. The Monterey County Historic Property Data File Directory and National Register of Historic Resources do not list any cultural resources in the Plan Area. Any significant discoveries during construction would be required to be preserved in place or mitigated through relocation or documentation; and the project is not anticipated to considerably contribute to a significant reduction in cultural resources. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts. The proposed project would not have cumulatively considerable impacts associated with cultural resources. (DEIR, pp. 3.3-15 and 3.3-16)			
GREENHOUSE GASES, CLIMATE CHANGE, AND ENERGY			
Impact 3.4-1: Potential to generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment (Potentially Significant) Short-term construction GHG emissions are a one-time release of GHGs and are not expected to significantly contribute to global climate change over the lifetime of the Specific Plan. Even after incorporation of the mitigation measures provided in Section 3.1: Air Quality, overall GHGs generated by the proposed project are expected to be greater than the applicable thresholds of 1,150 MT of CO_2e per year for construction emissions, 1.94 MT CO_2e/service population/year for operational emissions during Year 2035, and 0.80 MT CO_2e/service population/year for operational emissions during Year 2050. The project would generate GHG emissions, directly and indirectly, that may have a significant impact on the environment. (DEIR, pp. 3.4-31 through 3.4-38)	**Mitigation Measure 3.4-1**: Prior to the approval of the tentative maps and development review permits, as applicable, pursuant to CEQA Guidelines section 15183.5(b), Plans for the Reduction of Greenhouse Gas Emissions, the project applicant shall prepare a Greenhouse Gas Reduction Plan (GGRP) aimed at achieving specific performance standards. The GGRP shall include the following: 1) The GGRP shall achieve a per capita operational emissions level of 1.94 MT CO_2e/service population/year by year 2035, and 0.80 MT CO_2e/service population/year by year 2050. 2) Calculation of GHG emissions projection using an acceptable modeling tool such as the most recent version of CalEEMod. GHG reduction measures may include building and site energy reduction measures, measures to reduce project-generated vehicle miles traveled, or other measures. Off-site measures such as participation in a community-wide GHG reduction program(s), if any are adopted, or payment of GHG reduction fees (carbon offsets) into a qualified existing program, if one is in place, may be considered after all feasible on-site reduction measures are considered. The effectiveness of the GHG reduction measures included in the GGRP must be verifiable based	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Even with implementation of Mitigation Measure 3.4-1, it is possible that individual projects within the Plan Area may not achieve GHG reductions needed for their individual impacts to be less than significant. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	on evidence presented in the GGRP. Representative GHG reduction measures which may be considered may include, but are not limited to: • Measures identified by the California Air Pollution Control Officers' Association in Quantifying Greenhouse Gas Mitigation Measures: A Resource for Local Government to Assess Emission Reductions from Greenhouse Gas Mitigation Measures or updates to this document as may occur from time to time. • Applicable measures identified in guidance from MBARD, if any, and/or in guidance provided by other regional air districts such as the Bay Area Air Quality Management District, Sacramento Metropolitan Air Quality Management District, San Luis Obispo County Air Pollution Control District, or other agencies with adopted GHG reduction guidance that is applicable on the date the project application is deemed complete by the City. If sufficient feasible GHG reduction measures are unavailable to reduce GHG emissions to below the threshold of significance, the project applicant shall include evidence in the GGRP to this effect. The GGRP shall be subject to review and approval of the City of Salinas Community Development Department prior to approval of the tentative map or development review application, as applicable. Implementation of this mitigation measure shall not be required if the City has a qualified GHG reduction plan in place on the date a future individual project application is deemed complete, the qualified GHG reduction plan reflects the most recent legislatively-adopted GHG reduction targets (e.g., the 2030 target set by SB 32), includes an inventory of projected GHG emissions from development within the Specific Plan Area, and includes GHG reduction measures applicable to development within the Specific Plan Area whose implementation is required as a condition of approval of such projects.		
Impact 3.4-2: Potential to conflict with an applicable plan, policy, or regulation adopted for the purpose of	Implement Mitigation Measure 3.4-1.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
reducing the emissions of greenhouse gases (Potentially Significant) The Specific Plan would generate GHG emissions that could conflict with the State's long-term GHG Reduction targets, even with implementation of Mitigation Measures 3.1-1 through 3.1-9 contained within Section 3.1: Air Quality. The Specific Plan would not interfere with the *2008 Monterey Bay Regional Energy Plan* objectives. (DEIR, pp. 3.4-38 through 3.4-42)			environment. The City Council hereby directs that Mitigation Measure 3.4-1 be adopted. Implementation of Mitigation Measure 3.4-1 would ensure that GHG reduction measures required pursuant to it are consistent with the intent of current and future statewide GHG reduction legislation and regulations, and with current and future expectations of local, regional, and State stakeholders regarding the City's effort to reduce GHG emissions from new development, including Executive Order B-30-15 and S-03-05. Therefore, with implementation of Mitigation Measure 3.4-1, new development of the Plan Area would consistent with Executive Orders B-30-15 (and SB 32) and S-03-05. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.4-3: Project implementation may result in the inefficient, wasteful, or unnecessary use of energy resources (Less Than Significant) The proposed project would use energy resources for the operation of project buildings (electricity and natural gas), for on-road vehicle trips (e.g. gasoline and diesel fuel) generated by the proposed project, and from off-road construction activities associated with the proposed project (e.g. diesel fuel). Each of these activities would require the use of energy resources. The proposed project would be in compliance with all applicable federal, State, and local regulations regulating energy usage. Overall, the incorporation of mitigation measures would ensure that the proposed project would avoid and reduce inefficient, wasteful, and unnecessary consumption of energy. The proposed project would comply with all existing energy standards, including those established by the City of Salinas, the local air district (MBARD), and the State of California, and would not be expected to result in significant adverse impacts on energy resources. (DEIR, pp. 3.4-42 through 3.4-48)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.4-4: Cumulative impact on climate change from increased project-related greenhouse gas emission (Potentially Significant) Implementation of the proposed project will generate GHG emissions that would not otherwise exist without the proposed project. Given the length of construction activities for a project of this size, the construction emissions would be a long-term release of approximately 168,734.3 MT CO_2e. The operational emissions would be a long-term release totaling approximately 51,939.2 MT CO2e per year without mitigation, and 47,684.9MT CO_2e	Implement Mitigation Measure 3.4-1.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council hereby directs that Mitigation Measure 3.4-1 be adopted. Implementation of Mitigation Measure 3.4-1 would ensure that GHG reduction measures required pursuant to it are consistent with the intent of current and future statewide GHG reduction legislation and regulations, and with current and future expectations of local, regional, and State stakeholders regarding the City's effort to reduce GHG emissions from new

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
per year with mitigation. The City of Salinas's planning efforts included targeted growth that accommodates the economic and social needs of the community, while recognizing and seeking to mitigate environmental impacts when growth occurs. The State of California continues to implement measures that are intended to reduce emissions on a State-wide scale (i.e. vehicle fuel efficiency standards in fleets, low carbon fuels, etc.) that are consistent with AB 32 and SB 32. These types of statewide measures will benefit the proposed project (and city as a whole) in the long-term as they come into effect; however, the City does not have the jurisdiction to create far-reaching (i.e. statewide) measures to reduce GHG emissions. (DEIR, pp. 3.4-48 through 3.4-49)			development, including Executive Order B-30-15 and S-03-05. Therefore, with implementation of Mitigation Measure 3.4-1, new development of the Plan Area would consistent with Executive Orders B-30-15 (and SB 32) and S-03-05. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
HAZARDS AND HAZARDOUS MATERIALS			
Impact 3.5-1: Potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment (Potentially Significant) The hazards assessments included site reconnaissance, interviews, historical land use research, database research, and soils testing. The project has the potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment. (DEIR, pp. 3.5-24 through 3.5-26)	**Mitigation Measure 3.5-1**: Prior to issuance of grading permits or building permits, (including the issuance of demolition permits for agricultural support buildings) as applicable, the applicant shall hire a qualified consultant to: 1) Provide a final evaluation of the soils around the agricultural operations support buildings (residences, warehouses, barns, etc.) before they are demolished. If toxic levels of residual agrichemicals or surface staining are found, the contaminated soil shall be excavated and disposed of at an off-site disposal facility permitted to accept such waste. Any contaminated areas shall be remediated by the project applicant in accordance with recommendations made by the Monterey County Health Department Hazardous Materials Management Services, Regional Water Quality Control Board, Department of Toxic Substances Control, or other appropriate federal, State, or local regulatory agencies. 2) Investigate structures for asbestos-containing materials and lead. If asbestos-containing materials and/or lead are found in the buildings, a Cal-OSHA certified ACBM and lead based paint contractor shall be retained to remove the asbestos-containing materials and lead in accordance with U.S. EPA and California	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.5-1 through 3.5-3 be adopted. Implementation of the Mitigation Measures 3.5-1 requires a final evaluation of the soils around the agricultural operations support buildings and investigation of structures for asbestos-containing materials and lead. Implementation of the Mitigation Measures 3.5-2 requires destruction of existing water wells. Implementation of the Mitigation Measures 3.5-2 requires that water wells serving the proposed building be constructed and tested for water quality under permit from the Monterey County Health Department Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Occupational Safety and Health Administration (Cal/OSHA) standards. In addition, all activities (construction or demolition) in the vicinity of these materials shall comply with Cal/OSHA asbestos and lead worker construction standards. Any ACBM and lead shall be disposed of properly at an appropriate offsite disposal facility. **Mitigation Measure 3.5-2**: Prior to the issuance of grading permits, existing water wells within the grading area shall be destroyed under permit from the City of Salinas and/or the Monterey County Health Department, as applicable. Any destruction of these facilities shall be in accordance with the Monterey County Well Standards for Abandonment/Destruction. The project applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate destruction of these facilities. **Mitigation Measure 3.5-3:** Prior to the issuance of building permits, the water well or wells that will be providing water for the applicable portion of the Specific Plan Area, shall be constructed and tested for water quality under permit from the Monterey County Health Department. The project applicant shall provide the City of Salinas with a copy of the permit and a report or other information documenting the appropriate construction and operation of these facilities.		
Impact 3.5-2: Create a significant hazard to school sites due to siting or the placement of infrastructure (Potentially Significant) The proposed project does not pose significant hazards from existing natural gas transmission piping, and mitigation measures identified under Impact 3.5-1 would ensure water well construction and abandonment impacts would be less than significant. However, implementation of the project may create a significant hazard to school sites due to siting or the placement of infrastructure (i.e., the due to the citing of school sites near power lines). (DEIR, pp. 3.5-26 through 3.5-28)	**Mitigation Measure 3.5-4:** The property line of all school sites (even if it is a joint use agreement as described in subsection (o) of § 14010) shall be at least the following distance from the edge of respective power line easements as identified in the California Code of Regulations Title 5, Article 2. School Sites § 14010. Standards for School Site Selection (c). • 100 feet for power lines that are between 50 and 133 kV.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.5-4 be adopted. Implementation of Mitigation Measure 3.5-4 ensures all future electrical transmission alignments are required to comply with California Code of Regulations Title 5, Article 2 (School Sites) § 14010 (Standards for School Site Selection) setback requirements. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.5-3: Cumulative impact related to hazards and hazardous materials (Less Than Significant) The proposed project includes the approval and	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
subsequent implementation of an approximately 797-acre Specific Plan Area that includes residential, mixed use commercial, a community park, neighborhood parks, small parks, schools, and open space (with supplemental storm water detention/retention basins). These uses are not expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. The proposed Specific Plan land uses are not expected to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste. Mitigation measures have been included to minimize the risk of on-site hazards. (DEIR, pp. 3.5-28 through 3.5-29)			
HYDROLOGY AND WATER QUALITY			
Impact 3.6-1: The proposed project has the potential to violate water quality standards or waste discharge requirements during construction (Potentially Significant) Grading, excavation, removal of vegetation cover, and loading activities associated with construction activities could temporarily increase runoff, erosion, and sedimentation. Construction activities also could result in soil compaction and wind erosion effects that could adversely affect soils and reduce the revegetation potential at construction sites and staging areas. (DEIR, pp. 3.6-21 through 3.5-23)	**Mitigation Measure 3.6-1:** Prior to issuance of grading permits, the project proponent shall submit a Notice of Intent (NOI) and Storm Water Pollution Prevention Plan (SWPPP) to the City of Salinas prior to submitting to the RWQCB to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity (Construction General Permit Order 2009-0009-DWQ amended by 2010-0014-DWQ & 2012-0006-DWQ). The SWPPP shall be designed with Best Management Practices (BMPs) that the RWQCB has deemed to be effective at reducing erosion, controlling sediment, and managing runoff. These include: covering disturbed areas with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. Sediment control BMPs, installing silt fences or placing straw wattles below slopes, installing berms and other temporary run-on and runoff diversions. These BMPs are only examples of what should be considered and shall not preclude the use of equally or more effective new or innovative approaches currently available or being developed. Final selection of BMPs will be subject to approval by City of Salinas. The SWPPP will be kept on site during construction activity and will be made available upon request	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.6-1 be adopted. Mitigation Measure 3.6-1 requires the use of BMPs during construction activities in order to reduce erosion, control sediment, and manage runoff from the Plan Area. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	to representatives of the RWQCB.		
Impact 3.6-2: The proposed project has the potential to violate water quality standards or waste discharge requirements during operation (Potentially Significant) The long-term operations of the proposed project (all phases) could result in long-term impacts to surface water quality from urban stormwater runoff. The proposed Project would result in new impervious areas associated with roadways, driveways, parking lots, buildings, and landscape areas. Normal activities in these developed areas include the use of various automotive petroleum products (i.e. oil, grease, and fuel), common household hazardous materials, heavy metals, pesticides, herbicides, fertilizers, and sediment. Within urban areas, these pollutants are generally called nonpoint source pollutants. The pollutants pollutant levels vary based on factors such as time between storm events, volume of storm event, type of uses, and density of people. The proposed project has the potential to violate water quality standards or waste discharge requirements during operation. (DEIR, pp. 3.6-23 through 3.6-26)	**Mitigation Measure 3.6-2:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention/retention basins designed to meet the applicable regulatory requirements and to reduce contaminant loadings to receiving waters to the maximum extent practicable. The Improvement Plans shall be consistent with the City's NPDES permit requirements at the time of permitting. The NPDES permit granted to the City of Salinas by the Central Coast RWQCB (CCRWQCB, 2012) requires the following: I. Erosion and Sediment Control BMPs – Erosion control and sediment control BMPs shall be designed, installed, and maintained to reduce the discharge of pollutants from construction sites to the maximum extent practical (MEP) and protect water quality; II. Erosion and sediment from slopes and channels shall be controlled by implementing an effective combination of erosion control (source control) and other sediment control BMPs; and II. Soil Stabilization – Stabilization of disturbed areas shall, at a minimum, be initiated immediately whenever any clearing, grading, excavating, or other earth disturbing activities have permanently ceased. Additionally, the Improvement Plans shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The City of Salinas Stormwater Standards for New and Redevelopment Projects (City of Salinas, 2013) require the following practices: I. Limit disturbance of creeks and natural drainage features and provide setbacks according to the City's latest NPDES permit; II. Minimize compaction of highly permeable	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.6-2 through 3.6-4 be adopted. Mitigation Measure 3.6-2 requires submittal of a Stormwater Control Plan that includes calculations, BMPs and plan of sufficient detail to confirm that contaminant loadings to receiving waters will be reduced to the maximum extent practicable. Mitigation Measures 3.6-3 and 3.6-4 require submittal of detailed plans and calculations for the water quality BMPs, water quality detention basins, and supplemental retention and peak flow control. The BMPs will be designed to meet regulatory requirements and to reduce peak flows during storm events below peak flows under pre-project conditions. The various RWQCBs have evaluated the effectiveness of the types of BMPs required by Mitigation Measures 3.6-2 through 3.6-4 and have determined that BMPs are known to be effective in protecting receiving waters. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	soils; and II. Limit clearing and grading of native vegetation to the minimum needed to build the project and provide fire protection. **Mitigation Measure 3.6-3:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department a Stormwater Control Plan detailing plans and calculations for water quality best management practices (BMPs) and water quality detention basins designed to prevent to the maximum extent practicable the creation of new sources of polluted runoff. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department. **Mitigation Measure 3.6-4:** Prior to the approval of site improvement plans, the project applicant shall submit to the Salinas Public Works Department detailed plans and calculations for supplemental retention and peak flow control. BMPs will be designed to meet regulatory requirements and to reduce peak flows during storm events below peak flows under pre-project conditions. The detailed plans and calculations shall be subject to review and approval by the Salinas Public Works Department.		
Impact 3.6-3: The proposed project has the potential to substantially deplete groundwater supplies or interfere substantially with groundwater recharge (Potentially Significant) The proposed project, without mitigating features, would reduce infiltration of rainwater and runoff into the local groundwater system due to the increase in impermeable area. This may deplete groundwater supplies or interfere substantially with groundwater recharge. The total annual rainfall depth in an average year is approximately 16 inches and the project surface area is approximately 797 acres, producing an annual rainfall volume of approximately 1,060 AF. Nearly all of this area is currently in agriculture, while the proposed project could convert as much as 60 percent of the area to impervious surfaces, resulting in a reduction in groundwater recharge in the range of 400 to 600 AF. (DEIR, pp. 3.6-26 through 3.6-29)	**Mitigation Measure 3.6-5:** Prior to the approval of site improvement plans, the project applicant shall site, and design and include an Operation and Maintenance Plan for stormwater retention/infiltration basins and infiltration promoting BMPs sufficient to assure that there is no reduction in groundwater recharge. In order to assure there is no reduction in recharge, the plan shall result in circumstances which maintain infiltration to support baseflow and interflow to wetlands and surface waters, and deep vertical infiltration to groundwater. The site, design, and installation shall be consistent with the requirements of the City's Stormwater Development Standards for New and Redevelopment Projects. The contents of the site, design, and installation shall be included in a stormwater control plan. The stormwater control plan shall be reflected on the Improvement Plans, subject to review and approval by the Salinas Public Works Department.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.6-5 and 3.6-6 be adopted. Implementation of Mitigation Measure 3.6-5 requires an Operation and Maintenance Plan for stormwater retention/infiltration basins and infiltration promoting BMPs sufficient to assure that there is no reduction in groundwater recharge. Implementation of Mitigation Measure 3.6-6 requires an Operation and Maintenance Plan for post-construction BMPs and supplemental stormwater detention basins in accordance with City of Salinas stormwater development standards. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Mitigation Measure 3.6-6: Prior to the approval of site improvement plans, the project applicant shall site, design, and include an Operation and Maintenance Plan for post-construction BMPs and supplemental stormwater detention basins in accordance with City of Salinas stormwater development standards. Maintenance procedures (including frequency of procedure, cleaning schedules, applicant responsibility for each procedure, performance standards, or other means) and funding mechanisms shall be established for those facilities to assure adequate long-term performance and success in treating the water and controlling infiltration into the groundwater. The Improvement Plans and Operation and Maintenance Plan shall be subject to review and approval by the Salinas Public Works Department.		
Impact 3.6-4: The proposed project has the potential to alter the existing drainage pattern in a manner which would result in substantial erosion, siltation, flooding, or polluted runoff (Less than Significant) The proposed project will not alter drainage patterns in a manner which will cause flooding, erosion, or siltation. Surface runoff from the area will be managed via parcel-based LID measures, detention/retention basins, and flow reducing BMPs to prevent local flooding within the site. These features will also reduce peak flows from the Plan Area to receiving creeks and storm drains to amounts less than such flows under existing conditions. Sediment in the stormwater flows will be captured in detention ponds designed to prevent siltation. Flooding, erosion, or siltation is not anticipated by the proposed project given the storm drain design and best management practices that will be implemented. (DEIR, pp. 3.6-29 through 3.6-30)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-5: The proposed project has the potential to otherwise substantially degrade water quality (Potentially Significant) The proposed project would not otherwise substantially degrade water quality. The use of BMPs are intended to treat runoff close to the source during the construction and long term operational phase of the project to reduce stormwater quality impacts. (DEIR, pp. 3.6-30 through 3.6-31)	Implement **Mitigation Measure 3.6-1**.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.6-1 be adopted. Mitigation Measure 3.6-1 requires the use of BMPs during construction activities in order to reduce erosion, control sediment, and manage runoff from the Plan Area. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.6-6: Place housing or structures that would impede/redirect flows within a 100-year, or 200-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map (Less than Significant) The project would no place housing or structures that would impede/redirect flows within a 1-percent annual chance flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map. Provided that the storm drain system and detention/retention facilities to be installed as part of the proposed development are adequately sized and properly installed and maintained, additional flooding and/or impedance or redirection of flows will not be induced by the proposed project. (DEIR, pp. 3.6-31)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-7: The proposed project has the potential to expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, seiche, tsunami, or mudflow (Less than Significant) The proposed project would not result in the exposure of people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, seiche, tsunami, or mudflow. (DEIR, pp. 3.6-31 through 3.6-32)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-8: Cumulative increases in peak stormwater runoff from the plan area (Less than Significant) With the design and construction of flood control improvements, the West Area Specific Plan would not increase peak stormwater runoff. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures would control peak stormwater runoff. The proposed project would not have cumulatively considerable impacts associated with stormwater runoff. (DEIR, pp. 3.6-	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
32 through 3.6-33)			
Impact 3.6-9: Cumulative impacts related to degradation of water quality (Less than Significant) The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures would control storm water quality. The proposed project would not have cumulatively considerable impacts associated with water quality. (DEIR, pp. 3.6-33 through 3.6-35)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-10: Cumulative impacts related to degradation of groundwater supply or recharge (Less than Significant) The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures require maintaining water quality standards and preserving the infiltration of rainwater within the aquifer. The proposed project would not have cumulatively considerable impacts associated with groundwater supply/recharge. (DEIR, pp. 3.6-35 through 3.6-36)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.6-11: Cumulative impacts related to flooding (Less than Significant) Future development in the area must be sited and designed in accordance with the aforementioned City flood damage regulations (i.e., Article VI, Flood Damage Prevention, of the City's Code). The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts given that mitigation measures require designs that ensure structures are outside the base flood elevation and that storm water flows are maintained to prevent downstream flooding. The proposed project would not have cumulatively considerable impacts associated with flooding. (DEIR, pp. 3.6-36 through 3.6-38)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
NOISE			
Impact 3.7-1: The proposed project has the potential to increase traffic noise levels at existing receptors (Potentially Significant) As shown in Tables 3.7-8 through 3.7-11, some noise-sensitive receptors located along the Plan Area roadways are currently exposed to exterior traffic noise levels exceeding the City of Salinas 60 dB L_{dn} exterior noise level standard for residential uses. These receptors would continue to experience elevated exterior noise levels with implementation of the proposed project. As shown in Table 3.7-8, the segment of Natividad Road south of E. Boronda Road would experience unacceptable noise levels under Existing Plus Project conditions. The project would cause noise levels along this segment to increase by 1.6 dB. As shown in Table 3.7-9, the segment of Natividad Road south of E. Boronda Road would experience unacceptable noise levels under Existing Plus Project Plus CASP conditions. As shown in Table 3.7-10, the following roadway segments would experience unacceptable noise levels under Cumulative Plus Project conditions: • E. Boronda Road from San Juan Grade to McKinnon (2.4 dB increase); • E. Boronda Road from Independence to Hemmingway (1.8 dB increase); • E. Boronda Road from N. Sanborn to Williams (2.4 dB increase); • Natividad Road south of E. Boronda (3.7 dB increase); and • Natividad Road from E. Boronda to Future Russell Road (3.0 dB increase). As shown in Table 3.7-11, significant traffic noise increases are anticipated under the Cumulative Plus Project Plus CASP traffic condition include the following segments: • Constitution Blvd., South of E. Boronda – noise levels are predicted to increase by 3.5 dB from 62.2 dB to 65.7 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB,	Implement Mitigation Measures 3.7-1 and 3.7-8.	SU	Changes or alterations have been required in, or incorporated into the project, which substantially lessen the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. Mitigation Measure 3.7-1 requires adherence to the requirements of the City of Salinas Municipal Code with respect to hours of operation during project construction. Mitigation Measure 3.7-2 requires all equipment to be fitted with factory equipped mufflers and in good working order. Mitigation Measure 3.7-3 requires sound walls for residents located along the primary Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. Mitigation Measure 3.7-4 requires 3-coat stucco and windows having a Sound Transmission Class (STC) 35, or higher, rating to be installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-5 requires mechanical ventilation for the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-6 requires the center of active play areas, such as football fields, soccer fields or other athletic fields, to be located at a minimum distance of 90-feet from the nearest residential property lines. Mitigation Measure 3.7-7 includes various project design requirements where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas. Mitigation Measure 3.7-8 includes various project design requirements fort the well and treatment plant facilities. Even with implementation of Mitigation Measures 3.7-1 through 3.7-8, there is the potential for noise levels to exceed the acceptable levels in some cases if encroachment into private property proves for the construction of sounds walls proves to be infeasible. Therefore, the impact is significant and unavoidable. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
as outlined in Table 3.7-7. • E. Boronda Road, Main to San Juan Grade – noise levels are predicted to increase by 1.5 dB from 66.5 dB to 68.1 dB L_{dn}. This would equal the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, San Juan Grade to McKinnon – noise levels are predicted to increase by 2.6 dB from 65.3 dB to 67.9 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, El Dorado to Natividad – noise levels are predicted to increase by 3.3 dB from 64.1 dB to 66.1 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Natividad to Independence – noise levels are predicted to increase by 2.6 dB from 66.6 dB to 69.3 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Independence to Hemmingway – noise levels are predicted to increase by 3.5 dB from 65.1 dB to 68.6 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Hemmingway to Constitution – noise levels are predicted to increase by 3.0 dB from 58.2 dB to 61.3 dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • E. Boronda Road, N. Sanborn to Williams – noise levels are predicted to increase by 3.1 dB from 59.6 dB to 62.7dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • Natividad Road., South of E. Boronda – noise levels are predicted to increase by 4.5 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • Natividad Road., E. Boronda to Future Russell Road – noise levels are predicted to increase by 3.8 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. However, it should be noted that this roadway segment is located between the West Area Specific Plan and Central Area Specific Plan projects and future sensitive receptors along this roadway would be constructed with noise control measures designed to achieve compliance with the City of Salinas exterior and interior noise level standards. • Russell Road, West of San Juan Grade – noise levels are predicted to increase by 1.9 dB from 67.5 dB to 69.4 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. (DEIR p. 3.7-14 through 3.7-23)			
Impact 3.7-2: The proposed project has the potential to increase noise levels associated with construction activities (Potentially Significant) Noise would also be generated during the construction phase by increased truck traffic on area roadways. The proposed project has the potential to increase noise levels associated with construction activities. (DEIR, pp. 3.7-23 and 3.7-24)	**Mitigation Measure 3.7-1:** Prior to the approval of site improvement plans and respective permits, plans shall note that construction activities shall adhere to the requirements of the City of Salinas Municipal Code with respect to hours of operation. **Mitigation Measure 3.7-2:** Prior to the approval of site improvement plans and respective permits, plans shall note that all equipment shall be fitted with factory equipped mufflers and in good working order. All stationary noise generating equipment (i.e. generators) shall be located at least 300 feet from a sensitive receptor. All construction staging areas shall be located at least 300 feet from a sensitive receptor.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.7-1 and 3.7-2 be adopted. Mitigation Measure 3.7-1 requires adherence to the requirements of the City of Salinas Municipal Code with respect to hours of operation during project construction. Mitigation Measure 3.7-2 requires all equipment to be fitted with factory equipped mufflers and in good working order. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.7-3: The proposed project has the potential to increase noise vibration association with construction activities (Less Than Significant) The proposed project would not increase noise vibration associated with construction activities. Therefore, construction vibrations are not predicted to cause damage to existing buildings or cause annoyance to sensitive receptors. (DEIR, pp. 3.7-24 and 3.7-25)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.7-4: The proposed project has the potential to expose new sensitive receptors to excessive transportation noise (Potentially Significant) Table 3.7-14 data indicate that noise barriers 6- to 8-feet in height would generally be sufficient to achieve compliance with the City of Salinas 60 dB L_{dn} exterior noise level standard for the proposed residential uses. However, for the residential uses located along E. Boronda Road and Natividad Road, sound walls of 6- to 8-feet in height would only reduce exterior noise levels to 62 to 65 dB L_{dn}. While these noise level do not meet the City's preferred 60 dB L_{dn} noise standards, they would comply with the City's conditionally acceptable standard of 60 to 70 dB L_{dn}. Predicted interior noise levels would exceed the City's 45 dB L_{dn} interior noise level standard at the first row of residential uses located closest to E. Boronda Road and Natividad Road. Therefore, additional interior noise control measures would be required for these residential uses along E. Boronda Road and Natividad Road. To reduce interior noise levels to 45 dB L_{dn}, or less, it is likely that second floor facades would require windows having a Sound Transmission Class (STC) 35 rating, or higher. Exterior walls would also likely require 3-coat stucco and RC-channels. This would specifically apply to the first row of homes along E. Boronda Road and Natividad Road and would not apply to facades facing away from the roadway. (DEIR, pp. 3.7-25 through 3.7-28)	**Mitigation Measure 3.7-3:** Prior to the approval of site improvement plans and respective permits, the plans shall note the location, design and constructions details of the eight-foot to nine-foot tall sound attenuation walls and/or landscaped berm/wall combinations, as applicable, that will be constructed along the primary Specific Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. At the City's discretion, wall heights which achieve the City's conditionally acceptable 60-70 dB L_{dn} noise standard may be allowed. See the Draft EIR Table 3.7-14 for specific noise barrier/wall heights along each roadway. Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of the wall is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti. These graffiti prevention best management practices may include, without limitation: (1) The use or the installation and maintenance of ant-graffiti materials and	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-3 through 3.7-5 be adopted. Mitigation Measure 3.7-3 requires sound walls for residents located along the primary Plan Area roadways, adjacent to proposed residential dwellings, in order to achieve the City's exterior noise standards. Mitigation Measure 3.7-4 requires 3-coat stucco and windows having a Sound Transmission Class (STC) 35, or higher, rating to be installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Mitigation Measure 3.7-5 requires mechanical ventilation for the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	surface treatments approved by the City on likely graffiti-attracting surfaces. (2) Installation and maintenance of landscaping to discourage defacement of and/or protect likely graffiti-attracting surfaces. (3) Installation and maintenance of lighting to protect likely graffiti-attracting surfaces. (4) Immediate removal of graffiti by appropriate means within seventy-two hours. (5) Incorporation of architectural or design elements or features to discourage graffiti defacement in accordance with the principles of Crime Prevention Through Environmental Design (CPTED). (6) Authorizing right of access by city employees or contract agents to remove graffiti if not removed within specified time periods. (7) Supplying the city at its request with paint (of the appropriate color and type), cleaning agents, and/or other materials acceptable to the city to abate or to deter graffiti. (8) Other requirements, as deemed reasonably feasible by the city planner, to deter, to protect or to reduce the potential for graffiti defacement. **Mitigation Measure 3.7-4:** Prior to the approval of building permits, the first row of residential dwellings located along E. Boronda Road and Natividad Road shall include windows having a Sound Transmission Class (STC) 35, or higher, rating installed in second floor facades and rooms that have windows or doors that abut E. Boronda Road and/or Natividad Road. Exterior walls shall also require 3-coat stucco and RC-channels, sheathing, or another acceptable construction application that effectively attenuates noise intrusion to the interior of the house. The exterior wall specifications would specifically apply to the first row of homes that abut E. Boronda Road and/or Natividad Road and only applies to the facades facing these roadways. These specifications do not apply to single story homes,		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	or the first floor of a two-story home, both of which are attenuated by the sound wall. These requirements shall be included in the building plans for the specific dwelling units and noted on the building permits. A detailed analysis of any additional interior mitigation measures shall be conducted when building plans are available and prior to building permit issuance to verify these requirements. These requirements shall also be noted in the site improvement plans prior to approval by the City. **Mitigation Measure 3.7-5:** Prior to the approval of building permits, mechanical ventilation shall be required in the first row of all residential dwellings that abut E. Boronda Road and/or Natividad Road, sufficient to allow residents, as desired for acoustical isolation, to keep their doors and windows closed and still maintain acceptable interior temperature and noise levels. This requirement shall be included in the building plans for the specific dwelling units and noted on the building permits. This requirement shall also be noted in the site improvement plans prior to approval by the City.		
Impact 3.7-5: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed park and school uses (Potentially Significant) Children playing at neighborhood parks or outdoor recreational fields (softball, soccer, basketball, tennis) are often considered potentially significant noise sources which could adversely affect adjacent noise-sensitive land uses. Typical noise levels associated with groups of approximately 50 children playing at 50 feet generally range from 55 to 60 dB L_{eq} and 70 to 75 dB L_{max}. It is expected that park activities would occur primarily during daytime hours. Therefore, noise levels from the playgrounds would need to comply with the City of Salinas exterior noise level standards of 60 dB L_{eq} and 70 dB L_{max} at the nearest residential uses. (DEIR, pp. 3.7-29 and 3.7-30)	**Mitigation Measure 3.7-6:** Prior to the approval of site improvement plans, as applicable, when parks or play areas are located near residential uses, the center of active play areas, such as football fields, soccer fields or other athletic fields, shall be located at a minimum distance of 90-feet from the nearest residential property lines. Large active play areas shall comply with the 60 dB L_{eq} and 70 dB L_{max} standards, and shall include these further noise level evaluations during the design phases of future park areas. Parks shall be designed such that residences front, or side in limited locations where approved by the City Planner, to the park. Minimum 6-foot tall sound walls and/or landscaped berms shall be constructed where school site directly abuts a residential property line in instances where site design (i.e., minimum distances, siting of activity areas, etc.) cannot achieve the 60 dB L_{eq} and 70 dB L_{max} noise standards. No wall shall be required where residential uses are fronted towards a park or school site and separated by a roadway or a walkway. Noise barrier walls shall be constructed of concrete panels, concrete masonry units, stucco	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-6 be adopted. Mitigation Measure 3.7-6 requires the center of active play areas, such as football fields, soccer fields or other athletic fields, to be located at a minimum distance of 90-feet from the nearest residential property lines. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	or manufactured materials (with a density of four pounds per square foot or greater), earthen landscaped berms, or any combination of these materials as determined appropriate by the City of Salinas. The design/appearance of walls is subject to the design approval by the City of Salinas based upon the standards contained in the West Area Specific Plan and the Salinas Zoning Code, as applicable to ensure that it is visually pleasing. Wood is not permitted due to eventual warping and degradation of acoustical performance. The walls shall not have gaps or penetrations which allow sound to flank through or around the walls. Small gaps which may occur using materials such as "keystone" blocks shall be avoided. Additionally, in accordance with Section 5-03.19 of the City's Municipal Code, best management practices shall be incorporated into the sound wall design in order to control graffiti and/or mitigate the potential impacts of graffiti (see mitigation 3.7.3 for further discussion of best management practices.)		
Impact 3.7-6: The proposed project has the potential to expose sensitive receptors to substantial noise from proposed commercial mixed-uses (Potentially Significant) Mixed-use commercial land use activities can produce noise levels which affect adjacent sensitive land uses. The primary noise sources generally include truck deliveries, trash pickup, parking lot use, and heating, ventilation, and air conditioning (HVAC) equipment operation. These sources may result in noise levels exceeding the City's standards at nearby receptors. (DEIR, pp. 3.7-30 through 3.7-31)	**Mitigation Measure 3.7-7:** Prior to the approval of development review permits, the plans shall demonstrate: where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas, the following measures shall be included in the project design: • All HVAC equipment shall be located within mechanical rooms where possible or shielded from view with solid or grated barriers; • Emergency generators shall comply with the City's noise criteria at the nearest noise-sensitive receivers; • Delivery/loading activities shall comply with the Salinas Zoning Code standards and regulations; and • The applicant shall submit a noise study to verify that the appropriate noise control measures have been incorporated into the project design and will achieve compliance with the City's noise level standards.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.7-7 be adopted. Mitigation Measure 3.7-7 includes various project design requirements where commercial, business professional, office, or similar uses abut residential uses or where loading docks or truck circulation routes abut residential areas. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.7-7: The proposed project has the potential to expose sensitive receptors to substantial noise from	**Mitigation Measure 3.7-8:** The potential well and treatment plant sites are shown in the	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
proposed well sites (Potentially Significant) Typical noise levels for well sites at 50 feet are expected to be 60 dB L_{eq}. If a backup generator is present and running, a noise level of 70 dB L_{eq} at 50 feet would be expected. It is expected that wells could operate during daytime or nighttime hours. Long-term operation of the backup generator would only occur under emergency conditions and would therefore not be subject to the City of Salinas exterior noise level standards for Class A noise. However, weekly exercising of the generator may be subject to the City's 60 dB L_{eq} daytime exterior noise level standard at the nearest noise-sensitive residential receptors. (DEIR, pp. 3.7-32)	Specific Plan. The actual well and treatment plant facilities are subject to the approval of a Conditional Use Permit (CUP) by the City pursuant to the requirements of the Salinas Zoning Code and the West Area Specific Plan. The potential well and treatment plant sites and the CUP requirement for said facilities shall be clearly noted on the site improvement plans. Prior to approval of the CUP and subsequent issuance of the building permits for the well and treatment plant facilities, the plans shall demonstrate that the following measures shall be included in the project design: • The well and treatment facilities have been designed and will be built to not exceed a noise level of 55 dB L_{eq} at the nearest residential or school property line during normal operation of the facilities; • The generators shall not be permitted to exceed the City's daytime noise standard of 60 dB L_{eq}; • The generators shall be tested only during daytime hours; and • Additionally, that the well and treatment facilities/sites have been designed (in accordance with the West Area Specific Plan) to incorporate decorative screen walls, landscaping and other features to ensure compatibility with surrounding land uses.		environment. The City Council hereby directs that Mitigation Measure 3.7-8 be adopted. Mitigation Measure 3.7-8 includes various project design requirements fort the well and treatment plant facilities. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.7-8: Cumulative exposure of existing and future noise-sensitive land uses to increased noise resulting from cumulative development (Potentially Significant) Significant traffic noise increases under the Cumulative Plus Project Plus CASP traffic condition include the following segments: • Constitution Blvd., South of E. Boronda – noise levels are predicted to increase by 3.5 dB from 62.2 dB to 65.7 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Main to San Juan Grade – noise levels are predicted to increase by 1.5	No mitigation measures are feasible.	CS and SU	The EIR identified no mitigation measures to address this particular significant effect on the environment. Thus, the effect remains significant and unavoidable, and no mitigation is available to substantially lessen or avoid the effect. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
dB from 66.5 dB to 68.1 dB L_{dn}. This would equal the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, San Juan Grade to McKinnon – noise levels are predicted to increase by 2.6 dB from 65.3 dB to 67.9 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, El Dorado to Natividad – noise levels are predicted to increase by 3.3 dB from 64.1 dB to 66.1 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Natividad to Independence – noise levels are predicted to increase by 2.6 dB from 66.6 dB to 69.3 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Independence to Hemmingway – noise levels are predicted to increase by 3.5 dB from 65.1 dB to 68.6 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. • E. Boronda Road, Hemmingway to Constitution – noise levels are predicted to increase by 3.0 dB from 58.2 dB to 61.3 dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential receptors. • E. Boronda Road, N. Sanborn to Williams – noise levels are predicted to increase by 3.1 dB from 59.6 dB to 62.7dB L_{dn}. This would not exceed the FICON criteria of 5 dB where existing noise levels are less than 60 dB, as outlined in Table 3.7-7, but would cause a new exceedance of the City's 60 dB L_{dn} exterior noise level standard at outdoor activity areas of the nearest residential			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
receptors. • Natividad Road., South of E. Boronda – noise levels are predicted to increase by 4.5 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. • Natividad Road., E. Boronda to Future Russell Road – noise levels are predicted to increase by 3.8 dB from 63.0 dB to 67.5 dB L_{dn}. This would exceed the FICON criteria of +3 dB where no project noise levels are between 60 to 65 dB, as outlined in Table 3.7-7. However, it should be noted that this roadway segment is located between the West Area Specific Plan and Central Area Specific Plan projects and future sensitive receptors along this roadway would be constructed with noise control measures designed to achieve compliance with the City of Salinas exterior and interior noise level standards. • Russell Road, West of San Juan Grade – noise levels are predicted to increase by 1.9 dB from 67.5 dB to 69.4 dB L_{dn}. This would exceed the FICON criteria of +1.5 dB where no project noise levels are greater than 65 dB, as outlined in Table 3.7-7. (DEIR, pp. 3.7-33 through 3.7-37)			
POPULATION AND HOUSING			
Impact 3.8-1: The proposed Project has the potential to induce substantial population growth in an area (Less Than Significant) The West Area Specific Plan proposes development on the 797-acre Specific Plan Area including housing units that would result in direct population growth. The project includes a maximum of 4,340 total residential units. The addition of 4,340 housing units at full buildout has the potential to increase the population of the city by an estimated 16,101 persons (based on a U.S. Census Bureau estimate of 3.71 persons per household) (U.S. Census Bureau, 2017). The 2002 General Plan identifies areas for growth within the FGAs (which includes the Specific Plan Area). The Salinas General Plan Land Use Table LU-3 identifies the development capacity of the FGAs.	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
This includes 15,873 residential units, resulting in an additional population of 58,253 within the City's FGAs. The proposed West Area Specific Plan development proposes 4,340 units with the potential to increase the population of the city by an estimated 16,101 persons, which is within the projections identified in the Salinas General Plan. Implementation of the West Area Specific Plan would increase employment in the area through development of a maximum of 571,500 square feet of commercial space. The Salinas General Plan designates land uses to ensure a balance between new residential development and job-creating uses. Within the FGAs (including the Specific Plan Area) the General Plan assumes a development capacity that includes 178,000 square feet of retail space, 30,000 square feet of office space, 599,000 square feet of general commercial space, and 2,613,000 square feet of mixed use area (Salinas General Plan pg. LU 37: Land Use Element Table LU-3 Development Capacity). The proposed maximum 571,500 square feet developable by the proposed project is within the development capacities stated in the Salinas General Plan. (DEIR, pp. 3.8-14 through 3.8-19)			
Impact 3.8-2: Cumulative impact on the potential to induce substantial population growth in an area (Less Than Significant) Development of the North of Boronda FGA is a component of the City's planned long-term growth as identified in the City's General Plan. Infrastructure needed to support development of the site and the FGAs, and the subsequent population, housing and employment increases expected through implementation of the West Area Specific Plan, have already been planned and evaluated. The proposed project, when considered alongside all past, present, and probable future projects (inclusive of buildout of the various General Plans within Monterey County), would not be expected to cause any significant cumulative impacts. The proposed project would not have cumulatively considerable impacts associated with population and housing. (DEIR, pp. 3.8-19 through 3.8-20)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
PUBLIC SERVICES			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.9-1: The proposed project may require the construction of fire department facilities which may cause substantial adverse physical environmental impacts (Potentially Significant) The site-specific environmental impact of constructing a new fire facility to serve the West Area Specific Plan will be reviewed under CEQA as part of the Central Area Specific Plan Draft EIR, which is expected to be circulated in 2019. The proposed project may require the construction of fire department facilities which may cause substantial adverse physical environmental impacts. (DEIR, pp. 3.9-16 through 3.9-18)	**Mitigation Measure 3.9-1:** Prior to the issuance of a Certificate of Occupancy for each dwelling unit (and prior to issuance of building permits for non-residential uses), the applicant shall pay all applicable project impact fees per the impact fee schedule.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measure 3.9-1 be adopted. Mitigation Measure 3.9-1 requires payment of the project impact fees for each dwelling unit. Therefore, this impact is less than significant with mitigation incorporated.
Impact 3.9-2: The proposed project may result in, or have the potential to require the construction of police department facilities which may cause substantial adverse physical environmental impacts (Less Than Significant) The proposed project would not result in, or have the potential to require the construction of police department facilities which may cause substantial adverse physical environmental impacts. Development of the Specific Plan Area did not directly trigger the need for a new facility; however, additional staffing and patrols are required to serve the proposed Specific Pan Area. The City collects impact fees from new development based upon projected impacts from the development. The City also reviews the adequacy of impact fees on an annual basis to ensure that the fee is commensurate with anticipated future facilities demands, assessed on a fair share basis for new development. (DEIR, pp. 3.9-18 through 3.9-19)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.9-3: Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts (Potentially Significant) Physical impacts from construction of the school sites within the Specific Plan Area would be related to relevant environmental topics included in this EIR, such as: air quality (Section 3.1), biological resources (Section 3.2), cultural resources (Section 3.3), greenhouse gas emissions and climate change (Section 3.4), hazards and hazardous materials (Section 3.5), hydrology and water quality (Section 3.6), noise (Section 3.7) population (Section 3.8), public services (Section 3.9), transportation (Section 3.10), and utilities (Section 3.11). A	**Mitigation Measure 3.9-2:** Prior to the issuance of building permits for each dwelling unit, the applicant shall pay applicable school fees mandated by SB 50 to the Salinas Union High School District (SUHSD), and Santa Rita Union School District (SRUSD) and provide documentation of said payment to the City. Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.9-2, 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34 be adopted. Mitigation Measure 3.9-2 requires payment of the applicable school fees. Under state law, the payment of school impact fees is deemed to be adequate mitigation for the need for new school facilities. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
detailed discussion of relevant operational and construction impacts can be found in each respective section of this EIR. Furthermore, site-specific environmental review would be required for each school by the responsible school district prior to approval of a design for the facility and would consider any site-specific impacts unknown at this time. Project implementation may result in the need for the construction of new schools, which has the potential to cause substantial adverse physical environmental impacts. Potential environmental impacts associated with the future construction of each school within the Plan Area are addressed throughout this EIR. This EIR analyzes the physical environmental effects that may occur as a result of development and introduction of new urban land uses within the Plan Area. Each future school, if constructed, would fall within the range of environmental impacts disclosed in this EIR, and would be subject to relevant mitigation measures included in this EIR. It is noted, however, that development of a school within the proposed Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-19 through 3.9-21)			
Impact 3.9-4: Project implementation may result in effects on parks, or has the potential to require the construction of park facilities which may cause substantial adverse physical environmental impacts (Potentially Significant) Physical impacts from construction of the park sites within the Specific Plan Area would be related to relevant environmental topics included in this EIR, such as: air quality (Section 3.1), biological resources (Section 3.2), cultural resources (Section 3.3), greenhouse gas emissions and climate change (Section 3.4), hazards and hazardous materials (Section 3.5), hydrology and water quality (Section 3.6), noise (Section 3.7) population (Section 3.8), public services (Section 3.9), transportation (Section 3.10), and utilities (Section 3.11). A detailed discussion of relevant operational and construction impacts can be found in each	Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	SU	Changes or alterations have been required in, or incorporated into the project, which mitigate the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully avoid the effects. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
respective section of this EIR. Project implementation may result in effects on parks, or has the potential to require the construction of park facilities which may cause substantial adverse physical environmental impact. Potential environmental impacts associated with the future construction of park and other recreational facilities within the Plan Area are addressed throughout this EIR. This EIR analyzes the physical environmental effects that may occur as a result of development and introduction of new urban land uses within the Plan Area. Each future park, if constructed, would fall within the range of environmental impacts disclosed in this EIR, and would be subject to relevant mitigation measures included in this EIR. It is noted, however, that development of 49.76 acres of park land within the Plan Area would contribute to significant and unavoidable impacts related to air quality (Impacts 3.1-2, and 3.1-7), biological resources (Impacts 3.2-9 and 3.2-12), greenhouse gases (Impacts 3.4-1, 3.4-2, and 3.4-4), noise (Impacts 3.7-1, and 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-22 through 3.9-23)			
Impact 3.9-5: Project implementation may result in effects on other public facilities (Less than Significant) Project implementation may result in effects on other public facilities. The West Area Specific Plan would result in new demand for public facilities, including library facilities and recreational facilities. The West Area Specific Plan does not propose a library or other public facility such as a community building within the Plan Area, therefore, it does not have a direct physical impact on the environment. The West Area Specific Plan would be responsible for paying the applicable impact fees, and ongoing revenues from the Specific Plan would be generated from property taxes, sales taxes, and other appropriate fees/payments. Such fees/payments would be the financial contribution for any new demand created by the West Area Specific Plan. (DEIR, pp. 3.9-23 through 3.9-24)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.9-6: Under cumulative conditions the proposed project may result in effects on public facilities (Potentially Significant) The construction and operation of future public	Implement Mitigation Measures 3.1-1 through 3.1-7, 3.2-1 through 3.2-7, 3.3-1 through 3.3-3, 3.4-1, 3.5-1 through 3.5-4, 3.6-1 through 3.6-6, 3.7-1 through 3.7-8, and 3.10-1 through 3.10-34.	CS and SU	Changes or alterations have been required in, or incorporated into the project, which mitigate the significant effects on the environment. Even so, the effects remain significant and unavoidable, and no additional mitigation is available to fully

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
facilities required to serve cumulative development (including the West Area Specific Plan Area) could potentially cause significant impacts. Cumulative development including additional parks, schools, library, and other public facilities within the city and service area would contribute to significant and unavoidable cumulative impacts that have been identified within this EIR related to: air quality (Impact 3.1-7), biological resources (Impact 3.2-12), greenhouse gases (Impact 3.4-4), noise (Impact 3.7-8), and transportation and circulation (Impacts 3.10-3, and 3.10-4). (DEIR, pp. 3.9-24 through 3.9-26)			avoid the effects. The City Council concludes, however, that the Project's benefits outweigh the significant unavoidable impact of the Project, as set forth in the Statement of Overriding Considerations.
TRANSPORTATION AND CIRCULATION			
Impact 3.10-1: Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Existing Plus Project conditions, implementation of the proposed Specific Plan would conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan, without mitigations, results in unacceptable operation at eight of the study intersections, and two of the U.S. 101 ramp junctions. All study segments of U.S. 101 performed within the County CMP standards. (DEIR, pp. 3.10-42 through 3.10-46)	**Mitigation Measure 3.10-1**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal at San Juan Grade Road/Van Buren Avenue, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans for each stage of project development shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-2**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of the existing signal timing at San Juan Grade Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-1 through 3.10-9 be adopted. Mitigation Measures 3.10-1 through 3.10-9 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and ramps. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-3**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the signalization of the intersection at Hemingway Drive/East Boronda Road or equivalent traffic control (such as a roundabout), in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of roundabouts), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-4**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings at North Main Street/Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-5**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the widening of the intersection at Natividad Road/East Laurel Drive to add additional northbound and southbound through lanes, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of a roundabout), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-6**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the installation of a traffic signal or equivalent traffic control (such as a roundabout) at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. If this intersection is developed as a signalized intersection (instead of a roundabout), this measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-7**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the optimization of existing signal timings and to add an eastbound left turn pocket at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. This mitigation includes the addition of an eastbound left turn pocket and optimization of the existing signal timing to better accommodate the expected changes in traffic distribution and volume with implementation of the proposed project. The final improvement plans shall note		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-8**: Each project applicant for development within the Specific Plan Area shall provide its fair-share funding for the addition a southbound left turn lane and optimization of the traffic signal's timing at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share requirement. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-9**: Each project applicant for development within the Specific Plan Area shall contribute its fair-share funding to the Transportation Agency for Monterey County (TAMC) Regional Development Impact Fee (RDIF) Program and the City of Salinas' Traffic Impact Fee (TIF) Program, as determined by the TAMC and the City of Salinas, respectively, in proportion to the area planned for development by each project applicant. These programs include improvements to U.S. 101 that would improve mainline and ramp junction operations, which would mitigate the proposed project's impact to the U.S. 101 ramp junctions affected by the proposed project (i.e. the Northbound Road Off-Ramp and Northbound West Laurel Drive Off-Ramp). Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design.		
Impact 3.10-2: Under Existing Plus Project and Central Area Specific Plan conditions, implementation	**Mitigation Measure 3.10-10**: Each project applicant for development within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
of the proposed Specific Plan may conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Existing Plus Project and Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan would result in unacceptable operation at ten of the study intersections, and two of the U.S. 101 ramp junctions, under the Existing Plus Project and Central Area Specific Plan scenario. All study segments of U.S. 101 performed within the County CMP standards. (DEIR, pp. 3.10-53 through 3.10-56)	Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-11**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to convert the eastbound right turn lane to a shared through-right turn lane at Natividad Road/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-12**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for addition of an eastbound right turn pocket at the intersection of North Sanborn Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-13**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding for the installation of a traffic signal at the intersection of Williams Road/East Boronda Road, in proportion to the area planned for		environment. The City Council hereby directs that Mitigation Measures 3.10-10 through 3.10-14 be adopted. Mitigation Measures 3.10-10 through 3.10-14 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and ramps. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-14**: Each project applicant for development within the Specific Plan Area shall provide its fair-share of funding to optimize the existing traffic signal timing and splits at the South Sanborn/North Sanborn/John Street intersection, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department.		
Impact 3.10-3: Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Cumulative Plus Project conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan under the cumulative Plus Project scenario would result in unacceptable operation at seventeen of the study intersections, and three of the freeway segments. All ramp junctions perform at or above the minimum standards set by the County CMP under this scenario. (DEIR, pp, 3.10-63 through 3.10-70)	**Mitigation Measure 3.10-15**: Each project applicant for development within the Specific Plan Area shall contribute its fair-share of funding to the TAMC Regional Development Impact Fee provides mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Southbound Ramps/Echo Valley Road/Crazy Horse Canyon Road. Regional fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-16**: Each project applicant for development within the Specific	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-15 through 3.10-27 be adopted. Mitigation Measures 3.10-15 through 3.10-27 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and segments. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Plan Area shall contribute its fair-share of the TAMC Regional Development Impact Fee to provide mitigation for this impact identified as the installation of a traffic signal at intersection of U.S. 101 Northbound Ramps/Crazy Horse Canyon Road. Total fees shall be determined by the City of Salinas in consultation with TAMC. Fees are payable prior to issuance of a Certificate of Occupancy for residential and prior to building permit issuance for non-residential development. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-17**: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Crazy Horse Canyon Road/San Juan Grade Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall consider the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-18**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Natividad Road/Rogge Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-19**: Each project

	applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a traffic signal at intersection of Natividad Road/Russell Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-20**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of southbound and westbound left turn lanes at the intersection of North Main Street/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-21**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a southbound left turn lane at the intersection of Constitution Boulevard/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-22**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	for the installation of a traffic signal at the intersection of Old Stage Road/Williams Road/Private Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-23**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound through lane, the addition of a northbound right turn overlap phase, and the conversion of the westbound through lane to a westbound shared through-left turn lane at the intersection of North Main Street/East Bernal Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note these improvements and the fair-share funding requirement. **Mitigation Measure 3.10-24**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound and southbound through lanes at the intersection of Sherwood Drive/Natividad Road & East Bernal Drive/La Posada Way, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	Mitigation Measure 3.10-25: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of South Davis Road/Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-26**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane and a southbound left turn lane at the intersection of Salinas Street/North Main Street/West Market Street/East Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-27**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a northbound left turn lane at the intersection of South Main Street/West Blanco Road/East Blanco Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		
Impact 3.10-4: Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by	**Mitigation Measure 3.10-28**: Prior to the approval of final improvement plans for each tentative map, each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the	LTS	Changes or alterations have been required in, or incorporated into the project, which avoid the significant effects on the environment. The City Council hereby directs that Mitigation Measures 3.10-

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
the City of Salinas, Monterey County, and Caltrans (Potentially Significant) Under Cumulative Plus Project with Central Area Specific Plan conditions, implementation of the proposed Specific Plan may conflict with the transportation performance measures established by the City of Salinas, Monterey County, and Caltrans. Implementation of the Specific Plan would result in unacceptable operation at twenty-two of the study intersections, and four of the freeway segments, under the cumulative Plus Project with Central Area Specific Plan scenario. All ramp junctions perform at or above the minimum standards set by the County CMP under this scenario. (DEIR, pp, 3.10-76 through 3.10-81)	installation of a traffic signal at intersection of Old Stage Road/Hebert Road, in proportion to the area planned for development by such project applicant. Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. This measure shall include the use of currently available Adaptive Traffic Control Systems (ATCS) in the intersection design, as specified by the City of Salinas Public Works Department. **Mitigation Measure 3.10-29**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of northbound and southbound through lanes on Natividad Road and for the conversion of the existing eastbound right turn lane on East Laurel Drive to a shared through-right turn lane, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-30**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of eastbound and southbound left turn lanes at Constitution Boulevard/East Laurel Drive, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-31**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a westbound left turn lane at the intersection of North Sanborn Road/Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to		28 through 3.10-33 be adopted. Mitigation Measures 3.10-28 through 3.10-33 require payment of the applicable fair-share funding for the various improvements that would be required in order to improve traffic conditions at the impacted study intersections and segments. Therefore, this impact is less than significant with mitigation incorporated.

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
	issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-32**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of an eastbound left turn lane at Williams Road/East Boronda Road, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement. **Mitigation Measure 3.10-33**: Each project applicant for development within the Specific Plan Area shall provide its fair-share contribution for the installation of a southbound left turn lane at the intersection of East Front Street/Sherwood Drive/Market Street, in proportion to the area planned for development by such project applicant, in accordance with City policies (payable prior to issuance of Certificate of Occupancy for residential and prior to building permit issuance for non-residential development). Total fees shall be determined by the City of Salinas. The final improvement plans shall note this improvement and the fair-share funding requirement.		
Impact 3.10-5: Implementation of the proposed Specific Plan would not result in changes to air traffic patterns (Less than Significant) The nearest air facility to the Specific Plan boundaries is Salinas Municipal Airport, located approximately four miles to the southeast. Additionally, Marina Municipal Airport is located approximately six miles to the southwest. The Specific Plan Area contains no existing or planned airport facilities. The proposed land use changes to and development of the Specific Plan Area are expected to have no effect on the Salinas Municipal Airport or Marina Municipal Airport approach or departure zones, or any other airport approach or	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
departure zones. Implementation of the proposed Specific Plan would not result in changes to air traffic patterns. (DEIR, pp, 3.10-81 through 3.10-82)			
Impact 3.10-6: Implementation of the proposed Specific Plan would not substantially increase hazards due to a design feature (Less than Significant) Implementation of the proposed Specific Plan would not substantially increase hazards due to a design feature. Development within the Specific Plan Area would include new streets, access points, paths, and other circulation improvements that would be reviewed and checked for compliance with design and safety standards as part of the entitlement process conducted by the City of Salinas. (DEIR, pp, 3.10-82)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.10-7: Implementation of the proposed Specific Plan would not result in impacts related to emergency access (Less than Significant) Buildout of the proposed Specific Plan would result in increased development densities and land use intensities within the Specific Plan Area. As a result of buildout of the West Area Specific Plan, which includes the development of an internal transportation network within the Plan Area, the volume of users travelling within the Specific Plan Area is expected to increase. Emergency access along proposed and existing roadways must be accommodated in conjunction within the expected population and employment growth. Plans submitted for individual developments to be constructed in the Specific Plan Area would be reviewed for compliance with emergency access requirements by public safety officials during the City's entitlement process. Implementation of the proposed Specific Plan would not result in impacts related to emergency access. (DEIR, pp, 3.10-82)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.10-8: Implementation of the proposed Specific Plan would not conflict with adopted multi-modal circulation policies, plans, or programs, and would not decrease the performance or safety of public transit, bicycle, or pedestrian facilities (Less than Significant) Implementation of the Specific Plan would be consistent with, and would expand upon, the pedestrian and bicycle network identified in the 2002 *Salinas Bikeways Plan*. The Specific Plan	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
would improve the existing bicycle and pedestrian circulation infrastructure within the Specific Plan Area, as well as adjacent areas in the City of Salinas. The West Area Specific Plan is estimated to generate approximately 1,000 new transit trips on a daily basis, as well as 140 trips in the morning peak hour and 150 trips in the evening peak hour (Fehr & Peers, 2018). These new transit trips alone are not expected to overburden existing transit service in the area. Implementation of the proposed Specific Plan would not conflict with adopted multi-modal circulation policies, plans, or programs, and would not decrease the performance or safety of public transit, bicycle, or pedestrian facilities. (DEIR, pp, 3.10-83 through 3.10-84)			

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
UTILITIES			
Impact 3.11-1: The proposed project has the potential to exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board (Less than Significant) Wastewater generated within the Plan Area would be conveyed by the City of Salinas wastewater conveyance system to M1W Regional Treatment Plant. M1W, a regional agency, owns and operates M1W Treatment Plant. The wastewater treatment system treats domestic wastewater from residential and commercial sources. Waste Discharge Requirements (WDRs) Order No. R3-2018-0017 provides waste discharge requirements for M1W Treatment Plant, and a supply capacity of up to 29.6 MGD. Implementation of West Area Specific Plan would be covered under the existing capacity and would not exceed the wastewater discharge requirements in this Order. (DEIR, pp. 3.11-9)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-2: The proposed project has the potential to result in a determination by the wastewater treatment and/or collection provider which serves or may serve the project that it does not have adequate capacity to serve the project's projected demand in addition to the provider's existing commitments (Less than Significant) The City of Salinas Sanitary Sewer Master Plan projects new development would increase the total wastewater discharge to an average dry weather flow to a maximum of approximately 22.1 MGD at full build-out of the entire City Sphere of Influence. The estimated wastewater discharge for full buildout of the proposed project would be approximately 1.0 MGD. The West Area Specific Plan would increase the amount of wastewater requiring treatment. The wastewater would be treated at M1W Treatment Plant. The (WDRs Order No. R3-2018-0017 allows M1W Treatment Plant to accept up to 29.6 MGD. Given a current demand of approximately 16 MGD (as provided by M1W Treatment Plant Engineer Jennifer Gonzalez), the M1W Treatment Plant currently has an additional capacity of approximately 11 MGD; given 1.0 MGD generated by the project, there is sufficient plant capacity. (DEIR, pp. 3.11-10 through 3.11-11)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.11-3: The proposed project has the potential to require or result in the construction of new wastewater treatment or collection facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) The West Area Specific Plan project does not trigger a need to expand the M1W Treatment Plant. There would be a network of sewer collection infrastructure installed throughout the Plan Area to serve the West Area Specific Plan. The potential for environmental impacts associated with the installation of the wastewater collection system, and all construction activities within the Plan Area, are addressed throughout this EIR. (DEIR, pp. 3.11-11 through 3.11-12)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-4: Cumulative impact on wastewater utilities (Less than Significant) The M1W plant is designed and constructed to handle 29.6 MGD; which is more than 4 MGD than the project 2055 demand, under the worst case scenario modelled. The 1.0 MGD expected to be generated by full buildout of the proposed project would thereby leave approximately 3.6 MGD available in 2055, under the worst case scenario modelled. Moreover, it is more than likely that this represents an overestimate of cumulative wastewater demand, given that this estimate utilizes the higher end of the range of projected wastewater at the M1W Regional Treatment Plant in the future. Additionally, buildout of the Specific Plan is expected to occur over an approximately 20 to 30 year timeframe; therefore buildout is expected to occur no later than approximately 2048 (at latest). Therefore, using the year 2055 as the analysis year serves as a conservative date for buildout of the proposed project. (DEIR, pp. 3.11-12 through 3.11-13)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-5: The proposed project has the potential to require construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) The proposed project would not require construction of new water treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. The water infrastructure is sized to meet the	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
demand within the Plan Area. All offsite improvements are to be placed in or adjacent to existing streets to minimize potential impacts. Although the West Area Specific Plan would not require the expansion of existing water treatment facilities, the West Area Specific Plan may require the construction of a new centralized treatment facility within the Plan Area. This treatment facility would be specifically sized to serve the West Area Specific Plan and would not be upsized to ensure that it does not induce growth beyond what is anticipated by the West Area Specific Plan. (DEIR, pp. 3.11-37 through 3.11-38)			
Impact 3.11-6: The proposed project has the potential to have insufficient water supplies available to serve the project from existing entitlements and resources (Less than Significant) Water supplies are sufficient to meet the City's existing and projected future potable water demands, including those future water demands associated with the West Area Specific Plan, to the year 2035 under all hydrologic conditions. The three new groundwater wells would provide adequate groundwater for the proposed project. Additionally, the Cal Water Salinas District has sufficient water supply throughout its service area to serve the proposed project, even during the third year of a multi-year drought, and even if the proposed project's groundwater wells proved to not be sufficient to serve the entire Plan Area. Moreover, the development of the West Area Specific Plan would reduce consumption of groundwater (equivalent to increasing groundwater storage), when compared to the existing agricultural uses; this would also have the effect of reducing the potential for seawater intrusion into the groundwater basin, when compared to the existing agricultural uses. (DEIR, pp. 3.11-38 through 3.11-41)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-7: Cumulative Impact on Water Utilities (Less than Significant) There would be sufficient water resources available to provide supply for buildout of the cumulative scenario, so that no significant cumulative effect on the overall water supply would result. (DEIR, pp. 3.11-41 through 3.11-43)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact 3.11-8: The proposed project has the potential to require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects (Less than Significant) No new or expanded existing off-site infrastructure is proposed or would be required. Proposed project storm water infrastructure would be developed on-site, with connections made to off-site existing storm drain pipes along existing rights-of-way (such as along McKinnon Street). Installation of storm drainage infrastructure would occur during the construction phase of the proposed project. The construction of the new on-site stormwater drainage facilities, which are associated with the proposed project, has the potential to cause environmental impacts. The potential for environmental impacts associated with the installation of the stormwater system, and all construction activities within the Plan Area, are addressed throughout this EIR. (DEIR, pp. 3.11-63)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-9: Cumulative Impact on Stormwater Facilities (Less than Significant) The West Area Specific Plan includes an extensive system of on-site stormwater collection, treatment and retention facilities to accommodate the increased stormwater flows that would originate in the Specific Plan Area. Surface runoff from the area will be managed via detention/retention basins and flow reducing Best Management Practices (BMPs) to prevent local flooding within the Specific Plan Area. These features will also reduce peak flows from the Specific Plan Area to receiving creeks and storm drains to amounts less than such flows under existing conditions. The construction, maintenance, and operation of all stormwater facilities are not anticipated to cause substantial adverse impacts. The proposed project would not have cumulatively considerable impacts associated with stormwater facilities. (DEIR, pp. 3.11-63 through 3.11-65)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Impact 3.11-10: The proposed project would be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs and comply with federal, State, and local statutes and regulations related to solid waste (Less than	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Significant) The West Area Specific Plan would be required to comply with applicable State and local requirements including those pertaining to solid waste, construction waste diversion, and recycling. The addition of the volume of solid waste associated with the West Area Specific Plan, approximately 24.5 tons per day at total buildout, would increase the total to the Johnson Canyon Landfill; however, this increase would not cause an exceedance of the landfill's remaining capacity. (DEIR, pp. 3.11-72)			
Impact 3.11-11: Cumulative Impact on Solid Waste Facilities (Less than Significant) The Salinas Valley Solid Waste Authority service area is expected to add numerous developments through 2055. The Central Area Specific Plan, East Area Specific Plan, and the Economic Development Element (EDE) are three such areas, located within the City of Salinas. These new areas would generate an estimated 75 to 100 tons per day at total buildout. Buildout of other communities within the Salinas Valley Solid Waste Authority' service area would also affect Johnson County Landfill. These jurisdictions within the region are likely to generate new sources of solid waste that would need to be processed at the landfill. The Johnson Canyon Landfill has the capacity to serve nearly three times as much waste per day as it does currently and will have sufficient capacity to serve communities within the Salinas Valley Solid Waste Authority service area. Implementation of the proposed project would have a less than significant cumulative impact relative to this environmental topic. (DEIR, pp. 3.11-72 through 3.11-73)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
OTHER ISSUES			
Aesthetics The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would allow development to occur in the City in both vacant and underdeveloped portions of the community, and that the introduction/expansion of urban uses into these areas has the potential to interrupt views of natural features, open space, the hillsides, and agricultural resources, reducing the aesthetic value of these resources. Additionally, new development	To minimize and mitigate the impacts on aesthetics, the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) presented the following five mitigation measures: Mitigation Measure A1 requires the City to implement the City's Gateway Guidelines; Mitigation Measure A2 requires the City to strengthen and require compliance with the City's Design Guidelines; Mitigation Measure A3 requires the City to improve the Lighting Ordinance; Mitigation Measure A4 requires the	LTS	Three of the five mitigation measures included in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), including Mitigation Measures A1, A2, and A3, are requirements for the City of Salinas to implement. These measures do not apply to the proposed project. Mitigation Measures A4 and A5 are requirements for both the City and for proposed projects or discretionary projects. The proposed project would be subject to Mitigation Measure A4, which requires consistency with the landscaping requirements. All landscaping in the Specific Plan Area would be subject to the City's landscaping requirements. The proposed project would also be

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
in the City was found to increase the amount of light and glare in the community, particularly in areas planned for nonresidential development, such as retail and general commercial. It was also found that future development under the General Plan has the potential to change the visual character of the City. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that aesthetic impacts associated with the FGAs, which includes the West Area Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the proposed project, would be required to comply with the above referenced regulations, policies, and standards. Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). (See the Initial Study)	City to implement landscaping requirements for all proposed projects; and Mitigation Measure A5 requires the City to review all discretionary projects for aesthetics impacts.		subject to Mitigation Measure A5, which requires the City of review the proposed project for aesthetics impacts. Impacts to aesthetics are analyzed in the Initial Study for the project. See Appendix A of the Draft EIR for the West Area Specific Plan Initial Study. Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Agriculture and Forest Resources The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) noted that General Plan buildout would result in the conversion of 3,525 acres of agriculture lands to urban uses. The *Final Environmental Impact Report,* also indicates that General Plan buildout would result in agricultural activity in proximity to residential and other urban uses, which may result in conflicts between the uses. It is noted that agricultural activity can cause nuisances related to air quality and noise that may disturb surrounding development. Urban activities may also negatively affect nearby agricultural uses, as increased vandalism often occurs and the introduction of domestic animals may disturb certain agricultural activities. The City of Salinas certified the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), adopted a statement of overriding considerations relative to this significant and unavoidable impact, and approved the Salinas	The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the implementation of Mitigation Measures AG1 through AG4, the impacts on potential compatibility issues would be reduced to a less than significant level; however, while the impacts on agricultural conversion would be reduced to the extent feasible, a significant and unavoidable impact would remain related to the loss of important farmland. Mitigation AG5 specifically addressed Agricultural Land Conservation Easement Program, which states that the City will work with the County of Monterey and other local jurisdictions to create and implement an agricultural land conservation easement program, including such measures as securing the dedication of easements or by paying a mitigation fee that could be used to purchase easements through a mitigation bank. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a $750.00 per acre mitigation fee for agricultural lands currently	LTS	All of the five mitigation measures included in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002), including Mitigation Measures AG1 through AG5, are requirements for the City of Salinas to implement. These measures do not apply to the proposed project. Additionally, in 2006, the City Council adopted Resolution No. 19422, approving the Agricultural Land Preservation Program. The resolution adopted a per acre mitigation fee for agricultural lands currently designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance." The project would be subject to this fee. Impacts to agricultural resources are analyzed in the Initial Study for the project. See Appendix A of the Draft EIR for the West Area Specific Plan Initial Study. Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
General Plan. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that agricultural impacts associated with the FGAs, which includes the Specific Plan, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). Any future development under the approved General Plan, which includes all development under the proposed project, would be required to comply with the above-referenced regulations, policies, and standards. Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). (See the Initial Study)	designated by the California Department of Conservation's Farmland Mapping Program as "Prime" or "of Statewide Importance."		
Geology and Soils Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed in the Final Environmental Impact Report, Salinas General Plan (Cotton Bridges Associates 2002) and Final Supplemental for the Salinas General Plan Final Program EIR (EDAW/AECOM 2007). (See the Initial Study)	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)
Hazards and Hazardous Materials While the Draft EIR analyzes Hazards and Hazardous Materials, several topics were determined to not warrant additional analysis within the Chapter. The land uses proposed within the Specific Plan Area would not be expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Additionally, these uses are not expected to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Furthermore, the proposed project is not located in the vicinity of an airport or private airstrip; therefore, it would not result in a safety hazard related to air traffic for people residing or working in the Specific Plan Area. These topics do not	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
warrant additional analysis and will not be addressed further in the EIR. Separately, the City has adopted a Multi-hazard Emergency Plan, which serves as extensions of the California Emergency Plan and the Emergency Resource Management Plan. The purpose of the Multi-hazard Emergency Plan is to respond to emergency situations with a coordinated system of emergency service providers and facilities. The Emergency Operations Center (EOC) in City Hall serves as the center of the City's emergency operations. The Plan also addresses evacuation and movement of people in the event of an emergency. The proposed project does not impair implementation of or physically interfere with the Multi-hazard Emergency Plan. Implementation of the proposed project would have a less than significant impact relative to this environmental topic and will not be further analyzed or addressed further in the EIR. Lastly, the proposed project is not located in an area that is considered a high risk for wildfires. The proposed project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. (See the Initial Study)			
Land Use and Planning The *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002) concluded that with the impacts would be reduced to a **less than significant** level with mitigation. Subsequently, the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) indicated that impacts associated with the FGAs, which include the Specific Plan Area, would not be different from those discussed in the *Final Environmental Impact Report, Salinas General Plan* (Cotton Bridges Associates 2002). The City certified the Final Supplemental EIR and approved annexation of the North of Boronda FGA, which includes the West Area Specific Plan. The project, as proposed, is consistent with the Greater Salinas Area Memorandum of Understanding (GSA-MOU). All development under the proposed project would be required to comply with the regulations, policies, and standards identifies in the *Final Environmental*	No additional mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ENVIRONMENTAL IMPACT (SIGNIFICANCE BEFORE MITIGATION)	MITIGATION MEASURES	LEVEL OF SIGNIFICANCE AFTER MITIGATION	FINDINGS OF FACT
Impact Report, Salinas General Plan (Cotton Bridges Associates 2002), and *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007). Implementation of the proposed project would not result in any new significant adverse impacts beyond those addressed within these supporting documents. (See the Initial Study)			
Mineral Resources It was determined in the *Final Supplemental for the Salinas General Plan Final Program EIR* (EDAW/AECOM 2007) that development of the FGA, including the Specific Plan Area, would not have a significant impact on mineral resources or mining activities. As such, implementation of the proposed project would have no impact on mineral resources. (See the Initial Study)	No mitigation measures are necessary.	LTS	Under CEQA, no mitigation measures are required for impacts that are less than significant. (Pub. Resources Code, § 21002; CEQA Guidelines, §§ 15126.4, subd. (a)(3), 15091.)

ATTACHMENT 21

PROJECT FINDINGS FOR CONSIDERATION OF THE WEST AREA SPECIFIC PLAN (SPEC 2013-002), REZONING (RZ 2019-001), AND DEVELOPMENT AGREEMENT (DA 2019-001)

I. PROJECT DESCRIPTION AND APPROVALS

A. Project Location

The applicant, Brian Finegan, Esq. (representing multiple property owners and developers), is requesting a series of approvals that would enable the development of a 797-acre Specific Plan area ("project site") within the North of Boronda Future Growth Area (FGA) of the City . The project site is bounded by Boronda Road to the south, San Juan Grade Road to the west, Natividad Road to the east and Russell Road and Rogge Road to the north. Attachment 7 of the staff report, Project Site Location Map, shows the project site vicinity and the North of Boronda FGA.

The project site is bordered on the north primarily by existing residential development (the Bolsa Knolls area) and scattered residential and agricultural-related uses located in unincorporated Monterey County, on the east by agricultural uses in unincorporated Monterey County and the proposed Central Area Specific Plan area, on the south by existing residential and commercial development (Harden Ranch Specific Plan area), and on the west by existing residential development and commercial development (the Gateway Shopping Center Specific Plan). Attachment 8 of the staff report, Property Ownership/Existing Conditions Map, shows the project boundaries, owners and existing uses.

B. Project Description

The applicant is seeking the following approvals from the City Council: 1) Specific Plan (SPEC 2013-002); 2) Rezoning (RZ 2019-001); and 3) Development Agreement (2019-001), collectively referred to as the "Project". At build-out (estimated to occur over the next 20 to 30 years), the project would establish: 4,340 dwelling units provided as a mix of low, medium and high densities, a Village Center with up to 571,500 square feet of mixed-use commercial floor area, eleven parks, five schools (one high school, one middle school and three elementary schools), and other associated uses supporting the development including but not limited to open space and well-sites.

Specific Plan. A specific plan is a development guidance tool that is required for all new development proposed within the FGA pursuant to the General Plan. The draft *West Area Specific Plan* ("Specific Plan") prepared by the applicant under the direction of the City provides direction for the land uses, development regulations, design standards, circulation, infrastructure, storm water and water quality management, public financing and implementation and administration of the Specific Plan. The Specific Plan includes modifications to development regulations found in the City of Salinas Zoning Code to facilitate the New Urbanism development mandated under the General

Plan for this area. The changes to development regulations would apply only to development within the Specific Plan boundary, which is coterminous with the project site boundary. Attachment 11 of the staff report contains the Specific Plan and herein incorporated by reference. Table 1, Summary Land Use Plan, provides an overview of the project.

Table 1 Summary Land Use Plan

Land use		**Framework Acres**	**Projected Dwelling Units or Square Feet**
Residential Planning Areas	NE (Low)	227.72	1,361 du
	NG-1 (Medium)	188.44	1,803 du
	NG-2 (High)	59.84	1,085 du
	VC (Village Center)	4.55	91 du
	Total	**480.55**	**4,340 du**
Mixed use Village Center (1)		20.13	571,500 sq. ft.
Total Residential and Village Center		**500.68**	
High School		38.97	
Middle School		20.78	
Elementary School #1		10.98	
Elementary School #2		10.00	
Elementary School #3		10.00	
Community Park		30.83	
Neighborhood Parks (four)		12.52	
Small Parks (six)		6.41	
Supplemental Detention/Retention Basin Open Space		35.03	
Water Wells/Water Treatment		1.50	
Total Public Facilities		**177.02**	
Circulation Roadways (2)		118.85	
Total		**796.55**	

Rezone. The applicant is requesting approval of a rezone to establish zoning district classifications for the project site, which are consistent with the Salinas Zoning Code (and Map) and implement the existing General Plan land use designations for the project site. The existing zoning for the project site is New Urbanism Interim (NI) with a Specific Plan Overlay District. The proposed zoning

districts for the project site are Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1 (NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC). The proposed districts align with New Urbanism (NU) zoning districts contained in Division 8 of the Salinas Zoning Code and correspond with the Residential Low Density, Residential Medium Density, Residential High Density and Mixed Use Land Use Designations, respectively contained in the General Plan. Additional zoning districts proposed for the project site include Parks (P), Open Space (OS), and Public/Semipublic (PS). The proposed districts are shown in Attachment 12 of the staff report, incorporated herein by reference. The above-referenced districts also include a Specific Plan Overlay District.

Development Agreement. A development agreement has been prepared pursuant to Government Code Section 65864. The development agreement allows the applicant to proceed with the project in accordance with existing policies, rules, and regulations, subject to the conditions of approval, thus vesting certain development rights in the property.

C. Project Objectives

The following key objectives are the basis for the formulation of the Specific Plan policies, design principles, regulations and development standards:

1. Create a community with a compact form that promotes sustainable neighborhood design and is pedestrian, bicycle, and transit friendly;

2. Provide a variety of land uses in east walking distance of housing including a mixed use village, parks, and schools to lower vehicle miles traveled;

3. Provide parks and other public green space in accordance with General Plan standards that are designed to be safe and easily accessible to residents;

4. Provide a balance of low density, medium density, and high density housing to provide a variety of housing options for residents at various life stages;

5. Provide public services and infrastructure improvements that achieve and maintain City service standards;

6. Provide an inviting tree-lined street system which incorporates traffic calming and other measures;

7. Establish an interconnected path and open space system throughout the development that links to the greater North of Boronda FGA and City as a whole;

8. Create a sense of place and unique identity through the use of entry treatments, landscaping, streetscapes, public art, decorative street lighting, pedestrian amenities and other elements;

9. Provide for a reasonable jobs/housing balance;

10. Provide opportunities for senior housing and/or affordable housing; and

11. Provide for a site/parcel-based post construction Stormwater Control Measures (SCMs)/LID to the maximum extent practicable.

II. FINDINGS

For purposes of the following discussion, the Project is considered to be development of the project site as would be permitted upon the City's approval of the proposed Specific Plan, Rezone, and Development Agreement.

A. Specific Plan Findings

1. **Finding:** The proposed location of development and proposed conditions under which it will be operated and maintained is consistent with the goals and policies embodied in the Salinas General Plan and other applicable plans and policies adopted by the City Council.

   Evidence: The project site is located within the Future Growth Area (FGA) located north of East Boronda Road (referred to as the North of Boronda FGA). This area is designated under the General Plan to accommodate the anticipated future growth in the City. In accordance with the General Plan, the FGA is subject to the adoption of Specific Plans by the City Council prior to any development in this area. The Specific Plans are intended to specify the ultimate distribution, location and intensity of land uses in these areas in accordance with the total development capacities provided under the General Plan. As such, development of the project site has been planned for and has been anticipated by the City as part of a coordinated long-term development process for this area.

   The General Plan land use designations shown for land located with the FGA are illustrative in nature and subject to adjustment and refinement as part of the Specific Plan approval process. Under the Specific Plan, (encompassing approximately 797 acres of land), approximately 227.72 acres of land will be designated "Residential Low Density"; 188.44 acres of land will be designated "Residential Medium Density"; 59.84 acres of land will be designated "Residential High Density"; 24.68 acres of land will be designated "Mixed Use"; 49.76 acres of land will be designated "Park"; 35.03 acres of land will be designated "Open Space"; and 92.23 acres of land will be designated "Public/Semipublic". These proposed land uses are consistent with the land uses envisioned under the General Plan for this area.

The maximum number of dwelling units (without density bonus, conversion of commercial floor area, or accessory dwelling units) provided in the Plan Area is 4,340, which meets the overall minimum average density of nine dwelling units per net residential acre required under the General Plan for residential development in the FGA. The Specific Plan has also been designed and planned to ensure that 15%-25% of the dwelling units fall in the density range of 16-24 dwelling units per net residential acre, and 35%-45% fall in the density range of 7-14 dwelling units per net residential acre. These percentages are required under the General Plan to ensure a variety of dwelling types, specific densities and affordability levels are provided in the Plan Area.

The maximum square footage of proposed retail/commercial uses permitted under the Specific Plan is 571,500 square feet. Parks, schools (comprised of two existing schools and three proposed school sites) and open space (supplemental stormwater basins) are also provided in the Plan Area. These land uses and development intensities are consistent with the types of uses and development capacity anticipated for the North of Boronda FGA under the General Plan.

The Specific Plan has incorporated New Urbanism Design Principles, Crime Prevention Through Environmental Design (CPTED) and other design principles in accordance with the requirements of the General Plan to guide development in the FGA. Emphasis on pedestrian-friendly development through traffic calming, narrow streets, pedestrian linkages and dwellings oriented to the street promote walkability and foster a sense of community as envisioned under the General Plan. On-street bicycle lanes and routes will also be provided along the southerly and northerly greenways, East Boronda Road, Russell Road , San Juan Grade Road, McKinnon Street, El Dorado Drive and Natividad Road to promote the use of alternative forms of transportation and provide off-site connections to surrounding facilities. The Project also includes provisions for electrical vehicle charging to promote energy conservation and to reduce fossil fuel consumption as encouraged by the General Plan.

Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference.

2. **Finding:** The development will not be detrimental to the public health, safety, or welfare of persons residing or working in or adjacent to such a development, nor detrimental to properties or improvements in the vicinity or the general welfare of the City.

Evidence: The potential environmental effects of the Project were fully evaluated in the Final Program Environment Impact Report (EIR) prepared for the project. The project includes significant and unavoidable impacts as well as impacts that can be mitigated to a less than significant level. The full explanation (of environmental impacts) is discussed in Attachment 20 of the staff report, CEQA Findings and Statement of Overriding

Considerations, incorporated herein by reference.
The Specific Plan proposes land uses and improvements, which are generally compatible with and complementary to surrounding development located to the north, south, east and west of the Plan Area. It also includes standards, which implement design principles such as CPTED to promote "eyes on the street" through the use or porches and other elements to discourage criminal activity and promote safer neighborhoods.

The Specific Plan incorporates Low Impact Development (LID) and other features to ensure the Project is in compliance with the requirements of the General Plan, City's Storm Water Management Program and the City's National Pollutant Discharge Elimination System Permit.

Local demand for housing is high, particularly for affordable housing. The project will contribute to public welfare by providing dwelling units across a variety of housing types, densities and affordability levels. Market rate and inclusionary housing will be provided. The Project will be subject to City's Inclusionary Housing Ordinance.

3. **Finding:** The Specific Plan and resulting development will be consistent with the provisions of Article 8 of Chapter 3 of California Government Code, commencing with Section 65450 as may be subsequently amendment by the State of California.

Evidence: The California Government Code sections referenced above include Sections 65450 through 65457. Of these, Sections 65451, 65454 and 65455 are directly applicable to the adequacy of the Specific Plan and to discretionary actions related to its implementation.

California Government Code Section 65451 addresses the content requirements of a specific plan. The West Area Specific Plan has been reviewed by City staff and the City Attorney and found to be consistent with the content requirements in Section 65451.

California Government Code Section 65454 requires that a specific plan may not be adopted or amended unless it is consistent with the City's General Plan. As described in Finding "A.1" herein, and the proposed Planning Commission resolution recommending approval and adoption of the Specific Plan, the West Area Specific Plan has been found to be consistent with the Salinas General Plan.

California Government Code Section 654455 provides that no public works project may be approved, no tentative or parcel map may be approved, and no zoning ordinance may be adopted or amended within the areas covered by a specific plan unless it is consistent with the adopted specific plan. The on-site infrastructure needed for the Project has been designed to support the proposed uses and development in the Specific Plan area. Any parcel or tentative map proposed for the Project site will be required to be consistent with the Specific Plan in order to be approved. Development within the Specific Plan area will be subject to the

requirements of the Salinas Zoning Code except as modified by the Specific Plan. Should any conflict arise between the two regulations, the Specific Plan regulations will prevail.

B. Rezoning Findings

1. **Finding:** The amendment (Rezone) is consistent with the Salinas General Plan, any applicable specific plan, and other plans and policies adopted by the Salinas City Council.

   Evidence: The proposed amendment (Rezone) will facilitate the development of the West Area Specific Plan within the North of Boronda FGA, which is consistent with the City's General Plan policy to plan for and manage future growth within designated future growth areas of the City. The Project incorporates New Urbanism and other design principles and provides a variety of dwelling types and densities in accordance with the land use and housing mix required by the General Plan. The proposed Rezone will not conflict with other plans and policies of the Salinas City Council.

   Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference.

2. **Finding:** The amendment (Rezone) will not have the effect of reversing the policies of the Salinas General Plan, any applicable specific plan, and other plans and policies adopted by the Salinas City Council.

   Evidence: The proposed amendment (Rezone) will facilitate the approval and development of the proposed West Area Specific Plan. The Specific Plan provides specific policies to implement the General Plan, Zoning and other plans and policies adopted by the Salinas City Council. There are no policies in the Salinas General Plan that will be reversed as a result of this amendment.

   Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference as additional evidence of the project's consistency.

3. **Finding:** The amendment (Rezone) would not create an isolated district unrelated to adjacent zoning districts.

   Evidence: The proposed Rezone will enable the project site to be developed as a New Urbanism Specific Plan as envisioned under the General Plan. Upon annexation of the project site in 2008, the site was zoned New Urbanism Interim (NI) with a Specific Plan Overlay to provide an interim holding zone until such time specific plans were approved by the City Council for the North of Boronda FGA and the ultimate zoning districts for the area were established. As such, upon the approval of the Specific Plan and Rezone, the project site will be rezoned from the New Urbanism Interim (NI) with a Specific Plan Overlay zoning district to

Neighborhood Edge (NE)/Low Density Residential, Neighborhood General-1(NG-1)/Medium Density Residential, Neighborhood General 2 (NG-2)/High Density Residential, and Village Center (VC) as well as the Park (P), Open Space (OS) and Public/Semipublic zoning districts. The Specific Plan Overlay district will continue to be applicable to each of the districts as well. These districts are compatible with and complementary to the existing residential (low, medium and high density), commercial, park and open space districts located across the major arterial roads, which form the project boundaries.

The proposed Rezone will facilitate the development of a variety of dwelling types and densities, neighborhood commercial retail and services, parks and supporting uses necessary to serve the proposed Specific Plan community and surrounding area. For example, the various residential districts (NE, NG-1 and NG-2) and the Village Center (VC) district will allow the development of 4,340 dwelling units in the Plan Area. Additionally, other types of dwellings such as density bonus units and accessory dwelling units will also be permitted. The Parks (P) district will facilitate the development of 11 parks, which will provide a variety of recreational opportunities for residents of the plan area and the surrounding area. The Open Space (OS) district will facilitate the development of the supplemental detention/retention basins located throughout the site. These basins create open space, passive recreation opportunities and are intended to serve the storm water surface run-off needs of the West Area. The Public/Semipublic district will provide sites for two new elementary schools and one middle school. Lastly, the Village Center (VC) district will facilitate the development of the Specific Plan's town center. This area (including the town square and mixed-use commercial and residential development) is intended to be a destination and focal point for both residents of the Plan Area and surrounding area.

4. **Finding:** The City has the capability to provide public utilities, roads, and services to serve the uses allowed by the proposed Rezoning.

Evidence: The EIR and Specific Plan thoroughly analyzed the infrastructure including public utilities, roads, and services necessary to serve the Project. Respectively, sections 3.11, 3.10, and 3.9 of the EIR address these topics. Through adoption of the Specific Plan, Development Agreement, West Area Specific Plan Final Program Environmental Impact Report (FEIR) and associated Mitigation Monitoring and Reporting Program, the City will ensure the provision of public utilities, roads and services necessary to serve the proposed development is provided.

According to the fiscal impact analysis prepared for the project (Attachment 14), the cost of City services would be offset by increased revenues generated by the Project. No unfunded City services costs have been identified. The West Area Specific Plan is projected to generate an annual surplus of between approximately $1,541,619 to $3,376,303.

C. Development Agreement Findings

1. **Finding:** The Development Agreement is consistent with the Salinas General Plan, any applicable specific plan, and other applicable plans and policies adopted by the Salinas City Council.

Evidence: The Development Agreement is proposed in conjunction with the West Area Specific Plan in accordance with the Salinas General Plan. The Specific Plan implements the goals and policies of the General Plan by providing a comprehensively planned and orderly development in the North of Boronda FGA, designed to incorporate and implement the tenets of New Urbanism, CPTED and other design principles. Additionally, it provides potential employment and recreational opportunities for future and nearby residents and increased tax revenue and expansion to support City services. In this regard, the *Fiscal Impact Analysis* prepared for the Project (included as Attachment 14 to the staff report), is projected to generate an annual revenue surplus of approximately $1,541,619 to $3,376,303 to the City's General Fund. Most importantly; the project will provide critically needed housing in a variety of dwelling types, densities and affordability levels to address the City's housing shortage and overcrowding issues.

Appendix C of the Specific Plan further substantiates the project's consistency with the General Plan and is herein incorporated by reference.

2. **Finding:** A development agreement that includes a subdivision shall not be approved unless the agreement provided that any tentative map prepared for the subdivision will comply with the provisions of Government Code Section 66473.7.

Evidence: Government Code Section 66473.7 addresses the provision of adequate water supply. A Water Supply Assessment was prepared for the project, and is included in the Appendices of the West Area Specific Plan Final Program EIR as Appendix G. California Water Services Company (Cal Water), the water purveyor to the project site, has provided a "Can and Will Serve" letter for the subject project.

Salinas, CA 93901

Subject: West Area Specific Plan

Dear Planning Commissioners,

The Monterey Bay Economic Partnership (MBEP) was founded in 2015 with a mission to improve the economic health and quality of life in the Monterey Bay Region. Our Housing initiative was launched the same year to support and catalyze an increase in housing, of all types and income levels, in the region. Our Housing initiative begins with a broad coalition of community members, local employers, and organizations to advocate for the construction of housing.

The West Area Specific Plan proposes a maximum of 4,430 homes with an average minimum density of nine units per residential acre. This project has the potential to ameliorate the local housing shortage and establishing a positive precedent for future developments. Every possible step should be taken to strengthen the Project's density in order to maximize the development of prime agricultural land.

In 2018, MBEP partnered with Envision Housing to publish a Housing Policy White Paper, outlining several ways local governments can easily increase the quantity of housing built and encourage housing affordability. We applaud the City for the progress it's made in adopting some of our recommendations, such as the deferral of impact fees for housing developments. However, there still remains much work to be done.

3180 Imjin Road, Suite 102
Marina, CA 93933 831.915.2806

Santa Cruz . San Benito . Monterey

Monterey Bay
ECONOMIC PARTNERSHIP

The adoption of an Enhanced Density Bonus Ordinance would provide additional concessions to market-rate developments in exchange for the inclusion of additional deed-restricted housing units. The City's Density Bonus could be strengthened up to 50%, as neighboring jurisdictions have done. More certainty for long-term ADU policies, such as the City's temporary five-year impact fee holiday, should be codified as a condition of the Plan's development agreement and adoption. Additional opportunities to strengthen the plan include reducing parking requirements and zoning for higher housing densities to yield maximum land use and benefit.

We encourage the City to consider the adoption of such policies to facilitate the creation of affordable housing, mitigate unaffordability and optimize housing outcomes resulting from the West Area Specific Plan's adoption. We also encourage the City to ensure that increased housing density goals outlined in the Plan are fulfilled by developers such as maximizing mixed use opportunities and ADU development.

In summary, MBEP would like to strongly encourage:

1. Implementation of enhanced density bonus policy
2. Conversion of commercial space where feasible to maximize housing as part of mixed-use site
3. Incentives for ADU development (fee waivers, design standards, etc.)

The West Area Specific Plan is the largest housing decision put forth to the City of Salinas in a generation. The Project has great potential and should be strengthened where possible to ensure it results in the greatest positive outcome for the City of Salinas.

Thank you for your consideration.

Sincerely,

Kate Roberts

Mayor Gunter, Salinas City Councilmembers and Planning Commissioners
Salinas City Hall
200 Lincoln Avenue
Salinas, CA 93901

RE: Increase Affordable Housing and Tenant Protections to Mitigate the West Area Specific Plan Impacts

Dear Mayor Gunter, Councilmembers and Planning Commissioners:

We are a group of local residents and stakeholders who have come together to support increased affordable housing in Salinas. We have concerns regarding the proposed West Area Specific Plan (WASP).

Presently, the median rent for a two-bedroom apartment in Salinas is $2,095, nearly double the national average.[1] The skyrocketing rents, combined with the city's median household income of $54,864,[2] have resulted in severe overcrowding, substandard living conditions, and housing prices that are out of reach. According to the latest figures, only 9% of Salinas residents are able to afford the median home price.[3] One in ten students in Monterey County is experiencing homelessness, the highest rate among all counties in the State.[4]

State legislators have recognized and responded to this larger housing crisis by enacting comprehensive policy solutions such as SB 329 and AB 1482, addressing source-of-income discrimination and establishing a statewide rentcap including just causes for eviction, respectively. Still, locally there remains much work to ensure that the protections provided by these bills are duly enforced. We applaud efforts by the Mayor, Councilmember Barrera, and Councilmember Davis who are bringing forward an ordinance to ensure that state level provisions do not result in evictions across Salinas before going into effect January 1, 2020.

We understand the critical need to increase the City's housing supply and that the WASP has the potential to be a significant step forward in addressing our inadequate housing stock by proposing 4,340 new homes. However, the Plan's large-scale, decades-long buildout and high prices will not meet the needs of existing residents. Construction of the Plan's mixed-use residential component, the most affordable component of the Plan, is projected to take place twenty years out. Based on the City's baseline economic forecast, the average home prices included in the WASP range from $400,000 to $600,000. We recognize the incredible investment in time and effort to assemble the WASP project area since the early 2000s. The

[3] National Association of Home Builders (2018). 2006 - Q42018 NAHB - Wells Fargo Housing Opportunity Index (HOI)
[4] Crisis on the Coast, November 2018

project should proceed and be strengthened so that it better meets the needs of Salinas residents through these two provisions:

1) *Adopt a plan that encourages more affordable housing through higher densities.* The City should commit to adopting an enhanced density bonus program that allows for reductions in zoning code requirements (such as parking, setbacks, and height) in exchange for more affordable housing. City Staff should also work with the developers to maximize densities wherever possible. Increasing density will mitigate environmental impacts to levels within the existing impact parameters.

2) *Adopt a robust Community Benefits Agreement to mitigate the significant impacts of the proposed WASP development and work with the CDBG Housing Committee's Technical Advisory Committee to reach a workable set of policies to provide adequate protections to existing residents.* The Salinas Economic Development Element outlines the need to encourage the use of "community benefits agreements" between developers and community members to provide amenities and/or mitigation to the community.[5] Likewise, the Alisal Vibrancy Plan calls for a need to "maximize community benefits" and other amenities through the adoption of a community benefits agreement.[6] Concrete action is needed now. The CBA must include a commitment to adequately and continually fund an Anti-Displacement Fund that will support tenant and landlord education, free legal assistance and relocation assistance.

Salinas exists at the intersection of extraordinary rural, suburban, and urban housing challenges. Beyond the larger, highly-urbanized cities, other medium sized working class communities have adopted protection and stabilization policies to holistically address their housing crisis. While our City faces unique challenges, we have the opportunity to learn from and integrate similar policies other jurisdictions have adopted throughout the state.

Addressing the needs of the entire Salinas community requires creative policy and strong leadership. We strongly believe these requests are critical in ensuring that the future buildout of the City including the West Area Specific Plan be a positive step in meeting the housing needs of hard working Salinas residents and not the Silicon Valley.

Thank you for your consideration.

Sincerely,

---

Salinas, California 93901

Re: Planning Commission Meeting for West Area Specific Plan

Dear Ms. Miller:

Our office represents the Santa Rita Union School District ("District"). This letter is in regard to the City Planning Commission's consideration this afternoon of the West Area Specific Plan ("Specific Plan"), including the Environmental Impact Report ("EIR") that was prepared for the Specific Plan. The District previously reviewed the Draft EIR, and on April 15, 2019 provided written comments to this document (through a letter from our office). We are writing you this letter to raise concerns that our client has with the Planning Commission's consideration of the Specific Plan and the EIR.

First, to my knowledge the City has not provided responses to the District's comments, and perhaps has not provided responses to other comments, including those by other governmental entities. CEQA Guidelines section 15088(b) states that "(t)he lead agency shall provide a written proposed response to a public agency on comments made by that public agency at least 10 days prior to certifying an environmental impact report." While the EIR would not actually be certified until it goes before the City Council, pursuant to Municipal Code section 3-01.03(b)(3) the Planning Commission is charged with the obligation of the recommending certification of the EIR because it is a necessary component to the Specific Plan. As such, we believe the Planning Commission should have a complete record to review, including the responses to the comments made by the District and others.

Another area of concern relates to the attachments for the Specific Plan and EIR approval. To my knowledge, the attachments have not been made publicly available, and are not available on the City's website. Instead, recipients who have placed themselves on the email distribution list (myself included) received this note: "Please note that due to the large page count of the attachments, only a hardcopy of the Agenda will be distributed to Planning Commissioners during the meeting." From this note it is not clear that attachments have been given to Planning Commission or the public, which would seem unusual given the City's past practice of posting

lengthy attachments on its website simultaneously with the posting of a meeting agenda. To comply with the Brown Act, the attachments need to be made available to the public if they are going to be viewed and considered by the Planning Commissioners at the meeting. (See Gov. Code, § 54957.5.)

Based on the foregoing, it appears that the Planning Commission may not be adequately prepared to consider the Specific Plan approvals this afternoon. If indeed the comments to the EIR have not been responded to, and the public has not had an adequate opportunity to review and consider what will be before the Planning Commission this afternoon, the District believes it would be best to have this matter continued until everything has been worked out. If the public has not been provided an opportunity to review documents that have been provided to the Planning Commission, serious Brown Act concerns may be raised by proceeding today. Certainly, proceeding in this manner does not support the principles of government transparency inherent in the Brown Act and CEQA.

Sincerely,

Devon Lincoln

Testimony Before the Salinas Planning Commission on the West Area Specific Plan and Final EIR

December 4, 2019

Michael DeLapa
Executive Director, LandWatch Monterey County

Good evening. My name is Michael DeLapa. I'm the Executive Director of LandWatch Monterey County, a nonprofit, land conservation and planning organization that works closely with communities, elected officials and infill developers to create sustainable plans and projects. Our goals are stop sprawl, encourage urban in-fill and affordable housing, and promote climate-friendly development. Over the past several years, LandWatch has been proud to support workforce housing projects throughout Monterey County, including T&A's Spreckels Crossing, Casa Boronda, Avila Construction's Greenfield project, and others. These are good examples of what can come out of close collaborations and smart planning.

As we noted in our comments on the Draft EIR, the West Area Specific Plan, as hard as it tries, is not smart planning. The plan proposes to sprawl 4300 residential units over approximately 800 acres of annexed farmland. Average residential density of 9 units per acre favors large, expensive single-family homes over apartments and homes designed for affordability. By favoring cars rather than walking and biking, low density sprawl also generates significant greenhouse gas emissions and unmitigated air quality impacts.

We previously urged the City to adopted the Reduced Land Area (RLA) Project alternative. Under this alternative the average residential density would increase from 9 to 11 units per acre.

The Final EIR acknowledges that this alternative "would create a modest improvement to conserve agricultural land, lower housing prices, and lead to more economically and environmentally sustainable outcomes." So why isn't your staff recommending this alternative?

Here is what the Final EIR says:

First, it argues that the Reduced Land Area Alternative "does not fully meet the project objective to 'Provide public services and infrastructure improvements that achieve and maintain City service standards' because this alternative would develop fewer roadways, bicycle and pedestrian pathways, and other infrastructure improvements (such as well sites) when compared with the proposed project." (FEIR, p. 2.0-84.) You do not need infrastructure and services for land that is not developed.

Second, the Final EIR also claims that the Reduced Land Area Alternative would have greater air quality impacts because it is inconsistent with the Air Quality Management Plan. The inconsistency? It was not modeled in that Plan, which assumed more sprawl. This is absurd. The Final EIR admits that Reduced Land Area Alternative would in fact have lower air quality emissions. (FEIR, p. 2.0-87)

Even more absurd, the Final EIR

- Admits the Reduced Land Area Alternative is environmentally superior to the proposed project. (FEIR, p. 2.0-97)
- Admits the Alternative meets the basic project objectives by providing the same number of housing units. (FEIR, p. 2.0-89 to 2.0-90, correcting false claim in DEIR that RLA Alternative would have fewer units].)
- Claims the only project objectives the alternative does not meet are not basic objectives. And reason they say the objectives are unmet makes no sense (FEIR, p. 2.0-96).
    - The FEIR says the Alternative does not meet services and infrastructure objectives because it does not provide services and infrastructure in the undeveloped area.
    - Similarly, the FEIR says the Alternative does not establish sidewalk, pathway and open space system because it does not establish them in the undeveloped area.

If the bike and pedestrian linkage to the Central Area Specific plan is really needed, the developers can build a path without developing the 162 acres.

Your consultants had to completely revise the alternatives comparison tables in the Final EIR because the table failed to acknowledge that the Reduced Land Area Alternative had lesser or

equal impacts than the proposed sprawl project. (FEIR, pp. 2.0-85, 2.0-90)

To put the Reduced Land Area Alternative of 11 units/acre in context, the City of Monterey is currently planning to rezone a portion of its downtown to 30 residential units/acre. Why? Because they City recognizes that land in Monterey County is extremely valuable. That higher densities mean lower housing prices and easier walking, biking, and public transit. Monterey County already has 9000 approved but unbuilt single-family residential units and doesn't need any more. What Monterey County needs is apartments that are close to public services and daily needs.

You may not remember the long, expensive legal battle over Rancho San Juan/Butterfly Village, just a few miles north of the West Area Plan. Approved in 2008, Butterfly Village has 1147 homes already entitled and ready to be built. So how many have been built? Zero.

So why would the City want to approved more low-density sprawl that doesn't meet the needs of its working residents, that tax its schools, increase air pollution and greenhouse gases, and turn farmland into concrete?

Once again, LandWatch urges you to think about public needs, not private desires. Please consider adopting the Reduced Land Area Alternative to increase the density of the West Area Specific Plan modestly from 9 to 11 acres. You'll save land, reduce air pollution, and make homes and apartments more affordable for your residents.

By E-mail: patricia.barajas@ci.salinas.ca.us

City of Salinas
Attn: Patricia Barajas, City Clerk
200 Lincoln Avenue
Salinas, California 93901

Re: Request to Cure or Correct Brown Act Violation Related to Planning Commission Meeting

Dear Ms. Barajas:

Our office represents the Santa Rita Union School District ("District"). This letter is in regard to the City Planning Commission's consideration of the West Area Specific Plan ("Specific Plan"), including the Environmental Impact Report ("EIR") for the Specific Plan, on December 4, 2019. We are writing you this letter on behalf of our client to make a demand that the Planning Commission cure or correct a violation of the Ralph M. Brown Act ("Brown Act") related to this meeting.

Under the Brown Act, any interested person "may commence an action by mandamus or injunction for the purpose of obtaining a judicial determination that an action taken by a legislative body of a local agency in violation of Section 54953, 54954.2, 54954.5, 54954.6, 54956, or 54956.5 is null and void under this section." (Gov. Code, § 54960.1, subd. (a).) Prior to commencing such an action, the interested person is required to make a demand of the legislative body to cure or correct the action alleged to have been taken in violation of the aforementioned sections. (Gov. Code, § 54960.1, subd. (b).)

As I stated in my letter to Ms. Jill Miller dated December 4, 2019, it was not clear to me how the Planning Commission agenda packet materials were going to be distributed to the Planning Commissioners and made available to the public for the meeting. Recipients who placed themselves on the email distribution list (myself included) received this note: "Please note that due to the large page count of the attachments, only a hardcopy of the Agenda will be distributed to Planning Commissioners during the meeting." To comply with the Brown Act, agenda attachments need to be made available to the public if they are going to be viewed and considered by members of a body at a meeting. (See Gov. Code, § 54957.5.) What I later found out is that the Agenda's attachments could have been accessed through the City's website. However, the website was entirely misleading as to the availability of the attachments, which violated both the letter and spirit of the Brown Act.

On the City's website, there is a direct link to "Agendas" on the home page. Clicking on this link, a person is taken to "salinas.legistar.com/calendar."[1] For the Planning Commission meeting on December 4, 2019, there is an active (blue) link to the Agenda. However, under "Agenda Packet," it clearly states "Not available." If a person goes ahead and clicks on the agenda, "ID#19-513" is written next to "West Area Specific Plan Project," and it is in blue, suggesting a link. (See Gov. Code, § 54954.2, subd. (a)(2)(C)(iv).) However, there is nothing on the Agenda, or the management platform, that instructs a person on how to access the attachments.

The circumstances described above violated the Brown Act because an agenda is required to give fair notice of the business that is being conducted, and it cannot be confusing or misleading. (See Gov. Code, § 54954.2; *San Joaquin Raptor Rescue Center v. County of Merced* (2013) 216 Cal.App.4th 1167, 1177-1179.) Thus, members of the public cannot simply be provided clues from which they have to speculate. This is precisely what happened here. Due to their size, the Agenda attachments were provided online instead of being printed out for the meeting. However, due to the misleading nature of the agenda management platform, a person would have been dissuaded from accessing the attachments because the platform plainly represented that they were "Not available." This by itself violated the Brown Act. While the City may argue that the link on the Agenda itself cured this defect, neither the platform nor the Agenda itself gave any instruction on how a member of the public was actually supposed to access the attachments. Without such instructions, the public was not even provided a clue, which does not come close to meeting Brown Act standards for clarity and transparency.

Government Code section 54960.1(c)(2) requires the Planning Commission to cure or correct the aforementioned Brown Act violation within 30 days of the date of this letter, and inform our client in writing of its actions to cure or correct. If the City's decision is not to cure or correct this defect, our client is to be informed in writing. You may direct any such communications to our office. If you have any questions regarding the above, or if you feel that there are facts or circumstances that our office has not considered in this matter, please let me know. Otherwise, we will await the City's response.

Sincerely,

LOZANO SMITH

Devon B. Lincoln

DBL/en

---

[1] The Brown Act defines an "Integrated agenda management platform" as "an Internet Web site of a city, county, city and county, special district, school district, or political subdivision established by the state dedicated to providing the entirety of the agenda information for the legislative body of the city, county, city and county, special district, school district, or political subdivision established by the state to the public." (Gov. Code, § 54954.2, subd. (a)(2)(D)(i).)

2019 Engineering and Traffic Survey for Speed Limits

Approve a Resolution to establish speed limits as recommended by the 2019 Engineering and Traffic Survey for speed limits.

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **DECEMBER 17, 2019**

DEPARTMENT: **PUBLIC WORKS**

FROM: **DAVID JACOBS, DIRECTOR**

BY: **ANDREW EASTERLING, TRAFFIC ENGINEER**

TITLE: **2019 ENGINEERING AND TRAFFIC SURVEY FOR SPEED LIMITS**

RECOMMENDED MOTION:

A motion to approve a Resolution to establish speed limits as recommended by the 2019 Engineering and Traffic Survey for speed limits.

RECOMMENDATION:

Staff recommends that the City Council approve a Resolution to establish speed limits as recommended by the 2019 Engineering and Traffic Survey for speed limits.

EXECUTITVE SUMMARY:

In order to enforce speed limits on local roadways with the use of radar or other electronic devices, the courts require a certified Engineering and Traffic Survey (E&TS) from the local governing municipality. Without a valid E&TS, courts will dismiss speeding tickets thereby limiting the effectiveness of any speeding enforcement. A certified E&TS is required every five years for local roadways in order to establish a speed zone enforceable by radar or other electronic devices. Public Works staff identified fourteen (14) roadway segments where the posted speed limit has expired or is scheduled to expire in 2019. Two (2) of these segments are increasing and one (1) is decreasing, and eleven (11) segments are recommended to remain the same.

BACKGROUND:

A Speed Limit Sign is a federal device, which a posting authority is authorized to use providing they comply with the law. Article 1 Section 8 of the Constitution's mandate is uniform oversight of regulation of the nation's roadways. Congress' intent in this field is to establish uniformity in the vehicle code and traffic control devices. In the United States, there are 80,000 posting authorities and about 4 million miles of roads. The Uniform Vehicle Code (UVC) and Manual of

Uniform Traffic Control Devices (MUTCD) establishes the rules for which posting authorities shall conform to when establishing posted speed limits.

Speed limits for most roadways are established by prescribed procedures in accordance with the California Vehicle Code (CVC) and the MUTCD. The CVC Sections 22357 and 22358 provides local municipalities the power to increase or decrease prima facie speed limits for local streets, provided that an Engineering and Traffic Survey (E&TS) be conducted every five years to justify a posted speed limit. Section 40802 of the CVC specifies the time periods within which speed surveys must be performed if the use of radar is to be employed to enforce speed limits. If an E&TS is more than 5 years old, the speed zone is considered to be a "speed trap" under CVC 40802 and courts may reject evidence of speeding obtained through radar or other electronic devices. E&TS may be up to 7 years old if conditions under CVC 40802(c)(1) related to enforcement training and equipment certification have been met. If an E&TS is not performed within the required time frame, posted speed limits are no longer valid and cannot be enforced by radar. Local roads with specific characteristics as classified by the Federal Highway Administration (Attachment 2) do not require an E&TS, and a 25 mph prima facie speed limit is considered legitimate. Local roads provide direct access to adjacent lands and a higher transportation system. Local roads do not carry through traffic movement within the transportation network.

The MUTCD process of establishing a speed zone is built around a spot speed survey that typically consists of measuring speeds with a radar gun or other electronic device of motor vehicles traveling at free-flow speeds. Measured speeds create a data set and the most relevant data point is the 85th percentile speed. The 85^{th} percentile speed is the speed at or below which 85 percent of motor vehicles travel. The 85 percentile is identified as the maximum speed that the majority of drivers who drive a roadway consider reasonable and safe. As a result, posted speeds are a reflection of the speed that most drivers deem to be safe, as opposed to a minority of drivers who do not drive in a reasonable manner.

According to the California Manual of Uniform Traffic Control Devices (CAMUTCD) Section 2B.13 Paragraph 12a, the posted speed limit "shall be established at the nearest 5-mph increment of the 85th percentile speed of free-flowing traffic." For example, a segment with a measured 85th percentile speed of 37 mph would be rounded-down to have a posted speed limit of 35 mph, while another segment with a measured 85th percentile speed of 33 mph would be rounded-up to have a posted speed limit of 35 mph. The CAMUTCD allows the posted speed limit to be decreased by no more than 5 mph from a rounded speed, using one of two options described below that depend on whether the 85th percentile speed has been rounded down or up. There are no provisions for increasing the speed limit above the nearest 5-mph increment of the 85th percentile speed.

CAMUTCD option 1 is defined in Section 2B.13 which states, "The posted speed may be reduced by 5 mph from the nearest 5-mph increment of the 85th percentile speed, in compliance with CVC Sections 627 and 22358.5." The cited CVC Section 627 defines an E&TS that is required to consider prevailing speeds, accident records, and conditions not readily apparent to the driver, and optionally consider residential density as well as pedestrian and bicycle safety.

CAMUTCD option 2 is defined in Section 2B.13 which states, "For cases in which the nearest 5-mph increment of the 85th percentile speed would require a rounding up, then the speed limit may be rounded down to the nearest 5-mph increment below the 85th percentile speed, if no further reduction is used." An Option 2 round-down, which became available when CVC Section 21400(b) went into effect January 1, 2012, requires no engineering and traffic survey to post the speed limit sign. The E&TS is still required to allow radar or similar devices to be used for enforcement.

The federal Highway Administration has conducted numerous studies on the practice of establishing speed zones. The conclusions found in these studies states, "the speed limit should be set at the speed driven by 85 to 90 percent of the free-moving vehicles rounded up to the next 5 mph increment. This method results in speed limits that are not only acceptable to a majority of the motorist, but also fall within the speed range where accident risk is lowest." (Report No. FHWA/RD-85/096 Technical Summary, "Synthesis of Speed Zoning Practice"). Like other traffic laws, it is based upon the assumption that the majority of drivers will behave in a reasonable manner. Laws that arbitrarily restrict the majority of motorist encourage wholesale violations, lack of public support, and usually fail to bring about desirable changes in driving behavior. This is especially true of speed limits.

Public Works staff identified fourteen (14) roadway segments (Figure 1) where the posted speed limit has expired or is scheduled to expire in 2019. Public works staff prepared the 2019 Engineering and Traffic Survey for Speed Limits Technical Report (Attachment 1), which details the methodology and findings of the speed survey. The report details the CVC regulations and CAMUTCD policies. Of the fourteen (14) roadway segments two (2) are increasing, one (1) is decreasing, eleven (11) segments posted speed limits will remain the same. All other roadway segments not evaluated in the 2019 E&TS will remain the same. All existing school zones contained within these segments will remain the same. Highlighted are those street segments where speed limits are required to change in accordance with the CAMUTCD.

Street Segment	Limits	Existing	New
Harden Parkway	N Main Street to El Dorado Drive	35	35
Independence Boulevard	Provincetown Drive to Boronda Road	35	30
Riker Street	West Alisal St to West Blanco Road	25	25
Larkin Street	Davis Road to Rico Street	25	25
Market Street, East	Sherwood Drive to Sanborn Road	35	35
Sanborn Road	Del Monte Avenue to Boronda Road	35	35
Sanborn Road	E Laurel Drive to US 101	35	35
Boronda Road	Constitution Blvd to Williams Road	45	45
Front Street	E Market Street to John Street	25/35*	30
Laurel Drive, East	N Main Street to Natividad Road	35	35
Skyway Boulevard	Mortensen Avenue to Alisal Street	35	40
Work Street	East Alisal Street & Sanborn Road	35	35
Garner Avenue	Rider Avenue to Wiliams Road	35	30
Rico Street	Larkin Street to Rossi Street	25	25

**Highlighted are segments where speed limits are proposed to change.* Figure 1

Using the Engineering and Traffic Survey to establish speed zones is not only a federal requirement, it also has been shown to lower the risk of accidents. In should be noted however that while this practice is a best practice for lowering the risk of collision, accident severity does tend to increase with higher speeds. The CAMUTCD process is required in order to be able to conduct speed enforcement by radar; otherwise, speeding citations cannot be justified in court. Without enforcement, drivers traveling at speeds over the 85th percentile speed cannot be cited for speeding using radar and may continue to go unenforced.

Keeping the existing speed limit signs arbitrarily low to slow the speed of traffic is a common misconception. Many before and after studies have found that changing the speed limit signs does not change how fast people drive. The best known study is the "Parker Report", (Report No. FHWA-RD-92-084: The Effects of Raising and Lowering the Speed Limit**).** The federal Department of Transportation hired a consultant to prove that low speed limits slowed traffic and improved safety. The study looked at data from 100 sites in 22 states where speed limits were either raised or lowered. Counter to the hypothesis of the federal DOT, the study found low speed limits had no effect on traffic speed.

2018 Engineering and Traffic Study:

At the December 4th, 2018 City Council meeting, City Council passed a resolution to certify all of the 2018 Engineering and Traffic Surveys for Speed Limits report with the exception of twelve (12) roadway segments (Figure 2) which were recommended to increase the speed limit. Over the past year, Public Works staff in coordination with Police Department staff have continued to survey these twelve (12) roadway segments. Findings of each survey continue to show that the existing speed limit should be increased. Therefor the speed limit of these roadway segments cannot be certified to enable radar enforcement unless the speed limit is raised to limit established by the E&TS.

One exception is the segment of Garner Avenue between Sanborn Road and Williams Road, which has been merged with the adjacent segment of Garner Avenue between Rider Avenue and Sanborn Road to have a continuous 25mph speed zone between Rider Ave and Williams Road.

Public Works staff understands that there are perceived safety concerns related to increasing speed limits; however, staff believes the nationally recognized policies for establishing and enabling the radar enforcement of speed limits are the best practices to provide the lowest probability for collisions on the roadway network. All cities and counties in California follow these best practices policies established in the CAMUTCD.

The 2019 Engineering and Traffic Surveys for Speed Limits for Salinas is presented for approval, for which two roads are expected to increase and one road will decrease. This year staff has prepared an informational brochure (Attachment 4) to help inform the public and to equip representatives with informational material when responding to concerned residents.

Street Segment	Limits	Existing Speed Limit	Lowest Possible Legal Speed Limit
Beacon Hill Drive	Constitution Blvd to Constitution Blvd	25	30
Casentini Street	N Main St to Rico St	25	30
Chaparral Street	North Main Street to Maryal Drive	25	30
East Market Street	North Sanborn Road to Williams Road	25	30
West Alisal Street	Capitol St & Amherst Dr	25	30
East Laurel Drive	N Sanborn Rd & Williams Rd	25	30
Maryal Drive	Laurel Dr to Bernal Dr	25	35
Rider Avenue	Freedom Pkwy & Boronda Road	25	30
North Sanborn Road	Del Monte Ave & E Laurel Dr	25	30
Sherwood Drive	E Market St & US Hwy 101	35	40
Acacia Street, West	Davis Rd & W Alisal St	25	30
Garner Avenue	Sanborn Rd to Williams Rd	25	Speed Limit Updated

Figure 2

TRAFFIC AND TRANSPORTATION COMMISSION:

The recommendation for the establishment of the 2019 Engineering and Traffic Survey for speed limits was presented to the Traffic and Transportation Commission at its November 2019 meeting. The Commission voted unanimously (5-0) to recommend to Council the establishment of the 2019 Engineering and Traffic Survey for speed limits.

CEQA CONSIDERATION:

The City of Salinas has determined that the proposed action is not a project as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines Section 15378). In addition, CEQA Guidelines Section 15061 includes the general rule that CEQA applies only to activities which have the potential for causing a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. Because the proposed action and this matter have no potential to cause any effect on the environment, or because it falls within a category of activities excluded as projects pursuant to CEQA Guidelines section 15378, this matter is not a project. Because the matter does not cause a direct or foreseeable indirect physical change on or in the environment, this matter is not a project. Any subsequent discretionary projects resulting from this action will be assessed for CEQA applicability.

STRATEGIC PLAN INITIATIVE:

The establishment of enforceable speed limits support the City Council's strategic plan “Safe, Livable Community.”

DEPARTMENTAL COORDINATION:

The Public Works Department survey, recommend and monitor posted speed limits. Established speed zones allow the Salinas Police Department to enforce posted speed limits. Public Works provides the Police Department and the Traffic Court with updates and changes to the established speed zones for proper enforcement.

FISCAL AND SUSTAINABILITY IMPACT:

The City must replace existing speed limit signage and school zone signage on the three (3) changing roadway segments. Additionally, some speed zones are missing required speed limit signs which need to be installed. The estimated labor and material cost to replace and install missing signs is $22,730. Sufficient funding is available in CIP 9162, which funds the replacement of regulatory signs to meet national retro-reflectivity standards.

ATTACHMENTS:

Attachment 1: Resolution
Attachment 2: 2019 Engineering and Traffic Survey for Speed Limits Technical Report
Attachment 3: Speed Limit Informational Brochure

RESOLUTION NO. _____ (N.C.S.)

A RESOLUTION OF THE SALINAS CITY COUNCIL APPROVING THE ESTABLISHMENT OF SPEED LIMITS AS RECOMMENDED BY THE 2019 ENGINEERING AND TRAFFIC SURVEY FOR SPEED LIMITS

WHEREAS, in accordance with California Vehicle Code Sections 22357 and 22358, local municipalities have the power to increase or decrease prima facie speed limits for local streets; and

WHEREAS, in accordance with California Vehicle Code Section 40802 and provisions of the California Manual on Uniform Traffic Control Devices (CAMUTCD), Engineering and Traffic Surveys must be performed on those local streets every five years when the use of radar or other electronic devices which measure the speed of moving objects are utilized to enforce the prima facie speed limits for those streets; and

WHEREAS, the results of the Engineering and Traffic Surveys conform to the requirements of the Vehicle Code; and

WHEREAS, City staff has concluded those speed limits set forth in the 2019 Engineering and Traffic Survey attached hereto are justified for their associated street segments in that they are found to be most appropriate to facilitate the orderly movement of vehicular traffic and are reasonable and safe for those street segments; and

WHEREAS, at its November 14, 2019 meeting, the Traffic and Transportation Commission voted unanimously (5-0) to recommend to Council the establishment of the 2019 Engineering and Traffic Survey for speed limits; and

WHEREAS, the City of Salinas has determined that the establishment of the 2019 Engineering and Traffic Survey for speed limits is exempt from the California Environmental Quality Act (CEQA) Guidelines (Section 15301, Class 1). The project consists of the operation, repair, or minor alteration of public streets involving no expansion of use. There would be no significant effect on the environment.

NOW, THEREFORE, BE IT RESOLVED that the Salinas City Council hereby approves the establishment of the 2019 Engineering and Traffic Survey for speed limits; and

BE IT FURTHER RESOLVED that City staff is hereby authorized and directed to proceed with the establishment of the 2019 Engineering and Traffic Survey for speed limits to fully effectuate the intent of this Resolution.

PASSED AND APPROVED this 17th day of December 2019, by the following vote:

AYES:

NOES:

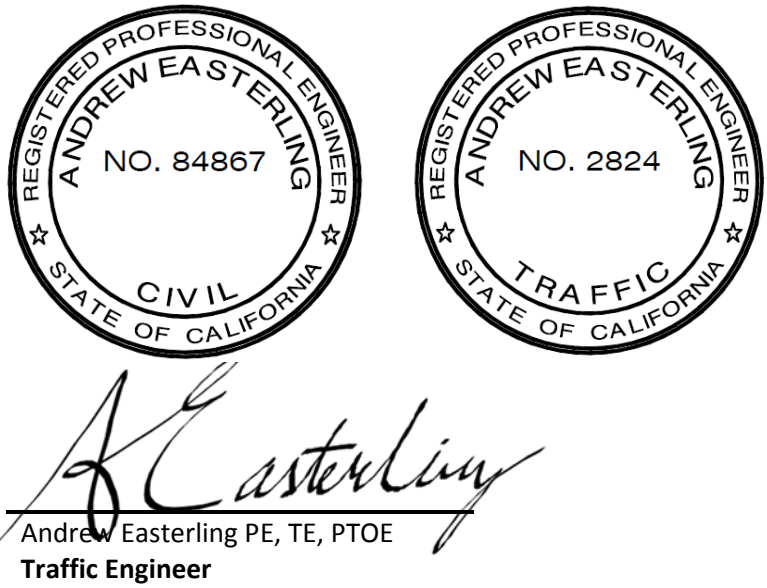
CERTIFICATION

I, Andrew Easterling, do hereby certify that this Engineering and Traffic Survey for the City of Salinas was performed under my supervision. I certify that I am experienced in performing surveys of this type and duly registered in the State of California as a professional Civil Engineer.



Andrew Easterling PE, TE, PTOE
Traffic Engineer

INTRODUCTION:

The 2019 Engineering and Traffic (E&T) Survey in the City of Salinas fulfills California Vehicle Code (CVC) Sections 22357 and 22358, which require local agencies to follow certain procedures established by the State of California. This E&T Survey is intended to serve as the basis for establishing and enforcing the speed limits for specific streets in the City. The work herein by the City Transportation and Traffic Engineering Division staff, in accordance with the California CVC Section 40802, reviews the established speed limit sections to determine whether changes in existing conditions have occurred which may require adjusting the posted speed limit.

Engineering and traffic surveys for speed limits are regularly conducted once every five (5) years by governing municipalities for the purpose of complying with Section 40802 of the CVC and the national Uniform Vehicle Code. E&T surveys may be extended to every seven (7) years if the arresting officer has completed device training and the device has been recently calibrated. E&T surveys may be extended every ten (10) years if a registered engineer evaluates the section of the highway and determines that no significant changes in roadway or surrounding land uses have occurred as specified in the CVC. An E&T survey should be conducted on new roadways or where traffic conditions have changed significantly.

The California Manual of Uniform Traffic Control Devices (MUTCD), as required under CVC 21400, defines standards for posting speed limits that rely upon collecting speed data in the field to determine the 85th percentile speed, which is subsequently rounded upward or downward to the nearest 5 mile per hour increment. The California MUTCD allows for options to further reduce the speed limit. That methodology was applied to the fourteen (14) segments. **Table 1: Engineering and Traffic Survey Summary** summarizes the findings and recommendations for speed limits on those segments. The results of the E&T survey will be valid until 2024, unless extended through additional criteria.

METHODOLOGY:

On January 1, 2012, CVC 21400(b) became effective requiring the California, Department of Transportation (Caltrans) to revise the California MUTCD so that speed limits are based on field-collected speed data. A spot speed survey that typically consists of measuring vehicle speeds with an electronic device, most commonly a radar speed detector. Traffic traveling at free-flow speeds in each direction for a two-way street is collected and compiled to create a data set. The most significant data point collected is the 85th percentile speed, which is the speed at or below which 85 percent of motor vehicles travel. The 85th percentile speed is the industry standard data point which typically represents one standard deviation above the average speed and establishes the upper limit of what is considered reasonable and prudent. The reason that speed limit areas are established and posted is to guard reasonable drivers from the unreasonable behavior of a reckless or otherwise dangerous drivers. As with other laws, speed limits are established based on the consensus of the majority of those who drive a section of roadway as to what speed is reasonable and safe.

As specified in the California MUTCD Section 2B.13, the posted speed limit "shall be established at the nearest 5-mph increment of the 85th percentile speed of free-flowing traffic." Additionally, the MUTCD allows the posted speed limit to be lowered by no more than 5 mph from a rounded speed, using one of two options that depend on whether the 85th percentile speed has been rounded down or up. The options may be applied as follows:

1. MUTCD Section 2B.13 states, "The posted speed may be reduced by 5 mph from the nearest 5-mph increment of the 85th percentile speed, in compliance with CVC Sections 627 and 22358.5." The cited CVC Section 627 defines an E&T survey that is required to consider prevailing speeds, accident records, and conditions not readily apparent to the driver, and optionally consider residential density as well as pedestrian and bicycle safety. According to the MUTCD, this option requires documentation of an E&T survey that "shall document in writing the conditions and justification for the lower speed limit and be approved by a registered Civil or Traffic Engineer." The basis for a speed limit that is more than 5 mph lower than the 85th percentile speed is something other than prevailing speeds. In regards to conditions not readily apparent to the driver, CVC 22358 states that "physical conditions such as width, curvature, grade and surface conditions, or any other condition readily apparent to a driver, in the absence of other factors, would not require special downward speed zoning."

2. MUTCD Section 2B.13 12a also states "For cases in which the nearest 5-mph increment of the 85th percentile speed would require a rounding up, then the 5 2016 Traffic Speed Zone Survey City of Salinas speed limit may be

rounded down to the nearest 5-mph increment below the 85th percentile speed, if no further reduction is used." An Option 2 round-down, which became available when CVC Section 21400(b) went into effect January 1, 2012, requires no engineering and traffic survey to post the speed limit sign. The E&T survey is required nevertheless, however, to allow radar or similar devices to be used for enforcement.

Neither the Vehicle Code nor the MUTCD provide much specific guidance regarding accident data or pedestrian or bicycle safety. In contrast, CVC 627(c)(1) provides specific guidance on residential density. Many residential neighborhoods in Salinas meet the density threshold of 16 separate dwelling houses or business structures per quarter mile. The statute does not apply to roads within a business district.

While the California MUTCD allows two options for lowering the posted speed, it has no provision for raising the speed limit above the nearest 5-mph increment of the 85th percentile speed.

SUMMARY OF RECOMMENDATIONS:

The results of the Engineering and Traffic Survey for fourteen (14) roadway sections are listed in **Table 1: Engineering and Traffic Survey Summary:**

Unchanged

34) Harden Parkway between North Main Street and El Dorado Drive - This segment of Harden Parkway is classified as a minor arterial in the City of Salinas General Plan. The surrounding land use includes backing residential, retail, office and park areas. Speed data collected May 30, 2019 revealed the 85th percentile speed of 42 mph. The 10 mph pace ranges from 33 mph to 42 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 35 mph should be retained.

44) Riker Street between West Alisal Street and Blanco Road - This segment of Riker Street is classified as a collector in the City of Salinas General Plan. The surrounding land use includes fronting residential areas. Speed data collected May 30, 2019 revealed the 85th percentile speed of 32 mph. The 10 mph pace ranges from 23 mph to 32 mph and suggests the 85th percentile is within this range. Since the roadway width is 40 feet and there is fronting residential, the roadway meets the criteria of a local road. Therefore, the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 25 mph should be retained.

51) Larkin Street between Davis Road and Rico Street - This segment of Larkin Street is classified as a collector in the City of Salinas General Plan. The surrounding land use includes fronting residential areas, a school and a park. Speed data collected May 28, 2019 revealed the 85th percentile speed of 32 mph. The 10 mph pace ranges from 25 mph to 34 mph and suggests the 85th percentile is within this range. Since the roadway width is 40 feet and there is fronting residential, the roadway meets the criteria of a local road. Therefore, the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 25 mph should be retained.

59) East Market Street between Sherwood Drive and Sanborn Road- This segment of East Market Street is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes office, commercial, and light industrial areas. Speed data collected May 28, 2019 revealed the 85th percentile speed of 39 mph. The 10 mph pace ranges from 28 mph to 37 mph and suggests the 85th percentile is above this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be retained

64) Sanborn Road between Del Monte Avenue and Boronda Road - This segment of Sanborn Road is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes backing residential homes, commercial areas and a school. Speed data collected May 16, 2019 revealed the 85th percentile speed of 38 mph. The 10 mph pace ranges from 28 mph to 37 mph and suggests the 85th percentile is above this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be retained.

66) Sanborn Road between East Laurel Drive and US Highway 101 - This segment of Sanborn Road is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes residential homes, commercial and office areas. Speed data collected May 28, 2019 revealed the 85th percentile speed of 42 mph. The 10 mph pace ranges from 33 mph to 42 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 35 mph should be retained.

80) Boronda Road between Constitution Boulevard and Williams Road - This segment of Boronda Road is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes backing residential homes, and retail areas. Speed data collected May 28, 2019 revealed the 85th percentile speed of 51 mph. The 10 mph pace ranges from 37 mph to 46 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 45 mph should be retained.

83) East Laurel Drive between North Main Street and Natividad Road - This segment of East Laurel Drive is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes residential homes, retail and office areas and a school. Speed data collected May 28, 2019 revealed the 85th percentile speed of 40 mph. The 10 mph pace ranges from 32 mph to 41 mph and suggests the 85th percentile is within this range. Based on the surrounding land

use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be retained.

88) Work Street between East Alisal Street and Sanborn Road - This segment of Work Street is classified as a minor arterial in the City of Salinas General Plan. The surrounding land use includes retail and industrial areas. Speed data collected May 28, 2019 revealed the 85th percentile speed of 40 mph. The 10 mph pace ranges from 32 mph to 41 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be retained.

97) Garner Avenue between Rider Avenue and Williams Road - This segment of Garner Avenue is classified as a minor arterial in the City of Salinas General Plan. The surrounding land use includes residential areas and a school. Speed data collected June 20, 2019 revealed the 85th percentile speed of 32 mph. The 10 mph pace ranges from 23 mph to 32 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the speed limit of 25 mph should be posted.

Garner Avenue currently lacks speed limit signs. The last speed survey certified a 25mph speed limit on Garner Avenue between Rider Avenue and Sanborn Road, and a 30mph speed limit between Sanborn Road and Williams Road. The 30mph segment E&TS was certified but never formerly adopted by City Council. The physical conditions and surrounding land uses are consistent between both relatively short segments; therefore it is recommended that the speed zones be combined into one 0.9 mile long speed zone consistent with MUTCD guidelines. The 2019 E&TS will supersede previous E&TS reports.

101) Rico Street between Larkin Street and Rossi Street- This segment of Larkin Street is classified as a collector in the City of Salinas General Plan. The surrounding land use includes fronting residential homes uses. Speed data was collected May 16, 2019 revealed the 85th-percentile speed of 36 mph. The 10 mph pace ranges from 27 mph to 36 mph and suggests the 85th percentile is within this range. Since the roadway width is 40 feet and there is fronting residential, the roadway meets the criteria of a local road. Therefore, the existing posted speed limit of 25 mph should be retained.

Decreased

37) Independence Boulevard between Constitution Boulevard to Boronda Road - This segment of Independence Boulevard is classified as a collector in the City of Salinas General Plan. The surrounding land use includes backing residential areas and a school. Speed data collected May 28, 2019 revealed the 85th percentile speed of 35 mph. The 10 mph pace ranges from 26 mph to 35 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be reduced to 30 mph.

Increased

82) Front Street between East Market Street and John Street – This segment of Front Street is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes industrial, and retail areas. Speed data collected June 5, 2019 revealed the 85th percentile speed of 35 mph. The 10 mph pace ranges from 26 mph to 35 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the speed limit of 30 mph should be posted.

Front Street is currently signed with both 35mph and 25mph speed limit signs. The last speed survey certified a 25mph speed limit on Front St between E Alisal and John St, however existing signs reflect a 35mph speed limit. It should be noted the previous speed engineering and traffic survey did not comply with MUTCD guidelines and left speed limit gaps in the transportation network. The 2019 E&TS recommends a 30 mph speed zone, which will replace existing invalid 25mph/35mph posted speed limit signs and extending the speed zone between East Market Street and John Street.

87) Skyway Boulevard between Airport Boulevard and Alisal Street - This segment of Skyway Boulevard is classified as

a minor arterial in the City of Salinas General Plan. The surrounding land use is public/semipublic uses. Speed data was collected May 16, 2019 revealed the 85th-percentile speed of 47 mph. The 10 mph pace ranges from 37 mph to 46 mph and suggests the 85th percentile is above this range. Based on the surrounding land use, the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1 in compliance with CVC Sections 627 and 22358.5, the existing posted speed limit of 35 mph should be increased to 40 mph.

CONCLUSIONS:

The Engineering and Traffic surveys contained in **Appendix A** of this report are intended to establish or justify posted speed limits that can be enforced by radar. The posted speed limits advise the motorist and enforcement agencies of speeds considered reasonable for a particular section of highway for prevailing conditions. The posted speed limits are not absolute maximums, but rather prima facie speed limits for which violations would be cited under the Basic Speed Law (Section 22350 of the CVC). CVC 22350 states that a person shall not drive a vehicle at a speed greater than is safe, having regard for traffic, roadway and weather conditions. A prima facie limit merely suggests a safe speed under normal conditions.

COLLISION HISTORY

The Engineering and Traffic Survey forms summarize the available collision information for each of the street segments. The collision information was obtained from the City of Salinas from January 1, 2017 to December 31, 2018. For this analysis, only collisions during the 2-year period between January 1, 2017 to December 31, 2018 were considered. The collisions were reviewed and only corridor related collisions, those not related to signalized intersections, were summarized for each segment. Based on the number of total collisions studied over the 2-year period and average daily traffic (ADT) counts, a collision rate was calculated for each segment. The collision rates for each segment were compared to the statewide average rate listed in the 2014 Collision Data on California State Highways, to provide a general comparison of the collision rates on the segments to expected collisions rates for similar types of roadways, shown in **Table 2: Collision Rate Summary**.

Lane Type	**Total Statewide Urban Collision Rate (2014, 2015, 2016) (Total per million vehicle miles)**
2 and 3 lane	1.52
4+ lanes (undivided)	2.12
4+ lanes (divided)	1.26

Table 2: Collision Rate Summary

No.	STREET SEGMENT	SEGMENT	Existing Facility	Length (mi)	AADT	Collisions (2 years)	Collision Rate (Acc./MVM)	Statewide Collision Rate (Acc./MVM)
34	**Harden Parkway**	McKinnon Street to El Dorado Drive	4+ lanes (divided)	1.10	7,680	10	1.68	1.26

COMMENTS:

This segment of Rico Street is classified as a collector in the City of Salinas General Plan. The surrounding land use includes fronting residential homes uses. Speed data was collected May 16, 2019 revealed the 85th-percentile speed of 36 mph. The 10 mph pace ranges from 27 mph to 36 mph and suggests the 85th percentile is within this range. Since the roadway width is 40 feet and there is fronting residential, the roadway meets the criteria of a local road. Therefore, the existing posted speed limit of 25 mph should be retained.

COMMENTS:

This segment of Garner Avenue is classified as a minor arterial in the City of Salinas General Plan. The surrounding land use includes residential areas and a school. Speed data collected June 20, 2019 revealed the 85th percentile speed of 32 mph. The 10 mph pace ranges from 23 mph to 32 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the speed limit of 25 mph should be posted.

AREA	DESCRIPTION
Distance	Approximately 5,100 Feet

COMMENTS:

This segment of Work Street is classified as a minor arterial in the City of Salinas General Plan. The surrounding land use includes retail and industrial areas. Speed data collected June 05, 2019 revealed the 85th percentile speed of 42 mph. The 10 mph pace ranges from 32 mph to 41 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be retained.

COMMENTS:

This segment of Skyway Boulevard is classified as a minor arterial in the City of Salinas General Plan. The surrounding land use is public/semipublic uses. Speed data was collected May 16, 2019 revealed the 85th-percentile speed of 47 mph. The 10 mph pace ranges from 37 mph to 46 mph and suggests the 85th percentile is above this range. Based on the surrounding land use, the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1 in compliance with CVC Sections 627 and 22358.5, the existing posted speed limit of 35 mph should be increased to 40 mph.

AREA	DESCRIPTION
Distance	Approximately 2,950 Feet
Vertical Alignment	Flat
Street Width	63 Feet
No. Lanes and Median	4-Lane Minor Arterial
Proposing Speed Zone	35 MPH
85th Percentile Speed	40 MPH
Traffic Volume (Date)	12,450
Accident Data (2 years)	2 Collisions (2017 - 2018)
Street Segment Collision Rate = (Collisions) (1,000,000) / (Years) (365) (ADT) (Length in Miles)	0.39 Acc./MVM

COMMENTS:

This segment of East Laurel Drive is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes residential homes, retail and office areas and a school. Speed data collected May 28, 2019 revealed the 85th percentile speed of 40 mph. The 10 mph pace ranges from 32 mph to 41 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be retained.

COMMENTS:

This segment of Front Street is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes industrial, and retail areas. Speed data collected June 5, 2019 revealed the 85th percentile speed of 35 mph. The 10 mph pace ranges from 26 mph to 35 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the speed limit of 30 mph should be posted.

AREA	DESCRIPTION

COMMENTS:

This segment of Boronda Road is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes backing residential homes, and retail areas. Speed data collected May 22, 2019 revealed the 85th percentile speed of 51 mph. The 10 mph pace ranges from 37 mph to 46 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 45 mph should be retained.

COMMENTS:

This segment of Sanborn Road is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes residential homes, commercial and office areas. Speed data collected May 28, 2019 revealed the 85th percentile speed of 42 mph. The 10 mph pace ranges from 33 mph to 42 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 35 mph should be retained.

COMMENTS:

This segment of Sanborn Road is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes backing residential homes, commercial areas and a school. Speed data collected May 16, 2019 revealed the 85th percentile speed of 38 mph. The 10 mph pace ranges from 28 mph to 37 mph and suggests the 85th percentile is above this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be retained.

AREA	DESCRIPTION
Distance	Approximately 5,100 Feet
Vertical Alignment	Flat
Street Width	Varies (64 to 86 Feet)
No. Lanes and Median	4-Lane Major Arterial
Existing Speed Zone	35 MPH

COMMENTS:

This segment of East Market Street is classified as a major arterial in the City of Salinas General Plan. The surrounding land use includes office, commercial, and light industrial areas. Speed data collected May 28, 2019 revealed the 85th percentile speed of 39 mph. The 10 mph pace ranges from 28 mph to 37 mph and suggests the 85th percentile is above this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be retained

COMMENTS:

This segment of Larkin Street is classified as a collector in the City of Salinas General Plan. The surrounding land use includes fronting residential areas, a school and a park. Speed data collected May 28, 2019 revealed the 85th percentile speed of 32 mph. The 10 mph pace ranges from 25 mph to 34 mph and suggests the 85th percentile is within this range. Since the roadway width is 40 feet and there is fronting residential, the roadway meets the criteria of a local road. Therefore, the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 25 mph should be retained.

AREA	DESCRIPTION
Distance	Approximately 3,300 Feet
Vertical Alignment	Flat
Street Width	Varies (43 to 45 Feet)

BETWEEN: **WEST ALISAL ST & WEST BLANCO RD**
SURVEY DATE: **05/30/19 (EXPIRES 2024)**

44

COMMENTS:

This segment of Riker Street is classified as a collector in the City of Salinas General Plan. The surrounding land use includes fronting residential areas. Speed data collected May 30, 2019 revealed the 85th percentile speed of 32 mph. The 10 mph pace ranges from 23 mph to 32 mph and suggests the 85th percentile is within this range. Since the roadway width is 40 feet and there is fronting residential, the roadway meets the criteria of a local road. Therefore, the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 25 mph should be retained.

AREA	DESCRIPTION
Distance	Approximately 5,350 Feet
Vertical Alignment	Flat
Street Width	40 Feet
No. Lanes and Median	2 Lane Arterial
Existing Speed Zone	25 MPH
85th Percentile Speed	32 MPH

COMMENTS:

This segment of Independence Boulevard is classified as a collector in the City of Salinas General Plan. The surrounding land use includes backing residential areas and a school. Speed data collected May 28, 2019 revealed the 85th percentile speed of 35 mph. The 10 mph pace ranges from 26 mph to 35 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded up and reduced by 5 mph per MUTCD option 2, the existing posted speed limit of 35 mph should be reduced to 30 mph.

AREA	DESCRIPTION
Distance	Approximately 5,600 Feet
Vertical Alignment	Flat
Street Width	Varies (56 to 86 Feet)
No. Lanes and Median	2-Lane Divided Arterial
Proposed Speed Zone	30 MPH
85th Percentile Speed	35 MPH

TRAFFIC SURVEY

STREET: **HARDEN PARKWAY**
BETWEEN: **N. MAIN STREET & EL DORADO DRIVE**
SURVEY DATE: **05/30/19 (EXPIRES 2024)**

34

COMMENTS:

This segment of Harden Parkway is classified as a minor arterial in the City of Salinas General Plan. The surrounding land use includes backing residential, retail, office and park areas. Speed data collected May 30, 2019 revealed the 85th percentile speed of 42 mph. The 10 mph pace ranges from 33 mph to 42 mph and suggests the 85th percentile is within this range. Based on the surrounding land use, and the 10 mph pace range, and the prevailing speeds rounded down and reduced by 5 mph per MUTCD option 1, the existing posted speed limit of 35 mph should be retained.

AREA	DESCRIPTION
Distance	Approximately 5,600 Feet
Vertical Alignment	Flat
Street Width	51 Feet
No. Lanes and Median	4-Lane Minor Arterial
Existing Speed Zone	35 MPH
85th Percentile Speed	42 MPH
Traffic Volume (Date)	7,680
Accident Data (2 years)	10 Collision (2017-2018)
Street Segment Collision Rate = (Collisions) (1,000,000) / (Years) (365) (ADT) (Length in Miles)	1.68 Acc./MVM

SPEED LAWS

Speed limits on most roadways are established through procedures in the California Vehicle Code and federal laws. Speed limit signs, indicating speed limits for which posting is required by law, shall be located at points of change from one speed limit to another.

In California, the maximum speed limit in urban areas is 65 MPH. Certain speed limits are established by State law and include the 25 MPH speed limit in business and residential districts. These speed limits do not need to be posted in order to be enforced. Special speed limits are established within 500 feet of school grounds which are typically 15 MPH to 25 MPH when children are present. School zones can be further reduced to 15 MPH.

> **Temporary speed limit reductions can be established in construction zones, usually no more than 10 MPH.**

ENGINEERING / TRAFFIC SURVEYS

The City of Salinas routinely certifies Engineering and Traffic Surveys which establish speed limits in accordance with state and federal standards. Engineering and Traffic Surveys are generally conducted every 5 years for every non-local roadway to establish speed limits. The survey includes an analysis of roadway conditions, collision records and a sampling of the prevailing speed of traffic. Speed limits are generally set at the 5 mile per hour increment closest to the measure 85th percentile speed. This practice established the maximum speed limit that is safe and reasonable. If an engineering and traffic survey is not performed within the required time frame, posted speed limits are no longer valid and cannot be enforced effectively.

THE PURPOSE OF SPEED LIMITS

A speed limit sign is a federal device, and such as the City of Salinas, and every other posting authority, must comply with the federal requirements set forth in the Uniform Vehicle Code (UVC). The uniform vehicle code establishes that, "No person shall drive a vehicle at a speed greater than is reasonable and prudent." In the United States, there are 80,000 posting authorities and about 4 milion miles of roads, how would a person know what is expected of them, or the penalties as they go from sign to sign? The UVC establishes the rules for which posting authorities shall conform to when establishing posted speed limits.

Speed limits are established using Engineering and Traffic Surveys which measure the prevailing speeds of roadway users. These studies determine a reasonable and maximum speed limit. The use of Engineering and Traffic Surveys to establish speed limits is not only a federal requirement, it also **lowers the risk of accidents**. Without a uniform process to establish speed limits, how would drivers know what speeds are considered reasonable or police officers be able to enforce drivers traveling at reasonable speeds?

MISCONCEPTIONS

"How come the City doesn't install limit signs with lower speed limits to slow down traffic?"

This is a misconception. Many before and after studies have found that changing the speed limit signs does not change how fast Americans drive. The best known study is Report No. FHWA-RD-92-084: The Effects of Raising and Lowering the Speed Limits. The Federal Department of Transportation conducted a study of speed limits to determine the effects on traffic flow. The study looked at data from 100 sites in 22 states where speed limits were either raised or lowered. Counter to many people's preconception, the study found changes in speed limits had such little effect on driver speeds that is statistically insufficient. Changing speed limit signs does not change driver behavior.

Parking for the Collision Reporting Center

Approve a Resolution establishing three “No Parking Tow-Away, Except Police” parking stalls along the frontage of 215 Lincoln Avenue in support of the Salinas Collision Reporting Center.

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **DECEMBER 17, 2019**

DEPARTMENT: **PUBLIC WORKS, TRANSPORTATION & TRAFFIC DIVISION**

FROM: **DAVID JACOBS, PUBLIC WORKS DIRECTOR**

BY: **ANDREW EASTERLING, TRAFFIC ENGINEER**

ROBERT HAMPSON, SERGEANT

TITLE: **PARKING FOR THE COLLISION REPORTING CENTER**

RECOMMENDED MOTION:

A motion to approve a Resolution establishing three "No Parking Tow-Away, Except Police" parking stalls along the frontage of 215 Lincoln Avenue in support of the Salinas Collision Center.

RECOMMENDATION:

Recommend that the City Council approve a Resolution establishing three "No Parking Tow-Away, Except Police" along the frontage of 215 Lincoln Avenue in support of the Salinas Collision Reporting Center.

BACKGROUND:

On October 17, the Salinas Collision Reporting Center (CRC) opened its doors to the public at 200 Lincoln Avenue. The center provides a safe and user-friendly format to Salinas community members wishing to document traffic collisions.

Motorists involved in collisions not involving injuries or criminal conduct are directed to file a report at the CRC, which is developed as the one-stop service opportunity for all collision reporting needs. Supporting insurers fund the program; there is no cost to the police or the public for these services.

The City of Salinas Police Department officials contacted the Public Works Department and expressed desire to restrict parking along the frontage of 215 Lincoln Avenue. The request is for three (3) parking spaces between driveways as shown in "Exhibit A: Proposed Parking Restrictions 215 Lincoln Avenue". Police Department officials are requesting this on-street parking reserved to support the operations of the new CRC. If approved, this on street parking restriction will remain at the proposed location after the Police Department moves to its new location; however, after the Police Departments moves, the City could consider relocating CRC parking to a City surface parking lot.

Staff is seeking to formalize the parking restrictions associated with providing the collision reporting services to the community.

TRAFFIC AND TRANSPORTATION COMMISSION:

The establishment of a total of three (3) "No Parking Tow-Away, Except Police" parking designations along the frontage of 215 Lincoln Avenue was presented to the Traffic and Transportation Commission at its November 14, 2019 meeting. The Commission voted 5-0 to recommend to the City Council to approve a resolution to establish a total of three parking designations of "No Parking Tow-Away, Except Police" along the frontage of 215 Lincoln Avenue in support of the Salinas Collision Center.

Staff received communication from the Salinas City Center Improvement Association (SCIAA) expressing concern for the permanent loss of parking in downtown. Staff provided a response that the three (3) on street spaces will remain at the proposed location after the Police Department relocates to the new Public Safety Building, and after the relocation and the decrease demand in parking in the area surrounding City Hall is realized, the proposed restricted parking spaces may be relocated to a nearby surface lot.

CEQA CONSIDERATION:

The City of Salinas has determined that the project is exempt from the California Environmental Quality Act (CEQA) Guidelines (Section 15301, Class 1(c)) because the actions consists of operation and minor alteration of an existing City street.

STRATEGIC PLAN INITIATIVE:

The Parking Restrictions along the frontage of 215 Lincoln Avenue support the current City Council's goals of a Safe Livable Community by supporting the collision reporting services for Salinas residents and travelers.

DEPARTMENTAL COORDINATION:

The Police Department has worked closely with the Public Works Department to initiate the request for on-street parking restrictions. Public works is responsible for preparing the staff reports, implementation and maintenance of parking restriction signage.

FISCAL AND SUSTAINABILITY IMPACT:

The estimated labor and material cost to install signage to indicate the parking restrictions at the Salinas Collision along the frontage of 215 Lincoln Avenue is estimated to be $700.00. Sufficient funding is available in the current streets budget to fund the installations.

Attachment 1: Resolution

Exhibit A- Exhibit to the Resolution

RESOLUTION NO. _____ (N.C.S.)

A RESOLUTION OF THE SALINAS CITY COUNCIL ESTABLISHING A TOTAL OF THREE (3) "NO PARKING TOW-AWAY, EXCEPT POLICE" PARKING DESIGNATIONS IN SUPPORT OF THE SALINAS COLLISION CENTER ALONG THE FRONTAGE OF 215 LINCOLN AVENUE

WHEREAS, the Salinas Police Department requested to reserve on-street parking along the frontage of 215 Lincoln Avenue in support of the operations at the new Salinas Collision Reporting Center (CRC); and

WHEREAS, on November 14, 2019, the Traffic and Transportation Commission voted unanimously (5-0) to recommend to City Council the approval of establishing three (3) "No Parking Tow-Away, Except Police" parking designations between the driveways as shown on "Attachment 2: Parking Restrictions Exhibit" along the frontage of 215 Lincoln Avenue; and

WHEREAS, the City of Salinas has determined that implementing the parking restrictions is exempt from the California Environmental Quality Act (CEQA) Guidelines (Section 15301, Class 1). The project consists of the operation, repair, or minor alteration of public streets involving no expansion of use. There would be no significant effect on the environment.

NOW, THEREFORE, BE IT RESOLVED that the Salinas City Council hereby approved the establishment of three (3) "No Parking Tow-Away, Except Police" parking designations between the driveways along the frontage of 215 Lincoln Avenue as shown on Exhibit A, attached and herewith incorporated.

Transfer of Certain Real Property and Facility Lease Agreement with Northern Salinas Valley Mosquito Abatement District - 342 Airport Boulevard

Approve a Resolution approving a facility lease for 342 Airport Blvd., between the City of Salinas and the Northern Salinas Valley Mosquito Abatement District at the Salinas Municipal Airport; and accept the Quitclaim for 342 Airport Blvd. transferring the rights, title, and interest in and to 342 Airport Blvd. to the City of Salinas.

CITY OF SALINAS
CITY COUNCIL STAFF REPORT

DATE: **DECEMBER 17, 2019**

DEPARTMENT: **PUBLIC WORKS, AIRPORT DIVISION**

FROM: **DAVID JACOBS, PUBLIC WORKS DIRECTOR**

BY: **BRETT J. GODOWN, AIRPORT MANAGER**

TITLE: **FACILITY LEASE 342 AIRPORT BLVD. AT THE SALINAS MUNICIPAL AIRPORT**

RECOMMENDED MOTION:

A resolution approving the transfer of certain real property and approval of a facility lease between the City of Salinas and Northern Salinas Valley Mosquito Abatement District, for 342 Airport Blvd. at the Salinas Municipal Airport.

RECOMMENDATION:

It is recommended that the City Council:

1. Approve a facility lease for 342 Airport Blvd., between the City of Salinas and the Northern Salinas Valley Mosquito Abatement District at the Salinas Municipal Airport; and

2. Accept the Quitclaim for 342 Airport Blvd. transferring the rights, title, and interest in and to 342 Airport Blvd. to the City of Salinas.

BACKGROUND:

The Northern Salinas Valley Mosquito Abatement District ("District") first entered into a ground lease at 342 Airport Blvd. in 1953. The lease expired in 2003. A second ground lease was executed for the same site in 2004. The second lease expired in June of 2019. Based on previous lease conditions, historical and current Airport leasing practices, the improvements constructed by the District are set to revert to the City of Salinas at the execution of the new facility lease. The City and the District have worked since January 2019 to construct a new lease and facilitate the change in ownership of the improvements.

At the December 5, 2019 Airport Commission meeting, the Airport Commission recommended City Council approve a facility lease for 342 Airport Blvd., between the City of Salinas and the Northern Salinas Valley Mosquito Abatement District at the Salinas Municipal Airport.

At the December 5, 2019 Airport Commission meeting, the Airport Commission recommended City Council accept the Quitclaim for 342 Airport Blvd. transferring the rights, title, and interest in and to 342 Airport Blvd. to the City of Salinas.

ANALYSIS:

Appraisal
Stephen Brown Associates, Inc. was contracted to appraise the site. The appraisal was completed in accordance with (a) the Uniform Standards of Professional Appraisal Practices ("USPAP") as promulgated by the Appraisal Standards Board of the Appraisal Foundation, and (b) the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute.

APPRAISAL CONCLUSION

Appraisal Premise	Interest Appraised	Effective Date	Value Conclusion
As Is	Fee Simple	Prospective July 1, 2019	Property Value of $1,300,000
Hypothetical – Vacant Site	Fee Simple	July 1, 2019	Ground Rent of $35,040

Property Inspection Report
West Coast Property Inspections was contracted to evaluate the building. Minor, non-structural defects were reported. The structural integrity of the building is sound. The minor defects included items such as missing Ground Fault Indicators, corrosion on vent pipes, missing carbon monoxide detector, stains from repaired roof leaks, etc.

Quitclaim Deed
On November 21, 2019, the District conveyed all rights, title and interest in and to 342 Airport Blvd. as well as all rights, title and interest of 342 Airport Blvd. in and to any leasehold improvements to the City of Salinas. Following Salinas City Council's approval of the Lease between the City and the District, the City Manager will execute a Certificate of Acceptance for 342 Airport Blvd. The Certificate of Acceptance is the final step in the change of ownership, transferring the property from the District to the City of Salinas.

Term
The lease provides one two-year initial term and a one one-year option renewal of the lease.

Space
Land - .915 acres 40,000 sq. ft.
Gross Building Area – 8,872± sq. ft. consisting of office, shop, maintenance area, garage, and storage.

Escalator
The annual rent shall be increased by an amount equal to the change in CPI (August to August) with a floor of 2.5% and a ceiling of 4.5%.

CEQA/NEPA CONSIDERATION:

The City of Salinas has determined that the proposed action is not a project and therefore exempt as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines Section 15378).

STRATEGIC PLAN INITIATIVE:

Approval of this lease will support City Council goals of Effective, Sustainable Government, and Economic Diversity and Prosperity.

DEPARTMENTAL COORDINATION:

The City of Salinas Airport Facility Lease, Quitclaim, and Certificate of Acceptance was reviewed as to form by the City Attorney.

FISCAL AND SUSTAINABILITY IMPACT:

Revenues from this lease will provide a positive impact to the Airport Enterprise Fund of $42,000 during the first year of the lease.

Resolution

RESOLUTION NO. _____ (N.C.S.)

A RESOLUTION APPROVING THE TRANSFER OF CERTAIN REAL PROPERTY AND THE APPROVAL OF A FACILITY LEASE BETWEEN THE CITY OF SALINAS AND NORTHERN SALINAS VALLEY MOSQUITO ABATEMENT DISTRICT, FOR 342 AIRPORT BLVD. AT THE SALINAS MUNICIPAL AIRPORT

WHEREAS, the Northern Salinas Valley Mosquito Abatement District ("District") desires to enter into a Facility Lease with the City of Salinas for real property located at 342 Airport Blvd. at the Salinas Municipal Airport; and

WHEREAS, in 1953, the District entered into a 50-year ground lease with the City of Salinas ("City") to develop District offices on airport property located at 342 Airport Blvd.; and

WHEREAS, in 2004, the District re-entered into a 15-year ground lease with the City to maintain their District Offices; and

WHEREAS, the 2004 lease expired on June 30, 2019; and

WHEREAS, the City and the District negotiated a new facility lease that includes a two-year initial term and one one-year option to extend the lease; and

WHEREAS, pursuant to the negotiated terms and conditions, at the execution of the new lease, the District will to Quitclaim all rights, title and interest in and to 342 Airport Blvd. and to any leasehold improvements to the City; and

WHEREAS, at the December 5, 2019 Airport Commission meeting, the Airport Commission recommended City Council approve the Facility Lease for 342 Airport Blvd. between the City and District; and

WHEREAS, at the December 5, 2019 Airport Commission meeting, the Airport Commission recommended City Council accept the Quitclaim for 342 Airport Blvd. transferring the rights, title, and interest in and to 342 Airport Blvd. to the City of Salinas; and

WHEREAS, the City Council of Salinas has determined it is in the best interest of the City and the Airport Enterprise Fund to accept the leasehold improvements.

NOW, THEREFORE, **BE IT RESOLVED** that the Mayor of Salinas is hereby authorized and directed for and on behalf of the City of Salinas to execute the attached Lease by and between the City of Salinas, a municipal corporation, Northern Salinas Valley Mosquito Abatement District; and

BE IT FURTHER RESOLVED, the City Council of Salinas accepts the Quitclaim Deed from the Northern Salinas Valley Mosquito Abatement District for certain real property located at 342 Airport Blvd., and more particularly describe on Exhibit A of the Quitclaim Deed dated November 21, 2019 (attached and incorporated to this Resolution); and

BE IT FURTHER RESOLVED, the City Manager of Salinas is hereby authorized to execute the Certificate of Acceptance, transferring the rights, title, and interest in and to 342 Airport Blvd. to the City of Salinas.

LEASE AGREEMENT

THIS LEASE AGREEMENT ("Lease") is entered into this January 1, 2020 (the "Effective Date") by and between the **City of Salinas**, a California charter city and municipal corporation of the State of California ("Lessor"), and **Northern Salinas Valley Mosquito Abatement District**, a political subdivision of the State of California ("Lessee").

WITNESSETH:

A. Lessor owns and operates the Salinas Municipal Airport in the City of Salinas, State of California.

B. Lessee desires to lease a portion of Airport for the uses permitted and upon the terms and conditions herein.

NOW, THEREFORE, in consideration of the foregoing, the mutual promises and covenants set forth in this Agreement, and for other good and valuable consideration, the sufficiency of which is hereby acknowledged, the parties agree as follows:

ARTICLE 1. DEFINITIONS AND EXHIBITS

Section 1.1 Definitions.

The following capitalized terms have the meanings set forth in this Section 1.1 whenever used in this Agreement, unless otherwise provided:

(a) "Additional Improvements" has the meaning given in Section 4.1.

(b) "Airport" means the Salinas Municipal Airport in the City of Salinas, State of California.

(c) "Base Rent" has the meaning given in Section 2.4, and includes the combined rent for the Building.

(d) "Building" has the meaning given in Section 2.1.

(e) "City Code" has the meaning given in Section 3.2(b).

(f) "Claims" has the meaning given in Section 5.1.

(g) "Event of Default" means any material breach of this Lease.

(h) "FAA" means the Federal Aviation Administration, as set forth in Section 3.3(e).

(i) "Land Use Plan" has the meaning given in Section 3.2(a).

(j) "Lease" means this Agreement, as set forth in the opening paragraph.

(k) "Lessee" means Northern Salinas Valley Mosquito Abatement District, as set forth in the opening paragraph.

(l) "Lessor" means the City of Salinas, a California charter city and municipal corporation, as set forth in the opening paragraph.

(m)"Ordinance No. 1719" has the meaning given in Section 3.4(d).

(n) "Original Term" has the meaning given in Section 2.3(a).

(o) "Part 21" has the meaning given in Section 3.3(c)(2).

(p) "Part 77" has the meaning given in Section 3.3(d).

(q) "Premises" means the [Building and the Ramp Space licensed to Lessee] pursuant to Section 2.1 of this Agreement.

(r) "Released and Indemnified Parties" means Lessor and its elected officials, officers, employees, agents, and assigns.

(s) ["Renewal Term" has the meaning given in Section 2.3(b).]

(t) "Rules" is defined in Section 3.2(a).

(u) "Super Adjacent Air Space" is defined in Section 3.1(e).

(v) "TSA" means the Transportation Security Administration, as set forth in Section 3.3(e).

Section 1.2 Exhibits.

The following exhibits are attached to this Lease and are incorporated into it by this reference; provided, however, that any conflict between an exhibit and the main body of this Lease will be construed in favor of the latter:

Exhibit A	Depiction of the Premises.
Exhibit B	RESERVED
Exhibit C	Permitted Uses of Premises
Exhibit D	RESERVED
Exhibit E	Insurance Requirements

ARTICLE 2. LEASE PROVISIONS

Section 2.1 Premises.

(a) Demise of the Premises. Lessor hereby agrees to lease to Lessee, and Lessee hereby agrees to lease from Lessor, approximately 8,872 square feet of office, industrial, garage, and warehouse space located at 342 Airport Blvd., Salinas, CA 93905 (the "Building"). The Building is described more particularly in Exhibit A.

Section 2.2 Use of the Premises.

The Premises will be used only for the purposes described in Exhibit C. The Premises may not be used for any other purpose without Lessor's written authorization, in Lessor's sole discretion.

Section 2.3 Term.

(a) Original Term. Except as otherwise specifically set forth in this Section, the term of this Lease shall be for a period of two (2) years commencing on the Effective Date January 1, 2020 and ending December 31, 2021, unless sooner terminated in the manner and under the conditions herein provided (the "Original Term"). Rent due pursuant to Section 2.4 begins upon commencement of the Original Term.

(b) Renewal Term. Lessor grants to Lessee the option to renew this Lease for one (1) additional one (1) year period ("Renewal Term"). Lessee's options to renew shall be exercised by Lessee delivering notice in writing to Lessor of its intent to exercise its option. Notice shall be delivered not more than three hundred sixty-five (365) days, or less than one hundred eighty (180) days, before the expiration of the Original Term for the Renewal Term. Lessee's notice of intent to exercise its option rights will not be effective if, at the time the notice is given, an Event of Default has occurred that has not been either waived in writing by Lessor or cured.

Section 2.4 Rent.

(a) Time and Place of Payments. In the event that Lessee elects to pay rent annually, the payment will be due and payable in advance for the first year on the Effective Date and each year thereafter on the annual anniversary of the Effective Date. In the event that Lessee elects to pay on a monthly basis, the payment be due and payable in advance for the first month, prorated on the basis of a thirty (30) day month for the number of days until the first (1st) day of the following month, and thereafter on the first (1st) day of each calendar month. Checks will be made payable to the City of Salinas, and will be delivered to:

City of Salinas
Office of the Finance Director, Attn: Airport Fund
200 Lincoln Avenue
Salinas, California 93901

The place and time of payment may be changed at any time by the Lessor upon thirty (30) days' written notice to Lessee. Lessee assumes all risk of loss and responsibility for late payment charges.

(b) Amount of Rent.

(1) Base Rent. During the Original Term, rent shall be payable, at the option of the Lessee, in either annual or equal monthly installments.

(A) The monthly rate for the Building and land on the Demised Premise is equals three thousand five hundred Dollars and No/100 ($3,500) per month or forty-two thousand Dollars and No/100 ($42,000.00) per annum ("Base Rent").

(2) Utilities. In addition to the Base Rent, Lessee shall pay for all water, gas, heat, light, power, telephone, sewage, garbage, and rubbish disposal, and all other services supplied to the Premises.

(3) Annual Increases. Commencing on the first anniversary of the Effective Date and on each anniversary of the Effective Date thereafter, the annual rent due under this Agreement shall be increased by at a rate equal to the percent change in the Consumer Price Index (CPI) for "All Urban Consumers, All Items" for San Francisco/Oakland/San Jose, California. The 12-month period, August to August, immediately preceding the date the rental increase is due will be used to calculate the rental increase. In no case shall the rent be adjusted lower than two and one-half percentage (2.5%) or greater than four and one-half percentage (4.5%) from the monthly rent from the preceding year.

(c) Delinquent Rent. Rent will be considered delinquent if it is not paid within ten (10) days of the due date. The parties agree that Lessee's failure to pay rent before it becomes delinquent will cause Lessor to suffer losses or damages, including but not limited to transactions charges, collections costs, and the loss of use of funds, which would be difficult to predict and calculate in advance. To compensate for such losses, Lessee will pay a late fee equal to ten percent (10%) of the amount of unpaid rent that is due and owing at the time the rent became delinquent, which the parties agree represents a reasonable estimate of Lessor's damages.

Section 2.5 Security Deposit.

There will be no security deposit; however, at the expiration of this Lease, or any earlier termination pursuant to Article 6, Lessee will return the Premises to Lessor in comparable or better condition and repair as it existed as of the Effective Date, normal wear and tear excepted.

Section 2.6 Taxes.

Lessee will pay all taxes (including possessory interest tax), property related fees, and assessments that may be levied upon the Premises, and any interest of Lessee therein, for the full term of this Lease.

ARTICLE 3. AIRPORT USE RESTRICTIONS

Section 3.1 Lessor's Reservations.

(a) Utilities. Lessor reserves the right, upon reasonable prior notice to Lessee, to install, lay, construct, maintain, repair, and operate such sanitary sewers, drains, storm water sewers, pipelines, manholes, and connections; water, oil and gas pipelines; telephone, telegraph and electric power lines; and the appliances and appurtenances necessary or convenient in connection therewith, in, over, upon, through, across and along any and all portions of the Premises. No right reserved by Lessor in this Subsection shall be so exercised as to interfere unreasonably with Lessee's permitted use or operations hereunder or to impair the security or

any secured creditor of Lessee. Lessor further agrees that rights granted to third parties by reason of this clause shall contain provisions that the Premises will be restored as nearly as practicable to its original condition upon the completion of any construction. Lessor further agrees that should the exercise of these rights temporarily interfere with the use of any and all of the Premises by Lessee, the rental and other charges due hereunder shall be reduced in proportion to the interference with Lessee's use of the Premises.

(b) Development of Landing Area. Lessor reserves the right to further develop or improve the landing area of the Airport as it sees fit, regardless of the desires or view of the Lessee and without interference or hindrance to Lessee's permitted use or operations hereunder or to impair the security or any secured creditor of Lessee. In the event the exercise of such rights unreasonably interferes with Lessee's use of the Premises, Lessee shall have a termination right as set forth in Section 6.4, and will be entitled to compensation as set forth therein.

(c) Facility Repairs. Lessor reserves the right, but shall not be obligated to the Lessee, to maintain and keep in repair the landing area of the Airport, the Ramp Area, and all publicly-owned facilities of the Airport, together with the right to direct and control all activities of the Lessee in this regard. In the event the exercise of such rights unreasonably interferes with Lessee's use of the Premises, Lessee shall have a termination right as set forth in Section 6.4, and will be entitled to compensation as set forth therein.

(d) Aerial Approaches. Lessor reserves the right to take any action it considers necessary to protect the aerial approaches of the Airport against obstruction, together with the right to prevent Lessee from erecting, or permitting to erect, any building or other structures on the Airport which, in the opinion of Lessor, would limit the usefulness of the Airport or constitute a hazard to aircraft.

(e) Super Adjacent Airspace. It is agreed and understood that Lessee's right and interest in the airspace above the Premises is limited by, and subordinate to, the primary use of the Airport for aviation purposes, and Lessor reserves and excepts from this Lease all that portion of the real property herein leased which is super adjacent to a plane sixty (60) feet above and parallel to the existing ground surface of said real property (the "Super Adjacent Air Space"). Lessor further reserves and excepts from this Lease, and Lessee hereby grants to Lessor (insofar as the hereinafter described easements and rights in any manner or to any extent that affect the Premises, any improvements which may be made thereon, and Lessee's leasehold or other interest therein and Lessee's use, occupancy or enjoyment thereof):

(1) An avigation easement over and laterally adjacent to the Leased Premises and any improvements which may be made thereon, including but not limited to the easement and right to fly, or cause or permit flight by any person of, any aircraft of and all kinds now or hereafter know, in, through, across or about any portion of said Super Adjacent Air Space and any air space laterally adjacent thereto; and

(2) The easement and right to cause or create, or permit to be caused or created, such noise, vibration, currents and other effects of air, illumination and fuel consumption which may arise or occur, (i) from or during the use of said avigation easement and such flight as is described hereinabove; or (ii) from or during the use by such aircraft of any

Airport facilities, including but not limited to the landing, storage, repair, maintenance, operation, warm-up and take-off of such aircraft, upon, within or about said Airport, and the approach and departure of aircraft to or from such Airport.

(f) Reservations in Gross. The easements and rights herein reserved and excepted by Lessor, and the easements and rights herein granted by Lessee to Lessor, shall be deemed both in gross and also appurtenant to each and every portion of the real property of the Airport (save and except the Premises).

Section 3.2 City of Salinas Regulations.

(a) Airport Rules and Land Use Plan Incorporated. The Salinas Municipal Airport Rules and Regulations (the "Rules") and the Salinas Municipal Airport Land Use Plan (the "Land Use Plan"), as those documents may be amended or superseded from time to time, are incorporated into this Lease by this reference. Lessee will comply fully with the Rules, and Lessee's use of the Premises will be consistent with the Land Use Plan.

(b) City of Salinas Municipal Code. Lessee agrees to comply at all times with applicable provisions of the City of Salinas Municipal Code (the "City Code"), including but not limited to Chapter 4 (Public Property) and Chapter 37 (Zoning). Lessor agrees that the Premises are compliant with such provisions as of the date of this Lease.

(c) Other Applicable Laws, Rules, and Regulations. Lessee further agrees to comply with all other applicable laws, rules, and regulations, for the use of the Premises and all other portions of the Airport, including any rules and regulations established by the Salinas City Council, the Salinas Airport Commission, and the Salinas Airport Manager.

Section 3.3 Federal Requirements.

(a) Subordination to Federal Agreements. This Lease is subordinate to the provisions and requirements of any existing or future agreement between the Lessor and the United States of America, relative to the development, operation, or maintenance of the Airport.

(b) Non-Exclusive Right. Lessee acknowledges that this Lease is subject to 49 U.S.C. § 40103, which states in part that: "A person does not have an exclusive right to use an air navigation facility on which Government money has been expended." Nothing in this Lease will be construed to grant or authorize the granting of an exclusive right to provide aeronautical services to the public, and Lessor reserves the right to grant others the privilege and right of conducting activities at the Airport of an aeronautical nature.

(c) Nondiscrimination.

(1) Lessee agrees to furnish any services provided to the public at the Premises on a fair, equal, and not unjustly discriminatory basis to all users of such services, and to charge fair, reasonable, and not unjustly discriminatory prices for each unit of service; provided, however, that Lessee may make reasonable and nondiscriminatory discounts, rebates, or similar price reductions to volume purchasers.

(2) Lessee agrees, on behalf of itself and its agents, successors, and assigns, and as material consideration for this Lease and a covenant running with the land, that: (i) no person on the grounds of race, gender, religion, or national origin, will be excluded from participation in, denied the benefits of, or be otherwise subjected to discrimination in the use of the Premises; (ii) in the construction or use of any improvements on, over, or under the Premises, and in the furnishing of services at the Premises, no person will be excluded from participation in, denied the benefits of, or otherwise be subjected to discrimination; and (iii) Lessee will use the premises in compliance with all other requirements imposed by or pursuant to Code of Federal Regulations, Title 49, Subtitle A, Part 21, Nondiscrimination in Federally Assisted Programs of the Department of Transportation—Effectuation of Title VI of the Civil Rights Act of 1964, as those regulations may be amended from time to time ("Part 21").

(3) Notwithstanding any other provision of this Lease relating to termination or default, and subject to any procedural safeguards provided for in the Part 21, in the event of breach of the covenants in the previous Paragraph (2), Lessor will have the right to terminate this Lease and to reenter and repossess the Premises, and to hold the same as if this Lease had never been made or issued.

(4) Lessee assures that it will undertake and equal opportunity program as may be required by Code of Federal Regulations, Title 14, Part 152, Subpart E ("Subpart E"), to ensure that no person will, on the grounds of race, creed, color, national origin, or sex, be excluded from participating in employment activities covered under Subpart E. Lessee assures that no person will be excluded on those grounds from participating in or receiving the services or benefits of any program or activity covered in Subpart E. Lessee assures that it will require that its covered sub-organizations provide assurances to Lessee that they similarly will undertake equal opportunity programs, and that they will require assurances from their sub-organizations, as may be required by Subpart E, to the same effort.

(5) Nothing in this Subsection is intended to authorize discrimination on any basis not addressed in Part 21 or Subpart E, and Lessee agrees to comply with all other applicable federal, state, or local statutes, regulations, or ordinances prohibiting discrimination on the basis of any protected classification.

(d) Height Restrictions.

(1) Lessee agrees, on behalf of itself and its agents, successors, and assigns, and as material consideration for this Lease and a covenant running with the land, not to erect or to permit the erection of any structures or objects on the Premises, nor to permit the grown of any tree, to a height that would exceed the standards set forth in Part 77 of the Federal Aviation Regulations ("Part 77") or Ordinance No. 1719 of the City of Salinas, dated November 21, 1977 ("Ordinance No. 1719"), as both may be amended or superseded from time to time. Lessor reserves the right to enter the Premises to remove any offending structure, object, or tree at Lessee's expense.

(2) Lessee agrees to comply with the notification and review requirements covered in Part 77 and Ordinance No. 1719 in the event future construction is planned for the

Premises, or in the event of any planned modification or alteration of any present or future building or structure on the Leased Premises.

(3) Lessee agrees, on behalf of itself and its agents, successors, and assigns, and as material consideration for this Lease and a covenant running with the land, not to use the Premises in any manner whatsoever that might interfere with the departure or landing of aircraft from the Airport or otherwise constitute a hazard. Lessor reserves the right to enter the Premises to abate any such interference at Lessee's expense.

(e) Security. Lessee agrees to comply with any applicable rules or procedures affecting the security of the Airport imposed by Lessor or any other federal, state, or local agency, including, without limitation, the provisions of any agreement respecting Airport security between Lessor and the Federal Aviation Administration (the "FAA") or the Transportation Security Administration (the "TSA"), or any security plan approved by the FAA or the TSA. Any violations of any such rules or procedures by Lessee that result in fines to Lessor by any federal, state, or local agency shall be assessed to Lessee as additional rent due and payable immediately upon invoice.

(f) War or National Emergency. This Lease and all the provisions of it are subject to whatever right the United States of America has affecting the control, operation, regulation, and taking over of the Airport or the exclusive or non-exclusive use of the Airport by the United States of America during the time of war or national emergency.

(g) Other Federal Requirements. Lessee agrees that Lessee's use of the Premises, including any initial construction, all future construction, and any maintenance, repair, or modification of the Premises, will comply with all applicable Federal Aviation Regulations or other applicable federal statutes, regulations, or rules affecting airports or aviation as may now be in force or that may be hereafter adopted by any federal agency or instrumentality. This Subsection will be construed broadly to ensure compliance with applicable federal requirements.

ARTICLE 4. OTHER COVENANTS

Section 4.1 Maintenance and Repair.

(a) Lessee's Maintenance and Repair Obligations. Except as otherwise specifically provided in this Lease Agreement, Lessee will be solely responsible for keeping the Premises clean and in good condition and repair, reasonable wear and tear excepted, and for maintaining and repairing all interior and exterior components of the Premises, including without limitation all roof, structure, foundation, exterior and load-bearing walls, landscaping, parking areas, heating, air-conditioning and ventilation systems, telephone and communication systems, plumbing and electrical systems, and all appliances, lighting, and light bulbs, flooring, ceilings, walls, doors, door locks, door frames, windows, window locks, window frames, and painted surfaces. Lessee will also be responsible for all damage or destruction of the Premises caused by any acts of Lessee or by Lessee's employees, agents, licenses, contractors, assignees, sublessees, guests, or invitees.

(b) Lessor's Right to Cure; Additional Rents. If, in the opinion of the Lessor's Airport Manager, the Premises are not being properly maintained, the Airport Manager may,

after giving written notice to Lessee and after a reasonable time to cure, cause such repair and maintenance to be made. The cost of such maintenance will be added to the rent, and will be due immediately upon invoice.

Section 4.2 Signs.

Lessee may post such signs as necessary and usual in the conduct of its business in and upon the Premises. Location, size, shape, and copy of all signs will be in accordance with the City Code, and will be approved by Lessor's Airport Manager, Community Development Department, and Permit Center prior to installation. Subject to all requirements of the City Code and other applicable laws, approval will not be withheld unreasonably.

Section 4.3 Liens and Claims.

(a) Possessory Interest. Lessee acknowledges that this lease may create a real property possessory interest subject to taxation. Without limiting Lessee's obligation pursuant to this Lease to pay taxes, assessments, property related fees, and other charges and impositions associated with the Premises, payment of real property taxes levied on such possessory interest will be the sole responsibility of Lessee, with no right of offset of rent, charges, or other fees due under this Lease.

(b) No Liens. Lessee will pay all taxes, assessments, property related fees, and other charges and impositions that Lessee is obligated to pay under this Lease before the same become delinquent. Furthermore, Lessee will not permit or suffer any liens or encumbrances to be imposed upon the Premises, the Airport, or any building or structure thereon as a result of nonpayment of any obligation of Lessee. Neither will Lessee permit or suffer any lien, claim, or demand to be imposed upon the Premises, the Airport, or any building or structure thereon, arising from any work of construction, repair, restoration, or maintenance at or on the Premises (except liens, claims, or demands suffered by or arising from the actions of Lessor).

(c) Payment and Performance Bonds. To ensure the completion of works of improvement and to protect the Premises from liens, prior to the commencement of any work of construction, repair, restoration, or maintenance at or on the Premises, which exceeds Five Thousand and No/100 Dollars ($5,000.00) in cost, Lessee shall furnish to Lessor's Airport Manager, at no cost to Lessor, payment and performance bonds approved as to form by the Lessor's City Attorney in the full amount of the total cost of the contract or contracts for the work.

(d) Contesting Charges. Notwithstanding anything to the contrary in this Section, with prior notice to Lessor, Lessee may contest any tax, assessment, fee, charge, imposition, claim, or demand for payment that may become a lien on Lessor's property if left unpaid, provided that nonpayment is permitted only during the pendency of any contest without the foreclosure of the lien or the imposition of any fine or penalty that could become a debt of Lessor. Lessee will prosecute any contest diligently, and will provide such security as may be requested by, and acceptable, to Lessor to hold Lessor and Lessor's property free from liability.

(e) Payment by Lessor. If Lessee fails to pay any amount required by this Section to be paid by Lessee, Lessor will have the right, but not the duty, on five (5) days' prior written

notice to Lessee, pay, discharge, or adjust such obligation for Lessee's benefit. On written demand from Lessor, Lessee will, as additional rent, reimburse Lessor within ten (10) days for the full amount expended by Lessor, together with interest from the date of payment at the lesser of ten percent (10%) or the maximum amount allowed by law.

Section 4.4 Right to Assign or Transfer.

(a) Limitation on Assignment, Subleasing, Encumbrance, or Transfer. Lessee will not sublease the Premises or otherwise encumber, assign or transfer this Lease, or any right or interest herein.

(b) Change in Control. If Lessee is a corporation, unincorporated association, partnership, or other business entity, the transfer, assignment, or hypothecation of any stock or interest in said entity, in the aggregate in excess of twenty-five percent (25%), transfer of the general partner or managing general partnership interest in a limited partnership, or transfer of the manager of a limited liability company, will be deemed an assignment within the meaning of this Lease. The following transfers are excepted from the provisions of this Subsection:

(1) Transfer or assignment of stock or interest to a shareholder or member of Lessee or an entity controlled by, under common control with, or controlling Lessee, or pursuant to a merger [or sale of all or substantially all of the assets of Lessee].

(2) Transfer or assignment of stock or interest to a spouse, child, or grandchild of a shareholder, member, or partner, or to a trust for the benefit of the same.

(c) Lessor's Option to Terminate. Notwithstanding any other provision in this Lease regarding default or termination, should Lessee attempt to make or suffer to be made any such encumbrance, assignment, sublease, or transfer in violation of this Section, or should any right or interest of Lessee hereunder or in or to the Premises be transferred or sold by or under court order or legal process, or otherwise, then any of the foregoing events will be deemed a breach of this Lease and thereupon Lessor may, at its option, terminate this Lease immediately by written notice to Lessee, or exercise other rights provided by law or in this Lease to be exercisable by Lessor in the event of any default or breach under this Lease. Should Lessor consent to any such encumbrance, assignment, sublease, or transfer, such consent will not constitute a waiver of any of the restrictions of this Section, and the same will apply to each and every encumbrance, assignment, sublease, or transfer hereunder and shall be severally binding upon each and every encumbrancer, assignee, sublessee, transferee, and other successor in interest of Lessee.

(d) Grounds for Withholding Consent. It is agreed and understood that Lessor may withhold Lessor's consent to any assignment, transfer, sublease, or encumbrance under the following circumstances:

(1) If a proposed assignee or sublessee will not covenant in writing to keep, perform, and be bound by each and all the covenants and conditions of this Lease, and to assume any previously accrued obligations hereunder.

(2) If Lessee is in default under this Lease at such time in any respect.

(3) If construction, repair, or demolition of improvements on the Premises is in progress, or if said construction, repair, or demolishment is incomplete.

(4) Until a determination has been made by Lessor that the assignee, transferee, or other successor in interest of Lessee can pay rent and operate in accordance with the standards required by Lessor.

(5) Lessor is not satisfied, in its sole and absolute discretion, that Lessee is willing and able to discharge any proposed encumbrance.

(6) Any other reasonable basis.

(e) Incorporation of Lease; Effect of Assignment. Any document that purports to assign, sublease, transfer, or encumber the Premises or any part thereof, will incorporate directly or by reference all provisions of this Lease unless otherwise amended in writing. Upon any assignment or transfer approved by Lessor, Lessee will be relieved of any further obligations arising under this Lease after the effective date thereof.

Section 4.5 Encumbrances of Leasehold Interests.

(a) Subject to Section 4.6, Lessee may encumber Lessee's interest in the Premises to secure a loan from a federally insured institutional lender to construct the Tenant Improvements and any Additional Improvements, provided the unpaid balance of any such loan will not at any time exceed [Seven Hundred Fifty Thousand and No/100] Dollars ([$750,000.00]) without the prior written consent of Lessor's City Council. Such encumbrance will be subject, however, to the following covenants and conditions:

(1) Any document evidencing the loan or any security given for it must be filed with Lessor's City Clerk within ten (10) days after its execution.

(2) Except as otherwise provided in this Section, any instrument securing the loan will be subordinate to this Lease and Lessor's interests in the Premises, the Airport, and all improvements thereon. In the event of any conflict between the provisions of this Lease and the provisions of such security instrument, the provisions of this Lease will control, and any person acquiring any interest in the Premises by foreclosure, trustee's sale, or any similar remedy, will acquire that interest subject to Lessee's obligations under this Lease.

(3) If Lessee elects to terminate this Lease pursuant to Section 6.6 in the case of any casualty, Lessee will be obligated disburse the proceeds of any insurance first to repay an loan secured by Lessee's interest in the Premises. The remaining proceeds, if any, will be paid to Lessor for such amounts, if any, due and owing to Lessor by Lessee under this Lease. Thereafter, any proceeds remaining may be disbursed to Lessee.

(b) To the extent that a loan secured by Lessee's interest in the Premises is reasonably necessary for Lessee to finance the Tenant Improvements and any Additional Improvements authorized by Lessor, and provided that Lessor has approved such encumbrance pursuant to Section 4.6 and this Section, Lessor will not unreasonably withhold agreement to customary creditor protections, including by providing the lender notice and an opportunity to

cure any breach of this Lease on Lessee's behalf prior to exercising any remedy hereunder that would threaten the lender's security.

Section 4.6 Right to Enter.

Lessor reserves the right by its officers, employees, agents, and contractors, to enter the Premises upon prior notice at reasonable times (except in cases of emergency), (i) for any reason otherwise authorized under this Lease, including as allowed in Section 3.1; (ii) to inspect the Premises and to ensure compliance with this Lease; (iii) in furtherance of any maintenance obligation of Lessor; (iv) to post notices, including notices of nonresponsibility for improvements, alterations, or repairs if an when Lessor desires to do so; and (v) whenever reasonably necessary in the interest of public health or safety.

Section 4.7 Abandonment.

Lessee may not abandon, vacate, or surrender the Premises during the Original Term or Rental Term, except as otherwise provided in this Lease. In the case of any unauthorized abandonment, Lessor may reenter and relet the Premises. Mere failure to operate the Premises will not constitute abandonment provided that Lessee continues to maintain the Premises and pay all rent and other obligations hereunder. Any belongings or other property left on the Premises following termination of this Lease or abandonment of the Premises will, at the option of Lessor, be deemed abandoned.

Section 4.8 Recording of Lease Forbidden.

Lessee will not record this Lease, or a memorandum or abstract of it, and will not cause or permit any other person to do the same on its behalf, without express written permission from Lessor's Airport Manager.

Section 4.9 Licenses and Permits.

Lessee has obtained or, will obtain at such time as may be necessary, each and every approval, license or permit as may be necessary to operate the Premises as contemplated hereunder.

ARTICLE 5. RISK MANAGEMENT

Section 5.1 Indemnification.

Lessee will indemnify, hold harmless, and defend (with counsel reasonably acceptable to Lessor) the Released and Indemnified Parties against any and all claims, actions, causes of action, liabilities, costs (including reasonable attorneys' fees), expenses, liens, judgments, damages, or civil or administrative fines (collectively, "Claims") caused by Lessee's use of the Premises, including, without limitation, Claims for property damage, personal injury, or wrongful death; provided, however, that Lessee's indemnification obligation does not extend to Claims arising out of the Released and Indemnified Parties gross negligence or willful misconduct.

Section 5.2 Insurance.

Lessee will provide insurance coverage in types and amounts, and subject to such conditions, as specified in Exhibit E.

Section 5.3 Reporting Damage.

Lessee will report any transaction or occurrence at or relating to the Premises for which Lessor may have significant exposure to liability. Such report will be made immediately by phone, and within one (1) business day in writing, to Lessor's Airport Manager or such other person as Lessor may designate in writing. The written report will describe the incident in reasonable detail, including a description of the nature of the damages and the identity and contact information (if available) of any witnesses. The report will also identify any insurance policy that may be available to cover the damage.

Section 5.4 Disclaimer and Release; ADA Notice.

(a) General Release.

(1) Lessee agrees that it was provided a reasonable opportunity prior to entering into this Agreement to inspect the Premises and to conduct such due diligence as it, in its discretion, has deemed appropriate. **LESSEE ACCEPTS THE PREMISES SUBJECT TO AND AS PROVIDED IN THIS LEASE IN ITS CURRENT "AS-IS" CONDITION, INCLUDING ALL FAULTS OR DEFECTS, ZONING CONDITIONS, OR HAZARDOUS CONDITIONS KNOWN OR UNKNOWN (IF ANY)**. Lessor will not be liable to Lessee for, and Lessee hereby releases the Released and Indemnified Parties from any and all liability, whether in tort or in contract, for any injury, damage, or loss resulting from or attributable to the condition or status of the Premises. Lessee hereby waives and agrees not to commence any action, legal or administrative proceeding, cause of action, or suit in law or equity, of whatever kind or nature, directly or indirectly against the Released Parties in connection with the Premises, this Lease or Lessee's use of the Premises pursuant to this Lease.

(2) Lessee, on its own behalf and of any other party claiming by or through Lessee, expressly waives the provisions of Civil Code Section 1542, which states:

> **A GENERAL RELEASE DOES NOT EXTEND TO CLAIMS THAT THE CREDITOR OR RELEASING PARTY DOES NOT KNOW OR SUSPECT TO EXIST IN HIS OR HER FAVOR AT THE TIME OF EXECUTING THE RELEASE AND THAT, IF KNOWN BY HIM OR HER, WOULD HAVE MATERIALLY AFFECTED HIS OR HER SETTLEMENT WITH THE DEBTOR OR RELEASED PARTY.**

Lessee's Initials: _____

(3) Lessee acknowledges that the release set forth above is an integral part of this Lease, and that Lessor would not have agreed to enter into this Lease without it. The release shall survive the expiration and termination of this Lease.

(4) Notwithstanding anything to the contrary herein, this Subsection shall not be construed to hold Released and Indemnified Parties harmless for liability for the breach of this Lease or for intentional and active fraud, willful misconduct, or gross negligence.

(b) Bailee Release. It is hereby agreed and understood that Lessor in no way purports to be a bailee, and is therefore not responsible in any way for any damage to the property of Lessee or Lessee's contractors, agents, employees, guests, or invitees.

(c) Access Barriers. Pursuant to Civil Code Section 1938, Lessor is required to advise Lessee of the following:

> **A Certified Access Specialist (CASp) can inspect the subject premises and determine whether the subject premises comply with all of the applicable construction-related accessibility standards under state law. Although state law does not require a CASp inspection of the subject premises, the commercial property owner or lessor may not prohibit the lessee or tenant from obtaining a CASp inspection of the subject premises for the occupancy or potential occupancy of the lessee or tenant, if requested by the lessee or tenant. The parties shall mutually agree on the arrangements for the time and manner of the CASp inspection, the payment of the fee for the CASp inspection, and the cost of making any repairs necessary to correct violations of construction-related accessibility standards within the premises.**

The Premises [have not] been inspected by a CASp. Lessee is responsible for all costs of complying with federal, state, and local statutes, regulations, and guidelines imposing standards for accessibility applicable to the Premises, and Lessee's failure to comply with such laws shall be subject to Lessee's obligations stated in Section 5.1.

(d) Assumption of Risks and Waiver. Lessee assumes all risks associated with the use of the Airport for aviation purposes, including, without limitation, risks (including any psychological risks) associated with noise, vibration, currents and other effects of air, illumination, and fuel consumption. Lessee expressly waives any and all claims whatsoever against the Released and Indemnified Parties arising in any manner out of the normal operation of the Airport as an airport, and waives any nuisance claim Lessee may have against another lessee or licensee of Airport property so long as the lessee or licensee is in full compliance with all applicable laws, as well as with its lease or license. Lessees within the scope of the foregoing waiver are intended beneficiaries of the waiver.

Section 5.5 Hazardous Substances.

(a) Notice of Releases. Pursuant to Health and Safety Code Section 25359.7, Lessee will notify Lessor in writing within a reasonable time after Lessee obtains knowledge of any material release of hazardous substances and of any hazardous substances that have come to be located beneath the Airport.

(b) Removal of Hazards. Prior to the expiration of this Lease, Lessee will, at its sole expense, remove all items of personal property from the Premises, including but not limited to all flammable substances and hazardous materials and wastes (as defined by state and federal

law) at the time of expiration of this Lease to the extent released or deposited by Lessee and to the extent the presence of which violates applicable Law. Lessee will have no liability or responsibility for removal of flammable substances or hazardous materials and wastes migrating to beneath the Leased Premises or existing prior to the Effective Date.

(c) Availability of Records. Lessee shall make available for inspection to the Lessor, all records relating to the maintenance, release, mitigation, cleanup and disposal of any hazardous substances on the Premises.

(d) Compliance with Applicable Laws. Lessee shall comply with all federal, state and local laws and regulations relating to hazardous materials and wastes it uses, stores, releases or discharges on the Premises during the term of this Lease, and shall timely comply with the orders of any governmental agencies relating thereto. Lessee will be responsible for meeting current storm water pollution prevention best management practices, as identified by Lessor in Lessor's Storm Water Pollution Prevention Plan, as it may be amended from time to time. Such practices include, without limitation:

(1) Providing a labeled and stocked spill kit on site;

(2) Proper storage and labeling of hazardous substances or components of potentially hazardous substances;

(3) Providing personnel with appropriate routine spill response training;

(4) Keeping repair, construction, and maintained appropriately covered from wet weather;

(5) Making appropriate use of drip pans, dry cleanup models, and spill and overflow protection; and

(6) Removing pollutants offsite as necessary or appropriate.

Lessee understands and agrees that failure to comply with such best practices may result in Lessee no longer being included by Lessor in Lessor's participation in the general permit of the California State Water Resources Control Board concerning storm water discharges.

(e) Indemnification. Without limiting Lessee's indemnification obligations in any manner under this Lease, Lessee agrees to hold harmless, indemnify, and defend the Released and Indemnified Parties for any liability to the extent caused by Lessee's breach of this Section.

Section 5.6 Survival.

Except for those duties described in subsections (b) and (d) of Section 5.5, Lessee's duties under this Article will survive the termination of this Lease.

ARTICLE 6. DEFAULT AND TERMINATION

Section 6.1 Termination for Nonpayment of Rent or Other Charges.

Lessor's failure to pay rent or any other charge due to Lessor under this Agreement within ten (10) days of the due date for such payment will constitute an Event of Default. Upon the occurrence of such Event of Default, Lessor will provide Lessee with written notice of the default. Unless the default is cured or waived within ten (10) days of such notice, or unless the parties reach some other agreement in writing regarding payment of the amount due, the Lessor may take whatever action at law or in equity as may appear reasonably necessary to enforce performance or observance of any obligations, agreements, or covenants of the Lessee under this Lease, including without limitation, termination of this Lease. In the event of such default, the Lessor's remedies shall be cumulative, and no remedy expressly provided for in this Section shall be deemed to exclude any other remedy allowed by law.

Section 6.2 Other Events of Default.

In the case of any Event of Default under this Lease other than as described in Section 6.1, Lessee will cure the default on ten (10) days' written notice from Lessor; provided that if a cure cannot reasonably be accomplished within such time, Lessee will commence a cure within ten (10) days, and will diligently pursue a cure as quickly as reasonably possible. If the default is not timely cured, the Lessor may take whatever action at law or in equity as may appear reasonably necessary to enforce performance or observance of any obligations, agreements, or covenants of the Lessee under this Lease, including without limitation, termination of this Lease. In the event of such default, the Lessor's remedies shall be cumulative, and no remedy expressly provided for in this Section shall be deemed to exclude any other remedy allowed by law

Section 6.3 Future Expansion.

Lessor may, upon six (6) months' prior written notice, terminate this Lease in the event that it requires the Premises in connection with the future expansion or operation of the Airport. Lessor will abate any rent due from Lessee accordingly, and will pay Lessee the fair market value of the Tenant Improvements and any Additional Improvements constructed with Lessor's permission, less the amount of the Tenant Improvements Allowance (if any).

Section 6.4 Force Majeure.

(a) Termination by Lessor. Lessor may terminate this Lease, on such notice as is reasonable under the circumstances, due to an act of God, war, civil unrest, terrorism, the action of another government agency, or for otherwise for good cause not reasonably within Lessor's control, that would prevent Lessee's use of the Premises as contemplated under this Lease, and that gives rise to a need to regain possession of the Premises. Lessor will abate any rent due from Lessee accordingly, and will pay Lessee the fair market value of the Tenant Improvements and any Additional Improvements constructed with Lessor's permission, less the amount of the Tenant Improvements Allowance (if any).

(b) Termination by Lessee. If, due to an act of God, war, civil unrest, terrorism, the action of another government agency, or for otherwise for good cause not reasonably within Lessor's control, Lessee can no longer use the Premises as contemplated under this Lease, Lessee may, upon three (3) months' written notice, terminate this Lease. Lessor will equitably abate

Lessee's rent during such period of notice, and will refund any prepaid rent for the period following termination, but will otherwise have no liability for any damages to Lessee.

Section 6.5 Insolvency.

Insolvency by Lessee will constitute an Event of Default under this Lease. Insolvency includes any circumstance in which Lessee has, (i) made a general assignment for the benefit of creditors; (ii) filed any voluntary petition in bankruptcy or suffered the filing of an involuntary petition by its creditors (provided that the filing of any involuntary petition in bankruptcy against Lessee will not constitute a breach of this lease unless and until there is an adjudication that Lessee is bankrupt); (iii) suffered the appointment of a receiver to take possession of all or substantially all of its assets; (iv) suffered the attachment or other judicial seizure of all or substantially all of its assets; (v) admitted in writing it inability to pay its debts as they come due; or (vi) made an offer of settlement, extension or composition to its creditors generally.

Section 6.6 Casualty.

(a) Lessor's Right to Restore. If the Premises are totally or partially damaged or destroyed by fire, earthquake or other casualty, Lessor will have the right but not the obligation, to restore the Premises by repair or rebuilding. Lessor will provide Lessee a written notice within thirty (30) says following the date of such damage stating whether Lessor has elected to terminate this Lease or to repair the Premises. If Lessor fails to provide such timely notice, Lessee may, upon ten (10) days' prior written notice, terminate this Lease. If Lessor provides such timely notice and elects to repair or rebuild, and thereafter is able to complete such restoration within ninety (90) days from the date of damage, this Lease shall remain in full force and effect. If Lessor is unable to restore the Leased Premises within this time, or if Lessor elects not to restore, then either party may terminate this Lease by giving the other written notice. Upon such election to terminate, the rent under this Lease will be due and payable only through the date of damage. If this Lease is not terminated, the rent due and payable under this Lease will be abated or reduced to the extent that the damage interferes with Lessee's reasonable use of the Premises until such portion of the Premises is restored.

(b) Lessee's Right to Terminate. Notwithstanding the provisions of Subsection (a), if the Premises are so damaged as to materially and adversely affect Lessee's ability to conduct its normal business operations, as reasonably determined by Lessee, Lessee will have the right at its option to terminate the Lease upon written notice to Lessor given within thirty (30) days following the date of such damage, and rent under this Lease will be due and payable only through the date that such notice is given.

(c) No Obligation to Restore. If Lessor elects to repair and restore, Lessor will restore the Premises to substantially its condition to that prior to the occurrence or damage, provided that Lessor will not be obligated to repair or restore any alterations, additions, fixtures, equipment or improvements which have been installed by Lessee, whether or not Lessee has the right or obligation to remove the same or is required to leave the same on the Premises as of the expiration or earlier termination of this Lease, unless Lessee, in a manner satisfactory to Lessor, assures payment in full of all costs as may be incurred by Lessor in connection therewith. If there be any such alterations, fixtures, additions equipment or improvements installed by Lessee

and Lessee does not assure or agree to assure payment of all cost of restoration or repair as aforesaid, Lessor will have the right to determine the manner in which the Premises will be restored so as to be substantially as the Premises existed prior to the damage occurring of this Lease, as if such alterations, additions, fixtures, equipment or improvements installed by Lessee had not then been made or installed.

(d) No Liability for Loss or Interruption of Business. In no event will Lessor be responsible for any loss or interruption to Lessee's business caused by damage or destruction to the Premises or during the repair or reconstruction thereof regardless of the cause of damage or destruction or the extent of insurance coverage. The parties agree that the rights and obligation of the parties in the event of damage or destruction of the Premises will be governed by this Lease.

Section 6.7 Eminent Domain.

This Lease will terminate automatically if the entire Premises are acquired by eminent domain or sale in lieu of eminent domain. All compensation for the Premises will be payable to Lessor, except that Lessee will have the right to make a claim to the public agency acquiring the property for compensation for its Tenant Improvements and Additional Improvements, relocation expenses, and business losses, as allowed by law. If only a portion of the Premises is acquired by eminent domain or sale in lieu of eminent domain, Lessee may terminate this Lease on thirty (30) days prior written notice; provided that termination will be effective only after Lessee pays any rent, taxes, assessments, property related fees, or other charges due and owing to the date of the termination. Any compensation which would otherwise be payable under this Section to Lessee may be paid directly to any encumbrancer of Lessee's leasehold interest to the extent of such encumbrance.

Section 6.8 Remedies Cumulative.

Remedies provided under this Article for any Event of Default are cumulative with any other remedy that may be available to either party at law or in equity. For greater clarity, a termination resulting from future expansion (in compliance with Section 6.3), Force Majeure, casualty, or eminent domain will be deemed a no-fault termination, and not an Event of Default, and remedies therefor will be limited as provided in this Article.

ARTICLE 7. MISCELLANEOUS PROVISIONS

Section 7.1 Notice.

Unless otherwise provided in this Lease, all notices required to be given under this Lease will be in writing and will be sent by (i) certified mail, postage prepaid, return receipt requested, (ii) express delivery or overnight courier service with a delivery receipt, (iii) personal delivery with a delivery receipt, or (iv) electronic mail with a copy delivered by one of the previous three methods, to the address of the parties shown as follows (or as either party may designate in writing):

If to Lessor: Airport Manager
Salinas Municipal Airport

30 Mortensen Avenue
Salinas, CA 93905

With a copy to:
City Attorney
City of Salinas
200 Lincoln Avenue
Salinas, CA 93901

If to Lessee: District Manager - Biologist
Northern Salinas Valley Mosquito Abatement District
342 Airport Boulevard
Salinas, CA 93905-3301

Notice will be deemed given upon delivery if personally delivered or five (5) days following deposit in the mails if so deposited. Other methods of notice, including electronic mail, may be used to give notice if consented to in writing by the parties.

Section 7.2 Venue and Applicable Law.

This Lease will be governed, construed, and interpreted according to the laws of the State of California, and in any legal proceeding necessary to interpret or enforce this Lease or any part of it, the parties agree to submit to the jurisdiction of, and venue in, the courts of the State of California in the County of Monterey.

Section 7.3 Time.

Time is of the essence with respect to all obligations of the parties under this Lease.

Section 7.4 Third Party Beneficiaries.

This Lease is not intended to create, nor will it be in any way interpreted to create, any third party beneficiary rights, except as expressly and unequivocally provided herein. For greater clarity, the Released and Indemnified Parties are intended beneficiaries of those provisions making reference to the same.

Section 7.5 Integration; Amendment.

This Lease contains the entire understanding of the parties relating to the subject matter hereof, and supersedes other prior and contemporaneous oral and written agreements, understandings, and representations between the parties. No amendment to this Lease will be binding unless agreed to in a writing executed by both parties.

Section 7.6 Waiver.

No waiver of any provision of this Lease will constitute a continuing waiver of that provision or a waiver of any other provision. No waiver will be binding unless executed in writing by the party making the waiver.

Section 7.7 Interpretation.

(a) Neutral Interpretation. This Lease includes the contributions of both parties, each of which has had the opportunity to consult competent counsel, and the rule stated in Civil Code Section 1654 that an agreement be construed against its drafter will not apply to this this Lease.

(b) Severability. If any term or provision of this Lease is held by a court of competent jurisdiction to be invalid or unenforceable, the remaining terms of the Lease will be valid and enforceable except to the extent that the original intent of the parties would be frustrated thereby.

(c) Headings. Headings contained in this Lease are for ease of reference only, and will not alter the meaning of any provision hereof.

(d) Gender and Number. In this Lease, the masculine includes the feminine and neuter, and vice versa, and the singular includes the plural, and vice versa, as the context admits or requires.

(e) Parties' Intent. Any rule of construction notwithstanding, this Lease will be construed in the manner that best effectuates its purposes, to the fullest extent permitted under applicable law.

Section 7.8 Attorneys' Fees and Costs.

Attorneys' fees and costs will be available pursuant to Civil Code Section 1717 in any action between the parties arising out of this Lease. Attorney’s fees for in-house City Attorney staff, if awarded, shall be calculated at the market rate.

Section 7.9 Heirs, Successors, and Assigns.

This Lease, subject to the provisions as to assignment, transfer, and subleases, applies to bind the permitted representatives, heirs, executors, administrators, executors, and assigns of both parties.

Section 7.10 Conflicts of Interest.

To Lessee’s knowledge, no one affiliated with it having a prohibited conflict of interest pursuant to Government Code Section 1090 or the Political Reform Act (Government Code Section 87100, et seq.), has participated in the making of this Lease, and Lessee will advise Lessor should it obtain knowledge in the future of facts giving rise to such a conflict.

Section 7.11 Relationship Between the Parties.

The parties to this Lease are independent contractors, and no agency, joint venture, partnership, employee, co-employer, or similar relationship exists between them, so that neither party has authority to bind the other.

Section 7.12 Brokers.

Each party represents that it has not dealt with any broker, agent, or other intermediary who is or may be entitled to be paid a commission or finder's fee in connection with this Lease [*insert any exceptions here*]. Each party agrees to indemnify, hold harmless, and defend the other party from any and all liabilities arising from any breach of the representations in this Section.

Section 7.13 Multiple Originals.

This Lease may be executed in counterparts, each of which will be deemed an original.

Section 7.14 Signatures.

Each person executing this Lease represents and warrants that he or she is fully authorized to bind his or her respective party hereto.

[***Signatures on Following Page***]

IN WITNESS WHEREOF, the parties have executed this Lease effective as of the Effective Date.

EXHIBIT A

Legal Description of the Premises

All that real property situated in the City of Salinas, County of Monterey, State of California, located and described as follows:

Being a portion of the Salinas Municipal Airport deeded to the City of Salinas, by the United States by deed dated April 9, 1948, and recorded in Volume 1116 of Official Records, at page 77 therein, records of Monterey County, California, being more particularly described as follows:

Beginning at a point at the northerly edge of Bardin Road, from which the most northerly corner of Mayfair Park, as shown on a map titled "Mayfair Park" and filed in Volume 5 of Cities and Towns, at page 5 therein, records of Monterey County, California, bears the following 6 courses and distances:

(1)	S. 36° 43' 45" E.	25.0 feet
(2)	S. 57° 46' 00" W.	420 feet
(3)	N. 39° 36' 00" W.	880.50 feet
(4)	N. 60° 23' 00" W.	1307.06 feet
(5)	N. 38° 02' 00" W.	507.21 feet
(6)	S. 53° 55' 00" W.	5.0 feet

Said point being the most easterly corner of a parcel of land leased by the City of Salinas to the California National Guard; thence along the northeastern boundary of said land leased to the California National Guard N. 36° 43' 45" W. for a distance of 200.0 feet to the most northerly corner of said land leased to the California National Guard; thence, leaving said land leased to the California National Guard N. 57° 46' 00" E. for a distance of 200.0 feet to a point; thence S. 36° 43' 45" E. for a distance of 200.00 feet to a point; thence S. 57° 46' 00" W. for a distance of 200.0 feet to the point of beginning.

All courses true.

Contains .915 acres more or less.

EXHIBIT B

Depiction of the Premises

EXHIBIT C

Permitted Uses of the Premises

Operation of District administration offices (a non-aeronautical activity). District administrative operations shall include the following allowed uses: laboratory uses, fish rearing, vehicle/equipment/fabrication/maintenance/storage and training facilities to carry out the charge of protecting the public health and well-being.

EXHIBIT D

Description of the Tenant Improvements

EXHIBIT E

Insurance Requirements

A. Coverage shall be at least as broad as:

1. Commercial General Liability ("CGL"): Insurance Services Office ("ISO") Form CG 00 01 covering CGL on an occurrence basis, including products and completed operations, property damage, bodily injury, and personal & advertising injury with limits no less than $1,000,000 per occurrence. If a general aggregate limit applies, either the general aggregate limit shall apply separately to this project/location (ISO CG 25 03 or 25 04) or the general aggregate limit shall be twice the required occurrence limit.

2. Workers' Compensation insurance as required by the State of California, with Statutory Limits, and Employer's Liability Insurance with limits of no less than $1,000,000 per accident for bodily injury or disease.

3. Property insurance against all risks of loss to any Lessee owned or controlled property, including without limitation Improvements, Additional Improvements, or betterments, at full replacement cost with no coinsurance penalty provision. Such property insurance shall include fire insurance with extended coverage and debris-cleanup provisions in an amount equal to ninety percent (90%) of the actual cash value of all Improvements and Additional Improvements in or on the Premises.

B. Other Insurance Provisions:

The insurance policies are to contain, or be endorsed to contain, the following provisions:

(1) Additional Insured Endorsement - The liability policies shall include the City of Salinas, its elected and appointed officials, officers, employees, representatives, volunteers, and agents (hereinafter collectively the "City") as Additionally Insured via endorsement.

(2) Waiver of Subrogation Endorsement - Owner/Operator hereby grants to Entity a waiver of subrogation which any insurer may acquire against Entity, its officers, officials, employees, and volunteers, from Owner/Operator by virtue of the payment of any loss. Owner/Operator agrees to obtain any endorsement that may be necessary to affect this waiver of subrogation but this provision applies regardless of whether or not the Entity has received a waiver of subrogation endorsement from the insurer. The Workers' Compensation policy shall be endorsed with a waiver of subrogation in favor of the Entity for all work performed by the Owner/Operator, its employees, agents, and subcontractors.

(3) Primary and Non-contributing Coverage - All required insurance policies and all renewals thereof shall be primary and non-contributing; the required insurance policy shall

be primary over any other insurance, deductible, or self-insurance maintained by the City and non-contributory with respect to the City.

(4) Cancellation - Required insurance policies shall not be cancelled or the coverage reduced until a thirty (30) day written notice of cancellation has been served upon the City except ten (10) days shall be allowed for non-payment of premium.

(5) Broader Coverage/Higher Limits - If the Permit Holder maintains broader coverage and/or higher limits than the minimums shown above, the Permit Holder requires and shall be entitled to the broader coverage and/or higher limits maintained by the Permit Holder. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

(6) Acceptability of Insurers - Insurance is to be placed with insurers authorized to conduct business in the state with a current A.M. Best rating of no less than A: VII, unless otherwise acceptable to the City.

(7) Verification of Coverage - Permit Holder shall furnish the City with original Certificates of Insurance including an additional insured endorsement and all required amendatory endorsements (or copies of the applicable policy language effecting coverage required by this clause) and a copy of the Declarations and Endorsement Pages of the liability policies listing all policy endorsements to City before work begins. However, failure to obtain the required documents prior to the work beginning shall not waive the Permit Holder's obligation to provide them. The City reserves the right to require complete, certified copies of all required insurance policies, including endorsements, required by these specifications, at any time.

(8) Special Risk or Circumstances - City reserves the right to modify these requirements, including limits, based on the nature of the risk, prior experience, insurer, coverage, or other special circumstances.

(9) Self-Insured Retentions - Self-insured retentions must be declared to and approved by the City of Salinas. At the option of the City, the Owner/Operator shall provide coverage to reduce or eliminate such self-insured retentions as respects the City, its officers, officials, employees, and volunteers; or the Owner/Operator shall provide evidence satisfactory to the City guaranteeing payment of losses and related investigations, claim administration, and defense expenses. The policy language shall provide, or be endorsed to provide, that the self-insured retention may be satisfied by either the named insured or City of Salinas.

(10) Contractors and Subcontractors - Lessee shall require all contractors and subcontractors who perform work on the Premises to maintain general liability insurance in an amount of no less than $1 million combined single limit per occurrence which complies with all of the provisions in this Insurance section above, including providing an

additional insured endorsement in favor of the City, and Lessee shall provide City with copies of such insurance certificates and endorsements upon request.

Furthermore, before commencing or allowing commencement of any work of improvement, Lessee shall ensure that all of its employees and/or all employees of any contractors and subcontractors retained by Lessee, are covered by workers' compensation insurance.

Mr. Brett Godown
Salinas Municipal Airport
30 Mortensen Avenue
Salinas, CA 93905

RE: Industrial property appraisal of the real estate located at 342 Airport Boulevard, Salinas, CA 93905. Assessor's Parcel No.: 003-861-016.

Dear Mr. Godown:

In fulfillment of our agreement, Stephen Brown Associates, Inc. is pleased to transmit our appraisal report developing a prospective opinion of the market value of the above referenced real property as of July 1, 2019 based on the extraordinary assumption that as of the effective date the 40,000 sq. ft. subject parcel is a legal lot of record zoned IBP and capable of being sold on the open market to a private sector buyer. Because the subject is city-owned and the facility is leased to another government entity (Mosquito Abatement), which is due to expire on June 30,2019, the Fee Simple property interest is being valued. The appraisers have also been asked to provide an opinion of the fair market rent for the subject's 40,000 sq. ft. site as if it were a vacant undeveloped site, which is a hypothetical condition. The opinion of value reported is qualified by certain assumptions, limiting conditions, certifications, and definitions, which are set forth in the report.

In order to carry out this assignment, a market study of real estate activity in the vicinity of the subject property has been conducted. This investigation included the collection and analysis of sales, offerings, and other developments which have occurred in the subject and competitive areas in the recent past. The sources of this data included Monterey County records, our own data bank, other information provided by real estate brokers and appraisers, and knowledgeable individuals active in the area. Please reference page 12 of this report for important information regarding the scope of work and analysis for this appraisal, including property identification, inspection, highest and best use analysis, and valuation methodology.

This appraisal has been completed in accordance with (a) the Uniform Standards of Professional Appraisal Practices (“USPAP”) as promulgated by the Appraisal Standards Board of the Appraisal Foundation, and (b) the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute.

Market value, as used in this appraisal report, is defined as:

> The most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:
>
> 1. Buyer and seller are typically motivated;
> 2. Both parties are well informed or well advised, and acting in what they consider their own best interests;

3. A reasonable time is allowed for exposure in the open market;
4. Payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
5. The price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

Source: "(12 C.F.R. Part 34.42(g); 55 Federal Register 34696, August 24, 1990, as amended at 57 Federal Register 12202, April 9, 1992; 59 Federal Register 29499, June 7, 1994); Appraisal Institute, The Dictionary of Real Estate Appraisal, Sixth Edition (Chicago, 2015) Page 142."

Based upon the investigation, the following Fee Simple market value has been concluded, along with the opinion of fair market rent for the 40,000 sq. ft. site as if vacant and undeveloped as of the date of value:

APPRAISAL CONCLUSION

Appraisal Premise	Interest Appraised	Effective Date	Value Conclusion
As Is	Fee Simple	Prospective July 1, 2019	Property Value of $1,300,000
Hypothetical – Vacant Site	Fee Simple	July 1, 2019	Ground Rent of $35,040 annually as if vacant

Exposure Time[1]:

- The exposure time preceding July 1, 2019 would have been 6 months for the "As is" condition and up to12 months for renting the site as though vacant.

Hypothetical Conditions[2]:

- The subject's land rent value estimate in this appraisal is based on the hypothetical condition that the site is vacant and ready for development, as of the date of value.

Extraordinary Assumptions[3]:

- The value estimate is based on the extraordinary assumption that as of the prospective date of value the 40,000 sq. ft. subject parcel is a legal lot of record zoned IBP and capable of being sold on the open market to a private sector buyer. The subject's site size of 40,000 sq. ft. is based on the legal description contained in the original land lease, which is assumed to be correct for purposes of this appraisal and it is expected that any use will need to meet FAA regulations.
- The appraisers have not received a title report for the subject property and an extraordinary assumption has been made that there are no easements or encumbrances that negatively affect value. It is also an extraordinary assumption that the soil and improvements (above or below ground) on the parcel do not contain hazardous materials or toxic chemicals that would require remediation, thus altering the value of the property to a potential buyer as they would consider remediation costs against the price.
- The subject property has been improved by the land lease tenant and those improvements remain owned as a leasehold interest until the termination of the land lease reverting ownership to the City of Salinas on July 1, 2019, which is the prospective date of value. It is assumed that the market conditions will remain stable between the inspection date and the effective date.

[1] Exposure Time: see definition on page 54
[2] Hypothetical Conditions: see definition on page 54
[3] Extraordinary Assumption: see definition on page 54

The opinions of value stated above, as well as every other element of this appraisal, are qualified in their entirety by the Contingent and Limiting Conditions as well as the Master Assumptions set forth in this report, which are an integral part of the appraisal. It should be noted that the use of hypothetical conditions or extraordinary assumptions might have an effect on the value conclusion(s).

This letter is invalid as an opinion of value if detached from the report, which contains the text, exhibits, and addenda.

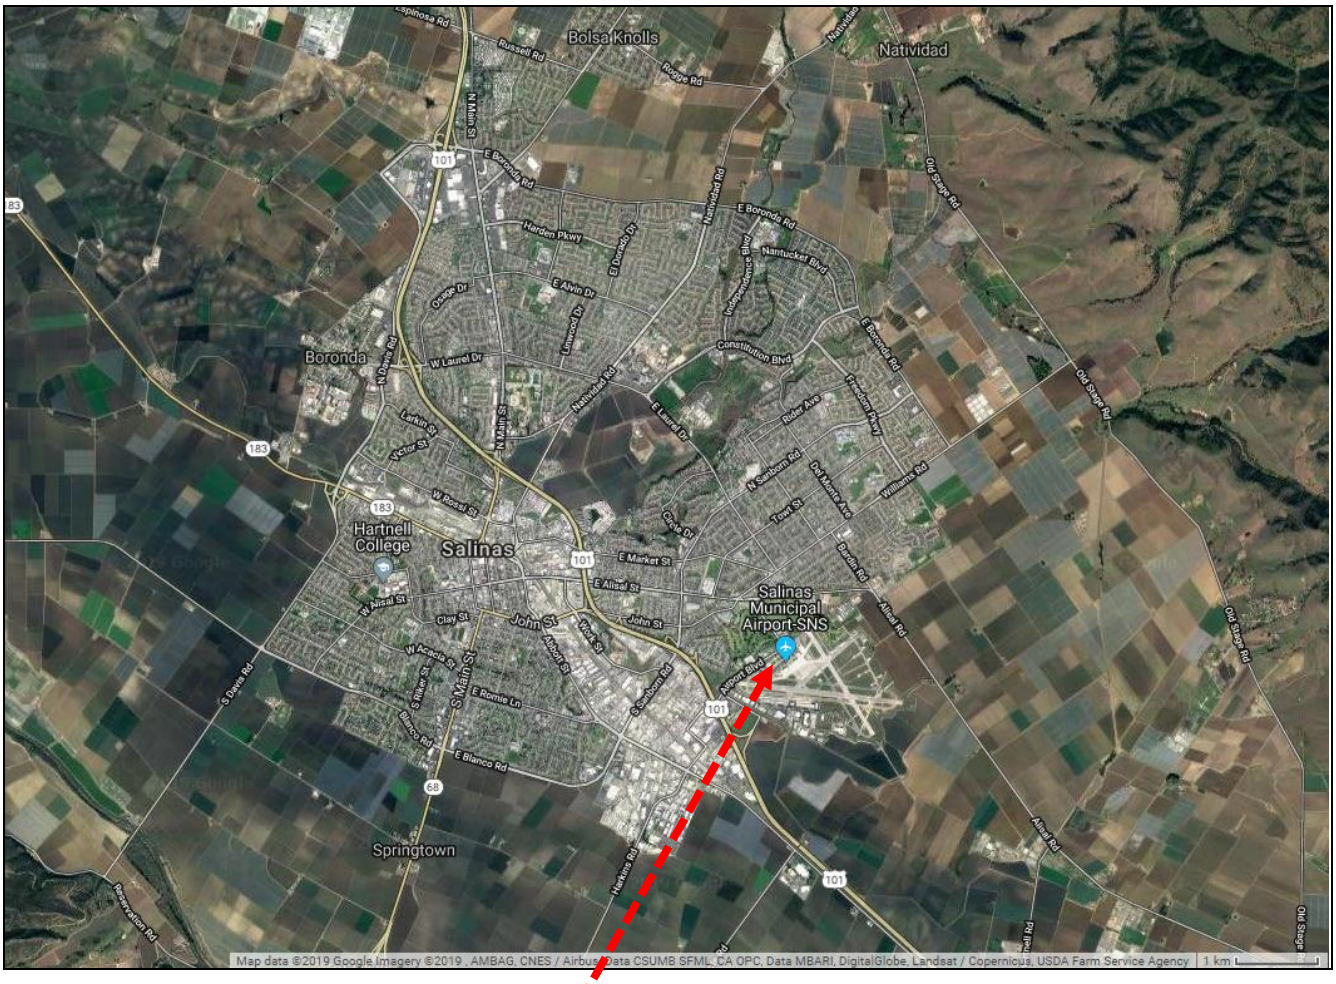
AERIAL AND SITE VIEWS



The general location of the subject property is indicated above by an arrow on the Google Earth map. The smaller image to the left shows the subject property outlined with a red line intended to approximate its site size and location. These maps are used for illustration purposes only.

The subject is part of a larger 70± acre parcel; however, the appraisal focuses on the 40,000 sq. ft (0.92± acres) fenced area that is developed with building improvements and driveway access on Airport Boulevard in an industrial neighborhood in south Salinas across the street from the municipal airport. The area in cultivation to the west and south of the subject is the location of the approved agricultural business park, which is an area of 257 acres; however, the market is not anticipating development of the agricultural business park in the immediate future.

SUMMARY OF IMPORTANT FACTS AND CONCLUSIONS

This section of the report is designed to provide quick access to a condensed synopsis of the appraiser's analysis with the most essential data and the resulting conclusions based on the Scope of Work defined within the report.

Subject Property:	342 Airport Boulevard, Salinas Monterey County, CA, 93905
Client:	Mr. Brett Godown Salinas Municipal Airport
Owner:	342 Airport Boulevard
Assessor Parcel Number (APN):	003-861-016 (portion)
Date of Value:	July 1, 2019 (prospective)
Date of Inspection:	April 2, 2019
Date of Report:	May 2, 2019
Valuation Perspective	Prospective
Interest Appraised:	Fee Simple
Intended Use:	The intended use is for asset management.
Intended User(s):	The client (Salinas Municipal Airport Manager, Brett Godown), and the City of Salinas' Airport Commission and their advisors.
Appraisal Report Type:	Industrial property appraisal
Location Description:	The subject is located in an industrial neighborhood in south Salinas near the airport. There are similar office/industrial uses in the subject's immediate area, which are approximately the same quality of construction and age.
Gross Building Area (GBA):	8,872± sq. ft. total
Site Size:	40,000± sq. ft. (0.92± acres) portion of larger parcel
Zoning:	Industrial Business Park (IBP) – extraordinary assumption
Highest & Best Use-As Vacant:	Industrial
Highest & Best Use-As Improved:	As developed.

Comments: The opinion of the market value of the above referenced real property as of July 1, 2019 is based on the extraordinary assumption that as of the effective date the 40,000 sq. ft. subject parcel is a legal lot of record zoned IBP and capable of being sold on the open market to a private sector buyer. Because the subject is city-owned and the facility is leased to another government entity (Mosquito Abatement), which is due to expire on June 30,2019, the Fee Simple property interest is being valued. The appraisers have also been asked to provide an opinion of the fair market rent for the subject's 40,000 sq. ft. site as if it were vacant, which is a hypothetical condition (addressed on p.40 of the Income Approach).

MARKET VALUATION SUMMARY

Final Opinion of Value (As Is – Fee Simple)	**$1,300,000**
Final Opinion of Market Rent for Land as if Vacant:	**$35,040 annually**

The introduction section that follows will provide more details on some of the important facts and conclusions summarized above.

INTRODUCTION SECTION

The analysis contained in this appraisal is based upon assumptions and opinions that are subject to uncertainty and variation. Some of the assumptions and opinions are often based on data obtained in interviews with third parties and such data, while part of the overall market evidence, may not always be completely reliable in every detail.

As part of the appraisal process, we make assumptions as to future behavior of consumers and the general economy, which are uncertain. It is inevitable that some assumptions may not materialize and that unanticipated events could occur. As such, actual achieved operating results may differ from the estimates contained in this report, and these differences may be material. Therefore, while our analysis was conscientiously prepared on the basis of our experience and the data available, we make no warranty of any kind that the conclusions presented will, in fact, be achieved. Additionally, it should be noted that we have not been engaged to evaluate the effectiveness of management, and we are not responsible for future marketing efforts or other management actions upon which actual results may depend. We take no responsibility for any events, conditions, or circumstances affecting the market that exist subsequent to the effective date of this appraisal.

It should be noted that the valuation makes no reduction for commission on sale, unpaid taxes, or liens against the property. Further, the value estimate should not be misconstrued as a listing price.

Effective Date of Value Opinion/Date of the Report

The appraisal considers the valuation of the subject property with a prospective effective date of July 1, 2019. In determining the valuation of the property, we will consider the market value under conditions prevalent at that time. Establishing the effective date of the appraisal is standard appraisal practice, and it is important to consider because value is subject to change over time. Aside from possible physical changes to the property, the value of real estate is also subject to changing economic conditions under which value may remain static, increase, or decrease. Additionally, changing policies of governing authorities may impede or encourage development over time.

The inspection of the subject property was conducted on April 2, 2019. The date of the report is May 2, 2019.

Reasonable Exposure Time Period Opinion[4]

The exposure time used as the basis for the following analysis preceding July 1, 2019 would have been 6 months for the “as is” condition and up to12 months for renting the site as though vacant.

Intended User(s)

This appraisal is for the intended use of the client (Salinas Municipal Airport Manager, Brett Godown), and the City of Salinas' Airport Commission and their advisors only.

Intended Use

The appraisal problem to be solved is to estimate the market value of the subject property as though it were its own legal lot of record as well as the fair market rent for a ground lease as though the subject site was vacant as of the date of value to assist the client (Salinas Municipal Airport Manager, Brett Godown), and the City of Salinas' Airport Commission and their advisors in making a business decision regarding asset management.

Neither all nor any part of the contents of this report shall be conveyed to any person or entity, other than the appraiser's firm's client through advertising, solicitation materials, public relations, news, sales, or other media without the written consent and approval of the authors, particularly as to valuation conclusions, the identity of the appraiser or firm with which the appraiser is connected, or any reference to (affiliation with any professional appraisal organization) or (designation). Further, the appraiser or

[4] Reasonable Exposure Time Period: see definition on page 54

firm assumes no obligation, liability, or accountability to any third party. If this report is placed in the hands of anyone but the client, client shall make such party aware of all the assumptions and limiting conditions of the assignment.

The appraiser has not identified any purchaser, borrower or seller as an intended user of this appraisal and no such party should use or rely on this appraisal for any purpose. Such parties are advised to obtain an appraisal from an appraiser of their own choosing, if they require an appraisal for their own use. This appraisal report should not serve as the basis for any property purchase decision or any appraisal contingency in a purchase agreement relating to the property.

Interest Valued

The use of this appraisal is to provide a market value opinion of the Fee Simple estate of the subject property. Unless stated otherwise, the interest being valued in this appraisal represents 100% of the interest (minority interest may be treated differently and have a different proportional value).

Hypothetical conditions

The subject's land rent value estimate in this appraisal is based on the hypothetical condition that the site is vacant and ready for development, as of the date of value.

Extraordinary Assumptions

The value estimate is based on the extraordinary assumption that as of the prospective date of value the 40,000 sq. ft. subject parcel is a legal lot of record zoned IBP and capable of being sold on the open market to a private sector buyer. The subject's site size of 40,000 sq. ft. is based on the legal description contained in the original land lease, which is assumed to be correct for purposes of this appraisal and it is expected that any use will need to meet FAA regulations.

The appraisers have not received a title report for the subject property and an extraordinary assumption has been made that there are no easements or encumbrances that negatively affect value. It is also an extraordinary assumption that the soil and improvements (above or below ground) on the parcel do not contain hazardous materials or toxic chemicals that would require remediation, thus altering the value of the property to a potential buyer as they would consider remediation costs against the price.

The subject property has been improved by the land lease tenant and those improvements remain owned as a leasehold interest until the termination of the land lease reverting ownership to the City of Salinas on July 1, 2019, which is the prospective date of value. It is assumed that the market conditions will remain stable between the inspection date and the effective date.

Current Listing/Pending Contract(s):

The subject is not currently listed for sale, or under contract.

Sales History

The subject has not sold in the last three years, according to public records.

ASSESSMENTS AND TAXES

REAL ESTATE ASSESSMENTS AND TAXES	
Taxing Authority	Monterey County Tax Collector
Assessment Year	2018

ASSESSED VALUES	
Tax Identification Number	003-861-016
Land Assessed Value	$0
Building Assessed Value	$0
Other Property Assessed Value	$0
Total Assessed Value	$0
Real Estate Taxes	$7,689 (direct charges and special assessments only)

The subject property is exempt from property taxes due to the fact that it is owned by a public entity. If the property were to be developed by a private sector owner or user, it would be assessed at its market value at a typical tax rate. Based on a survey of the surrounding privately-owner commercial-industrial properties, a tax rate of 1.15% will be used in the Income Approach to estimate market-based taxes for the subject.

SCOPE OF WORK

Having previously identified the client, the effective date of value and definition of value, the appraiser(s) now considers the relevant characteristics of the subject assignment and assignment conditions, which include the definition of the intended users, intended use and type of opinion. Part of completing the Scope of Work is the planning of the assignment so that the client's problem can be solved with credible results. This is the process where the appraiser(s) diagnoses the problem and determines a reasonable means to find a solution.

To determine the appropriate scope of work for the assignment, we considered the intended use of the appraisal, the needs of the user, the complexity of the property, and other pertinent factors.

The subject property is an industrial property located at 342 Airport Boulevard in south Salinas. As background, the subject was originally leased as an undeveloped parcel from the City of Salinas to the North Salinas Valley Mosquito Abatement District beginning June 1, 1953 for a 25-year term and subsequently the lease was extended the lease for another 25-year term from June 1, 1978 to May 31, 2003. A new lease was written and commenced July 1, 2004 for another fifteen-year period ending June 30, 2019 (copy is in the addenda). Because the subject is city-owned and the facility is leased to another government entity (North Salinas Valley Mosquito Abatement District) and the lease expires June 30, 2019, the Fee Simple property interest is being valued as of the prospective effective date of July 1, 2019. The subject appraisal is intended for asset management purposes.

Based on our understanding of the assignment, a fair market rent for the 40,000 sq. ft. site (ground lease as though vacant – hypothetical condition) is to be developed as well as the opinion of the market value for the property as currently developed, assuming physical improvements have reverted to the City of Salinas at the end of the lease extension. Given that the property is part of a 70+/- acre larger parcel under public ownership and zoned PS (Public / Semipublic), the appraisal requires the use of an extraordinary assumption that as of the prospective date of value the leased land area is a legal lot of record with IBP (Industrial – Business Park) zoning, which is consistent with the privately-owned parcels to the east and west of the subject property.

According to the Uniform Standards of Professional Appraisal Practice, it is the appraiser's responsibility to determine the appropriate Scope of Work. USPAP defines the Scope of Work as the amount and type of information researched and the analysis applied in an assignment. Scope of Work includes, but is not limited to, the following:

- the degree to which the property is inspected or identified;
- the extent of research into physical or economic factors that could affect the property;
- the extent of data research; and
- the type and extent of analysis applied to arrive at opinions or conclusions.

The following information defines the Scope of Work:

Report Type:	Industrial Property Appraisal
Information Sources:	The following description is based on our property inspection, assessment records, and information provided by the client/owner.
Information Not Provided:	Title Report Phase I/II Studies
Inspection:	April 2, 2019
Valuation Date:	July 1, 2019
Inspected By:	Kyle C. Brown, MAI Bonnie Brown, MAI

Market Analysis and Market Conditions:	The local market has been analyzed and current market conditions will be applied to the valuation of the subject property.
Highest and Best Use:	A limited as vacant and as improved highest and best use analysis for the subject has been made. Physically possible, legally permissible and financially feasible uses were considered, and the maximally productive use was concluded.
Cost Approach Analysis:	A cost approach was considered and was developed because there is adequate data to develop a land value and the depreciation accrued to the improvements can be reasonably measured.
Sales Comparison Approach Analysis:	A sales/direct comparison approach was considered and was developed because there is adequate data to develop a value estimate and this approach reflects market behavior for this property type. However, it is noted that Sales Comparison Approach is limited by the lack of a vibrant marketplace that produces a sufficient volume of comparable sales data for this approach to stand alone. The use of sales and listings to help bracket value is judged as important as a check against the Income Approach and the overall valuation analysis.
Income Approach Analysis:	An income approach was considered and was developed because the subject is an income producing property and there is adequate data to develop a value estimate with this approach. Additionally, it is judged that with limited sales activity that a knowledgeable buyer would rely most heavily upon the Income Approach.
Prior Appraisal Analysis within 3 years:	No

In preparing the following appraisal, the appraiser(s):

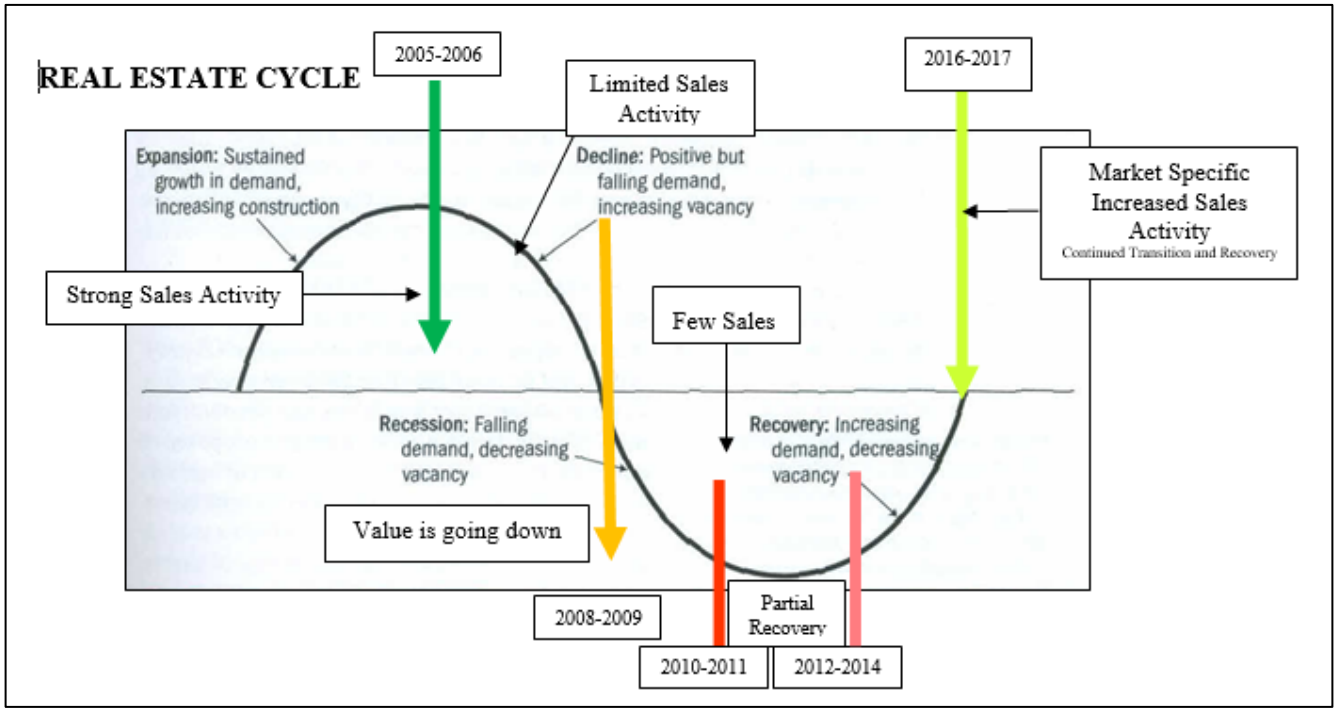
- Inspected the property to provide a familiarity with the site, the improvements and its neighborhood, but this inspection should be considered as preliminary with reliance to be made on information provided by professionals, such as licensed building inspectors, licensed contractors, environmental inspectors, architects and engineers. The appraiser(s) is not a professional in the field of inspection or the determination of exact building materials or physical sizes. Without these professional studies the appraiser(s) may be required to utilize the use of extraordinary assumptions or hypothetical conditions as part of the valuation process.
- Gathered information about the subject as well as comparable properties from a wide variety of sources, including, but not limited to, listings and sales of land, improved properties (MLS as well as the Internet), and rentals. All of the data collected was used to form the foundation for further analysis and ultimately comparison to the subject.
- Confirmed data as required and as available from sources such as City and County records, listing and selling agents/brokers, buyers, sellers, and tenants. Some or all of the data may be from secondary market data sources and not personally verified.

Stephen Brown Associates, Inc. analyzed the data gathered through the use of appropriate and accepted appraisal methodology to arrive at a probable value indication via each applicable approach to value which results in our final opinion(s) of value. The steps required to complete each approach are discussed in the methodology section. To that end, this report incorporates a summarized explanation of the data, reasoning and analysis that were used to develop the opinion of value.

This is an Appraisal Report as defined by Uniform Standards of Professional Appraisal Practice under Standards Rule 2-2(a).

MARKET CONDITIONS

The traditional market cycle is shown by the following illustration. While stylized into a "normal" curve it is judged as reasonably representing what is commonly considered as the business cycle in real estate. This shows a market moving from a "seller's" market with high demand to a "buyer's" market. The green arrow is intended to reflect the generally accepted peak of the market while the orange shows the slide to what was reported to be the "bottom" of the recession at the end of 2009. The red line shows what is judged to be the bottom of the local market and the pink line is intended to show the market transitioning toward a more normal growth between 2012 and 2014. However, as of 2019, most all segments of the local real estate market show signs of full recovery.



As indicated in the illustration above, the real estate cycle started to fail around 2008. The cycle changed from a seller's market to a buyer's market caused by the national recession. This illustration is a generalization to describe the overall market. However, the subject market which is located in the Central Coast region of California is made up of a wide variety of property types, not all of which are or were impacted equally.

The various property types tend to fall into seven general categories, which include multiple family, industrial, office, retail, land, agriculture, and special purpose properties. Agricultural properties had continued demand during the recession and values changed moderately. Local multiple family properties rebounded fairly quickly. The industrial market place in most local areas has a limited supply allowing it to rebound, especially in the Salinas Valley area which is driven by a $4 billion per year agri-business economy. Some of the office and retail market places appear to remain in recession with vacancy and rental rates continuing to be depressed which may indicate a long-term shift in demand. The vacant land segment of the market has been nearly dormant due to lack of construction financing and for the high cost of new development (exceptions being industrial and agri-business).

The subject property is part of the industrial market place which as of the date of value is judged to undersupplied which is causing increases in rental rates as well as property values. As of the date of value there are few vacant industrial lots to support new development.

AREA AND NEIGHBORHOOD ANALYSIS AND DESCRIPTION

NEIGHBORHOOD INFORMATION

The subject property is located in the southeast industrial neighborhood located on Airport Boulevard north of the Salinas Municipal Airport and Moffett Street to the west zoned Industrial Business Park (IBP). There are similar office/industrial uses in the subject's immediate area, which are approximately the same quality of construction and age.

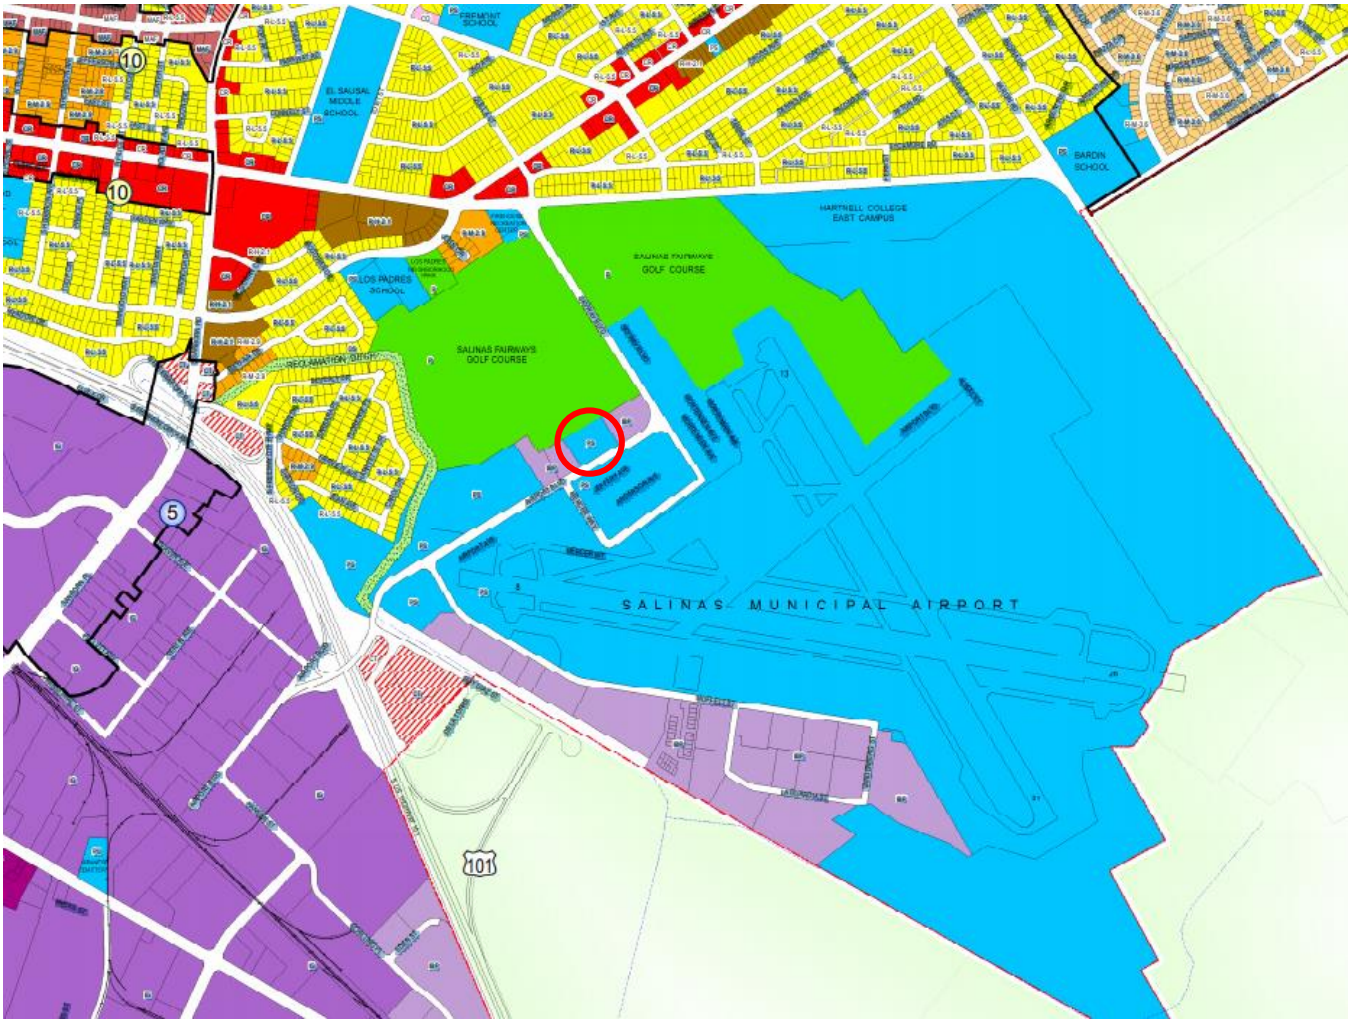
COMPETITIVE OR ALTERNATE NEIGHBORHOODS

The boundaries of the subject neighborhood consist of South Salinas office/light industrial areas and business parks. Office uses are found to be concentrated around the Monterey County and City of Salinas Governmental Centers and the Central Business District. Areas outside of the downtown core tend to be along primary and secondary traffic arteries in strip zoned commercial areas. The boundaries for competing light industrial uses generally run from John Street along the north and northwest, down Abbott Street and Highway 101 to the Airport and subject center on the east, and Harkins Road on the southwest.

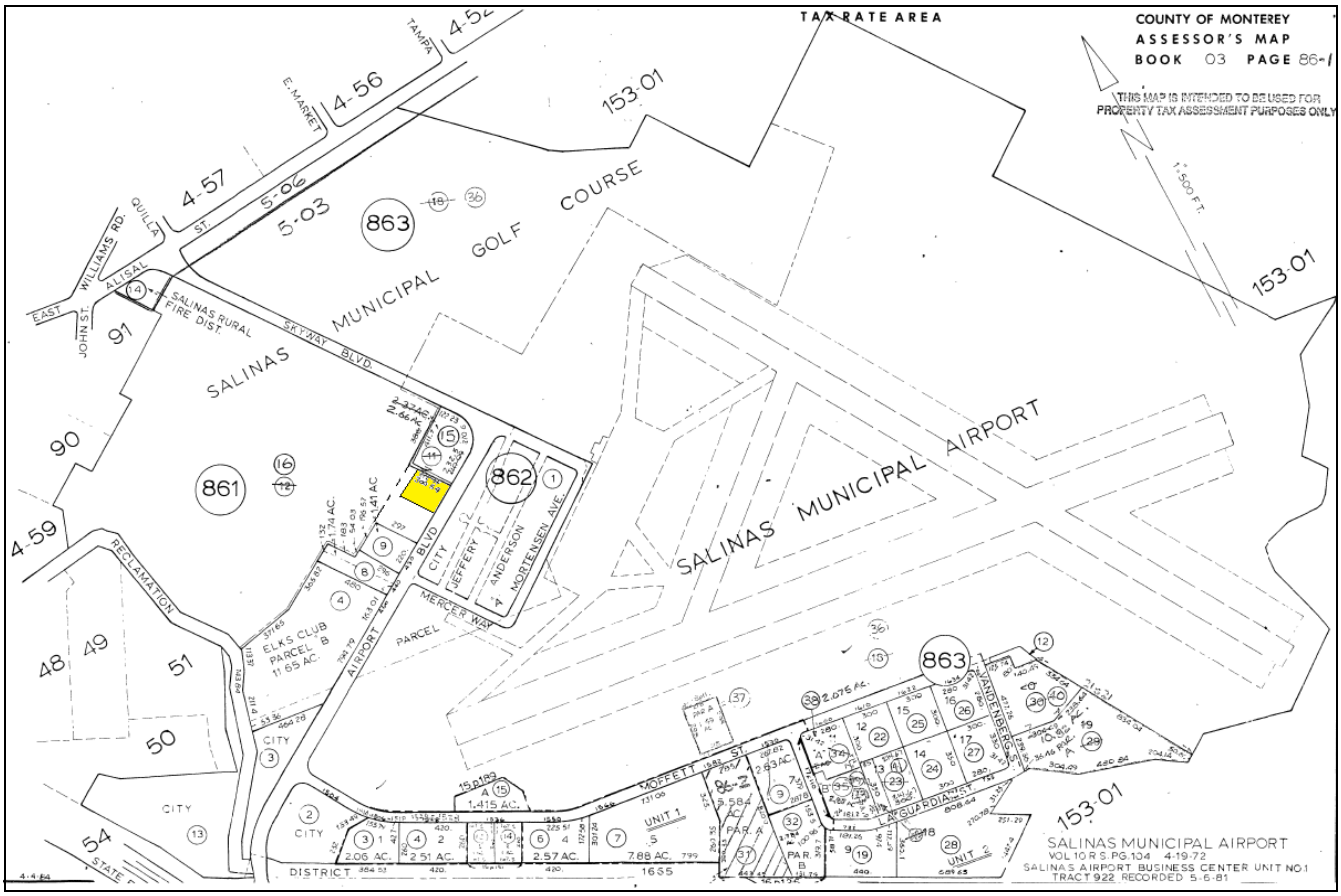
The immediate neighborhood is effectively 100% developed. However, there is the 257-acre Uni-Kool approved agricultural business park located southwest of the subject neighborhood awaiting improved economic feasibility before infrastructure will be developed. That project was proposed for larger parcels 5-20± acres in size and is intended for agricultural cooler development, which may lead to conversion of older, inefficient coolers into secondary warehouse space or redevelopment to meet existing industrial demand, but as of the effective date new cooler development demand has been met with the remaining industrial land in the Gonzales agricultural-industrial park to the south. The Gonzales industrial park is close to becoming fully developed, and development pressure will eventually return to Salinas and may potentially spur the development of the Uni-Kool project.

ZONING

Zoning Classification:	Industrial Business Park (IBP) (extraordinary assumption) with airport overlay
Zoning Description:	The industrial-business park (IBP) district regulations allow development of sites with high architectural and landscape standards for industrial office centers, limited manufacturing, warehousing and large-scale, single destination retail and other limited retail uses which may not be appropriate in retail areas.
Zoning Comments:	The subject is currently zoned Public / Semipublic (PS); however, it is an extraordinary assumption of this report that as of the prospective valuation date the subject is zoned as Industrial Business Park (IBP), which is consistent with the privately-owned parcels to the east and west of the subject property.
Zoning Map:	The subject is circled in the zoning map below and is colored blue for the PS district. The light purple parcels on either side of the subject are zoned IBP, as are all the parcels along Moffett Street to the south.



APN MAP



The subject is a 200 ft. by 200 ft. square area highlighted in yellow in the Monterey County Assessor Parcel Map shown above. The subject is a portion of the larger parcel (003-861-016). The Assessor Parcel Map is not an official survey map, but is used to identify the subject property and is deemed correct for purposes of this appraisal. This map is provided for illustration only.

SITE IDENTIFICATION

The subject is outlined in red in the aerial image to the left.

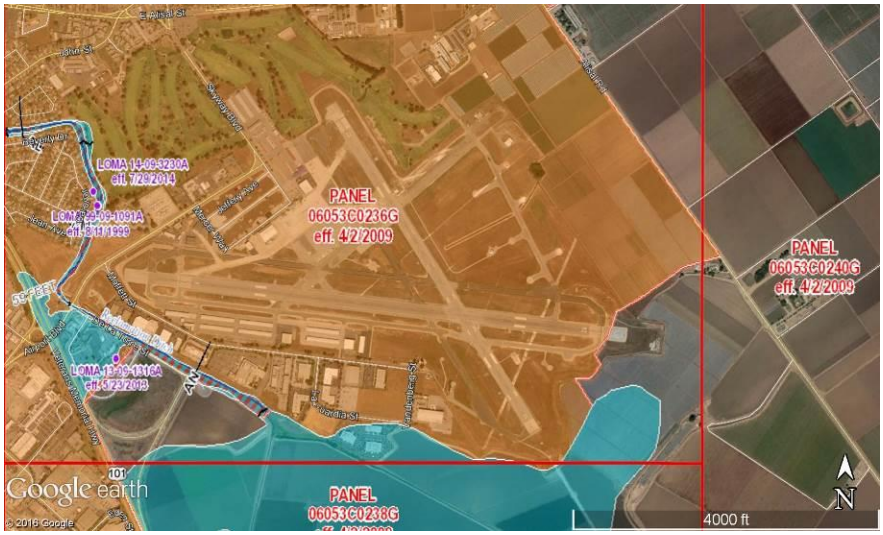
The subject property is located in an industrial neighborhood in south Salinas that backs up to a golf course and is across from the Salinas Airport. The site has average access to Highway 101.

Locational Information

Property Address:	342 Airport Boulevard, Salinas, CA 93905
Assessor's Parcel Number:	003-861-016 (portion)
Map Latitude:	36°39'58.58'N
Map Longitude:	121°36'54.51'W

Land Information

Gross Land Area:	0.92± acres (40,000± sq. ft.)
Usable Land Area:	0.92± acres (40,000± sq. ft.)
Shape:	Square
Terrain/Topography:	Level
Site Utility:	Average
Road Frontage:	200± ft. along Airport Boulevard
Access (Ingress and Egress):	Average
Visibility:	Average
Seismic:	Typical for area - All of Central California is subject to earthquakes. Monterey County and the Monterey Peninsula have known faults which at some point may be the location of an earthquake. However, to this point in time this factor has not affected real property value in the subject area.
Soil Conditions:	The soil conditions observed at the subject appear to be typical of the region and adequate to support development.
Drainage:	Assumed to be adequate, although an inspection was not made during a heavy rain period.
Title Report:	None provided.
Easements/Encumbrances:	There are no known adverse encumbrances or easements.
Environmental Hazards:	There are no known adverse environmental conditions on the subject site.
Wetlands/Watershed:	No wetlands were observed during our site inspection.
Flood Plain:	According to Flood Insurance Rate Maps, published by the Federal Emergency Management Agency for Monterey, panel number 06053C0236G, indicates that the subject property is not in the flood plain (SFHA).



Utilities at Site and Improvements

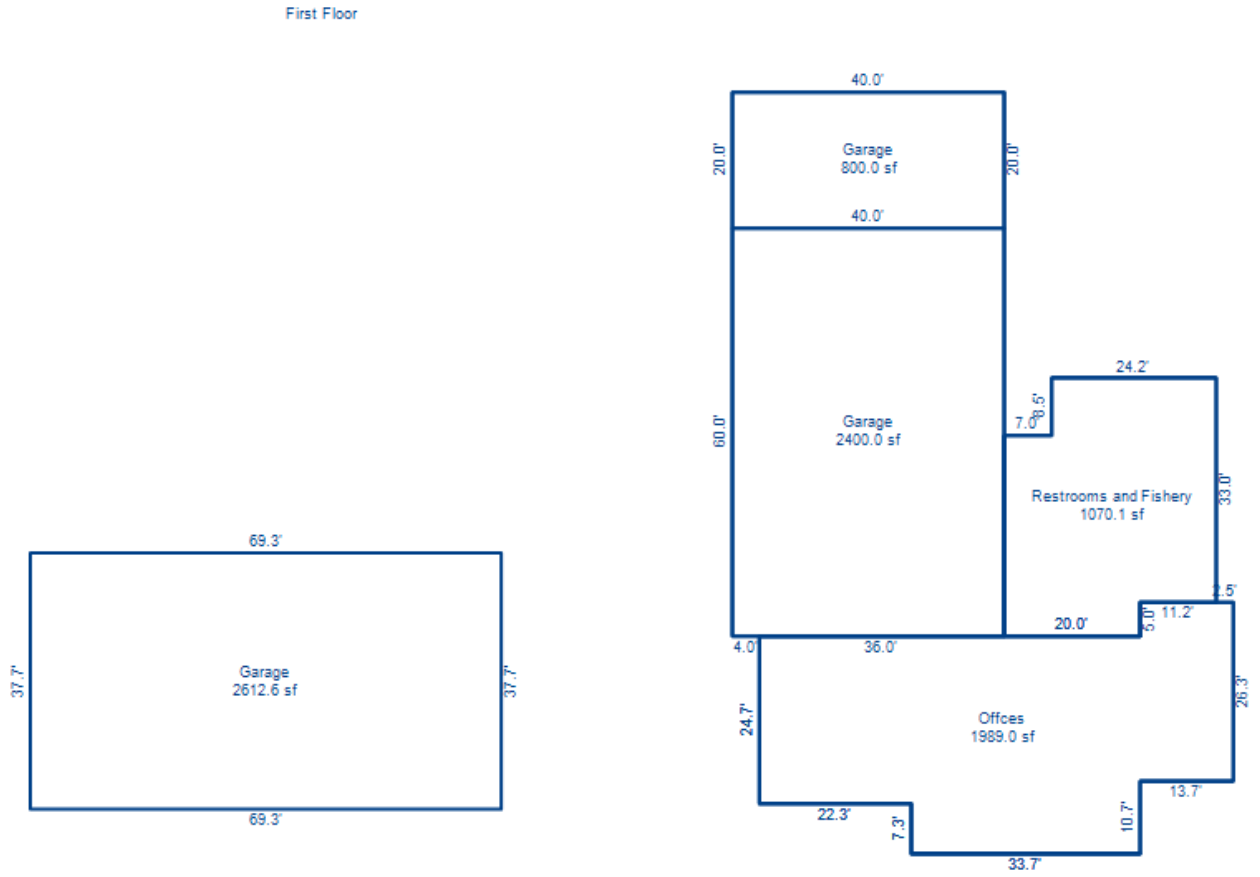
Description of Existing Utilities:	The subject's utilities are typical and adequate for the market area.
Site Improvements:	
Street Lights:	Yes
Sidewalk:	Yes
Curb/Gutter:	Yes

Site Analysis & Comments

Overall, the site is typical of the industrial neighborhood and the market. All available utilities are present, parking is judged as sufficient, and there are no known impediments to development.

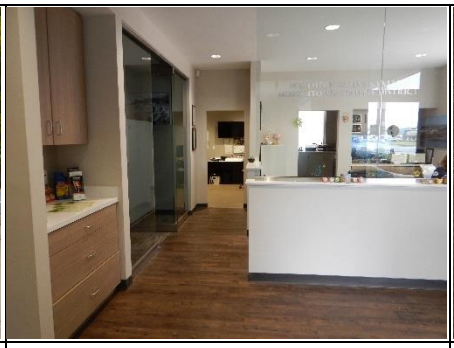
SITE AND/OR FLOOR PLANS

The following floor plan is based on the appraisers' direct measurement upon inspection and the building plans. The floor plan is for illustration purposes only.



IMPROVEMENT DESCRIPTION

Main Office/Industrial Building



Office Interior

Garage/Warehouse Building

Improvement Information

Overview:	Industrial building with office and garage area, as well as a freestanding garage/warehouse
Construction:	Class C
Number of Buildings:	2
Number of Stories:	1
Construction Quality:	Average
Appeal and Appearance:	Average/Good
Year of Construction:	1953±
Condition:	Average/Good
Areas, Ratios & Numbers:	Gross Building Area: 8,872± sq. ft. total Percent Office: 22.4% (average) Land to Building Ratio: 4.51 to 1 Floor Area Ratio (FAR): 0.22 (average)

Building	Sq. Ft.
Industrial/Office Building	6,262
Garage/Warehouse	2,610
Total	8,872

Building Description:

The subject is developed with an industrial building that has approximately 1,989 sq. ft. of finished office area (including one half-bathroom), a 3,200 sq. ft. garage with five roll-up doors, and the remainder of the building is comprised of the common men's and women's bathrooms and hallway to the fishery, which is a room currently used to house multiple fish tanks. The garage area has a tiled counter with a range and sink (see photo at the left), as well as another range/oven on a different wall. There is also a smaller freestanding concrete-block building with three roll-up doors used for storage and garaging vehicles.

The sq. ft. estimates are based on building area sizes stated on the plans by Tunstall Engineering Consultants Inc., which are supported by the appraiser's direct measurement upon inspection (see floor plan on prior page). These figures are assumed to be accurate for appraisal purposes.

Foundation, Frame & Exterior

Foundation:	Poured concrete slab
Structure (frame type):	Concrete Block
Exterior Walls:	Painted Concrete Block
Wall/Floor Height:	13-16± ft.
Windows:	Dual-Pane
Truck Doors:	5 in garage of Main Building; 3 in Warehouse/Garage Building

F. F. & E.:	Unless otherwise stated, this appraisal does not include the valuation of personal property (also known as furniture, fixtures and equipment). The propane tank in the subject's yard is considered personal property.

Interiors

Floor Plan Layout:	Average
Interior Walls and Partitioning:	Drywall in office area, painted concrete block in warehouse/garage areas
Ceiling Height:	8-9± ft. in the office; 11-15± ft. clear height in the garage area of the main building; 11± ft. clear height in the warehouse/garage building.
Floor Cover:	Vinyl, laminate and carpet in office, none in warehouse/garage areas

Mechanical Systems

Plumbing Condition: Average. In the main building, there is a men's restroom (two sinks, shower, toilet and two urinals), a women's restroom (toilet, sink, shower), and a half-bathroom (toilet and sink). The men's restroom has a separate locker room where the sinks are located (see photo). There is also additional plumbing in the rear room that houses the fish tanks. The other warehouse/garage building does not have any restrooms.

Electrical Service:	Typical
Interior Lighting:	Fluorescent and Incandescent
Heating Type:	Forced Air Unit (FAU)
Cooling Type:	Standard A/C Unit in office portion in main building only
Fire Sprinklers:	No

Design, Utility and Condition

Design & Functional Utility:	Average for property type.
Deferred Maintenance:	None noted upon inspection.
Hazardous Substances:	None known. Please reference the Limiting Conditions and Assumptions section of this report.

Site Improvements

Landscape and Hardscape: Minimal landscaping along the street frontage. Hardscape consists of the paved driveways and parking areas.

Parking: The onsite parking is adequate for the current and continued use as developed.

Americans with Disabilities Act (ADA) of 1990

ADA is a civil rights act passed by Congress guaranteeing individuals with disabilities equal opportunity in public accommodations, employment, transportation, government services, and telecommunications. Statutory deadlines became effective on various dates between 1990 and 2009. No studies were made available to the appraiser, so it is possible that a compliance survey of the subject property, together with an analysis of the current requirements of the ADA, could

reveal that the property is not in compliance with one or more of the requirements of the Act. This discovery could have a negative effect on the value of the property. Since SBA, Inc. has no specific information relating to this issue, nor is SBA, Inc. qualified to make such an assessment, the effect of non-compliance with the requirements of the ADA was not considered in estimating the value of the subject.

Building Improvement Summary

The site is developed with two structures - the primary industrial building designed with office area in the front, and the freestanding garage/warehouse. The property has sufficient access and parking area for both buildings. The subject is judged to be competitive with other industrial office developments in the marketplace.

VALUATION PROCEDURES AND METHODOLOGIES

As a part of the typical valuation process, the appraiser inspects the subject and surrounding properties, the neighborhood, and the comparables. The highest and best use is analyzed and estimated for the subject, both as vacant and as improved.

A search is made for comparable land sales as recent as possible to the date of valuation with similar potential. When the data is available the most comparable sales are then selected from those transactions to bracket the subject's opinion of value. For improved property appraisals, the land valuation becomes part of the Cost Approach.

The Cost Approach is based upon the premise that a prudent buyer will pay no more for a property than it would cost to reproduce or replace a substitute property with the same utility. The site value is based upon a vacant site being used to its highest and best use. Replacement or reproduction cost new can be derived from reliable cost manuals or from interviews with reputable local contractors. Depreciation can be from physical, functional, or economic causes. Depreciation is estimated from information developed from the market by observing comparable properties. The validity of the resulting opinion of value by the Cost Approach is impacted to varying degrees by the accuracy of the cost estimates and the depreciation estimate. This approach is most suitable where improvements are newer and represent the highest and best use of the land.

The Sales Comparison Approach relies heavily upon the "Principle of Anticipation". Recent sales of similar properties are gathered and a meaningful unit of comparison is developed. Then, a comparative analysis is conducted between the comparable data and the subject, which involves consideration for differences in location, time, terms of sale, and physical characteristics. The reliability of the Sales Comparison Approach depends, to a large extent, upon the degree of comparability between the sales (listings) and the subject.

The Income Approach is predicated upon the relationship between anticipated income and value. This appraisal technique converts anticipated annual net income into an indication of value. The net income attributable to the subject property is estimated by subtracting vacancy, collection losses, and expenses from the property's annual potential gross income. The reliability of the Income Approach depends upon the of income and expense estimates, the duration of the net annual income, the capitalization rate or factor used, and the method of capitalization.

The Final Reconciliation is the process of measuring the strengths and weaknesses of each method.

Subject Appraisal

The appraisal of properties in Monterey County commonly face factors that impact the appraisal process and the selection of the appraisal approaches. The Cost Approach is judged to be a reliable method of valuation for new or near new properties. While the subject buildings show signs of age, it is judged that due to limited sales data for direct comparison the use of the Cost Approach is appropriate. As an income producing property, the Income Approach is judged to be a reliable method of calculating the subject's current value in the local market place, and it will receive heavy reliance. Due to the limited market activity and the lack of highly similar properties, the appraisers judge that the Sales Comparison Approach is only capable of being used as a check against the other approaches.

The methodologies employed in this appraisal are summarized as follows:

Approach	Applicability to Subject	Use in Assignment
Cost Approach	Applicable	Utilized
Sales Comparison Approach	Applicable	Utilized
Income Approach	Applicable	Utilized

HIGHEST AND BEST USE ANALYSIS

"The reasonably probable use of property that results in the highest value. The four criteria that the highest and best use must meet are legal permissibility, physical possibility, financial feasibility, and maximum productivity."[5]

1. **Legally Permissible:** What uses are permitted by zoning and other legal restrictions?
2. **Physically Possible:** To what use is the site physically adaptable?
3. **Financially Feasible:** Which possible and permissible use will produce any net return to the owner of the site?
4. **Maximally Productive:** Among the feasible uses which use will produce the highest net return, (i.e., the highest present worth)?

Highest and Best Use as Vacant

The first question to be answered is whether the land should be developed or left vacant. If development is appropriate, the second question is then determining what kind of improvements should be built.

The highest and best use as vacant is to be developed with an industrial use consistent with the IBP zoning.

The competitive market place is almost completely built out and there is steady demand for industrial uses as indicated by stable to rising rental rates for industrial property types. Across from the subject is a 13+ acre parcel that is part of the Salinas Airport. It is under negotiation for development under a long-term land lease and will bring new rental space into production in phases. There is also 257 acres of approved, but yet to be improved land for the expansion of the agribusiness industry. While both projects may be significant to the Salinas industrial market, neither of these projects are judged to directly impact the subject.

Highest and Best Use as Improved

The third question that applies to the highest and best use study is: Should the existing improvements on the property be maintained in their current state or should they be altered in some manner to make them more valuable?

The highest and best use as improved is to remain as developed. The current improvements add substantial value to the land. The subject property is improved with a building and site improvements that are judged to be a reasonable representation of the highest and best use of the land.

Selection of Comparable Market Data

In the following sections of this report, the appraiser(s) will select sale, listing and rental comparables that help the appraiser develop their opinion of value. When possible, the best comparables will be selected from a larger market sample with the intent to bracket the unit of comparison.

[5] *The Dictionary of Real Estate Appraisal 6th edition*, Appraisal Institute

LAND VALUE

Due to the shift in rental rates and values for industrial properties, recent land sales would be necessary in determining the extent that land values have risen in conjunction with the appreciating market. This approach is based on the "Principle of Substitution" which states that a prudent and rational person would pay no more for a property than the cost to construct a similar and competitive property, assuming no undue delay in the process.

Land Comparables

To complete this analysis the appraiser has utilized a wide variety of comparables, some which may appear to be dated due to their age (date of sale) but are judged as necessary to help the reader understand land values over an extended period of time. The valuation is based on the concept known as highest and best use, which is the theoretical use judged to support the highest value of the land, but often does not consider a specific proposed use.

Comparable Sales Data

The following array of local industrial land sales includes multiple transactions over the last few years, which are not all comparable to the subject, but cumulatively help the appraiser better estimate the market. It is from this study that the appraiser can analyze the relationship of prior sales, changes in market conditions and ultimately form an opinion of the subject's land value.

Comp. #	APN / Address	Sales Date	Doc. #	Price/$PSF
#1	003-012-015 791 Work Street, Salinas	3/26/2019	2019011520	$2,100,000 $8.99± PSF Gross $12.05 PSF Net

This is a corner parcel at Work Street and Elvee Drive, which is to be developed with a traffic signal, improving accessibility to this site. The overall site is measured at 5.364± acres, but a portion of the site is unusable (retention pond) and brokerage for this site has identified its net usable area as 4.0 acres, creating a net and gross pricing for the sale. This property sold on 1/31/2017 for $1,742,500 then was subsequently placed on the market for sale, initially at the price of $2,965,000 ($17.02± PSF Net Area), which was reduced to $2,650,000 ($15.20± PSF Net Area) and sold in March 2019 at the price of $2,100,000 ($12.05± PSF Net Area).

Comp. #	APN / Address	Sales Date	Doc. #	Price/$PSF
#2	003-461-011 850 Work Street, Salinas	1/4/2019	2019000423	$1,865,000 $9.67± PSF Gross $11.38± PSF Net

This parcel on Work Street (4.43 acres gross and 3.76 acres net) has a long history having been sold at the beginning of the recession (2008), resold at a lower price during the recession (2015), brought back to the market at an increased price, reduced and sold in January 2019. The asking price for the property was $2,508,000 or $15.31± per usable sq. ft., then reduced to $2,025,000 or $12.36± per usable sq. ft., and ultimately sold for $1,865,000 or $11.38± per usable sq. ft.

Comp. #	APN / Address	Sales Date	Doc. #	Price/$PSF
#3	003-012-004 661 Work Street, Salinas	11/2/2018	2018050776	$742,000 $13.00 PSF

This is a 1.31-acre parcel located in the industrial neighborhood on Work Street in south Salinas. Zoning is IG and the site is on the fringe of the Airport Overlay District. The reported price of $742,000 reflects a price per sq. ft. of $13.00.

Comp. #	APN / Address	Sales Date	Doc. #	Price/$PSF
#4	003-012-020 641 Work Street, Salinas	8/21/2018	2018036926	$742,000 $13.07 PSF

This is a 1.36-acre parcel located in the industrial neighborhood on Work Street in south Salinas. Zoning is IG and the site is on the fringe of the Airport Overlay District. The reported price of $774,000 reflects a price per sq. ft. of $13.07.

Comp. #	APN / Address	Sales Date	Doc. #	Price/$PSF
#5	003-012-005 681 Work Street, Salinas	8/20/2018	2018036536	$1,055,000 $11.53 PSF

This is a 2.01-acre parcel located in the industrial neighborhood on Work Street in south Salinas. Zoning is IG and the site is on the fringe of the Airport Overlay District. The reported price of $1,055,000 reflects a price per sq. ft. of $11.53. The buyer reportedly intends to build a facility to operate his forklift business.

Comp. #	APN / Address	Sales Date	Doc. #	Price/$PSF
#6	003-012-015 791 Work Street, Salinas	1/31/2017	2017005654	$1,742,500 $7.46± PSF Gross $10.00 PSF Net

Additionally, there is a current listing for 4.51 acres of industrial land with frontage on both Work Street and Sanborn Road, which is a main thoroughfare in Salinas with good access to Highway 101. This property is reportedly located in the new federally designated "opportunity zone" offering significant tax incentives for the purchaser. The asking price of $2,850,000 reflects $14.51 per sq. ft.; however, the property has been available since August 2018 without selling.

Reconciliation

The previous analysis includes land sales of commercial land in the City of Salinas and surrounding competitive areas. With much of the finished sites within the City of Salinas developed, there is limited opportunity for new development until the 257± acre Salinas Ag-Industrial Center is improved.

It is obvious that there is lack of true comparables, which is the reason for the testing of value with sales over such a long period of time. However, there is a scarcity of available land for development of industrial uses, especially parcels around the subject's estimated site size of 40,000 sq. ft.

Land values over an extended period of time have been studied with the most recent sales selling in the $10-$14 per sq. ft. range for parcels in superior locations in Salinas relative to the subject. Asking prices increased to as great as $17.00± per sq. ft. only to be reduced after extended market exposure, suggesting that such prices are not economically viable due to current market rents and the increasing cost of construction caused in part by scarcity of materials as well as tariffs that have been more recently enacted.

Sales Comparison Approach - Land Value Conclusion

Analyzing the subject and comparing it to the market data, the estimated land value, under the assumptons of the report as well as the Scope of Work, is judged to be reasonably represented at $11.00 per sq. ft. when considering size and the location of the subject. As such, the subject's 40,000 sq. ft. of usable land area produces a land value estimate of $440,000.

COST APPROACH

The Cost Approach value estimation is applicable to improved property valuation and involves a summation of separate value estimates of site and improvements. This approach is based on the "Principle of Substitution," which states that a prudent and rational person would pay no more for a property than the cost to construct a similar and competitive property, assuming no undue delay in the process.

There are two steps to the Cost Approach. First is the development of an opinion of value for the site or land, which is impacted by the limited number of comparable land sales in our local marketplace, and then for the improvements (site and building), as if they are new. As improvements age or the market demands and desires change, improvements experience depreciation (physical, functional and/or external). In the case of the subject property the Cost Approach is not ideal, but given the lack of comparable market data as improved, it is judged as necessary and appropriate to develop a value by adding the depreciated value of the improvements to the estimated land value.

Land Value

A land value estimate has been developed for use with the Cost Approach. Based on a review of the local land sales and conversations with knowledgeable market participants, the land value judged as appropriate for the subject's 40,000 sq. ft. IBP-zoned parcel (extraordinary assumption) has been estimated at $11.00 per sq. ft. Based on this land value allocation, the estimated land value contribution is $440,000.

Building and Site Improvement Costs

In-lieu-of having a current cost breakdown completed for the subject property by a local contractor, design builder or cost analysts, the appraisers have relied upon Marshall Valuation Service (MVS). The MVS provides cost estimating data for all types of commercial, residential, and farm buildings throughout the United States with adjustments for location, quality, and other factors. Experience with this cost source has indicated it to be reliable. An estimation of the replacement cost utilizing the MVS was made as follows:

The Marshall Valuation Service (MVS) manual suggests that the type of construction associated with the subject's main building is Class C and good quality, while the smaller garage building is also Class C and good quality. An additional line item was added for the overhead doors in both buildings. The site improvements have been allocated a cost of $6.00 per sq. ft., which is applied to the portion of the lot that surrounds the individual buildings to cover the cost of paving, fencing, etc.

Soft Costs

The soft costs that are judged as appropriate for the subject property have been estimated at 7% of the as new construction costs.

Developer's Profit

This factor reflects the profit necessary for the developer to undertake the management, responsibility and risks of construction associated with the subject property. Current valuation theory states that the four components that create value are land, labor, capital and coordination. Developer's profit as used in the Cost Approach reflects the coordination component of value. Typically, developer's profit runs a minimum of 10% to 20% of the total construction costs; the appraisers have computed developer's profit at 15% of construction costs.

Depreciation Analysis

Depreciation may be defined as any loss of value from any cause. There are three general areas of depreciation: physical deterioration, functional obsolescence and external obsolescence. As indicated prior in the report, market conditions are strong and industrial properties for rent or acquisition are limited, placing upward pressure on price, which tends to reduce the impact of depreciation, which is difficult to estimate even under more natural market conditions.

Reconciliation of Cost Approach

As seen at the bottom of the grid on the prior page, the total indicated value by the Cost Approach is rounded to $1,290,000 including the land value as estimated prior.

SALES COMPARISON APPROACH

In the Sales Comparison Approach (also known as the Direct Comparison Approach), the appraiser(s) develops an opinion of value by analyzing similar properties and comparing these properties with the subject property. The approach draws heavily upon the "Principle of Substitution" based on the assumption that the buyer of the subject could have purchased the comparable if offered at the same time. The essence of this principle is that a prudent purchaser will pay no more for any particular property than it would cost to acquire an equally desirable alternate property. As such, the appraiser analyzes both sales and listings (active and expired).

The appraiser(s) have reviewed the available data and has reduced the comparables to the following most meaningful properties. When possible the appraiser(s) use the comparable data to bracket the subject property by the comparable market data which helps the appraiser(s) define the probable range. The factors considered in the comparison include date of sale, conditions of the sale (including financial terms), and physical characteristics. In Monterey County there are often limited opportunities to purchase alternate directly comparable properties. Scarcity can impact price as can limited market exposure. These are common conditions that impact the development of the Sales Comparison Approach. The subject property is the standard, and the comparison or adjustments are made to arrive at an indication of value for the subject. These adjustments may be qualitative (equal, inferior or superior) or may be based on percentage or dollar adjustments, depending upon the type and quality of the data.

Improved Sale Comparables

Of the comparables reviewed, the following six properties represent the properties judged to be most appropriate to estimate the subject's market value. The comparables have been researched through numerous sources and verified to a level consistent with the scope of work for this assignment. These sales are presented on the map on the next page followed by analysis and a reconciled opinion of value developed from the market data.

Comparable Sale Analysis

The properties presented on the prior pages are summarized in the comparable grid below. Note that the sales are presented in order of the sale date, rather than comparability.

#	APN	Location	Date	Price	GBA	Site SF	FAR	$/Sq. Ft.
1	261-716-008	20 Quail Run Cir., Salinas	6/15/2018	$2,850,000	13,955	43,996	0.32	$204.23
2	003-471-034	1057 Terven Ave., Salinas	10/11/2017	$1,700,000	11,500	58,806	0.20	$147.83
3	002-951-005	1355 Abbott St., Salinas	8/9/2017	$1,900,000	19,600	57,499	0.34	$96.94
4	003-561-014	761 Sanborn Place, Salinas	5/12/2017	$ 813,500	6,684	23,522	0.28	$121.71
5	032-312-041	206 Cypress Ave., Marina	2/26/2016	$1,312,500	8,210	14,989	0.55	$159.87
6	003-051-081	268 Commission St., Salinas	1/5/2015	$1,350,000	10,109	89,298	0.11	$133.54

The sales range from $96.94 per sq. ft. to $204.23 per sq. ft. of gross building area. The low end of the range (Comp. #3) is represented by a concrete tilt-up industrial building on a 1.32-acre corner lot that experienced extended exposure to the market, primarily due to being nearly 50% vacant at the time. The building is designed with 9,800 sq. ft. of two-story office and the rear two-thirds is warehouse with a 26 ft. clear height. The high-end of the range (Comp. #1) is an industrial flex building that had a purchase price influenced by a premium lease agreement to manufacture cannabis-based foods and use it as a corporate headquarters, occupying the entire building.

Five of the six sale comparables are located in Salinas, with Comp. #5 being a light industrial property in Marina that was totally renovated and reconstructed in 2006 with high-end materials and finishes. The building has office/showroom area and warehouse with eight roll-up doors. There are four bathrooms, one of which has a shower. This building is similar in size and has some similar utility to that of the subject, but the improvements are in “immaculate, pristine condition,” according to the listing agent, and the parcel is significantly smaller in a different marketplace.

While there are multiple market examples, none are judged to be a direct comparable. The use of this data in this segment of the analysis is to compare properties based on their depreciated price per sq. ft. to help determine the reasonable expected range of value. It is important to note that this unit of comparison can be misleading when compared to the other sales due to the differences in site size. In order to adjust for the different land-to-building ratios (FAR), the land value must be allocated to arrive at the depreciated value of the improvements. Considering market conditions and demand for industrial land, the appraisers have allocated $10.00 to $11.00 per sq. ft. to the net usable land area of the comparables in Salinas; however, the older sale of Comp. #6 was judged to have a lower land value due to its larger size and configuration with limited utility at the rear of the site. Also, a higher land value was allocated to the Marina sale (Comp. #5) primarily due to the small size of the site and location.

The following Depreciated Improvement Grid includes the calculations to arrive at the estimated depreciated value of the improvements for the comparable industrial sales, which were then adjusted for building size, condition, utility (% office), and/or market conditions. After the depreciated values are adjusted for dissimilar characteristics, the adjusted depreciated improvement values range from $86.05 to $104.85 per sq. ft.

Depreciated Improvement Grid

#	Location	Date	Price	GBA	Site SF	FAR	Land PSF	Land Value	Dep. Imp. Value	Dep. Imp. PSF	Net Adj.	Adj. $/SF
1	20 Quail Run Cir., Salinas	6/15/2018	$2,850,000	13,955	43,996	0.32	$10.00	$ 439,956	$2,410,044	$172.70	-40%	$103.62
2	1057 Terven Ave., Salinas	10/11/2017	$1,700,000	11,500	58,806	0.20	$11.00	$ 646,866	$1,053,134	$ 91.58	10%	$100.73
3	1355 Abbott St., Salinas	8/9/2017	$1,900,000	19,600	57,499	0.34	$10.00	$ 574,990	$1,325,010	$ 67.60	45%	$ 98.02
4	761 Sanborn Place, Salinas	5/12/2017	$ 813,500	6,684	23,522	0.28	$11.00	$ 258,746	$ 554,754	$ 83.00	20%	$ 99.60

6	268 Commission St., Salinas	1/5/2015	$1,350,000	10,109	89,298	0.11	$ 7.00	$ 625,086	$ 724,914	$ 71.71	20%	$ 86.05

Sales Comparison Approach Conclusion

All of the value indicators have been considered, and in the final analysis, the appraisers have placed least weight on two oldest sales, both of which were the outliers when looking at the FAR range. Once removed, the range tightens to $98.02 - $103.62 per sq. ft. with most weight on Comp. #2 as it had the smallest net adjustment. As such, the subject is judged to be reasonably represented at $100.00 per sq. ft. for the depreciated improvement value as of the date of value.

The total depreciated value is estimated at $887,200 and when combined with the estimated land value at $11.00 per sq. ft. for the subject's 40,000 sq. ft. site, the final value is calculated at $1,330,000 rounded, as shown in the grid at the right.

Property Component	$/SF	SF	Value
Depreciated Improvement Value	$ 100.00	8,872	$887,200
Land Value	$ 11.00	40,000	$440,000
		Total Value	$1,327,200
		Total Value Rounded	**$1,330,000**

As stated, the sales have limited comparability due to their different characteristics, which make it difficult to adjust. The appraisers judge that this approach is secondary to the Income Approach due to the limited comparability of the available data.

INCOME APPROACH – DIRECT CAPITALIZATION ANALYSIS

The Income Approach is a method of estimating the market value of an income producing property by capitalizing the net income which a fully informed person is reasonably warranted in assuming the property will produce during its remaining economic life or the projection term of the ownership. This approach is based on the "Principle of Anticipation," which considers that value is created by anticipated benefits to be derived from future ownership. Thus, people buy real estate because they anticipate the ownership will provide them with (either or both) annual cash flow income and equity build.

The two most widely accepted forms of the Income Approach both involve the estimation of the net operating income (NOI). These methods are Direct Capitalization and Discounted Cash Flow Analysis. The Direct Capitalization Technique is given greatest credence when a property is currently operating at or near a stabilized occupancy level or when a property is projected to have a relatively level income stream. In the case of a subject property with a changing income stream and multiple tenants the discounted cash flow analysis would best represent the value of the property.

Value is defined as "the present worth of all rights to future benefits arising from ownership" and is to be measured in dollars according to the definition. As such, in the Income Approach it is necessary to estimate the future benefits in dollars and discount income stream to a present worth at an anticipated investment yield that will attract purchase capital (cash or mortgage and equity). The discounting practice is known as the capitalization process where the analysis considers the property from an investor's point of view.

DIRECT CAPITALIZATION ANALYSIS

The steps involved in capitalizing the subject's net operating income are as follows:

- Develop the subject's Potential Gross Income (PGI) through analysis of the subject's actual income compared with an analysis of competitive current market income rates.
- Estimate and deduct vacancy and collection losses to develop the Effective Gross Income (EGI).
- Develop and subtract stabilized operating expenses to derive the Net Operating Income (NOI).
- Develop the appropriate capitalization rate (R_o).
- Divide the net operating income by the capitalization rate to develop an opinion of value through the income approach.

In appraisal practice, the estimated future income can be based on either the actual contract rent(s) or the estimated market rent(s) (economic rents for the subject). In most all cases, the current market rent for the subject must be estimated and for these reasons the rental survey shown in this section of the report has been completed. The first consideration is that of the current income stream.

Current Rent Roll

As background, the subject was originally leased as an undeveloped parcel from the City of Salinas to the North Salinas Valley Mosquito Abatement District beginning June 1, 1953 for a 25-year term and subsequently the lease was extended for another 25-year term from June 1, 1978 to May 31, 2003. A new lease was written and commenced July 1, 2004 for another fifteen-year period ending June 30, 2019 (copy is in the addenda).

Address	Tenant	Start Date	End Date	Sq. Ft. (land)	April 2019 Ground Rent	$/SF of Land
342 Airport Blvd., Salinas	North Salinas Mosquito Abatement District	7/1/2004	6/30/2019	40,000	$1,015.13	$0.03

The appraisers were provided with the current rent for the subject, which is $1,015.31 per month ($0.03 per sq. ft. of land). However, the current lease term will be ending on June 30, 2019 and no longer represents the current market rate. Additionally, the initial lease for the underlying land would not include the rental rate for the overall property, as currently improved.

Based on our understanding of the assignment, the income analysis for the subject is to be developed for the 40,000 sq. ft. site (ground lease as though vacant – hypothetical condition) as well as the fair market rent for the property as currently developed, assuming physical improvements have reverted to the City of Salinas at the end of the lease extension.

Analysis of Market Rent

Market rent, as used in this report, is defined by The Appraisal of Real Estate, Fourteenth Edition, by the Appraisal Institute as:

> *The most probable rent that a property should bring in a competitive and open market reflecting all conditions and restrictions of the typical lease agreement, including the rental adjustment and revaluation, permitted uses, use restrictions, expense obligations, term, concessions, renewal and purchase options, and tenant improvements (TIs).*

Rent Comparable Comparison

The appraisers have researched alternate rentals analyzing lease terms, recent and historical leases, as well as, current offerings in the process of developing an opinion of the reasonable fair market rent for the subject property, both as if a vacant undeveloped site (hypothetical condition) and as currently improved. The following comparable rentals are part of a larger survey of local industrial properties and were used in estimating an appropriate market rent for the subject.

Ground Lease Rates

One of the purposes of this appraisal is to estimate the market rent for the subject's land area of 40,000 sq. ft. as if it were vacant (hypothetical condition) and available as a ground lease. As our market has very limited long-term leasing data to use a comparables, an alternative approach is needed to determine the rate at which a lessor would anticipate leasing a property, and it is common practice to develop the lease rate on the rate of return based on the property's land value.

As established prior, the land value for the subject property is estimated at $11.00 per sq. ft. and rates of return extracted from interviews with the various agents and property managers indicate a rate of return from 6% to 11% for land that is ready for development, with more weight in the 6% to 8% range and considering the small size of the subject site, 8% is judged as reasonable. This produces a Fair Market Rent estimate of $0.073 per sq. ft. of land or $2,920 per month ($35,040 annually) for the subject's 40,000 sq. ft.

Improved Property Rental Rates

The following rent comparables were selected from a larger survey in the process of determining a reasonable market rent for the subject as improved. Not shown, but included in the analysis, are actual current leases known to the appraiser from appraisals of adjacent properties. That information is confidential and cannot be reproduced in this report, but is known and considered in the overall market analysis. As part of developing the appraiser's opinion of market rent, the following samples were considered.

590 Work Street, Salinas

This 18,000 sq. ft. industrial building was just constructed with completion in early 2019 and is located in an industrial neighborhood near Highway 101 in south Salinas. The space is divisible to 6,000 sq. ft. and the warehouse space has roll-up doors and 24-foot heights. The property has an asking rent of $1.26 per sq. ft. on a modified gross basis and the listing agent reports that tenant improvements are negotiable.

1520-1528 Moffett Street, Salinas
Located on Moffett Street, near the subject and east of the Salinas Airport near Highway 101, this concrete industrial building was built in 1991 and currently has 24,309 sq. ft. of first floor space available to lease. The property has one well dock and multiple grade-level roll-up doors and warehouse clear heights of 17-19 ft. The space has 10% office area. Once occupied by Monterey Pasta as a manufacturing facility, this unit has been available since September 2018 at an asking rate of $1.15 per sq. ft on a modified gross basis with negotiable tenant improvements.

220 Griffin Street, Salinas
This property consists of a vacant concrete tilt-up warehouse that has limited access and shares a 5-acre yard. The warehouse was built in 1965 and it is designed with a 23 ft. ceiling height and minimal office. It was listed as available in May 2014 and after extended exposure over the years, it has not leased at the asking rent of $1.00 per sq. ft. industrial gross, which is judged to be due to its limited functional utility. A rent reduction is likely necessary to attract a tenant to lease this warehouse space. However, this is not a comparable property and was used only to test the lower end of the rental range.

881-A Vertin Avenue, Salinas
Built in 1964, this warehouse has 10,100 sq. ft. of space that was leased in 2017 at the reported rate of $0.75 per sq. ft. on an industrial gross basis. The space has 10% office area, three roll-up doors, 16-ft. eave height, with some mezzanine storage space above the office. This unit is part of a larger 38,739 sq. ft. metal warehouse in an established industrial neighborhood in south Salinas near Highway 101. The space is operated on an industrial gross basis and includes yard space. This rent comparable would only be suitable for developing a rental rate applicable to the subject's warehouse/garage space.

Harkins Road at Dayton Street
The appraisers have also considered the lease data for the industrial properties shown in the aerial photograph to the right, which are confidential, but known in detail to the appraisers. These properties are located directly across the street from the subject in the same industrial neighborhood and are judged to have comparability. There are multiple tenancies in both concrete tilt-up and metal warehouse style buildings with sizes ranging from 1,700± to 26,000± sq. ft., with rental rates that range from $0.60 to $1.00 per sq. ft. When analyzed, the typical cause for a variance in rent is size, condition and utility of the space, but also more importantly, the start date of the lease. The more recent the lease has been negotiated, the higher the rate.

In addition to the industrial lease data described above, the following chart displays local lease data for industrial units over 5,000 sq. ft. listed on CoStar.

Lease Comps Report

	Property Name - Address	Rating	Lease				Rents	
			SF Leased	Floor	Sign Date	Type	Rent	Rent Type
1	221 Prader St	★☆☆☆☆	5,700	1st	10/31/2018	New	$1.00/mg	Asking
2	527 Brunken Ave	★★☆☆☆	7,500	1st	5/23/2018	New	$0.64/mg	Effective
3	210 Griffin St	★★☆☆☆	7,500	1st	3/29/2018	New	$1.00/ig	Asking
4	881 Vertin Ave	★★☆☆☆	10,100	1st	9/7/2017	New	$0.75/ig	Asking
5	Bldg 2-Whs 1057 Pellet Ave	★★☆☆☆	5,700	1st	6/21/2017	New	$0.44/nnn	Effective
6	Firestone Business Park 340 El Camino Real South	★★★★☆	18,238	1st	4/19/2017	New	$0.45/mg	Asking
7	34 Simas St	★★☆☆☆	8,800	1st	8/1/2016	New	$0.85/mg	Effective

The lease comparables from CoStar provide a wider range of rents ($0.44 per sq. ft. NNN to $1.00 per sq. ft. industrial gross), which is due in part to the differing lease terms related to the expenses included in the rent, specifically in the case of Comp. #5 which is the most recent sale and has the highest taxes per sq. ft., or because of extended vacancy and inferior utility in the case of Comp. #6. All of the rent comparables are located in the City of Salinas, except for Comp. #6, which is located in the Firestone Business Park to the south and Comp. #9 located in the Castroville Industrial Park to the north. The CoStar comparables have limited comparability to the subject as developed, as the subject includes two concrete buildings with significantly more office area, so the subject would be expected to achieve a higher overall rental rate.

As additional market data, the appraisers are aware of the lease terms for an industrial property located in the industrial tract on Rosehart Way in south Salinas with has some similar utility to the subject. Located on a one-acre parcel, a 6,200-sq. ft. metal warehouse with 32% finished office area (0.14 FAR) is leasing to a single tenant at a rate in the range of $1.30 per sq. ft. overall. Reportedly, the lease is on a NNN basis where the tenant is responsible for all expenses; however, the appraiser has not seen the lease contract to verify the actual terms.

Market Rent Reconciliation

The rental properties presented and those known confidentially exhibit a rental rate range that primarily falls between $0.65 to $1.30 per sq. ft., depending on unit size, construction (metal v. concrete), condition, and location. The conversations with brokers about the industrial market indicated that although many industrial properties are renting in this range, few of the lease comparables have larger office areas like the subject. To address this, the appraisers have applied a separate higher rental rate of $1.50 per sq. ft. to the subject's well-appointed attractively finished office area and a lower rental rate of $1.00 per sq. ft. to the warehouse/garage areas to develop a blended rate overall.

The grid at the right shows the estimated average built-up market rent for the subject property. The total blended monthly rental amount is $9,866.50 or $1.11 per sq. ft. While there may be some variance that is applicable to the individual assigned rental rates, the significance of the analysis is that this data

Area	Sq. Ft.	$/Sq. Ft.	$/Mo.
Office	1,989	$1.50	$2,983.50
Garage	6,883	$1.00	$6,883.00
	8,872	$1.11	$9,866.50

supports a rounded rental rate of $10,000 per month for the subject, which is judged to reasonably represent the overall property and will be used to project the potential gross income.

POTENTIAL GROSS INCOME

In analyzing the potential gross income and processing it to a net operating income, the appraisers first had to establish a market rent for the subject. The following grid shows the rental rates that the appraisers judge to represent market rent as of the date of valuation, and the total annual potential gross income produced using this rental rate.

Unit/Space Type	Income	Method	Units/SF	Annual	% of PGI
Industrial Property	$10,000.00	$/Month	1	$120,000	100.0%
			Potential Gross Income:	$120,000	100%

Vacancy and Collection Loss

The next step in the Income Approach is to estimate the loss in income due to vacancy and collection losses. Based on a review of market conditions and expectations, the stabilized projected rate for vacancy and collection loss is estimated at 5.00%.

Expenses

Typically, the appraiser analyzes income and expenses from the last three to five years, from which the appraisers stabilize operating expenses for the purpose of estimating the net operating income. Some of this information from 2016-2018 was made available to the appraisers for review. After reviewing the subject's historical operating data and comparing it with typical expenses from lease comparables and discussions with local agents/brokers, the deduction for the operating expenses is judged to be reasonably estimated at $0.28 per sq. ft. per mo. for the subject (including market value real estate taxes based on the tax rate of 1.15%) as shown in the NOI grid that follows. Based on the typical modified gross terms, the tenant is responsible for utilities, so those expenses are limited to the vacancy period. As a single-tenant industrial property, a management fee of 3% of the EGI was judged as reasonable and replacements for reserves was estimated at 2% of the EGI.

NET OPERATING INCOME

The next area to be addressed is the estimation of the Net Operating Income (NOI), which is based on the estimated potential income less a vacancy allowance and the anticipated stabilized operation expenses. The following grid represents the estimate for the potential gross income less vacancy and rent loss allowance and operating expenses, which provides the stabilized estimate of the NOI.

		Potential Gross Income:	$120,000	100%
		Vacancy & Collection Loss:	$6,000	5.00%
		Effective Gross Income (EGI):	$114,000	95.0%
Expense	**Amount**	**Method**	**Annual**	**$/SF**
Taxes	$15,000	$/Year	$15,000	$1.69
Insurance	$4,000	$/Year	$4,000	$0.45
Repairs and Maintenance	$2,500	$/Year	$2,500	$0.28
Utilities	$1,000	$/Year	$1,000	$0.11
Landscaping	$1,500	$/Year	$1,500	$0.17
Management	3.0%	% of EGI	$3,420	$0.39
Reserves	2.0%	% of EGI	$2,280	$0.26
		Total Expenses:	$29,700	$3.35
		Expense Ratio (Expenses/EGI):	26.05%	
		Net Operating Income (NOI):	$84,300	$9.50

DIRECT CAPITALIZATION

Direct capitalization is the method being used to convert the estimate of the subject's stabilized net operating income based on the prior analysis to an indication of value. The next step is to develop an opinion of the appropriate capitalization rate which is also commonly known as an overall rate (OAR) or "Cap Rate."

Overall capitalization rates may be derived from many sources, which include comparable sales, effective gross income multipliers or net income ratios, band-of-investment or weighted-average techniques, debt coverage ratios and yield capitalization techniques. The preferred technique when sufficient data is available is from the analysis of sales and listings of similar and competitive properties. When sales transactions are limited, as is the case for the subject property, the appraisers review survey data for competitive properties on a local and national level and will use the mortgage equity technique to augment the market data.

Survey Data - Appraisal Institute

The projection of an appropriate capitalization rate is based in part on the following national survey published by the Appraisal Institute for its members. It provides the most recent overview of current market conditions and investor expectations based on data collected for the fourth quarter of 2018.

Economic Indicators | PwC Real Estate Investor Survey, Q4 2018

	Regional Mall		CBD Office		Warehouse		Apartment	
	Q4 2018	Q3 2018	Q4 2018	Q3 2018	Q4 2018	Q3 2018	Q4 2018	Q3 2018

Change (bps)		–22		–9		–13		–4

[a]Rate on unleveraged, all-cash transactions. Definitions: bps — basis points. Discount Rate (IRR) — internal rate of return in an all-cash transaction, based on annual year-end compounding. Overall Cap Rate (OAR) — initial rate of return in an all-cash transaction. Residual Cap Rate — overall capitalization rate used in calculation of residual price; typically applied to the NOI in the year following the forecast. Survey involves institutional-grade properties. Source: PwC Real Estate Investor Survey; Personal survey conducted by PwC during October 2018. For subscription information, please email us-pwcsurvey@pwc.com.

The most recent survey shows an OAR range for industrial warehouse of 1.00-6.50%, with an average rate of 4.56%, slightly lower than the prior quarter. The properties that are represented are national investment grade properties, which would be expected to have a lower rate than the subject property or even the same property if it were in Salinas due to different local market conditions. The portion of the range that is applicable is judged to be the middle to the upper end of the range (5.00% to 6.50%). While not directly applicable to the local subject market, this data contributes to the selection of a market-based capitalization rate for the subject property. What is most significant about the data presented in the prior grid is that warehouse properties have the lowest average OAR, indicating that segment of the market has the greatest demand and that is judged to also translate to the subject market place.

Mortgage Equity Technique

An additional method of analysis is known as the mortgage equity band of investment technique. For the subject appraisal, the appraiser has researched mortgage rates and terms typical for the subject within the market area. The following Band of Investment analysis is based on current market loan interest rates and projected equity return requirements. The current rate for a loan as of the date of valuation is judged to have been in the range of 5.75% using a 30-year mortgage amortization. The equity position is affected by the market conditions and risk. It is the appraisers' judgment that a return of 6.00% for the equity position would be reasonable, considering the subject is most likely to be purchased by an owner-user, which tends to compress the equity return requirements.

Capitalization Rate Calculations					
Capitalization Rate Variables					
Mortgage Interest Rate	5.75%				
Loan Term (Years)	30				
Loan To Value Ratio	65.%				
Equity Dividend Rate	6.00%				
Band of Investment Analysis					
Mortgage Constant			Loan Ratio	Contributions	
0.070028743		x	65.%	=	4.55%
Equity Dividend Rate			Equity Ratio		
6.00%		x	35.%	=	2.10%
			Band of Investment Capitalization Rate		**6.65%**

The prior model is a simplified mortgage equity calculation based on what are judged to be reasonable expectations for the components of the capitalization rate. This method was also used for sensitivity analysis using lower and higher rates. The result of the mortgage-equity analysis is a capitalization rate 6.65%. However, this represents conventional financing of a purchase. It is not uncommon for properties at this investment level to be purchased by an owner-user, where the buyer is willing to take a lower return on equity. Having studied the local market and the recent trends, it is the appraisers' judgment that there remains downward pressure on the OAR.

Capitalization Rate Conclusion

After consideration of the market data, including the most recent PwC rates survey, the appraisers have reconciled to an overall capitalization rate of 6.50%, considering the demand for this property type and the scarcity of such industrial properties in the local market. This is a reasonable rate to process the income and expenses judged to be appropriate under market conditions as of the date of valuation

Capitalization to Value

All of the foregoing analysis culminates in the following grid where the stabilized net operating income is capitalized to produce the value conclusion by the Income Approach.

PGI	$ 120,000
Vac. & CL (5%)	($6,000)
EGI	$ 114,000
Expenses	($29,700.00)
NOI	$84,300
OAR	6.50%
As Stabilized Value	$ 1,296,923
Rounded	$1,300,000

Direct Capitalization Analysis Conclusion

Based on the analysis detailed above, as of July 1, 2019, the appraisers have reconciled to a direct capitalization approach value of $1,300,000.

RECONCILIATION AND FINAL OPINION OF VALUE

In this section of the report, the appraiser(s) reviews of the data gathered during the appraisal, culminating with their opinion of the most probable value under the conditions and assumptions of the report. It is in this section where the most significant thoughts about the valuation methods are then reconciled into a final conclusion.

Value Indications

Cost Approach:	$1,290,000
Sales Comparison Approach:	$1,330,000
Income Approach:	
Direct Capitalization:	$1,300,000

Cost Approach

Due to the limited comparable sale and lease properties, the Cost Approach was completed as another method of valuation. The appraisers have estimated the land value and replacement cost new to support the value conclusions in the Sales Comparison and Income Approaches. While not as reliable as if the property was new and costs to construct the actual subject were available, this approach is judged to be helpful in estimating what it would cost to build the subject in today's market and then depreciated to an indication of value.

Sales Comparison Approach

The **Sales Comparison Approach** relies upon the development of comparable market data. Within the industrial market place there is a wide variance in size, design and other factors that results in limited comparability between the sales and the subject property. When appraising industrial properties, often the utility of the improvements has similarity, but the underlying land size, shape or even value can differ. This was the case for the data assembled to compare with the subject property. As such, the appraisers have analyzed the sales based on the contribution of the depreciated improvements, which was reconciled and added to the estimated land value to produce a total property value for the subject by this approach. Ultimately, it is being used primarily as a check of reasonableness against the Income Approach. If there were better comparable sales data, more emphasis would be placed on this approach.

Income Approach – Direct Capitalization

In the **Income Approach**, the market rent was estimated as of the date of valuation based on local comparable lease data and then used to process the Potential Gross Income. The appraisers used typical expenses a buyer would anticipate to project for the expected Net Operating Income, which was capitalized using what is judged to be a market-based capitalization rate to produce a value estimate for the subject as developed. An opinion of the fair market rent for the subject site as if vacant and undeveloped (hypothetical condition) was also provided.

The conclusion from the Income Approach falls within the value range produced from the Cost Approach and Sales Comparison Approach. In terms of the appraisal analysis, it suggests to the appraisers that the value by the Income Approach has some additional support from other market data.

Value Conclusion

Based on the data and analyses developed in this appraisal, the appraisers have reconciled to the following value conclusion(s), as of July 1, 2019, subject to the Limiting Conditions and Assumptions of this appraisal.

Reconciled Value(s):

Final Opinion of Value (As Is – Fee Simple)	**$1,300,000**
Final Opinion of Market Rent for Land as if Vacant:	**$35,040 annually**

ADDENDA

CERTIFICATION STATEMENT

The appraiser(s) certify and agree that:

1. The appraiser(s) have no present or contemplated interest in the property appraised and that neither the employment to make this appraisal nor the compensation for it is contingent upon the appraised value of the property.
2. The appraiser(s) have no present or prospective interest in the property that is the subject of this report, and no personal interest with respect to the parties involved.
3. Kyle C. Brown and Bonnie Brown have personally inspected the subject property.
4. According to the best of our knowledge and belief, all statements and information in this report are true and correct; the appraiser(s) have not knowingly withheld any information.
5. The reported analyses, opinions, and conclusions are limited only by the reported assumptions, contingent and limiting conditions, and are our personal, impartial, and unbiased professional analyses, opinions, and conclusions.
6. The analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.
7. We certify that to the best of our knowledge and belief, the reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and the Standards of Professional Appraisal Practice of the Appraisal Institute. We certify that the use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.
8. As of the date of this report, Kyle C. Brown and Bonnie Brown have completed the requirements of the continuing education program of the Appraisal Institute.
9. Kyle C. Brown, MAI and Bonnie Brown, MAI have prepared all conclusions and opinions concerning the real estate that are set forth in the appraisal.
10. Our compensation for completing this assignment was not contingent upon the development or reporting of a predetermined value or direction of value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or occurrence of a subsequent event directly related to the intended use of this appraisal.
11. Our engagement in this assignment was not contingent upon developing or reporting predetermined results.
12. Based on our experience, it is our opinion that we meet the qualifications to provide the following estimation of the subject property's value.
13. We have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
14. The appraiser(s) have not performed any professional services related to this same property within a period of three years preceding the date of the appraisal assignment.

No changes of any item of the appraisal report shall be made by anyone other than the appraisers, and the appraisers shall have no responsibility for any such unauthorized changes. This letter of transmittal and the pages that follow constitute our report, including the data and analyses utilized in forming an opinion of value. MASTER ASSUMPTIONS

These definitions appear in the Uniform Standards of Professional Appraisal Practice (USPAP), which are the governing standards for the appraisal industry. They are used in completing and communicating an appraisal.

Extraordinary Assumption: an assumption, directly related to a specific assignment, which, if found to be false could alter the appraiser's opinions or conclusions.

Hypothetical Condition: that which is contrary to what exists but is supposed for the purpose of analysis.

The underlying goal of the use of extraordinary assumptions and hypothetical conditions is to provide an analysis that is not misleading to the client. Historically, the use of assumptions within the appraisal report called the client's attention to the possible unreliability of information or conclusions within an appraisal. When the industry adopted USPAP, one of the goals was to provide credible appraisals to the public and to this end, new definitions have been produced. As part of the evolution of the appraisal process the use of extraordinary assumptions and hypothetical conditions has been implemented.

Extraordinary assumptions and hypothetical conditions can have a significant impact on the conclusions reached in an analysis. Extraordinary assumptions and hypothetical conditions that are known at the outset of an assignment are typically included in the engagement agreement. While the Scope of Work is a dynamic process in that it defines the research and analysis to complete an assignment correctly, it is the use of extraordinary assumptions and hypothetical conditions that allow the appraiser to communicate what is known so that the client can be fully informed about the reliability of the analysis. It is the area of unknown information that prompts the use of an extraordinary assumption. It should be noted that any "as is" valuation contained within this analysis is not based on a hypothetical condition(s).

To address these "unknown" issues this appraisal uses a "master assumption" to help define the basic or underlying assumptions of the appraisal. Put simply, the appraiser assumes that the property is capable of functioning as it is intended, without restrictions unless otherwise stated. This may mean that the land and improvements are assumed to be in average or better condition, capable of being used to its highest and best use, without limitations. Should this not be the case, then the value conclusion is likely to change upon clarification of the "unknown". It may be of help to understand that the appraiser is an expert in valuation issues but is not trained as nor is an expert in the field of law, accounting, title, soil analysis, construction analysis, engineering and architecture.

All these disciplines may be involved in the analysis of real property; however, such experts may not be engaged until after a question about the property is determined to exist. The appraiser utilizes only the information available at the time of the appraisal based on their training. This typically includes a brief inspection of the property to become familiar with the general condition but this inspection should not be considered a replacement for qualified analysis by licensed professional.

The assumption that the property is functioning properly, well-maintained, and in average or better condition for its age is the basis for measuring value. It is typically assumed that the property is legally owned, does not have issues such as soil contamination or stability, has appropriate building permits, complies to the appropriate codes, and that the improvements have structural integrity, which would also be assumed to be typical of the comparables unless noted within the appraisal. Once these issues or any other issue that would not be obvious based on the brief inspection or review of available documents are known to the appraiser, their impact would be considered in the analysis. Without this knowledge from trained professionals the appraiser is unlikely to know the extent of the effect on value and appeal, thus it would not be measured as part of the overall analysis. This is considered the "master assumption" for this appraisal.

CONTINGENT AND LIMITING CONDITIONS

Acceptance of and/or use of this report constitutes acceptance of the following limiting conditions and assumptions; these can only be modified by written documents executed by both parties.

1. This appraisal is to be used only for the purpose stated herein. While distribution of this appraisal in its entirety is at the discretion of the client, individual sections shall not be distributed; this report is intended to be used in whole and not in part. Neither all nor any part of the contents of this report or copy thereof (including conclusions as to property value, the identity of the appraiser(s), professional designations, reference to any professional appraisal organizations, or the firm with which the appraiser(s) are connected) shall be used for any purposes by anyone but the client or his advisors without the previous written consent of the appraiser(s), nor shall it be conveyed by anyone to the public through advertising, public relations, news, sales, or other media without the written consent and approval of the appraiser(s). Possession of this report or a copy thereof does not carry with it the right of publication. It may not be used for any purpose by anyone other than the addressee or the Appraisal Institute without the previous written consent of the appraisers. Disclosure of the contents of this appraisal is governed by the by-laws and regulations of the professional appraisal organizations with which the appraisers are affiliated.

2. All files, work papers and documents developed in connection with this assignment are the property of Stephen Brown Associates, Inc. Information, estimates and opinions are verified where possible, but cannot be guaranteed. Reduced copies of plans duplicated within the report are intended to assist the client in visualizing the property; no other use of these plans is intended or permitted. Maps, plats, sketches, graphs, photographs and other exhibits included in the repot are for the purpose of illustration and visualization only. The appraiser(s) have made no survey of the property. All data provided by the client, property owners, property manager or owner's representative is assumed to be correct and accurate.

3. No hidden or unapparent conditions of the property, subsoil or structure, which would make the property more or less valuable, were discovered by the appraiser(s) or made known to the appraiser(s). No responsibility is assumed for such conditions or engineering necessary to discover them.

4. Unless otherwise stated in this report, the existence of hazardous material, which may or may not exist, was not observed by the appraiser(s). The appraiser(s) has no knowledge of the existence of such materials on or in the property. The appraiser(s), however, is not qualified to detect such substances. The presence of such substances such as asbestos, ureaformaldehyde, or other potential hazardous materials may affect the value of the property. The appraiser(s) assumes that no such substances are present on or in the property. The appraiser(s) urges the client to retain an expert in this field if any assurances are desired concerning the presence of potentially hazardous materials.

5. Unless stated herein, the property is assumed to be outside of areas where flood hazard insurance is mandatory. Maps used by public and private agencies to determine these areas are limited with respect to accuracy. Due diligence has been exercised in interpreting these maps, but no responsibility is assumed for misinterpretation. The values as concluded herein are entirely contingent upon the subject property not being within or subject to a federally designated potential Endangered Species area as defined by the U.S. Fish and Wildlife Service, which as a result might otherwise limit, restrict, and/or prevent development of the subject to its highest and best use.

6. Good title, free of liens, encumbrances and special assessments is assumed, unless stated otherwise. No opinion is being expressed on matters which may require legal expertise or specialized knowledge beyond that which is customarily employed by real estate appraiser(s). The appraiser(s) assume no responsibility for matters of a legal nature affecting the property appraised or the title thereto, nor do the appraiser(s) render any opinion as to the title, which is assumed to be marketable. No private deed restrictions are considered unless otherwise noted. Furnishings, equipment and business interests, unless considered as part of the real estate, are not valued in this appraisal unless otherwise stated.

7. It is assumed that all required licenses, certificates of occupancy, consents, or other legislative or administrative authority from any local, state, or national government or private entity or organization have been or can be obtained or renewed for any use on which the value opinion contained in this report is based.

8. It is assumed that all applicable zoning and use regulations and restrictions have been complied with and there are no encroachments, easements or other restrictions which would affect the subject property, unless otherwise stated. It is assumed that there is full compliance with all applicable federal, state, and local environmental regulations and laws unless noncompliance is stated, defined, and considered in the appraisal report.

9. All engineering is assumed to be correct. The plot plans and all illustrative material in this report are included only to assist the reader in visualizing the property. Any proposed improvements are assumed to be completed in a good workmanlike manner in accordance with the submitted plans and specifications. All engineering information, if any, is assumed to be correct. The construction and condition of the improvements mentioned in the body of this report are based on observations. No engineering study has been provided which would assist in the discovery of any latent defects. No certification as to any of the physical aspects could be given unless a proper engineering study was made. On all appraisals involving proposed construction, the appraisal report and value conclusions are contingent upon completion of the proposed improvements, if any, in accordance with the plans and specifications.

10. It is assumed that the utilization of the land and improvements is within the boundaries or property lines of the property described and that there is no encroachment or trespass unless noted in the report.

11. Information, estimates, and opinions furnished to the appraiser(s) and contained in this report were obtained from sources considered reliable and believed to be true and correct. However, no responsibility for accuracy of such items furnished by the appraiser(s) can be assumed by the appraiser(s).

12. Unless otherwise stated in this report, the subject property is appraised without a specific compliance survey having been conducted to determine if the property is or is not in conformance with the requirements of the Americans with Disabilities Act. The presence of architectural and communications barriers that are structural in nature that would restrict access by disabled individuals may adversely affect the property's value, marketability, or utility.

13. Please note that our consent to allow an appraisal report prepared by Stephen Brown Associates, Inc., or portions of such report, to become part of or be referenced in any public offering, the granting of such consent will be at our sole discretion and, if given, will be on condition that we will be provided with an Indemnification Agreement and/or Non-Reliance letter, in a form and content satisfactory to us, by a party satisfactory to us. We do consent to your submission of the reports to rating agencies, loan participants or your auditors in its entirety (but not component parts) without the need to provide us with an Indemnification Agreement and/or Non-Reliance letter.

14. The distribution of the total valuation in this report between land and improvements applies only under the existing program of utilization. The separate valuations for land and building must not be used in conjunction with any other appraisal and are invalid if so used.

15. Responsible ownership and competent property management are assumed.

16. All value opinions provided in the appraisal apply to 100% of the ownership unless otherwise indicated. It may be inappropriate for the reader to apply fractional interests or pro ration of interests.

17. The appraiser is not aware of any contemplated public initiatives, governmental development controls, or rent controls that would significantly affect the value for the subject property as of the date of valuation.

18. The forecasts, projections, or operating estimates contained herein are based upon current market conditions, anticipated short-term supply and demand factors, and a continued stable economy. These forecasts are, therefore, subject to change as a result of variations in the market. Value(s) are based on U. S. Dollars as of the date of value.

19. Appraisals are based on the data available at the time the assignment is completed. Amendments/modifications to appraisals based on new information made available after the appraisal was completed will be made, as soon as reasonably possible, for an additional fee.

20. The appraiser(s) have followed traditional appraisal standards to develop a reasonable estimate of the insurable value based upon industrial practices and the industry accepted Marshal Valuation Service cost handbook. The appraiser estimate should only be used as a comparison to the analysis completed by insurance industry experts for underwriting for underwriting purpose.

21. The appraiser(s) are not required to give testimony in court in connection with this appraisal. If the appraiser(s) are subpoenaed pursuant to a court order, the client agrees to pay the appraiser(s) our regular per diem rate plus expenses. The appraiser(s) are not required to give testimony or appear in court because of having made this appraisal with reference to the property in question unless arrangements have been made therefore.

22. The employer agrees, as a condition of the appraisal, to defend and indemnify appraiser(s) at employer's sole expense in any action brought against appraiser(s) by a third party due to the appraisal or any advice given to employer by appraiser(s). The employer will also reimburse appraiser(s) for any award, court costs and or attorney's fees which appraiser(s) may be required by a court to pay as a result of such action. Appraiser(s) may, at his sole discretion, participate in the defense of any such action, but such participation shall not relieve employer of his obligations under this condition.

23. Acceptance and or use of this appraisal report by the client or any third party constitutes acceptance of the Conditions and Limiting Conditions and Special Assumptions. The liability of the appraiser(s) extends only to the stated client and not to subsequent parties or users, and the liability is limited to the amount of fee received from the employer by the appraiser(s).

24. The appraisal performed under this Agreement will be subject to all statements, assumptions, limiting conditions and other conditions (collectively, “Appraisal Conditions”) set forth in the appraisal report. Client agrees that Client will review the Appraisal Conditions upon receipt of the report and that Client’s use of the appraisal will constitute acceptance of the Appraisal Conditions. The Appraisal Conditions shall be considered as being incorporated into and forming part of this Agreement with respect to the appraisal in which they are contained and to the services relating to that appraisal. The Appraiser’s anticipated Appraisal Conditions at this time are attached and incorporated into and form part of this Agreement. It should be understood that additional Appraisal Conditions may be developed during performance of the appraisal and will be set forth in the report.

25. Any use of or reliance on the appraisal by any party, regardless of whether the use or reliance is authorized or known by Appraiser, constitutes acceptance of, and is subject to, all appraisal statements, limiting conditions and assumptions stated in the appraisal report.

26. Unless the time frame is shorter under applicable law, any legal action or claim relating to the appraisal or Appraiser’s services shall be filed in court (or in the applicable arbitration tribunal, if the parties to the dispute have executed an arbitration agreement) within two (2) years from the date of delivery to Client of the appraisal report to which the claims or causes of action relate or, in the case of acts or conduct after delivery of the report, two (2) years from the date of the alleged acts or conduct. The time frame stated in this section shall not be extended by any delay in the discovery or accrual of the underlying claims, causes of action or damages. The time frame stated in this section shall apply to all non- criminal claims or causes of action of any type.

27. Legal claims or causes of action relating to the appraisal are not transferable or assignable to a third party, except: (i) as the result of a merger, consolidation, sale or purchase of a legal entity, (ii) with regard to the collection of a bona fide existing debt for services but then only to the extent of the total compensation for the appraisal plus reasonable interest, or (iii) in the case of an appraisal performed in connection with the origination of a mortgage loan, as part of the transfer or sale of the mortgage before an event of default on the mortgage or note or its legal equivalent.

DEFINITIONS

Some definitions in this section are footnoted within the body of the report. The following definitions help define our opinion of value. Their source(s) are from the 6th Edition of The Dictionary of Real Estate Appraisal, The 14th Edition of The Appraisal of Real Estate or from other referenced materials identified within the report.

Exposure Time: 1. The time a property remains on the market. 2. [The] estimated length of time that the property interest being appraised would have been offered on the market prior to the hypothetical consummation of a sale at market value on the effective date of the appraisal. Comment: Exposure time is a retrospective opinion based on an analysis of past events assuming a competitive and open market. (USPAP, 2016-2017 ed.)
Hypothetical Condition: 1. A condition that is presumed to be true when it is known to be false. (SVP) 2. A condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but is used for the purpose of analysis. Comment: Hypothetical conditions are contrary to known facts about physical, legal, or economic characteristics of the subject property; or about conditions external to the property, such as market conditions or trends; or about the integrity of data used in an analysis. (USPAP, 2016-2017 ed.)
Extraordinary Assumptions: An assumption, directly related to a specific assignment, as of the effective date of the assignment results, which, if found to be false, could alter the appraiser's opinions or conclusions. Comment: Extraordinary assumptions presume as fact otherwise uncertain information about physical, legal, or economic characteristics of the subject property; or about conditions external to the property, such as market conditions or trends; or about the integrity of data used in an analysis. (USPAP, 20162017 ed.)
Fee Simple Estate: Absolute ownership unencumbered by any other interest or estate, subject only to the limitations imposed by the governmental powers of taxation, eminent domain, police power, and escheat.
Leased Fee Interest: The ownership interest held by the lessor, which includes the right to receive the contract rent specified in the lease plus the reversionary right when the lease expires.
Leasehold interest: The right held by the lessee to use and occupy real estate for a stated term and under the conditions specified in the lease.
As Is Market Value: The estimate of the market value of real property in its current physical condition, use, and zoning as of the appraisal date. (Interagency Appraisal and Evaluation Guidelines) Note that the use of the "as is" phrase is specific to appraisal regulations pursuant to FIRREA applying to appraisals prepared for regulated lenders in the United States. The concept of an "as is" value is not included in the Standards of Valuation Practice of the Appraisal Institute, Uniform Standards of Professional Appraisal Practice, or International Valuation Standards.
Gross Building Area (GBA): 1. Total floor area of a building, excluding unenclosed areas, measured from the exterior of the walls of the above grade area. This includes mezzanines and basements if and when typically included in the market area of the type of property involved. 2. Gross leasable area plus all common areas. 3. For residential space, the total area of all floor levels measured from the exterior of the walls and including the superstructure and substructure basement; typically does not include garage space.
Gross Leasable Area (GLA): Total floor area designed for the occupancy and exclusive use of tenants, including basements and mezzanines; measured from the center of joint partitioning to the outside wall surfaces.
Rentable Area (RA): For office or retail buildings, the tenant's pro rata portion of the entire office floor, excluding elements of the building that penetrate through the floor to the areas below. The rentable area of a floor is computed by measuring to the inside finished surface of the dominant portion of the permanent building walls, excluding any major vertical penetrations of the floor. Alternatively, the amount of space on which the rent is based; calculated according to local practice.
Lease Terms are defined as:

- Triple Net (NNN) lease: An alternative term for a type of net lease. In some markets, a net net net lease is defined as a lease in which the tenant assumes all expenses (fixed and variable) of operating a property except that the landlord is responsible for structural maintenance, building reserves, and management; also called NNN lease, triple net lease, or fully net lease.
- Gross lease: A lease in which the landlord receives stipulated rent and is obligated to pay all of the property's operating and fixed expenses; also called full-service lease.
- Modified gross lease: A lease in which the landlord receives stipulated rent and is obligated to pay some, but not all, of the property's operating and fixed expenses. Since assignment of expenses varies among modified gross leases, expense responsibility must always be specified. In some markets, a modified gross lease may be called a double net lease, net net lease, partial net lease, or semi-gross lease.
- Industrial gross lease: A type of modified gross lease of an industrial property in which the landlord and tenant share expenses. The landlord receives stipulated rent and is obligated to pay certain operating expenses, often structural maintenance, insurance, and real property taxes, as specified in the lease. There are significant regional and local differences in the use of this term.

SUMMARY OF QUALIFICATION

KYLE CALDER BROWN, MAI
CALIFORNIA STATE CERTIFIED
GENERAL REAL ESTATE APPRAISER AG#044626
GENERAL CONTRACTOR, License #872815

Kyle C Brown graduated from Cal Poly, SLO in 2003 and subsequently earned his Contractor's License while working in construction in San Luis Obispo, California. Mr. Brown has worked as an off-site consultant for Stephen Brown Associates, Inc. since 1997. In 2007, Mr. Brown began working full-time as a real estate appraiser for Stephen Brown Associates, Inc. He has earned his MAI designation from the Appraisal Institute is currently working toward earning an ARA designation from The American Society of Farm Managers and Rural Appraisers.

EXHIBIT A

Legal Description

All that real property situated in the City of Salinas, County of Monterey, State of California, located and described as follows:

Being a portion of the Salinas Municipal Airport deeded to the City of Salinas, by the United States by deed dated April 9, 1948, and recorded in Volume 1116 of Official Records, at page 77 therein, records of Monterey County, California, being more particularly described as follows:

Beginning at a point at the northerly edge of Bardin Road, from which the most northerly corner of Mayfair Park, as shown on a map titled "Mayfair Park" and filed in Volume 5 of Cities and Towns, at page 5 therein, records of Monterey County, California, bears the following 6 courses and distances:

(1)	S. 36° 43' 45" E.	25.0 feet
(2)	S. 57° 46' 00" W.	420 feet
(3)	N. 39° 36' 00" W.	880.50 feet
(4)	N. 60° 23' 00" W.	1307.06 feet
(5)	N. 38° 02' 00" W.	507.21 feet
(6)	S. 53° 55' 00" W.	5.0 feet

Said point being the most easterly corner of a parcel of land leased by the City of Salinas to the California National Guard; thence along the northeastern boundary of said land leased to the California National Guard N. 36° 43' 45" W. for a distance of 200.0 feet to the most northerly corner of said land leased to the California National Guard; thence, leaving said land leased to the California National Guard N. 57° 46' 00" E. for a distance of 200.0 feet to a point; thence S. 36° 43' 45" E. for a distance of 200.00 feet to a point; thence S. 57° 46' 00" W. for a distance of 200.0 feet to the point of beginning.

All courses true.

Contains .915 acres more or less.

File #: ID#19-659, **Version:** 1

Purchase of one 2019 F-250 Utility Body Truck

Approve a Resolution authorizing the direct purchase of one Ford F-250 Utility Truck from Salinas Valley Ford Truck Company in Salinas at a total cost of $38,583.24.

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **DECEMBER 17TH, 2019**

DEPARTMENT: **PUBLIC WORKS, STEET MAINTENANCE DIVISION**

FROM: **DAVID JACOBS, PUBLIC WORKS DIRECTOR**

BY: **RONALD PATTERSON, FLEET MAINTENANCE SUPERVISOR**

TITLE: **PURCHASE OF 2019 F-250 UTILITY BODY TRUCK**

RECOMMENDED MOTION:

It is recommended that City Council approve a resolution authorizing the direct purchase of one Ford F-250 Utility Truck from Salinas Valley Ford Truck Company in Salinas at a total cost of $38,583.24.

RECOMMENDATION:

It is recommended that City Council approve the recommended motion so that the Street Maintenance Division can proceed with purchasing this much needed utility truck.

EXECUTIVE SUMMARY:

This report explains why staff chose the Ford F-250 utility truck. This truck is needed to continue with the maintenance and repairs of the city infrastructure.

BACKGROUND:

The Department continues work to update and replace a dated and worn out vehicle fleet. Capital Improvement Project 9525 has funds available to purchase a new Ford F-250 truck.

The Public Works Fleet, in conjunction with the Street Maintenance Division, selected the Ford F-250 due to its long-standing service history as well as the ability to get service and parts locally. Additionally, Salinas Valley Ford has this truck built and sitting on the lot ready for purchase. The truck from National Auto Fleet Group will have to be built.

National Auto Fleet Group quoted a price of $41,027.42 using the Sourcewell contract #091218-NAF. Salinas Valley Ford quoted a price of $38,583.24 which is below the Sourcewell quote and is a local dealer. An additional benefit is the truck is available immediately.

This truck is used daily to perform street sign maintenance and repair as well as roadway markings. The total cost of this equipment is $38,538.24. This new asset will replace the item listed below. Staff is requesting this item be declared surplus at this time and be sold at auction after the new truck is in service.

Year	Make	Model	Unit	Vin#
1992	Cheverolet	C10	16	1GCDC14Z5NZ185060

The city can utilize cooperative purchases with other government agencies. Local businesses are given the opportunity to compete against these contracts. This purchase from Salinas Valley Ford satisfies the purpose and requirements of Article III-A, Local Purchasing Preference of the Salinas Municipal Code by being within ten percent of the State Contract.

Salinas Valley Ford has the truck available for immediate delivery.

CEQA CONSIDERATION:

Not a Project. The City of Salinas has determined that the proposed action is not a project as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines Section 15378).

STRATEGIC PLAN INITIATIVE:

The requested Council action directly relates to Council's Strategic Plans or Goals of providing a "Safe, Livable Community"; "Well Planned City and Excellent Infrastructure"; and "Well Maintained City Infrastructure". The purchase of the Ford F-250 utility truck enables the Street Maintenance Division to continue to maintain and repair the city's streets and sidewalks.

DEPARTMENTAL COORDINATION:

Fleet Maintenance in coordination with the Street Maintenance Division had a meeting to discuss the needs of the new truck. We concluded that the truck in this report meets both the needs of the Street Maintenance Division as well as the requirements of the Fleet Maintenance Shop.

FISCAL AND SUSTAINABILITY IMPACT:

Funds have been budgeted in Capital Improvement Project 9525 Fleet Replacement. There will be no impact to the City's General Fund since monies for the purchase are from the Fleet Replacement Fund 9525 totaling $38,583.24.

ATTACHMENTS:

Council Resolution
Vehicle and Equipment quotes

RESOLUTION NO._____(N.C.S.)

A RESOLUTION AUTHORIZING DIRECT PURCHASE OF NEW 2019 FORD F-250 UTILITY TRUCK

WHEREAS, Funds are available in Capital Improvement Project 9525 to purchase a new utility truck; and

WHEREAS, Staff chose a 2019 Ford F-250 from Salinas Valley Ford at a cost of $38,583.24; and

WHEREAS, this purchase meets the requirements of the City's local purchasing preference.

NOW, THEREFORE, BE IT RESOLVED that the Salinas City Council authorize the Purchasing Officer to purchase a new Ford F-250 Utility Truck from Salinas Valley for a total cost of $38,583.24.

Audited Basic Financial Statements and Single Audit Report - June 30, 2019

Accept the audited Basic Financial Statements and Single Audit Report on federal funded programs for fiscal year ended June 30, 2019.

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **DECEMBER 17, 2019**

DEPARTMENT: **FINANCE DEPARTMENT**

FROM: **MATT N. PRESSEY, CPA, FINANCE DIRECTOR**

TITLE: **AUDITED BASIC FINANCIAL STATEMENTS AND SINGLE AUDIT REPORT ON FEDERAL FUNDED PROGRAMS FOR THE YEAR ENDED JUNE 30, 2019**

RECOMMENDED MOTION:

A motion to accept the audited Basic Financial Statements and Single Audit Report on federal funded programs for fiscal year ended June 30, 2019.

RECOMMENDATION:

Staff recommends that City Council accept the audited Basic Financial Statements and Single Audit Report on federal funded programs for fiscal year ended June 30, 2019.

DISCUSSION:

Audited Basic Financial Statements

The Finance Department is pleased to present the audited financial statements for the fiscal year ended June 30, 2019. The transmittal letter in the Basic Financial Statements beginning on page "i" and the Management Discussion and Analysis beginning on page F-5 provide an overview of the City's financial activities for the fiscal year.

McGilloway, Ray, Brown & Kaufman, the City Council's independent auditor, has completed their annual audit of City affairs. Their Independent Auditors Opinion Report is included in the Basic Financial Statements on page F-1 and is a "clean audit" opinion stating, "In our opinion, the financial statements... present fairly, in all material respects, the respective financial position of the governmental activities, the business-type activities, each major fund, and the aggregate remaining fund information of the City, as of June 30, 2019."

Single Audit Report on Federal Funded Programs

The Finance Department is also pleased to present the Single Audit Report of federal funded programs for the fiscal year ended June 30, 2019. The report includes a summary of the federal financial awards, internal control, compliance and schedule of findings and questioned costs for the fiscal year ending June 30, 2019.

McGilloway, Ray, Brown & Kaufman has completed their annual audit of City of Salinas compliance requirements. During the audit, they noted no instance of non-compliance.

CEQA CONSIDERATION:

Not a Project. The City of Salinas has determined that the proposed action is not a project as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines Section 15378).

STRATEGIC PLAN INITIATIVE:

The audited financial statements and single audit are part of upholding the Council Goal of Effective Sustainable Government.

DEPARTMENTAL COORDINATION:

The audited financial statements and single audit represent the great work of all departments of the City.

FISCAL AND SUSTAINABILITY IMPACT:

Costs associated with the audit are included in the City's FY 2019-20 budget.

INDEPENDENT AUDITORS' REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING AND ON COMPLIANCE AND OTHER MATTERS BASED ON AN AUDIT OF FINANCIAL STATEMENTS PERFORMED IN ACCORDANCE WITH *GOVERNMENT AUDITING STANDARDS*

The Honorable Mayor and
Members of City Council
of the City of Salinas
Salinas, California

We have audited, in accordance with the auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards* issued by the Comptroller General of the United States, the financial statements of the governmental activities, the business-type activities, each major fund and the aggregate remaining fund information of the City of Salinas, California (the City), as of and for the fiscal year ended June 30, 2019, and the related notes to the financial statements, which collectively comprise the City's basic financial statements and have issued our report thereon dated December 12, 2019.

Internal Control over Financial Reporting

In planning and performing our audit of the financial statements, we considered the City's internal control over financial reporting (internal control) to determine the audit procedures that are appropriate in the circumstances for the purpose of expressing our opinions on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the City's internal control. Accordingly, we do not express an opinion on the effectiveness of the City's internal control.

A *deficiency in internal control* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, misstatements on a timely basis. A *material weakness* is a deficiency, or a combination of deficiencies, in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented or detected and corrected on a timely basis. A *significant deficiency* is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Our consideration of internal control was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control that might be material weaknesses or, significant deficiencies. Given these limitations, during our audit we did not identify any deficiencies in internal control that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

Compliance and Other Matters

As part of obtaining reasonable assurance about whether the City's financial statements are free from material misstatement, we performed tests of its compliance with certain provisions of laws, regulations, contracts and grant agreements, noncompliance with which could have a direct and material effect on the determination of financial statement amounts. However, providing an opinion on compliance with those provisions was not an objective of our audit, and accordingly, we do not express such an opinion. The results of our tests disclosed no instances of noncompliance or other matters that are required to be reported under *Government Auditing Standards.*

Purpose of this Report

The purpose of this report is solely to describe the scope of our testing of internal control and compliance and the results of that testing, and not to provide an opinion on the effectiveness of the entity's internal control or on compliance. This report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering the entity's internal control and compliance. Accordingly, this communication is not suitable for any other purpose.

INDEPENDENT AUDITORS' REPORT ON COMPLIANCE FOR EACH MAJOR PROGRAM; AND ON INTERNAL CONTROL OVER COMPLIANCE REQUIRED BY THE UNIFORM GUIDANCE; AND ON THE SCHEDULE OF EXPENDITURES OF FEDERAL AWARDS

The Honorable Mayor and
Members of City Council
of the City of Salinas
Salinas, California

Report on Compliance for Each Major Federal Program

We have audited the City of Salinas, California's (the City) compliance with the types of compliance requirements described in the *OMB Compliance Supplement* that could have direct and material effect on each of the City's major federal programs for the fiscal year ended June 30, 2019. The City's major federal programs are identified in the summary of auditor's results section of the accompanying schedule of findings and questioned costs.

Management's Responsibility

Management is responsible for the compliance with federal statutes, regulations, and the terms and conditions of its federal awards applicable to its federal programs.

Auditors' Responsibility

Our responsibility is to express an opinion on compliance for each of the City's major federal programs based on our audit of the types of compliance requirements referred to above. We conducted our audit of compliance in accordance with auditing standards generally accepted in the United States of America; the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States; and the audit requirements of Title 2 U.S. *Code of Federal Regulations* Part 200, *Uniform Administrative Requirement, Cost Principles, and Audit Requirements for Federal Awards* (Uniform Guidance). Those standards and the Uniform Guidance require that we plan and perform the audit to obtain reasonable assurance about whether noncompliance with the types of compliance requirements referred to above that could have a direct and material effect on a major federal program occurred. An audit includes examining, on a test basis, evidence about the City's compliance with those requirements and performing such other procedures as we considered necessary in the circumstances.

We believe that our audit provides a reasonable basis for our opinion on compliance for each major federal program. However, our audit does not provide a legal determination of the City's compliance.

Opinion on Each Major Federal Program

In our opinion, the City complied, in all material respects, with the types of compliance requirements referred to above that could have a direct and material effect on each of its major federal programs for the year ended June 30, 2019.

Report on Internal Control over Compliance

Management of the City is responsible for establishing and maintaining effective internal control over compliance with the types of compliance requirements referred to above. In planning and performing our audit of compliance, we considered the City's internal control over compliance with the types of requirements that could have a direct and material effect on each major federal program to determine the auditing procedures that are appropriate in the circumstances for the purpose of expressing an opinion on compliance for each major federal program and to test and report on internal control over compliance in accordance with the Uniform Guidance, but not for the purpose of expressing an opinion on the effectiveness of internal control over compliance. Accordingly, we do not express an opinion on the effectiveness of the City's internal control over compliance.

A *deficiency in internal control over compliance* exists when the design or operation of a control over compliance does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, noncompliance with a type of compliance requirement of a federal program on a timely basis. A *material weakness in internal control over compliance* is a deficiency, or combination of deficiencies, in internal control over compliance, such that there is a reasonable possibility that material noncompliance with a type of compliance requirement of a federal program will not be prevented, or detected and corrected, on a timely basis. A *significant deficiency in internal control over compliance* is a deficiency, or a combination of deficiencies, in internal control over compliance with a type of compliance requirement of a federal program that is less severe than a material weakness in internal control over compliance, yet important enough to merit attention by those charged with governance.

Our consideration of internal control over compliance was for the limited purpose described in the first paragraph of this section and was not designed to identify all deficiencies in internal control over compliance that might be material weaknesses or significant deficiencies. We did not identify any deficiencies in internal control over compliance that we consider to be material weaknesses. However, material weaknesses may exist that have not been identified.

The purpose of this report on internal control over compliance is solely to describe the scope of our testing of internal control over compliance and the results of that testing based on the requirements of the Uniform Guidance. Accordingly, this report is not suitable for any other purpose.

Report on Schedule of Expenditures of Federal Awards Required by the Uniform Guidance

We have audited the financial statements of the governmental activities, business-type activities, each major fund, and the aggregate remaining fund information of the City as of and for the year ended June 30, 2019, and the related notes to the financial statements, which collectively comprise the City's basic financial statements. We issued our report thereon dated December 12, 2019, which contained unmodified opinions on those financial statements. Our audit was conducted for the purpose of forming opinions on the financial statements that collectively

comprise the City's basic financial statements. The accompanying schedule of expenditures of federal awards is presented for purposes of additional analysis as required by the Uniform Guidance and is not a required part of the basic financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the basic financial statements. The information has been subjected to the auditing procedures applied in the audit of the financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the basic financial statements or to the basic financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the schedule of expenditures of federal awards is fairly stated in all material respects in relation to the financial statements as a whole.

See accompanying notes to schedule of expenditures of federal awards.

1. Summary of Significant Accounting Policies Applicable to the Schedule of Expenditures of Federal Awards

A. Scope of Presentation

The accompanying Schedule of Expenditures of Federal Awards (Schedule) presents the expenditures incurred by the City of Salinas, California (the City) that are reimbursable under programs of federal agencies providing federal awards. For the purposes of this schedule, federal awards include both federal financial assistance received directly from a federal agency, as well as federal funds received indirectly by the City from a nonfederal agency or other organization. Only the portion of program expenditures reimbursable with such federal funds is reported in the accompanying schedule. Program expenditures in excess of the maximum federal reimbursement authorized or the portion of the program expenditures that was funded with other state, local or other nonfederal funds are excluded.

B. Basis of Accounting

The accompanying schedule of expenditures of federal awards is presented using the modified accrual basis of accounting for governmental funds, which is described in Note 1 of the City's basic financial statements. Such expenditures, as the federal awards were both awarded prior to and after December 24, 2014, are recognized following the cost principles contained in the Uniform Guidance and OMB A-87, Cost Principles for State, Local, and Indian Tribal Governments, wherein certain types of expenditures are not allowable or are limited as to reimbursement.

C. Direct and Indirect (Pass-Through) Federal Awards

Federal awards may be granted directly to the City by a federal granting agency or may be granted to other government agencies which pass-through federal awards to the City. The Schedule includes both of these types of Federal awards programs when they occur.

D. Indirect Cost Rate

The City has elected not to use the 10% de minimis indirect cost rate as allowed under the Uniform Guidance.

E. Relationship to Federal Financial Reports

Grant expenditure reports for the year ended June 30, 2019, which have been submitted to grantor agencies, will, in some cases, differ from amounts disclosed herein. The reports prepared for grantor agencies are typically prepared at a later date and often reflect refined estimates of the year-end accruals. The reports will agree at termination of the grant as the discrepancies, if any, are for timing differences.

2. Sub-recipients

The City provided federal awards to sub-recipients as follows:

Program Title	Federal CFDA Number	Amount Provided
U.S. Department of Housing and Urban Development		
Office of Community Planning and Development		
Community Development Entitlement Grant Program	14.218	
Special Programs		
Legal Services for Seniors		$ 25,000
Alliance on Aging		25,000
Boys and Girls Clubs		30,000
Girls Inc of the Central Coast		25,000
Food Bank		103,850
Girl Scouts of Monterey Bay		35,000
Grid Alternatives		50,000
Multi Family Housing		162,079
Eden Council Hope & Opportunity		43,637
Partners for Peace		30,785
Total CFDA No. 14.218		530,351
U.S. Department of Housing and Urban Development		
Emergency Shelter Grants Program	14.231	
Special Programs		
Central Coast Center Independent		241,996
Interim-Mental Health Wellness		181,020
Housing Resource Center of Monterey County		114,660
Community Homeless Solutions		218,936
San Benito County		190,801
Total for CFDA No. 14.231		947,413
Home Investments Partnership Program	14.239	
Special Programs		
Vista De La Terraza		246,274
Total for CFDA No. 14.239		246,274
Total sub-recipients for U.S. Department of Housing and Urban Development		1,724,038
U.S. Department of Justice		
FY15 Smart Supervision: Reducing Prison Population, Saving Mon and Creating Safer Communities	16.812	
Monterey County Probation Department		10,760
Total for CFDA No. 16.812		10,760
Total all sub-recipient awards		$ 1,734,798

3. Contingencies

Under the terms of federal and state grants, additional audits may be requested by the grantor agencies, and certain costs may be questioned as not being appropriate expenditures under the terms of the grants. Such audits could lead to a request for reimbursement to the grantor agencies.

December 17, 2019

Honorable Mayor and Members of the City Council
City of Salinas, California

We are pleased to submit the City of Salinas (City) Basic Financial Statements for the fiscal year ended June 30, 2019. The financial statements are presented in conformity with generally accepted accounting principles (GAAP) and are audited in accordance with generally accepted auditing standards.

Responsibility for the accuracy of the data and the fairness of presentation, including all notes and disclosures, rests with the City. We believe the data presented in this report is accurate in all material respects and all statements and disclosures necessary for the reader to obtain a thorough understanding of the City's financial activities have been included. Management of the City has established a comprehensive internal control framework that is designed both to protect the City's assets from loss, theft, or misuse and to compile sufficient reliable information for the preparation of the City's financial statements in conformity with GAAP. Because the cost of internal controls should not outweigh their benefits, the City's comprehensive framework of internal controls has been designed to provide reasonable rather than absolute assurance that the financial statements will be free from material misstatements.

While traditionally addressed to the governing body of the City, this report is intended to provide relevant financial information to the residents of the City of Salinas, City staff, creditors, investors and other concerned readers. We encourage all readers to contact the Finance Department with any questions or comments concerning this report.

McGilloway, Ray, Brown & Kaufman, a firm of certified public accountants, have audited the City's financial statements. The goal of the independent audit was to provide reasonable assurance that the financial statements of the City for the fiscal year ended June 30, 2019, are free of material misstatements. The independent audit involved examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Based upon the audit, the independent auditors concluded that there was reasonable basis for rendering an unmodified opinion that the City's financial statements for the fiscal year ended June 30, 2019, are fairly presented in conformity with GAAP. The independent auditor's report is presented as the first component of the financial section of this report.

The independent audit of the financial statements of the City was part of a broader, federally mandated "Single Audit" designed to meet the special needs of federal grantor agencies. The standards governing Single Audit engagements require the independent auditor to report not only on fair presentation of the financial statements, but also on the government's internal controls and compliance with legal requirements, with special emphasis on internal controls and legal requirements involving the administration of federal awards. These reports are available in the City's separately issued Single Audit Report.

GAAP requires that management provide a narrative introduction, overview, and analysis to accompany the basic financial statements in the form of Management's Discussion and Analysis (MD&A). This letter of transmittal is designed to complement the MD&A and should be read in conjunction with it. The City's MD&A can be found immediately following the report of the independent auditors.

This report is divided into two sections:

- The **Introductory Section** includes this letter of transmittal and an organizational overview of the City government.
- The **Financial Section** consists of the independent auditors' report, Management's Discussion and Analysis, Basic Financial Statements; which include the Government-Wide Financial Statements, Fund Financial Statements, Notes to Financial Statements and Required Supplementary Information and other Supplementary Information.

The Reporting Entity and Its Services

In defining the reporting entity, there are no other governmental units over which the City Council has financial accountability. Under new state law, the Salinas Redevelopment Agency, which was a component unit of the City, ceased to exist as of February 1, 2012, and therefore the assets and activities of the dissolved redevelopment agency are reported in a Fiduciary Fund (private purpose trust fund) in the financial statements of the City.

The City of Salinas acts as fiscal agent for the Sunrise House. Therefore, the financial information of this agency is included in the Fiduciary Funds in the accompanying financial statements. The City's service as fiscal agent has ended during the year.

The City of Salinas was incorporated as a charter City on March 4, 1874, and operates under the Council-Manager form of government. The City is governed by a six-member Council elected by districts for four-year alternating terms and a Mayor elected at large for a two-year term. The Council appoints the City Attorney and the City Manager who is responsible for day-to-day administration of the City under the policy direction of the Council.

The City of Salinas is the "county seat" of Monterey County, and is located in the Central Coast region of California, 17 miles inland from the Monterey Bay, 325 miles north of Los Angeles and 106 miles south of San Francisco. Salinas is a charter City providing all typical City services: Public safety - police and fire, Public Works - maintenance services (streets, lighting, signals, facilities, parks and trees), development and permit services, current and advanced planning and

traffic and facilities engineering, Library, Recreation and General administrative services. Business-type City services include: a Municipal Airport, Industrial Waste system, Golf (two municipal golf courses), Sanitary Sewer and Storm Drain systems, Water Utility and a Parking District. The State Department of Finance reports the City's population at 162,797 as of January 1, 2019. The City FY 2019-20 budget includes 611.50 positions authorized on a full time equivalent basis.

Three elementary school districts, a unified high school district and several private schools at both the primary and secondary level operate in the City of Salinas. Hartnell College, a State Community College, offers two-year degrees and occupational certificate programs. California State University Monterey Bay is located less than 15 miles away on the former Fort Ord site. Graduate studies through Golden Gate University, Monterey Institute of International Studies and Chapman College are available nearby. Also in the area are Moss Landing Marine Laboratory, Monterey College of Law, Stanford University's Hopkins Marine Station and San Jose State University.

Salinas has extensive health and medical services with two of Monterey County's four hospitals located within the City. Salinas also offers skilled nursing and convalescent homes and residential retirement facilities for seniors, as well as over 220 practicing physicians.

Fire protection and basic and advanced life support are provided by the City's full service Fire Department. Advanced life support services are provided by the Fire Department's paramedic program. The City of Salinas has a Police Department and receives additional support, as required, from the Monterey County Sheriff's Office and other regional, state and federal agencies.

The City's moderate climate encourages year-round use of its 550 plus acres of municipal parks, which include golf courses, tennis courts and swimming pools. The Salinas Community Center regularly hosts symphonies, ballets, concerts and conventions. Salinas is host to the annual Steinbeck Festival, the California Rodeo, and the California International Airshow. Salinas has a modern California Sports Complex and the National Steinbeck Center. Surrounding Salinas are diverse recreational opportunities including beautiful beaches and the world famed golf courses of the Monterey Bay Peninsula.

As the retail hub of the Central Coast, Salinas enjoys a wide selection and diversity in its stores. Northridge Shopping Center contains over 120 specialty shops and four major department stores – Macy's, Sears, Best Buy and J.C. Penney. Harden Ranch Plaza includes Wal-Mart, Target, Safeway, specialty stores, restaurants, and banking institutions. The Westridge Shopping Center is home to Costco, Wal-Mart, Office Max, Dick's Sporting Goods and a variety of national chain restaurants. The Salinas Auto Center houses nine local dealers and its retail area hosts Home Depot, Beverages and More (BevMo), Kohl's, and other specialty stores. Additionally, Salinas' location allows quick access to the Monterey Peninsula, as well as the San Jose area.

The City utilizes various Boards and Commissions in the conduct of its affairs. Commissions and Committees established by City Ordinance are:

- Airport Commission
- Library and Community Services Commission
- Traffic and Transportation Commission
- Planning Commission
- Measure G Oversight Committee
- Measure E Oversight Committee

Boards and Committees established by Resolution of the City Council are:

- Police Community Advisory Committee
- Animal Services Committee
- Design Review Board
- Board of Appeals
- Grievance Advisory Board
- Finance Committee
- Historical Resources Board

FINANCIAL INFORMATION

The City's management staff is responsible for establishing and maintaining internal controls that safeguard the assets of the government from loss, theft, or misuse and allow the compilation of adequate accounting data for the preparation of financial statements in conformity with Generally Accepted Accounting Principles (GAAP). Internal controls are designed to provide reasonable, but not absolute, assurance that these objectives are met. The concept of reasonable assurance recognizes that the cost of a control should not exceed its likely benefits and that the evaluation of costs and benefits is subject to management estimates and judgments.

Single Audit

As a recipient of Federal, State and County financial assistance, the City is responsible for providing assurance that adequate internal controls are in place to ensure compliance with applicable laws and regulations relating to these award programs. Internal controls are subject to periodic evaluation by management, the Finance Department staff, and the City's outside independent auditors.

As part of the City's single audit procedures, tests are performed to determine the effectiveness of the internal controls over major Federal award programs and the City's compliance with applicable laws and regulations related to these award programs.

Accounting System and Budgetary Control

The City's accounting and budgeting records for general governmental operations are maintained on a modified accrual basis, with the revenues being recorded when available and measurable. Expenditures are recorded when the services or goods are received or the liabilities incurred. Accounting and budgeting for the City's proprietary funds are maintained on the accrual basis.

The City also uses encumbrance accounting as another technique for accomplishing budgetary control. An encumbrance is a commitment of a future expenditure earmarked for a particular purpose that reduces the amount of budgetary authority available for general spending. At the end of the fiscal year, encumbered appropriations are carried forward and become part of the following year's budget while appropriations that have not been encumbered lapse and are available to be appropriated through the following fiscal year's budget process.

The City Council approves operating appropriations at the department and fund level prior to July 1, each year and may amend the budget during the fiscal year. Please refer to Required Supplementary Information to the financial statements for a more detailed discussion of budget policy and control. The City continues to meet its responsibility for sound financial management as demonstrated by the statements and schedules included in the financial section of this report.

Annual Financial Report

The purpose of the City's Annual Financial Report is to summarize the administrative and operational performance of the City during the previous fiscal year. The report is intended to highlight significant accomplishments that were achieved during the fiscal year ended June 30, 2019 and to provide a financial analysis of City performance.

Capital Assets and Depreciation

As of June 30, 2019, capital assets, including infrastructure assets, of the City of Salinas totaled $806.5 million; accumulated depreciation totaled $407.0 million, with the difference providing net capital assets of $399.5 million. Net capital assets of the City's governmental activities (general government) are $281.3 million and net capital assets for the City's business-type activities (enterprise funds) are $118.2 million.

Capital assets include buildings, infrastructure (streets, curbs, gutters, sidewalks, bridges, streetlights, traffic signals, etc.), improvements other than buildings (park improvements, etc.), and machinery and equipment.

During FY 2018-19, depreciation expense on capital assets of the City's governmental activities (general government) was $10.8 million and depreciation expense on capital assets of the City's business-type activities (enterprise funds) was $6.3 million. Depreciation expense represents the amount at which assets are being used-up annually. Due to budget constraints over the years, the City has been unable to invest in the maintenance of capital assets at anywhere near the annual depreciation amount.

Please refer to the Notes to Basic Financial Statements for a complete discussion of the City's Capital Assets.

Long-term Debt Payable

At June 30, 2019, the City had $413.1 million in long-term debt. Long-term debt includes liabilities for annual leave, long-term portion of Worker's Compensation claims payable, capital leases and notes and bonds payable, and net pension liability. While the General Fund guarantees most of the City's long- term debt, other funds, agencies or property owners make the majority of principal and interest payments. Examples of other funds, agencies or property owners include, the Industrial Waste Fund, Golf Courses Fund, the Sanitary Sewer Fund, Successor Agency to the former Salinas Redevelopment Agency property tax increments, and payments from property owners who are included in the City's various assessment districts.

Please refer to the Notes to Basic Financial Statements, Note 18, for a complete discussion of the City's Long-term Debt.

Fund Financial Statements-General Governmental Revenues

The current governmental operations of the City are accounted for in the General, Special Revenue, Debt Service, and Capital Project Funds. For the fiscal year ended June 30, 2019, total revenues for general governmental functions totaled $171.6 million, an increase of 6.0% over the previous fiscal year.

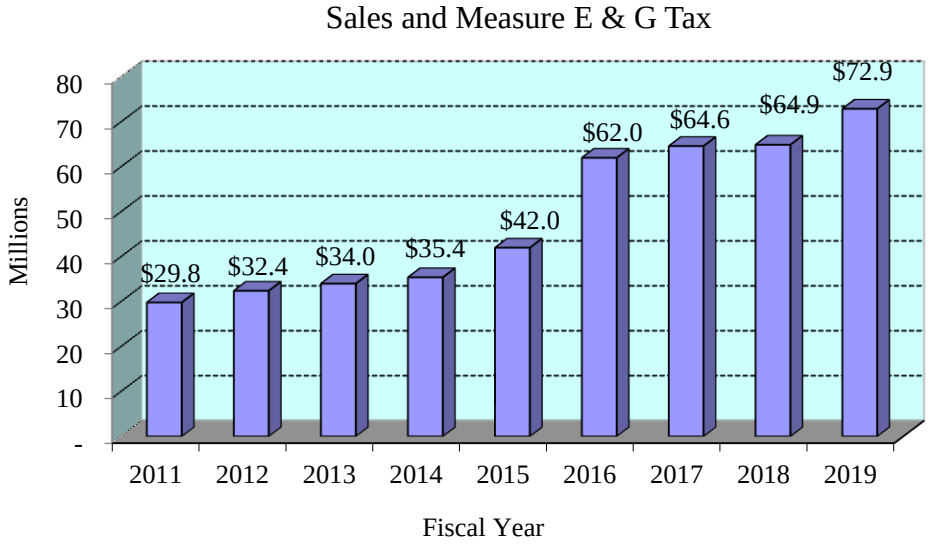
Sales Tax

The City has a well-diversified economy and sales tax base. Sales tax receipts increased for the eighth year after the three consecutive years of significant declines. The sales and transaction and use tax increased $7.9 million, or 12.2% from FY 2017-18. This increase is a one-time increase as a result of the State implementing a new reporting system, which resulted in the City not receiving all of the amounts due for the first and second quarter of 2018. Eventually the City received it, which was in current FY 2018-19 year. The exact amount cannot be determined, but average increase over the last two years is 6.4%. Sales tax was still the largest single category of revenue this fiscal year producing 18.5% of the combined governmental fund type revenues. Transactions and Use Tax (Measure E and G) represents 24.0% of the combined governmental fund type revenues. Measure E and G transactions and use tax is a general tax and is reported as part of the General Fund. Combined, sales tax and transactions and use tax revenue total $72.9 million or 42.5% of the combined governmental fund type revenues.

On November 8, 2005, the voters of Salinas approved Measure V, a 0.50% transactions and use tax. On November 6, 2012, the voters of Salinas approved to extend the 0.50% transaction and use tax with no sunset (Measure E). Measure E is a general tax and is reported as part of the General Fund, although the tax is accounted for in a separate sub-fund of the General Fund.

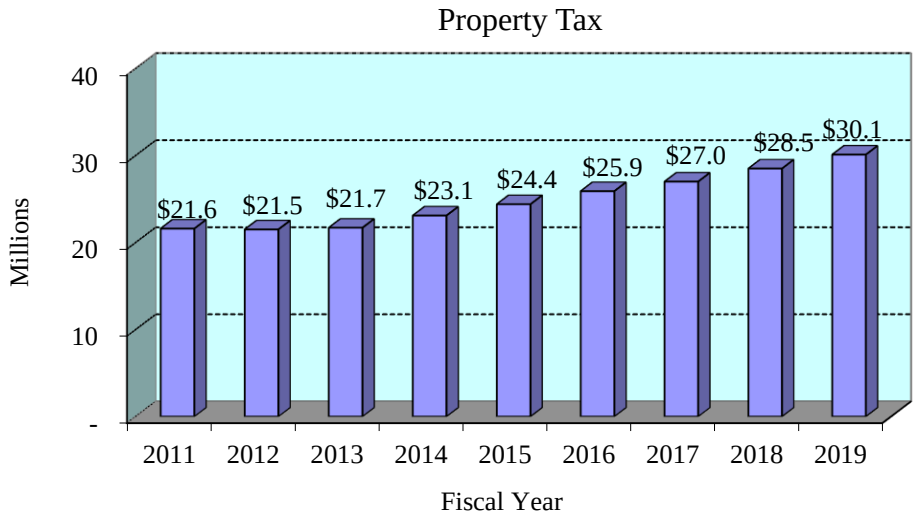
On November 4, 2014, the voters of Salinas approved Measure G, an ordinance imposing a one-cent general transactions and use tax. Measure G has a fifteen-year term and requires the City

Council to establish an Oversight Committee. Measure G is a general tax and is reported as part of the General Fund, although the tax is accounted for in a separate sub-fund of the General Fund.



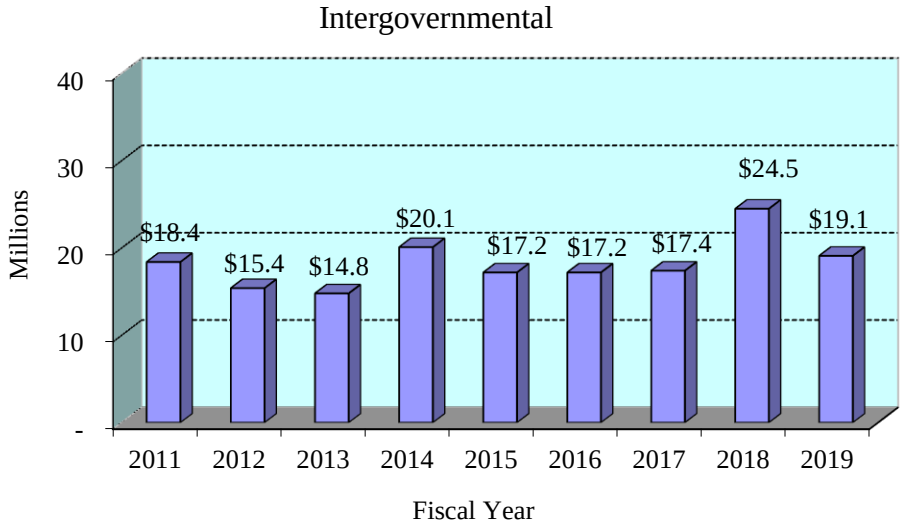
Property Tax

Property tax revenue was the second largest source of revenue during this fiscal year, producing 17.5% of the combined governmental fund type revenues. Property tax revenue includes Property tax-in-lieu of vehicle license fees (2/3 of VLF) of $13.0 million that is now determined by the City's growth in assessed property values. Property tax experienced a low in 2012 of $21.5 million and is now $30.1 million, which is more than a full recovery to the high of $27.5 million in 2009.



Intergovernmental

Intergovernmental revenue was the third largest single category of revenue during the fiscal year producing 11.1% of the combined governmental fund revenues. Intergovernmental revenues consist of vehicle licenses fees (1/3 of VLF), Federal and State Public Safety Funds, Federal Block Grants, State Gas Taxes and Federal and State Construction Grants. Intergovernmental revenue recovered from a 10-year low six years ago. Intergovernmental revenue had a decrease from the prior year by $5.5 million, or 22.3%, mainly from Measure X funds, a regional revenue measure focused on streets improvements, received in 2018.



Utility User's Tax and Other Taxes

Utility user's tax and other taxes produced 14.6% of the combined governmental fund type revenues. Other taxes include business license tax and franchise fees, among others. Utility user's tax decreased by $0.9 million, or 7.2%. Other taxes increased by $1.0 million, or 8.4% from the prior year.

Taxes receivable total $15.3 million for the year ended June 30, 2019 and are further explained in Note 6 to the financial statements.

Assessment District Taxes

The Assessment District Debt Service Fund taxes remained unchanged from the prior year at $2.5 million.

Charges for Services

The Charges for Services revenue increased by $1.8 million, or 27.6% as a result of increased development.

Revenues from various sources and the resulting changes over the last year are shown below.

Source of Revenues	2019 Amounts	Percent of Total	2018 Amounts	2019 vs. 2018 Increase/(decrease) Dollars	Percent
Assessment districts:					
Taxes	$ 2,479,777	1.4%	$ 2,514,982	$ (35,205)	-1.4%
Property tax	30,099,616	17.5%	28,499,277	1,600,339	5.6%

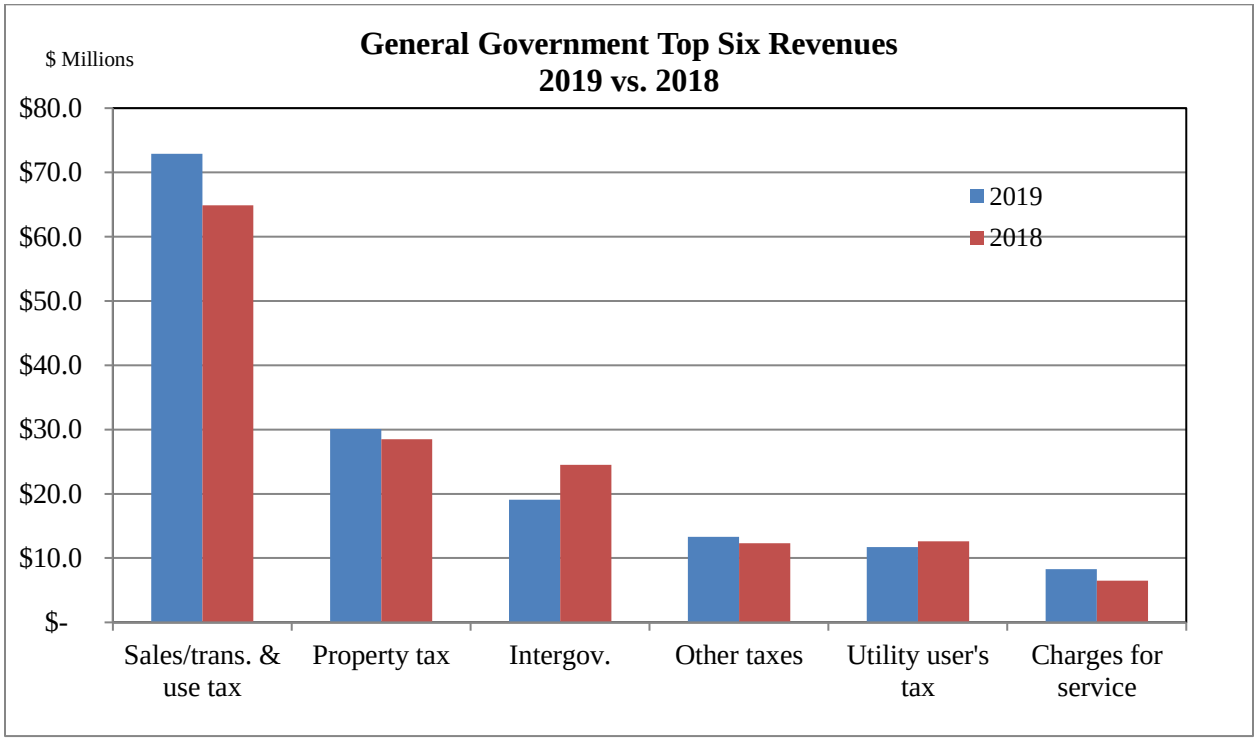
Miscellaneous	1,423,363	0.8%	1,014,416	408,947	40.3%
TOTAL	$ 171,574,589	100.0%	$ 161,798,192	$ 9,776,397	6.0%

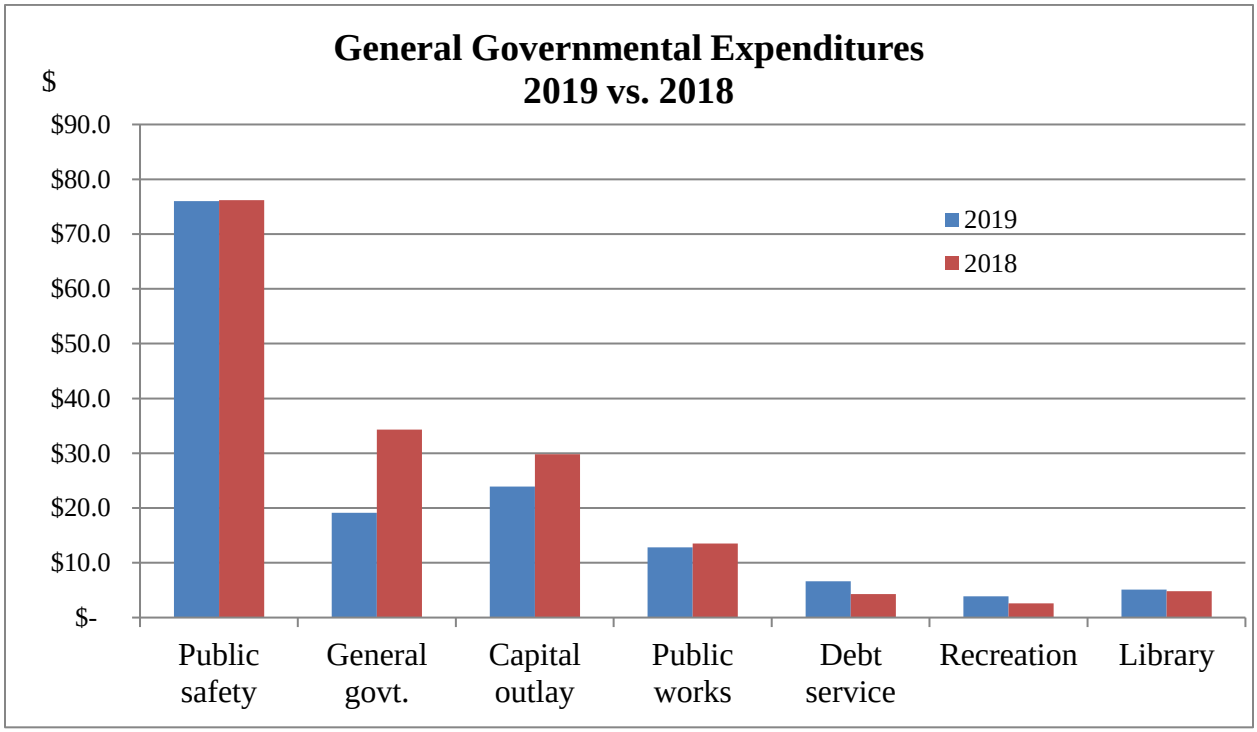


Fund Financial Statements-General Governmental Expenditures

Expenditures for governmental operations during the fiscal year ended June 30, 2019 were $147.4 million, a net decrease of 11.0% in total expenditures over the previous year.

Changes in expenditures by major function are as follows:

Function	2019	Percent of Total	2018	2019 vs. 2018 Increase/(decrease) Dollars	Percent
General government	$ 19,092,506	13.0%	$ 34,303,909	$ (15,211,403)	-44.3%
Public safety	75,960,561	51.5%	76,243,153	(282,592)	-0.4%
Public works	12,789,997	8.7%	13,512,685	(722,688)	-5.3%
Recreation	3,941,411	2.7%	2,566,808	1,374,603	53.6%
Library	5,113,905	3.5%	4,805,647	308,258	6.4%
Subtotal operations	116,898,380	79.3%	131,432,202	(14,533,822)	-11.1%
Capital outlay	23,944,191	16.2%	29,816,713	(5,872,522)	-19.7%
Debt service:					
Principal	3,159,338	2.1%	3,232,023	(72,685)	-2.2%
Interest	3,397,650	2.3%	1,094,547	2,303,103	210.4%
Total	$ 147,399,559	100.0%	$ 165,575,485	$ (18,175,926)	-11.0%



Operating expenditures decreased by $14.5 million or 11.1% from $131.4 million in FY 2017-18 to $116.9 million in FY 2018-19.

General Government decreased by $15.2 million, or 44.3%. This decrease was due to the City making a one-time $11.3 million payment to PERS in the prior year to pay down the UAL, an expense that was not done in the current year. Recreation increased by $1.4 million, or 53.6%, due to the Community Safety division moving out of General Government to Recreation, further contributing to the decrease in General Government as previously noted. Public Safety decreased by $0.3 million, or 0.4%, Public Works decreased during the year by $0.7 million, or 5.3%, and Library expenditures increased slightly by $0.3 million, or 6.4%.

Principal payments decreased slightly by $0.1 million while interest payments increased by $2.3 million due to new debt, notably the COP 2018B TRIP, which only required debt service payments on the interest portion in FY 18-19.

Capital Outlay (Project) expenditures decreased $5.9 million or 19.7% from $29.8 million in FY 2017-18 to $23.9 million in FY 2018-19. During the year, there were 239 capital projects worked on. The largest project was the Police Services Headquarters project that continued from the prior year with $1.9 million spent in 2019. The second largest project was $1.7 million spent on the N. Sanborn Road Improvements. The third and fourth largest projects were $1.5 and $1.1 million on the Sanborn/US 101 improvements and the city-wide Slurry Seal Improvement projects, respectively.

Business-type Activities-Enterprise Funds

Enterprise Funds are the City's business-type activities (activities supported, at least in part, by fees or charges) and include the Salinas Municipal Airport, the Industrial Waste Facility, the Municipal Golf Courses (Fairways and Twin Creeks), the Storm Sewer System, the Sanitary Sewer System, the Hitchcock Road Water Utility, the Parking District, Permit Services and the Landfill Garbage Surcharge Fund (which is used to account for the proceeds of the installment sale of the Crazy Horse Landfill to the Salinas Valley Solid Waste Authority).

The Enterprise Fund's net position totaled $88.8 million at June 30, 2019.

Internal Service Funds

Internal Service Funds are used to account for the City's fleet maintenance program and risk management program which administers employee benefits and the City's insurance programs including; 1) General Insurances-employee assistance program, unemployment claims, biennial physical exams and property insurance; 2) Workers' Compensation self-insurance program; and 3) General Liability self-insurance program.

At June 30, 2019, the Internal Service Funds liabilities for estimated claims payable totaled $30.6 million, with $20.6 million representing Workers' Compensation and $10.0 million representing General Liability.

Total Workers' Compensation insurance claims liabilities are $22.9 million at June 30, 2019. A portion of the liability is reported in the Internal Service Fund ($20.6 million) and a portion is

treated as long-term debt ($2.3 million). The long-term debt portion represents future obligations of the Workers' Compensation Plan.

Fiduciary Funds

Fiduciary Funds are used to account for assets held in trust for others and cannot be used for general government purposes. The City maintains the following Fiduciary Funds: Private Purpose Trust Funds, Pension Trust Funds and Agency Funds.

Private Purpose Trust Funds include a deficit net position of $0.0 million ($24.8 thousand) held by the City, which decreased by $1.3 million from the prior year. Of the net position, a net deficit of $0.7 million is held by the City for the dissolved Redevelopment Agency, which is accounted for in the Successor Agency Trust, and a net position of $0.6 million held by the City for Community Center and Sherwood Hall activities, MRWPCA Fees, Sales Tax, Payroll Taxes, Deposits, Construction Bonds and other trust arrangements not properly reported in a pension trust.

Pension Trust Funds held by the City of $17.1 million are employee deferred compensation funds.

Agency Funds are assets held by the City for Business Improvement District, Economic Development, Salinas Valley Enterprise Zone, Employee Cafeteria Plan and Retired Employees Health Insurance Program. Agency assets held by the City total $0.1 million.

Cash Management

In accordance with the provisions of California Government Code Section 53600 et. seq., the City is restricted to certain types of legal investments. These investments are included in the City's investment policy and are approved by City Council annually. In addition, the City's investment activity is reported to the City Council monthly pursuant to the California Government Code.

The City invests all idle funds daily. The cash management system of the City is designed to monitor revenues and expenditures to ensure the investment of monies to the fullest extent possible. The criteria, in order of priority, for selecting investments are safety, liquidity, and yield.

The majority of City funds (61.9% of investment at FMV) are invested in the State's Local Agency Investment Fund (LAIF). LAIF yielded average returns of 2.42% for fiscal year ended June 30, 2019 and grew from 1.900% to 2.57% during the fiscal year.

The City's investment in certificates of deposit and investment contracts are reported at cost, which is fair value. While recorded at fair market value in the financial statements, the City's investments are redeemable at 100% of cost.

The City's investment in the State Local Agency Investment Fund at June 30, 2019 is as follows:

Balance at cost - June 30, 2019	$ 116,720,994
Unrealized gain	203,684
Balance at fair value - June 30, 2019	$ 116,924,678

Please refer to Note 4 for a complete discussion of the City's Cash and Investments.

Property Assessment

Assessed valuation of citywide taxable properties increased $620.1 million to $12,081 million representing an increase of 5.4% over FY 2018-19. Last year, the Assessed value exceeds the assessed value high of $10,912 million in FY 2017-18.

The following table summarizes the growth and declines in assessed valuation.

Fiscal year	Before Redevelopment Increment	After Redevelopment Increment	Percent Change
2019-20	$ 12,080,694,193	$ 11,149,838,970	5.41%
2018-19	11,460,172,316	10,577,591,282	5.02%
2017-18	10,912,115,449	10,071,741,861	4.70%
2016-17	10,422,521,577	9,614,776,155	4.60%
2015-16	9,963,782,622	9,195,146,472	6.49%
2014-15	9,356,177,997	8,629,207,052	8.82%
2013-14	8,597,836,189	7,904,316,402	2.72%
2012-13	8,370,116,351	7,693,329,440	0.72%
2011-12	8,310,478,479	7,628,550,860	-0.61%
2010-11	8,361,701,633	7,473,844,928	-6.75%
2009-10	8,966,761,801	7,981,760,147	-11.25%
2008-09	10,102,973,741	9,158,540,984	-5.10%
2007-08	10,645,974,648	9,750,295,032	7.25%
2006-07	9,926,023,729	9,107,918,547	12.72%
2005-06	8,806,009,783	8,305,434,488	12.90%
2004-05	7,799,653,100	7,373,407,370	10.70%
2003-04	7,045,521,979	6,643,698,145	6.90%
2002-03	6,590,542,785	6,284,551,441	10.04%

Significant Events and Accomplishments

Through the leadership of the City Council and the City Manager, the city continues to produce amazing accomplishments. The City Council is committed to five strategic goals, which guide the initiatives and activities of each City department. The following is a list of accomplishments during the year for each of the five strategic goals:

❖ **Economic Diversity and Prosperity**

Community Development Department

- Plan & Project Implementation Division
  - ✓ Continued implementation of the Economic Development Element.
    - Completed East Alisal Corridor Plan that outlines improvements to improve mobility, safety and access for all users.
    - Developed Alisal Vibrancy Plan (AVP) content and draft plan chapters with anticipated adoption by end of fiscal year.
    - Engaged over 700 community stakeholders in AVP development process.
    - Secured three VISTA volunteers to support EDE and AVP implementation by building volunteer capacity and supporting plan and project implementation.
  - ✓ Provided Small Business Support.
    - Provided 193 hours individual technical support to 30 small businesses and 78 hours of business education and training to 84 entrepreneurs through master agreement with El Pájaro Community Development Corporation.
    - Assisted 10 clients with pre loan and loan applications. Three clients received funding ($350,000, $10,000, and $10,000).
    - Sponsored El Dia Del Empresario Latino, a one-day business education workshop that connected businesses and entrepreneurs with education and resources.
  - ✓ Continued implementation of Salinas Downtown Vibrancy Plan.
    - Adopted Adaptive Reuse Ordinance to remove regulatory barriers and incentivize the conversion of underutilized commercial space to residential uses.
- Advanced Planning Division
  - ✓ Continued Vision Salinas (General Plan Update Visioning and Coordination of Major Planning Efforts):
    - Conducted 15 bilingual outreach events and 4 stakeholder meetings as well as a survey to receive public input (with 1,000+ persons engaged) to inform the General Plan Update and preparation of other major planning documents.
    - Refined the Draft Guiding Principles and presented them to the Planning Commission and City Council for acceptance.

- Maintained the Vision Salinas website and increased the number of followers (currently 1,200+ and growing) on the City's Instagram account to actively engage the public.
- Coordinated over 20 interdepartmental meetings to ensure an integrated public outreach.

✓ Continued to process the Draft West Area Specific Plan (and DEIR) with approximately 4,300 residential dwelling units, 571,000 sq. ft. of mixed-use commercial, schools, parks and open space land uses:

- Completed the public review draft of the West Area Specific Plan and the related DEIR and released the documents for the required 45-day public review period.
- Conducted two public study sessions (before the Planning Commission and the City Council) and presented the proposed project to the City Council Housing Subcommittee.
- Presented to the Libraries and Community Services Commission and the Traffic and Transportation Commission, which recommended approval to the City Council.

✓ Continued to process the Central Area Specific Plan and (DEIR) with approximately 3,800 units, 200,000 sq. ft. mixed-use commercial, schools, parks and open space.

➢ Current Planning & Permit Services Divisions

✓ Issued 1,588 permits with a valuation over $81.6 million in 2018.

✓ Offered counter service from 8:00 am – 5:00 pm, Monday – Friday serving 13,633 customers.

✓ Achieved full cost recovery for the Permit Services Division.

✓ Completed plan and permit reviews and inspections within allotted timeframe, 457 "over-the- counter" reviews, 2,510 total reviews at an average time of 5 calendar days.

✓ Conducted all inspections via electronic devices.

✓ Amended the Zoning Code to facilitate economic development and market rate housing.

✓ Facilitated the construction of Phases 5A (89 single-family houses) and 5B (71 single-family houses) of Monte Bella through seamless plan review and permitting.

✓ Completed the Salinas Travel Center annexation, EIR and Specific Plan process.

➢ Code Enforcement Division

✓ Addressed 1,611 code complaints with approximately 280 of those cases relating to life and safety and collected over $170,000 in fines.

✓ Worked with outside counsel to complete three receivership cases involving the demolition of one dilapidated duplex and the full remediation of two houses, enabling the City to obtain full cost recovery for staff time of nearly $12,000.

- ✓ Initiated work with the National Resource Network to explore the development of a rental housing registration and inspection program.
- ✓ Hired two part-time Code Enforcement Officers to expand capacity for proactive blight and after-hours on weekends and evening weekdays.
- ✓ Assisted with drafting of a blighted property ordinance to increase the Division's ability to enforce and address nuisance properties.

➢ Housing & Community Development Division

- ✓ Completed the City's Annual Action Plan, Consolidated Annual Performance and Evaluation Report (CAPER) for the City's federal HUD programs (CDBG, HOME, & ESG), and Regional Analysis of Impediments to Fair Housing Choice (AI).
- ✓ Funded 14 public services agencies (CDBG, ESG, and HCD ESG) to provide critical programming to youth, seniors, and homeless.
- ✓ Completed the Hikari (Haciendas Phase III) 50-unit housing project, construction started for the Moon Gate Plaza mixed-use development, which will include a total of 90-units in Chinatown, and completion of nine (9) inclusionary ownership units in Monte Bella Phase 5A.
- ✓ Continued to work with the County of Monterey on operational support for the temporary Warming Shelter at 111 W. Alisal St. and assisted with a HEAP grant application for the construction of a year-round Permanent Shelter at 855 E. Laurel Drive.
- ✓ Continued to work with Public Works and Library and Community Services Departments on the final phase of Sherwood Recreation Center CDBG capital improvement project.

City Attorney's Department

➢ **Love's Travel Stops**. Supported the completion and the entitlement of the project including annexation of additional land into the City and certification of the environmental impact report.

➢ **Continued Support for the Future Growth Area**. Continued working with other City department on continued review of the Specific Plans and related documents, including Environmental Impact Reports, as needed. West Area Specific Plan and associated Environmental Impact Report completed and circulated for public review. Set for consideration and approval/certification this calendar year.

Police Department

➢ Used creative staffing allocations to attempt to reduce overtime costs.

➢ Provided overtime patrols to the Old Town and Chinatown area to enforce quality of life issues, provide for an inviting entertainment district and to manage homeless related issues.

Public Works Department

- Downtown Vibrancy Plan Implementation:
  - ✓ Coordination with stake holders while preparing construction documents for the Main Street Streetscape Project.
  - ✓ Completion of Downtown Complete Streets Design and Bidding Project for construction in Fall 2019.
- Support development of Salinas Travel Center project.
- Advancing Design of the Boronda Road Congestion Relief Project (future growth area).
- Technical Support for the Economic Development Element and West Area Specific Plan approval process.
- Provide engineering and street maintenance support for various City special events
- Complete Design and Construction for Freight Building remodel at Train Station to lease to Welcome Center.
- Complete Design for Sanitary and Storm line installation for Lincoln Ave Extension into the Train Station (ITS).
- Complete Vibrancy plan and conceptual Design for the Williams Road Improvements.
- Continuing work to develop sustainable parking enterprises which help support the city's economic sectors.

Assessments and Maintenance Districts

- Met with various district groups throughout the year to address common concerns.
- Responded to citizen inquires and attended property owner meetings.
- Kept expenses within budget and below the anticipated revenues to insure adequate reserves.

Library and Community Services

- Provided community service opportunities for youth and adults to strengthen skill development and workforce readiness. Residents performed nearly 31,000 volunteer service hours.
- Provided adult learner instruction to 499 students (including computer literacy, basic literacy or high school equivalency). More than 130 adults passed part or all of their GED because of the Library.
- The Youth Leadership Academy launched its 6th year in March 2019. The job readiness and life skills preparedness program is serving 22 high school aged students and will result in 22 internship placements for the Summer of 2019.
- More than 700 children recorded reading for 15 days or more over the summer and attendance for the Summer Reading preprogram was 3,400. The goal was to encourage reading and reduce and/or reverse the summer slide (a well-documented phenomenon that affects many students during the summer months and reduces grade level readiness).

- Celebrated second year anniversary of successful partnership and teen programming with the Digital NEST. Digital Nest programming supports classes at the John Steinbeck and Cesar Chavez Libraries.
- The Library connected over 3,000 kindergarteners to library books with its Kindermobile (dedicated Bookmobile for kindergartners), reaching nearly every public-school kindergartner once a month for the entire school year.

Enterprise Operations

- Provided economic role and benefit of the airport for the Salinas Economic Development Element.
- Provide parking services in support of the Downtown Vibrancy Plan.
- Provide parking support for other commercial areas in Salinas.
- Develop parking strategies in support of encouraging housing development in downtown.

❖ **Safe, Livable Community**

Police Department

- Established effective communications strategy with the homeless in Chinatown.
- Created the Homeless Outreach Team and assigned a full-time officer to the team.
- Continued to refine shooting review process to more effectively use limited resources and involve other allied agencies.
- Supported City yard personnel in ongoing cleanups of homeless encampments.
- Collaborated with Federal Law Enforcement partners targeting violent criminals and fugitives in Salinas and surrounding areas.

Fire Department

- Grants

  SAFER - The City received a SAFER Grant with a total value of $2,269,314. This will fund six firefighter positions for three years starting February 2018. Personnel savings to the city after matching funds are contributed is $1,399,409. The six firefighters funded by the grant are currently in the recruit training academy and are expected to graduate and be on the line July 2019.

  Assistance to Firefighters Grant (AFG) - The fire department was awarded this Assistance to Firefighters grant in the amount of $500,000. It is a regional grant with the Monterey Fire Department and provides funding to send 3 firefighters from the Salinas Fire Department through paramedic training. The grant provides funding for all tuition and personnel backfill costs.

  Western Fire Chiefs Association Data Lab Grant – The fire department was selected to receive this grant to implement a real-time data analytics platform to be used to

constantly evaluate the effectiveness and efficient deployment of resources. This will allow for planning and decision making based upon up-to-the-minute response data. The grant provides $27,500 for the costs associated with the implementation of the platform.

- **Firefighter Academies** - The Fire Department recruit fire academy started in March 2019 with 8 recruits, three of which are paramedics. These new recruits will graduate and receive their station assignments effective July 16, 2019. The fire department is actively recruiting additional firefighters and paramedics with a focus on a more diversified hiring model. We are entering the 2019-2020 FY with several firefighter openings that we are working to fill as rapidly as possible. We are also seeking collaborative training opportunities with other agencies to reduce fiscal impacts as highlighted in the Salinas Plan.
- **Haz/Mat Response Program** - the Salinas Fire Department HazMat Team has been certified as a Type I hazardous materials team by the State of California. This enables the team to respond and mitigate both accidental and intentional releases of hazardous materials. The team is available as a statewide asset if needed for these types of emergencies. The Fire Department also completed an agreement with San Benito County to be their contracted HazMat Response Team. Establishing this agreement positions us as a regional asset to open more grant opportunities for sustaining this critical program. We continue in our agreement with Monterey County for HazMat Response. This agreement brings in approximately $150,000 annually to fund the personnel costs associated with the team.

- **Promotional Exams** –The Fire Department promoted the following personnel in the 18/19 Budget: (2) fire captains, and two (2) fire engineers. FY 19/20 will see additional promotional processes for the positions of Deputy Fire Chief, Battalion Chief, Captain, and Engineer.
- **Apparatus Purchases** –The replacement engine for Fire Station 4 on Williams Rd. was placed into service as well as (3) utility pickup trucks have well exceeded their useful life and reliability for the department's mission.
- **Fire Prevention Division** – This Division was able to roll-out an updated fee ordinance and automated billing and collection program to help improve compliance with over 600 annual false alarm responses, and greatly improve the consistency in false alarm cost recovery. In addition, the Division has actively participated in joint inspection efforts by the Office of the City Attorney and Code Enforcement to reduce hazards posed by abandoned structures throughout the City.

The Fire Prevention Division was able staff all vacant full-time positions as well as 2 of 3 part-time inspector aide positions and purchase three additional vehicles. The Prevention Division managed to complete over 2000 inspections and over 600 plan reviews and has established a business inspection program with new part-time staff positions classified as Fire Prevention Aides.

City Attorney's Department

- **Continue support of development of new Public Safety Headquarters and El Gabilan Library**. Supported primarily the Public Works and Library and Community Services Departments on agreements and related documents to begin construction of these two projects.
- **Continued expansion of Code Enforcement Litigation**. Continued support of Code Enforcement staff and assistance with outside counsel on commencement and resolution of Receivership litigation and other code enforcement efforts.
- **Ordinance Adoption**. Completed blighted properties ordinance and unruly gathering ordinances for Council adoption. Presented a revised noise ordinance for Council adoption. Ordinance regulating parking of over-sized vehicles presented to City Council and adopted by City Council.

Library and Community Services

- Implemented a weekly Saturday Night Teen Program at five locations logging over 2,016 visits and 661 unduplicated participants in order to reduce violence and provide positive alternatives for youth.
- Over 275,000 residents visited recreation centers and 3,600 youth ages 5-18 participated in various sports programs.
- Conducted 7 community clean ups and issued 98 special event permits.
- The Library's Youth Services division continues to expand programming to offer programs seven days a week.
- Implemented the Youth and Government Institute with 28 High School youth participants.
- Implemented the second year of the Building Strong Neighborhood Meeting Series connecting residents to services provided by the Salinas Police Department, Community Development and Code Enforcement and Public Works.
- Earned a $500,000 California Violence Intervention and Prevention (CAL VIP) Grant from the Board of State and Community Corrections.
- The first annual Salinas See Our Youth (SOY) Summit celebrating youth leadership across the city drew over 100 high school aged students. The Summit was youth designed and led.
- Continued implementation of the Street Outreach Intervention program providing mentorship and safe opportunities to over 50 gang impacted youth most at risk of becoming a victim or a perpetrator of violence.

Public Works Department

- Continuing work with Monterey County Health Department to develop Traffic Safety education programs.
- Continued homeless encampment cleanups, and responded to health concerns related to the spread of Hepatitis A.
- Initiated a re-forestation program following the storms of 2017.

- Completed 95%Design of East Laurel Drive Pedestrian Improvements.
- Complete design and begin construction of Old Muni Pool phase 3.
- Complete 95% design on the Bardin Road SRTS Improvements.
- Completed the E Laurel Drive/Saint Edwards Traffic Signal.
- Completed design of the Alvin Drive Safe Routes to School Project for construction in Fall 2019.
- Completed the North Sanborn Road Safety Improvement Project (Fall 2018).
- Completed the East Market Street Safe Routes to School Project.
- Working on design of 5 new traffic signals and a mini roundabout for construction in 2019.
- Constructed 2 of the 4 Priority Traffic Calming Projects and currently working with the communities on remaining two locations.

Assessments and Maintenance Districts

- Removed graffiti within 24-hours; removed homeless encampments monthly.
- Removed overgrowth from creek beds reducing impacts from potential flooding and wildfires.
- Responded to concerns related to traffic and security as soon as possible.

Enterprise Operations

- Hosted 2018 California International Airshow.
- Opened new Airport Restaurant – the Flying Artichoke.
- Provide Parking enforcement support for Code enforcement activities.
- Provide Parking enforcement support for traffic safety at school locations.

❖ **Effective, Sustainable Government**

Administration Department

- Continued dialogue with City leaders, site selectors and major business corporations in preparation and planning for the 4th annual Forbes AgTech Summit sponsored by the City.
- Continued Council and community engagement regarding City services, fiscal management, and implementation of the strategic plan goals and objectives for FY 2017-19.
- Continue to work with local service providers and County officials to mitigate homeless encampments, construction of a permanent shelter, and solidify housing and commercial development in the Chinatown area.
- Continued oversight of the Economic Development Element Plan and the integration of the Housing element, Downtown Vibrancy, Chinatown Vibrancy, and the Alisal Vibrancy to the General Plan.

- Continues to lead the efforts between the City and County animal shelter consolidated services.
- Participating in multijurisdictional efforts toward the development of clean energy electricity generation.
- Managed and implemented SalinasConnect (QAlert) service request management system city-wide.
- Ongoing management of the City Council, Measure E, and Measure G agenda process.
- Continue to inventory and destroyed City records pursuant to the Records Retention Policy; and is in the process of updating the City's record retention schedule and policy.
- Continues to process Republic Services low-income senior discounts.
- Human Resources Division successfully submitted the 2018 Affordable Care Act reporting to the Internal Revenue Services.
- Human Resources conducted over 60 recruitments to include one executive level recruitment, processed over 1,672 applications and processed approximately 34 new regular hires and 50 new temporary hires.
- Human Resources partnered with Community Hospital of the Monterey Peninsula and coordinated biometric health studies for eligible employees as part of a growing Health and Wellness Program.
- Human Resources coordinated the Employee Health & Wellness Fair attended by more than 40 vendors.
- Human Resources processed over 80 health enrollments and/or changes and respective COBRA notifications.
- Human Resources transitioned approximately 85 IAFF members to CalPERS medical pursuant to the current Memorandum of Understanding Agreement.
- Human Resources initiated the implementation of the NEOGOV applicant tracking system.

City Attorney's Department

- **Employee Relations**. Continued working with other City departments to resolve labor relations matters. Assisted with labor negotiations. Defended PERB unfair practice charges and any litigation. Responded to request for information. Directed investigations and advised re grievances and meet/confer matters.
- **Personnel Policies**. Ensured legal compliance with employment laws to prevent liability: continue work on personnel policy updates; assisted with review and revision of department policies; continued to advise on employment situations; investigated employee complaints.
- **Municipal Code Update**. Continued work on a comprehensive review and update of the Municipal Code to eliminate outdated or unnecessary provisions to improve the efficiency of the City's internal operations.

- **Insurance Joint Powers Agency**. Reviewed and improved the City's insurance coverages through the ACCEL joint powers authority; improved the City's insurance coverages with better policies.
- **Workers Compensation**. Continued management of the City's Workers Compensation program with resolution of cases through compromise and release in order to bring down the City's long-term liability.

Finance Department

- Strategically and collaboratively worked with departments and City Manager to balance the FY 2019-20 budget.
- Successfully transitioned succession planning for three levels of staffing including Assistant Finance Director, or retired, Accounting Manager, and Senior Accountant.
- Lead RFP, selection and managed Parks Impact Fee Study.
- Coordinated equipment lease financing for approximately $900,000 in urban forestry equipment and $2.5 million in Police and Fire Motorola radios.
- Coordinated Monte Bella CFD Financing.
- Coordinated upgrade of TRAKiT to version 9, begin conversion of Business Licenses into TRAKiT and coordinated implementation of GIS module of TRAKiT.
- Improved written procedures of the Revenue Division.
- Streamlined Grant management procedures.
- Implemented new CIP budgeting system.
- Conducted and completed TOT audits of all motels and hotels.
- Achieved cost reductions by consolidating actuarial services and issuing RFP.
- Lead economic incentive agreement negotiations with the Salinas Travel Center.
- Supported SPOA .and PMA labor negotiations with financial costing and fiscal updates
- Participated in finalizing and implementing the Salinas Plan including 10-year forecast model.
- Ongoing replacement of aging equipment in the Data Center and around the City.
- Working on upcoming fiber deployment to connect City Hall and the PD, along with bringing to the City additional lower-cost options for connecting City Hall to the internet. This is the first phase of the project.
- Continuing the success of using no full-time contractors for IT support and developing in-house employees to be better cross-trained for future growth.
- Adding additional Wi-Fi City-wide where needed and upgrading the existing AT&T leased fiber to a newer circuit so more City facilities will connect to the network and the internet.
- Coordinated CRISI and BUILD grant applications for the freight rail terminal project.

- Closed on the $33 million Measure X bond issue financing and coordinated deployment of proceeds on road projects with Public Works and prepared MOE and annual report.
- Continue to manage, facilitate and support the Measure E and G Committee and the Finance Committee.
- Completed the annual financial statements and audit with a clean audit opinion.

Police Department

- Re-organized the department to include:
  - ✓ Organization of all civilian staff under a civilian administrator (Police Services Administrator).
  - ✓ Re-organized the investigation bureau by reassigning cases based on areas of expertise.
- Institutionalized Body Worn Cameras in patrol personnel to enhance the Department's transparency and trust within the community.
- Continued the implementation of the Collaborative Reform Program with the Department of Justice.
- Continued to implement the community policing concept to increase communication with the community.

Public Works Department

- Developing Sustainable Citywide Parking Management Program.
  - ✓ Created Parking Enterprises to better manage parking programs.
  - ✓ Demonstrated successful implementation of Parking Enforcement Enterprise; improving services while continuing to cover costs at the same time supporting the City's economic and safety objectives.
  - ✓ Adjusted rates in the Downtown Parking District for the first time in a decade to reduce dependence of the enterprise on the City General Fund.
- Utilized Geographic Information Systems (GIS) for spatial analysis. Spatial analysis lets staff evaluate suitability and capability, estimate, predict, interpret and understand data. This capability is delivered to all City Departments to provide new perspectives to data driven decision-making.
- Implemented innovative and emerging technology solutions to increase efficiency and effectiveness of City services.
- Coordination of EV stations transformer for the ITC center.
- Embarked upon the development of a Community-Based Public/Private Partnership (P3) process to potentially fund green infrastructure projects throughout the City.
- Developing Proposition 26 fees to fund the costs of NPDES inspection and plan review activities.
- Continuing Implementation of the City Traffic Fee Ordinance.

Assessments and Maintenance Districts

- Managed district budgets with positive fund balances at year-end and built reserves.
- Implemented water conservation techniques in compliance with State water reduction mandates.

Library and Community Services

- Successful merge of the Community Safety Division into the Library and Community Services Department from the Administration Department with the goal of streamlining youth services and delivering more cost-effective services.
- Continued to explore methods where Library and Recreation services can collaborate to provide increased programming opportunities.
- Introduced self check-out and e-commerce at library branches.
- The Library introduced Brainfuse, an online tutoring service that provides students with homework help. This service was rolled out with the Student Success Initiative, a new Library pilot program aimed at providing a higher level of support to public schools. The service provides a seamless connection to the Library's digital resources and reaches over 3,000 students.
- Implemented web-based recreation software to allow residents to register for youth sports programs on-line and allow for credit card payments.

Enterprise Operations

- Continued support of the Airport Commission.
- Updated Airport Rates and Fees Schedule.
- Continued development of sustainable City Parking programs.
- Creation of the Parking Enterprise.
- Successful development of sustainable Parking enforcement program that provide city services and covers cost.
- Adjusted rates of Downtown Parking enterprise for next 2 fiscal years with the goal for enterprise to self-sustaining.

❖ **Excellent Infrastructure**

City Attorney's Department

- **Continued Support of Police Headquarters and El Gabilan Library Projects**. Supported primarily the Public Works and Library and Community Services Departments on agreements and related documents to begin construction of these two projects.

Library and Community Services

- Completed Phase II and initiated Phase III of the Old Muni Pool Retrofit Project which will allow for additional venues for recreation and meeting space.

- Demolished the El Gabilan Library and celebrated the ground breaking for the new El Gabilan Library.
- Raised nearly $400,000 from private donors and foundations in order to support new construction enhancements to the new El Gabilan Library.
- Opened the Library Connection @ Northridge Mall. This satellite location provides awareness of library services and enlists new library members. On average, the Library Connection signs up over 450 new card holders every month and circulates over 2,400 items per month.
- Continued work on a Master Plan for parks, recreation and library facilities with the intention of bringing the plan to the City Council for adoption in the spring of 2019.
- Completed the Sherwood Tennis Center tennis court refurbishment project.
- Initiated a Public Art Master Planning process.

Public Works Department

- Completed the Pavement Management System analysis.
- Bonded Measure X funds for street improvements.
- Completed construction on the St Edwards Traffic Signal.
- Designing Boronda Road Improvements which provides increase capacity to four lanes and 5 new roundabouts at key intersections.
- Begin construction of 2018 Slurry Seal project City Wide.
- Complete 80% design of San Juan Grade Road rehabilitation.
- Complete 90% design of Monte Bella Detention Basin Desiltation and Repair.
- Complete 80% design of High Priority Sanitary Sewer and manhole repairs.
- Complete the On-Call Job Order Contract for Sidewalk improvements.
- Complete Weatherproofing Women's Club Building.
- Continuing Development of City's Active Transportation Plan.
- Completed East Alisal Corridor Plan.
- Secured grant funding to stretch transportation dollars.

Assessments and Maintenance Districts

- Implemented traffic calming for Monte Bella.
- Painted curbs and replaced signs as needed.

Enterprise Operations

- Completed Airport Layout Plan and Narrative Report.
- Completed preventative maintenance inspection on all City owned Aircraft Hangars.
- Completed Airport Pavement Maintenance and Management Program.

❖ Quality of Life

Police Department

- Established the Special Operations Unit and utilized volunteers to increase Neighborhood Watch presentations.
- Worked with community stakeholders to balance the property owner's rights with the needs of the homeless community.
- Created the Salinas Violence Suppression Task Force in cooperation with federal agencies to reduce the violent crimes afflicting Salinas.

City Attorney's Department

- **Arts Ordinance/Public Art Program.** Presented for adoption by the City Council an ordinance implementing a public arts program and associated policies and procedures.

Public Works Department

- Completed the pre-development work for both the Salinas Public Safety Services Headquarters and new El Gabilan Library.
- Traffic Calming Improvements at Curtis Street, Riker Street and Ambrose Drive neighborhoods. Currently constructing traffic calming projects at Chaparral Street and working on Traffic Calming Plan for Cherokee Street neighborhood.
- Repair the Tennis courts at Sherwood Park.
- Plant trees at Beacon Hill and Constitution.

Library and Community Services

- Provided over 11,182 meals to youth and seniors at seven locations through the Summer Lunch/Snack Program and Firehouse Senior Program.
- Continued the Library's Paletero Program where Library staff walk high need areas in Salinas with an ice cream cart, but instead of ice cream, the library delivers a mobile Wi-Fi station, books and services.
- The department played a key leadership and planning role in the decentralization of National Night Out Salinas 2018 resulting in over community led 15 block parties simultaneously all over the city celebrating community and police partnerships.
- Expanded Library Adult Programming to include more health and wellness and workforce development programs.
- The library introduced Kanopy, an online library of top rated movies and documentaries.
- Expanded programming at the Firehouse Recreation Center to include recreational fee-based programming.

Labor Relations

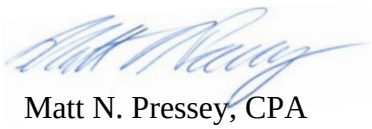
All employee groups have approved Memorandum of Understandings (MOUs) with the City. SPOA's MOU became effective September 23, 2019 after going through the imposition process. Negotiations will start again during the next year. Police Manager's Association (PMA)'s MOU expires December 31, 2021. Fire Supervisors Association (FSA) and the International Association of Firefighters (IAFF) MOU's expire December 31, 2019. All of the non-safety groups have contracts that expire December 31, 2019 or shortly thereafter.

Acknowledgements

The preparation of this Annual Financial Report could not have been accomplished without the professional, efficient, and dedicated service of the staff of the Finance Department. In particular, I would like to acknowledge and give a very special thanks to Assistant Finance Director, Elizabeth Mariano and Accounting Manager, Mary Lagasca, who both are dedicated to the sound fiscal management of the City. I also would like to express my appreciation to our professional senior accountants: Alma Gonzales-Delgado, Juan Hernandez, and Abe Pedroza. The entire Finance staff deserves a special word of thanks for another year of hard work and quality performance. We also wish to thank our auditors, McGilloway, Ray, Brown & Kaufman, Accountants & Consultants, for their diligence, cooperation and assistance.

Sincere appreciation is also expressed to the City Manager and members of the City Council for their support in planning and conducting the financial operations of the City in a responsible, sustainable and progressive manner.

Respectfully submitted,



Matt N. Pressey, CPA
Finance Director

INDEPENDENT AUDITOR'S REPORT

To the Honorable Mayor and
Members of the City Council
City of Salinas
Salinas, California

Report on the Financial Statements

We have audited the accompanying financial statements of the governmental activities, the business-type activities, each major fund, and the aggregate remaining fund information of City of Salinas, California (the City), as of and for the year ended June 30, 2019, and the related notes to the financial statements, which collectively comprise the City's basic financial statements as listed in the table of contents.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America; this includes the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express opinions on these financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America and the standards applicable to financial audits contained in *Government Auditing Standards*, issued by the Comptroller General of the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions.

Opinions

In our opinion, the financial statements referred to above present fairly, in all material respects, the respective financial position of the governmental activities, the business-type activities, each major fund, and the aggregate remaining fund information of the City, as of June 30, 2019, and the respective changes in financial position and, where applicable, cash flows thereof for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Emphasis of Matter

Implementation of New Accounting Standard

The City adopted GASB Statement No. 84, *Fiduciary Activities*, during the year ended June 30, 2019. GASB Statement No.84 improves guidance regarding the identification of fiduciary activities for accounting and financial reporting purposes and how those activities should be reported. The adoption of this statement increased net position in the government-wide financial statements and in fiduciary net position as of July 1, 2018 as disclosed in Note 21. Our opinion is not modified with respect to this matter.

Correction of an Error

As further discussed in Note 21 to the accompanying financial statements, the prior period net position/fund balance for the governmental activities and business-type activities was restated. Our opinion is not modified with respect to this matter.

Other Matters

Required Supplementary Information

Accounting principles generally accepted in the United States of America require that the management's discussion and analysis, budgetary comparison schedules, claims development for internal services funds, employee retirement pension benefits information, and other postemployment benefits information (collectively, the required supplementary information), as listed in the table of contents be presented to supplement the basic financial statements. Such information, although not a part of the basic financial statements, is required by the Governmental Accounting Standards Board, who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the required supplementary information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

Other Information

Our audit was conducted for the purpose of forming opinions on the financial statements that collectively comprise the City's basic financial statements. The introductory section, combining and individual nonmajor fund financial statements and the General, Measure E & Measure G Funds combining statements, as listed in the table of content, are presented for purposes of additional analysis and are not a required part of the basic financial statements.

The combining and individual nonmajor funds and the General, Measure E & Measure G Funds combing statements are the responsibility of management and was derived from and relate directly to the underlying accounting and other records used to prepare the basic financial statements. Such information has been subjected to the auditing procedures applied in the audit of the basic financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the basic financial statements or to the basic financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the combining and individual nonmajor fund and the General, Measure E & Measure G Funds combining statements financial statements are fairly stated, in all material respects, in relation to the basic financial statements as a whole.

The introductory section has not been subjected to the auditing procedures applied in the audit of the basic financial statements and, accordingly, we do not express an opinion or provide any assurance on them.

Other Reporting Required by Government Auditing Standards

In accordance with *Government Auditing Standards*, we have also issued our report dated December 12, 2019, on our consideration of the City's internal control over financial reporting and on our tests of its compliance with certain provisions of laws, regulations, contracts, and grant agreements and other matters. The purpose of that report is to describe the scope of our testing of internal control over financial reporting and compliance and the results of that testing, and not to provide an opinion on internal control over financial reporting or on compliance. That report is an integral part of an audit performed in accordance with *Government Auditing Standards* in considering City of Salinas, California's internal control over financial reporting and compliance.

McGilloway, Ray, Brown & Kaufman
Salinas, California

SALINAS

RICH IN LAND | RICH IN VALUES

This page is intentionally left blank.

This analysis of the City of Salinas (City) financial performance provides an overview of the City's financial activities for the fiscal year ended June 30, 2019. Please read it in conjunction with the accompanying transmittal letter, the basic financial statements and the accompanying notes to the financial statements.

A. FINANCIAL HIGHLIGHTS

- At June 30, 2019, the City's net position (excess of assets over liabilities) was $187.6 million. Of this amount, $300.5 million are invested in capital assets and restricted assets, which is offset by a deficit of $112.9 million classified as unrestricted assets.
- During the fiscal year ended June 30, 2019, the City's total net position increased by $17.7 million excluding a prior period adjustment of $4.8 million. This change primarily results from improved investment earnings, sales tax, Measure G transactions and use tax, and property tax.
- During the fiscal year fund balances increased $59.4 million to $138.1 million for governmental funds, of which $128.6 million is either nonspendable, restricted, committed, or assigned and thus unavailable.
- During the fiscal year the General Fund, Measure E, and Measure G fund balance increased $33.9 million to $52.3 million of which $41.9 million is either nonspendable, restricted, committed, or assigned. Unassigned General Fund, Measure E & Measure G fund balance was $10.3 million, which mainly represents the City's operating reserves of $9.6 million.
- The City's total liabilities increased by $41.9 million during the current fiscal year. Governmental Activities increased by $42.2 million and Business-type Activities decreased $0.3 million. The long-term debt increased $35.9 million as a result of increases in Certificates of Participation of $37.5 million for Total Road Improvement Program (TRIP) 2018B, $2.7 million for Community Financing District Monte Bella, $4.4 million in unamortized bond premiums for the two previously mentioned items, a Capital Lease of $3.5 million for Public Safety Radios and Public Works equipment, coupled with a decrease in Net Pension Liability of $7.0 million, and a decrease of $5.2 million from regularly scheduled debt service repayments in both Governmental and Business-type Activities.
- The City's capital assets, net of depreciation, increased $8.1 million to $399.5 million.

B. OVERVIEW OF FINANCIAL STATEMENTS

This discussion and analysis is intended to serve as an introduction to the City's basic financial statements, which are comprised of three components: 1) Government-Wide Financial Statements, 2) Fund Financial Statements and 3) Notes to the Basic Financial Statements.

The basic financial statements include the City (primary government) and all legally separate entities (component units) for which the government is financially accountable.

This report also contains other supplementary information in addition to the basic financial statements for further information and analysis.

Government-Wide Financial Statements

The Government-Wide Financial Statements present the financial picture of the City and provide readers with a broad view of the City's finances. These statements present governmental activities and business-type activities separately and include all assets of the City (including infrastructure) as well as all liabilities (including long-term debt). Additionally, certain interfund receivables, payables and other interfund activity have been eliminated as prescribed by GASB Statement No. 34.

The *Statement of Net Position* and the *Statement of Activities and Changes in Net Position* report information about the City as a whole and about its activities. These statements include all assets and liabilities of the City using the accrual basis of accounting, which is similar to the accounting used by most private-sector companies. All of the current year's revenues and expenses are taken into account, regardless of when cash is received or paid.

The *Statement of Net Position* presents information on all of the City's assets and liabilities, with the difference between the two reported as net position. Over time, changes in net position may serve as a useful indicator of whether the financial position of the City is improving or deteriorating.

The *Statement of Activities and Changes in Net Position* presents information showing how the City's net position changed during the year. All changes in net position are reported as soon as the underlying event giving rise to the change occurs, regardless of timing of related cash flows.

In the Statement of Net Position and the Statement of Activities and Changes in Net Position, we separate the City activities as follows:

> *Governmental Activities*—All of the City's basic services are reported in this category, including general government, public safety, community development, public works, recreation, and library. Property taxes, sales taxes, user fees, interest income, franchise fees, state grants and federal grants finance these activities. The City's insurance programs (health, worker's compensation, liability and property damage) are accounted for in internal service funds, but are reported as part of governmental activities since these programs are used primarily for governmental activities.
>
> *Business-Type Activities*—The City charges a fee to customers to cover all or most of the costs of certain services it provides. The City's Industrial Wastewater System, Airport, Golf Courses, Sanitary Sewer, Hitchcock Water Utility, Storm Sewer, Permit Service, Landfill and Parking District activities are reported as business-type activities.

Fund Financial Statements

The Fund Financial Statements provide detailed information about the City's major funds — not the City as a whole. Some funds are required to be established by State law and by bond covenants. However, management establishes many other funds to help it control and manage money for particular purposes or to show that it is meeting legal responsibilities for using certain taxes, grants and other money.

The Fund Financial Statements include statements for each of the three categories of activities – governmental, proprietary and fiduciary. The governmental funds are prepared using the current financial resources measurement focus and modified accrual basis of accounting. The proprietary funds are prepared using the economic resources measurement focus and the accrual basis of accounting. The fiduciary funds are agency funds, pension trust fund and private purpose trust funds, which only report assets and liabilities and do not have a measurement focus.

Governmental Funds - The Governmental Funds are used to account for essentially the same functions reported as governmental activities in the Government-Wide Financial Statements. However, unlike the Government-Wide Financial Statements, Governmental Funds Financial Statements focus on current financial resources, which emphasize near-term inflows and outflows of expendable resources as well as balances of expendable resources at the end of the fiscal year. This information is essential in evaluating the City's near-term financial requirements.

In order to better understand the City's long-term and short-term requirements, it is useful to compare the City's Governmental Funds Statements with the governmental activities in the Government-Wide Financial Statements. A reconciliation is provided for the Governmental Fund Balance Sheet and the Statement of Revenues, Expenditures and Changes in Fund Balances to facilitate this comparison. The major governmental funds include the General, Measure E and Measure G Funds, Development Fees Special Revenue Fund, and the Special Construction Assistance Special Revenue Fund, which are reported in detail in the Governmental Fund Financial Statements. All other funds are shown in the aggregate as other non-major governmental funds.

Individual fund data for other non-major governmental funds is provided in the form of supplementary information elsewhere in the report.

Proprietary Funds - The City maintains two types of proprietary funds, enterprise funds and internal service funds. Enterprise funds are used to report the same functions presented as business-type activities in the Government-Wide Financial Statements. The City uses enterprise funds to account for its Airport, Industrial Wastewater System, Golf Courses, Sanitary Sewer, Parking, Hitchcock Water Well Utility, Storm Sewer, Permit Services and Landfill activities. Internal service funds are an accounting device used to accumulate and allocate costs internally among the City's various functions. The City uses internal service funds to account for its general city insurance operations. Because these services predominantly benefit the governmental rather than business-type activities, they have been included within governmental activities in the Government-Wide Financial Statements.

Proprietary funds provide the same type of information as the Government-Wide Financial Statements, only in more detail. All enterprise funds are presented in detail as major enterprise funds. The internal service funds are combined into a single aggregated presentation in the proprietary fund financial statements. Individual fund data for the internal service funds is provided in the form of supplementary information elsewhere in the report.

Fiduciary Funds - The City is the trustee, or fiduciary, for certain funds held on behalf of external parties. The City's fiduciary activities are reported in separate Statements of Fiduciary Net Position. These activities are excluded from the City's other financial statements because the resources of these funds are not available to support the City's own programs. The City is responsible for ensuring that these funds are used for their intended purpose.

Notes to the Basic Financial Statements

The notes provide additional information that is essential to a full understanding of the data provided in the Government-Wide and Fund Financial Statements.

Required Supplementary Information

In addition to the basic financial statements, this report also presents certain Required Supplementary Information including the City's budgetary comparison schedules for the General, Measure E and Measure G Funds and the Development Fees major special revenue fund, and information concerning the progress in funding its obligation to provide pension benefits to its employees.

Other Supplementary Information

Combining statements for the other non-major governmental funds, Internal Service Funds, Fiduciary Funds and General, Measure E and Measure G Funds are presented immediately following the Required Supplementary Information as supplementary information.

C. GOVERNMENT-WIDE FINANCIAL ANALYSIS

The Management Discussion and Analysis (MD&A) includes comparative data for analysis.

Statement of Net Position

Net position is a good indicator of the City's financial position. During this fiscal year, the net position of the City increased $22.5 million (13.6%) over the prior year from $165.1 to $187.6 million.

At June 30, 2019, the largest portion of net position (112%) consists of the City's investment in capital assets net of related debt. This component portrays the total amount of funds required to acquire those assets less any related outstanding debt used for such acquisition. The City uses these capital assets to provide services to residents. The capital assets of the City are not sources of income for repayment of debt as most assets are not revenue generating and generally are not liquidated to repay debt. Debt service payments are funded from other resources available to the City.

The following is the Condensed Statement of Net Position for the fiscal years ended June 30, 2019 and 2018:

City of Salinas

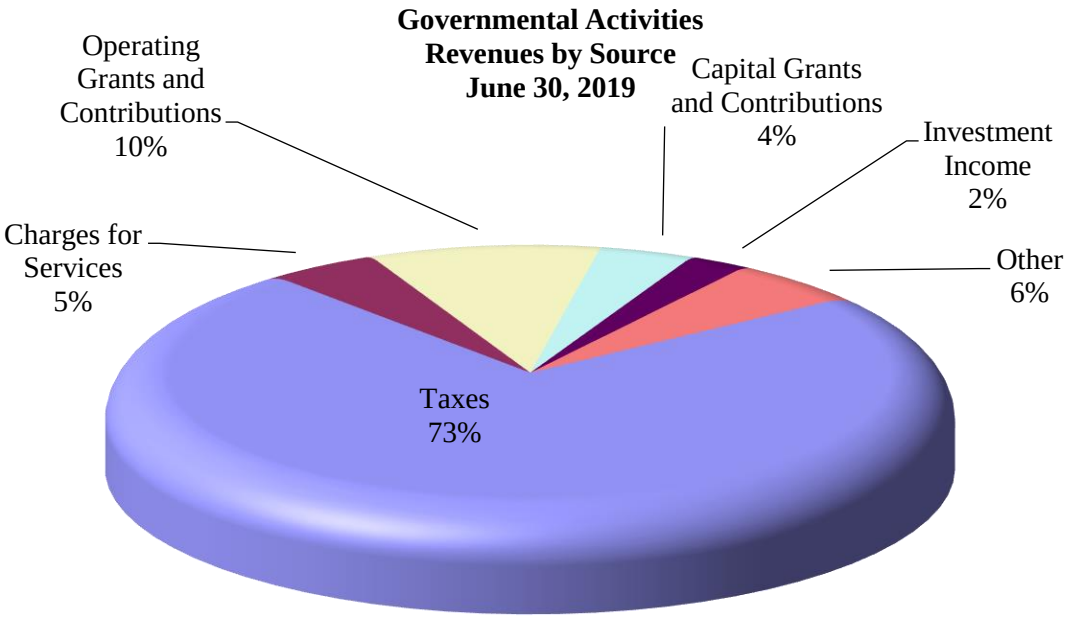
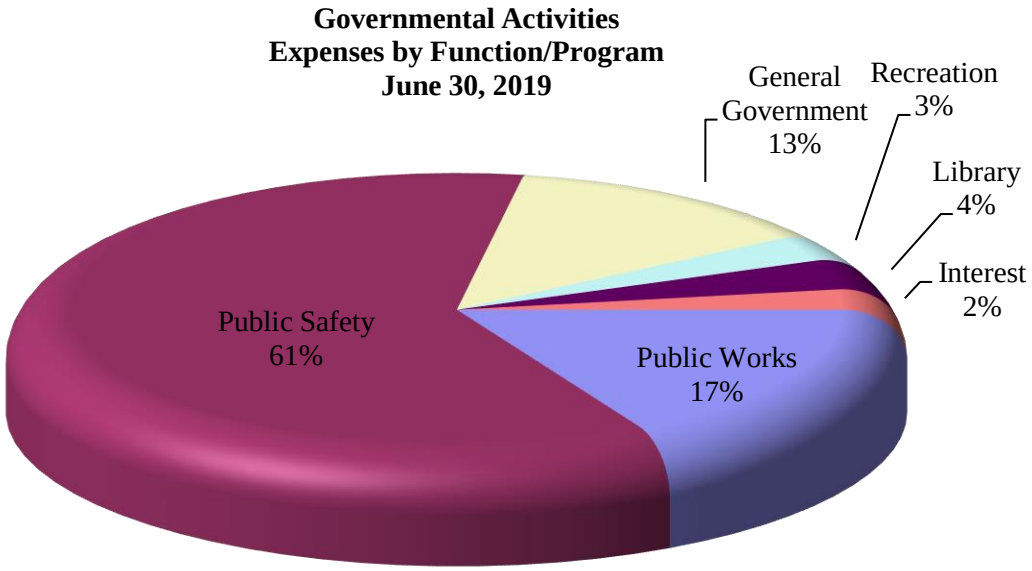
Total revenues increased from the prior year by $16.2 million, or 9.3% and total expenditures increased by $4.1 million from prior year, or 2.4%. Further analysis is provided within the governmental and business-type activities sections.

Governmental Activities

Governmental activities resources total $175.4 million. The City's governmental activities increased net position by $19.3 million. The following charts highlight the sources of revenues and purpose of expenses:



Total expenses for governmental activities, excluding transfers and contributions, were $152.4 million including interest on long-term debt of $3.7 million. Total expenditures that were funded by tax revenues, investment income and other general revenues were $119.4 million.



Functional expenses for the year ended June 30, 2019 were as follows:

	Total Cost of Services	Percent	Net Cost of Services	Percentage
General government	$ 20,198,949	13.3 %	$ (3,892,145)	(3.3)%
Public safety	92,185,514	60.5 %	87,605,823	73.4 %
Public works	26,171,785	17.2 %	22,913,234	19.2 %
Recreation	4,623,328	3.0 %	4,131,531	3.5 %
Library	5,453,771	3.6 %	4,926,139	4.1 %
Interest	3,746,197	2.5 %	3,746,198	3.1 %
Total	$ 152,379,544	100 %	$ 119,430,780	100 %

Public safety continues to be the single highest expense for the City followed by public works. Net cost of services, after subtracting fees and grant revenues total $119.4 million.

Business-Type Activities

The City's business-type activities net position was $88.8 million, a decrease of $1.6 million from the prior fiscal year. Total revenues for business-type activities were $14.6 million. The largest program revenues were charges for services of $13.2 million. Other program revenues included operating/capital grants and contributions of $1.0 million. Total expenses for the business-type activities were $19.9 million during FY 2018-19.

Business -Type Activities
Revenues, Expenses (in millions)

Expenses	$2.39	$2.40	$0.60	$4.45	$5.72	$0.39	$0.02	$2.64

D. FUND FINANCIAL STATEMENT ANALYSIS

The City uses fund accounting to ensure and demonstrate compliance with finance-related legal requirements.

Governmental Funds

The focus of the City's governmental funds is to provide information on short-term inflows, outflows and balances of spendable resources. Such information is useful in assessing the City's financing requirements. In particular, unassigned fund balance may serve as a useful measure of a government's net resources available for spending at the end of the fiscal year.

As of the end of the current fiscal year, the City's governmental funds reported combined ending fund balances of $138.1 million. Of the total fund balance, $8.9 million was nonspendable and indicates the resources are nonspendable inventory, loans, notes, land and property held for resale and are not anticipated to be liquidated in the near-term. Of the total fund balance, $85.0 million was restricted fund balance and indicates the use of resources is constrained by external parties, resource providers, constitutions or enabling legislations. Fund balance of $15.4 million was restricted for future development, $6.4 million for maintenance districts, $11.3 million for street repairs and improvements, $4.8 million for debt service, $2.5 million for grants, $1.1 million for housing, $40.0 for capital projects, and $2.1 million for public safety purposes. The remainder of the restrictions in the amount of $0.9 million is restricted for various purposes as listed in the Fund Balance footnote. Committed fund balance totaled $7.0 million and are limited to specific purposes as defined in the City Charter or through a formal budgetary action of the City Council occurring through adoption of an ordinance or resolution. The $7.0 million committed fund balance is committed for capital projects. Assigned fund balance totaled $30.7 million and represents informal assignments made by the City. The remaining fund balance of $6.4 million is unassigned and mainly includes the unassigned fund balance of the General Fund of $6.6 million, Measure E Fund of $2.0 million, Measure G Fund of $1.7 million, which are mainly operating reserves.

The General Fund is the chief operating fund of the City. The General, Measure E and Measure G Funds' fund balance increased by $18.4 million in FY 2018-19 to $52.3 million, of which $6.2 million was nonspendable and indicates the resources are nonspendable inventory and advances and are not anticipated to be liquidated in the near-term. The $5.0 million committed fund balance is committed for capital projects and is limited to specific purposes as defined in the City Charter or through a formal budgetary action of the City Council occurring through adoption of an ordinance or resolution. Assigned fund balance totaled $30.7 million and has been allocated by the City Council for specific capital and operational needs. The remaining fund balance of $10.3 million is unassigned.

Proprietary Funds

The City's proprietary funds provide the same type of information found in the government-wide financial statements but in more detail. Factors concerning these funds have been addressed in the discussion of Government-Wide Financial Analysis.

E. GENERAL FUND BUDGETARY HIGHLIGHTS

The final amended General, Measure E, and Measure G Fund revenue budget, including transfers in, totaled $137.4 million and the expenditure budget totaled $154.4 million including transfers out. Transfers out are budgeted mostly for capital projects and the funds are already on-hand. Transfers out to the Capital Projects Fund will occur over multiple years.

Significant Appropriations Increases/Decreases

Appropriations during the year were adjusted upward by $15.8 million, of which $13.7 million were related to transfers for capital projects and $2.1 million in operational changes. Estimated revenue was adjusted upward by $1.5 million.

F. CAPITAL ASSETS AND LONG-TERM OBLIGATIONS

Capital Assets Including Infrastructure

The following is a summary of the City's capital assets as of June 30, 2019 and 2018:

City of Salinas' Capital Assets

	Governmental Activities		Business-type Activities		Totals	
	2019	2018	2019	2018	2019	2018
Land	$ 26,141,392	$ 25,230,652	$ 3,632,339	$ 3,632,339	$ 29,773,731	$ 28,862,991
Buildings	45,950,880	45,286,961	27,266,967	27,266,967	73,217,847	72,553,928
Improvements	15,766,022	15,720,822	21,808,016	21,130,339	37,574,038	36,851,161
Equipment	39,028,559	32,376,660	8,157,450	7,925,352	47,186,009	40,302,012
Infrastructure	243,208,588	239,494,655	236,689,231	236,689,231	479,897,819	476,183,886
Construction in Progress	130,701,284	120,078,338	8,159,727	6,426,682	138,861,011	126,505,020
	500,796,725	478,188,088	305,713,730	303,070,910	806,510,455	781,258,998
Accumulated Depreciation	(219,441,309)	(208,526,562)	(187,522,268)	(181,257,607)	(406,963,577)	(389,784,169)
	$ 281,355,416	$ 269,661,526	$ 118,191,462	$ 121,813,303	$ 399,546,878	$ 391,474,829

Capital assets, including infrastructure assets of the City, are those assets which are used in the performance of the City's functions. At June 30, 2019, net capital assets of the Governmental Activities totaled $281.4 million and the net capital assets of the Business-type Activities totaled $118.2 million. During FY 2002-03, American Appraisal Associates were hired to conduct an inventory and valuation of all the City's capital assets. Finance Department staff maintains and updates the Capital Assets inventory by recording all assets acquired or retired at the end of every fiscal year and performs rotating spot inventories each year. The City has elected to report and depreciate all infrastructures.

Governmental activities acquired $20.9 million of capital assets during the year. The acquisitions include $11.1 million in construction in progress, $3.7 million in infrastructure improvements, and $4.3 million in machinery.

Overall, Business-type Activities had a net decline in capital assets by $3.6 million. The City acquired $2.7 million of capital assets during the year. The acquisitions mainly include $1.7 million in construction in progress, and $0.6 million in improvements other than building.

Long-Term Obligations

As of June 30, 2019, the City had $413.1 million in long-term debt.

Further details on the City of Salinas' long-term debt can be found in Note 18 to the financial statements.

G. ECONOMIC FACTORS AND NEXT YEAR'S BUDGET

The FY 2019-20 budget is the second year of a series of significant challenging years ahead. The outlook shows healthy resources, however, the trajectory of forecasted expenditures far outpace the revenue growth. This financial forecast is the same for almost every City in California because of salaries and benefits including the PERS retirement increases where the cost will almost double during the seven-year phase-in. With this understanding of the future, the City has been working hard to implement strategies to address the future challenges, including the, "Salinas Plan". The FY 2019-20 budget is balanced on improved revenue and controlling the main cost drivers of the City. The largest cost driver is salaries. To make it through the next seven years, the City needs to control salaries. Until something else changes, no employee raises are proposed in this budget for next year or the PERS seven-year phase-in period. CalPERS lowered the discount rate in December 2016, which will cost the City $60.5 million cumulatively over the 7-year phase-in period starting in FY 2018-19 and ending in FY 2024-25, based on the latest actuarial reports from CalPERS.

The Salinas Plan and Fiscal Sustainability

The Salinas Plan is a Ten-Year Plan designed to provide the City with a path toward maintaining a long-term balanced budget while preserving City services and addressing the affordable housing crisis. The plan provides 32 recommended initiatives. The 32 recommended initiatives are now in various stages of progress and are described in more detail in the Salinas Plan section of this budget.

Major Projects and Funding

Amid challenging deficits, the City continues deploying approximately $6.5 million of Measure X and SB1 funding for maintaining and improving the City's roads and sidewalks. The City is also finalizing the construction of the long-awaited new Police Services Headquarters and expanded El Gabilan Branch Library, funded with Measure G and E, respectively.

H. REQUEST FOR INFORMATION

This financial report is designed to provide our residents, taxpayers, customers, and investors and creditors with a general overview of the City's finances and to demonstrate the City's accountability for the money it receives. If you have questions about this report or need additional financial information, contact the City of Salinas Finance Department, 200 Lincoln Avenue, Salinas, California 93901.

FUND FINANCIAL STATEMENTS

This page is intentionally left blank.

GOVERNMENTAL FUNDS

GENERAL, MEASURE E, & MEASURE G FUND

The General, Measure E, & Measure G Funds are always classified as a major fund. They account for all financial resources necessary to carry out basic governmental activities of the City that are not accounted for in another fund. The General, Measure E, & Measure G Funds support essential City services such as police and fire protection, street maintenance, libraries, and parks and open space maintenance.

DEBT SERVICE FUNDS

Debt Service Funds are used for the accumulation and disbursement of financial resources that will be used to make principal and interest payments on general long-term debt. The following fund has been classified as a major fund:

Assessment District Debt Service – This fund is used to accumulate monies for payment of the City's Assessment Districts Improvement Bonds. Debt service is financed with special assessments levied against property owners within the respective improvement districts.

CAPITAL PROJECT FUNDS

Capital Projects Funds are used to account for major capital acquisition and construction activities. The following fund has been classified as a major fund:

Special Construction Assistance – This fund accounts for proceeds of long-term borrowings resulting from the sale of Certificates of Participation to finance the acquisition and construction of capital projects.

The accompanying notes are an integral part of this statement.

CITY OF SALINAS
RECONCILIATION OF THE GOVERNMENTAL FUNDS BALANCE SHEET
TO THE GOVERNMENT WIDE STATEMENT OF NET POSITION - GOVERNMENTAL ACTIVITIES
JUNE 30, 2019

Total fund balances - total governmental funds (page F-27)		$ 138,093,085
Amounts reported for governmental activities in the statement of net position are different because:		
Capital assets used in governmental funds are not current financial resources and therefore are not reported in the governmental funds balance sheet.		281,355,416
Interest payable on long-term debt does not require current financial resources. Therefore, interest payable is not reported as a liability in governmental funds balance sheet.		(588,128)
Deferred Inflows are adjusted as follows:		
Deferred inflows resulting from revenues that are not available to liquidate liabilities of the current period in the governmental funds are reclassified as revenues in the statement of net position.		4,099,864
Taxes receivable not collectible within sixty days are not available to pay current period expenditures and, therefore, are not reported in the funds.		111,955
Internal service funds are used by management to charge the costs of insurance programs to individual funds. The assets and liabilities of the internal service funds are included in governmental activities in the government-wide statement of net position.		7,480,140
Long-term liabilities are not due and payable in the current period and, therefore, they are not reported in the governmental funds balance sheet as follows:		
Annual leave	$ (11,249,287)	
Estimated insurance claims	(2,315,675)	
Net pension liability	(186,128,356)	
Net OPEB liability	(18,749,263)	
Capital leases	(96,347,881)	
Certificates of participation	(46,871,285)	
Assessment bonds	(5,719,934)	(367,381,681)
Deferred inflows and outflows		
The deferred outflows are not current assets or financial resources; and the deferred inflows are not due and payable in the current period, and therefore are not reported in the Governmental Funds		
Deferred outflows		49,232,249
Deferred inflows		(13,568,437)
Net position of governmental activities (page F-21)		$ 98,834,463

The accompanying notes are an integral part of this statement.

The accompanying notes are an integral part of this statement.

CITY OF SALINAS
RECONCILIATION OF THE STATEMENT OF REVENUES, EXPENDITURES AND CHANGES IN FUND BALANCE OF THE GOVERNMENTAL FUNDS TO THE GOVERNMENT WIDE STATEMENT OF ACTIVITIES - GOVERNMENTAL FUNDS
FOR THE YEAR ENDED JUNE 30, 2019

Net change in fund balance - total governmental funds (page F-29)		$ 59,364,532
Amounts reported for governmental activities in the statement of activities are different because:		
Governmental funds report capital outlays as expenditures. However, in the statement of activities, the costs of those assets are allocated over their estimated useful lives and reported as depreciation expense. This amount represents capital outlays, net of depreciation.		
Capital outlay	$ 17,286,947	
Depreciation	(10,788,309)	6,498,638
The net effect of various miscellaneous transactions involving capital assets (i.e., sales and donations).		40,712
Revenues in the statement of activities that do not provide current financial resources are not reported as revenues in the governmental funds.		
Earned but unavailable intergovernmental revenues	2,818,511	
Interest	1,071,319	
Property taxes	162,399	4,052,229
Issuance of housing loans are reported in the statement of net position.		1,502,704
Principal payments on housing loans are reported in the statement of net position.		(242,000)
Reporting of loan receivables at realizable value requires an allowance to be made.		(1,570,110)
Issuance of long-term debt including capital advances, compensating absences, and leases provides current financial resources to governmental funds, while the repayment of the principal of long-term debt consumes the current financial resources in governmental funds. Neither transaction has any effect on net position. Also, governmental funds report the effect of issuance costs, premiums, discounts, and similar items when debt is first issued, whereas these amounts are deferred and amortized in the statement of activities. Following is the net effect of these differences in the treatment of long-term debt and related items:		
Increase in compensated absences	(162,533)	
Decrease in insurance claims payable	158,934	
Issuance of certificates of participation	(37,500,000)	
Issuance of assessment district bonds	(2,675,000)	
Premium	(4,401,938)	
Discount	370,719	
Principal paid on capital leases	1,799,338	
Principal paid on certificates of participation	555,000	
Principal paid on assessment district bonds	805,000	(41,050,480)
Pension expense and OPEB expense do not require the use of current financial resources and therefore are not presented as an expenditure in the governmental funds.		(9,466,007)
Governmental funds report the effect of bond insurance costs when debt is issued, whereas these amounts are deferred and amortized in the statement of activities. This amount is the net current period change in unamortized bond insurance cost.		(30,630)
Interest payable expense on long-term debt is reported in the government-wide statement of activities, but they do not require the use of current financial resources. Therefore, interest payable expense is not reported as expenditures in governmental funds. This amount is the current year net change in interest payable.		(348,546)
Internal service funds are used by management to charge the costs of activities involved in rendering services to departments within the City. The assets and liabilities of the internal service funds are included in the statement of net position.		592,835
Change in net position of governmental activities (page F-22)		$ 19,343,877

The accompanying notes are an integral part of this statement.

PROPRIETARY FUNDS

Proprietary Funds are used to account for a government's business-type activities (activities supported, at least in part, by fees or charges). Proprietary funds are segregated into Enterprise Funds and Internal Service Funds. Enterprise Funds are used to report business-type activities for which a fee is charged to external users for goods or services. Internal Service Funds on the other hand are used primarily for services provided to internal users (other departments or agencies).

The City has the following Enterprise Funds:

Airport Fund - This fund is used to account for the enterprise operations of the City-owned airport.

Industrial Waste Fund - This fund is used to account for enterprise operations of the City-operated Industrial Wastewater treatment facility.

Municipal Golf Courses Fund - This fund is used to account for the enterprise operations of the Fairways and Twin Creeks golf courses.

Sanitary Sewer Fund - This fund is used to account for the maintenance of the City's sanitary sewer collection system, which is funded by user fees and by the Monterey Regional Water Pollution Control Agency sewer user fees.

Storm Sewer Fund - This fund is used to account for the maintenance of the City's storm drainage system and the street sweeping program. This program was funded with a storm sewer fee that was declared by the Court as invalid under Proposition 218. Until alternative funding is secured, the program is funded with a combination of general funds and gas tax funds. In addition, the program is funded with a street sweeping surcharge on garbage collection billings.

Landfill Garbage Surcharge Fund - This fund is used to account for the installment sale of the Crazy Horse landfill site to the Salinas Valley Solid Waste Authority.

Water Utility Fund – This fund is used to account for the repairs and maintenance of the water well located at Hitchcock Road. Water users fund the costs of the water well repairs and annual operating costs.

Downtown Parking District Fund - This fund was established to account for revenues, operating expenses and debt service associated with the City's parking facilities. The City's paid parking facilities include the Monterey Street Parking Structure, the Salinas Street Garage and four parking lots.

Permit Services Fund – This fund is used to account for the revenues and expenditures associated with providing permitting services to the community.

The accompanying notes are an integral part of this statement.

FIDUCIARY FUNDS

Fiduciary Funds are used to account for assets held in a trustee or agency capacity for others and therefore cannot be used to support the government's own programs. The City maintains the following Fiduciary Funds:

Private Purpose Trust Funds - These funds are used to account for any trust arrangement not properly reported in a pension trust fund under which principal and income benefit individuals, private organizations, or other governments. This fund also accounts for the Successor Agency of the former Redevelopment Agency which was dissolved on January 31, 2012 pursuant to state law.

Pension Trust Funds – These funds are used to account for resources that are required to be held in trust for the members and beneficiaries of defined benefit pension plans, defined contribution plans, other post-employment benefit plans, or other employee benefit plans. The City's only pension trust fund is the Deferred Compensation Fund; which allows City employees to invest in trust deeds that are managed by the City with the oversight of an investment committee that is made up of representatives from each of the bargaining units.

Custodial Funds - These funds are used to account for assets held in an agent capacity by the City for individuals, private organizations, other governments and/or other funds that are not required to be reported in pension trust funds, investment trust funds, or private-purpose trust funds.

NOTES TO
BASIC FINANCIAL STATEMENTS

This page is intentionally left blank.

1. Description of the Reporting Entity and Significant Accounting Policies:

A. Reporting Entity

Description of the Reporting Entity

The City of Salinas (City) was incorporated as a charter City on March 4, 1874. The City operates under a Council-Manager form of government and provides the following services as authorized: Public Safety, Public Works, Recreation-Parks, Library and General Government Administrative Services. The City also operates an Airport, a Downtown Parking District, a Sanitary Sewer System, a Water Utility, a Storm Sewer System and an Industrial Waste Facility.

The financial statements and accounting policies of the City conform with generally accepted accounting principles applicable to governments in the United States of America. The Governmental Accounting Standards Board (GASB) is the accepted standard-setting body for establishing governmental accounting and financial reporting principles. Significant accounting policies are summarized below:

The basic financial statements of the City of Salinas, California (City), include the financial activities of the City (the primary government) and its component unit. The component unit discussed below is included in the City's reporting entity because of the significance of their operational or financial relationship with the City. The blended component unit, although a legally separate entity, is, in substance, part of the City's operations and so data from this unit is combined with data of the primary government. The City has no discretely presented component units. The City and its blended component unit have June 30 year ends.

Blended Component Unit

The Salinas Public Financing Authority (Authority) – The Authority was established October 6, 1992 pursuant to a Joint Exercise of Powers Agreement by and between the City and the City of Salinas Redevelopment Agency, which is now the Salinas Successor Agency to the former Redevelopment Agency. It was established to refund Central City Revitalization Project tax allocation bonds. The Authority's purpose is to assist with financing or refinancing of certain public capital facilities within the City.

The Authority was used on the following dates for the following purposes:

- April 19, 1994 - to issue a site lease to finance the expansion of the industrial waste facility.
- September 17, 1996 - to issue Central City Revitalization Project Tax Allocation Bonds, Series A 1996.
- March 25, 1997 - issue Variable Rate Lease Revenue Bonds, Series A and B 1997.
- October 24, 1997 - to issue Certificates of Participation, Series A 1997.
- February 25, 1999 - to issue Certificates of Participation, Series A 1999.

- December 17, 2003 - to issue Certificates of Participation, Series A 2004.
- September 1, 2005 - issue Refunding Certificates of Participation, Series 2005 A and B.
- August 21, 2008 - to issue variable rate taxable refunding Certificates of Participation Series 2008.
- January 29, 2014 – to refinance Certificates of Participation, Series A 2004 & Series A 1999 (Animal Shelter) with a lease purchase agreement (2014) with a bank.
- September 1, 2015 – to issue Refunding Certificates of Participation Series 2015 A and B for refunding of Certificates of Participation Series 2005 A and B.
- July 28, 2016 – to refinance Assessment District bonds through a direct private placement.
- February 29, 2019 – to issue Special Tax Bonds, CFD Monte Bella 2019 .

The Authority is controlled by the City and has the same governing body as the City, which also performs all accounting and administrative functions for the Authority. The financial activities of the Authority are included in the City's Debt Service and Enterprise Funds. A financial report is not issued by the Authority.

B. Financial Statement Presentation

In recent years, the City's General Fund has been managed carefully in order to balance its revenues and expenditures. The City has achieved adequate liquidity through the passage of an additional transaction and sales tax initiative (Measure G and Measure E) coupled with an increase in property taxes resulting from the recovery of the local real estate market values from the decline experienced in 2009.

The City's Basic Financial Statements are prepared in conformity with accounting principles generally accepted in the United States of America. The Governmental Accounting Standards Board is the acknowledged standard setting body for establishing accounting and financial reporting standards followed by governmental entities in the United States of America.

Government-Wide Financial Statements – The government-wide financial statements, i.e. the statement of net position and the statement of activities, display information about the primary government (City) and its component units. These statements include the financial activities of the overall government, except for fiduciary activities. These statements distinguish between the governmental and business-type activities of the City. As a general rule, the effect of inter-fund activity has been eliminated from the government-wide financial statements. All internal balances in the statement of net assets have been eliminated, with the exception of those representing balances between the governmental activities and the business-type activities, which are presented as internal balances and eliminated in the total government column. In the statement of activities, internal service fund transactions have been eliminated; however, those transactions between governmental and business-type activities have not been eliminated. Governmental activities, which are normally supported by taxes and inter-governmental revenues and other non-exchange

transactions, are reported separately from business-type activities, which rely to a significant extent on fees charged to external parties.

The statement of activities presents a comparison between direct expenses and program revenues for each business-type activities of the City and for each function of the City's governmental activities. Direct expenses are those that are specifically associated with a business-type activity or governmental function and; therefore, are clearly identifiable to a particular activity or function. Program revenues include 1) fines, fees and charges paid by the recipients of goods or services offered by the programs and 2) grants and contributions that are restricted to meeting the operational or capital requirements of a particular program. Revenues that are not classified as program revenues, including all taxes, are presented instead as general revenues.

Fund Financial Statements – The fund financial statements provide information about the City's funds, including fiduciary funds. Separate statements for each fund category are presented (Governmental, Proprietary and Fiduciary). The emphasis of the fund financial statements are on major governmental and enterprise funds of the City and are reported separately in the accompanying financial statements. All remaining governmental funds are separately aggregated and reported as non-major funds in the accompanying financial statements.

Fund accounting is designed to demonstrate legal compliance and to aid financial management by segregating transactions related to certain government functions or activities. A fund is a separate accounting entity with a self-balancing set of accounts.

The City reports the following major governmental funds:

- General, Measure E, & Measure G – This fund is the primary operating fund of the City. It accounts for all revenues and expenditures necessary to carry out basic governmental activities of the City that are not accounted for in another fund. The General, Measure E, & Measure G Fund supports essential City services such as police and fire protection, street maintenance, libraries, and parks and open space maintenance.
- Assessment District Debt Service - This fund is used to accumulate monies for payment of the City's Assessment Districts Improvement Bonds. Debt service is financed with special assessments levied against property owners within the respective improvement districts.
- Special Construction Assistance – This fund accounts for proceeds of long-term borrowings resulting from the sale of Certificates of Participation to finance the acquisition and construction of capital projects.

The City reports the following major enterprise funds:

- Airport Fund - This fund accounts for the operations of the City owned airport. The activities necessary to provide such service are accounted for in the fund, including, but not limited to, operations, maintenance, financing and related debt service, and billing and collection.
- Industrial Waste Fund - This fund accounts for the operations of the City operated Industrial Waste Water treatment facility.

- Municipal Golf Courses Fund - This fund accounts for the operations of Fairways and Twin Creek golf courses.
- Sanitary Sewer Fund - This fund accounts for the maintenance of the City's sanitary sewer collection system, which is funded from a surcharge on the Monterey Regional Water Pollution Control Agency sewer user fees.
- Storm Sewer Fund - This fund accounts for the maintenance of the City's storm drainage system and the street sweeping program. This program was funded with a storm sewer fee that was declared by the Court as invalid under Proposition 218. Until alternative funding is secured, the program is funded with a combination of general funds and gas tax funds. In addition, the program is funded with a street sweeping surcharge on garbage collection billings.
- Landfill Garbage Surcharge Fund -This fund accounts for the installment sale of the Crazy Horse landfill site to the Salinas Valley Solid Waste Authority.
- Water Utility Fund - This fund accounts for the repairs and maintenance of the water well located at Hitchcock Road. Water users fund the costs of the water well repairs and annual operating costs.
- Downtown Parking District Fund - This fund accounts for the operations of the City's parking facilities. The activities necessary to provide such services are accounted for in the fund, including, but not limited to, operations, maintenance, financing and related debt service, and billing and collection.
- Permit Services Fund - This fund is used to account for the revenues and expenditures associated with providing permitting services to the community.

The City reports the following additional fund types:

- Internal Service Fund (a proprietary fund type) accounts for the services provided to internal users (other departments or agencies).
- Fiduciary Fund accounts for the assets held in a trustee or agency capacity for others and therefore cannot be used to support the government's own programs. The private-purpose trust funds accounts for assets and activities of the dissolved Redevelopment Agency, which is accounted for in the Successor Agency Trust, and other trust arrangements not properly reported in a pension trust. The pension trust funds account for resources that are required to be held in trust for members and beneficiaries of defined benefit pension plans, defined contribution plan, other post-employment benefit plans, other employee benefit plans. The agency fund is used to account for assets held in an agency capacity by the City for individuals, private organizations, other governments and/or other funds.

C. Measurement Focus and Basis of Accounting

Measurement focus and basis of accounting refers to when revenue and expenditures or expenses are recognized in the accounts and reported in the basic financial statements. The accounting and financial reporting treatment applied to a fund is determined by its measurement focus. All governmental funds are accounted for using a current financial resources measurement focus. With this measurement focus, only current assets and current liabilities are generally included on the balance sheet. Operating statements of these funds present increases (i.e., revenues and other financing sources) and decreases (i.e., expenditures and other financing uses) in net current position. When both restricted and unrestricted net positions are available, unrestricted resources are used only after the restricted resources are depleted.

The government-wide financial statements and proprietary fund financial statements are reported using the economic resources measurement focus and the accrual basis of accounting. Revenues are recorded when earned and expenses are recorded when a liability is incurred, regardless of the timing of related cash flows. Property taxes are recognized as revenues in the year for which they are levied. Grants and similar items are recognized as revenue as soon as all eligibility requirements imposed by the provider have been met.

Amounts reported as program revenues include 1) charges to customers or applicants for goods, services, or privileges provided, 2) operating grants and contributions, and 3) capital grants and contributions, including special assessments. Internally dedicated resources are reported as general revenues rather than as program revenues. Likewise, general revenues include all taxes.

Governmental funds are reported using the current financial resources measurement focus. This focus is on the determination of, and changes in financial resources, and generally only current assets and current liabilities are included in the balance sheet. These funds use the modified accrual basis of accounting, whereby revenues are recognized in the accounting period in which they become both measurable and available to finance expenditures of the fiscal period. For this purpose, the City considers revenues as available if they are collected within sixty days of the end of the current fiscal period. Expenditures are generally recorded when a liability is incurred. However, principal and interest on long-term debt and certain estimated liabilities, such as compensated absences, and self-insurance claims, are recorded only when payment is due.

In the governmental funds, revenues from taxes, franchise fees, investment income, state and federal grants and charges for services associated with the current fiscal period are all considered to be susceptible to accruals. Such accruals have been recognized as revenues in the current period. All other revenue items are considered to be measurable and available only when cash is received by the City.

Proprietary funds distinguish operating revenues and expenses from non-operating items. Operating revenues and expenses generally result from providing services and producing and delivering goods in connection with a proprietary fund's principal ongoing operation. The principal operating revenues of the City's enterprise funds and internal service funds are charges to customers for sales and services. Operating expenses for enterprise funds and internal service funds include the cost of sales and services, administrative expenses, and depreciation on capital assets. All revenues and expenses not meeting this definition are reported as non-operating revenues and expenses.

Under the terms of grant agreements, the City funds certain programs by a combination of specific cost reimbursement grants, categorical block grants and general revenues. Thus, when program expenses are incurred, there are both restricted and unrestricted net position available to finance the program. It is the City's policy to first apply restricted cost reimbursement grant resources to such programs, followed by restricted categorical block grants, and then by unrestricted general revenues.

D. New Accounting Pronouncements

The following Governmental Accounting Standards Board (GASB) Statements have been implemented in the current financial statements:

GASB Statement No. 84 – In January 2017, GASB issued Statement No. 84, *Fiduciary Activities*. The objective of this Statement is to improve guidance regarding the identification of fiduciary activities for accounting and financial reporting purposes and how those activities should be reported. The requirements of this Statement are effective for reporting periods beginning after December 15, 2018. The City early implemented the requirements of this statement; see note 21 for effect of early implementation.

GASB Statement No. 83 – In November 2016, GASB issued Statement No. 83, *Certain Asset Retirement Obligations*. This Statement addresses accounting and financial reporting for certain asset retirement obligations (AROs). An ARO is a legally enforceable liability associated with the retirement of a tangible capital asset. A government that has legal obligations to perform future asset retirement activities related to its tangible capital assets should recognize a liability based on the guidance in this Statement. The requirements of this Statement are effective for reporting periods beginning after June 15, 2018. This statement had no effect on these financial statements.

GASB Statement No. 88 – In April 2018, GASB issued Statement No. 88, *Certain Disclosures Related to Debt, Including Direct Borrowings and Direct Placements*. The primary objective of this Statement is to improve the information that is disclosed in notes to government financial statements related to debt, including direct borrowings and direct placements. It also clarifies which liabilities governments should include when disclosing information related to debt. The requirements of this Statement are effective for reporting periods beginning after June 15, 2018. This statement had no effect on these financial statements.

The City has not determined the effects on the financial statements for the following GASB Statements, and is currently analyzing its accounting and financial reporting practices to determine the potential impact:

GASB Statement No. 87 – In June 2017, GASB issued Statement No 87, *Leases*. The objective of this Statement is to better meet the information needs of financial statement users by improving accounting and financial reporting for leases by governments. This Statement increases the usefulness of governments' financial statements by requiring recognition of certain lease assets and liabilities for leases that previously were classified as operating leases and recognized as inflows of resources or outflows of resources based on the payment provisions of the contract. It establishes a single model for lease accounting based on the foundational principle that leases are financings of the right to use an underlying asset. Under this Statement, a lessee is required to recognize a lease liability and an intangible right-to-use lease asset, and a lessor is required to recognize a lease receivable and a deferred inflow of resources, thereby enhancing the relevance and consistency of information about governments' leasing activities. The requirements of this Statement are effective for reporting periods beginning after December 15, 2019.

GASB Statement No. 90 – In April 2018, GASB issued Statement No. 90, *Majority Equity Interests - an amendment of GASB Statements No. 14 and No. 61*. The primary objectives of this Statement are to improve the consistency and comparability of reporting a government's majority equity interest in a legally separate organization and to improve the relevance of financial statement information for certain component units. It defines a majority equity interest and specifies that a majority equity interest in a legally separate organization should be reported as an investment if a government's holding of the equity interest meets the definition of an investment. The requirements of this Statement are effective for reporting periods beginning after December 15, 2018.

GASB Statement No. 91 – In May 2019, GASB issued Statement No. 91, *Conduit Debt Obligations*. The primary objectives of this Statement are to provide a single method of reporting conduit debt obligations by issuers and eliminate diversity in practice associated with (1) commitments extended by issuers, (2) arrangements associated with conduit debt obligations, and (3) related note disclosures. The requirements of this Statement are effective for reporting periods beginning after December 15, 2020.

E. Fair Value Measurement

The City applies GASB Statement No. 72, *Fair Value Measurement and Application* for determining a fair value measurement for reporting purposes and applying fair value to certain investments and disclosures related to all fair value measurements. The City categorizes the fair value measurements of its investments based on the hierarchy established by generally accepted accounting principles. The fair value hierarchy, which has three levels, is based on the valuation inputs used to measure an asset's fair value: level 1 inputs are quoted prices in active markets for identical assets, level 2 inputs are significant other observable inputs, and level 3 inputs are significant unobservable inputs.

F. Interest Earnings

Interest received on time deposits and investments is prorated quarterly to the following funds generally based on an average of three month ending cash balances. Interest earned by other funds under this method is allocated to the General Fund.

- General, Measure E & G
- Development Fees
- Emergency Medical Services
- Asset Seizure
- Lighting, Landscape and Maintenance District
- Municipal Art
- Measure X
- SB1
- Local Public Safety
- Gas Tax
- SRA Public Improvement Grant
- Affordable Housing
- COP 1999 & COP 2004 Consolidation (2014)
- Energy Improvement Lease
- COP 2005 A & B 2015 Refunding
- Assessment District Reserve
- Special Aviation
- Assessment District Project
- Airport
- Industrial Waste
- Municipal Golf Courses
- Sanitary Sewer
- Storm Sewer
- Permit Services
- Landfill Garbage Surcharge
- Internal Service Funds
- Pension Trust Fund
- Successor Agency Trust Fund

G. Cash and Investments

Cash and Cash Equivalents - Cash and cash equivalents are considered to be amounts in demand deposits, and short-term investments with original, maturity of three months or less from the date of acquisition. For purposes of both the balance sheet and statements of cash flows, cash and cash equivalents include not only currency on hand, but deposits in the City's cash and investment pool. These deposits have the same characteristics for the participating funds as demand deposit accounts, in that the funds may deposit additional cash at any time and also effectively withdraw cash at any time without prior notice or penalty. Cash and cash equivalents also include restricted cash and money market funds held by fiscal agents. For purposes of cash flows, the City considers all liquid market investments with maturities of one year or less at time of purchase to be cash equivalents. All other investments are stated at fair value. Market value is used as fair value for those securities for which market quotations are readily available.

Investment held in Local Agency Investment Fund - The City participates in the Local Agency Investment Fund (LAIF), an investment pool managed by the State of California. LAIF has invested portion of the pool funds in structured notes and asset-backed securities. LAIF's investments are subject to credit risk with the full faith and credit of the State of California collateralizing these investments. In addition, these structured notes and asset-backed securities are subject to market risk as a result of changes in interest rates.

LAIF determines fair value on its investments portfolio based on market quotations for those securities where market quotations are readily available and based on amortized cost or best estimate for those securities where market value is not readily available.

The City valued its investments in LAIF as of June 30, 2019, by multiplying its account balance with LAIF times a fair value factor determined by LAIF value for all LAIF participants by total aggregate amortized cost.

Other Investments - Investments in nonparticipating interest earning contracts (certificate of deposits) are reported at cost, and all other investments are reported at fair value. Fair value is defined as the amount the City could reasonably expect to receive for an investment in a current sale between a willing buyer and seller and is generally measured by quoted market prices.

Deferred Compensation - The Deferred Compensation Plan is invested in deeds of trust secured by real or personal property and in real estate holdings. The trust deeds are considered nonparticipating interest earning investments and are reported at fair market value. See Note 13 for additional information on the various deferred compensation plans.

H. Restricted Cash and Investment with Fiscal Agents

Certain restricted cash and investments are held by fiscal agents for the redemption of bonded debt and for acquisition and construction of capital projects.

I. Receivables

All receivables are reported at their gross value and, where appropriate, are reduced by the estimated portion that is expected to be uncollectible. Invoices that remain unpaid after 90 days may be referred to collections. An invoice sent to collection is written off.

J. Prepaid Bond Insurance, Original Issue Discounts and Premiums, and Refundings

Prepaid bond insurance costs are amortized using the straight-line method over the life of the bonds. Amortization of these balances is recorded as a component of operating expenses.

In the government-wide, proprietary fund and fiduciary fund financial statements, long-term debt and other long-term obligations are reported as liabilities in the applicable governmental activities, business-type activities, proprietary fund and fiduciary fund financial statements. Bond premiums and discounts are deferred and amortized over the life of the bonds. Bonds payable are reported net of the applicable bond premium or discount. Original issue premiums are amortized using the straight-line method over the life of the bonds. Gains or losses from refunding of debt are reported as deferred inflows or outflows of resources and amortized over the shorter of the life of the refunded debt or refunding debt. Amortization of these balances is recorded as a component of interest expense.

In the fund financial statements, governmental fund types recognize bond premiums and discounts, as well as bond issuance costs, during the current period. Issuance costs, whether or not withheld from the actual debt proceeds received, are reported as debt service expenditures.

K. Special Assessment Districts

Special assessments are recorded as receivables when they become a lien on property. Special assessments not considered available are recorded as receivables and offset by unearned revenues. In general, special assessments and special tax bonds are fully secured by liens against the privately owned properties benefited by the improvement for which the bonds were issued. There is no reserve for delinquent receivables since priority liens exist against the related properties and hence the City's management believes value will ultimately be received by the City.

L. Interfund-fund Transactions

Interfund transactions are reflected as loans, services provided, reimbursements and/or transfers. Loans and balances related to unsettled service transactions are reported as receivables and payables as appropriate, are subject to elimination upon consolidation of similar fund types, and are referred to as either "due to/from other funds," i.e., the current portion of interfund loans and unsettled service transactions, or "advances to/from other funds," i.e., the noncurrent portion of interfund loans. Any residual balances outstanding between the governmental activities and the business-type activities are reported in the government-wide financial statements as "internal balances."

Services provided are deemed to be at market or near market rates and are treated as revenues and expenditures/expenses. Reimbursements are defined as when one fund incurs a cost, charges the appropriate benefiting fund and reduces its related cost as a reimbursement. All other interfund transactions are treated as transfers. Transfers between governmental or proprietary funds are netted as part of the reconciliation to the government-wide presentation.

M. Inventory of Supplies

Inventory is valued on a first-in-first-out basis. Inventory in the General Fund consists of expendable supplies held for consumption by all departments of the City. The cost is recorded as an expenditure or expense in the appropriate fund at the time individual inventory items are withdrawn for use (consumption method). The General Fund inventory amount is recorded as a nonspendable portion of fund balance because such assets are not available for current operations.

N. Land Held for Resale

Land held for resale is being carried at cost, but no greater than the net realizable value. In the fund financial statements, this amount is recorded as a restricted portion of fund balance due to externally imposed grantor restrictions.

O. Restricted Assets

Assets that are restricted for specific uses by bonded debt requirements, grant provisions or other requirements are classified as restricted because their use is limited by applicable bond covenants or agreements. In addition, funds have been restricted for future capital improvements by City resolution.

P. Capital Assets

Capital assets include land, buildings, improvements, vehicles and equipment, infrastructure, and all other tangible and intangible assets that are used in operations and that have initial useful lives in excess of one year. Capital assets are reported in the applicable governmental or business-type activity columns in the government-wide financial statements, the proprietary funds' statement of net position, and the private-purpose trust fund. Capital assets are defined as assets with an initial individual cost of more than $10,000 for general capital assets and $100,000 for major infrastructure assets, and an estimated useful life in excess of one year. Such assets are recorded at historical cost if purchased or constructed. Donated capital assets are recorded at acquisition value, market based entry price at the time of contribution. Capital outlay is recorded as expenditures of the governmental funds and as assets in the government-wide financial statements to the extent the City's capitalization threshold is met. Amortization of assets acquired under capital leases is based on the shorter of the lease term or the estimated useful life of the asset and is included in depreciation and amortization.

Buildings, improvements, infrastructure, vehicles and equipment, and furniture and fixtures are depreciated using the straight-line method (depreciation is calculated starting with the month following the date the asset was placed in service) over the following estimated useful lives:

Buildings	20-50 years
Other improvements	15-45 years
Infrastructure	10-50 years
Equipment	5-20 years

Q. Encumbrances

Encumbrance accounting, under which purchase orders, contracts, and other commitments for the expenditure of monies are recorded in order to reserve that portion of the applicable appropriation, is employed as an extension of formal budgetary integration in the General, Special Revenue, and Capital Projects Funds. Encumbrances outstanding at year-end are reported as reservations of fund balance since they do not constitute expenditures or liabilities.

R. Deferred Outflows/Inflows of Resources

In addition to assets, the statement of net position will sometimes report a separate section for deferred outflows of resources. This separate financial statement element, deferred outflows of resources, represents a consumption of net position that applies to a future period(s) and so will not be recognized as an outflow of resources (expense/expenditure) until then. The City has the following items that qualify for reporting in this category:

- Losses on refunding are reported as deferred outflows of resources in the government-wide financial statements.
- Deferred outflows of reousrces related to pensions are reported in the government-wide financial statements as described further in Note 14.
- Deferred outflows of reousrces related to OPEB are reported in the government-wide financial statements as described further in Note 15.

In addition to liabilities, the statement of net position will sometimes report a separate section for deferred inflows of resources. This separate financial statement element, deferred inflows of resources, represents an acquisition of net position that applies to a future period(s) and will not be recognized as an inflow of resources (revenue) until that time. The City has the following items that qualify for reporting in this category:

- Unavailable revenues are reported only in the governmental fund balance sheet. The governmental funds report unavailable revenues from grants, assessment receivable, and long-term notes receivable. These amounts are reported as unavailable and recognized as an inflow of resources in the period that the amounts become available.
- Gains on refunding are reported as deferred inflows of resources in the government-wide financial statements.

- Deferred inflows of resources related to pensions are reported in the government wide financial statements as described further in Note 14.
- Deferred inflows of resources related to OPEB are reported in the government wide financial statements as described further in Note 15.

S. Compensated Absences

Vacation, compensatory time, and related benefits are accrued as determined by the agreement between the City and the respective employees' collective bargaining group. For governmental funds, compensated absence obligations are recorded in the appropriate governmental funds when due. The portion not currently due is recorded in the government-wide financial statements. For proprietary funds, compensated absences are expensed when earned by employees. At year-end, the accrued but unpaid compensated absence obligations are recorded as current and non-current liabilities in the appropriate proprietary funds.

Eligible employees may accrue a maximum of 600 annual leave hours (75 days). Any hours accumulated in excess of 600 hours are paid at the employee's adjusted hourly rate of pay. For the Firefighter group the maximum is 840 hours for 56 hour shift employees and 600 for 40 hour shift employees. Employees with fewer than 20 years of service may request pay in lieu of annual leave up to a maximum of 10 days. Employees with more than 20 years of service may request a maximum of 15 days pay in lieu of annual leave.

T. Public Employees Retirement System (CalPERS)

Pensions - For purposes of measuring the net pension liability, deferred outflows and inflows of resources related to pensions, pension expense, information about the fiduciary net position and additions to/deductions from the fiduciary net position have been determined on the same basis as they are reported by the City of Salinas. For this purpose, benefit payments (including refunds of employee contributions) are recognized when due and payable in accordance with the benefit terms. Investments are reported at fair value.

U. Unearned Revenue

Governmental funds report unearned revenue in connection with revenues that are not considered earned as of year-end. For additional information on unearned revenues, see Note 20.

V. Claims and Judgments

Claims and judgments are recognized as expenditures when it is probable that the liability has been incurred and the amount of the loss can be reasonably estimated. This liability is recorded in the internal service fund that accounts for the City's self insurance activities.

W. Long-Term Debt

In the Government-wide Financial Statements and the proprietary fund types in the Fund Financial Statements, long-term debt and other obligations are reported as liabilities in the applicable governmental activities, business-type activities, or proprietary fund statement of net positions. Bond premiums and discounts are deferred and amortized over the life of the bonds using effective interest methods. Bonds payable are reported net of the applicable bond premium or discount. In the governmental funds statement of revenue, expenditures and changes in fund balance, issuance of debt is recorded as another financing source (use) in the respective fund. Issuance costs and payment of principal are reported as debt service expenditures.

X. Net Position

Net position represents total assets and deferred outflows of resources less liabilities and deferred inflows of resources. Net position invested in capital assets, net of related debt, consists of capital assets, net of accumulated depreciation, reduced by the outstanding balances of any borrowings used for the acquisition, construction or improvement of those assets, excluding unspent debt proceeds. Net position are reported as restricted when there are limitations imposed on their use either through the enabling legislation adopted by the City or through external restrictions imposed by creditors, grantors or laws or regulations of other governments.

The City first applies restricted resources when an expense is incurred for purposes for which both restricted and unrestricted net position are available.

The government-wide and proprietary fund financial statements utilize a net position presentation. Net position is categorized as follows:

- Net Investment In Capital Assets - This category groups all capital assets, including infrastructure, into one component of net position. Accumulated depreciation and the outstanding balances of debt that are attributable to the acquisition, construction, or improvement of these assets reduce the balance in this category.
- Restricted Net Position - This category represents net position that have extemal restrictions imposed by creditors, grantors, contributors or laws or regulations of other governments and restrictions imposed by law through constitutional provisions or enabling legislation.
- Unrestricted Net Position - This category represents net amounts that do not meet the criteria for “restricted” or “net investment in capital assets.”

Y. Fund Balance

Under GASB Statement No. 54, *Fund Balance Reporting and Governmental Fund Type Definitions*, the financial statements reporting for governmental funds classify fund balances based primarily on the extent to which the City is bound to honor constraints on the specific purposes for which those funds can be spent. Fund balance for the City's governmental funds consists of the following categories:

- *Nonspendable Fund Balance* - includes amounts that are not in a spendable form, such as inventories, prepaid items, and long-term loans and notes receivables. It also includes amounts that are legally or contractually required to be maintained intact or required to be retained in perpetuity, such as the principal of an endowment fund.
- *Restricted Fund Balance* - includes amounts reported as restricted when constraints placed on the use of resources are either (1) externally imposed by creditors (such as through debt covenants), grantors, contributors, or laws or regulations of other governments; or (2) imposed by law through constitutional provisions or enabling legislation.
- *Committed Fund Balance* - includes amounts that have been limited to specific purposes as defined in the City Charter or through adoption of an ordinance by the City Council, the highest level of decision making authority of the City. These commitments may be changed or lifted, but only by the same formal action that was used to impose the constraint originally. City Council action to commit fund balance must occur within the fiscal reporting period while the amount committed may be subsequently determined.
- *Assigned Fund Balance* - includes amounts that are intended to be used by the City for specific purposes through City Council budgetary action, which include the approval of appropriations and revenue sources pertaining to the next fiscal year's budget. Intent is expressed by (a) the City Council or (b) a body or official to which the City Council has delegated the authority to assign amounts to be used for specific purpose.
- *Unassigned Fund Balance* - includes amounts within the General, Measure E, & Measure G Funds, the residual resources, either positive or negative, in excess of what can be properly classified in one of the other four fund balance categories, unassigned amounts are technically available for any purpose. Other governmental funds may only report a negative unassigned balance that was created after classification in nonspendable, restricted, and committed fund balance.

In circumstances when an expenditure is made for a purpose for which amounts are available in multiple fund balance categories, fund balance is depleted in the order of restricted, committed, assigned, and unassigned.

Z. Property Taxes

Property taxes are collected on behalf of and remitted to the City by the County of Monterey (the "County"). The amount of property tax levies is restricted by Article 13A of the California State Constitution (commonly referred to as Proposition 13).

The County assesses property values, levies, bills, and collects the related property taxes as follows:

	Secured	Unsecured
Valuation/lien dates	January 1	January 1
Levy dates	January 1	January 1
Due dates (delinquent after)	50% on November 1 (December 10) 50% on February 1 (April 10)	July 1 (August 31)

The City has not elected to participate in the "Teeter Plan" offered by the County whereby cities receive 100% of secured property and supplemental property taxes levied in exchange for foregoing any interest and penalties collected on the related delinquent taxes. The City retains the right to any interest and penalties collected on the related delinquent taxes. Accordingly, property tax revenues are recognized in the fiscal period for which they are levied and collected, adjusted for any amounts deemed uncollectible and amounts expected to be collected more than 60 days after the fiscal year.

General property taxes are based on either a flat 1% rate applied to the fiscal year 1976 full value of the property or on 1% of the sales price of the property on sales transactions and construction that occur after the fiscal year 1976 valuation. Assessed values on properties (exclusive of increases related to sales and construction) can rise at a maximum of 2% per year depending on increases in the consumer price index.

AA. Self-Insurance

The City is self-insured for workers' compensation, general, automobile, and public liability claims. The City's estimated liability for claims as of June 30, 2019 is based on the claim manager's estimate of probable losses plus an amount estimated for incurred but not reported claims. An Internal Service Fund is used to account for the collection of premiums from various City departments related to workers' compensation claims and general claims liabilities. Premiums are established based on historical claims experience. Additionally, the City contracts with third party administrators for claims management.

BB. Use of Estimates

A number of estimates and assumptions relating to the reporting of revenues, expenditures/ expenses, assets, deferred outflows of resources, liabilities, deferred inflows of resources, and the disclosure of contingent liabilities were used to prepare these financial statements in conformity with accounting principles generally accepted in the United States of America. Actual results could differ from those estimates.

2. Stewardship, Compliance and Accountability:

A. Budgeting

The Budget is prepared by the City Manager and adopted by City Council. Formal budgetary integration was employed as a management control device during the fiscal year for the General, Measure E & Measure G Fund, Special Revenue Funds and Capital Projects Funds.

The City Manager may transfer budget appropriations between departments and Department Directors may transfer appropriations between programs and accounts within their individual departments and divisions, but only the Council by resolution may appropriate funds from reserves or fund balances.

Budgets for General, Special Revenue and Capital Projects Funds are adopted on a basis consistent with generally accepted accounting principles (GAAP). Reserves for future lease commitments have been established for accounting purposes and the fund balance is reserved for the total lease commitment consistent with budget policies.

Budget policy excludes taxes, interest, and accounts receivable assets, which are not currently available resources for budget purposes, and condemnation deposits which are returned upon right of way acquisition.

Expenditures may not legally exceed budgeted appropriations at the government level. Budgeted amounts shown are as originally adopted or as amended by the City Council during the year. Additional supplementary appropriations were adopted during the mid-year review.

Appropriations lapse at fiscal year end and then are rebudgeted for the coming year. Project-length financial plans are adopted for all capital projects funds and appropriations are carried forward until project completion. Grant funds are carried forward until the grant expires.

Encumbrances represent commitments related to unperformed contracts for goods or services. Encumbrance accounting, under which purchase orders, contracts, and other commitments for the expenditure of monies are recorded in order to reserve that portion of the applicable appropriation, is employed as an extension of formal budgetary integration in the governmental funds. Encumbrances outstanding at year-end are recorded as reservations of fund balance and do not constitute expenditures or liabilities because the commitments will be honored during the subsequent year.

For additional information on budgetary policy and control see Required Supplementary Information.

B. Deficit Fund Balance

At June 30, 2019, the following funds had a deficit fund balance or deficit net position:

Major Funds		
Business-type Activities		
Municipal Golf Courses Fund	$	9,006,787
Downtown Parking District Fund	$	5,088,119
Non-Major Funds		
Governmental Activities		
Special Revenue Funds		
Housing and Urban Development Grant	$	230,859
Debt Service Funds		
2018 Lease-PS Building Police	$	3,163
2018 Lease-El Gabilan Library	$	1,800
Assessment District Administration	$	2,178

Enterprise Funds – Municipal Golf Courses Fund
The deficit net asset balance of $9,006,787 is a result of the long-term bonds payable for the 2015A Certificates of Participation and the 2008 Certificates of Participation amounting to $3,320,000 and $4,360,000, respectively, exceeding the related assets. This deficit will continue to decline over time as the bonds are paid back.

Enterprise Funds – Downtown Parking District Fund
The deficit net position in the Downtown Parking District Fund of $5,088,119 is a result of the long-term lease payable amounting to $10,675,000. This deficit will continue to decline over time as the lease payable is collected.

Non-Major Special Revenues Fund
The deficit net position in the non-major special revenue funds is a result of deferred inflows of resources from housing loans and grants receivable that are not considered available at June 30, 2019. The deficit will decline as loans are paid off and grant funds become available.

Non-Major Debt Service Funds
The deficit net position in the non-major debt service funds is the result of timing of transfers from other funds. This deficit will decline as transfers are made to reimburse the non-major debt service funds.

3. Debt Compliance:

There are a number of limitations and restrictions contained in the various bond indentures. The City believes it is in compliance with all significant limitations and restrictions.

4. Cash and Investments:

The City's cash and investments at June 30, 2019 are included in the accompanying basic financial statements as follows:

	Government-Wide Statement of Net Position			Fund Financials	
	Governmental Activities	Business-Type Activities	Total	Fiduciary Funds Statement of Net Position	Total
Cash and Investments	$ 147,567,821	$ 17,463,649	$ 165,031,470	$ 13,908,269	$ 178,939,739
Restricted Cash and Investments	856,472	1,965,948	2,822,420	1,591,907	4,414,327
Total Cash and Investments	$ 148,424,293	$ 19,429,597	$ 167,853,890	$ 15,500,176	$ 183,354,066

Cash and investments at June 30, 2019 consisted of the following:

Cash and cash equivalents	
Demand accounts at banks	$ 5,751,961
Money market	1,964,531
Deposits held in trust by fiscal agent	211,813
Money market held in trust by fiscal agent	38,323,134
State local agency investment fund (LAIF)	114,633,346
Petty cash and revolving fund	15,000
Deferred compensation	
State local agency investment fund (LAIF)	2,291,331
	163,191,116
Investments	
Investments held in trust by fiscal agent	13,585,725
Deferred compensation	
Investment in trust deeds and properties	6,577,225
	20,162,950
Total cash and investments	$ 183,354,066

Deposits

At June 30, 2019, the carrying amount of the City's deposits was $5,751,961. The bank balance was $8,274,394. The difference is due to outstanding checks and deposits in transit. All bank balances are insured or collateralized.

Investments

Investments permitted by the City's investment policy include the following:

- Certificates of Deposit
- Repurchase Agreements
- Bankers Acceptances
- Guaranteed Investment Contracts
- U.S. Treasury Bills and Notes
- State of California Local Agency Investment Fund
- Government Agency Securities
- Passbook Savings Accounts
- Mutual Funds
- Interest Bearing Checking Accounts
- Commercial Paper

The Deferred Compensation Plan is permitted by City resolution to invest in deeds of trust secured by real or personal property.

Investment income from cash and investments held by fiscal agents are credited directly to the related funds.

The City participates in the California Local Agency Investment Fund (LAIF), an investment pool managed by the State of California. The LAIF is a special fund of the California State Treasury through which local governments may pool investments. At June 30, 2019, the total fair value amount invested by all public agencies in LAIF is $106.6 billion managed by the State Treasurer. Of that amount, 1.77% is invested in medium-term and short-term structured notes and asset-back securities. No amounts were invested in derivative financial products. The Local Investment Advisory Board (Board) has oversight responsibility for LAIF. The Board consists of five members as designated by State Statute. The fair value of the Authority's investment in this pool is reported in the accompanying financial statements at amounts based upon the City's pro-rata share of the fair value provided by LAIF for the entire LAIF portfolio (in relation to the amortized cost of that portfolio). The balance available for withdrawal is based on the accounting records maintained by LAIF, which are recorded on an amortized cost basis.

As of June 30, 2019, the City had the following investment and maturities:

	Maturities			
	0-12 months	1-5 years	over 5 years	Total
Investment Agreements	$ 5,347,045	$ 8,238,680	$ -	$ 13,585,725
Trust Deeds-Def Comp	-	6,577,225	-	6,577,225
Total	$ 5,347,045	$ 14,815,905	$ -	$ 20,162,950

Interest Rate Risk

Interest rate risk is the risk that changes in market interest rates will adversely affect the fair value of an investment. As a means of limiting exposure to fair value losses from rising interest rates, the City's investment policy limits the maturity of investments in accordance with Government Code Sections 53601(a)-(n) and 53636(a)-(m). It is the City's policy to ladder investments so that there are always investments coming due to meet cash flow requirements. Because the Local Agency Investment Fund as of June 30, 2019 had an average life of 173 days, it was presented as an investment with a maturity of 0-12 months. However, LAIF allows the City to make withdrawals of any amount within 24 hours. Information about the sensitivity of the fair values of the City investments to market interest rate fluctuations is provided by the preceding table that shows the distribution of the City's investment by maturity.

Summarized below are the ratings of the City's cash and investments:

	Fair Value	S&P	Moodys	% of Total
Demand accounts at banks	$ 5,751,961	NR	NR	3.14%
Money Market at Rabobank	1,964,531	A-1	Aa3	1.07%
Deposits held in trust by fiscal agent	211,813	BBB+	Baa2	0.12%
Money Market held in trust by fiscal agent				
Fidelity Investment MM Gov	1,754,125	AAAm	Aaa-mf	0.96%
Belmont Bk + TR CO Chicago	243,808	NR	NR	0.13%
CELTIC BK Salt Lake City	243,844	NR	NR	0.13%

	1,003,290	A-	A2	0.55%
	1,004,250	AA-	Aa2	0.55%
	1,003,530	AA+	Aaa	0.55%
	999,140	A-	A2	0.54%
Fed Home Loan Mortgage	2,000,890	AA+	Aaa	1.09%
Certificates of deposit	5,347,045	NR	NR	2.92%
Westdeutsche Landesbank	975,467	NR	NR	0.53%
Trust Deeds-Def Comp	6,577,225	NR	NR	3.59%
Total	$ 183,354,066			100.00%

Concentration of Credit Risk

The City places no limit on the amount the City may invest in any one issuer. However, the City's investment policy calls for portfolio diversification by avoiding over concentration in a specific maturity sector or specific investments. The City's portfolio is detailed in the preceding table (see above).

Custodial Credit Risk

For an investment, custodial credit risk is the risk that, in the event of the failure of the counterparty, the City will not be able to recover the value of its investments or collateral securities that are in the possession of an outside party. The City's investment policy limits safekeeping of investments to third-party custody.

All of the City's deposits are either insured by the Federal Depository Insurance Corporation (FDIC) up to $250,000 or collateralized with pledge securities held in the trust department of the financial institution in the City's name.

Fair Value Measurement and Application

The City categorizes its fair value measurements within the fair value hierarchy established by generally accepted accounting principles. The hierarchy is based on the valuation inputs used to measure the fair value of the asset. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). The three levels of the fair value hierarchy are described as follows:

Level 1 – Inputs to the valuation methodology are unadjusted quoted prices for identical assets or liabilities in active markets that the City has the ability to access.

Level 2 – Inputs to the valuation methodology include:

- Quoted prices for similar assets or liabilities in active markets;
- Quoted prices for identical or similar assets or liabilities in inactive markets;
- Inputs other than quoted prices that are observable for the asset or liability; and
- Inputs that are derived principally from or corroborated by observable market data by correlation or other means.

Level 3 – Inputs to the valuation methodology are unobservable and significant to the fair value measurement. Unobservable inputs reflect the City's own assumptions about the inputs market participants would use in pricing the asset or liability (including assumptions about risk). Unobservable inputs are developed based on the best information available in the circumstances and may include the City's own data.

The asset's level within the hierarchy is based on the lowest level of input that is significant to the fair value measurement. Valuation techniques used, need to maximize the use of observable inputs and minimize the use of unobservable inputs. The determination of what constitutes observable requires judgment by the City's management. City management considers observable data to be that market data, which is readily available, regularly distributed or updated, reliable, and verifiable, not proprietary, and provided by multiple independent sources that are actively involved in the relevant market. The categorization of an investment within the hierarchy is based upon the relative observability of the inputs to its fair value measurement and does not necessarily correspond to City management's perceived risk of that investment.

In instances where inputs used to measure fair value fall into different levels in the above fair value hierarchy, fair value measurements in their entirety are categorized based on the lowest level input that is significant to the valuation. The City's assessment of the significance of particular inputs to these fair value measurements requires judgment and considers factors specific to each asset or liability.

Deposits and withdrawals in governmental investment pools, such as LAIF, are made on the basis of $1 and not fair value. Accordingly, the City's measured fair value of its proportionate share in these types of investments is based on uncategorized inputs not defined as a Level 1, Level 2, or Level 3 input. Non-negotiable FDIC-insured bank certificates of deposit are priced at par.

The following is a description of the valuation methods and assumptions used by the City to estimate the fair value of its investments:

- When available, quoted process are used to determine fair value. When quoted prices in active markets are available, investments are classified within Level 1 of the fair value hierarchy.
- The City held one type of investment that is measured using Level 3 inputs, Trust Deeds. The City administers a Trust Deposit Fund that includes a Deferred Compensation Plan funded solely by the voluntary salary reductions. The Trust Deed Program is managed on a cash basis with interest posted when received and expenditures posted when paid. Trust Deed notes secured by property taken back in foreclosure and held for resale, are valued by independent real estate professionals (market approach), and trust deed notes are valued at their present value (income approach). The valuations are considered Level 3. The value of properties held for resale are reduced for cost of sales. The notes (loans) are valued based on amounts investors would likely pay for notes with interest rates ranging from 6% to 11% discounted to provide loan to values ranging from 70% to 50% depending on property type and condition, borrowers payment history, and term remaining on note.

There have been no changes in the methods and assumptions used at June 30, 2019. The methods described may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. City management believes its valuation methods are appropriate and consistent with other market participants. The use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different fair value measurement at the reporting date.

The City had the following recurring fair value measurements as of June 30, 2019:

Investment Type	Total	Level 1	Level 2	Level 3
Investment Agreements				
Bonds	$ 7,263,213	$ 7,263,213	$ -	$ -
Certificates of deposit	5,347,045	-	5,347,045	-
Equities	975,467	975,467	-	-
Trust Deeds-Def Comp	6,577,225	-	-	6,577,225
	20,162,950	$ 8,238,680	$ 5,347,045	$ 6,577,225
Investments Not Measured at Fair Value				
Demand accounts at banks	5,751,961			
Money Market at Rabobank	1,964,531			
Deposits held in trust by fiscal agent	211,813			
Money Market Funds				
Fidelity Investment MM Gov	1,754,125			
Belmont Bk + TR CO Chicago	243,808			
CELTIC BK Salt Lake City	243,844			
Third Fed Svgs + LN Assn	249,336			
Freyfus Gov Cash Management	301,112			
Capital GTY	1			
Live Oak BKG CO Wilmington	232,492			
Rabobank	2			
Insurance Reserve	413,621			
Wilmington Trust, NA	34,884,793			
Petty cash and revolving fund	15,000			
Local Agency Investment Fund	116,924,677			
Total Investments	$ 183,354,066			

5. Restricted Assets:

Cash and investments of $2,822,420 are recorded as restricted assets at June 30, 2019 as follows:

Assessment District Debt Service:		
Debt Service Fund - restricted to cover expenses of debt		$ 141,739
Non-major Capital Projects Fund:		
Restricted for debt service payments		301,112
Enterprise Fund:		
Restricted to cover expenses of debt service		
Golf Courses Fund	$ 345,748	
Sanitary Sewer	1,620,200	1,965,948
Internal Service Fund:		
Restricted for insurance claims		413,621
Total Restricted Assets		$ 2,822,420

6. Taxes Receivable:

Taxes receivable recorded in the General, Measure G & E Fund of $15,139,155 represent amounts due for the quarter ended June 30, 2019 for the following taxes:

Sales Tax	$ 5,210,929
Measure E Transaction and Use Tax	2,233,177
Measure G Transaction and Use Tax	4,484,779
Utility Users Tax	1,255,006
Franchise Tax	826,472
Transient Occupancy Tax	925,426
Other Taxes	117,350
Property Transfer Tax	86,016
Total	$ 15,139,155

7. Assessment Receivable:

Debt Service Fund – Assessments receivable recorded in the Assessment District Debt Service Fund of $5,645,000 at June 30, 2019, will be collected from property owners to retire outstanding bond principal issued for improvements in special assessment districts. Cash and investments at June 30, 2019 of $2,881,099 are available to make bond and interest payments of $893,325 that are due on September 1, 2019.

Assessment receivables in the amount of $2,140,000 are not expected to be collected within the subsequent year.

8. Due From Outside Agencies:

Due from outside agencies consists of the following:

	Federal	State	Other	Total
Governmental Activities:				
General Fund:				
Welcome Center	$ -	$ -	$ 75,000	$ 75,000
	-	-	75,000	75,000
Special Revenue Funds:				
Dept. of Housing & Urban Development:				
CDBG Improvement Program	207,362	-	-	207,362
Emergency Shelter Grant	503,196	-	-	503,196
Board of State & Community Corrections	-	-	86,259	86,259
Cable Franchise	-	-	43,899	43,899
California Highway Users Tax	-	237,217	-	237,217
County of Monterey	-	-	2,466,432	2,466,432
Department of Parks & Recreation	-	3,405	-	3,405
Federal Drug Enforcement	29,064	-	-	29,064
Federal Emergency Management Agency	163,675	-	-	163,675
National Highway Traffic Safety Administration	-	-	22,407	22,407
SB1 Road Maintenance & Rehab	-	529,491	-	529,491
U.S. Department of Justice	102,700	-	-	102,700

Total Business Type Activities	5,045,035	1,341,615	
Total Governmental & Business Activities	$35,561,330	$35,561,330	

Internal Balances - The composition of advances to/from other funds as of June 30, 2019 was as follows:

	Advances To Governmental Activities General
Advances From:	
Business Type Activities:	
Golf Course	$ 3,300,000
Downtown Parking	2,785,000
Total Business Type Activities	6,085,000
Total Primary Government	$ 6,085,000

10. Loans Receivable, Net of Allowance:

At June 30, 2019, receivables of the City's major individual funds and non-major funds taken in aggregate, including the applicable allowance for uncollectible accounts are as follows:

Type of Loan	CDBG	Low & Moderate Income Housing Asset	Total Governmental Activities	Fiduciary Funds
Housing Program Developer, rehabilitation, second mortgage and relocation loans	$ -	$ -	$ -	$ -
Loans funded by federal grants	20,933,492	-	20,933,492	-
Economic development real estate developer and other loans	-	11,590,413	11,590,413	173,900
Less: Allowance for Uncollectibles	(20,723,458)	(11,573,842)	(32,297,300)	-
Total loans, net	$ 210,034	$ 16,571	$ 226,605	$ 173,900

The City uses funds generated from the former Agency Housing Loans as well as other state and federal funding sources to offer financial assistance to qualified developers, individuals and families by providing loans at “below market” interest rates.

Typical loans and related terms are summarized as follows:

Loan Type	Interest Rates	Due
Affordable Housing	0 - 4%	up to 55 years
Multi-unit rental rehabilitation	3%	5 or more years
First time home buyer	3%	7 to 40 years
Home Improvement	3 - 6%	1 to 30 years

Loans are secured by first or second in lien-property deeds of trust except for first time homebuyer loans, which are all secured by second deeds of trust. Interest and principal are typically due in installments, except for first time homebuyer, which do not require payments until their maturity dates.

The City has also invested in multi-family rental housing projects serving low to moderate income individuals through subordinate loans with terms of up to 55 years. Generally, these loans are to be repaid through fixed payments or net cash flow payments from project operations and the term and potential risk of each loan varies. Because of the net cash flow feature of these subordinate loans, there is greater risk of variability in the timing of payments and, potentially, a lower probability of eventual repayment on these subordinate loans than on other loan types.

Accordingly, for financial statement purposes, the City has established an allowance account for these loans receivable due to the contingent nature of the repayment schedules of these loans.

11. Land and Properties Held for Resale:

Land and properties held for resale consisted of the following at June 30, 2019:

Special Revenue Fund		
137, 145 & 151 Division Street	$	850,000
Affordable Housing Fund - Central City Housing		
17 & 19 Soledad Street		370,693
9 & 11 Soledad Street		129,738
		500,431
Affordable Housing Fund -Sunset Avenue Merged Housing		
115 Division Street		335,947
123 Division Street		300,000
923 E. Market Street		521,175
		1,157,122
Total Land and Properties Held for Resale	$	2,507,553

12. Capital Assets:

Capital asset activity for the fiscal year ended June 30, 2019 was as follows:

	Balance June 30, 2018	Additions	Adjustments/ Retirements	Balance June 30, 2019
Governmental Activities				
Capital assets, not being depreciated:				
Land	$ 25,230,652	$ 996,210	$ (85,470)	$ 26,141,392

Water utility	10,045
Downtown parking	587,634
Permit Services	13,778
Total depreciation expense - business-type activities	$ 6,296,733

13. Deferred Compensation Plan:

The City has four deferred compensation plans created in accordance with Internal Revenue Code Section 457. The Small Business Job Protection Act of 1996 requires the establishment of a trust or similar vehicle to ensure that the assets of Deferred Compensation Plans under the Internal Revenue Code Section 457 are protected and used exclusively for the benefit of Plan participants and/or their beneficiaries. According to these laws the City established Employer Trust arrangements for each of the Plans before January 1, 1999.

The City has established Employer Trust agreements with ICMA Retirement Corporation, Mass Mutual Financial Group, and Central Coast Credit Union. In 1998, the City Council adopted a Resolution amending the City administered deferred compensation plans to conform to the new law protecting the plan participant assets from any claim against the City. Under the Trust arrangement, individual accounts maintained by the record-keeper used for receiving contributions and paying distributions must be subject to the Trust. The existence of the Trust does little to change the Plan structure except to add a layer of protection for money set aside for the employee against claims of the Employer's creditors. The law also allows an increase in the amount a participant may contribute to differ each year, based on changes in the consumer price index.

International City Manager's Association (ICMA) Retirement Corporation

The International City Manager's Association Retirement, Inc., Plan had 212 participants and a balance of $40,271,609 at June 30, 2019. All employees are eligible to participate through voluntary salary deduction. Some management employees participated in lieu of participation in the New York Life Retirement Program until June 19, 1995 when a qualified 401(a) retirement program was established. These assets are not reported on the City's financial statements at June 30, 2019 pursuant to the Employer Trust established by the City with ICMA Retirement Corporation during November 1997.

Trust Deed Program

The City administers a Trust Deposit Fund that includes a deferred compensation plan funded solely by the voluntary salary reductions. The goal of the Trust Deed program is to invest participants' funds in short-term deeds of trust (notes). This investment option is administered within the City of Salinas by the City's appointed administrator of the Deferred Compensation Plan. Loans are based on equity after obtaining a fee appraisal. All property is physically inspected and the loan package is reviewed and approved/disapproved by a Deferred Compensation Committee. All employees are eligible to participate. The Plan had 280 participants and a balance of $8,871,549 in net assets at June 30, 2019. The balance in these plans is available to employees only upon termination, retirement, death or unforeseen emergency. While the Employer Trust established by the City on December 15, 1998 protects these funds from creditors of the City, because the City administers the plan assets, they are included in the City's financial statements at June 30,2019.

The Trust Deed Program is managed on a cash basis with interest posted when received and expenditures posted when paid. Interest and expenditures are allocated to participants based on month end cash balances. Trust deed notes secured by property taken back in foreclosure, are reevaluated based on the current market value of the property. When the value of property taken back in foreclosure is less than the note secured by that property, the note is written-down to current market value (less foreclosure and sales expenses) of the property. Gains are recognized only when properties are sold. Gains or losses are allocated to plan participants based on month end cash balances.

As of June 30, 2019, pursuant to GASB 72, properties held for resale were valued by independent real estate professionals (market approach) and trust deed notes were valued at their present value (income approach). The valuations are considered Level 3. The value of properties held for resale are reduced for cost of sales. The notes (loans) are valued based on amounts investors would likely pay for notes with interest rates ranging from 6% to 11% discounted to provide loan to values ranging from 70% to 50% depending on property type and condition, borrowers payment history and term remaining on note. The change in net realizable values are reflected in the Statement of Changes in Net Position – Fiduciary Funds (page F-44).

Central Coast Federal Credit Union (CCFCU)

This third deferred compensation plan was established in August 1993 with Central Coast Federal Credit Union. The plan funds are backed by the full faith and credit of the U.S. Government and are also insured by the National Credit Union Administration (NCUA), an agency of the federal government for up to $250,000. Central Coast collateralizes any amounts invested in their savings accounts in excess of NCUA insurance limits in accordance with applicable law. As of June 30, 2019 there were 82 participants with a balance of $5,507,993. All employees are eligible to participate through voluntary salary deductions. The assets for this plan are not reported on the City's financial statements.

Mass Mutual Financial Group

The fourth Deferred Compensation plan was established in September 2000 with Mass Mutual Financial Group. This retirement savings plan enables employees to defer a portion of their current compensation for payment at a later date, generally retirement. Salary deferrals (or contributions) are voluntary, and are made through the ease of payroll deductions. Mass Mutual offers a variety of investment vehicles that vary in risk, term and return to the investment. These investment options are offered through a group variable annuity contract. There were 32 participants with a balance of $3,147,669 at June 30, 2019. All employees are eligible to participate through voluntary salary deductions. The assets for this plan are not reported on the City's financial statements.

14. Retirement Programs:

I. Defined Benefit Pension Plans

The City of Salinas provides defined benefit retirement program benefits through the California Public Employees' Retirement System (CalPERS) and New York Life. As of June 30, 2019, the City was contributing to agent multiple-employer defined benefit pension plans and cost-sharing multiple-employer defined benefit pension plans through CalPERS, and was also contributing to a single-employer defined benefit pension plan through New York Life.

The City's net pension liability as of June 30, 2019 is as follows (recorded as of the measurement date of June 30, 2018 and August 31, 2018):

Net Pension Liability	Governmental Activities	Business-type Activities	Total Net Pension Liability
CalPERS pension plans:			
Agent Multiple-Employer Miscellaneous	$ 26,007,838	$ 4,953,876	$ 30,961,714
Agent Multiple-Employer Safety-Police	100,313,844	-	100,313,844
Cost Sharing Multiple-Employer Safety - Fire (Tier 1 & Tier 2)	45,259,034	-	45,259,034
New York Life - Single Employer	16,095,726	-	16,095,726
Total net pension liability	$187,676,442	$ 4,953,876	$ 192,630,318

The City's deferred outflows of resources related to pensions as of June 30, 2019 is as follows (recorded as of the measurement date of June 30, 2018 and August 31, 2018):

Deferred Outflows of Resources	Governmental Activities	Business-type Activities	Total Deferred Outflows
CalPERS pension plans:			
Agent Multiple-Employer Miscellaneous	$ 7,218,070	$ 1,374,874	$ 8,592,944
Agent Multiple-Employer Safety-Police	20,418,700	-	20,418,700
Cost Sharing Multiple-Employer Safety - Fire (Tier 1 & Tier 2)	19,285,787	-	19,285,787
New York Life - Single Employer	1,357,402	-	1,357,402
Total deferred outflows of resources	$ 48,279,959	$ 1,374,874	$ 49,654,833

The City's deferred inflows of resources related to pensions as of June 30, 2019 is as follows (recorded as of the measurement date of June 30, 2018 and August 31, 2018):

Deferred Inflows of Resources	Governmental Activities	Business-type Activities	Total Deferred Inflows
CalPERS pension plans:			
Agent Multiple-Employer Miscellaneous	$ 1,075,260	$ 204,801	$ 1,280,061
Agent Multiple-Employer Safety-Police	1,748,309	-	1,748,309
Cost Sharing Multiple-Employer Safety - Fire (Tier 1 & Tier 2)	8,937,148	-	8,937,148
New York Life - Single Employer	-	-	-
Total deferred inflows of resources	$ 11,760,717	$ 204,801	$ 11,965,518

The City's total pension expenses for the fiscal year 2018-2019, including employee contributions, normal costs and annual amortization of prior service is as follows:

Pension Expense	Governmental Activities	Business-type Activities	Total Pension Expense
CalPERS pension plans:			
Agent Multiple-Employer Miscellaneous	$ 3,942,709	$ 750,992	$ 4,693,701
Agent Multiple-Employer Safety-Police	15,077,363	-	15,077,363
Cost Sharing Multiple-Employer Safety - Fire (Tier 1 & Tier 2)	8,931,916	-	8,931,916
New York Life - Single Employer	1,058,278	-	1,058,278
Total pension expense	$ 29,010,266	$ 750,992	$ 29,761,258

A. California Public Employees Retirement System

Agent Multiple-Employer Defined Benefit Pension Plan

Plan Description – All qualified permanent and probationary employees are eligible to participate in the City of Salinas' separate Safety (police) and Miscellaneous (all other) Plans, agent multiple-employer defined benefit pension plans administered by the California Public Employees' Retirement System (CalPERS), which acts as a common investment and administrative agent for its participating member employers. Benefit provisions under the Plans are established by State statute and Local Government resolution. CalPERS issues publicly available reports that include a full description of the pension plans regarding benefit provisions, assumptions and membership information that can be found on the CalPERS website.

Benefits Provided - CalPERS provides service retirement and disability benefits, annual cost of living adjustments and death benefits to plan members, who must be public employees and beneficiaries. Benefits are based on years of credited service, equal to one year of full time employment.

The City's provisions and benefits in effect at June 30, 2019, are summarized as follows:

	Miscellaneous	
Hire Date	*Prior to January 1, 2013	On or after January 1, 2013
Benefit formula	2.0% @ 55	2.0% @ 62
Benefit vesting schedule	5 years of service	5 years of service
Benefit Payments	monthly for life	monthly for life
Retirement age	50-55	52-67
Monthly benefits, as a % of eligible compensation	2.0% to 2.45%	1.0% to 2.5%
Required employee contribution rates	7.00%	6.25%
Required employer contribution rates	7.85%	7.84%

	Police	
Hire Date	*Prior to January 1, 2013	On or after January 1, 2013
Benefit formula	3.0% @ 50	2.7% @ 57
Benefit vesting schedule	5 years of service	5 years of service
Benefit Payments	monthly for life	monthly for life
Retirement age	50	52-57
Monthly benefits, as a % of eligible compensation	3.00%	2.0% to 2.7%
Required employee contribution rates	9.00%	12.00%
Required employer contribution rates	20.96%	20.96%

**Plan is closed to new members. Miscellaneous and Safety (Police) members that were CalPERS participants before January 1, 2013, with no break in service over six months, may continue in the plan.*

Employees Covered – As of June 30, 2017 (valuation date), the following employees were covered by the benefit terms for each Plan:

	Miscellaneous	Police
Inactive employees or beneficiaries currently receiving benefits	147	245
Inactive employees entitled to, but not yet receiving benefits	229	108
Active employees	294	153

Contribution Description - Section 20814(c) of the California Public Employees' Retirement Law (PERL) requires that the employer contribution rates for all public employers be determined on an annual basis by the actuary and shall be effective on the July 1 following notice of a change in the rate. Funding contributions for both Plans are determined annual on an actuarial basis as of June 30 by CalPERS. The actuarially determined rate is the estimated amount necessary to finance the costs of benefits earned by employees during the year, with an additional amount to finance any unfunded accrued liability. The City is required to contribute the difference between the actuarially determined rate and the contribution rate of employees.

Actuarial Methods and Assumptions used to determine Total Pension Liability - For the measurement period ending June 30, 2018 (the measurement date), the total pension liability was determined using the following actuarial methods and assumptions:

Valuation Date	June 30, 2017
Measurement Date	June 30, 2018
Actuarial Cost Method	Entry Age Normal Cost Method
Actuarial Assumptions	
Discount Rate	7.15%
Inflation	2.75%
Salary Increases	Varies by Entry Age and Service
Payroll Growth	3.00%
Investment Rate of Return	7.50% Net of Investment and Administrative Expenses; includes inflation
Mortality	The probabilities of mortality are based on the 2014 CalPERS Experience Study for the period from 1997 to 2011. Pre-retirement and Post-retirement mortality rates include 20 years of projected mortality improvement using Scale BB published by the Society of Actuaries.

All other actuarial assumptions used in the June 30, 2017 valuations were based on the results of a 2014 actuarial experience study for the period 1997 to 2011, including updates to salary increase, mortality and requirement rates. The Experience Study report can be found on CalPERS' website under Forms and Publications.

Change of Assumption – In 2018, demographic assumptions and inflation rate were changed in accordance to the CalPERS Experience Study and Review of Actuarial Assumptions December 2017. There were no changes in the discount rate.

Discount Rate - The discount rate used to measure the total pension liability was 7.15%. To determine whether the municipal bond rate should be used in the calculation of a discount rate for each plan, CalPERS stress tested plans that would most likely result in a discount rate that would be different from the actuarially assumed discount rate. Based on the testing, none of the tested plans run out of assets. Therefore, the current 7.15% discount rate is adequate and the use of the municipal bond rate calculations is not necessary. The long term expected discount rate of 7.15% will be applied to all plans in the Public Employees Retirement Fund (PERF). The stress test results are presented in a detailed report called "GASB Crossover Testing Report" that can be obtained from the CalPERS website.

The long-term expected rate of return on pension plan investments was determined using a building-block method in which best-estimate ranges of expected future real rates of return (expected returns, net of pension plan investment expense and inflation) are developed for each major asset class.

In determining the long-term expected rate of return, CalPERS took into account both short-term and long-term market return expectations as well as the expected pension fund cash flows. Such cash flow were developed assuming that both members and employers will make their required contributions on time and as schedule in all future years. Using historical returns of all the funds' asset classes, expected compound returns were calculated over the short-term (first 10 years) and the long-term (11-60 years) using a building-block approach. Using the expected nominal returns for both short-term and long-term, the present value of benefits was calculated for each fund. The expected rate of return was set by calculating the single equivalent expected return that arrived at the same present value of benefits for cash flows as the one calculated using both short-term and long-term returns. The expected rate of return was then set equivalent to the single equivalent rate calculated above and rounded down to the nearest one quarter of one percent.

The following table reflects long-term expected real rates of return by asset class. The rate of return was calculated using the capital market assumptions applied to determine the discount rate and asset allocation. These geometric rates of return are net of administrative expenses.

Asset class	New Strategic Allocation	Real Return Years 1-10(a)	Real Return Years 11+(b)
Global Equity	47.0%	4.90%	5.38%
Fixed income	19.0%	0.80%	2.27%
Inflation Assets	6.0%	0.60%	1.39%
Private Equity	12.0%	6.60%	6.63%
Real Estate	11.0%	2.80%	5.21%
Infrastructure and Forestland	3.0%	3.90%	5.36%
Liquidity	2.0%	-0.40%	-0.90%
Total	100.0%		

(a) An expected inflation of 2.5% used for this period
(b) An expected inflation of 3.0% used for this period

Pension Plan Fiduciary Net Position- Detailed information about each plan's fiduciary net position is available in the separately issued CalPERS financial report.

Changes in Net Pension Liability – The following tables show the changes in the net pension liability for both the City's Miscellaneous and Safety (Police) plans recognized over the measurement period:

Agent Multiple-Employer Defined Benefit Plan - Miscellaneous Plan:

	Increase (Decrease)		
	Total Pension Liability (a)	Plan Fiduciary Net Position (b)	Net Pension Liability (c) = (a) - (b)
Balance at: 6/30/2017 (MD)	$ 108,898,886	$ 78,652,937	$ 30,245,949
Changes Recognized for the Measurement Period:			
Service Cost	3,099,429	-	3,099,429
Interest on Total Pension Liability	7,806,166	-	7,806,166
Changes of Benefit Terms	-	-	-
Changes of Assumptions	(752,607)	-	(752,607)
Differences between Expected and Actual Experience	1,457,261	-	1,457,261
Plan to Plan Resource Movement	-	(199)	199
Contributions - Employer	-	3,133,948	(3,133,948)
Contributions - Employees	-	1,403,836	(1,403,836)
Net Investment Income	-	6,712,207	(6,712,207)
Benefit Payments, including Refunds of Employee Contributions	(3,952,236)	(3,952,236)	-
Administrative Expense	-	(122,563)	122,563
Other Miscellaneous Income/Expense	-	(232,745)	232,745
Net Changes during 2017-18	7,658,013	6,942,248	715,765
Balance at: 6/30/2018 (MD)	$ 116,556,899	$ 85,595,185	$ 30,961,714

Agent Multiple-Employer Defined Benefit Plan - Safety (Police) Plan:

	Increase (Decrease)		
	Total Pension Liability (a)	Plan Fiduciary Net Position (b)	Net Pension Liability (c) = (a) - (b)
Balance at: 6/30/2017 (MD)	$ 275,818,189	$ 181,063,160	$ 94,755,029
Changes Recognized for the Measurement Period:			
Service Cost	5,603,486	-	5,603,486
Interest on Total Pension Liability	19,772,458	-	19,772,458
Changes of Benefit Terms	-	-	-
Changes of Assumptions	(1,307,343)	-	(1,307,343)
Differences between Expected and Actual Experience	6,096,574	-	6,096,574
Plan to Plan Resource Movement	-	(447)	447
Contributions - Employer	-	8,260,458	(8,260,458)
Contributions - Employees	-	1,816,971	(1,816,971)
Net Investment Income	-	15,347,329	(15,347,329)
Benefit Payments, including Refunds of Employee Contributions	(13,742,608)	(13,742,608)	-
Adminstrative Expense	-	(282,146)	282,146
Other Miscellaneous Income/Expense	-	(535,805)	535,805
Net Changes during 2017-18	16,422,567	10,863,752	5,558,815
Balance at: 6/30/2018 (MD)	$ 292,240,756	$ 191,926,912	$ 100,313,844
Totals of Both Miscellaneous and Safety Plans	$ 408,797,655	$ 277,522,097	$ 131,275,558

Sensitivity of the Net Pension Liability to Changes in the Discount Rate – The following presents the net pension liability of the Plan as of the Measurement Date, calculated using the discount rate of 7.15 percent, as well as what the net pension liability would be if it were calculated using a discount rate that is 1 percentage-point lower (6.15 percent) or 1 percentage-point higher (8.15 percent) than the current rate:

	Miscellaneous	Police	Total
1% Decrease	6.15%	6.16%	6.16%
Net Pension Liability	$ 47,494,057	$ 141,323,258	$ 188,817,315
Current Discount Rate	7.15%	7.15%	7.15%
Net Pension Liability	$ 30,961,714	$ 100,313,844	$ 131,275,558
1% Increase	8.15%	8.15%	8.15%
Net Pension Liability	$ 17,326,642	$ 66,832,653	$ 84,159,295

Subsequent Events – There were no subsequent events that would materially affect the results presented in this disclosure.

Amortization of Deferred Outflows and Deferred Inflows of Resources – Under GASB 68, actuarial gains and losses related to changes in total pension liability and fiduciary net position are recognized in pension expense systematically over time.

The first amortized amounts are recognized in pension expense for the year the gain or loss occurs. The remaining amounts are categorized as deferred outflows and deferred inflows of resources related to pensions and are to be recognized in future pension expense.

The amortization period differs depending on the sources of the gain or loss:

Difference between projected and actual earnings on pension plan investment	5 year straight-line amortization
All other amounts	Straight-line amortization over the average expected remaining service lives (EARLS) of all members that are provided with benefits (active, inactive, and retired) as of the beginning of the measurement period.

Deferred outflows of resources and deferred inflows of resources relating to Differences between Expected and Actual Experience, Changes of Assumptions and employer-specific amounts should be amortized over the EARSL of members provided with pensions through the Plan. The EARSL for the miscellaneous and safety (police) plans for the June 30, 2018 measurement date are 4.7 and 3.5 years, respectively, which was obtained by dividing the total service years by the total number of participants (active, inactive, and retired) in the Plan. Inactive employees and retirees have remaining service lifetimes equal to zero. Total future service is based on the members' probability of decrementing due to an event other than receiving a cash refund.

Pension Expense and Deferred Outflows and Deferred Inflows of Resources Related to Pensions – As of the start of the measurement period (July 1, 2017), the NPL is $125,000,978.

For the measurement period ending June 30, 2018 (the measurement date), the City of Salinas recognized a pension expense of $19,771,064 for the miscellaneous and safety (police) plans.

For the measurement period ending June 30, 2018 (the measurement date), the City of Salinas reports other amounts for the miscellaneous and safety (police) plans as deferred outflow and deferred inflow of resources related to pensions as follows:

	Deferred Outflows of Resources	Deferred Inflows of Resources
Plan Contributions Subsequent to Measurement Date	$ 12,992,752	$ -
Differences between Expected and Actual Experience	5,773,990	1,314,679
Changes of Assumptions	9,593,004	1,713,691
Net Difference between Projected and Actual Earnings on Pension Plan Investments	651,898	-
	$ 29,011,644	$ 3,028,370

$12,992,752 reported as deferred outflows of resources to contributions subsequent to the measurement date will be recognized as a reduction of the net pension liability in the year ending June 30, 2020.

Amounts reported as deferred outflows of resources and deferred inflows of resources related to pensions will be recognized as pension expenses as follows:

Measurement Period Ended June 30:	Deferred (Inflows) of Resources
2019	$ 22,925,960
2020	4,723,295
2021	(1,038,798)
2022	(627,183)
2023	-
Thereafter	-
Total	$ 25,983,274

Cost-Sharing Multiple Employer Defined Benefit Pension Plan

Plan Description – All qualified permanent and probationary employees are eligible to participate in the City's separate Safety risk pool (Fire Tier 1 & Tier 2), cost-sharing multiple-employer defined benefit pension plans administered by CalPERS, which acts as a common investment and administrative agent for its participating member employers. Benefit provisions under the Plans are established by State statute and Local Government resolution. CalPERS issues publicly available reports that include a full description of the pension plans regarding benefit provisions, assumptions and membership information that can be found on the CalPERS website.

Benefits Provided - CalPERS provides service retirement and disability benefits, annual cost of living adjustments and death benefits to plan members, who must be public employees and beneficiaries. Benefits are based on years of credited service, equal to one year of full time employment.

The City's plans provisions and benefits in effect at June 30, 2019, are summarized as follows:

	Fire Tier 1	
Hire Date	*Prior to January 1, 2013	On or after January 1, 2013
Benefit formula	3.0% @ 50	2.7% @ 57
Benefit vesting schedule	5 years of service	5 years of service
Benefit Payments	monthly for life	monthly for life
Retirement age	50	52-57
Monthly benefits, as a % of eligible compensation	3.00%	2.0% to 2.7%
Required employee contribution rates	9.00%	9.00%
Required employer contribution rates	22.35%	12.78%

	Fire Tier 2	
Hire Date	*Prior to January 1, 2013	On or after January 1, 2013
Benefit formula	3.0% @ 55	2.5% @ 57
Benefit vesting schedule	5 years of service	5 years of service
Benefit Payments	monthly for life	monthly for life
Retirement age	55	52-57
Monthly benefits, as a % of eligible compensation	3.00%	2.0% to 2.7%
Required employee contribution rates	9.00%	9.00%
Required employer contribution rates	19.35%	12.78%

**Plan is closed to new members. Safety (Fire Tier 1 & Tier 2) members that were CalPERS participants before January 1, 2013, with no break in service over six months, may continue in the plan.*

Contribution Description - Section 20814(c) of the California Public Employees' Retirement Law (PERL) requires that the employer contribution rates for all public employers be determined on an annual basis by the actuary and shall be effective on the July 1 following notice of a change in the rate. The total plan contributions are determined through the CalPERS annual actuarial valuation process. The actuarially determined rate is the estimated amount necessary to finance the costs of benefits earned by employees during the year, with an additional amount to finance any unfunded accrued liability. The employer is required to contribute the difference between the actuarially determined rate and the contribution rate of employees.

The City's contribution for the safety plan were as follows:

	Fiscal Year 2018/19	Meaasurement Date 2017/18	Valuation Date 2016/17
Safety Plan (Fire)	$ 4,369,284	$ 16,741,091	$ 5,132,440
Total Contributions	$ 4,369,284	$ 16,741,091	$ 5,132,440

Pension Liabilities, Pension Expense and Deferred Outflows/Deferred Inflows of Resources Related to Pensions – As of June 30, 2019, the City reported net pension liabilities for its proportionate share of the net pension liability as of June 30, 2019 and 2018 were as follows:

	Proportionate Share of Net Pension Liability/(Asset)	
	June 30, 2019	June 30, 2018
Safety Plan (Fire)	$ 45,259,034	$ 57,529,594
Total Net Pension Liability	$ 45,259,034	$ 57,529,594

The City of Salinas' net pension liability is measured as the proportionate share of the net pension liability. The net pension liability is measured as of June 30, 2018, and the total pension liability used to calculate the net pension liability was determined by an actuarial valuation as of June 30, 2017 rolled forward to June 30, 2018 using the standard update procedures. The City of Salinas' proportion of the net pension liability was based on a projection of the City's long-term share of contributions to the pension plans relative to the projected contributions for all participating employers actuarially determined.

The City's proportionate share of the net pension liability as of June 30, 2019 and 2018 were as follows:

	Percentage Share of Risk Pool		Change:
Fiscal Year	6/30/2019	6/30/2018	Increase/(Decrease)
Measurement Date	6/30/2018	6/30/2017	
Percentage of Plan (PERF C) NPL	0.469674%	0.580096%	-0.110422%

For the year ended June 30, 2019 (measurement date June 30, 2018), the City of Salinas recognized a pension expense of $8,931,916 for the Safety Plan (Fire).

As of June 30, 2019 the City of Salinas reports deferred outflow and deferred inflow of resources related to pensions as follows:

	Deferred Outflows of Resources	Deferred Inflows of Resources
Differences between Expected and Actual Experience	$ 972,464	$ 3,689
Changes of Assumptions	4,440,701	599,130
Net Difference between Projected and Actual Earnings on Pension Plan Investments	306,425	-
Change in Employer's Proportion	-	8,334,329
Differences between the Employer's Contributions and the Employer's Proportionate Share of Contributions	9,196,913	-
Pension Contributions Subsequent to Measurement Date	4,369,284	-
Total	$ 19,285,787	$ 8,937,148

$4,369,284 reported as deferred outflows of resources to contributions subsequent to the measurement date will be recognized as a reduction of the net pension liability in the year ending June 30, 2020.

Amounts reported as deferred outflows of resources and deferred inflows of resources related to pensions will be recognized as pension expenses as follows:

Measurement Period Ended June 30:	Deferred (Inflows) of Resources
2019	$ 4,658,472
2020	2,755,373
2021	(1,121,003)
2022	(313,487)
2023	-
Thereafter	-
Total	$ 5,979,355

Actuarial Methods and Assumptions used to determine Total Pension Liability - For the measurement period ended June 30, 2018 (the measurement date), the total pension liability was determined by rolling forward the June 30, 2017 total pension liability determined in the June 30, 2017 actuarial accounting valuation. The June 30, 2018 total pension liability were based on the following actuarial methods and assumptions:

Actuarial Cost Method	Entry Age Normal in accordance with the requirements of GASB Statement No. 68
Actuarial Assumptions	
Discount Rate	7.15%
Inflation	2.75%
Salary Increases	Varies by Entry Age and Service
Mortality Rate Table (1)	Derived using CalPERS' Membership Data for all Funds
Post Retirement Benefit Increase	Contract COLA up to 2.50% until Purchasing Power Protection Allowance Floor on Purchasing Power applies

(1) The mortality table used was developed based on CalPERS-specific data. The table includes 15 years of mortality improvements using Society of Actuaries Scale 90% of scale MP 2016. For more details on this table, please refer to the December 2017 experience study report (based on CalPERS demographic data from 1997 to 2015) that can be found on the CalPERS website.

Change of Assumption – In 2018, demographic assumptions and inflation rate were changed in accordance to the CalPERS Experience Study and Review of Actuarial Assumptions December 2017. There were no changes in the discount rate.

Discount Rate - The discount rate used to measure the total pension liability for PERF C was 7.15%. The projection of cash flows used to determine the discount rate assumed that contributions from plan members will be made at the current member contribution rates and that contributions from employers will be made at statutorily required rates, actuarially determined. Based on those assumptions, the Plan's fiduciary net position was projected to be available to make all projected future benefit payments of current plan members. Therefore, the long-term expected rate of return on plan investments was applied to all periods of projected benefit payments to determine the total pension liability.

Long-term Expected Rate of Return - The long-term expected rate of return on pension plan investments was determined using a building-block method in which expected future real rates of return (expected returns, net of pension plan investment expense and inflation) are developed for each major asset class.

In determining the long-term expected rate of return, CalPERS took into account both short-term and long-term market return expectations as well as the expected pension fund cash flows. Using historical returns of all of the funds' asset classes, expected compound (geometric) returns were calculated over the short-term (first 10 years) and the long-term (11+ years) using a building-block approach. Using the expected nominal returns for both short-term and long-term, the present value of benefits was calculated for each fund. The expected rate of return was set by calculating the

rounded single equivalent expected return that arrived at the same present value of benefits for cash flows as the one calculated using both short-term and long-term returns. The expected rate of return was then set to equal to the single equivalent rate calculated above and adjusted to account for assumed administrative expenses.

The expected real rates of return by asset class can be found in CalPERS' Comprehensive Annual Financial Report (CAFR) for the fiscal year ended June 30, 2017.

Amortization of Deferred Outflows and Deferred Inflows of Resources – The Net Difference Between Projected and Actual Investment Earnings on Pension Plan Investments is amortized over a five-year period on a straight-line basis. One-fifth is recognized in pension expense during the measurement period, and the remaining Net Difference Between Projected and Actual Investment Earnings on Pension Plan Investments is amortized over the remaining amortization periods. The Net Difference Between Projected and Actual Investment Earnings on Pension Plan Investments in the Schedule of Collective Pension Amounts represents the unamortized balance relating to the current measurement period and the prior measurement periods on a net basis.

Deferred Outflows of Resources and Deferred Inflows of Resources relating to Differences Between Expected and Actual Experience and Changes of Assumptions are amortized over the Expected Average Remaining Service Lifetime (EARSL) of members provided with pensions through the Plan determined as of the beginning of the related measurement period. The EARSL for PERF C for the measurement date ending June 30, 2018 is 3.8 years, which was obtained by dividing the total service years of 516,147 (the sum of remaining service lifetimes of the active employees) by 135,474 (the total number of participants: active, inactive, and retired) in PERF C. Inactive employees and retirees have remaining service lifetimes equal to 0. Total future service is based on the members' probability of decrementing due to an event other than receiving a cash refund.

Sensitivity of Proportionate Share of Net Pension Liability (Asset) to Changes in the Discount Rate – The following presents the proportionate share of the net pension liability of the City's Plan as of the Measurement Date, calculated using the discount rate of 7.15 percent, as well as what the net pension liability would be if it were calculated using a discount rate that is 1 percentage-point lower (6.15 percent) or 1 percentage-point higher (8.15) than the current rate:

	Measurement Date June 30, 2018		
	Discount Rate		
	6.15%	7.15%	8.15%
Safety Plan (Fire)	(1% Decrease)	(Current Rate)	(1% Increase)
Net Pension Liability	$ 69,131,639	$ 45,259,034	$ 25,699,709

Pension Plan Fiduciary Net Positions – Detailed information about each plan's fiduciary net position is available in the separately issued CalPERS financial report.

Subsequent Events – There were no subsequent events that would materially affect the results presented in this disclosure.

B. New York Life Retirement Plan

Plan Description – The New York Life retirement plan is a closed single-employer defined benefit pension plan that covers Non-Public Safety Employees. The plan's benefits offers a formula of 2% @ 60 for vested employees. The Plan was established on September 1, 1954 and has been amended and restated from time to time since that date. Prior Plan amendments eliminated the six-month service requirement for entry into the plan and credited participants with up to six-months of service from hire to plan entry prior to time change. The Plan was amended and restated effective September 1, 1996 to bring the Plan into compliance with the Internal Revenue Code and Regulations promulgated thereby to provide for the City's pick-up of employee eligible participants equal to the present value of vested accrued benefits. Effective June 1, 2001, the Plan amended its benefit formula to one that uses an average salary computed from the twelve-month period, replacing the old formula that used an average salary computed from a thirty six month period. As of June 19, 1995, all new regular non-public safety employees are enrolled in CalPERS.

The City has an agreement with New York Life to hold and invest plan assets of the Retirement Plan, which covers employees other than Police and Fire. New York Life holds assets in NYL Fixed Dollar Account, NYL Mainstay Total Return Bond Fund, and NYL Guaranteed Annuity Contracts.

New York Life Guaranteed Annuity Contracts in the amount of $6,066,273 are allocated insurance contracts set up to pay benefits and accordingly are excluded from the total pension liability, and are not reported in the City's financial statements.

Employees Covered – As of September 1, 2017 (valuation date), the following employees were covered by the benefit terms for the single-employer defined benefit pension plan:

Inactive employees or beneficiaries currently receiving benefits	51
Inactive employees entitled to but not yet receiving benefits	10
Active employees	17
Total	78

Benefits - Non-Public Safety personnel benefits vest after five years of service. The vested benefit would be in the form of a pension beginning after attaining age 60 equal to the benefits accrued at time of termination, or for a reduced amount if an election is made to have payments commence before attaining the normal retirement age of 60. City employees who retire at or after age of 60 with five years of credited service are entitled to an annual retirement benefit payable monthly, as a straight line annuity, as a ten year certain and life annuity, or as a lump sum, in an amount equal to 2% of the average earnings paid to the employee during the twelve consecutive months of service with the City during which their earnings were highest, multiplied by the number of years and completed months of plan participation.

The plan allows early retirement after reaching age 55 and completing five years of plan participation. The plan also provides death and survivor benefits.

Funding Policy – The contribution requirements of Plan members and the City are established and may be amended by the City Council. Prior to January 1, 1979, participants were required to make specified levels of contributions to the plan in order to accrue benefits under the Plan. For the period commencing January 1, 1979 through December 31, 1993, there were no participants' contributions under this Plan. Since January 1, 1994, participants are required to contribute 4.5% of their compensation to the Plan. Since September 1, 1996, participant contributions are made by the City under the employee pretax pick-up provision for government-sponsored plans allowed under the Internal Revenue Code. As established in their Memorandum of Understanding document for personnel of the SEIU Blue Collar bargaining group, the City will contribute (pick-up) four and one-half percent of the employee retirement contribution.

Pension Liabilities, Pension Expense and Deferred Outflows/Deferred Inflows of Resources Related to Pensions – As of June 30, 2019 (Measurement Date - August 31, 2018), the City reported net pension liability as follows:

Measurement Date	8/31/2018	8/31/2017
Total Pension Liability (TPL)	$ 20,559,745	$ 19,778,000
Fiduciary Net Position (FNP)	4,464,019	2,660,000
Net Pension Liability (NPL)	$ 16,095,726	$ 17,118,000
Funded Status (FNP/TPL)	21.7%	13.4%

The City's net pension liability is measured as of August 31, 2018, and the total pension liability used to calculate the net pension liability was determined by an actuarial valuation as of September 1, 2017.

For the year ended June 30, 2019 (measurement date August 31, 2018), the City of Salinas recognized a pension expense of $1,058,278.

As of June 30, 2019 the City of Salinas reports deferred outflow and deferred inflow of resources related to pensions as follows:

	Deferred Outflows of Resources	Deferred Inflows of Resources
Net Difference between Projected and Actual Earnings on Pension Plan Investments	$ 543,865	$ -
Plan Contributions Subsequent to Measurement Date	813,537	-
	$ 1,357,402	$ -

$813,537 reported as deferred outflows of resources to contributions subsequent to the measurement date will be recognized as a reduction of the net pension liability in the year ending June 30, 2020.

Amounts reported as deferred outflows of resources and deferred inflows of resources related to pensions will be recognized as pension expenses as follows:

Fiscal Year Ended June 30:	Deferred (Inflows) of Resources
2019	$ 211,966
2020	165,966
2021	153,966
2022	11,967
2023	-
Thereafter	-
Total	$ 543,865

Actuarial Methods and Assumptions used to determine Total Pension Liability - For the measurement period ended August 31, 2018 (measurement date), the total pension liability was determined by using the following actuarial assumptions, applied to all periods included in the measurement:

Valuation Date	September 1, 2017			
Measurement Date	August 31, 2018			
Contribution Policy	City contributes full ADC			
Actuarial Assumptions				
Discount Rate and long-term expected rate of return on assets	3.40% at August 31, 2018 3.40% at August 31, 2017 Discount rate lower of (1) expected long-term rate of return on investments, and (2) Bond Buyer 20- Bond GO Index as of Measurement Date			
Long-Term Expected Rate of Return on Investments	3.40%			
General Inflation	2.25% per annum			
Salary Increases	2.00% per annum			
New York Life Guaranteed Annuity Contract	Value of payments expected to be made under contract excluded from TPL (contract assets not included in Fiduciary Net Position)			
Mortality, Disability, Termination	2017 IRS Combined Mortality Tables for males and females			
Mortality Improvement	Post-retirement mortality projected fully generational with Scale MP-2017			
Retirement	Age	Rate	Age	Rate
	55-56	10%	61-64	30%
	57-59	20%	65+	100%
	60	70%		
Benefit Form	Disability - Annuity for all particiapants Lump sum for all other particiapants, valued using UP-1984 Mortality Table with 1.00% interest rate			

Discount Rate – The discount rate used to measure the total pension liability was 3.40%. The discount rate is based on the expected rate of return which is lower than the 20 year municipal bond rate. The projection of cash flows used to determine the discount rate assumed that employee contributions will be made at current contribution rates and City contributions will be made at rates equal to the difference between actuarially determined contribution rates and the employee rate.

Based on those assumptions, the pension plan's fiduciary net position was not projected to be available to make all projected future benefit payments of current active and inactive employees. The City's annual contributions will be adjusted to keep the plan solvent.

Investments are with New York Life invested 99% in their Main Stay Total Return Bond Fund and 1% is in the fixed income fund with an expected rate of return of 3.4%. The rate of return was calculated based on an assumed 1.15% real rate of return with a 2.25% general inflation factor.

Change of Assumption – There were no changes in assumptions since the last measurement date August 31, 2017.

Change of Benefit Terms – There were no changes in benefit terms since the last measurement date August 31, 2017.

Changes in Net Pension Liability – The following tables show the changes in the net pension liability for the City's Single-Employer Pension Plan recognized over the measurement period:

	Increase (Decrease)		
	Total Pension Liability (a)	Plan Fiduciary Net Position (b)	Net Pension Liability (c) = (a) - (b)
Balance at: 8/31/17 (MD)	$ 19,778,000	$ 2,660,000	$17,118,000
Changes Recognized for the Measurement Period:			
Service Cost	302,184	-	302,184
Interest	679,330	-	679,330
Changes of Benefit Terms	-	-	-
Changes of Assumptions	-	-	-
Differences between Expected and Actual Experience	-	-	-
Contributions - Employer	-	1,927,686	(1,927,686)
Contributions - Employees	-	70,043	(70,043)
Net Investment Income	-	60,254	(60,254)
Benefit Payments, including refunds	(199,769)	(199,769)	-
Administrative Expense	-	(54,195)	54,195
Net Changes	781,745	1,804,019	(1,022,274)
Balance at: 8/31/18 (MD)	$ 20,559,745	$ 4,464,019	$16,095,726

Sensitivity of the Net Pension Liability to Changes in the Discount Rate – The following presents the net pension liability of the Plan as of the Measurement Date, calculated using the discount rate of 3.40 percent, as well as what the net pension liability would be if it were calculated using a discount rate that is 1 percentage-point lower (2.40 percent) or 1 percentage-point higher (4.40 percent) than the current rate:

	Measurement Date August 31, 2017 Discount		
	2.40% (1% Decrease)	3.40% (Current Rate)	4.40% (1% Increase)
Net Pension Liability	$ 17,058,347	$ 16,095,726	$ 15,267,054

Pension Plan Fiduciary Net Position- Detailed information about the pension plan's fiduciary net position as of August 31, 2018 is as follows:

	New York Life
Assets	
New York Life Fixed Dollar Account	$ 219,981
New York Life Main Stay Total Return Bond Fund	4,272,675
Total investments	4,492,656
Liabilities	
Accrued expenses	28,637
Fiduciary Net Positon	$ 4,464,019

Subsequent Events – There were no subsequent events that would materially affect the results presented in this disclosure.

C. ICMA Retirement Corporation Defined Contribution Plan

Plan Description – On June 19, 1995, the City established a qualified retirement program in accordance with Internal Revenue Code Section 401(a). This defined contribution 401(a) Money Purchase Retirement Plan was established with International City Managers Association Retirement Corporation (ICMA). Non-Public Safety Mid-Management employees that were participating in the ICMA 457 non-qualified deferred compensation plan in-lieu of participation in the New York Life Retirement Program, were required to transfer to one of the other City's three qualified retirement plans. The City's annual contribution to this plan is determined by the employer required contribution to the New York Life Plan Retirement Plan in accordance with Internal Revenue contribution limits.

Significant Accounting Policies

Basis of Accounting – Financial statements are prepared using the cash basis of accounting. Employer contributions are recognized in the period that the contributions are made.

Method Used to Value Investments – Participants direct their investments, without restriction, among various investments options available under the ICMA 401(a) Plan.

Retirement Buyback Program

During Fiscal Year 1995-96, the City established a deferred compensation retirement buyback program for Department Directors where the City contributes a flat dollar amount based on tenure with the City. The 401(a) Money Purchase Retirement Plan is administered by the ICMA Retirement Corporation. The program requires employee-matching contributions for every dollar contributed by the City. At June 30, 2019, there were 11 participants RECEIVING A TOTAL OF $92,136 in this form of benefit while there were 2 participants in the ICMA 401(a) money Purchase Plan with a City annual contribution was $15,714 while the employees had an equal mandatory matching contribution of $15,714.

15. Post Employment Benefits Other Than Pensions (OPEB):

A. General Information about the OPEB Plan

For purposes of measuring the net OPEB liability, deferred outflows of resources, and deferred inflows of resources related to OPEB, and OPEB expense, information about the fiduciary net position of the City's plan (OPEB Plan) and additions to/deductions from the OPEB Plan's fiduciary net position have been determined on the same basis.

Generally accepted accounting principles require that the reported results must pertain to liability and asset information within certain defined timeframes.

For this report, the following timeframes are used:

Valuation Date	June 30, 2017
Measurement Date	June 30, 2018
Measurement Period	July 1, 2017 to June 30, 2018
Fiscal Year End	June 30, 2019

Plan Description: The City joined the Public Employees' Medical & Hospital Care Act (PEMHCA) in 2000 for Police and Miscellaneous employees, offered through the California Public Employees' Retirement System (CalPERS). It is an agent multiple-employer plan administered by California Public Employees' Retirement System (CalPERS). The healthcare plan which provides medical insurance benefits to active and eligible retirees and their families in accordance with various labor agreements. Fire employees receive healthcare benefits for active and retiree members from a union sponsored plan.

OPEB Trust: The City joined The California Employers' Retiree Benefit Trust (CERBT) in 2011 to prefund it's OPEB liability. CERBT is an agent multiple employer defined plan for other post-employment benefits administered by CalPERS. The Plan includes participating employers of the State of California and public agencies. CalPERS is governed by a 13-member Board of Administration (the Board); two elected by CalPERS members, one elected by retired members of CalPERS, two appointed by the Governor, one public representative appointed jointly by the Speaker of the Assembly and Senate Rules Committee, and four ex-officio members: State Treasurer, State Controller, Director of California Department of Human Resources, and Designee of the State Personal Board. The Board is responsible for the management and control of CalPERS, including the exclusive control of the administration and investments of the Plan.

The plan information is as follows:

Fiscal Year End	June 30, 2019
Plan type	Agent Multiple Employer
OPEB trust	Yes
Special funding situations	No
Nonemployer contributing entities	No

Post-Employment Benefits Eligibility: The City provides post-retirement healthcare benefits to eligible employees who retire directly from the City after the age of 50 years (Age 52 for Miscellaneous PEPRA employees) and with five years of service or disability retirement. For Police and Fire Supervisors, the City pays 25% of retiree and spouse health insurance premium up to $100 per month plus PEMHCA AB2544 "unequal method" monthly benefit to retirees ($129.20 per month in 2019). The payment is made until Medicare eligibility, but no more than 10 years for non-supervisory Police retirees. For Miscellaneous employees, the City pays the PEMHCA "unequal method" monthly benefit to retirees ($129.20 per month in 2019). For IAFF (Fire employee), the City pays 25% of retiree and spouse health insurance premium up to $100 per month. The payment is made until Medicare eligibility.

Employees Covered**:** As of the June 30, 2017 actuarial valuation, the following current and former employees were covered by the benefit terms under the PEMHCA and Union Sponsor Plans:

June 30, 2019 Fiscal Year End June 30, 2018 Measurement Date	Number of Covered Participants
Inactive employees currently receiving benefits	119
Inactive employees entitled to benefits	242
Actives employees	449
Total employees	810

Contributions: The City intends to contribute to the Trust the actuarially determined contribution (ADC) net of the pay-as-you-go benefits paid annually directly from employer resources. For the fiscal year ended June 30, 2019, the City's cash contributions were $260,329 in premium payments made on behalf of retirees, $250,000 payments to the trust, and implied subsidy payments of $685,000, resulting in total payments of $1,195,329.

B. Net OPEB Liabilities, Expense, and Deferred Outflows/Inflows of Resources

Net OPEB Liability: As of the June 30, 2018 measurement date, was as follows:

Fiscal Year Ended Measurement Date	6/30/2019 6/30/2018	6/30/2018 6/30/2017
Total OPEB liability (TOL)	$ 22,499,995	$ 21,875,000
Fiduciary net position (FNP)	2,304,596	1,899,000
Net OPEB liability (NOL)	$ 20,195,399	$ 19,976,000
Funded status (FNP/TOL)	10.2%	8.7%

Actuarial Methods and Assumptions Used to Determine the OPEB Liability: The City's net OPEB liability was measured as of June 30, 2018. The total OPEB liability used to calculate the net OPEB liability was determined by an actuarial valuation dated June 30, 2017 that was rolled forward to determine the June 30, 2018 total OPEB liability based on the following significant actuarial methods and assumptions:

Measurement Date	June 30, 2018
Valuation Date	June 30, 2017
Salary increases	Aggregate - 3% Merit - CalPERS 1997-2015 experience study
Medical trend	Non-Medicare - 7.5% for 2019, decreasing to an ultimate rate of 4.0% in 2076 Medicare - 6.5% for 2019, decreasing to an ultimate rate of 4.0% in 2076
Healthcare participation	100% for Safety $100 benefit 50% for PEMHCA benefit if covered as active 10% for PEMHCA benefit if waived as active
Cap increases	None
Contribution policy	City contributes $250,000 annually, and pays benefit payments outside of trust.
Discount rate	4.95% at June 30, 2018 4.73% at June 30, 2017
Municipal Bond Rate	3.87% at June 30, 2018 (Bond Buyer 20-bond Index) 3.58% at June 30, 2017 (Bond Buyer 20-bond Index)
Expected long-term rate of return on investment	6.75%
General inflation	2.75% per annum
Retirement	CalPERS 1997-2015 experience study
Termination	CalPERS 1997-2015 experience study
Disability	CalPERS 1997-2015 experience study
Mortality	CalPERS 1997-2015 experience study
Mortality Improvement	Projected fully generation with scale MP-2017
Change of benefits terms	None

Change of assumptions: Discount rate was updated based on municipal bond rate as of measurement date and crossover test

Discount Rate: The discount rate used to measure the total OPEB liability was 4.95%. The projection of cash flows used to determine the discount rate assumed that City contributions will be made at rates equal to the actuarially determined contribution rates. Based on those assumptions, the OPEB plan's fiduciary net position was projected to be available to make all projected OPEB payments for current active and inactive employees and beneficiaries. Therefore, the long-term expected rate of return on OPEB plan investments was applied to all periods of projected benefit payments to determine the total OPEB liability.

Expected Long Rate of Return: The long-term expected rate of return on OPEB plan investments was determined using a building block method in which expected future real rates of return (expected returns, net of OPEB plan investment expense and inflation) are developed for each major asset class. These ranges are combined to produce the long-term expected rate of return by weighting the expected future real rates of return by the target asset allocation percentage and by adding expected inflation. The target allocation and best estimates of arithmetic real rates of return for each major asset class are summarized in the following table:

Asset Class/Strategy	Target Allocation*	Expected Real Rate of Return
Measurement Date	6/30/18	6/30/18
Global equity	57%	4.82%
Fixed income	27%	1.47%
TIPS	5%	1.29%
Commodities	3%	0.84%
REITs	8%	3.76%
Assumed long-term rate of inflation		2.75%
Assumed long-term investment expenses		n/a
Expected long-term net rate of return, rounded		6.75%
Discount rate**		
6/30/18		4.95%
6/30/17		4.73%

* Provided by CalPERS' Strategic Asset Allocation Analysis Overview in August 2014 – Strategy 1.

** The fiduciary net position is not projected to be sufficient to make projected benefit payments, and the plan assets are expected to be invested using the strategy to achieve the expected return.

Discount Rate Sensitivity Analysis: The following schedule shows the impact of the Net OPEB Liability if the discount rate used was 1% less than and 1% greater than the discount rate that was used (4.73%) in measuring the Net OPEB Liability.

	Discount Rate		
	3.95% (1% Decrease)	4.95% (Current Rate)	5.95% (1% Increase)
Net OPEB liability	$ 23,186,625	$ 20,195,399	$ 17,718,987

Healthcare Trend Sensitivity Analysis: The following presents the net OPEB liability of the City if it were calculated using healthcare cost trend rates that are one percentage point lower or one percentage point higher than the current rate, for measurement period ended June 30, 2018:

	Healthcare Trend Rate		
	Decrease)	Trend)	(1% Increase)
Net OPEB liability	$ 17,207,148	$ 20,195,399	$ 23,937,983

Changes in the OPEB Liability: The changes in the net OPEB liability for the City Plan are as follows:

Changes in Net OPEB Liability	Total OPEB Liability (a)	Fiduciary Net Position (b)	Net OPEB Liability (a) - (b)
Balance at June 30, 2018 (Measurement Date June 30, 2017)	$ 21,875,000	$ 1,899,000	$ 19,976,000
Changes for the year:			
Service Cost	1,085,475	-	1,085,475
Interest	1,064,391	-	1,064,391
Difference between actual and expected experience	-	-	-
Assumptions changes	(609,871)	-	(609,871)
Contributions - employer*	-	1,165,000	(1,165,000)
Contributions - employee	-	-	-
Net investment income	-	159,215	(159,215)
Benefit payments and refunds*	(915,000)	(915,000)	-
Administrative Expenses	-	(3,619)	3,619
Net Changes	624,995	405,596	219,399
Balance at June 30, 2019 (Measure Date June 30, 2018)	$ 22,499,995	$ 2,304,596	$ 20,195,399

* Includes $250,000 City contribution to trust, and $243,000 cash benefit payments and $635,000 Implied Subsidy benefit payments (both paid outside of trust).

Recognition of Deferred Outflows and Deferred Inflows of Resources: To smooth market volatility, gains and losses related to changes in total OPEB liability and fiduciary net position are recognized over nine and half years. Amounts are first recognized in OPEB expense for the year the gain or loss occurs. The remaining amounts are categorized as deferred outflows and deferred inflows of resources related to OPEB and are to be recognized in future OPEB expense.

OPEB Expense and Deferred Outflows/Inflows of Resources Related to OPEB: For the fiscal year ended June 30, 2019, the City recognized OPEB expense of $1,749,246.

As of fiscal year ended June 30, 2019, the City reported deferred outflows of resources and inflows of resources related to OPEB from the following sources:

	Deferred Outflows of Resources	Deferred Inflows of Resources
Changes of assumptions	$ -	$ 1,938,685
Net differences between projected and actual earnings on plan investment	-	55,173
Employer contributions after measurement date*	1,195,329	-
Total	$ 1,195,329	$ 1,993,858

* Contributions to trust of $250,000 plus $260,329 cash benefits and $685,000 implied subsidy paid by the City.

Deferred outflows of resources in the amount of $1,195,329 related to contributions subsequent to the measurement date and will be recognized as a reduction of the net OPEB liability during the fiscal year ending June 30, 2020. Other amounts reported as deferred inflows of resources related to OPEB will be recognized as expense as follows:

Amounts reported as deferred inflows of resources related to OPEB will be recognized as OPEB expenses as follows:

Fiscal Year ended June 30:	Deferred (Inflows) of Resources
2020	$ (267,740)
2021	(267,740)
2022	(265,740)
2023	(254,741)
2024	(250,197)
Thereafter	(687,700)
Total	$ (1,993,858)

16. Risk Management:

The City has a self-insurance program and carries excess insurance for catastrophic losses. National Casualty Company combined with Berkley National Insurance Company provides General Liability coverage up to a maximum of $15,000,000 after the self-insured retention of $1,000,000 per occurrence met. Safety National Casualty Corporation provides Worker's Compensation excess coverage with statutory coverage (pursuant to California Worker's Compensation Act) after the self-insurance retention of $1,000,000 for Public Safety and $750,000 for non Public Safety is met.

Liabilities for estimated claims payable for the self-insurance programs represent settled claims, claims incurred but not paid and claims incurred but not reported based upon past experience, modified for current trends and information. While the ultimate amount of losses incurred through June 30, 2019 is dependent on future developments, City management has determined the desired reserve level for each self-insurance program as follows and believes the estimates are adequate to cover such losses.

- Worker's Compensation insurance liability of $23,861,251 includes $18,341,749 for claims incurred but not paid and $4,585,437 for claims incurred but not reported which is based on expected claims and past claims history. At June 30, 2019, Worker's Compensation Insurance liability of $22,927,186 is reported on the statement of net position. The worker's compensation fund was established as an Internal Service Fund on July 1, 1991. The portion of the worker's compensation insurance liability since July 1, 1991, at June 30, 2019 is $20,611,511 and is reported in the Internal Service Fund; $2,315,675 of this is treated as long-term debt.
- General liability insurance liability at June 30, 2019 of $9,973,263 that is reported in the Internal Service Fund includes $9,074,452 for claims incurred but not paid and $898,811 for claims incurred but not reported which is based on expected claims and past claims history. Unreserved retained earnings is $1,921,595 at June 30, 2019 and is short the City's goal of reserving three times the self-insured retention plus full funding of all past claims history. The City's self-insured retention is $1,000,000. At June 30, 2019, the City reports a receivable of $8,000,000 due from excess insurance for amounts over the self-insurance retention.

Changes to the claims liability for fiscal year ended June 30, 2019 are as follows:

	Workers Compensation	General Liability
Beginning balance of claims liability	$ 23,861,251	$ 1,773,353
Less beginning provision for incurred but not reported claims	(4,772,250)	(900,690)
Beginning provisions for incurred but not paid claims	19,089,001	872,663
Increase (decrease) in claims incurred and reported	5,049,864	9,001,943
Claims expenses paid	(5,797,116)	(800,154)
Ending balance provision for incurred but not paid claims	18,341,749	9,074,452
Provisions for incurred but not reported claims	4,585,437	898,811
Ending balance of claims liability	$ 22,927,186	$ 9,973,263

17. Lease Obligations:

Operating Leases as Lessee

The City has commitments under various long-term operating lease agreements requiring annual rental payments, which are described as follows:

Governmental Activities – The City has ongoing commitments under operating lease agreements for business equipment, and office facilities necessary for City operations, which expire at various dates through 2024. Each governmental fund includes the expenditures related to such lease agreements. There are both cancelable and non-cancelable lease agreements. Rental expenditures reported by the General Fund and other governmental funds under these operating lease agreements for the fiscal year ended June 30, 2019 amounted to $436,007.

The future minimum lease payments anticipated under the existing lease commitments as of June 30, 2019 are as follows:

Year Ended June 30,	
2020	$ 306,900
2021	276,948
2022	71,971
2023	65,730
2024	36,157
	$ 757,706

18. Long Term Debt:

The following is a summary of Long Term Debt transactions for the fiscal year ended June 30, 2019:

	June 30, 2018	Increases	Decreases	June 30, 2019	Due Within One Year
Governmental Activities:

Certificates of Participation Bonds

Series A-1997 (Refunded by Series B-2005 in 2005 and refunded by Series B-2015 in 2015)

On October 24, 1997, the Salinas Public Financing Authority issued City of Salinas Certificates of Participation (Certificates) Series A-1997 totaling $11,960,000. The purpose of this financing was to raise money for capital improvement projects, $8,000,000 and to refund the Authority's Variable Rate Lease Revenue Bonds, which were issued to purchase the 65 W. Alisal Building. The Variable Rate Lease Revenue Bonds Series A-1997 and Series B-1997 were fully retired on

November 20, 1997. The outstanding Certificates were secured by liens on City owned assets based on the following appraised values; City Hall ($3,820,000); Public Safety Building ($1,990,000); Steinbeck Library ($2,350,000) and 65 W. Alisal Building ($2,805,000).

On September 14, 2005, the Salinas Public Financing Authority issued City of Salinas Refunding Certificates of Participation Series 2005B (1997 Capital Improvement Projects). The Refunding Certificates were issued to refund Series A-1997 Certificates. Series 2005B Refunding Certificates were issued in the amount of $11,705,000 for 24 years at 4.22%. Maximum annual debt service is $795,705. The Refunding Certificates were secured by a lien on the Salinas Community Center with an appraised value of $13,415,000. With these refunding, liens were removed from the City's Public Safety Building, 65 West Alisal Building and Steinbeck Library.

On September 1, 2015, the City issued Refunding Certificates of Participation Series 2015, in the amount of $11,440,000 at a 2.53% interest rate, to refund the outstanding portion of the 2005A Certificates of Participation (Twin Creeks) and the 2005B Certificates of Participation (Capital Improvements). Bond started September 1, 2015 and will end after 12 years on September 1, 2027.

The current refunding of the Certificates of Participation Series 2005-A (Business-type Activity) and 2005-B (Governmental Activity) reduced total debt service payments over the next 13 years by $3,184,743. This results is an economic gain (difference between the present values of the debt service payments on the old and new debt) of $1,200,896. Debt payable of $5,415,000 is recorded as Governmental Activities at June 30, 2019.

The annual debt service requirements to maturity for the certificates are as follows:

Year Ended June 30,	Principal	Interest	Total
2020	$ 570,000	$ 129,789	$ 699,789
2021	585,000	115,178	700,178
2022	600,000	100,188	700,188
2023	615,000	84,818	699,818
2024	630,000	69,069	699,069
2025 - 2029	2,415,000	114,419	2,529,419
	$ 5,415,000	$ 613,461	$ 6,028,461

Series 2018B - TRIP

On July 18, 2108, the California Statewide Communities Development Authority Transportation Revenue issued City of Salinas Certificates of Participation, Series 2018B totaling $37,500,000 at various interest rates plus premium and discounts. The purpose of this financing was to provide expedited funding for the design, acquisition, and construction of certain local roadway and street improvement projects within the jurisdiction of the City. Debt payable net of premiums and discounts of $41,456,285 is recorded as Governmental Activities at June 30, 2019.

The annual debt service requirements to maturity for the certificates are as follows:

	$ 37,500,000	$ 27,392,213	$ 64,892,213

Assessment Districts Bonds

At June 30, 2019, outstanding Assessment District Bonds totaled $5,645,000. Bonds issued for improvements in special assessment districts are liabilities of the property owners and are secured by liens against the assessed property. In the case of default, the City has the authority to advance bonds payments from the special reserve fund and to foreclosure on delinquent property. The Assessment District Reserve Fund balance is $1,802,014 at June 30, 2019.

Assessment District 2017 Act Bonds

On July 28, 2017 the City issued $4,555,000 in bonds to refinance the following special assessment district debt:

- 1998 AD 98-1 – Bella Vista III Refunding ($2,665,000)
- 2000 AD 96-2 – Acacia Park Refunding ($340,000)
- 2002 RADA – Bella Vista Refunding ($1,365,000)
- 2002 RADB – Bella Vista Refunding ($185,000)

The current refunding of the assessment districts debt reduced total debt service payments over the next 9 years by $937,889. This results in an economic gain (difference between the present values of the debt service payments on the old and new debt) of $318,303.

The refinancing was funded through a direct private placement with City National Bank. Maximum debt service is $882,065, including interest ranging from 2.3% to 2.7% for 9 years.

Annual debt service requirements to maturity for Assessment District 2017 Act Bonds are as follows:

Year Ended June 30,	Principal	Interest	Total
2020	$ 830,000	$ 63,325	$ 893,325
2021	580,000	46,215	626,215
2022	590,000	31,835	621,835
2023	430,000	19,170	449,170

2014 Lease/Purchase Agreement

The City of Salinas 2014 Lease/Purchase Agreement was issued by the Salinas Facilities Financing Authority on January 29, 2014. The financing was issued to refund the Animal Shelter COP Series A-1999 ($2,812,000) and the Monterey Street Parking Structure COP Series A-2004 ($13,253,000). The Monterey Street Parking Structure portion of the financing was issued for 20 years (ending September 1, 2033), at an average interest rate of 4.02%. Maximum annual debt service is $963,518. The annual debt service requirements for the Monterey Street Parking Structure are illustrated in the table below and are reported as Business-Type Activities.

Debt service requirements to maturity is as follows:

Year Ended June 30,	Principal	Interest	Total
2020	$ 534,000	$ 418,402	$ 952,402
2021	551,000	396,593	947,593
2022	578,000	373,900	951,900
2023	599,000	350,243	949,243
2024	625,000	325,640	950,640
2025 - 2029	3,507,000	1,224,070	4,731,070
2030 - 2034	4,281,000	443,788	4,724,788
	$ 10,675,000	$ 3,532,636	$ 14,207,636

Street Sweepers

On May 23, 2016 the City, using lease purchase financing, purchased a street sweeper. The City will make six annual payments of $59,557 at 2.87% interest. On April 6, 2017 the City, using lease purchase financing, purchased a second street sweeper. The City will make six annual payments of $58,774 at 2.57% interest. Debt payable of $334,910 is recorded in the Storm Sewer Enterprise Fund at June 30, 2019.

Debt service requirements to maturity are as follows:

2016 Street Sweeper Year Ended June 30,	Principal	Interest	Total
2020	$ 56,280	$ 3,277	$ 59,557
2021	57,895	1,662	59,557
	$ 114,175	$ 4,939	$ 119,114

2017 Street Sweeper Year Ended June 30,	Principal	Interest	Total
2020	$ 53,102	$ 5,673	$ 58,775
2021	54,466	4,308	58,774
2022	55,867	2,908	58,775
2023	57,300	1,473	58,773
	$ 220,735	$ 14,362	$ 235,097

Fire Engine

On January 21, 2014, the City, using lease purchase financing, purchased a Rosenbauer Airwolf fire engine for $398,997. The fire engine debt is funded 50% by the Airport Fund; see capital leases for governmental type activities for the remaining 50% under *Quantum Pumper Fire Engine & Rosenbauer Airwolf*. The City will make seven annual payments of $30,849 for the portion associated to business-type activities, beginning on March 1, 2015 and ending on March 1, 2021 at 2.02% interest. Debt payable of $59,877 is recorded in the Airport Fund at June 30, 2019.

Debt service requirements to maturity is as follows:

Year Ended June 30,	Principal	Interest	Total
2020	$ 29,639	$ 1,210	$ 30,849
2021	30,238	611	30,849
	$ 59,877	$ 1,821	$ 61,698

HUD Section 108 Loan

On March 28, 2015, the City entered into a contract for Loan Guarantee Assistance with the Housing and Urban Development Department (HUD), pursuant to which the City will derive funds for the purposes permitted under the agreement, and will execute one or more City Notes in the maximum aggregate principal amount of up to $9,390,000. During the fiscal year, the City executed a note numbered as B-12-MC-06-0005 (Community and Economic Development Fund – Industrial Waste Water Conveyance System Project) in the principal amount of $4,000,000. The City of Salinas has pledged current and future Community Development Block Grants (CDBG) funds as principal security for the loan. The loan carries a variable interest rate of 20 points (0.2%) above the applicable LIBOR rate. As of June 30, 2019, $2,820,000 of the loan balance is outstanding.

Debt service requirements to maturity is as follows:

Year Ended June 30,	Principal	Interest	Total
2020	$ 425,000	$ 63,947	$ 488,947
2021	442,000	55,576	497,576
2022	460,000	45,795	505,795
2023	478,000	34,535	512,535
2024	497,000	21,721	518,721
2025 - 2029	518,000	7,382	525,382
	$ 2,820,000	$ 228,956	$ 3,048,956

Bonds Payable

Certificates of Participation, Series A-1999 – Golf Courses (Portion Refunded by Series A-2005 in 2005 and refunded again by Series A-2015)

On March 16, 1999, the Salinas Public Financing Authority issued City of Salinas Certificates of Participation (Certificates) Series A-1999 totaling $14,315,000. A portion of the Certificates was allocated for the construction of an animal shelter, $1,250,338, and the balance of the Certificates, $13,064,662 was allocated for construction of the new Twin Creeks (9-hole) Golf Course, $8,221,604 and the renovation of Fairways Golf Course, $4,843,058.

On August 24, 2004, the City entered into a sublease agreement with the Monterey Peninsula Foundation and its related foundation, Future Citizens Foundation, dba the First Tee of Monterey County providing for the lease of Twin Creeks golf course to Future Citizens Foundation. As a condition of the lease, the City repaid the portion of the 1999 Certificates attributable to the Twin Creeks golf course facility (about 57.5% of the lease payments of $575,000) and refinanced that golf course portion with a new Refunding issue of Certificate of Participation.

On September 14, 2005, the Salinas Public Financing Authority issued City of Salinas Refunding Certificates of Participation Series 2005A, in the amount of $8,005,000, to refund the portion of the 1999 Certificates attributed to Twin Creeks. Refunding Certificates Series 2005A were issued for 24 years at 4.22%, and were secured by a lien on Twin Creeks golf course. The net value expense of the funding was $117,298. The refunding was completed to issue qualified 501 (c) 3 bonds to provide for the operation of Twin Creeks golf course by First Tee of Monterey County.

With the closing of this financing, the sublease agreement with First Tee of Monterey County was finalized. Annual debt service for the 2005A Certificates ($572,308) will be paid by the annual lease payments ($575,000) from Future Citizens Foundation and guaranteed by the Monterey Peninsula Foundation. As with most City issued debt, the General Fund of the City backs the new Certificates and payment of debt service is ultimately the responsibility of the City.

At the request of First Tee of Monterey County, on December 6, 2011, the City approved a sublease payment reduction from $575,000 to $125,000 (an annual reduction of $450,000). This request was the result of First Tee's significant unsustainable golf course operating losses experienced recently due to the downturn of the economy. With the goal of maintaining a quality of level of service to the thousands of golf youth participants and as the most cost effective alternative, the City Council approved the General Fund support through fiscal year 2015-16 to offset the reduced amount of the sublease to the First Tee of Monterey County.

On September 1, 2015, the City issued Refunding Certificates of Participation Series 2015, in the amount of $11,440,000 at a 2.53% interest rate, to refund the outstanding portion of the 2005A Certificates of Participation (Twin Creeks) and the 2005B Certificates of Participation (Capital Improvements). Bond started September 1, 2015 and will end after 12 years on September 1, 2027.

The current refunding of the Certificates of Participation Series 2005-A (Business-type Activity) and 2005-B (Governmental Activity) reduced total debt service payments over the next 13 years by $3,184,743. This results is an economic gain (difference between the present values of the debt service payments on the old and new debt) of $1,200,896.

Debt service requirements to maturity for the Twin Creeks Golf Course is as follows:

Year Ended June 30,	Principal	Interest	Total
2020	$ 380,000	$ 79,189	$ 459,189
2021	390,000	69,448	459,448
2022	400,000	59,455	459,455
2023	410,000	49,209	459,209
2024	420,000	38,709	458,709
2025 - 2029	1,320,000	50,600	1,370,600
	$ 3,320,000	$ 346,610	$ 3,666,610

Certificates of Participation, Series A-2008 – Fairways Golf Course

On August 2008, the City of Salinas was issued Refunding Certificates of Participation Series 2008, in the amount of $4,660,000 at a variable interest rate, to refund the outstanding portion of the 1999 Certificate pertaining to the Fairways Golf Project. Bond started September 1, 2008 and will end after 30 years on September 1, 2038. Following the execution and delivery of the Certificates of Participation Series 2008, the 1999 Certificates, attributed to the animal shelter, will remain outstanding.

The annual debt service requirements to maturity for Fairways Golf Course are as follows:

Year Ended June 30,	Principal	Interest	Total
2020	$ 80,000	$ 196,200	$ 276,200
2021	90,000	192,600	282,600
2022	105,000	188,550	293,550
2023	115,000	183,825	298,825
2024	130,000	178,650	308,650
2025 - 2029	910,000	790,425	1,700,425
2030 - 2034	1,305,000	546,750	1,851,750
2035 - 2039	1,625,000	226,125	1,851,125
	$ 4,360,000	$ 2,503,125	$ 6,863,125

Series 2012 – Sanitary Sewer Revenue Bonds

On February 8, 2012, the City of Salinas issued Sanitary Sewer System Revenue Bonds, Series 2012 in the amount of $17,995,000 to provide funds for the current refunding of the City's Sanitary Sewer System Revenue Bonds, Series 1998 and to finance capital replacement of existing sewer mains and other sewer related capital replacement. Maximum annual debt service is $1,022,406, including interest ranging from 1.0% to 4.4% for 30 years. The City is authorized under Chapter 36, Article II, Division 5 of the Salinas City Code, to levy a sewer fee for the purpose of paying sanitary sewer related expenses of the City. On January 10, 2012, the City Council approved adjustments to wastewater collection fees effective February 1, 2012 to reflect the cost of wastewater conveyance through the Enterprise and an amount to cover debt service. The fee is billed by the Monterey Regional Water Pollution Control Agency. Debt payable of $15,470,000 is recorded in the Sanitary Sewer Enterprise Fund at June 30, 2019.

Debt service requirements and maturity are as follows:

Year Ended June 30,	Principal	Interest	Total
2020	$ 405,000	$ 615,881	$ 1,020,881
2021	420,000	601,406	1,021,406
2022	430,000	584,406	1,014,406
2023	450,000	566,806	1,016,806
2024	470,000	550,756	1,020,756
2025 - 2029	2,595,000	2,485,081	5,080,081
2030 - 2034	3,155,000	1,919,872	5,074,872
2035 - 2039	3,840,000	1,207,306	5,047,306
2040 - 2044	3,705,000	323,106	4,028,106
	$ 15,470,000	$ 8,854,620	$ 24,324,620

Conduit Debt

In June of 1999, the City of Salinas issued Multifamily Housing Revenue Bonds, Series 1999A ($5,310,000 tax-exempt) and 1999A-T ($390,000 taxable) for the construction of a 132-unit senior apartment project. Twenty percent (20%) of the project is designated to be affordable to seniors. As of June 30, 2019, the total conduit debt outstanding related to these bonds is $3,700,000.

On June of 2007, the City of Salinas issued Economics Development Revenue Bonds, Series 2007A ($18,655,000 tax-exempt) and 2007B ($1,570,000 taxable) for the acquisition of a building located at 1000 Main Street in Salinas. The building is currently leased in part to the County of Monterey Department of Social Services. The project intends to provide monthly rental at below the market value rates to the County of Monterey, a one-million-dollar premise improvement allowance to the Department of Social Services to renovate and upgrade its space in the building and to generate charitable support for the County's residents. The debt was refinanced in 2016 as series 2016A and 2016B. As of June 30, 2019, total conduit debt outstanding related to the Economic Development Revenue Bonds is $17,215,000.

Pursuant to the bond purchase agreements, the City of Salinas has no obligation related to the repayment of these bonds. Accordingly, the bonds are not reported as liabilities in the City's financial statements.

19. Restricted Net Position:

The government-wide statement of net position reports $87,701,244 of restricted net position, of which enabling legislation restricts $1,620,200 represented by the net position held at the Sanitary Sewer Fund.

20. Unearned Revenues and Deferred Inflows of Resources, Net of Allowance:

Governmental funds report unearned revenues in connection with funds received, in advance for which assets recognition criteria have been met, but for which revenue recognition criteria have not been met. Receivables for revenues not considered available to liquidate liabilities of the current period are considered unavailable revenues and reported as deferred inflows of resources on the governmental funds. Unearned revenues are stated at $6,162,023, in the Government-Wide Statements. Governmental funds report $517,023 of unearned revenues and $9,744,864 of deferred inflows of resources that are not available resources.

Unearned revenues and unavailable revenues, net of allowance of the governmental activities at June 30, 2019 consist of the following:

Major funds:	
Assessment district debt service unavailable assessments receivable	$ 5,645,000
Special Construction Assistance unearned revenue	506,285
Special Construction Assistance unavailable grants receivable	897,648
Non-major funds:	
Housing and urban development unavailable housing loans	
Housing rehab loans	1,379,487
First time homebuyers loans	1,237,232
CDBG/home program deferred inflows or resources	18,316,773
Less: allowance for doubtful accounts	(20,723,458)
Net housing and urban development loans	210,034
Unavailable grants receivable	655,778
Total housing and urban development	865,812
Affordable Housing unavailable housing loans	
Low & moderate incoming housing loans	11,590,413
Less: allowance for doubtful accounts	(11,573,842)
Net affordable housing loans	16,571
Unavailable grants receivable	1,054,748
Total affordable housing	1,071,319
Grants	
Unearned revenue	10,738
Unavailable grants receivable	346,292
Total Grants	357,030
Special aviation	
Unavailable grants receivable	918,793
Total governmental activities	$ 10,261,887

21. Prior Period Adjustment:

Implementation of new accounting standard - for the fiscal year ended June 30, 2019, the City implemented the provisions of GASB No. 84 – *Fiduciary Activities*. As part of implementing the requirements, prior period adjustments totaling $1,745,506 were made to increase the City's beginning net position as of July 1, 2018 for amounts that had been previously reported as fiduciary activities. The adjustment included transfers $1,399,735 to the general fund, $326,682 to non-major special revenue funds, $2,186 to Airport, and $16,903 to Permit Services.

The provision of GASB No. 84 also added the OPEB and NYL pension trusts to the pension trust fund as of July 1, 2018 in the amounts of $2,306,078 and $3,168,639, respectively.

Correction of error - during 2019, management evaluated the unearned revenues of the non major funds and determined that $1,351,773 had met all revenue recognition criteria. As a result, management increased net position by $1,351,773. In addition, the City discovered that two fire vehicles and a police tactical vehicle had been inadvertently expensed in the prior year. A correction was made in the amount of $1,654,542 to increase the City's beginning net position as of July 1, 2018 and add the vehicles to the City's capital assets.

	Prior Period Adjustment	Implimentation of GASB 84	Correction for Unearned Revenues	Correction for Capital Assets
Net Position				
Governmental Activities	$ 4,732,732	$ 1,726,417	$ 1,351,773	$ 1,654,542

Private Purpose Trust Fund	$ (1,623,506)	$ (1,623,506)	$ -	$ -
Pension Trust Fund	$ 5,474,717	$ 5,474,717	$ -	$ -
Custodial Funds	$ (122,000)	$ (122,000)	$ -	$ -

22. Fund Balance:

It is the policy of the City to maintain a minimum reserve for a reasonable level of assurance that the City's day-to-day operations will be able to continue even if circumstances occur where revenues are insufficient to cover expenditures. The minimum reserve of the General Fund is 5% of the next year's General Fund annual budgeted operating expenditures, as calculated by the Finance Director. The minimum fund balance is shown as unassigned in the General Fund.

Fund balance for governmental funds as of June 30, 2019 consists of the following:

	General, Measure E, & Measure G	Assessment District Debt Service	Special Construction Assistance	Other Nonmajor Governmental Funds	Total

23. Encumbrance:

The City uses encumbrances to control expenditure commitments for the year and to enhance cash management. Encumbrances represent commitments related to contracts not yet performed and purchase orders not yet filled (executor contracts; and open purchase orders). Commitments for such expenditures of monies are encumbered to reserve a portion of applicable appropriations. Encumbrances still open at year end are not accounted for as expenditures and liabilities but, rather, as restricted, committed, or assigned governmental fund balance.

As of June 30, 2019, total governmental fund encumbrance balances for the City are as follows:

General Fund, Measure E, & Measure G	$	2,695,544
Special Construction Assistance		2,643,877
Nonmajor governmental funds		240,561
	$	5,579,982

24. Joint Venture – Salinas Valley Solid Waste Authority:

The Authority is a joint exercise of powers authority, created pursuant to an agreement dated as of January 1, 1997 (the "Authority Agreement) among the County of Monterey, and the cities of Salinas, Gonzales, Greenfield, Soledad, and King City (the "Members"). The Authority was established to acquire and manage the landfill assets of each member, ensure long-term landfill capacity of the Authority service area and provide a unified and coordinated solid waste management for the members.

The Authority is governed by a nine member governing board, consisting of three members of the Salinas City Council, two members of the Monterey County Board of Supervisors, and one City council member each from the cities of Gonzales, Greenfield, King City and Soledad. Pursuant to the Authority Agreement, while the City of Salinas does not have unilateral control over the activities of the Authority, the affirmative vote of at least one member of the Authority Board who is a member of the Salinas City Council is required to approve Board actions.

With the formation of the Authority, each participating jurisdiction contractually agreed to its responsibilities. In addition, the Authority adopted waste delivery agreements with each Member of the Authority. Each member has committed to deliver waste generated within its boundaries to the Authority's solid waste facilities, to direct its franchise/permitted solid waste haulers to dispose of waste at these facilities, and to pay tipping fees set by the Authority to cover all Authority-related costs.

The commitments provided by the Members are for a minimum period of 15 years (2012) from the date of the Authority Agreements. Thereafter, the agreement may be terminated under specific terms of withdrawal, which includes a majority vote of the City Council, repayment of all outstanding debt and funding of closure, post closure and site remediation costs upon withdrawal from or termination of the Authority. The members have made no equity contributions, or have sold their interest in their assets to the Authority, and there is no explicit, measurable equity interest in this joint venture.

The City had no measurable equity interest in the Authority and does not receive a share of operating results. The Authority is currently funding the closure, post closure and site remediation costs based on estimates of these future costs.

The Annual Financial Report of the Salinas Valley Solid Waste Authority is published and available from the Authority Treasurer at the Authority's Finance Department located at 128 Sun Street, Suite 101, Salinas, CA 93901.

25. Commitments and Contingent Liabilities:

Various claims and lawsuits are pending against the City. Although the outcome of those claims and lawsuits are not presently determinable, in the opinion of the City Attorney the resolution of these matters are within the self-insured retention and are not likely to have a material adverse effect on the financial condition of the City.

26. Successor Agency to the Salinas Redevelopment Agency:

Cash and Investments – Cash and investments at June 30, 2019 consisted of the following:

Cash and investments	$ 2,968,884
Restricted cash and investments	1,591,907
Total Cash and Investments	$ 4,560,791

Cash and investments of $1,591,907 recorded as restricted assets are restricted to cover debt service. These funds are held by the City's fiscal agent.

Capital Assets – The following is a summary of the Agency's capital assets at June 30, 2019:

	Balance June 30, 2018	Additions	Adjustments/ Retirements	Balance June 30, 2019

	$ 2,737,985	$ 4,540,822	$ 7,278,807

Loans and Notes Payable

Homeless Shelter Loan – Green Gold Inn

On March 7, 1995, the Salinas Redevelopment Agency – Central Agency Revitalization Project entered into a funding agreement and received a loan from the City of Salinas Community Development Block Grant Fund for the acquisition of property, Green Gold Inn at 28-32 Soledad Street, to establish a homeless center/shelter. The Agency agreed that the property would be used solely for a homeless center/shelter for a period not less than ten years. If the Agency or the organization holding title to the property disposes of the property or alters the use of the property prior to expiration of the ten year period, the Agency will reimburse the City the full amount of the current fair market value less improvement costs.

Upon completion of the ten-year period, one half of the debt, $157,500, was forgiven. Upon cessation of the homeless center/shelter operations, the City will be reimbursed the fair market value of the property less the portion of the loan paid and improvement costs.

Debt service requirements for Green Gold Inn homeless center/shelter no interest loan is as follows:

Year Ended June 30,	Principal	Interest	Total
2029-2041	$ 157,500	$ -	$ 157,500

Tax Allocation Bonds

On August 28, 1996, the former Salinas Redevelopment Agency issued $11,145,000 of Tax Allocation Bonds Series A-1996. On October 27, 1992, the former Redevelopment Agency issued $6,541,178 of Refunding Tax Allocation Bonds Series A-1992. The bonds were issued to complete project improvements in the Central Agency Revitalization Project area. The bonds were repaid from property taxes levied within the Salinas Redevelopment Agency Central City Revitalization Project through January 31, 2012, the dissolution date. This debt is now being paid with taxes received from the Redevelopment Property Tax Trust Fund in accordance with the Recognized Obligation Payments Schedule submitted by the Successor Agency and approved by the State Department of Finance.

The annual debt service requirements for the bonds at June 30, 2019 are as follows:

Year Ended	TAB Series A-1996		TAB Series A-1992	
June 30,	Principal	Interest	Principal	Interest
2020	$ 115,000	$ 99,413	$ 197,604	$ 1,019,735
2021	125,000	92,813	184,342	1,030,421
2022	130,000	85,800	172,406	1,042,860
2023	135,000	78,513	161,133	1,053,867
2024	1,360,000	37,400	-	-
	$ 1,865,000	$ 393,939	$ 715,485	$ 4,146,883

The Series A-1996 bond issue has a term bond of $4,510,000 that matures on November 1, 2023. Debt service payments beginning in fiscal year 2011-2012 are deposits into a sinking fund. The term bonds are subject to redemption prior to maturity from the sinking fund installments on each November 1 on and after November 1, 2011 without premium according to a specified schedule, which is used in these debt service requirements.

The Series A-1992 bond issue has a term bond of $2,638,475 that matures on November 1, 2022. Debt service payments beginning in fiscal year 2009-2010 are deposits into a sinking fund. The term bonds are subject to redemption prior to maturity from the sinking fund installments on each

November 1 on and after November 1, 2009 without premium according to a specified schedule that is used in these debt service requirements.

Unamortized Bond Discount

The Statement of Net position includes an unamortized bond discount of $53,511 in Debt Payable-Due in More than One Year-Net of Discounts. The 1996 Tax Allocation Revenue Bonds were sold at a discount of $249,729. The discount is being amortized over the life of the bond issue (28 years) at an annual rate of $8,919.

At June 30, 2019 the 1996 Tax Allocation Revenue Bonds unamortized discount was as followed:

	June 30, 2018	Increases	Decreases	June 30, 2019
Tax Allocation Bond, Series A-1996	$ 53,511	$ -	$ (8,919)	$ 44,592

Commitment to Monterey Street Parking Structure – In November 2001, the City Council and the Agency entered into a Disposition and Development Agreement (DDA) with Maya Cinema Holding Company LLC for the development of a 14-Screen, 2,916-seat multiplex movie theater complex on the 100 block of Main Street. To serve this and other developments within the 100 blocks, the DDA committed the City/Agency to construct a five-level, 435-space public parking structure on the corner of Monterey Street and Market Street adjacent to the National Steinbeck Center and the Maya Cineplex Theater. The public parking garage opened in June 2005, while the Maya Cinemas Multiplex was completed and opened during July 2005. During FY 2013-14 the Certificates of Participation 2004 that funded the construction of the Monterey Street Parking Structure with a balance of $13,870,000 at January 2014, was refinanced through the Salinas Facilities Financing Authority by a direct private lease placement with Western Alliance Bancorporation. Because the debt service for the 2004 Certificates was reimbursed to the City from redevelopment tax increment, the savings from the 2004 Certificates was distributed to affected taxing entities as apportioned by the County of Monterey, including a portion for the City, due to the dissolution of the City's Redevelopment Agency. With this refinancing, the average annual debt service requirement was reduced by approximately $123,000.

27. Subsequent Events:

On December 6, 2018, the City of Salinas (the "City") issued a notice of intention to withdraw from the Joint Powers Agreement (the "Agreement") between the City of Gonzales, the City of Greenfield, the City of King, the City of Soledad, and the County of Monterey, (collectively "the Authority"). Pursuant to Section 19 of the Joint Powers Agreement, the notice serves as a one-year notice. The City's notice of intent to withdraw as a member of the Authority merely served as notice to the Authority and its remaining members, and triggered a one-year period during which the Authority would be required to take action to reflect the changed membership status. The one-year mark has passed and the City is still doing further analysis on whether to withdraw from the JPA or not.

The City understands and acknowledges its obligation to continue paying its share of the 2014 Bonds as regularly scheduled and agrees to continue paying its share of the obligation after withdrawal from the Authority, should withdrawal actually occur. In addition, the City understands and acknowledges its obligation to pay its share of the Authority's legacy costs as further described in Section 19(a) of the Agreement. If the City actually withdraws from the Authority beginning in 2020 and annually thereafter the City will have to meet this obligation.

The City has evaluated subsequent events through December 12, 2019, the date these financial statements were available to be issued.

CITY OF SALINAS
Required Supplementary Information
Budgetary Policy and Control
Budgetary Information
Fiscal Year June 30, 2019

BUDGETING

The budget is prepared by the City Manager and adopted by the City Council. The City Council approves operating appropriations at the department and fund level prior to July 1, each year and may amend the budget during the fiscal year. Budgetary control is maintained at the program level. Formal budgetary integration was employed as a management control device during the fiscal year for the General Fund, Special Revenue Funds, Debt Service Funds, Capital Projects Funds, Enterprise Funds and Internal Service Funds.

Budgets are legally adopted for all Governmental and Proprietary Fund Types. Fiduciary Funds and Agency Funds have no adopted budgets because the City is only required to make payments to the extent funds are available. Agency Fund budgets that are approved by their respective governing boards are recorded in the City's accounting system.

The City Manager may transfer budget appropriations between departments and Department Directors may transfer appropriations between programs and accounts within their individual departments and divisions, but only the Council may appropriate funds from reserves or fund balances.

Budget policy excludes the use of taxes, accounts receivable, interest receivable assets and long-term advances that are not currently available resources for budget purposes. Condemnation deposits, are also excluded because they are returned upon right of way acquisition.

Expenditures may not legally exceed budgeted appropriations at the department level. Budgeted amounts shown are as originally adopted and as amended by the City Council during the year. During the year, Council amends the budget with the approval of supplemental appropriations and reviews and amends the budget at mid-year and at year-end.

Appropriations lapse at fiscal year end to the extent they have not been expended. New budget appropriations are approved for the coming year. Project-length financial plans are adopted for all capital projects funds and appropriations are carried forward until project completion. Grant funds are carried forward until the grant expires.

Encumbrances represent commitments related to unperformed contracts for goods or services. Encumbrance accounting, under which purchase orders, contracts, and other commitments for the expenditure of monies are recorded in order to reserve that portion of the applicable appropriation, is employed as an extension of formal budgetary integration in the governmental funds. Encumbrances outstanding at year-end are recorded as reservations of fund balance and do not constitute expenditures or liabilities because the commitments will be honored during the subsequent year.

On November 8, 2005, the voters of Salinas approved Measure V, a 0.50% transactions and use tax. Measure V is a general tax and is reported as part of the General Fund. The tax was effective April 1, 2005 and had an original sunset of ten (10) years. Measure V was revised by the voters on November 6, 2012 eliminating a termination date on the imposition of the tax through Measure E. The Measure E Oversight Committee is a fundamental provision of the voter-approved tax. The Mayor and City Council each annually appoints one member of the public to serve on the Oversight Committee. The committee is responsible for and overseeing the use of Measure E funds to assure consistency with the voter approved tax and the appropriated use of Measure E funds.

On November 4, 2014, the voters of Salinas approved Measure G (For a Safer Better Salinas), a 1.00% transactions and use tax. Measure G is a general tax and is reported as part of the General Fund. The tax was effective April 1, 2015 and had a sunset date of fifteen (15) years. The Measure G Oversight Committee is a fundamental provision of the voter-approved tax. The Mayor and City Council each annually appoints one member of the public to serve on the Oversight Committee. The committees' main responsibilities include the review of the auditor's report of the specific uses of Measure G funds and to issue a public report to the City Council regarding the use of revenue and such other matters as the City Council may assign.

BUDGETARY INFORMATION

The adopted FY 2018-19 budget represents the financial and organizational plan by which the policies and programs approved by the City Council will be implemented. It includes: (1) the programs, projects, services and activities to be provided during the fiscal year; (2) estimated revenues available to finance the operating plan; and (3) the estimated spending requirements of the operating plan. The City's goals and objectives identified by the City Council in the Strategic Plan thru 2019 was approved on June 14, 2016, following strategic planning sessions on January 23 and March 1, 2016 and are as follows:

- Economic Development and Prosperity
- Safe Livable Community - Salinas as a City of Peace
- Effective, Sustainable Government
- Excellent Infrastructure
- Quality of Life

On May 29, 2018, the City Council was introduced and reviewed the proposed operating budget for the City of Salinas and Successor Agency. The Salinas City Council adopted FY 2018-19 Annual Operating Budgets on June 5, 2018. Capital project budget is updated annually.

Annual budgets are prepared for General Governmental Funds, Internal Service, Enterprise Operations, Assessment and maintenance Districts, Block Grant and Home programs, certain Grant and City Agencies, Deferred Compensation and Retirement, Debt Service, Successor Agency and Capital Project Funds.

The annual appropriation resolution adopts the budget at an appropriation level by fund, with detail expenditure by departments and programs included in the budget document.

GENERAL FUND

The General Fund fund balance decreased $10,803,399 to $24,444,051, of which $6,171,019 is Non-spendable, $650,461 is committed, $10,996,190 is assigned and $6,626,381 is unassigned.

General Fund reserves have been set-aside by Council for specific purposes. Under the Reserved fund balance category, the General Fund Non-spendable fund balance of $6,626,381 includes Inventory ($11,019), Due from outside agencies ($75,000) and Advances ($6,085,000). Committed funds balance of $650,461 is designated for future encumbrances. Carryover Appropriations of $9,13,891, $2,500,000 assigned to fund the New York Life retirement account, and other purposes of $6,085,845 are under the $10,996,190 Assigned fund balance category.

The General Fund unassigned fund balance is made up of $6,830,000 is reserved for operations , $1,150,000 for the Deficit Reduction Reserve, coupled with ($1,353,619) of future funds required to meet the fund balance reserves at June 30, 2019.

MEASURE E

Measure E is a general tax (discretionary) and is reported as part of the General Fund. The Measure E fund balance increased $2,271,258 to $8,674,320, of which $152,884 is committed to future Capital Projects, $6,532,506 is assigned and $1,988,930 is unassigned. The $962,000 of Measure E unassigned fund balance is reserved for operations.

MEASURE G

Measure G is a general tax (discretionary) and is reported as part of the General Fund. The Measure G fund balance increased $3,883,908 to $19,153,870, of which $1,400,000 is Non-spendable, $4,235,330 is committed for future capital projects, $13,210,308 is assigned and $1,708,232 is unassigned. The Measure G Fund unassigned fund balance of $1,760,000 represents a modest reserve for operations at June 30, 2019.

BUDGETARY RESULTS RECONCILED TO GAAP

The budgetary process is based upon accounting for certain transactions on a basis other than the accounting principles generally accepted in the United States (GAAP) basis. The results of operations are presented in the accompanying budget and actual comparison schedules in accordance with the budgetary process (budgetary basis) to provide a meaningful comparison with the budget. The major differences between the budgetary basis actual and GAAP basis are as follows:

- Year-end encumbrances are recognized as the equivalent of expenditures in the budgetary basis financial statements, while encumbered amounts are not recognized as expenditures on the GAAP basis until the equipment, supplies, or services are received.
- Certain loan transactions are recognized as expenditures for the budgetary basis but not for the GAAP basis. When these loans are made, they are recorded as receivables for the GAAP basis and as expenditures for the budgetary basis. When loan repayments are received, they are recorded as reductions to receivables for the GAAP basis, but are recognized as revenues for the budgetary basis.
- Certain accounts such as the change in fair market value of investments included in the City's GAAP basis amounts, for which no formal budgets are prepared, are excluded from the budgetary basis financial statements.
- Certain grant revenues received in advance are recognized on the budgetary basis financial statements, but are deferred and not recognized as revenue on the GAAP basis financial statements. This process normally creates a variance in recognized revenue from the prior year to the current year.

BUDGET REVISIONS

The following is a summary of the actions taken after the approval on February 19, 2019 of the mid-year adjustments to the fiscal year 2018-19 budget:

- General Fund adjusted upwards its revenue by $1,200,000 for transient occupancy tax (TOT) and $400,000 for investment earnings. The operating budget was also increased by $1,077,814. The Capital Project budget increased in the same mid-year council action by $2,478,890 for a variety of projects.

The budget amounts presented in the accompanying schedule of revenues, expenditures, and changes in fund balances – budget and actual (budgetary basis) reflect such budget revisions.

Notes to Schedule of Changes in Net Pension Liability and Related Ratios:

Benefit Changes: The figures above do not include any liability impact that may have resulted from plan changes which occurred after the June 30, 2017 valuation date. This applies for voluntary benefit changes as well as any offers of Two Years Additional Service Credit (a.k.a. Golden Handshakes).

Changes of Assumptions: In 2018, demographic assumptions and inflation rate were changed in accordance to the CalPERS Experience Study and Review of Actuarial Assumptions December 2017. There were no changes in the discount rate. In 2017, the discount rate was reduced from 7.65 percent to 7.15 percent. In 2016, there were no changes. In 2015, amounts reported reflect an adjustment of the discount rate from 7.5 percent (net of administrative expense) to 7.65 percent (without a reduction for pension plan administrative expense.) In 2014, amounts reported were based on the 7.5 percent discount rate.

* For the year ending on the measurement date

Notes to Schedules

The actuarial methods and assumptions used to set the actuarilly determined contributions for the fiscal year 2018-19 were from the June 30, 2016 Valuations.

Actuarial Cost Method	Entry Age Normal
Amortization Method/Period	For details, see June 30, 2016 Funding Valuation Report
Asset Valuation Method	Actuarial Value of Assets. For details, see June 30, 2016 Funding Valuation Report
Inflation	2.75%
Salary Increases	Varies by Entry Age and Service
Payroll Growth	3% compounded annually
Investment Rate of Return	7.25% Net of Pension Plan Investment and Administrative Expenses; includes inflation.
Retirement Age	The probabilities of Retirement are based on the 2014 CalPERS Experience Study for the period from 1997 to 2011.
Mortality	The probabilities of mortality are based on the 2014 CalPERS Experience Study for the period from 1997 to 2011. Post-retirement mortality rates include 20 years of projected mortality improvement using Scale BB published by the Society of Actuaries.

SUPPLEMENTARY INFORMATION

This page is intentionally left blank.

NON-MAJOR GOVERNMENTAL FUNDS

SPECIAL REVENUE FUNDS

Special Revenue Funds are used to account for specific revenues that are legally restricted to expenditure for specified purposes. The Special Revenue Funds used by the City in this report are as follows:

Lighting, Landscape and Maintenance District - This fund accounts for monies received from the various maintenance districts throughout the City. Funds are used to pay for the lighting and landscape maintenance of the respective districts.

Local Public Safety Fund - This fund accounts for monies received from federal and state grants, which are expended to enhance law enforcement services.

Development Fees - This fund accounts for the fees that subdividers and developers of property are required to pay, by Resolution 3823 (N.C.S.), covering traffic impact, annexation, use of existing or new sewers, storm drains, park facilities, library facilities and street trees.

Gas Tax - This fund accounts for gas tax revenues received from State apportionments of gasoline taxes. Expenditures are restricted to street maintenance and street improvements. No expenditures are made directly from this fund, but transfers are made to the General Fund for street maintenance and engineering salaries and to the Capital Projects Fund for street improvements based on actual expenditures.

Emergency Medical Services Fund - This fund accounts for monies received from County Service Area (CSA) 74. Funds are used to purchase emergency medical and safety equipment under the capital improvement program.

Asset Seizure - This fund accounts for the proceeds from sale of assets seized primarily from illegal narcotics activity. These funds are used for law enforcement.

Traffic Safety - This fund accounts for revenues derived from traffic violations whose use is restricted by State statute for traffic safety and street maintenance purposes. No expenditures are made directly from this fund, but transfers are made to the General Fund for traffic safety expenditures and street maintenance.

Vehicle Abatement - This fund accounts for monies allocated by the State to fund the vehicle abatement program.

Recreation Parks Fund - This fund accounts for revenues received from an admission fee charge that is imposed to events held at the Salinas Sports Complex (Rodeo Grounds stadium). Funds are designated for Parks and Recreation activities.

Cable - This funds accounts for revenues received for public, educational and governmental (PEG) fees from video service providers. Its use is restricted to provide non-commercial public, educational and government channels.

Municipal Art - This fund accounts for revenues received from a 0.5% charge on certain City capital improvement projects. Funds are designated for spending on public art to be located in public places throughout the City.

Contributions and Donations - This fund accounts for contributions and donations from different individuals and agencies to the Library, Rec-Park, Fire and Police Department. Use of the funds are restricted for use of the appropriate Department.

KDF Los Padres Dev Social Services - This fund accounts for social services provided by the City of Salinas to lower income residents of the Development. On June 1, 2003, the Salinas Redevelopment Agency, the City of Salinas and the KDF Los Padres, L.P. entered into a loan agreement where loan payments will be collected annually by the City and used to provide recreational and social services to lower income residents of the Development. Term of the loan is 55 years commencing in 2006. Payment will increase by 3% annually.

Measure X Transport Safety & Inv Plan Fund - This fund accounts for revenues allocated by TAMC from the transportation sales and use tax. Expenditures are restricted to road improvements, pothole repairs, street and road maintenance, traffic deduction and regional safety, mobility and walkability.

SB1 Road Maintenance & Rehab & SB1 Traffic Congestion Relief - This fund accounts for gas tax revenues received from State apportionments of an increased tax on gasoline and a new vehicle license fee from Senate Bill 1 (SB 1), the Road Repair and Accountability Act of 2017. Expenditures are restricted to street maintenance and street improvements including facilities for bicycles and pedestrians. No expenditures are made directly from this fund, but transfers are made to the General Fund for street maintenance and engineering salaries and to the Capital Projects Fund for street improvements based on actual expenditures.

SRA Public Improvement Grant - This fund accounts for the use of monies received from proceeds of the land sale located in Main Street where the "Taylor Farms" headquarters is constructed and other properties held for re-sale.

Affordable Housing Fund - These funds are used to improve and increase the supply of low income housing within the City.

Housing and Urban Development Grant - This fund accounts for the use of community development block grant funds received from the federal government. Other revenues in this fund include repayments of commercial and residential loans and rental income from City property. Funds are used for programs or projects that increase affordable housing and benefit people with special needs such as senior and handicapped citizens.

Grants Fund - This fund accounts for various minor grants received for purposes ranging from library to police operations.

NON-MAJOR GOVERNMENTAL FUNDS

DEBT SERVICE FUNDS

Debt Service Funds are used for the accumulation and disbursement of financial resources that will be used to make principal and interest payments on general long-term debt. The debt service funds include the following debt issuances:

COP 1999 & COP 2004 Consolidation (2014) - This fund is used to accumulate funds for the payment of principal and interest on the 2014 Lease Purchase/Agreement that was issued on January 29, 2014 to refinance the portion of the 1999 Certificates of Participation that were used to finance the construction of the City Animal Shelter. Debt service for the Animal Shelter is used to finance the City's General Fund.

2018 Lease-PS Building Police - This fund is used to accumulate monies for the designing, permitting, constructing and equipping the new public safety building, including ancillary parking and related facilities, located at 312 E Alisal Street in Salinas. Salinas Public Safety Facilities Inc. (SPF) issued lease revenue bonds to finance the construction of the new building. Lease payments are made from the City's Measure G Funds.

COP 2018B T.R.I.P. Total Rd Impv - This fund is used to accumulate monies for the principal and interest payments for the Transportation Revenue COP Certificates issued to finance large scale street improvement projects. COPs will be secured by Measure X Revenues the City receives from the Transportation Agency of Monterey County (TAMC).

Energy Improvement Lease Fund - This fund is used to account for lease payments on debt incurred in fiscal year 2014-15 that funds the City's ongoing efforts to reduce energy consumption and to develop long-term cost savings through increased energy efficiency. The project will install LED lighting on street lights and parking lots in addition to building solar PV installations at the Hitchcock Road Animal Shelter, the Industrial Waste Treatment Plant, the Salinas Municipal Airport, the Permit Center, Sherwood Hall, and the Sewer Lift Station site off Work Street. The Funding came through a private placement in the amount of $21,908,000. The Debt Service repayment will be over a 17 year period at an interest rate of 3.03%.

Certificates of Participation (2005 A & B) 2015 Refunding Fund - This fund is used to accumulate funds for the payment of principal and interest on the 2005B Certificates of Participation. Proceeds were used to refund the Certificates of Participation 1997. The proceeds from the Certificates of Participation 1997 were used for capital improvements and to refund the Salinas Public Financing Authority's Variable Rate Lease Revenue Bonds that were used to purchase the 65 W. Alisal building. Debt service is financed from installment payments from the Salinas Valley Solid Waste Authority (SVSWA) for the purchase of Crazy Horse Landfill and a lease on the 65 W. Alisal Building.

2018 Lease-El Gabilan Library - This fund is used to accumulate monies for the designing, permitting, constructing and equipping the El Gabilan Library expansion, including ancillary parking, located at 1400 N Main Street in Salinas. Salinas Public Safety Facilities, Inc. (SPF) issued lease revenue bonds to facilitate the construction of the El Gabilan Library. Lease payments are made from the City's Measure E Funds.

Assessment District Administration Fund - This fund accounts for the cost of administering the City's assessment district bonds used to finance improvements within those districts. Funding is provided by an assessment equal to 5% of the assessment amount with a maximum $16 levy per parcel per bond.

Assessment District Reserve Fund - This fund accounts for the reserves on outstanding assessment districts bonds.

2019 Special Tax Bond Monte Bella - This fund is used to accumulate monies for the principal and interest payments for the 2019 Special Tax Bonds to finance the acquisition and/or construction of certain public facilities and improvements within the Community Facilities District No. 2016-1 (Monte Bella) Area No. 1.The annual levy of special taxes on that area would be used to pay for principal and interest payments on the bonds.

NON-MAJOR GOVERNMENTAL FUNDS

CAPITAL PROJECT FUNDS

Capital Projects Funds are used to account for major capital acquisition and construction activities. The Capital Projects Funds used by the City in this report are as follows:

Special Aviation Fund - This fund accounts for federal and state airport grants. Funds are used to reimburse the Capital Projects Fund for airport capital expenditures.

Assessment District Projects Fund - This fund accounts for bond proceeds from assessment districts used for capital improvements. Funds are used to reimburse the Capital Projects Fund for assessment district capital project expenditures.

2019 Spec Tax Bond Monte Bella - This fund accounts for bond proceeds from assessments from the Monte Bella District for Capital Improvements. Funds are used to reimburse the Capital Projects Fund for Monte Bella District Capital Project Expenditures.

Capital Projects - This fund accounts for all capital project expenditures. Funds are transferred in from various other funds after expenditures are made. This revolving fund was established with $2,000,000 and is used to advance capital project expenditures prior to reimbursement of Federal, State, and other construction grants and bond financing.

INTERNAL SERVICE FUNDS

Internal Service Funds are used to account for the financing of goods or services provided by one department or agency to other departments or agencies of the government and to other government units, on a cost reimbursement basis.

Risk Management Fund - This fund is used to account for the City's risk management program which administers employee benefits and the Internal Service Funds insurance programs.

General Insurance Fund - This fund is used to account for city-wide safety programs, employee assistance programs, unemployment claims, biennial physical exams, and insurance for property, fine arts, and reimbursable damages.

Workers Compensation Fund - This fund is used to account for the City's self-insured workers compensation program.

General Liability Fund - This fund is used to account for the City's self-insured general liability insurance program.

Fleet Maintenance Fund - This fund is used to account for the inspection, maintenance, and repair of all the City's vehicles and equipment.

Fiduciary Funds

PRIVATE-PURPOSE TRUST FUNDS

The private-purpose trust funds accounts for assets and activities of the dissolved Redevelopment Agency, which is accounted for in the Successor Agency Trust, and other trust arrangement not properly reported in a pension trust.

Successor Agency –

RORF - This fund accounts for all the financial activities of the Redevelopment Obligation Retirement Fund (RORF) related to the former Redevelopment Project Area in accordance with AB 1x26 and AB 1484 which unwind the Redevelopment Agency of the City of Salinas.

Administration – This fund accounts for the administrative activities of the Successor Agency to the former Salinas Redevelopment Agency which was dissolved on February 1, 2012 in accordance with AB 1x26 (enacted June 28, 2011).

Other Private Purpose Trust Funds – These funds are used to account for other trust arrangements not properly reported in a pension trust fund under which principal and income benefit individuals, private organizations, or other governments. The City accounts for the following trust funds: Community Center, Monterey Regional Water Pollution Control Agency (MRWPCA) Fees, Sales Tax, Payroll Taxes, Developer Deposits, Evidence Room, Construction Bonds, Monterey County Tourism Improvement District, Leadership Salinas, and miscellaneous.

CUSTODIAL FUNDS

Agency Funds are used to account for assets held by the City as an agent for individuals, private organizations, other governments and/or other funds. Agency Funds operate as a clearing mechanism. Cash resources are collected, held for a brief period and then distributed to the proper recipients. The City has a fiduciary responsibility for the assets, which it does not own outright.

Business Improvements District Fund - This fund accounts for the business license surcharged assessment imposed on Alisal businesses, and are used to promote and revitalize the business district. Expenditures are determined by the districts' Board of Directors and approved by the City Council.

Economic Development - This fund is used to account for the activities related to enhancing economic development in the City with the purpose of increasing employment opportunities, better paying employment, assisting local businesses to remain competitive and attracting new, desirable business and promoting expansion of tourism industry while enhancing revenue stream for the City. Fund balance was transferred to the general fund after implementation of GASB 84.

Flexible Spending - This fund is used to account for revenues resulting of employee concessions contributions used to reduce the cost of medical, vision and dental health insurance premiums.

Cafeteria Plan - This fund is used to account for the City's Cafeteria Plan for unreimbursed medical and dependent care payments (Flexible Spending Account) operated under Section 125 of the Internal Revenue Code. Pre-tax monies are deducted from employees in accordance with their Salary Redirection Agreements and used to reimburse employees for qualified unreimbursed medical and dependent care expenses after obtaining approval from the City's cafeteria plan administrator.

Downtown Community Benefit District - This fund accounts for the property assessment generated revenues imposed on the Downtown Community Benefit District. The concept is that eventually the Downtown Community Benefit District will grow and receive revenues from multiple sources within a defined boundary that can among other things, including entrepreneurial activities, special mandate, are not be excluded, and no exemptions for not-for-profit entities are being considered. It can be governed by a 501(c)3 non-profit corporation, merging the existing energies in Downtown into just one organization, rather than the 501(c)6 BID and the OSA Foundation. It can receive grants and donations, and merge these with more assessments that are powerful.

Modification to the Classification - Salary Schedule

Approve a Resolution to amend the Classification - Salary Schedule for the adjustment of temporary employee salaries to comply with the state minimum wage pursuant to SB 3 and adjust impacted classifications in the series.

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **December 17, 2019**

DEPARTMENT: **HUMAN RESOURCES DEPARTMENT**

FROM: **Marina Horta-Gallegos, Human Resources Director**

TITLE: **MODIFICATION TO THE CLASSIFICATION – SALARY SCHEDULE**

RECOMMENDED MOTION:

It is recommended that the City Council approve a Resolution to do the following: 1) amend the Classification-Salary Schedule for the adjustment of temporary employee salaries to comply with the state minimum wage pursuant to SB 3, approved April 4, 2016 and 2) adjust impacted classifications in the series.

RECOMMENDATION:

Staff recommends that the City Council approve the attached Resolution modifying the Classification – Salary Schedule to reflect the minimum wage rate of $13.00 per hour effective January 1, 2020.

BACKGROUND:

SB 3 provides for six stepped annual increases from $10.00 per hour to $15.00 per hour, between January 1, 2017 and January 1, 2022 for employers with twenty-six (26) or more employees. Consistent with the provisions of SB 3, the current rate of $12.00 per hour is increasing to $13.00 per hour effective January 1, 2020. The City of Salinas has several classifications that fall below the $13.00 per hour range. Therefore, it is necessary to take action to adjust the Classification-Salary Schedule to reflect the increase of any salary ranges that are below the $13.00 hourly rate to comply with the current state law.

The Industrial Welfare Commission (IWC) is authorized to determine minimum wages in accordance with a prescribed procedure that includes the selection of wage boards to consider and make recommendations regarding wage issues. Consistent with SB 3, the Department of Industrial Relations amended the General Minimum Wage Order, MW-2014, of the Industrial Welfare Commission with MW-2017 to be consistent with the new law.

CEQA CONSIDERATION:

Not a Project. The City of Salinas has determined that the proposed action is not a project as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines Section 15378).

STRATEGIC PLAN INITIATIVE:

The proposed action meets the Effective Sustainable Government Council goal.

DEPARTMENTAL COORDINATION:

The Human Resources and Finance Departments coordinated on this effort.

FISCAL AND SUSTAINABILITY IMPACT:

Currently, departments use temporary staff while funds are available. There may be adjustments necessary in the mid-year budget and next fiscal year's budget to reflect the increase in minimum wage for 2020 and 2021.

General Plan Amendment 2017-001 and Rezone 2017-002 located at 295 Sun Way in the P-F (Parks - Flood Plain Overlay) Zoning District

Adopt an Ordinance for Rezone 2017-002. (Second Reading)

CITY OF SALINAS
COUNCIL STAFF REPORT

DATE: **DECEMBER 3, 2019**

DEPARTMENT: **COMMUNITY DEVELOPMENT DEPARTMENT**

FROM: **MEGAN HUNTER, COMMUNITY DEVELOPMENT DIRECTOR**

THROUGH: **COURTNEY GROSSMAN, PLANNING MANAGER**

BY: **BOBBY LATINO, ASSOCIATE PLANNER**

TITLE: **GENERAL PLAN AMENDMENT 2017-001 (GPA 2017-001) AND REZONE 2017-002 (RZ 2017-002) LOCATED AT 295 SUN WAY IN THE P-F (PARKS – FLOOD PLAIN OVERLAY) ZONING DISTRICT**

RECOMMENDED MOTION:

A motion to adopt the proposed Mitigated Negative Declaration, approve a Resolution for General Plan Amendment 2017-001, and adopt an Ordinance for Rezone 2017-002.

RECOMMENDATION:

Staff recommends that the City Council affirm the findings and adopt the proposed Mitigated Negative Declaration in accordance with the California Environmental Quality Act, approve a Resolution for General Plan Amendment 2017-001, and introduce and adopt an Ordinance for Rezone 2017-002.

EXECUTIVE SUMMARY:

Simas-East Market Street LLC, Applicant and Property Owner, is requesting approval of a General Plan Amendment 2017-001 (GPA 2017-001) to change a 7.67-acre site from Park to General Commercial/Light Industrial and a Rezone 2017-002 (RZ 2017-002) to change a 7.67-acre site from Parks to Industrial - General Commercial. Following the effective date of the General Plan Amendment and Rezone, subsequent development would be subject to the City of Salinas Zoning Code.

BACKGROUND:

The General Plan identifies the site as a Park, but the grounds have been owned by a private corporation, which entered into a lease with the City of Salinas for the use as a Park in 1974 (see attached City Council Resolution No. 8514, 1974 Lease Agreement between City of Salinas and California Rodeo Association). A subsequent lease (see attached Exhibit 3 of Initial Study: City Council Resolution No. 19242) between the City of Salinas and the current property owner, Simas-

East Market Street LLC, was terminated on November 4, 2018 (see attached Exhibit 4 of Initial Study: Termination Letter for Expo Site Lease Agreement, dated January 14, 2019). Per Condition No. 6 of the lease, "upon termination of the lease agreement for any reason, Tenant agrees that it will cooperate in accomplishing a change of zoning of the leased premises to correspond with the zoning designation of other properties in the area in order to provide the Leased Premises the highest market potential possible." This General Plan Amendment and Rezone is in direct response to Condition No. 6 of the Lease; therefore, excluding this property further as a Park.

On September 12, 2019, the Traffic and Transportation Commission voted 5-1, to recommend City Council approve the General Plan Amendment (GPA 2017-001) and Rezone (RZ 2017-002) based on the Rodeo Property Traffic Impact Analysis (see attached Initial Study and Mitigated Negative Declaration).

On November 6, 2019, the Salinas Planning Commission voted 6-0, to recommended that the City Council adopt the proposed Mitigated Negative Declaration, approve General Plan Amendment 2017-001, and adopt Rezone 2017-002 (See attached Planning Commission Resolution 2019-15). Commissioner Meeks noted concerns about a lack of park space. Staff explained that the site is privately owned and that per a lease agreement between the owner and the City of Salinas, the site would be rezoned because the location is not appropriate for a park because it is surrounded by industrial uses, US 101, and PGE power lines.

DISCUSSION:

Analysis:

The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Community Design Policy CD-2.4, the requirements of the property owner and City to rezone the property in response to conditions of the lease, which encourages development of an industrial property. Consistent with Circulation Policy C-1.2 and C-2.2, the Mitigation Monitoring and Reporting Program and the proposed mitigation measures ensure traffic Level of Service (LOS) D or better for all intersections and roadways (including U.S. Highway 101). The Mitigation Monitoring and Reporting Program and the proposed mitigation measures require future development to contribute to financing of street improvements required to meet the traffic demand generated by the project consistent with Circulation Policy C-1.4. The proposed "General Commercial/Light Industrial" land use designation is not expected to result in negative impacts or conflict with surrounding properties, because future industrial uses will be compatible with neighboring uses located adjacent to the south and west. No existing residential units are located on-site, or near the site.

No specific development plan is included with this application. Future development would be subject to the City of Salinas Zoning Code including, but not limited to use classification, development standards, design standards, and performance standards.

CEQA CONSIDERATION:

The environmental impacts of the project have been analyzed in accordance with the California Environmental Quality Act (CEQA). An Initial Study was prepared to evaluate the potential impacts associated with the project. Based upon review of the Initial Study, the proposed project will not have a significant effect on the environment because the mitigation measures outlined in the proposed Mitigation Monitoring Program have been included in the project (see attached Initial Study and Mitigated Negative Declaration). The Initial Study and Mitigated Negative Declaration were routed to responsible agencies and posted at the County Clerk's Office on September 26, 2019; the deadline for comments was October 28, 2019. Action on the environmental document should precede any action on the requested permits. Monterey County Planning Department and Monterey Bay Air Resources District (MBARD) provided "No Comments" on the Mitigated Negative Declaration during the review period.

Correspondence was received from Transportation Agency for Monterey County (TAMC) (see attached). Paraphrased comments from the agencies are shown below:

1. TAMC: Consider adding a bike lane between the right turn lane and through-lane on Natividad at East Laurel Drive.

> Staff Response: The intersection of Natividad Road at East Laurel Drive is in the City's Traffic Improvement Program (Project 61). The project is responsible for payment of traffic impacts fees, which represents the project's fair-share contribution towards this improvement.

2. TAMC: Consider providing median pedestrian refuge for longer crosswalks, especially where a third lane is added.

> Staff Response: Pedestrian refuge islands will be considered where feasible at every location where project impacts require mitigation measure improvements.

STRATEGIC PLAN INITIATIVE:

The proposed General Plan Amendment and Rezone will assist the City Council's goal of Economic Diversity and Prosperity and Well Planned City and Excellent Infrastructure by facilitating an appropriate change of Land Use and Zoning designation to accommodate a privately-owned vacant lot for future development, ultimately creating jobs and business opportunities.

DEPARTMENTAL COORDINATION:

The Current Planning Division of the Community Development Department was the lead project manager for the proposed General Plan Amendment and Rezone. The Traffic and Transportation Division of the Public Works Department was instrumental in the following: review of the Traffic Impact Analysis, review of Mitigation Monitoring Program for the Mitigated Negative Declaration, and facilitation of the Traffic and Transportation Commission recommendation. The

Legal Department was instrumental in the review of the proposed Resolutions and Ordinance and provided support to the Planning Commission.

FISCAL AND SUSTAINABILITY IMPACT:

No significant impacts to the City's General Fund are anticipated with the application.

ORDINANCE NO. _____ (N.C.S.)

AN ORDINANCE AMENDING THE ZONING MAP BY RECLASSIFYING A 7.67 ACRE LOT LOCATED AT 295 SUN WAY FROM "PARK" TO "INDUSTRIAL-GENERAL COMMERCIAL" (RELATED TO GPA 2017-001)

WHEREAS, on December 3, 2019, the Salinas City Council, at the request of Simas-East Market Street LLC, Applicant/Property Owner, held a duly noticed public hearing to consider Rezone 2017-002 to change the Zoning designation of an approximate 7.67-acre lot from "Park" to "Industrial-General Commercial" located at 295 Sun Way (APN: 003-212-017-000); and

WHEREAS, on September 12, 2019, the Salinas Traffic and Transportation Commission, held a duly noticed public hearing to consider Rezone 2017-002-; and

WHEREAS, at the September 12, 2019 hearing, the Salinas Traffic and Transportation Commission considered the traffic impacts of Rezone 2017-002 and made a recommendation to City Council for approval; and

WHEREAS, on November 6, 2019, the Salinas Planning Commission, held a duly noticed public hearing to consider Rezone 2017-002; and

WHEREAS, on November 6, 2019, the Planning Commission considered a Mitigated Negative Declaration prepared for this project and independently determined that all impacts were adequately addressed in accordance with the California Environmental Quality Act; and

WHEREAS, on November 6, 2019, the Salinas Planning Commission weighed the evidence presented at said public hearing, considered the staff report, determined that positive findings could be made for approval of the project, adopted Resolution No. 2019-15 recommending adoption of the related Mitigated Negative Declaration and approval of Rezone 2017-002; and

WHEREAS, the City Council weighed the evidence presented at the December 3, 2019 public hearing, including the Staff Report which is on file at the City Clerk's Office together with the record of environmental review; and

WHEREAS, at the December 3, 2019 public hearing, the City Council reviewed and considered the information contained in the Initial Study and related environmental documents including the Mitigated Negative Declaration.

NOW, THEREFORE, BE IT RESOLVED by the Salinas City Council that Rezone 2017-002 is hereby approved, and the following finding are hereby adopted as the basis for its determination, and that the foregoing recitations are true and correct, and are included herein by reference as findings:

Rezone 2017-002:

1. **The amendment is consistent with the Salinas general plan, any applicable specific plan, and other plans and policies adopted by the Salinas city council;**

The proposed Amendment is consistent with Salinas General Plan Policies. The location is not suitable for a park because the site is surrounded by industrial uses, US 101, and PGE power lines. Consistent with Community Design Policy CD-2.4, the requirements of the property owner and City to rezone the property in response to conditions of the lease encourages the rehabilitation of an industrial property. The grounds have been owned by a private corporation, which entered into a lease with the City of Salinas for the use as a park in 1974. A subsequent lease between the City of Salinas and the current property owner, Simas-East Market Street LLC, was terminated on November 4, 2018. Per Condition No. 6 of the lease, "upon termination of the lease agreement for any reason, Tenant agrees that it will cooperate in accomplishing a change of zoning of the leased premises to correspond with the zoning designation of other properties in the area in order to provide the Leased Premises the highest market potential possible." This General Plan Amendment and Rezone is in direct response to Condition No. 6 of the Lease. The proposed Rezoning of an approximate 7.67-acre lot from "Parks" to "Industrial-General Commercial" would be consistent with adjacent uses located south and west of the project site and would allow future industrial uses and creation of jobs.

2. **The amendment will not have the effect of reversing the policies of the Salinas general plan, any applicable specific plan, and other plans and policies adopted by the Salinas city council;**

There are no policies within the Salinas General Plan that would be reversed as a result of this amendment. There are no Specific Plans or Precise Plans applicable to the site.

3. **The amendment would not create an isolated district unrelated to adjacent zoning districts;**

The proposed zoning amendment will not create an unrelated zoning district because the rezoning would extend the boundary of the existing and contiguous IGC base zoning district to include the proposed lot located at 295 Sun Way.

4. **The city has the capability to provide public utilities, roads, and services to serve the uses allowed by the proposed amendment.**

Salinas is an urbanized area and public infrastructure is presently in place to serve most uses. The proposed Rezoning would not create the need for additional infrastructure.

NOW, THEREFORE, THE SALINAS CITY COUNCIL HEREBY ORDAINS AS FOLLOWS:

SECTION 1. The City of Salinas's Zoning Map, a copy of which is on file with the City Clerk of the City of Salinas and which copy constitutes the original record, is hereby amended to reflect the following:

That certain real property located in the City of Salinas, County of Monterey, State of California, and shown and designated on that certain map attached hereto as Exhibit 1 and made a part hereof, entitled "Rezone Map – Rezone 2017-002" and which real property, approximately 7.67 acre lot (APN: 003-212-017-000) located at 295 Sun Way and now classified in the Parks (P) Zoning District, is hereby reclassified as shown on the attached "Rezone Map – Rezone 2017-002" into the Industrial-General Commercial (IGC) Zoning District.

SECTION 2. The aforesaid map and all notations, references and other information shown thereon shall be as much a part of this ordinance as if the matters and information shown on said map were fully described herein.

SECTION 3. This ordinance shall take effect and be in force thirty days from and after its adoption.

SECTION 4. The Salinas City Clerk is hereby directed to cause the following summary of the ordinance to be published by one insertion in the *The Californian*, a newspaper of general circulation published and circulated in the City of Salinas and hereby designated for that general purpose by the Salinas City Council:

> "The City of Salinas's Zoning Map has been amended by reclassifying approximately 7.67-acre lot from the Parks (P) Zoning District to the Industrial-General Commercial (IGC) Zoning District on property located at 295 Sun Way. This Ordinance goes into effect 30 days after adoption. For additional detail concerning this amendment, contact Community Development Department, 65 West Alisal Street, Salinas, CA 93901."

This ordinance was introduced and read on December 3, 2019 and passed and adopted on December 17, 2019, by the following vote:

RESOLUTION NO. _____ (N.C.S.)

RESOLUTION APPROVING AN AMENDMENT TO THE SALINAS GENERAL PLAN TO CHANGE THE GENERAL PLAN DESIGNATION OF AN EXISTING 7.67 ACRE-LOT LOCATED AT 295 SUN WAY (RELATED TO RZ 2017-002)

WHEREAS, on December 3, 2019, the Salinas City Council, at the request of the City of Salinas, Applicant/Property Owner, held a duly noticed public hearing to consider General Plan Amendment 2017-001 to change the General Plan designation of an approximate 7.67-acre lot from Park to General Commercial/Light Industrial located at 295 Sun Way (APN: 003-212-017-000); and

WHEREAS, on September 12, 2019, the Salinas Traffic and Transportation Commission, held a duly noticed public hearing to consider General Plan Amendment - GPA 2017-001; and

WHEREAS, at the September 12, 2019 hearing, the Salinas Traffic and Transportation Commission considered the traffic impacts of the General Plan Amendment 2017-001 and made a recommendation to City Council for approval; and

WHEREAS, on November 6, 2019, the Salinas Planning Commission, held a duly noticed public hearing to consider General Plan Amendment 2017-001; and

WHEREAS, the Planning Commission considered a Mitigated Negative Declaration prepared for this project and independently determined that all impacts were adequately addressed in accordance with the California Environmental Quality Act; and

WHEREAS, on November 6, 2019, the Salinas Planning Commission weighed the evidence presented at said public hearing, considered the staff report, determined that positive findings could be made for approval of the project, adopted Resolution No. 2019-15 recommending adoption of the related Mitigated Negative Declaration and approval of General Plan Amendment 2017-001; and

WHEREAS, the City Council weighed the evidence presented at said public hearing, including the Staff Report which is on file at the Community Development Department together with the record of environmental review; and

WHEREAS, the City Council has reviewed and considered the information contained in the Initial Study and related environmental documents including the Mitigated Negative Declaration; and

WHEREAS, by Resolution adopted by the City Council on December 3, 2019, the City Council adopted the Mitigated Negative Declaration prepared for General Plan Amendment 2017-001.

NOW, THEREFORE, BE IT RESOLVED by the Salinas City Council that General Plan Amendment 2017-001 is hereby approved, and the following findings are hereby adopted as the basis for its determination, and that the foregoing recitations are true and correct, and are included herein by reference as findings:

General Plan Amendment 2017-001:

1. ***The proposed general plan amendment is consistent with all other goals, policies, programs, and land uses of applicable elements of the general plan;***

   The proposed Amendment is consistent with Salinas General Plan Policies. The location is not suitable for a park because the site is surrounded by industrial uses, US 101, and PGE power lines. Consistent with Community Design Policy CD-2.4, the requirements of the property owner and City to change the designation of the property in response to conditions of the lease encourages the rehabilitation of an industrial property. The Mitigation Monitoring and Reporting Program and the proposed mitigation measures ensure traffic Level of Service (LOS) D or better for all intersections and roadways (including U.S. Highway 101) consistent with Circulation Policy C-1.2 and C-2.2. Furthermore, the Mitigation Monitoring and Reporting Program and the proposed mitigation measures will require future development to contribute to financing of street improvements required to meet the demand generated by the project consistent with Circulation Policy C-1.4. The proposed "General Commercial/Light Industrial" land use designation is not expected to result in negative impacts or conflict with surrounding properties, because future industrial uses will be compatible with neighboring uses located adjacent to the south and west.

2. ***The proposed general plan amendment promotes the public necessity, convenience, and general welfare.***

   The General Plan Amendment promotes the public necessity, convenience and general welfare because the proposal will create a General Plan and Zoning designation to allow for future development creating jobs and business opportunities.

PASSED AND APPROVED this 3rd day of December 2019, by the following vote:

MEETING MINUTES
SALINAS TRAFFIC AND TRANSPORTATION COMMISSION

The Salinas Traffic and Transportation Commission met on Thursday, September 12, 2019, at 6:00 p.m. in the City Council Rotunda, 200 Lincoln Avenue, Salinas.

1. ROLL CALL: Chairperson Hill called the meeting to order at 6:01 p.m.

PRESENT: Commissioner Brandon Hill
Commissioner John Viarengo
Commissioner Chris Flescher
Commissioner Sophia Rome
Commissioner Elias Nunez
Commissioner Jeff Davis (arrived at 6:24pm)

ABSENT: Commissioner Guadalupe Guzman-Rubio (staff received notification of Commissioner Guzman-Rubio's absence on 9/12/19)

STAFF PRESENT: James Serrano, Transportation Manager
Andrew Easterling, Traffic Engineer
Crissy White, Administrative (Recording) Secretary

2. WRITTEN COMMUNICATIONS (RECEIVED BY STAFF):
Staff received a fax related to Consent Item #19-475, which has been provided to Commissioners.

3. PUBLIC COMMUNICATIONS / COMMENTS FOR ITEMS NOT ON THIS AGENDA: NONE

4. BUSINESS

A. CONSENT AGENDA:

1. ITEM ID# 19-485: Approval of Minutes
Approve minutes of August 8, 2019 Commission meeting

2. ITEM ID# 19-475: "No Parking" Red Zones at the intersection of Archer Street and West Street

COMMISSION ACTION: Recommend City Council adopt a Resolution approving the installation of a total of 55 feet of "No Parking" Red Zones to provide sufficient sight lines

Jesse Hernandez approached the Commission to request Item #19-475 be pulled from the Consent Agenda.

DRAFT

James Serrano presented his report, on file in the Public Works Department.

Mr. Hernandez has lived in this area for several years. The biggest issue they have in this area is keeping up on the removal of abandoned vehicles. Parking congestion is being caused by parking overflow from the nearby apartment complexes. Mr. Hernandez believes installing red zones at this location will only push more vehicles down further into the neighborhood. He believes the red zones are needed more at Park and West Streets, where there are a higher number of accidents.

Commissioner Nunez mentioned a letter received from Kimberly Moore who also opposes the red parking zone installation. Commissioner Nunez asked if permit parking could be considered for this area.

James Serrano provided information regarding parking demands throughout the City. The issue at this intersection is more of a sight line distance safety measure.

Commissioner Flescher asked about collision reports at this intersection compared to other intersections on West Street.

Commissioner Rome asked if there were any other communications received from residents opposing the red zones; and if nearby Hartnell College could have an affect on the parking problem. James Serrano provided information.

Commissioner Hill discussed parking demands in this residential area and the use of garages.

Commissioner Nunez mentioned we have had a similar issue before the Commission in the past, where the Commission had to weigh a safety issue against parking demands.

COMMISSIONER ROME MADE A MOTION TO APPROVE CONSENT AGENDA ITEM #19-475 , COMMISSIONER NUNEZ SECONDED THE MOTION, COMMISSIONER VIARENGO ABSTAINED, COMMISSIONERS FLESCHER AND HILL WERE IN FAVOR, MOTION CARRIED.

**(Commissioner Jeff Davis arrived after the motion was taken for Item #19-475)*

3. ITEM ID# 19-480: Little River Drive and Manchester Drive Neighborhood Traffic Calming After Study

COMMISSION ACTION: Receive informational report on the Neighborhood Traffic Calming After Study for Little River Drive and Manchester Drive

COMMISSIONER VIARENGO MADE A MOTION TO APPROVE CONSENT AGENDA ITEM #19-485 and #19-480, COMMISSIONER NUNEZ SECONDED THE MOTION, ALL IN FAVOR, NONE OPPOSED, MOTION CARRIED.

B. CONSIDERATION AGENDA:

1. ITEM ID# 19-489: General Plan Amendment and Rezone: Rodeo Property Traffic Impact Analysis

COMMISSION ACTION: Consider recommending approval of a General Plan Amendment and Rezone change at Sun Street, adjacent to US Highway 101, based on the Rodeo Property Traffic Impact Analysis

Andrew Easterling presented his report, on file in the Public Works Department.

Commissioner Nunez asked if this development is finalized. He commented he doesn't think this area can accommodate any additional traffic.

Commissioner Davis asked about the total daily trips that would be added and mitigation that would be required.

Commissioner Hill asked about the residential traffic already in the area; the history of how this location was transferred from City property to a private development; and if there is an idea of what types of businesses would be developed in the area. Andrew Easterling and James Serrano provided information.

COMMISSIONER DAVIS MADE A MOTION TO APPROVE THE CONSIDERATION AGENDA, COMMISSIONER VIARENGO SECONDED THE MOTION, COMMISSIONER NUNEZ VOTED NO, COMMISSIONERS HILL, FLESCHER, AND ROME WERE IN FAVOR, MOTION CARRIED.

5. COMMISSIONER COMMENTS / REPORTS:

A. Commissioner Flescher asked about construction happening on Sherwood Drive, James Serrano advised he will look into work being done by PG & E.

Commissioner Flescher reported two locations that seem to be having traffic signal issues: at Davis and Rossi the signal stays green for Rossi quite a long time at night when drivers are trying to go north on Davis; on Boronda and Dartmouth the signal stays green for Dartmouth for an excessive time while cars are waiting at Boronda.

DRAFT

B. Commissioner Viarengo reported there is a traffic signal on Homestead and Alisal, headed towards Blanco, blocked by a tree branch.

C. Commissioner Davis apologized for being late to tonight's meeting.

6. ATTENDANCE AT NEXT MEETING / ADJOURNMENT: October 10, 2019

All Commissioners present plan to attend.
The meeting was adjourned at 6:52 p.m.

APPROVED:

SUBJECT: GENERAL PLAN AMENDMENT 2017-001 (GPA 2017-001) AND REZONE 2017-002 (RZ 2017-002) LOCATED AT 295 SUN WAY IN THE P-F (PARKS – FLOOD PLAIN OVERLAY) ZONING DISTRICT

RECOMMENDATION

Staff recommends that the Planning Commission affirm the findings and approve the attached Resolution recommending that the City Council adopt the proposed Mitigated Negative Declaration, approve General Plan Amendment 2017-001, and adopt Rezone 2017-002.

BACKGROUND

Simas-East Market Street LLC is requesting approval of a General Plan Amendment 2017-001 (GPA 2017-001) to change a 7.67-acre site from Park to General Commercial/Light Industrial and a Rezone 2017-002 (RZ 2017-002) to change a 7.67-acre site from Parks to Industrial - General Commercial. Following the effective date of the General Plan Amendment and Rezone, subsequent development would be subject to the City of Salinas Zoning Code.

Although the General Plan identifies the site as a Park, the grounds have been owned by a private corporation, which entered into a lease with the City of Salinas for the use as a Park in 1974 (see attached City Council Resolution No. 8514, 1974 Lease Agreement between City of Salinas and California Rodeo Association). A subsequent lease (see attached Exhibit 3 of Initial Study: City

Council Resolution No. 19242) between the City of Salinas and the current property owner, Simas-East Market Street LLC, was terminated on November 4, 2018 (see attached Exhibit 4 of Initial Study: Termination Letter for Expo Site Lease Agreement, dated January 14, 2019). Per Condition No. 6 of the lease, "upon termination of the lease agreement for any reason, Tenant agrees that it will cooperate in accomplishing a change of zoning of the leased premises to correspond with the zoning designation of other properties in the area in order to provide the Leased Premises the highest market potential possible." This General Plan Amendment and Rezone is in direct response to Condition No. 6 of the Lease; therefore, excluding this property further as a Park.

The property is located in the P (Parks) base Zoning District and F (Flood Plain Overlay) overlay Zoning District. The following provides an overview of the land uses and zoning districts adjacent to the project site:

North: U.S. 101
South: Industrial Complex / IGC-F (Industrial-General Commercial – Flood Plan Overlay)
East: U.S. 101
West: Warehousing and Storage, Limited / IGC-F (Industrial-General Commercial – Flood Plan Overlay)

Traffic and Transportation Commission Review

On September 12, 2019, the Traffic and Transportation Commission voted 5-1, to recommend City Council approve the General Plan Amendment (GPA 2017-001) and Rezone (RZ 2017-002) based on the Rodeo Property Traffic Impact Analysis (see attached Initial Study and Mitigated Negative Declaration).

ANALYSIS

General Plan Amendment and Rezone

The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Community Design Policy CD-2.4, the requirements of the property owner and City to rezone the property in response to conditions of their lease encourages the rehabilitation of an industrial property. Consistent with Circulation Policy C-1.2 and C-2.2, the Mitigation Monitoring and Reporting Program and the proposed mitigation measures ensure traffic Level of Service (LOS) D or better for all intersections and roadways (including U.S. Highway 101). The Mitigation Monitoring and Reporting Program and the proposed mitigation measures require future development to contribute to financing of street improvements required to meet the demand generated by the project consistent with Circulation Policy C-1.4. The proposed "General Commercial/Light Industrial" land use designation is not expected to result in negative impacts or conflict with surrounding properties, because future industrial uses will be compatible with neighboring uses

located adjacent to the south and west. No existing residential units are located on-site, or near the site.

No specific development plan is included with this application. Future development would be subject to the City of Salinas Zoning Code including, but not limited to use classification, development standards, design standards, and performance standards.

ENVIRONMENTAL REVIEW

The environmental impacts of the project have been analyzed in accordance with the California Environmental Quality Act (CEQA). An Initial Study was prepared to evaluate the potential impacts associated with the project. Based upon review of the Initial Study, the proposed project will not have a significant effect on the environment because the mitigation measures outlined in the proposed Mitigation Monitoring Program have been included in the project (see attached Initial Study and Mitigated Negative Declaration). The Initial Study and Mitigated Negative Declaration were routed to responsible agencies and posted at the County Clerk's Office on September 26, 2019; the deadline for comments was October 28, 2019. Action on the environmental document should precede any action on the requested permits. Monterey County Planning Department and Monterey Bay Air Resources District (MBARD) provided "No Comments" on the Mitigated Negative Declaration during the review period.

Correspondence was received from Transportation Agency for Monterey County (TAMC) (see attached). Paraphrased comments from the agencies are shown below:

1. TAMC: Consider adding a bike lane between the right turn lane an through-lane on Natividad at East Laurel Drive.

    Staff Response: The intersection of Natividad Road at East Laurel Drive is in the City's Traffic Improvement Program (Project 61). The project is responsible for payment of traffic impacts fees, which represents the project's fair-share contribution towards this improvement.

2. TAMC: Consider providing median pedestrian refuge for longer crosswalks, especially where a third lane is added.

    Staff Response: Pedestrian refuge islands will be considered where feasible at every location where project impacts require mitigation measure improvements.

FINDINGS

Mitigated Negative Declaration:

Prior to taking action on the requested General Plan Amendment and Rezone, the

Planning Commission will need to confirm that the proposed environmental document is adequate for the proposed project by establishing the findings set forth in the attached Planning Commission Resolution.

General Plan Amendment/Rezone:

The Planning Commission may recommend approval of a General Plan Amendment and Rezone if all of the findings set forth in the attached Planning Commission Resolution are established. Per Zoning Code Section 37-60.920(d)(2), an affirmative vote of a majority (no less than four (4) votes) of the Planning Commission is required for the Commission to make a recommendation of the General Plan Amendment to the City Council.

TIME CONSIDERATION

The proposed project includes requests for a General Plan Amendment and a Rezone, which are both legislative acts and are not subject to the Permit Streamlining Act (PSA).

ALTERNATIVES AVAILABLE TO THE COMMISSION

The Planning Commission has the following alternatives:

1. Affirm the findings set forth in the attached Resolution, recommending that the City Council adopt the Mitigated Negative Declaration and approve General Plan Amendment 2017-001 and Rezone 2017-002 with modifications; or

2. Find that the proposal applications are not appropriate and establish findings at the public hearing recommending that the City Council deny General Plan Amendment 2017-001 and Rezone 2017-002.

CONCLUSION

The proposed General Plan Amendment and Rezone will be consistent with General Plan and Zoning Code policies. Approval will provide additional industrial opportunities in Salinas with no negative impacts to surrounding properties. The Initial Study and Mitigated Negative Declaration did not identify significant environmental impacts.

SALINAS PLANNING COMMISSION
RESOLUTION NO. 2019-15

Resolution Recommending to the Salinas City Council Approval of an Amendment to the Salinas General Plan to Change the General Plan Land Use Designation and the Zoning District Boundaries Located at 295 Sun Way
(GPA 2017-001 and RZ 2017-002)

WHEREAS, on November 6, 2019, the Salinas Planning Commission, at the request of the Applicant/Property Owner, Simas-East Market Street LLC, held a duly noticed public hearing to consider General Plan Amendment 2017-001 (GPA 2017-001) to change a 7.67-acre site from Park to General Commercial/Light Industrial and a Rezone 2017-002 (RZ 2017-002) to change a 7.67-acre site from Parks to Industrial - General Commercial located at 295 Sun Way (Assessor's Parcel Number 003-212-017-000); and

WHEREAS, the Planning Commission weighed the evidence presented at said public hearing, including the Staff Report which is on file at the Community Development Department together with the record of environmental review; and

WHEREAS, the Planning Commission has reviewed and considered the information contained in the Initial Study and related environmental documents including the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program.

NOW, THEREFORE, BE IT RESOLVED by the Salinas Planning Commission that it recommends that the City Council adopt the proposed Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program and approve General Plan Amendment 2017-001 and Rezone 2017-002 and adopts the following findings as the basis for its determination, and that the foregoing recitations are true and correct, and are included herein by reference as findings:

For the Mitigated Negative Declaration:

The Planning Commission hereby finds that a Mitigated Negative Declaration (MND) has been prepared with respect to the project in compliance with the California Environmental Quality Act (CEQA) of 1970, as amended, and the guidelines promulgated thereunder. Further, this Commission has independently reviewed and considered the information contained in the Initial Study and related environmental documents, together with the comments received during the public review process. On the basis of the whole record before it, ***the Commission finds that, with the conditions of approval and the proposed mitigation measures, there is no substantial evidence that the project will have a significant effect on the environment and that the MND reflects the Commission's independent judgment and analysis.*** *On this basis, the Commission adopts the Mitigated Negative Declaration and Mitigation Monitoring and Reporting Program.*

The environmental impacts of the project have been analyzed in accordance with the California Environmental Quality Act (CEQA). An Initial Study was prepared to evaluate the potential impacts associated with the project. Based upon review of the Initial Study, the proposed project will not have a significant effect on the environment because the mitigation

measures outlined in the proposed Mitigation Monitoring Program have been included in the project (see attached Initial Study and Mitigated Negative Declaration). The Initial Study and Mitigated Negative Declaration were routed to responsible agencies (including State Clearinghouse) and posted at the County Clerk's Office on September 26, 2019; the deadline for comments was October 28, 2019. Monterey County Planning Department and Monterey Bay Air Resources District (MBARD) provided "No Comments" on the Mitigated Negative Declaration during the review period.

Correspondence was received from Transportation Agency for Monterey County (TAMC). Paraphrased comments from the agencies are shown below:

1. TAMC: Consider adding a bike lane between the right turn lane an through-lane on Natividad at East Laurel Drive.

Staff Response: The intersection of Natividad Road at East Laurel Drive is in the City's Traffic Improvement Program (Project 61). The project is responsible for payment of traffic impacts fees, which represents the project's fair-share contribution towards this improvement.

2. TAMC: Consider providing median pedestrian refuge for longer crosswalks, especially where a third lane is added.

Staff Response: Pedestrian refuge islands will be considered where feasible at every location where project impacts require mitigation measure improvements.

For the General Plan Amendment:

1. ***The proposed general plan amendment is consistent with all other goals, policies, programs, and land uses of applicable elements of the general plan;***

The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Community Design Policy CD-2.4, the requirements of the property owner and City to rezone the property in response to conditions of their lease encourages the rehabilitation of an industrial property. The Mitigation Monitoring and Reporting Program and the proposed mitigation measures ensure traffic Level of Service (LOS) D or better for all intersections and roadways (including U.S. Highway 101) consistent with Circulation Policy C-1.2 and C-2.2. Furthermore, the Mitigation Monitoring and Reporting Program and the proposed mitigation measures will require future development to contribute to financing of street improvements

required to meet the demand generated by the project consistent with Circulation Policy C-1.4. The proposed "General Commercial/Light Industrial" land use designation is not expected to result in negative impacts or conflict with surrounding properties, because future industrial uses will be compatible with neighboring uses located adjacent to the south and west.

2. ***The proposed general plan amendment promotes the public necessity, convenience, and general welfare.***

   The General Plan Amendment promotes the public necessity, convenience and general welfare because the proposal will create a General Plan and Zoning designation to allow for future development creating jobs and business opportunities.

For the Rezone:

1. ***The amendment is consistent with the Salinas general plan, any applicable specific plan, and other plans and policies adopted by the Salinas city council;***

   The proposed Amendment is consistent with Salinas General Plan Policies. Consistent with Community Design Policy CD-2.4, the requirements of the property owner and City to rezone the property in response to conditions of their lease encourages the rehabilitation of an industrial property. The proposed Rezoning of an approximate 7.67-acre lot from "Parks" to "Industrial-General Commercial" would be consistent with adjacent uses located south and west of the project site and would allow future industrial uses and creation of jobs.

2. ***The amendment will not have the effect of reversing the policies of the Salinas general plan, any applicable specific plan, and other plans and policies adopted by the Salinas city council;***

   There are no policies within the Salinas General Plan that would be reversed as a result of this amendment. There are no Specific Plans or Precise Plans applicable to the site.

3. ***The amendment would not create an isolated district unrelated to adjacent zoning districts;***

   The proposed zoning amendment will not create an unrelated zoning district because the rezoning would extend the boundary of the existing and contiguous IGC base zoning district to include the proposed lot located at 295 Sun Way.

4. ***The city has the capability to provide public utilities, roads, and services to serve the uses allowed by the proposed amendment.***

   Salinas is an urbanized area and public infrastructure is presently in place to serve most uses. The proposed Rezoning would not create the need for additional infrastructure.

PASSED AND ADOPTED this 6th day of November 2019, by the following vote:

AYES: Chairperson Griffin, Vice Chairperson Meeks, Commissioners Anzo, Hernandez, Nohr, and Rocamora

NOES: None

ABSTAIN: Commissioner Ottone

ABSENT: None

THIS IS TO CERTIFY that the foregoing is a full, true, and correct copy of a Resolution of the Planning Commission of the City of Salinas, that said Resolution was passed and adopted by the affirmative and majority vote of said Planning Commission at a meeting held on November 6, 2019, and that said Resolution has not been modified, amended, or rescinded, and is now in full force and effect.

65 West Alisal Street, Salinas, CA 93901

(MITIGATED) NEGATIVE DECLARATION

The project described below has been reviewed in accordance with the California Environmental Quality Act (CEQA) and has been determined to have a less than significant impact upon the environment.

Project's Common Name: General Plan Amendment 2017-001 (GPA 2017-001) and Rezone 2017-002 (RZ 2017-002).

File Nos.: GPA 2017-001; RZ 2017-002

Project Applicant: Simas -East Market LLC

Project Location: 295 Sun Way in the P-F (Park – Flood Plain Overlay) Zoning District (APN 003-212-017-000)

Determination: The attached Initial Study has been prepared for the above project in accordance with the California Environmental Quality Act and procedures established in the *CEQA Guidelines* adopted by the City of Salinas. On the basis of the Initial Study, the City of Salinas makes the following determination:

☐ The above project will not have a significant effect on the environment, and a NEGATIVE DECLARATION is hereby approved.

☒ The above project could have a significant effect on the environment, but WILL NOT have a significant effect in this case because the attached mitigation measures have been made by or agreed to by the applicant which will avoid the effects or mitigate the effects to a point where clearly no significant effects will occur. Furthermore, there is no substantial evidence before the City of Salinas that the proposed project, as revised, may have a significant effect on the environment. A (MITIGATED) NEGATIVE DECLARATION is hereby approved.

Mitigation measures, if any, included in the project to avoid potentially significant effects:

(See attached Mitigation Monitoring Program)

Further information about this project and about its probable environmental impact will be on file in the Community Development Department, 65 West Alisal Street, Salinas, CA 93901.

GENERAL PLAN AMENDMENT 2017-001 (GPA 2017-001) FROM PARK TO GENERAL COMMERCIAL/LIGHT INDUSTRIAL AND REZONE 2017-002 (RZ 2017-002) FROM PARK TO INDUSTRIAL - GENERAL COMMERCIAL
MITIGATION MONITORING AND REPORTING PROGRAM
295 SUN WAY

Mitigation Number	Nature of Mitigation	Result after Mitigation	Party Responsible for Implementing	Party Responsible for Monitoring: Method to Confirm Implementation	Timing for Implementation
CU-1	In the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find pursuant to Public Resources Code Section 21083.2	To ensure compliance with Public Resources Code Section 21083.2.	Applicant, or Successor in Interest.	Community Development Department, Current Planning	During grading/ construction activities
TRANS-1	Add a third northbound lane and third southbound lane to Natividad Road through the Natividad Road / East Laurel Drive intersection. Intersection operations would improve during the AM and PM peak hours. To ensure that the intersection at Natividad Road / East Laurel Drive will operate at acceptable level of service, the Applicant shall pay the City of Salinas Traffic Impact Fees, which would represent the project's fair-share contribution of this improvement that is included in the City of Salinas TFO (Project 61).	To minimize transportation impacts.	Applicant, or Successor in Interest.	Public Works Department	Prior to issuance of a building permit.

Mitigation Number	Nature of Mitigation	Result after Mitigation	Party Responsible for Implementing	Party Responsible for Monitoring: Method to Confirm Implementation	Timing for Implementation
TRANS-2	Convert the signal phasing on the east and west intersection of Sherwood Drive – Natividad Road / East Bernal Drive-La Posada Way approaches from concurrent phasing to split phasing. Intersection operations would improve during the AM and PM peak hour to LOS D. To ensure that the intersection of Sherwood Drive – Natividad Road / East Bernal Drive-La Posada Way will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Improvement Program and Traffic Fee Ordinance to include the signal modifications at this intersection as one of the improvements that is funded by the TFO, or	To minimize transportation impacts.	Applicant, or Successor in Interest.	Public Works Department	Prior to issuance of the first grading permit for a specific development project at project site.
	(2) if the signal modifications at this intersection have not been included in the TFO, the applicant shall be responsible for either:				

Mitigation Number	Nature of Mitigation	Result after Mitigation	Party Responsible for Implementing	Party Responsible for Monitoring: Method to Confirm Implementation	Timing for Implementation
	(a) Funding the improvements and obtaining the requisite encroachment or other permits for modifying the signal phasing and ensuring that the signal modification is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or				Prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site
	(b) Concurrent with the issuance of the first grading permit for a specific development project at project site, depositing funds with the City in order for the City to obtain the requisite permits and modifying the signal phasing ensuring that the signal modification is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.				Prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site

Mitigation Number	Nature of Mitigation	Result after Mitigation	Party Responsible for Implementing	Party Responsible for Monitoring: Method to Confirm Implementation	Timing for Implementation
TRANS-3	Add a third northbound lane and third southbound lane on North Main Street through the North Main Street / Rossi Street intersection. Intersection operations would improve during the PM peak hour to LOS C. To ensure that the intersection at North Main Street / Rossi Street will operate at acceptable level of service, the Applicant shall pay the City of Salinas Traffic Impact Fees, which would represent the project's fair-share contribution of this improvement that is included in the City of Salinas TFO (Project 31).	To minimize transportation impacts.	Applicant, or Successor in Interest.	Public Works Department	Prior to issuance of a building permit.
TRANS-4	Signalize the intersection of Sun Street and East Market Street. The intersection would operate at LOS A during the AM and PM peak hours with signalization. To ensure that the intersection of Sun Street and East Market Street will operate at acceptable levels of service, the applicant shall be responsible for either:	To minimize transportation impacts.	Applicant, or Successor in Interest.	Public Works Department	
	(a) Funding the improvements and obtaining the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or				Prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

Mitigation Number	Nature of Mitigation	Result after Mitigation	Party Responsible for Implementing	Party Responsible for Monitoring: Method to Confirm Implementation	Timing for Implementation
	(b) Concurrent with the issuance of the first grading permit for a specific development project at project site, depositing funds with the City in order for the City to obtaining the requisite permits for, and installation of, a traffic signal that will be operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.				Prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.
TRANS-5	Signalize the intersection. Intersection operations would improve during the AM and PM peak hours to LOS B. To ensure that the intersection of U.S. 101 Southbound Offramp – Merced Street/East Market Street will operate at acceptable levels of service, the applicant shall either: (1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Improvement Program and Traffic Fee Ordinance to include a traffic signal at this intersection as one of the improvements that is funded by the TFO, or	To minimize transportation impacts.	Applicant, or Successor in Interest.	Public Works Department	Prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

UNOFFICIAL MINUTES
OF THE
SALINAS PLANNING COMMISSION

November 6, 2019

The meeting was called to order at 3:30 p.m. in the City Council Chamber Rotunda.

PLEDGE OF ALLEGIENCE

ROLL CALL

WELCOME AND STAFF INTRODUCTIONS

PRESENT: Chairperson Griffin, Commissioners, Anzo, Hernandez, Meeks, Nohr, Ottone (Arrived at 3:55 p.m.), and Rocamora.

ABSENT: None

STAFF: Community Development Director, Megan Hunter; City Attorney, Chris A. Callihan; Planning Manager, Courtney Grossman; Senior Planner, Jill Miller; Associate Planner, Bobby Latino; and Administrative Aide, Maira Flores

COMMENTS FROM THE PUBLIC FOR ITEMS NOT ON THE AGENDA

Chairperson Griffin opened for public comment at 3:32 p.m.

No public comment received.

Chairperson Griffin closed for public comment at 3:32 p.m.

APPROVAL OF THE MINUTES: October 16, 2019

Upon motion by Commissioner Meeks, second by Commissioner Anzo, the minutes of October 16, 2019 were approved. The motion carried by the following vote:

AYES: Chairperson Griffin, Commissioners, Anzo, Meeks, and Nohr.

NOES: None

ABSTAIN: Commissioner Hernandez and Rocamora

ABSENT: Commissioner Ottone (Arrived at 3:55 p.m.)

CONSIDERATIONS

None

PUBLIC HEARINGS

Bobby Latino, Associate Planner, presented a PowerPoint Presentation regarding Variance 2019-001; a request to vary fence height at 1072 Industrial Street. This presentation is on file at the Community Development Department.

Commissioner Meeks inquired if there would be any major changes to the building structure to ensure compliance with commercial cannabis regulations. Bobby Latino indicated that compliance with regulations and building code would be secured through the Commercial Cannabis Business Permit process.

Commissioner Nohr requested clarification on the protest letter received for the project as it referenced concerns with the homeless population on the railroad right of way as opposed to the use of the site. Bobby Latino clarified that the use was previously established through a Site Plan Review and that the Variance was strictly to vary the fence height.

Chairperson Griffin opened for public comment at 3:39 p.m.

No public comment received.

Chairperson Griffin closed for public comment at 3:40 p.m.

Commissioner Meeks provided comments on the homeless camp referenced in the protest letter.

Commissioner Meeks motioned to adopt the resolution approving Variance 2019-001; A request to vary fence height at 1072 Industrial Street. Commissioner Nohr seconded this motion. The motion carried by the following vote:

AYES:	Chairperson Griffin, Commissioners Anzo, Hernandez, Meeks, Nohr, and Rocamora
NOES:	None
ABSTAIN:	None
ABSENT:	Commissioner Ottone (Arrived at 3:55 p.m.)

Bobby Latino, Associate Planner, presented a PowerPoint Presentation regarding General Plan Amendment 2017-001; a request to change a 7.67-acre site from Park to General Commercial/Light Industrial and Rezone 2017-002; a request to change a 7.67-acre site from

Parks to Industrial – General Commercial located at 295 Sun Way. This presentation is on file at the Community Development Department.

Commissioner Hernandez indicated that residents of Rancho Salinas Mobile Home Park are concerned with the rezone as they viewed this location as a recreational resource. Megan Hunter, Community Development Director, informed commissioners that the City determined not to continue to lease this privately-owned property for recreational use. Instead, the City's Master Park Plan will focus on maintenance and making capital improvements to existing parks; hence, the rezone for 295 Sun Way.

Commissioner Rocamora inquired if there was any information on the proposed use for the rezoned area since there's currently a need for housing. Ms. Hunter responded that due to the location of the site's proximity to the freeway and most of the surrounding areas being zoned as Industrial – General Commercial, this site would not be ideal for housing. Ms. Hunter also informed that as part of the Chinatown's Revitalization Plan, the City will continue to expand areas and identify opportunity sites for housing.

Robert Atkinson, Syufy Enterprises - Applicant, made a statement regarding the current use of the property and spoke in support of the project.

Chairperson Griffin opened for public comment at 3:54 p.m.

No public comment received.

Chairperson Griffin closed for public comment at 3:54 p.m.

Commissioner Hernandez motioned to approve the resolution recommending that City Council adopt the proposed Mitigated Negative Declaration, approved General Plan Amendment 2017-001, and introduce then adopt Rezone 2017-002. Commissioner Anzo seconded this motion. The motion carried by the following vote:

AYES:	Chairperson Griffin, Commissioners Anzo, Hernandez, Meeks, Nohr, and Rocamora
NOES:	None
ABSTAIN:	Commissioner Ottone (Arrived at 3:55 p.m.)
ABSENT:	None

Bobby Latino, Associate Planner, presented a PowerPoint Presentation regarding General Plan Amendment 2017-002; a request to change the General Plan designation of 94,235 square feet of a 401,197 lot from General Commercial/Light Industrial to Arterial Frontage, Rezone 2017-001; a request to change the Zoning designation of 94,235 square feet of a 401,197 lot from Industrial-General Commercial to Mixed Arterial Frontage, and Conditional Use Permit 2017-019; a request to establish and operate a religious assembly use in a an existing 18,150 square foot building located at 10 Simas Street. This presentation is on file at the Community Development Department.

Commissioner Nohr requested clarification regarding the buildings on the parcel that would be impacted by the project. Mr. Latino provided clarification.

Robert Atkinson, Syufy Enterprises - Applicant, made a statement regarding the current use of the property and spoke in support of the project.

Chairperson Griffin opened for public comment at 4:06 p.m.

David Mack, Salinas Resident, expressed a concern that the project may imply spot zoning.

Terry Green, Lead Pastor of Celebration Church, provided public comment in support of the project.

Karen Green, Lead Pastor of Celebration Church, provided public comment in support of the project.

Rosanna Guerrero, Congregation Member of Celebration Church, provided public comment in support of the project.

Jason Green, Youth Pastor of Celebration Church, provided public comment in support of the project.

John and Lily Martin, Congregation Members of Celebration Church, provided public comment in support of the project.

Shara Green Pena, Associate Pastor of Celebration Church, provided public comment in support of the project.

Luis Ortiz Jr., Local Mortician, provided public comment in support of the project.

Jesse, Congregation Member of Celebration Church, provided public comment in support of the project.

Echo Grijalva, Youth Mentor of Celebration Church, provided public comment in support of the project.

Received public comment in support of the project from two other unidentified Congregation Member of Celebration Church.

Chairperson Griffin closed for public comment at 4:32 p.m.

Commissioner Meeks inquired if there were any other areas in which spot zoning exists. Ms. Hunter informed the commissioners that this project was not considered spot zoning and it was not uncommon to have parcels with split zoning.

Commissioner Hernandez spoke in support of the project and commended the work of Celebration Church.

Commissioner Meeks motioned to approve the resolution recommending that City Council adopt the proposed Mitigated Negative Declaration, approved General Plan Amendment 2017-002, and introduce then adopt Rezone 2017-001 and approve Conditional Use Permit 2017-019. Commissioner Hernandez seconded this motion. The motion carried by the following vote:

AYES:	Chairperson Griffin, Commissioners Anzo, Hernandez, Meeks, Nohr, Ottone and Rocamora
NOES:	None
ABSTAIN:	None
ABSENT:	None

OTHER BUSINESS

Jill Miller, Senior Planner, presented a PowerPoint regarding the Study Session: West Area Specific Plan. This presentation is on file at the Community Development Department.

Commissioner Meeks inquired if it had been determined who would pay for sewage connections of Bolsa Knolls residences that could potentially result because of the project. Jill Miller informed that this would be determined by Monterey County regulations and not the City. Ms. Miller indicated she would research and present more information regarding this inquiry when the project returns to the Planning Commission for formal consideration.

Commissioner Ottone inquired when the Final Environmental Impact Report would be available for review. Courtney Grossman, Planning Manager, anticipated these documents would be available no later than Friday, November 15, 2019, (for consideration at the November 20, 2019 Planning Commission meeting), or as required by CEQA regulations.

Commissioner Ottone also inquired if action on the Development Agreement would be required from the Planning Commission. Christopher A. Callihan, City Attorney, responded

that only City Council would be required to action on the Development Agreement; however, it would be part of the package presented for consideration to the Planning Commission.

Commissioner Nohr, asked how Assembly Bill 68 and other senate bills impact the West Area Specific Plan. Jill Miller, Senior Plan, indicated that the plan currently meets municipal code; however, changes would be made as necessary to ensure compliance with the state law.

Chairperson Griffin opened for public comment at 4:53 p.m.

David Mack, resident of Salinas, stated concerns regarding potential impacts and sewer connections that could arise with the project.

Natalie Vaughn, California State University of Monterey Bay, provided public comment.

Chairperson Griffin closed for public comment at 4:58 p.m. No action is required with the study session.

Megan Hunter, Community Development Director, spoke regarding the need for an advisory Design Review Board to assist in providing applicants with review and feedback on project design. Ms. Hunter asked if the Planning Commissioners had any input or ideas for the layout and structure of such committee.

Courtney Grossman, Planning Manager, provided examples of previous advisory committees.

Commissioner Nohr agreed with the need for a Design Review Board and provided feedback.

Chairperson Griffin asked if documentation of the structure to follow of previous existing boards that assisted in similar functions could be referenced when considering the design of the committee.

Commissioner Ottone suggested consideration on expanding membership of the Ad Hoc Review Committee to subject matter experts of neighboring cities.

FOLLOW UP REPORTS

Megan Hunter, Community Development Director, apprised the Planning Commission that a second reading at City Council was held on November 5, 2019 to approve the Zoning Code Amendments that were recommended for approval by the Planning Commission on October 2, 2019 as well as the approval of the Alisal Vibrancy Plan presented on October 16, 2019. Both projects were approved.

Ms. Hunter also provided information regarding the report to City Council on November 5, 2019 by Joseph DeSante, Permit Center Manager and Building Official. As of September 30, 2019, over 1,800 Building Permits have been issued.

Additionally, Ms. Hunter informed that the City Council will be establishing a Business Development Committee which will serve as an advisory committee for building permitting improvements. Planning Commissioners should contact Ms. Hunter if interested.

FUTURE AGENDA ITEMS

The West Area Specific Plan and the Mitigated Negative Declaration for the Airport Lease Project located at 1341 Mercer Way are expected to be presented to the Planning Commission on November 20, 2019. Public works is also expected to present a Mitigated Negative Declaration for East Laurel Drive on this date.

The Chinatown Revitalization Project is expected for presentation to the Planning Commission on either December 4, 2019 or December 18, 2019.

Planning Commissioner attendance for November 20, 2019 was confirmed.

ADJOURNMENT

The meeting was adjourned at 5:20 p.m.

1. BACKGROUND

Project Name: General Plan Amendment 2017-001 (GPA 2017-001) and Rezone 2017-002 (RZ 2017-002).

Project Location: 295 Sun Way in the P-F (Park – Flood Plain Overlay) Zoning District

Assessor Parcel Number: 003-212-017-000

☒ **See Attached Vicinity Map**

Current Land Use: Park (Privately-owned)

Surrounding Land Uses/Zoning Districts:

North: U.S. 101
South: Industrial Complex / IGC-F (Industrial-General Commercial – Flood Plan Overlay)
East: U.S. 101
West: Warehousing and Storage, Limited / IGC-F (Industrial-General Commercial – Flood Plan Overlay)

Lead Agency Contact Person: Bobby Latino, Associate Planner

Telephone: (831) 758-7206

Location and Existing Setting: City of Salinas/ Existing privately-owned Park.

Project Description: General Plan Amendment 2017-001 (GPA 2017-001) to change a 7.67-acre site from Park to General Commercial/Light Industrial and a Rezone 2017-002 (RZ 2017-002) to change a 7.67-acre site from Park to Industrial - General Commercial. Following the effective date of the General Plan Amendment and Rezone, subsequent development would be subject to the City of Salinas Zoning Code.

Environmental Factors Potentially Affected:

- ☐ Aesthetics
- ☐ Biological Resources
- ☐ Geology/Soils
- ☐ Hydrology/Water Quality
- ☐ Noise
- ☐ Recreation
- ☐ Utilities/Service Systems
- ☐ Agricultural Resources
- ☒ Cultural Resources
- ☐ Greenhouse Gas Emissions
- ☐ Land Use/Planning
- ☐ Population/Housing
- ☒ Transportation
- ☐ Wildfire
- ☐ Air Quality
- ☐ Energy
- ☐ Hazards & Hazardous Materials
- ☐ Mineral Resources
- ☐ Public Services
- ☒ Tribal Cultural Resources
- ☐ Mandatory Findings of Significance

2. CHECKLIST

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
1. AESTHETICS. Except as provided in Public Resources Code Section 21099, *would the proposal:*					A1, A2, N1
(a) Affect a scenic vista or scenic highway?	☒	☐	☐	☐	
(b) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that area experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☒	☐	☐	☐	
(c) Substantially degrade the existing visual character or quality of the site and its surroundings?					

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
(d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☒	☐	☐	☐	
	☒	☐	☐	☐	

Discussion

(a-b) The site is in an urbanized area and is not adjacent to or near a scenic vista or a scenic highway.

(c) The project does not include development at this time; therefore, the project would not degrade the existing visual character or quality of the site and its surroundings. Future development would be subject to the City of Salinas Zoning Code, including the development and design standards, which will address any visual impacts.

(d) No development is proposed with this project. However, any future development would be subject to the City of Salinas Zoning Code which would ensure that impacts due to light and glare are reduced to a level of insignificance.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
2. AGRICULTURAL RESOURCES. *Would the proposal:*					A1, A2, N1
(a) Convert Prime Farmland, Unique Farmland, or Farmland	☒	☐	☐	☐	

Issue		Impact				Source *(Refer to Section 3: Source List)*
		No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
	of Statewide Importance (Farmland), as shown on the maps pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?					
(b)	Conflict with existing zoning for agricultural use or a Williamson Act contract?	☒	☐	☐	☐	
(c)	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☒	☐	☐	☐	
(d)	Result in the loss of forest land or conversion of forest land to non-forest use?	☒	☐	☐	☐	
(e)	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☒	☐	☐	☐	

Discussion

(a-e) The site is located on an in-fill property within the P-F (Park – Flood Plain Overlay) Zoning District. Farming activities and forest land are not located on the site.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
3. AIR QUALITY. *Would the proposal:*					A1, A2, A3 A7, B1, F1, F2
(a) Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐	
(b) Result in cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☒	☐	☐	☐	
(c) Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐	
(d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☒	☐	☐	☐	

Discussion

(a) Considering the consistency with the 2012-2015 Monterey Bay Air Resources District (MBARD) Air Quality Management Plan (AQMP) and the project's

future construction and operational emissions, the project would not exceed MBARD's thresholds of significance and would not conflict with or obstruct implementation of the applicable air quality plan. Air quality impacts would be less than significant as assessed by Air Quality Impact Analysis by First Carbon Solutions, dated September 19, 2019 (see attached, Exhibit "5") and confirmed by the City's contracted Peer Review by Rincon Consultants, Inc., dated October 23, 2018 (see attached, Exhibit "10").

(b) The average daily and annual operational emissions from the future construction would not exceed the MBARD operational thresholds for any criteria pollutant. Therefore, the future construction operational-related emission impact would be less than significant. This was assessed by Air Quality Impact Analysis by First Carbon Solutions, dated September 19, 2019 (see attached, Exhibit "5") and confirmed by the City's contracted Peer Review by Rincon Consultants, Inc., dated October 23, 2018 (see attached, Exhibit "10").

(c) Impacts from CO emissions and construction Health Risk Assessment (HRA) on nearby sensitive receptors would be less than significant. This was assessed by Air Quality Impact Analysis by First Carbon Solutions, dated September 19, 2019 (see attached, Exhibit "5") and confirmed by the City's contracted Peer Review by Rincon Consultants, Inc., dated October 23, 2018 (see attached, Exhibit "10").

(d) Future construction and operational-related activities could involve diesel-fueled construction equipment and trucks. Furthermore, VOC emissions would be generated during architectural coating and asphalt paving phases, which could be objectionable odors to some populations. However, such odorous emissions would disperse rapidly from the site and would be intermittent during future construction activities. Thus, it is highly unlikely that these intermittent odor sources would reach an objectionable level adversely affecting a substantial number of people. Future construction related odor impacts would be less than significant. This was assessed by Air Quality Impact Analysis by First Carbon Solutions, dated September 19, 2019 (see attached, Exhibit "5") and confirmed by the City's contracted Peer Review by Rincon Consultants, Inc., dated October 23, 2018 (see attached, Exhibit "10").

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
4. BIOLOGICAL RESOURCES. *Would the proposal result in impacts to:*					A1, A2, A3, A7, B2, M1, N1
(a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☒	☐	☐	☐	
(b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service	☒	☐	☐	☐	
(c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☒	☐	☐	☐	
(d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
or migratory wildlife corridors, or impede the use of native wildlife nursery sites?					
(e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☒	☐	☐	☐	
(f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☒	☐	☐	☐	

Discussion

(a-d) As a result of the recurrent mowing of the project site no special-status species were observed and are not expected to be found on site. No significant impacts to special-status plants species is expected due to high levels of disturbance. Given the location of the site, adjacent to US 101 with high traffic volumes, and between existing warehouse and industrial uses, reduces the ability for most species to use the project site as a migratory corridor. No significant impacts to wildlife movement are expected as a result of existing barriers coupled with the lack of suitable habitat due to high levels of disturbance on the project site. Project does not conflict with any local polices, Habitat Conservation Plan, Natural Community Conservation Plan or any other habitat conservation plan. Biological Resources impacts of the project were assessed by a Biological Resources Assessment by First Carbon Solutions, dated August 17, 2018 (see attached, Exhibit “6”) and confirmed by the City’s contracted Peer Review by Rincon Consultants, Inc., dated October 23, 2018 (see attached, Exhibit “10”).

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
5. CULTURAL RESOURCES. *Would the proposal:*					A1, A2, A3, A5, A6, A7, B3, Q3
(a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5	☒	☐	☐	☐	
(b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☒	☐	
(c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐	

Discussion

(a) The subject site was not included in either of the City of Salinas 1989 or 2016 City Historic and Architectural Surveys.

(b-c) Cultural Resources impacts were assessed by a Phase 1 Cultural and Paleontological Resources Assessment by First Carbon Solutions, dated August 17, 2018 (see attached, Exhibit "7") and confirmed by the City's contracted Peer Review by Rincon Consultants, Inc., dated October 23, 2018 (see attached, Exhibit "10"). However, there is always the potential to encounter subsurface materials during grading and construction. Therefore, pursuant to the Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With this requirement, there is little potential for a significant impact on the environment.

On October 12, 2017, pursuant to Public Resources Code Section 21080.3.1, subd. (d), Assembly Bill 52 (AB52), and California Senate Bill 18 (SB18), City of Salinas staff sent via certified mail, a consultation request on the proposed project within 30-days of the date of the letter to all applicable California Native American Tribes whose geographic area of traditional and cultural affiliation lands boundary includes the City of Salinas as specified by the Native American Heritage Foundation.

On December 18, 2017, the Ohlone /Costanoan-Esselen Nation (OCEN) provided a response letter stating concern with the proposed project site and recommending that an OCEN Tribal Monitor be located on-site during construction (see attached. Exhibit "12"). Per Mitigation Measure CU-1 below, pursuant to Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction in connection with development, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With mitigation measures, there is little potential for a significant impact on the cultural resources.

Mitigation

CU-1 In the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find pursuant to Public Resources Code Section 21083.2.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
6. ENERGY. *Would the proposal:*					A1, A2, G1
(a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐	
(b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐	

Discussion

(a) The proposed project does not include development at this time. Future development will be subject to the City of Salinas Zoning Code. No permanent, long-term, or substantial energy consumption would occur during or as a result of the project. Therefore, impacts related to wasteful, inefficient, or unnecessary consumption of energy resources would be less than significant.

(b) The City of Salinas is part of Monterey Bay Community Power Authority (MBCP), a regional Community Choice Energy project. MBCP was formed to provide locally-controlled, carbon-free electricity to residents and businesses in Monterey, San Benito, and Santa Cruz counties (MBCP 2019). The goals of MBCP are to increase utilization of renewable power, create local and sustainable energy sources, and create green jobs.

The proposed project does not include development at this time. Future development will be subject to the City of Salinas Zoning Code. No permanent, long-term, or substantial energy consumption would occur during or as a result of the project. Due to the limited duration and scope of energy-consuming activity, substantial use of energy would not occur. Therefore, the project would not conflict with the goals of MBCP, and impacts would be less than significant.

Mitigation

No mitigation is required.

Issue	**Impact**				**Source** *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
7. GEOLOGY/SOILS. *Would the proposal result in or expose people to potential impacts involving:*					A1, A2, A3, A7, B3
(a) Directly or indirectly cause potential substantial adverse effects, including	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
the risk of loss, injury, or death involving:					
(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☒	☐	☐	☐	
(ii) Strong seismic ground shaking?	☒	☐	☐	☐	
(iii) Seismic-related ground failure, including liquefaction?	☒	☐	☐	☐	
(iv) Landslides?	☒	☐	☐	☐	
(b) Result in substantial soil erosion or the loss of topsoil?	☒	☐	☐	☐	
(c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☒	☐	☐	☐	
(d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
risks to life or property?					
(e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☒	☐	☐	☐	
(f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐	

Discussion

a (i-iv) All structures located in Salinas are required to be designed to at least Seismic Design Category D in accordance with Section 1613 of the 2010 California Building Code. As shown on the Seismic Hazards Map for the Greater Salinas Planning Area (Figure 5.10-1 of the Salinas General Plan Final EIR), the project site is located within the Moderately High Seismic Hazard Zone. Any future development on the site will be subject to the most recent, adopted edition of the California Building Code, and related Codes, as a part of the building permit process to ensure that adequate seismic design is provided.

(b-d) No construction will occur with this project at this time; therefore, it will not induce substantial changes to the topography or to the soil conditions with a result of excavation or grading. Any future development would be subject to the most recent version of the California Building Code, and related Codes, as a part of the building permit process to ensure adequate seismic safety. The project site is currently developed and is basically flat.

(e) The subject property is currently served by the City's sewer system. The proposed project would not involve the use of septic systems or alternative waste water disposal systems.

(f) The proposed project does not include development. Paleontological Resources were assessed by a Phase 1 Cultural and Paleontological Resources Assessment

by First Carbon Solutions, dated August 17, 2018 (see attached, Exhibit "7") and confirmed by the City's contracted Peer Review by Rincon Consultants, Inc., dated October 23, 2018 (see attached, Exhibit "10") and no paleontological resources or unique geological features are evident on the subject property. However, pursuant to Public Resources Code (Section 21083.2), in the event that paleontological materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. The proposed project is subject to all local, state, and federal laws relative to discovery of cultural resources during construction. With this requirement, there is little potential for a significant impact on the environment.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
8. GREENHOUSE GAS EMISSIONS. *Would the project:*					A1, A2, A3, A7, B4
(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐	
(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐	

Discussion

(a-b) The project's amortized construction and annual operational GHG emissions would not exceed the applicable threshold of significance. Thus, the project's future construction and operational GHG emissions would not result in a significant impact on climate change. The project is consistent with the applicable strategies and would not conflict with the recommendations of AB 32 in achieving a statewide

reduction in GHG emissions. The project would not conflict with Monterey County's adopted Municipal Climate Action Plan (MCAP) or the 2040 Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS). Therefore, the project would not conflict with any applicable plan, policy or regulation of an agency adopted to reduce GHG emissions. Greenhouse Gas Emissions impacts were assessed a Greenhouse Gas Impact Analysis by First Carbon Solutions, dated August 17, 2018 (see attached, Exhibit "8") and confirmed by the City's contracted Peer Review by Rincon Consultants, Inc., dated October 23, 2018 (see attached, Exhibit "10").

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
9. HAZARDS & HAZARDOUS MATERIALS. *Would the proposal:*					A1, A2, A3, M1, N1
(a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☒	☐	☐	☐	
(b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☒	☐	☐	☐	
(c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☒	☐	☐	☐	
(d) Be located on a site which is					

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☒	☐	☐	☐	
(e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☒	☐	☐	☐	
(f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☒	☐	☐	☐	
(g) Expose people or structures, either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?	☒	☐	☐	☐	

(a-b) The proposed project will not create a significant hazard to the public or the environment through the routine transport, use, or disposal of materials. Future development will be subject to the City of Salinas Zoning Code. Compliance with local, state, and federal requirements would ensure that the hazards to the public are reduced to a level of insignificance.

(c) The site is composed of a vacant lot [(see also above discussion (a-b)].

Future development will be subject to the City of Salinas Zoning Code; therefore,

the project will not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. The closest school is Mt. Toro High School (10 Sherwood Dr.), which is approximately 900 feet away (measured from parcel to parcel).

(d) The site is not known to be included on a list of hazardous materials sites.

(e) The site is not located within an airport land use plan area nor located within the Airport Area of Influence per Figure LU-11 of the Salinas General Plan. The site is located approximately 9,756 feet away (over a mile and half away) miles from the end of the runway (8-26) of the Salinas Municipal Airport and would not create a hazard to persons residing or working in the project area.

(f) Future development will be subject to the City of Salinas Zoning Code. The project will not interfere with an adopted emergency response plan or emergency evacuation plan.

(g) Future development will be subject to the City of Salinas Zoning Code. The project will not expose people or structures to risk of loss, injury or death involving wildland fires, because the site is an infill property and no wildlands are located nearby.

Mitigation

No mitigation is required.

	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
that the project may impede sustainable groundwater management of the basin?					
(c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces in a manner which would:					
i. result in substantial erosion or siltation on- or off-site;	☒	☐	☐	☐	
ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite:	☒	☐	☐	☐	
iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☒	☐	☐	☐	
iv. impede or redirect floor flows?	☒	☐	☐	☐	
(d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☒	☐	☐	☐	
(e) Conflict with or obstruct implementation of a water quality control plan or	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
sustainable groundwater management plans?					
(f) With regards to NPDES compliance:					
(i) Potential impact of project construction on storm water runoff?	☒	☐	☐	☐	
(ii) Potential impact of project post-construction activity on storm water runoff?	☒	☐	☐	☐	
(iii) Potential for discharge of storm water from material storage areas, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas?	☒	☐	☐	☐	
(iv) Potential for discharge of storm water to impair the beneficial uses of the receiving waters or areas that provide water quality benefit?	☒	☐	☐	☐	
(v) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and water bodies?	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
(vi) Potential for significant changes in the flow velocity or volume of storm water runoff that can cause environmental harm?					
(vii) Potential for significant increases in erosion of the project site or surrounding areas?					
(viii) Could this proposed project result in an increase in pollutant discharges to receiving waters? Consider water quality parameters such as temperature, dissolved oxygen, turbidity, and other typical Stormwater pollutants (e.g., heavy metals, pathogens, petroleum derivatives, synthetic organics, sediment, nutrients, oxygen-demanding substances, and trash).	☒	☐	☐	☐	
(ix) Could the proposed project result in a decrease in treatment and retention capacity for the site's Stormwater run-on?	☒	☐	☐	☐	
(x) Could the proposed project result in					

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
significant alteration of receiving water quality during or following construction?					
(xi) Could the proposed project result in increased impervious surfaces and associated increased urban runoff?	☒	☐	☐	☐	
(xii) Could the proposed project create a significant adverse environmental impact to drainage patterns due to changes in urban runoff flow rates and/or volumes?	☒	☐	☐	☐	
(xiii) Could the proposed project result in increased erosion downstream?	☒	☐	☐	☐	
(xiv) Could the proposed project alter the natural ranges of sediment supply and transport to receiving waters?	☒	☐	☐	☐	
(xv) Is the project tributary to an already impaired water body, as listed on the CWA Section 303(d) list? If so, can it result in an increase in any pollutant for which the water body is already impaired?	☒	☐	☐	☐	
(xvi) Could the proposed project have a					

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
potentially significant environmental impact on surface water quality, to either marine, fresh, or wetland waters?					
(xvii) Could the proposed project result in decreased baseflow quantities to receiving surface waterbodies?	☒	☐	☐	☐	
(xviii) Could the proposed project cause of contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses?	☒	☐	☐	☐	
(xix) Does the proposed project adversely impact the hydrologic or water quality function of the 100-year floodplain area?	☒	☐	☐	☐	
(xx) Does the proposed project site layout adhere to the Permittee's waterbody setback requirements?	☒	☐	☐	☐	
(xxi) Can the proposed project impact aquatic, wetland, or riparian habitat?	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
	☒	☐	☐	☐	

Discussion

(a) Future development will be subject to the City of Salinas Zoning Code.

(b) Future development will be subject to the City of Salinas Zoning Code. Thus, the project would not substantially deplete groundwater supplies and would not interfere substantially with the direction or rate of flow of groundwater.

(c) The site is basically flat. Future development will be subject to the City of Salinas Zoning Code. There are no rivers or streams on or near the site.

(d) The site is located within a 100-year flood area. Future development will be subject to the City of Salinas Zoning Code. Inundation by seiche, tsunami, or mudflow is unlikely because the site is located a considerable distance from the ocean and is relatively flat thereby negating a potential mudflow.

(e -f)(i – xxi) (see “a” above)

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigation Incorporated	Potentially Significant Impact	
11. LAND USE AND PLANNING. *Would the proposal:*					A1, A2, A3, M1,

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
(a) Physically divide an established community?	☒	☐	☐	☐	N1
(b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐	

Discussion

(a) The proposed project does not have the potential to disrupt or divide the physical arrangement of the community. Existing and planned adjacent uses will not be disrupted or divided as a result of the proposed project.

(b) The proposed project includes a General Plan Amendment to change a 7.67 acre-site from Park to General Commercial/Light Industrial and a Rezone to change a 7.67 acre-site from Park to Industrial - General Commercial. Subsequent development would be subject to the City of Salinas Zoning Code including, but not limited to the development standards. design standards, and mitigation measure made a part of the Initial Study and Mitigated Negative Declaration.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
12. MINERAL RESOURCES. *Would the proposal:*					A1, A2, A3

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☒	☐	☐	☐	
(b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☒	☐	☐	☐	

Discussion

(a-b) The proposed project will not result in the loss of availability of a known mineral resource that would be of value to the region or the residents of the state.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
13. NOISE. *Would the proposal result in:*					A1, A2, A3, M1
(a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
the local general plan or noise ordinance, or applicable standards of other agencies?					
(b) Generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐	
(c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☒	☐	☐	☐	

Discussion

(a) No substantial permanent, or temporary or periodic, increases in the ambient noise level are expected with the project. According to the General Plan Master Environmental Assessment Section 9.2, ambient noise is defined as the "all encompassing noise associated with a given environment, being a composite of sounds from many sources, near and far."

(b) The site is located within the 60 CNEL contour as shown on *Figure 5.3-1 Noise Contours (CNEL)* of the Salinas General Plan, Final Environmental Impact Report, 2002. The Future Noise Contours as shown on Figure 5.3-4 of the Salinas General Plan, Final Environmental Impact Report, 2002, shows the project site as located within the 70 CNEL contour. Traffic generates the main source of noise for the depicted 70 CNEL contour.

Groundborne vibration or groundborne noise levels generated by any future development on the project site is not expected to be excessive. The Zoning Code Standards regarding noise are expected to reduce noise impacts to a level of

insignificance.

(c) The site is located approximately 1.88 miles from the Salinas Municipal Airport and is located within the 55 CNEL contour as shown on *Figure 5.3-2: Salinas Airport Future Noise Contours)* of the Salinas General Plan, Final Environmental Impact Report, 2002. Noise impacts from airport operations will not have an adverse impact on the site.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
14. POPULATION AND HOUSING. *Would the proposal:*					
(a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly *(for example, through extension of roads or other infrastructure)*?	☒	☐	☐	☐	A1, A2, A3, M1, N1
(b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☒	☐	☐	☐	

Discussion

(a-b) The proposed project does not include a residential component. It will not induce substantial growth, and it will not displace housing units or people. The subject site is composed of an existing 7.67-acre vacant lot.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
15. PUBLIC SERVICES. *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*					A1, A2, A7, A8, B5
(a) Fire protection?	☒	☐	☐	☐	
(b) Police protection?	☒	☐	☐	☐	
(c) Schools?	☒	☐	☐	☐	
(d) Parks?	☐	☒	☐	☐	
(e) Other public facilities?	☒	☐	☐	☐	

Discussion

(a-c) The proposed project is located on an existing vacant lot. Police and Fire services are currently available to serve the site. No schoolchildren will be generated by the project.

(d-e) Although the General Plan identifies the site as a Park, the grounds are owned by a private corporation, which entered into a lease with the City of Salinas for the use as a Park. The lease (see attached City Council Resolution No. 19242) between the City of Salinas and the current property owner, Simas-East Market Street LLC, was terminated on November 4, 2018 (see attached Termination Letter

for Lease). Per Condition No. 6 of the lease, "upon termination of the lease agreement for any reason, Tenant agrees that it will cooperate in accomplishing a change of zoning of the leased premises to correspond with the zoning designation of other properties in the area in order to give the Leased Premises the highest market potential possible." This General Plan Amendment and Rezone is in direct response to Condition No. 6 of the Lease; therefore, excluding this property further as a Park. No other government services are expected to be impacted by the proposed project.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
16. RECREATION. *Would the proposal:*					A1, A2, M1, N1
(a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☒	☐	☐	☐	
(b) Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☒	☐	☐	☐	

Discussion

(a-b) The proposed project will not increase the use in park facilities because it does not include residential development. The proposed project includes the removal of a

recreational facilities, which will not have an adverse effect on the environment.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
17. TRANSPORTATION. *Would the project:*					A1, A2, A8, B5
(a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	☐	☐	☒	☐	
(b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, Subdivision (b)?	☐	☐	☒	☐	
(c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐	
(d) Result in inadequate emergency access?	☒	☐	☐	☐	

Discussion

(a-c) Transportation impacts were assessed by a Traffic Impact Analysis by Mott McDonald, dated June 12, 2019 (see attached, Exhibit “9”) and confirmed by the City’s Traffic Engineer on June 25, 2019. Following the effective date of the proposed General Plan Amendment and Rezone, the site could be developed at a floor area ratio 0.40 maximum. For purposes of the Traffic Impact Analysis, 4 percent of the floor space (4,700 square feet) was assumed to be occupied by

support office space and this space was modeled as general office space. The remaining floor area (113,900 square feet) was modeled as light industrial space. Potentially significant impacts were identified at five different intersections.

1) Natividad Road / East Laurel Drive: This intersection would operate at a deficient LOS E during the AM and PM peak hours, unchanged from existing conditions. Specific development project at project site would add 16 AM peak hour and 17 PM peak hour trips to this intersection. The impact of a specific development project at project site to the intersection is significant because the specific development project at project site will add peak hour trips to the intersection that operates at a deficient level without the specific development project at project site as discussed below:

2) Sherwood Drive – Natividad Road / East Bernal Drive – La Posada Way: This intersection would operate at a deficient LOS E (AM) and F (PM), unchanged from existing conditions. A specific development project at project site would add 16 AM peak hour and 17 PM peak hour trips to this intersection. The impact of the specific development project at project site to the intersection is significant because the specific development project at project site will add peak hour trips to the intersection that operates at a deficient level without the specific development project at project site.

3) North Main Street (SR 183) / Rossi Street: This intersection, which is under Caltrans jurisdiction, would operate at a deficient LOS D during the PM peak hour, unchanged from existing conditions. A specific development project at project site would add 6 trips to this intersection during the PM peak hour and increase the PM peak hour delay by 0.1 seconds. The impact a specific development project at project site to the intersection is significant because the specific development project at project site will increase the average vehicle delay during the PM peak hour by at least 0.1 seconds.

4) Sun Street / East Market Street: Side-street operations at this intersection (the southbound Sun Street approach) would operate at a deficient LOS F during the PM peak hour, unchanged from existing conditions. A specific development project at project site would add 31 trips to this approach during the PM peak hour. The impact of a specific development project at project site to the intersection is significant because specific development project at project site will add peak hour trips to the intersection whose southbound approach operates at LOS F without the specific development project at project site.

5) U.S. 101 Southbound Offramp – Merced Street / East Market Street: This intersection would operate at a deficient LOS F during the PM peak hour, while side-street operations (the southbound US 101 Southbound Offramp approach) would operate at a deficient LOS F during the AM and PM peak

hours, unchanged from existing conditions. A specific development project at project site would add 30 AM peak hour and 27 PM peak hour trips to this intersection. The impact of specific development project at project site to the intersection is significant because the project will increase the average vehicle delay during the AM and PM peak hours by at least 0.1 seconds.

The mitigation measures for each intersection will mitigate the impacts to less than significant.

(d) The project will not result in inadequate emergency access.

Mitigation

TRANS-1 Add a third northbound lane and third southbound lane to Natividad Road through the Natividad Road / East Laurel Drive intersection. Intersection operations would improve during the AM and PM peak hours. To ensure that the intersection at Natividad Road / East Laurel Drive will operate at acceptable level of service, the Applicant shall pay the City of Salinas Traffic Impact Fees, which would represent the project's fair-share contribution of this improvement that is included in the City of Salinas TFO (Project 61).

TRANS-2 Convert the signal phasing on the east and west intersection of Sherwood Drive – Natividad Road / East Bernal Drive-La Posada Way approaches from concurrent phasing to split phasing. Intersection operations would improve during the AM and PM peak hour to LOS D. To ensure that the intersection of Sherwood Drive – Natividad Road / East Bernal Drive-La Posada Way will operate at acceptable levels of service, the applicant shall either:

(1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Improvement Program and Traffic Fee Ordinance to include the signal modifications at this intersection as one of the improvements that is funded by the TFO, or

(2) if the signal modifications at this intersection have not been included in the TFO, the applicant shall be responsible for either:

(a) Funding the improvements and obtaining the requisite encroachment or other permits for modifying the signal phasing and ensuring that the signal modification is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or

(b) Concurrent with the issuance of the first grading permit for a specific development project at project site, depositing funds with the City in order

for the City to obtain the requisite permits and modifying the signal phasing ensuring that the signal modification is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

TRANS-3 Add a third northbound lane and third southbound lane on North Main Street through the North Main Street / Rossi Street intersection. Intersection operations would improve during the PM peak hour to LOS C. To ensure that the intersection at North Main Street / Rossi Street will operate at acceptable level of service, the Applicant shall pay the City of Salinas Traffic Impact Fees, which would represent the project's fair-share contribution of this improvement that is included in the City of Salinas TFO (Project 31).

TRANS-4 Signalize the intersection of Sun Street and East Market Street. The intersection would operate at LOS A during the AM and PM peak hours with signalization. To ensure that the intersection of Sun Street and East Market Street will operate at acceptable levels of service, the applicant shall be responsible for either:

(a) Funding the improvements and obtaining the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or

(b) Concurrent with the issuance of the first grading permit for a specific development project at project site, depositing funds with the City in order for the City to obtaining the requisite permits for, and installation of, a traffic signal that will be operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

TRANS-5 Signalize the intersection. Intersection operations would improve during the AM and PM peak hours to LOS B. To ensure that the intersection of U.S. 101 Southbound Offramp – Merced Street/East Market Street will operate at acceptable levels of service, the applicant shall either:

(1) Prior to the City's issuance of the first grading permit for a specific development project at project site, pay a traffic impact fee provided the City has updated its Traffic Improvement Program and Traffic Fee Ordinance to include a traffic signal at this intersection as one of the improvements that is funded by the TFO, or

(2) if the traffic signal at this intersection has not been included in the TFO, the applicant shall be responsible for either:

(a) Funding the improvements and obtaining the requisite encroachment or other permits for installation of a traffic signal and ensure that the signal is in operation prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site, or

(b) Concurrent with the issuance of the first grading permit for a specific development project at project site, depositing funds with the City in order for the City to obtain the requisite permits and install the traffic signal ensuring that the signal is operational prior to the issuance of the first Certificate of Occupancy for a specific development project at the project site.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
18. TRIBAL CULTURAL RESOURCES. *Would the project:*					A5, A6, A7, B3, Q3
(a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a Californian Native American tribe, and that is:					
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
Resources Code Section 5020.1(k); or ii. A resource determined by the Lead Agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1 In applying the criteria set forth in Subdivision (c) of Public Resource Code 5024.1, the Lead Agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐	

(a)(i) The subject site was not included in either of the City of Salinas 1989 or 2016 City Historic and Architectural Surveys.

(a)(ii) Cultural Resources impacts were assessed by a Phase 1 Cultural and Paleontological Resources Assessment by First Carbon Solutions, dated August 17, 2018 (see attached, Exhibit "7") and confirmed by the City's contracted Peer Review by Rincon Consultants, Inc., dated October 23, 2018 (see attached, Exhibit "10"). However, there is always the potential to encounter subsurface materials during grading and construction. Therefore, pursuant to the Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With mitigation measures, there is little potential for a significant impact on the environment.

On October 12, 2017, pursuant to Public Resources Code Section 21080.3.1, subd. (d), Assembly Bill 52 (AB52), and California Senate Bill 18 (SB18), City of Salinas staff sent via certified mail, a consultation request on the proposed project within 30-days of the date of the letter to all applicable California Native American Tribes whose geographic area of traditional and cultural affiliation lands boundary includes the City of Salinas as specified by the Native American Heritage Foundation.

On December 18, 2017, the Ohlone /Costanoan-Esselen Nation (OCEN) provided a response letter stating concern with the proposed project site and recommending that an OCEN Tribal Monitor be located on-site during construction (see attached, Exhibit "12"). Per Mitigation Measure TCR-1 below, pursuant to Public Resources Code (Section 21083.2), in the event that cultural materials are encountered during grading/construction in connection with development, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find. With mitigation measures, there is little potential for a significant impact on cultural resources.

Mitigation

TCR-1 In the event that cultural materials are encountered during grading/construction in, all work shall cease until the find has been evaluated and mitigation measures put in place for the disposition and protection of any find pursuant to Public Resources Code Section 21083.2.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
19. UTILITIES & SERVICE SYSTEMS. *Would the project:*					A1, A2, M1, N1
(a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
significant environmental effect?					
(b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☒	☐	☐	☐	
(c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has the adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☒	☐	☐	☐	
(d) Generate solid waste in excess of State or Local standards, or in excess of the capacity of local infrastructure, or otherwise impact the attainment of solid waste reduction goals?	☒	☐	☐	☐	
(e) Comply with federal, state, and local management and reduction statues and regulations related to solid waste?	☒	☐	☐	☐	

Discussion

(a) Salinas is an urbanized area and utilities are available to serve the site.

(b-c) The proposed project is not expected to involve a heavy usage of water and therefore does not discharge significant quantities of water into the wastewater treatment plant (also see Hydrology and Water Quality above).

(d-e) The proposed project is not expected to generate significant solid waste. Disposal of waste generated by the project is not expected to be significant, Subsequent development will be required to comply with federal, state, and local reduction statutes related to solid waste.

Mitigation

No mitigation is required.

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
20. WILDFIRE. *If located in or near State responsibility areas or lands classified as very high fire hazard severity zones, would the project:*					A1, A2, M1, N1
(a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☒	☐	☐	☐	
(b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☒	☐	☐	☐	
(c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☒	☐	☐	☐	
(d) Expose people or structures to significant risks, including downslope or downstream	☒	☐	☐	☐	

Issue	Impact				Source *(Refer to Section 3: Source List)*
	No Impact	**Less Than Significant Impact**	**Potentially Significant Unless Mitigation Incorporated**	**Potentially Significant Impact**	
flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?					

Discussion

(a-d) The City of Salinas is not located in or near State responsible areas or lands classified at very high fire hazard severity zones.

Mitigation

No mitigation is required.

Mandatory Findings of Significance	No Impact	Less Than Significant Impact	Potentially Significant Unless Mitigated	Potentially Significant Impact
1. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
2. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☒	☐	☐	☐
3. Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

4. DETERMINATION

On the basis of this Initial Study:

☐ I find that the proposed project ***COULD NOT*** have a significant effect on the environment, and a ***NEGATIVE DECLARATION*** will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there ***WILL NOT*** be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A ***MITIGATED NEGATIVE DECLARATION*** will be prepared.

☐ I find that the proposed project ***MAY*** have a significant effect on the environment, and an ***ENVIRONMENTAL IMPACT REPORT*** is required.

☐ I find that the proposed project ***MAY*** have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect:

(a) Has been adequately analyzed in *(Reference document)* pursuant to applicable legal standards; and

(b) Has been addressed by mitigation measures based on the earlier analysis as described in *Section 2: Checklist*, if the effect is a "Potentially Significant Impact" or a Negative Declaration: “Potentially Significant Unless Mitigation Incorporated".

An ***ENVIRONMENTAL IMPACT REPORT*** is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects:

(a) Have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and;

(b) Have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project.

NOTHING FURTHER IS REQUIRED.

RESOLUTION NO. 19242 (N.C.S.)

A RESOLUTION APPROVING A LEASE AGREEMENT BETWEEN THE CITY OF SALINAS AND SIMAS-EAST MARKET LLC FOR THE USE OF THE EXPO SITE LOCATED AT 295 SUN WAY

WHEREAS, the City of Salinas operates parks and recreation programs for the residents of the City at various sites and locations throughout the City; and

WHEREAS, the City has used the vacant property located at 295 Sun Way, otherwise known as the Expo Site, pursuant to a lease agreement with the Rodeo Association for park and recreation program purposes; and

WHEREAS, Simas-East Market LLC acquired the Rodeo Association's interest in the Expo Site and has agreed to allow the City to continue its use of the Expo Site for park and recreation purposes pursuant to a new lease agreement; and

WHEREAS, the City desires to continue its use of the Expo Site upon the terms and conditions of a new lease agreement with Simas.

NOW THEREFORE, BE IT RESOLVED BY THE COUNCIL OF SALINAS, that the lease agreement between the City of Salinas and Simas-East Market LLC is hereby approved and

BE IT FURTHER RESOLVED, that the Mayor is authorized, for and on behalf of the City, and as its act and deed, to execute the lease agreement between the City of Salinas and Simas-East Market LLC on the terms and conditions presented.

PASSED AND ADOPTED this 19th day of June 2007 by the following vote:

AYES: Councilmembers Barnes, Barrera, De La Rosa, Sanchez, Villegas and Mayor Donohue

NOES: None

ABSENT: Councilmember Lutes

ABSTAIN: None

Dennis Donohue, Mayor

ATTEST:

Ann Camel, City Clerk

EXPO SITE LEASE AGREEMENT

This Lease Agreement (this "Lease Agreement") is made and entered into this 12th day of June, 2007, by and between the **CITY OF SALINAS**, a political subdivision of the State of California, hereinafter referred to as "Tenant," and **SIMAS-EAST MARKET, LLC**, a California limited liability company, hereinafter referred to as "Landlord."

RECITALS

WHEREAS, Landlord is the owner of a fee simple interest in that certain real property (the "Leased Premises"), commonly known as the Exposition Site, located at 295 Sun Way in the City of Salinas, State of California, and designated as Areas A, B, C, and D (subject to a Pacific Gas and Electric Company easement) on the site plan attached hereto as Exhibit A and incorporated herein by reference; and

WHEREAS, Tenant and Landlord's predecessor in interest, the California Rodeo Association, entered into a Lease And Agreement for Exposition Site (the "Original Lease") on June 4, 1996; and

WHEREAS, the Original Lease was terminated by action of the Salinas City Council on April 18, 2006, which termination became effective on July 24, 2006; and

WHEREAS, Landlord and Tenant now desire to enter into a new lease to re-establish the terms and conditions of the Tenant's use and occupancy of the Leased Premises.

NOW, THEREFORE, in mutual consideration of the terms, conditions, and covenants contained herein, Landlord and Tenant agree to the following.

AGREEMENTS

1. Use of Leased Premises. Tenant understands and acknowledges that Landlord and the California Rodeo Association have entered into or will enter into a license agreement pursuant to which the California Rodeo Association shall be permitted exclusive use and occupancy of the Leased Premises for an approximate three week period each year to conduct a carnival and related activities associated with the annual California Rodeo. Subject to the right of the California Rodeo Association to exclusively use and occupy the Leased Premises for a carnival and related activities for an approximate three-week period each year at a time prior to, during and immediately after the annual California Rodeo, throughout the term of this Lease Agreement, Tenant shall have the exclusive right (subject to a Pacific Gas and Electric Company easement and all other encumbrances on the title to the Leased Premises) to use the Leased Premises for all lawful purposes normally conducted by the Tenant's Parks and Recreation Department, including various park and recreational activities, such as community use of the playground facilities and apparatus, the softball and soccer fields, nighttime field rentals, and special event activities.

[redacted]

2. Acceptance of Leased Premises. Tenant agrees to take the Leased Premises in "As-Is" condition without any agreements, representations, understandings or obligations on the part of Landlord to perform any alteration, modification, repair or improvement thereto. Tenant acknowledges that the Leased Premises are in good and sanitary order, condition, and repair. Except during the approximate three-week period reserved for the use of the California Rodeo Association in section 1 of this Lease Agreement, Tenant shall, at its sole cost and expense, maintain and repair the Leased Premises and improvements thereon in a good state of condition and repair (however, Tenant shall have no obligation to make any capital repairs to the Leased Premises). Tenant, at its sole cost and expense, shall procure, maintain in effect and comply with all conditions of any and all permits, licenses and other governmental and regulatory approvals required for Tenant's use of the Leased Premises, and Tenant shall not use or occupy the Leased Premises or permit anything to be done in or about the Leased Premises in violation of a condition or restriction, if any, set forth in any encumbrance on the title to the Leased Premises, or in violation of any laws now in force or which may hereinafter be enacted or promulgated.

3. Term. The initial term of this Lease Agreement shall commence on June 1, 2007, and shall continue in full force and effect for a period of two (2) months until July 31, 2007 (the "Initial Term"). Effective August 1, 2007, and continuing thereafter until such time as this Lease Agreement may be terminated, the term of this Lease Agreement shall be extended on a month-to-month basis (the "Extended Term"), and either party shall have the right to terminate this Lease Agreement for any reason (or no reason) by giving the other party no less than thirty (30) days advance written notice of such termination. As used in this Lease Agreement, the term "Term" shall collectively mean the Initial Term and the Extended Term.

4. Rent. In consideration for Tenant's use, maintenance and repair of the Leased Premises, rent during the Initial Term of this Lease shall be one thousand four hundred dollars ($1,400.00). Concurrent with the execution of this Lease Agreement, Landlord shall provide Tenant with a written invoice for such one thousand four hundred dollar ($1,400.00) amount of rent due from Tenant, and within thirty (30) days after Tenant's receipt of such written invoice, Tenant shall pay such amount of rent to Landlord.

Rent during the Extended Term of this Lease Agreement shall be two hundred fifty dollars ($250.00) each month and shall be paid to Landlord by Tenant no later than the first day of each calendar month.

5. Alterations. During the Term, neither party shall make any alterations to the Leased Premises nor construct new buildings on the Leased Premises without the prior written consent of the other party, which written consent shall not be unreasonably withheld. Upon the expiration or termination of this Lease Agreement, Tenant shall remove any items of Tenant's fixtures, equipment and personal property from the Leased Premises. If Tenant fails to remove any such items of Tenant's fixtures, equipment or personal property from the Leased Premises designated by Landlord to be removed, then upon the expiration or termination of this Lease, and upon Tenant's vacation of the Leased Premises, all such items of Tenant's fixtures, equipment and personal property shall become the property of Landlord and Tenant shall reimburse Landlord for the cost of removal and/or storage of such items.

[redacted]

6. Zoning Designation. Upon the termination of this Lease Agreement for any reason, Tenant agrees that it will cooperate in accomplishing a change of zoning of the Leased Premises to correspond with the zoning designation of other properties in the area in order to give the Leased Premises the highest market potential possible.

7. Indemnification and Hold Harmless. Except for the approximate three-week period during which the Leased Premises are being used by the California Rodeo Association for a carnival and related activities as contemplated in Section 1 of this Lease Agreement, Tenant shall indemnify and hold Landlord harmless against any claim, loss, damage or expense, including attorney's fees and costs of defense reasonably incurred, which Landlord may suffer or incur arising out of any claim, action or proceeding that may be brought against Landlord to the extent caused by the use of the Leased Premises by Tenant or by its employees, agents or contractors.

8. Insurance. Throughout the Term of this Lease Agreement, Tenant shall keep in full force and effect a policy of commercial general liability insurance insuring Landlord and Tenant from and against all claims, demands, actions and liability for injury to or death of any persons, and for damage to property arising from or related to the use or occupancy of the Leased Premises by Tenant. Such insurance shall be written on an occurrence basis with coverage in a minimum amount of two million dollars ($2,000,000) per occurrence for bodily injury/property damage and five million dollars ($5,000,000) general aggregate limit. However, such limits shall not limit Tenant's liability or obligations under this Lease Agreement.

Tenant is a political subdivision of the State of California that is self-insuring for all forms of legal liability, and such insurance as is required under this Section 8, up to an amount of one million dollars ($1,000,000), may be met through one or more policies of self-insurance. Evidence of such self-insurance to meet the requirements of this Section 8 shall be delivered to Landlord upon both parties signing this Lease Agreement. Such policies and the coverages provided thereunder shall not change or be canceled without Tenant first giving Landlord at least thirty (30) days' prior written notice.

9. Liens. If any lien is made or filed against the Leased Premises, Tenant shall bond against or discharge the same within ten (10) days after the filing thereof. Tenant shall indemnify, defend, protect and hold Landlord and the Leased Premises free and harmless from and against any and all liability, damage, claims, demands, suits, actions or expense (including attorneys' fees) to the extent the above arise out of any work done or material supplied on or about the Leased Premises by Tenant or at Tenant's direction, including by Tenant's employees, representatives, successors, contractors, subcontractors, materialmen, subtenants or assigns.

10. Default. This Lease Agreement shall be subject to early termination by either party in the event the other party defaults in the performance of any of the covenants and conditions required herein to be kept and performed, provided such default continues for a period of thirty (30) days after receipt by the defaulting party of written notice of the existence of said default. In the event of any early termination by Tenant under this Section 10 due to a default by Landlord, Tenant shall be entitled to reimbursement of any rental amount already paid for under this Lease Agreement for any period of time occurring after the effective date of termination during which

[redacted]

Tenant shall not use and occupy the Leased Premises. Such reimbursement shall be due and payable from Landlord without the need for a formal request from Tenant.

In the event either party defaults under or breaches this Lease Agreement, both Landlord and Tenant shall be entitled to any and all such legal remedies as may be available to them under the law, including those remedies available to Landlord under California Civil Code sections 1951.2 and 1951.4.

11. Notices. Any notices under this Lease Agreement shall be sent to the parties by United States certified Mail return receipt requested, properly addressed as provided in this Section 11, postage fully prepaid, and shall be effective upon the day following such deposit in the mail.

Written notices to Tenant hereunder shall, until further notice, be addressed to:

City Manager
ATTN: Administration
200 Lincoln Avenue
Salinas, California 93901

With a copy to

City Attorney
200 Lincoln Avenue
Salinas, California 93901

Written notices to Landlord hereunder shall, until further notice, be addressed to:

Simas-East Market, LLC
c/o SyWest Development
150 Pelican Way
San Rafael, California 94901
Attn: William Vierra

12. Successors and Assigns. The terms, covenants, and conditions contained herein shall apply to and bind the heirs, successors, and assigns of all the parties hereto. However, Tenant shall have no right to sublease the Leased Premises or to assign this Lease Agreement.

13. Further Assurances. Each party agrees to do such further acts and things and to execute and deliver such additional agreements and instruments as the other party may reasonably require to consummate, evidence or confirm the agreements contained herein in the manner contemplated hereby.

14. Counterparts. This Lease Agreement may be executed in one or more counterparts, each of which shall be deemed an original, but all of which together shall constitute a single agreement.

[redacted]

15. Entire Agreement; Brokers. Except as otherwise provided herein, this Lease Agreement constitutes the entire agreement between Landlord and Tenant relating to the Leased Premises, and is the final expression of both with respect to the terms and conditions included herein. Landlord and Tenant acknowledge that any prior agreements, promises, negotiations, or representations not expressly set forth in this Lease Agreement are of no force and effect. Tenant and Landlord warrant that they have had no dealings with any broker or agent in connection with this Lease Agreement.

16. Rights and Obligations Under Lease Agreement. By entering into this Lease Agreement, the parties do not intend to create any obligations express or implied other than those set out herein; further, this Lease Agreement shall not create any rights in any party not a signatory hereto.

17. Litigation Involving Lease Agreement; Attorney's Fees. In case suit shall be brought to interpret or to enforce this Lease Agreement, or because of the breach of any other covenant or provision herein contained, the prevailing party in such action shall be entitled to recover its reasonable attorneys' fees, in addition to such costs as may be allowed by the court under Code of Civil Procedure §1033.5. Tenant's attorney's fees, if awarded, shall be calculated at the market rate.

18. Compliance With Applicable Law and Jurisdiction. This Lease Agreement shall be administered and interpreted under the laws of the State of California. Jurisdiction of litigation arising from this Lease Agreement shall be in the State of California, County of Monterey.

19. Modification. No amendments to or changes to this Lease Agreement may be made, except by a writing expressly authorized and signed by both parties.

20. **Utilities**. During the entire Term of this Lease Agreement, Tenant shall be solely responsible for and shall apply for, arrange and promptly pay directly to the utility service provider all charges for heat, hot and/or chilled water, gas, electricity, telephone, telecommunications, data, refuse and garbage removal, sewer service charges and fees, fire sprinkler, fire alarm and any other utility used, consumed or provided in, or furnished, or attributable to the Leased Premises, however supplied, at the rates charged by the supplying utility companies. All federal, state and local taxes which may from time to time be imposed upon or payable in connection with charges for utility services pursuant to this Lease Agreement shall be payable by Tenant in addition to the charges to which they relate.

21. **Landlord's Access**. During the Term of this Lease Agreement, Landlord shall have the right to access the Leased Premises for inspection, for any pre-construction activities, to show prospective tenants the Leased Premises, to post signs on the Leased Premises, to confirm Tenant's compliance with the provisions of this Lease Agreement, or for any other reasonable purpose, however, Landlord's right of access shall in no way interfere with or interrupt Tenant's use and occupancy of the Leased Premises. Tenant shall deliver to Landlord any keys necessary for such access by Landlord.

[redacted]

IN WITNESS WHEREOF, the undersigned, as authorized representatives of the City of Salinas and Simas-East Market, LLC have executed this Lease Agreement.

Attn: Candice Martinez

RE: Expo Site Lease Agreement

Dear Ms. Martinez,

On October 5, 2018, the City of Salinas notified Sy West Development of its termination of the Lease Agreement for Exposition Site located at 295 Sun Way in Salinas, California effective November 4, 2018.

Following that notice, Rick Key, Parks & Urban Forestry Manager and I met with you and Lisa Beatty, Property Administrator to do a walk-thru of the site on November 8, 2018. During that walk-thru you noted the homeless encampments and a number of site concerns and repairs that needed to be addressed before Sy West would take possession of the property. A detailed listing of site concerns and necessary repairs was provided via email on November 12, 2018.

We will schedule a clean up of the homeless encampments at the Expo Site so that SyWest can secure and re-take possession of the property. We will work internally to identify potential dates and will coordinate with you on final selection and transfer of property. After the homeless encampments have been cleaned and SyWest has secured the property, we can coordinate on resolution of the remaining issues on SyWest's list, some of which may not be necessary given SyWest's plans to develop the property.

If you have any questions, please let me know.

Thank you,

Kristan Lundquist, RC
Interim Library & Community Services Director

SECTION 1: EXECUTIVE SUMMARY

1.1 - Purpose and Methods of Analysis

The following analysis was prepared to evaluate whether the Project would cause significant air quality impacts. This assessment follows the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.). The methodology follows Monterey Bay Air Resources District (MBARD) recommendations for quantification of emissions and evaluation of air quality impacts.

1.2 - Project Summary

1.2.1 - Site Location

The Rodeo Property Project is located at 295 Sun Way, south and west of US 101 in the central part of the City of Salinas, Monterey County, California (see Exhibit 1). North and south of the Project site are existing warehouse/light industrial uses. To the north of the Project site is Security Public Storage; to the south at 10 Simas Street is Celebration Church and at 34 Simas Street is a light industrial building containing an ambulance dispatch business and an electrical supply company. To the southwest of the Project at 8 Sun Street is Sun Street Centers Men's Residential Program. Adjacent to and west of the Project is open space; however, there is a mix of land uses further west of the Project, including St. James CME Church located at 285 Calle Cebu, Haciendas Place multi-family residential located at 245 Calle Cebu, and the Rancho Salinas Mobile Park located at 150 Sherwood Drive. The Project site is bounded by Sun Street and Sun Way to the west, US 101 to the east, Security Public Storage to the north, and light industrial uses to the south (see Exhibit 2).

1.2.2 - Project Description

The project is a General Plan amendment and Rezone that would allow development of industrial and commercial uses on a 6.8-acre site located on Sun Street adjacent to US 101. The proposed land use designation would allow the site to be developed at a floor area ratio of 0.4, which would allow for the development of up to 118,600 square feet (sq.ft.) of industrial floor space. For purpose of this analysis, 4 percent of the floor space (4,700 sq.ft.) was assumed to be occupied by support office space which is categorized as general office space. The remaining floor area (113,900 sq.ft.) was modeled as light industrial space. The site is designated in the General Plan as Open Space. Access to the site is provided via Sun Street and its connections to Calle Cebu and E. Market Street.

1.3 - Summary of Analysis Results

Impact AIR-1: The Project would not conflict with or obstruct implementation of the applicable air quality plan. **Less than significant impact.**

Impact AIR-2: The Project would not violate air quality standards or contribute substantially to an existing or projected air quality violation. **Less than significant impact.**

Impact AIR-3: The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors). **Less than significant impact.**

Impact AIR-4: The Project would not expose sensitive receptors to substantial pollutant concentrations. **Less than significant impact.**

Impact AIR-5: The Project would not create objectionable odors affecting a substantial number of people. **Less than significant impact.**

SECTION 2: AIR QUALITY SETTING

2.1 - Air Basin

The Project site is located in the City of Salinas, Monterey County, within the North Central Coast Air Basin (NCCAB or the Air Basin), and under the jurisdiction of the MBARD. The NCCAB consists of Monterey, San Benito, and Santa Cruz counties. The NCCAB includes an area of approximately 5,159 square miles along the central coast of California. The project site is located near the coast in the northern portion of the air basin.

Air quality in the NCCAB is regulated at the federal level by the United State Environmental Protection Agency (EPA), at the state level by the California Air Resources Board (ARB), and at the regional level by MBARD. The regulatory responsibilities of these agencies are discussed in the Regulatory Framework section.

Air quality conditions within the NCCAB are primarily influenced by the NCCAB's meteorology, topography, and climate conditions. These characteristics with respect to the NCCAB are discussed below. However, the main driver of air quality conditions in any is the amount and intensity of emission sources located within the region. In some cases such as for the NCCAB, transport of air pollutants from neighboring air basins can also affect air quality conditions within the air basin.

2.2 - Attainment Status

The EPA and the ARB designate an air basin in which ambient air quality standards are exceeded as a "nonattainment" area. If standards are met, the area is designated as an "attainment" area. If there is inadequate or inconclusive data to make a definitive attainment designation, the area is considered "unclassified." National nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards.

Each standard has a different definition, or "form," of what constitutes attainment, based on specific air quality statistics. For example, the federal 8-hour carbon monoxide (CO) standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring value exceeds the threshold per year. In contrast, the federal annual $PM_{2.5}$ standard is met if the 3-year average of the annual average $PM_{2.5}$ concentration is less than or equal to the standard.

On March 12, 2008, the EPA adopted a new 8-hour ozone standard of 0.075 ppm. In April 2012, EPA designated the NCCAB as attainment/unclassified based on 2009-2011 data. This EPA rule suspends key State Implementation Plan (SIP) requirements as long as monitoring data continues to show that the Bay Area attains the standard. The current attainment designations for the basin are summarized in Table 1. The basin is nonattainment for state ozone and PM_{10} standards.

Table 1: North Central Coast Air Basin Attainment Status

Pollutant	State Status	National Status
Ozone (O_3)	Nonattainment[2]	Attainment/Unclassified[3]
Inhalable particulates (PM_{10})	Nonattainment	Attainment
Fine particulates ($PM_{2.5}$)	Attainment	Attainment/Unclassified[4]
Carbon monoxide (CO)	Monterey Co.—Attainment San Benito Co.—Unclassified Santa Cruz Co.—Unclassified	Attainment/Unclassified
Nitrogen dioxide (NO_2)	Attainment	Attainment/Unclassified[5]
Sulfur dioxide (SO_2)	Attainment	Attainment[6]
Lead	Attainment	Attainment/Unclassified[7]

Notes:
1 State designations based on 2010 to 2012 air monitoring data.
2 Effective July 26, 2007, the ARB designated the NCCAB a nonattainment area for the State ozone standard, which was revised in 2006 to include an 8-hour standard of 0.070 ppm.
3 On March 12, 2008, EPA adopted a new 8-hour ozone standard of 0.075 ppm. In April 2012, EPA designated the NCCAB attainment/unclassified based on 2009–2011 data.
4 This includes the 2006 24-hour standard of 35 µg/m^3 and the 2012 annual standard of 12 µg/m^3.
5 In 2012, EPA designated the entire state as attainment/unclassified for the 2010 NO_2 standard.
6 In June 2011, the ARB recommended to EPA that the entire state be designated as attainment for the 2010 primary SO_2 standard. Final designations to be addressed in future EPA actions.
7 On October 15, 2008, EPA substantially strengthened the national ambient air quality standard for lead by lowering the level of the primary standard from 1.5 µg/m t0 0.15µg/m^3. Final designations were made by the EPA in November 2011.

2.3 - Local Climate

Monterey County is bounded on the west by the Pacific Ocean, on the east by the San Joaquin Valley, on the south by San Luis Obispo County and on the north by the Santa Cruz and San Mateo Counties. Most of Monterey County's population lives in the western part of the County along the coast and in sheltered valleys. These valleys act like a series of miniature air basins, trapping air pollutants within the valley and limiting dispersion.

The Salinas Valley is a steep-sloped coastal valley that opens out on Monterey Bay and extends southeastward with mountain ranges (Gabilan Range to the east and Sierra de Salinas to the west) of 2,000 to 3,000 feet elevation on either side. The broad area of the valley floor near the mouth is 25 miles wide, narrowing to about 6 miles at Soledad, which is 40 miles inland, and to 3 miles wide at King City, which is about 60 miles from the coast. At Salinas, near the northern end of the Valley, west and northwest winds occur about one-half the time during the entire year.

Winds from the San Francisco Bay Area Air Basin (SFBAAB) tend to transport pollutants into the NCCAB, where surface winds move the pollutants to the eastern portion of the NCCAB. The NCCAB pollutant levels are influenced by the transport of pollutants from SFBAAB, and assessments have indicated that 50percent of NCCAB exceedances are the result of transport of pollutants from the

SFBAAB. Regional temperatures in the area typically range from the mid-forty degrees Fahrenheit (F°) to the low 70s, and average precipitation measures approximately 19.73 inches per year. August, September, and October are typically the warmest months.

2.4 - Local Air Quality Conditions

The existing local air quality is characterized by reviewing relevant air pollution concentration data near the Project area for comparison to the NAAQS and CAAQS. Air samples are either collected continuously or periodically depending on the pollutant and the type of monitoring equipment installed. Monitoring sites are usually chosen to be representative of emissions in a community. Ozone, CO, NO_2, toxics, and PM_{10} and particulate matter of size 2.5 microns and smaller ($PM_{2.5}$) are monitored at the Salinas #3 Station, located approximately 1.3 miles northeast of the Project site. Table 2 summarizes 2014 through 2016 published air monitoring data, which is the most recent 3-year period available. The number of days each year that standards were exceeded and the amount of the exceedance provide a good indicator of severity of the air quality problems in the local area.

Table 2: Air Quality Monitoring Summary

Air Pollutant	Averaging Time	Item	2014	2015	2016
Ozone	1 Hour	Maximum 1 Hour (ppm)	0.066	0.068	0.066
		Days > State Standard (0.09 ppm)	0	0	0
	8 Hour	Maximum 8 Hour (ppm)	0.062	0.061	0.058
		Days > State Standard (0.07 ppm)	0	0	0
		Days > National Standard (0.070 ppm)	0	0	0
*Carbon monoxide	8 Hour	Maximum 8 Hour (ppm)	0.76 (2010)	0.99 (2011)	1.39 (2012)
		Days > State Standard (9.0 ppm)	0	0	0
		Days > National Standard (9 ppm)	0	0	0
Nitrogen dioxide	Annual	Annual Average (ppm)	5	5	4
	1 Hour	Maximum 1 Hour (ppm)	38.0	33.0	33.0
		Days > State Standard (0.18 ppm)	0	0	0
**PM_{10}	Annual	Annual Average ($\mu g/m^3$)	16.4 (2009)	15.3 (2010)	4.9 (2011)
	24 Hour	24 Hour ($\mu g/m^3$)	41 (2009)	39 (2010)	18 (2011)
		Days > State Standard (50 $\mu g/m^3$)	0	0	0
		Days > National Standard (150 $\mu g/m^3$)	0	0	0

Table 2 (cont.): Air Quality Monitoring Summary

Air Pollutant	Averaging Time	Item	2014	2015	2016
$PM_{2.5}$	Annual	Annual Average (µg/m^3)	4.8	4.8	5.4
	24 Hour	24 Hour (µg/m^3)	20.2	22.8	28.7
		Days > National Standard (35 µg/m^3)	0	0	0

Notes:
> = exceed ppm = parts per million µg/m^3 = micrograms per cubic meter
PM_{10} = particulate matter of size 10 microns and below; $PM_{2.5}$ = particulate matter of size 2.5 microns and below
State Standard = California Ambient Air Quality Standard
National Standard = National Ambient Air Quality Standard
All data from Salinas #3 Station
* Data from Salinas #3 Station for years 2010-2012
** Data from Salinas #3 Station for years 2009 to 2011
Sources: ARB 2016.

The health impacts of the various air pollutants of concern are presented in a number of ways. The clearest in comparison is to the state and federal ozone standards. If concentrations are below the standard, it is safe to say that no health impact would occur to anyone. When pollutant concentrations exceed the standard, health impacts will vary based on the magnitude of the exceedance. The EPA developed the Air Quality Index (AQI) as an easy to understand measure of health impact compared to concentrations in the air. Table 3 provides a description of the health impacts of ozone at different concentrations.

Table 3: Air Quality Index and Health Effects

Air Quality Index/ 8-hour Ozone Concentration	Health Effects Description
AQI-100—Moderate	**Sensitive Groups**: Children and people with asthma are the groups most at risk.
Concentration 70 ppb	**Health Effects Statements**: Unusually sensitive individuals may experience respiratory symptoms.
	Cautionary Statements: Unusually sensitive people should consider limiting prolonged outdoor exertion.
AQI-150—Unhealthy for Sensitive Groups	**Sensitive Groups**: Children and people with asthma are the groups most at risk.
Concentration 85 ppb	**Health Effects Statements**: Increasing likelihood of respiratory symptoms and breathing discomfort in active children and adults and people with respiratory disease, such as asthma.
	Cautionary Statements: Active children and adults, and people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.

Table 3 (cont.): Air Quality Index and Health Effects

Air Quality Index/ 8-hour Ozone Concentration	Health Effects Description
AQI-200—Unhealthy	**Sensitive Groups**: Children and people with asthma are the groups most at risk.
Concentration 105 ppb	**Health Effects Statements**: Greater likelihood of respiratory symptoms and breathing difficulty in active children and adults and people with respiratory disease, such as asthma; possible respiratory effects in general population.
	Cautionary Statements: Active children and adults, and people with respiratory disease, such as asthma, should avoid prolonged outdoor exertion; everyone else, especially children, should limit prolonged outdoor exertion.
AQI-210—Very Unhealthy	**Sensitive Groups**: Children and people with asthma are the groups most at risk.
Concentration 115 ppb	**Health Effects Statements**: Increasingly severe symptoms and impaired breathing likely in active children and adults and people with respiratory disease, such as asthma; increasing likelihood of respiratory effects in general population.
	Cautionary Statements: Active children and adults, and people with respiratory disease, such as asthma, should avoid all outdoor exertion; everyone else, especially children, should limit outdoor exertion.
Notes: AQI = air quality index ppb = parts per billion Source: EPA 2014b.	

Based on the AQI scale for the 8-hour ozone standard, the nearest monitoring station experienced no days in the last 3 years that would be categorized as unhealthful (AQI 200), and no days that would be considered moderate (AQI 100) as measured at the Salinas #3 Station. The highest reading was 68 parts per billion (ppb) in 2015 compared with the 70-ppb cut off point for moderate (AQI 100).

The other nonattainment pollutant of concern is PM_{10}. An AQI of 100 or lower is considered moderate and would be triggered by a 24-hour average concentration of 154 $\mu g/m^3$, which is an exceedance of the federal PM_{10} standard. The Salinas #3 Station did not exceed the standard in 2014 to 2016. People with respiratory or heart disease, the elderly and children are the groups most at risk. Unusually sensitive people should consider reducing prolonged or heavy exertion.

Table 4: Air Quality Index and Health Effects

Air Quality Index/ 24-hour PM_{10} Concentration	Health Effects Description
AQI-100—Moderate Concentration 154 µg/m^3	**Sensitive Groups**: People with respiratory disease are the group most at risk.
	Health Effects Statements: Unusually sensitive people should consider reducing prolonged or heavy exertion.
	Cautionary Statements: Unusually sensitive people should consider reducing prolonged or heavy exertion.
AQI-150—Unhealthy for Sensitive Groups Concentration 254 µg/m^3	**Sensitive Groups**: People with respiratory disease are the group most at risk.
	Health Effects Statements: Increasing likelihood of respiratory symptoms and aggravation of lung disease, such as asthma
	Cautionary Statements: People with respiratory disease, such as asthma, should limit outdoor exertion
AQI-200—Unhealthy Concentration 354 µg/m^3	**Sensitive Groups**: People with respiratory disease are the group most at risk.
	Health Effects Statements: Increased respiratory symptoms and aggravation of lung disease, such as asthma; possible respiratory effects in general population.
	Cautionary Statements:—
AQI-210—Very Unhealthy Concentration 361 µg/m^3	**Sensitive Groups**: People with respiratory disease are the group most at risk.
	Health Effects Statements: Significant increase in respiratory symptoms and aggravation of lung disease, such as asthma; increasing likelihood of respiratory effects in general population.
	Cautionary Statements: People with respiratory disease, such as asthma, should avoid any outdoor activity; everyone else, especially the elderly and children, should limit outdoor exertion.

Notes:
AQI = air quality index
µg/m^3 = micrograms (one-millionth of a gram) per cubic meter
Source: EPA 2014b.

SECTION 3: REGULATORY FRAMEWORK AND RULES

Air pollutants are regulated to protect human health and for secondary effects such as visibility and building soiling. The Clean Air Act of 1970 tasks the United States Environmental Protection Agency (EPA) with setting air quality standards. The State of California also sets air quality standards that, in some cases, are more stringent than federal standards and address additional pollutants. The ARB is the State agency responsible for setting air quality standards for California. The following section describes these federal and state standards and the health effects of the regulated pollutants.

Air pollutants are regulated at the national, state, and air basin or county level; each agency has a different level of regulatory responsibility. The EPA regulates at the national level, the ARB regulates at the state level, and the Air District regulates at the air basin level.

The EPA is responsible for national and interstate air pollution issues and policies. The EPA sets national vehicle and stationary source emission standards, oversees approval of all SIPs, provides research and guidance for air pollution programs, and sets National Ambient Air Quality Standards, (also known as federal standards, described earlier).

A SIP is a document prepared by each state describing existing air quality conditions and measures followed to attain and maintain federal standards. The SIP for the State of California is administered by the ARB, which has overall responsibility for statewide air quality maintenance and air pollution prevention. California's SIP incorporates individual federal attainment plans for regional air districts—each air district prepares its federal attainment plan, which is sent to ARB to be approved and incorporated into the California SIP. Federal attainment plans include the technical foundation for understanding air quality (e.g., emission inventories and air quality monitoring), control measures and strategies, and enforcement mechanisms.

Areas designated non-attainment must develop air quality plans and regulations to achieve standards by specified dates depending on the severity of the exceedances. For much of the country, implementation of federal motor vehicle standards and compliance with federal permitting requirements for industrial sources are adequate to attain air quality standards on schedule. For many areas of California, however, additional state and local regulation is required to achieve the standards. Regulations adopted by California are summarized in the following sections.

3.1 - Clean Air Act

Congress established much of the basic structure of the Clean Air Act (CAA) in 1970, and made major revisions in 1977 and 1990. Six common air pollutants (also known as criteria pollutants) are in the CAA. These are particulate matter, ground-level ozone, CO, sulfur oxides, nitrogen oxides, and lead. EPA calls these pollutants criteria air pollutants because it regulates them by developing human health-based and/or environmentally based criteria (science-based guidelines) for setting permissible levels. The set of limits based on human health are primary standards. Another set of limits intended to prevent environmental and property damage are secondary standards (EPA 2014a). The federal standards are National Ambient Air Quality Standards (NAAQS). The air quality

standards provide benchmarks for determining whether air quality is healthy at specific locations and whether development activities will cause or contribute to a violation of the standards. The criteria pollutants are:

- Ozone (O_3)
- Nitrogen dioxide (NO_2)
- Lead (Pb)
- Particulate matter (PM_{10} and $PM_{2.5}$)
- Carbon monoxide (CO)
- Sulfur dioxide (SO_2)

The federal standards were set to protect public health, including that of sensitive individuals; thus, EPA updates these standards when more medical research is available regarding the health effects of the criteria pollutants. Primary federal standards are the levels of air quality necessary, with an adequate margin of safety, to protect the public health (ARB 2013a).

3.2 - California Clean Air Act

The California Legislature enacted the California Clean Air Act (CCAA) in 1988 to address air quality issues of concern not adequately addressed by the federal CAA at the time. California's air quality problems were and are some of the most severe in the nation and required additional actions beyond the federal mandates. The ARB administers California Ambient Air Quality Standards (CAAQS) for the 10 air pollutants designated in the CCAA. The 10 state air pollutants are the six federal standards listed above as well visibility-reducing particulates, hydrogen sulfide, sulfates, and vinyl chloride. EPA authorized California to adopt its own regulations for motor vehicles and other sources that are more stringent than similar federal regulations implementing the CAA. Generally, the planning requirements of the CCAA are less stringent than federal CAA; therefore, consistency with the CAA will also demonstrate consistency with the CCAA.

3.3 - Toxic Air Contaminants

A toxic air contaminant (TAC) is an air pollutant that may cause or contribute to an increase in mortality or serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; however, their high toxicity or health risk may pose a threat to public health even at low concentrations. There are no ambient air quality standards for TAC emissions. TACs are regulated in terms of health risks to individuals and populations exposed to the pollutants. The 1990 Clean Air Act Amendments, significantly expanded EPA's authority to regulate hazardous air pollutants (HAPs). Section 112 of the CAA lists 187 hazardous air pollutants regulated by source category. Authority to regulate these pollutants was delegated to the States. ARB and local air districts regulate TACs and HAPs in California.

3.4 - Air Pollutant Description and Health Effects

The federal and state ambient air quality standards, relevant effects, properties, and sources of the pollutants are summarized in Table 5.

Ozone

Ozone is not emitted directly into the air but is formed by a photochemical reaction in the atmosphere. Ozone precursors, which include reactive organic compounds (ROC) and nitrous oxides (NO_X), react in the atmosphere in the presence of sunlight to form ozone. Because photochemical reaction rates depend on the intensity of ultraviolet light and air temperature, ozone is primarily a summer air pollution problem. Often, the effects of emitted ROC and NO_X are felt a distance downwind of the emission sources. Ozone is subsequently considered a regional pollutant. Ground-level ozone is a respiratory irritant and an oxidant that increases susceptibility to respiratory infections and can cause substantial damage to vegetation and other materials.

Ozone can irritate lung airways and cause inflammation much like a sunburn. Other symptoms include wheezing, coughing, pain when taking a deep breath, and breathing difficulties during exercise or outdoor activities. People with respiratory problems are most vulnerable, but even healthy people who are active outdoors can be affected when ozone levels are high. Chronic ozone exposure can induce morphological (tissue) changes throughout the respiratory tract, particularly at the junction of the conducting airways and the gas exchange zone in the deep lung. Anyone who spends time outdoors in the summer is at risk, particularly children and other people who are more active outdoors. Even at very low levels, ground-level ozone triggers a variety of health problems, including aggravated asthma, reduced lung capacity, and increased susceptibility to such respiratory illnesses as pneumonia and bronchitis.

Ozone also damages vegetation and ecosystems. It leads to reduced agricultural crop and commercial forest yields; reduced growth and survivability of tree seedlings; and increased susceptibility to diseases, pests, and other stresses such as harsh weather. In the United States alone, ozone is responsible for an estimated $500 million in reduced crop production each year. In addition, ozone causes damage to buildings, rubber, and some plastics.

Ozone is a regional pollutant, as the reactions forming it take place over time, and it materializes downwind from the sources of the emissions. As a photochemical pollutant, ozone is formed only during daylight hours under appropriate conditions, but is destroyed throughout the day and night. Thus, ozone concentrations vary depending upon both the time of day and the location. Even in pristine areas, some ambient ozone forms from natural emissions that are not controllable. This is termed background ozone. The average background ozone concentrations near sea level are in the range of 0.015 to 0.035 parts per million (ppm), with a maximum of about 0.04 ppm.

Reactive Organic Gases

Reactive organic gases (ROG) are defined as any compound of carbon, excluding CO, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participate in atmospheric photochemical reactions. ROG consist of nonmethane hydrocarbons and oxygenated hydrocarbons. Hydrocarbons are organic compounds that contain only hydrogen and carbon atoms. Nonmethane hydrocarbons are hydrocarbons that do not contain the unreactive hydrocarbon methane. Oxygenated hydrocarbons are hydrocarbons with oxygenated functional groups attached.

It should be noted that there are no state or national ambient air quality standards for ROG because ROG is not classified as criteria pollutant. ROG is regulated, however, because a reduction in ROG emissions reduces certain chemical reactions that contribute to the formulation of ozone. ROG is transformed into organic aerosols in the atmosphere, which contribute to higher PM_{10} levels and lower visibility.

Nitrogen Oxides

During combustion of fossil fuels, oxygen reacts with nitrogen to produce nitrogen oxides or NO_X. This occurs primarily in motor vehicle internal combustion engines and fossil fuel-fired electric utility facilities and industrial boilers. The pollutant NO_x is a concern because it is an ozone precursor, which means that it helps form ozone. When NO_x and ROG are released in the atmosphere, they can chemically react with one another in the presence of sunlight and heat to form ozone. NO_x can also be a precursor to PM_{10} and $PM_{2.5}$.

Because NO_x and ROG are ozone precursors, the health effects associated with ozone (as discussed below in Table 5) are also indirect health effects associated with significant levels of NO_X and ROG emissions.

Particulate Matter (PM_{10} and $PM_{2.5}$)

PM is particulate matter in the air that includes a mixture of solids and liquid droplets. Some particles are emitted directly; others are formed in the atmosphere when other pollutants react. PM is so small that they can get into the lungs, potentially causing serious health problems. PM_{10} is 10 microns in diameter, smaller than the width of a human hair. $PM_{2.5}$ is 2.5 microns in diameter and consists of "fine" particles. These fine particles are so small they can be detected only with an electron microscope. Sources of fine particles include all types of combustion, including motor vehicles, power plants, residential wood burning, forest fires, agricultural burning, and some industrial processes.

These particles come in many sizes and shapes and can be made up of hundreds of different chemicals. Some particles, known as primary particles, are emitted directly from a source, such as construction sites, unpaved roads, fields, smokestacks, or fires. Others form in complicated reactions in the atmosphere from chemicals such as sulfur dioxides and nitrogen oxides that are emitted from power plants, industrial activity, and automobiles. These particles, known as secondary particles, make up most of the fine particle pollution in the United States.

Particle exposure can lead to a variety of health effects. For example, numerous studies link particle levels to increased hospital admissions and emergency room visits—and even to death from heart or lung diseases. Both long- and short-term particle exposures have been linked to health problems. Long-term exposures, such as those experienced by people living for many years in areas with high particle levels, have been associated with problems such as reduced lung function, the development of chronic bronchitis, and even premature death. Short-term exposures to particles (hours or days) can aggravate lung disease, causing asthma attacks and acute bronchitis, and may increase susceptibility to respiratory infections. In people with heart disease, short-term exposures have been linked to heart attacks and arrhythmias. Healthy children and adults have not been reported

to suffer serious effects from short-term exposures, although they may experience temporary minor irritation when particle levels are elevated.

Carbon Monoxide

Carbon monoxide (CO) is of less concern in the NCCAB because it is classified as an attainment area. CO is a colorless, odorless gas that is formed when carbon in fuel is not burned completely. It is a component of motor vehicle exhaust, which contributes about 56 percent of all CO emissions nationwide. Other non-road engines and vehicles (such as construction equipment and boats) contribute about 22 percent of all CO emissions nationwide. Higher levels of CO generally occur in areas with heavy traffic congestion. In cities, 85 to 95 percent of all CO emissions may come from motor vehicle exhaust. Other sources of CO emissions include industrial processes (such as metals processing and chemical manufacturing), residential wood burning, and natural sources such as forest fires. Woodstoves, gas stoves, cigarette smoke, and unvented gas and kerosene space heaters are sources of CO indoors.

Motor vehicles are the dominant source of CO emissions in most areas. CO is described as having only a local influence because it dissipates quickly. High CO levels develop primarily during winter, when periods of light winds combine with the formation of ground-level temperature inversions (typically from the evening through early morning). These conditions result in reduced dispersion of vehicle emissions. Because CO is a product of incomplete combustion, motor vehicles exhibit increased CO emission rates at low air temperatures. High CO concentrations occur in areas of limited geographic size, sometimes referred to as hot spots. Since CO concentrations are strongly associated with motor vehicle emissions, high CO concentrations generally occur in the immediate vicinity of roadways with high traffic volumes and traffic congestion, active parking lots, and in automobile tunnels. Areas adjacent to heavily traveled and congested intersections are particularly susceptible to high CO concentrations.

CO is a public health concern because it combines readily with hemoglobin, reducing the amount of oxygen transported in the bloodstream. The health threat from relatively low levels of CO is most serious for those who suffer from such heart-related diseases as angina, clogged arteries, or congestive heart failure. For a person with heart disease, a single exposure to CO at low levels may cause chest pain and reduce that person's ability to exercise; repeated exposures may contribute to other cardiovascular effects. High levels of CO can affect even healthy people. People who breathe high levels of CO can develop vision problems, reduced ability to work or learn, reduced manual dexterity, and difficulty performing complex tasks. At extremely high levels, CO is poisonous and can cause death.

Toxic Air Contaminants

In addition to the criteria pollutants, discussed above, toxic air contaminants (TACs), also known as hazardous air pollutants (HAPs), are another group of pollutants of concern. A TAC is defined as an air pollutant that may cause or contribute to an increase in mortality or serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; however, their high toxicity or health risk may pose a threat to public health even at low concentrations. In general, for those TACs that may cause cancer, there are thresholds set by

regulatory agencies below which adverse health impacts are not expected to occur. This contrasts with the criteria pollutants for which acceptable levels of exposure can be determined and for which the state and federal governments have set ambient air quality standards.

According to the California Almanac of Emissions and Air Quality, the majority of the estimated health risk from TACs for the State of California can be attributed to relatively few compounds, the most important of which is diesel particulate matter (DPM) from diesel-fueled engines.

Diesel Particulate Matter

The ARB identified PM emissions from diesel-fueled engines as a TAC in August 1998 under California's TAC program. The State of California, after a 10-year research program, determined in 1998 that DPM from diesel-fueled engines is a human carcinogen and that chronic (long-term) inhalation exposure to DPM poses a chronic (long-term) health risk. According to ARB's 2013 Almanac, on-road diesel-fueled vehicles contribute approximately 42 percent of the statewide total inventory, with an additional 55 percent attributed to other mobile sources such as construction and mining equipment, agricultural equipment, and transport refrigeration units.[1] The remaining DPM inventory was generated by stationary point sources and aggregated stationary sources.

[1] The California Almanac of Emissions and Air Quality. 2013 Edition. Website: https://www.arb.ca.gov/aqd/almanac/almanac13/almanac2013all.pdf.

Table 5: Description of Air Pollutants

Air Pollutant	Averaging Time	California Standard	Federal Standard[a]	Most Relevant Effects from Pollutant Exposure	Properties	Sources
Ozone	1 Hour	0.09 ppm	—	Irritate respiratory system; reduce lung function; breathing pattern changes; reduction of breathing capacity; inflame and damage cells that line the lungs; make lungs more susceptible to infection; aggravate asthma; aggravate other chronic lung diseases; cause permanent lung damage; some immunological changes; increased mortality risk; vegetation and property damage.	Ozone is a photochemical pollutant not emitted directly into the atmosphere, but is formed by a complex series of chemical reactions between volatile organic compounds (VOC), oxides of nitrogen (NO_x), and sunlight. Ozone is a regional pollutant generated over a large area and is transported and spread by the wind.	Ozone is a secondary pollutant; thus, it is not emitted directly into the lower level of the atmosphere. The primary sources of ozone precursors (VOC and NO_x) are mobile sources (on-road and off-road vehicle exhaust).
	8 Hour	0.070 ppm (parts per million)	0.070 ppm[f]			
Carbon monoxide	1 Hour	20 ppm	35 ppm	Ranges depending on exposure: slight headaches; nausea; aggravation of angina pectoris (chest pain) and other aspects of coronary heart disease; decreased exercise tolerance in persons with peripheral vascular disease and lung disease; impairment of central nervous system functions; possible increased risk to fetuses; death.	Carbon monoxide is a colorless, odorless, toxic gas. Carbon monoxide is somewhat soluble in water; therefore, rainfall and fog can suppress carbon monoxide conditions. Carbon monoxide enters the body through the lungs, dissolves in the blood, replaces oxygen as an attachment to hemoglobin, and reduces available oxygen in the blood.	Carbon monoxide is produced by incomplete combustion of carbon-containing fuels (e.g., gasoline, diesel fuel, and biomass). Sources include motor vehicle exhaust, industrial processes (metals processing and chemical manufacturing), residential wood burning, and natural sources.
	8 Hour	9.0 ppm	9 ppm			
Nitrogen dioxide[b]	1 Hour	0.18 ppm	0.100 ppm	Potential to aggravate chronic respiratory disease and respiratory symptoms in sensitive groups; risk to public health implied by pulmonary and extra-pulmonary biochemical and cellular changes and pulmonary structural changes; contribution to atmospheric discoloration; increased visits to hospital for respiratory illnesses.	During combustion of fossil fuels, oxygen reacts with nitrogen to produce nitrogen oxides—NO_x (NO, NO_2, NO_3, N_2O, N_2O_3, N_2O_4, and N_2O_5). NO_x is a precursor to ozone, PM_{10}, and $PM_{2.5}$ formation. NO_x can react with compounds to form nitric acid and related small particles and result in PM related health effects.	NO_x is produced in motor vehicle internal combustion engines and fossil fuel-fired electric utility and industrial boilers. Nitrogen dioxide (NO_2) forms quickly from NO_x emissions. NO_2 concentrations near major roads can be 30 to 100 percent higher than those at monitoring stations.
	Annual	0.030 ppm	0.053 ppm			

Table 5 (cont.): Description of Air Pollutants

Air Pollutant	Averaging Time	California Standard	Federal Standard[a]	Most Relevant Effects from Pollutant Exposure	Properties	Sources
Sulfur dioxide[c]	1 Hour	0.25 ppm	0.075 ppm	Bronchoconstriction accompanied by symptoms which may include wheezing, shortness of breath and chest tightness, during exercise or physical activity in persons with asthma. Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient sulfur dioxide levels. It is not clear whether the two pollutants act synergistically or one pollutant alone is the predominant factor.	Sulfur dioxide is a colorless, pungent gas. At levels greater than 0.5 ppm, the gas has a strong odor, similar to rotten eggs. Sulfur oxides (SO_x) include sulfur dioxide and sulfur trioxide. Sulfuric acid is formed from sulfur dioxide, which can lead to acid deposition and can harm natural resources and materials. Although sulfur dioxide concentrations have been reduced to levels well below state and federal standards, further reductions are desirable because sulfur dioxide is a precursor to sulfate and PM_{10}.	Human caused sources include fossil-fuel combustion, mineral ore processing, and chemical manufacturing. Volcanic emissions are a natural source of sulfur dioxide. The gas can also be produced in the air by dimethylsulfide and hydrogen sulfide. Sulfur dioxide is removed from the air by dissolution in water, chemical reactions, and transfer to soils and ice caps. The sulfur dioxide levels in the State are well below the maximum standards.
	3 Hour	—	0.5 ppm			
	24 Hour	0.04 ppm	0.14 ppm (for certain areas)			
	Annual	—	0.030 ppm (for certain areas)			
Particulate matter (PM_{10})	24 hour	50 µg/m^3 (microgram per cubic meter)	150 µg/m^3	• Short-term exposure (hours/days): irritation of the eyes, nose, throat; coughing; phlegm; chest tightness; shortness of breath; aggravate existing lung disease, causing asthma attacks and acute bronchitis; those with heart disease can suffer heart attacks and arrhythmias. • Long-term exposure: reduced lung function; chronic bronchitis; changes in lung morphology; death.	Suspended particulate matter is a mixture of small particles that consist of dry solid fragments, droplets of water, or solid cores with liquid coatings. The particles vary in shape, size, and composition. PM_{10} refers to particulate matter that is between 2.5 and 10 microns in diameter, (1 micron is one-millionth of a meter). $PM_{2.5}$ refers to particulate matter that is 2.5 microns or less in diameter, about one-thirtieth the size of the average human hair.	Stationary sources include fuel or wood combustion for electrical utilities, residential space heating, and industrial processes; construction and demolition; metals, minerals, and petrochemicals; wood products processing; mills and elevators used in agriculture; erosion from tilled lands; waste disposal, and recycling. Mobile or transportation related sources are from vehicle exhaust and road dust. Secondary particles form from reactions in the atmosphere.
	Mean	20 µg/m^3	—			
Particulate matter ($PM_{2.5}$)	24 Hour	—	35 µg/m^3			
	Annual	12 µg/m^3	12.0 µg/m^3			
Visibility-reducing particles	8 Hour	See note below[d]				

Table 5 (cont.): Description of Air Pollutants

Air Pollutant	Averaging Time	California Standard	Federal Standard[a]	Most Relevant Effects from Pollutant Exposure	Properties	Sources
Sulfates	24 Hour	25 µg/m^3	—	(a) Decrease in ventilatory function; (b) aggravation of asthmatic symptoms; (c) aggravation of cardio-pulmonary disease; (d) vegetation damage; (e) degradation of visibility; (f) property damage.	The sulfate ion is a polyatomic anion with the empirical formula SO_4^{2-}. Sulfates occur in combination with metal and/or hydrogen ions. Many sulfates are soluble in water.	Sulfates are particulates formed through the photochemical oxidation of sulfur dioxide. In California, the main source of sulfur compounds is combustion of gasoline and diesel fuel.
Lead[e]	30-day	1.5 µg/m^3	—	Lead accumulates in bones, soft tissue, and blood and can affect the kidneys, liver, and nervous system. It can cause impairment of blood formation and nerve conduction, behavior disorders, mental retardation, neurological impairment, learning deficiencies, and low IQs.	Lead is a solid heavy metal that can exist in air pollution as an aerosol particle component. Leaded gasoline was used in motor vehicles until around 1970. Lead concentrations have not exceeded state or federal standards at any monitoring station since 1982.	Lead ore crushing, lead-ore smelting, and battery manufacturing are currently the largest sources of lead in the atmosphere in the United States. Other sources include dust from soils contaminated with lead-based paint, solid waste disposal, and crustal physical weathering.
	Quarter	—	1.5 µg/m^3			
	Rolling 3-month average	—	0.15 µg/m^3			
Vinyl chloride[e]	24 Hour	0.01 ppm	—	Short-term exposure to high levels of vinyl chloride in the air causes central nervous system effects, such as dizziness, drowsiness, and headaches. Epidemiological studies of occupationally exposed workers have linked vinyl chloride exposure to development of a rare cancer, liver angiosarcoma, and have suggested a relationship between exposure and lung and brain cancers.	Vinyl chloride, or chloroethene, is a chlorinated hydrocarbon and a colorless gas with a mild, sweet odor. In 1990, the Air Resources Board identified vinyl chloride as a toxic air contaminant and estimated a cancer unit risk factor.	Most vinyl chloride is used to make polyvinyl chloride plastic and vinyl products, including pipes, wire and cable coatings, and packaging materials. It can be formed when plastics containing these substances are left to decompose in solid waste landfills. Vinyl chloride has been detected near landfills, sewage plants, and hazardous waste sites.

Table 5 (cont.): Description of Air Pollutants

Air Pollutant	Averaging Time	California Standard	Federal Standard[a]	Most Relevant Effects from Pollutant Exposure	Properties	Sources
Hydrogen sulfide	1 Hour	0.03 ppm	—	High levels of hydrogen sulfide can cause immediate respiratory arrest. It can irritate the eyes and respiratory tract and cause headache, nausea, vomiting, and cough. Long exposure can cause pulmonary edema.	Hydrogen sulfide (H2S) is a flammable, colorless, poisonous gas that smells like rotten eggs.	Manure, storage tanks, ponds, anaerobic lagoons, and land application sites are the primary sources of hydrogen sulfide. Anthropogenic sources include the combustion of sulfur containing fuels (oil and coal).
Volatile organic compounds (VOC)		There are no State or federal standards for VOCs because they are not classified as criteria pollutants.		Although health-based standards have not been established for VOCs, health effects can occur from exposures to high concentrations because of interference with oxygen uptake. In general, concentrations of VOCs are suspected to cause eye, nose, and throat irritation; headaches; loss of coordination; nausea; and damage to the liver, the kidneys, and the central nervous system. Many VOCs have been classified as toxic air contaminants.	Reactive organic gases (ROG), or VOCs, are defined as any compound of carbon—excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate—that participates in atmospheric photochemical reactions. Although there are slight differences in the definition of ROG and VOCs, the two terms are often used interchangeably.	Indoor sources of VOCs include paints, solvents, aerosol sprays, cleansers, tobacco smoke, etc. Outdoor sources of VOCs are from combustion and fuel evaporation. A reduction in VOC emissions reduces certain chemical reactions that contribute to the formulation of ozone. VOCs are transformed into organic aerosols in the atmosphere, which contribute to higher PM10 and lower visibility.
Diesel particulate matter (DPM)		There are no ambient air quality standards for DPM.		Some short-term (acute) effects of DPM exposure include eye, nose, throat, and lung irritation, coughs, headaches, light-headedness, and nausea. Studies have linked elevated particle levels in the air to increased hospital admissions, emergency room visits, asthma attacks, and premature deaths among those suffering from respiratory problems. Human studies on the carcinogenicity of	DPM is a source of PM2.5—diesel particles are typically 2.5 microns and smaller. Diesel exhaust is a complex mixture of thousands of particles and gases produced when an engine burns diesel fuel. Organic compounds account for 80 percent of the total particulate matter mass, which consists of compounds such as hydrocarbons and their derivatives, and polycyclic aromatic hydrocarbons and their derivatives.	Diesel exhaust is a major source of ambient particulate matter pollution in urban environments. Typically, the main source of DPM is from combustion of diesel fuel in diesel-powered engines. Such engines are in on-road vehicles such as diesel trucks, off-road construction vehicles, diesel electrical generators, and various pieces of stationary construction equipment.

Table 5 (cont.): Description of Air Pollutants

Air Pollutant	Averaging Time	California Standard	Federal Standard[a]	Most Relevant Effects from Pollutant Exposure	Properties	Sources
				DPM demonstrate an increased risk of lung cancer, although the increased risk cannot be clearly attributed to diesel exhaust exposure.	Fifteen polycyclic aromatic hydrocarbons are confirmed carcinogens, a number of which are in diesel exhaust.	

Notes:
ppm = parts per million (concentration) µg/m^3 = micrograms per cubic meter Annual = Annual Arithmetic Mean 30-day = 30-day average Quarter = Calendar quarter
NO_x = oxides of nitrogen VOC = volatile organic compounds NO_2 = nitrogen dioxide SO_x = oxides of sulfur DPM = diesel particulate matter ROG = reactive organic gases
PM_{10} = particulate matter of size 10 microns and below $PM_{2.5}$ = particulate matter of size 2.5 microns and below H_2S = hydrogen sulfide SO_4^{2-} = sulfate SO_2 = sulfur dioxide

[a] Federal standard refers to the primary national ambient air quality standard, or the levels of air quality necessary, with an adequate margin of safety to protect the public health. All standards listed are primary standards except for 3 Hour SO_2, which is a secondary standard. A secondary standard is the level of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[b] To attain the 1-hour NO_2 national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 parts per billion (0.100 ppm).

[c] On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 parts per billion (ppb). The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

[d] Visibility-reducing particles: In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

[e] The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[f] The EPA Administrator approved a revised 8-hour ozone standard of 0.07 ppb on October 1, 2015. The new standard went into effect 60 days after publication of the Final Rule in the Federal Register. The Final Rule was published in the Federal Register on October 26, 2015 and became effective on December 28, 2015.

Source of effects, properties, and sources: Bay Area Air Quality Management District 2011; California Environmental Protection Agency 2002; California Air Resources Board 2009a; U.S. Environmental Protection Agency 2003, 2009a, 2009b, 2010, 2011, and 2012a; National Toxicology Program 2011a and 2011b.
Source of standards: ARB 2013a.

Several pollutants listed in Table 5 are not discussed further in this analysis. Analysis of lead is not included in this report because the Project will not create any new sources of lead emissions. Particulate matter is addressed in this analysis, and therefore visibility-reducing particles are not explicitly addressed. The Project will not generate or expose residents to vinyl chloride because the proposed Project does not use the chemical processes that create this pollutant, and there are no such uses in the Project vicinity. The proposed Project will not expose people to hydrogen sulfide because it will not generate hydrogen sulfide in any substantial quantity.

Toxic Air Contaminants and their Health Effects

A TAC is an air pollutant that may cause or contribute to an increase in mortality or serious illness, or that may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air; however, their high toxicity or health risk may pose a threat to public health even at low concentrations. The California Almanac of Emissions and Air Quality presents the relevant concentration and cancer risk data for the ten TACs that pose the most substantial health risk in California based on available data. The ten TACs are acetaldehyde, benzene, 1.3-butadiene, carbon tetrachloride, hexavalent chromium, para-dichlorobenzene, formaldehyde, methylene chloride, perchloroethylene, and DPM.

Some studies indicate that DPM poses the greatest health risk among the TACs listed above. A 10-year research program (ARB 1998) demonstrated that DPM from diesel-fueled engines is a human carcinogen and that chronic (long-term) inhalation exposure to DPM poses a chronic health risk. In addition to increasing the risk of lung cancer, exposure to diesel exhaust can have other health effects. Diesel exhaust can irritate the eyes, nose, throat, and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. Diesel exhaust is a major source of fine particulate pollution as well, and studies have linked elevated particle levels in the air to increased hospital admissions, emergency room visits, asthma attacks, and premature deaths among those suffering from respiratory problems.

DPM differs from other TACs in that it is not a single substance but a complex mixture of hundreds of substances. Although diesel-fueled, internal combustion engines emit DPM, the composition of the emissions varies. The DPM exhaust composition depends on several items, including engine type, operating conditions, fuel composition, lubricating oil, and whether or not an emission control system is present. Unlike the other TACs, however, no ambient monitoring data are available for DPM because no routine measurement method currently exists. The ARB has made preliminary concentration estimates based on a DPM exposure method. This method uses the ARB emissions inventory's particulate matter of sizes 10 microns and smaller (PM_{10}) database, ambient PM_{10} monitoring data, and the results from several studies to estimate concentrations of DPM.

Asbestos

Asbestos is the name given to a number of naturally occurring fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The three most common types of asbestos are chrysotile, amosite, and crocidolite. Chrysotile, also known as white asbestos, is the most common type of asbestos found in buildings. Chrysotile makes up approximately 90 to 95 percent of all asbestos contained in buildings in the

United States. Exposure to asbestos is a health threat; exposure to asbestos fibers may result in health issues such as lung cancer, mesothelioma (a rare cancer of the thin membranes lining the lungs, chest, and abdominal cavity), and asbestosis (a non-cancerous lung disease that causes scarring of the lungs).

3.5 - Air Quality Plans and Regulations

3.5.1 - California Regulations

California Clean Air Act

The California Legislature enacted the California Clean Air Act (CCAA) in 1988 to address air quality issues of concern not adequately addressed by the federal CAA at the time. California's air quality problems were and are some of the most severe in the nation and required additional actions beyond the federal mandates. The ARB administers California Ambient Air Quality Standards (CAAQS) for the 10 air pollutants designated in the CCAA. The 10 state air pollutants are the six federal standards listed above as well visibility-reducing particulates, hydrogen sulfide, sulfates, and vinyl chloride. EPA authorized California to adopt its own regulations for motor vehicles and other sources that are more stringent than similar federal regulations implementing the CAA. Generally, the planning requirements of the CCAA are less stringent than federal CAA; therefore, consistency with the CAA will also demonstrate consistency with the CCAA.

Low-Emission Vehicle Program

The ARB first adopted Low-Emission Vehicle (LEV) program standards in 1990. These first LEV standards ran from 1994 through 2003. LEV II regulations, running from 2004 through 2010, represent continuing progress in emission reductions. As the State's passenger vehicle fleet continues to grow and more sport utility vehicles and pickup trucks are used as passenger cars rather than work vehicles, the more stringent LEV II standards were adopted to provide reductions necessary for California to meet federally mandated clean air goals outlined in the 1994 State Implementation Plan. In 2012, ARB adopted the LEV III amendments to California's Low-Emission Vehicle (LEV) regulations. These amendments include more stringent emission standards for both criteria pollutants and GHGs for new passenger vehicles (ARB 2012a).

On-Road Heavy-Duty Vehicle Program

The ARB has adopted standards for emissions from various types of new on-road heavy-duty vehicles. Section 1956.8, Title 13, California Code of Regulations contains California's emission standards for on-road heavy-duty engines and vehicles, and test procedures. ARB has also adopted programs to reduce emissions from in-use heavy-duty vehicles including the Heavy-Duty Diesel Vehicle Idling Reduction Program, the Heavy-Duty Diesel In-Use Compliance Program, the Public Bus Fleet Rule and Engine Standards, and the School Bus Program and others (ARB 2013b).

ARB Regulation for In-Use Off-Road Diesel Vehicles

On July 26, 2007, the ARB adopted a regulation to reduce DPM and NO_X emissions from in-use (existing) off-road heavy-duty diesel vehicles in California. Such vehicles are used in construction, mining, and industrial operations. The regulation limits idling to no more than five consecutive

minutes, requires reporting and labeling, and requires disclosure of the regulation upon vehicle sale. The ARB is enforcing that part of the rule with fines up to $10,000 per day for each vehicle in violation. Performance requirements of the rule are based on a fleet's average NO_X emissions, which can be met by replacing older vehicles with newer, cleaner vehicles or by applying exhaust retrofits. The regulation was amended in 2010 to delay the original timeline of the performance requirements, making the first compliance deadline January 1, 2014 for large fleets (over 5,000 horsepower), 2017 for medium fleets (2,501-5,000 horsepower), and 2019 for small fleets (2,500 horsepower or less).

ARB Airborne Toxic Control Measure for Asbestos

In July 2001, the ARB approved an Air Toxic Control Measure for construction, grading, quarrying and surface mining operations to minimize emissions of naturally occurring asbestos. The regulation requires application of best management practices to control fugitive dust in areas known to have naturally occurring asbestos and requires notification to the local air district prior to commencement of ground-disturbing activities. The measure establishes specific testing, notification and engineering controls prior to grading, quarrying, or surface mining in construction zones where naturally occurring asbestos is located on Projects of any size. There are additional notification and engineering controls at work sites larger than one acre in size. These Projects require the submittal of a "Dust Mitigation Plan" and approval by the air district prior to the start of a Project.

Construction sometimes requires the demolition of existing buildings where construction occurs. Buildings often include materials containing asbestos. The demolition is associated with this Project would be subject to MBARD, Rule 1000 (Asbestos Demolition, Renovation, and Manufacturing). Asbestos is also found in a natural state, known as naturally occurring asbestos. Exposure and disturbance of rock and soil that naturally contain asbestos can result in the release of fibers into the air and consequent exposure to the public. Asbestos most commonly occurs in ultramafic rock that has undergone partial or complete alteration to serpentine rock (serpentinite) and often contains chrysotile asbestos. In addition, another form of asbestos, tremolite, can be found associated with ultramafic rock, particularly near faults. Sources of asbestos emissions include unpaved roads or driveways surfaced with ultramafic rock, construction activities in ultramafic rock deposits, or rock quarrying activities where ultramafic rock is present.

The ARB has an Air Toxics Control Measure for construction, grading, quarrying, and surface mining operations, requiring the implementation of mitigation measures to minimize emissions of asbestos-laden dust. The measure applies to road construction and maintenance, construction and grading operations, and quarries and surface mines when the activity occurs in an area where naturally occurring asbestos is likely to be found. Areas are subject to the regulation if they are identified on maps published by the Department of Conservation as ultramafic rock units or if the Air Pollution Control Officer or owner/operator has knowledge of the presence of ultramafic rock, serpentine, or naturally occurring asbestos on the site. The measure also applies if ultramafic rock, serpentine, or asbestos is discovered during any operation or activity. Review of the Department of Conservation maps indicates that the Project site area are not likely to contain NOA.[2]

[2] A General Location Guide for Ultramafic Rocks in California. August 2010. ftp://ftp.consrv.ca.gov/pub/dmg/pubs/ofr/ofr_2000-019.pdf.

Diesel Risk Reduction Plan

The ARB's Diesel Risk Reduction Plan has led to the adoption of new state regulatory standards for all new on-road, off-road, and stationary diesel-fueled engines and vehicles to reduce DPM emissions by about 90 percent overall from year 2000 levels. The Projected emission benefits associated with the full implementation of this plan, including federal measures, are reductions in DPM emissions and associated cancer risks of 75 percent by 2010, and 85 percent by 2020 (ARB 2000).

3.5.2 - Monterey Bay Air Resources District

The Project is located in Salinas City, Monterey County, NCCAB, and is under the jurisdiction of MBARD. Under the California CAA, the MBARD is required to develop an air quality plan for nonattainment criteria pollutants. As mentioned in Section 2.2, the NCCAB is designated nonattainment for state ozone and PM_{10} standards.

MBARD is responsible for controlling emissions primarily from stationary sources and maintains air quality monitoring stations throughout the NCCAB. MBARD's responsibilities include overseeing stationary-source emissions, approving permits, maintaining emissions inventories, maintaining air quality stations, overseeing agricultural burning permits, and reviewing air quality-related sections of environmental documents required by CEQA. The MBARD is also responsible for establishing and enforcing local air quality rules and regulations that address the requirements of federal and state air quality laws and for ensuring that NAAQS and CAAQS are met.

Through the attainment planning process, MBARD has developed rules and regulations for sources of air pollution. Specific regulations applicable to the Project may involve diesel construction equipment emissions, fugitive dust, on-road haul truck emissions, and general permit requirements. Listed below are the MBARD rules that would be applicable to the Project.

- Rule 402, Nuisances: Provide an explicit prohibition against sources creating public nuisances while operating within the District.
- Rule 403, Particulate Matter: Provide particulate matter emission limits for sources operating within the District.
- Rule 424, National Emission Standards for Hazardous Air Pollutants (NESHAPS): Provide clarity on the District's enforcement authority for the National Emissions for Hazardous Air Pollutants by incorporating those provisions of Parts 61 and 63 Chapter I, Title 40 of the Code of Federal Regulations (40 CFR Parts 61&63) into this Rule by reference.
- Rule 425, Use of Cutback Asphalt: Limit the emissions of vapors of organic compounds from the use of cutback and emulsified asphalts.
- Rule 439, Building Removals: Limit particulate emissions from the removal of buildings within the District.
- Rule 426, Architectural Coatings: Limit the emissions of Volatile Organic Compounds (VOC) from the use of architectural coatings.

- Rule 1000, Permit Guidelines and Requirements for Sources Emitting Toxic Air Contaminants:
  - prevent the emission into the atmosphere within the District of toxic air contaminants (referenced hereinafter as TACs), which may cause or contribute to an increase in mortality or an increase in serious illness, or which may pose a present or potential hazard to human health; and,
  - prevent occurrences which may endanger the health and welfare of the public within the District and to assure that no person will suffer material impairment of health or functional capacity; and,
  - comply with the federal Clean Air Act §112(g) Toxic New Source Review requirements; and,
  - protect the public's health and welfare while allowing, where permitted, the continued operation of sources which do or may emit TACs; and,
  - Not to limit in any way the provisions, extent, intent, interpretation, or enforcement of District Rule 402 (Nuisances).
- Rule 1003, Air Toxics Emissions Inventory and Risk Assessments Comply with the California Health & Safety Code Part 6, Section 44300 et seq., by establishing and implementing a program to inventory air toxics emissions, to assess the risk to public health from exposure to these emissions, to notify the public of any known significant health risk associated with toxic emissions from any facility, and to prepare Risk Reduction Audits and Plans to effect risk reductions.

The District adopted the 2012-2015 Air Quality Management Plan in March 2017, which updates the 2013 Air Quality Management Plan (AQMP) for the Monterey Bay Region and documents progress towards attaining the ozone CAAQS. MBARD has adopted CEQA Air Quality Guidelines[3] in 2008, which is the most recent applicable Guideline. The 2008 CEQA Guideline determined the regional project-level thresholds of significance for construction and operational-related emissions. Emissions that exceed the designated threshold levels are considered potentially significant impacts and further mitigation measures should be applied.

This assessment follows the 2008 MBARD CEQA Air Quality guidelines. The significance thresholds used in this analysis are based on the MBARD standards and as set forth in Table 6 below.

Current Air Quality Plans

A State Implementation Plan (SIP) is a federal requirement; each state prepares one to describe existing air quality conditions and measures that will be followed to attain and maintain the national ambient air quality standards. In addition in California, state ozone standards have planning requirements. However, state PM_{10} standards have no attainment planning requirements, but air districts must demonstrate that all measures feasible for the area have been adopted.

Ozone Plans

Because the NCCAB is nonattainment for the state ozone standards, the MBARD AQMP is a transitional plan shifting focus of their efforts to achieving the new, more stringent 8-hour

[3] MBUAPCD. February 2008. Monterey Bay Unified Air Pollution Control District 2008a.

requirement.[4] The plan includes an updated air quality trends analysis, which now reflects both the 1- and 8-hour standards, as well as an updated emission inventory, which includes the latest information on stationary, area and mobile emission sources.

The 2008 AQMP documented that the air basin continued to attain the 1-hour standard and recommended adoption of the following five control measures to make progress towards achieving the 8-hour standard:

- A1—Solvent Cleaning Operations: reduce VOC emissions by the establishment of a 25 gram/liter VOC limit on general cleaning applications, cleaning of ink application equipment, and polyester resin application equipment.
- A2—Degreasing Operations: reduce VOC emissions from degreasing operations by the establishment of a 50 gram/liter VOC limit on the cleaning solution. As an alternative, an airtight/airless cleaning system could be used in lieu of complying with the 50 gram/liter VOC limit.
- A3—Spray Booths: Miscellaneous Coatings and Cleanup Solvents: require the reduction of VOC emissions from miscellaneous coating and cleanup solvents at spray booth operations, which are not affected by other coating regulations.
- A4—Adhesives and Sealants–reduce VOC emissions from the use of adhesives/sealants and cleanup solvents by requiring low-volatile organic compounds (VOC) adhesives/sealants and clean-up solvents and improved adhesive transfer efficiency.
- A5—Natural Gas-Fired Fan-Type Central Furnaces and Residential Water Heaters: reduce NO_X emissions by establishing a limit of 40 nanograms/joule (55 ppm (@ 3% O2) for new and replacement installations.

For 2010, the combined emission reductions from these measures are estimated to be 1.65 tons per day of VOC and 0.17 tons per day of NO_X.

In March 2017, the MBARD adopted the 2012-2015 Air Quality Management Plan, which is the latest AQMP. It is an update to elements included in the 2013 AQMP and shows that the region continues to make progress toward meeting the state ozone standard. The recent changes that contributed to reducing estimated ROG emissions compared to the 2013 AQMP include lower vehicle miles traveled and aligning Rule 426 Architectural Coatings to the ARB's recommendations. In addition, Cleaner exhaust standards for mobile sources continue to be an important factor in reducing regional ROG and NO_X emissions over the lifetime of the AQMP series.

Particulate Matter Plans

MBARD planning related to attainment of the state's PM_{10} standard is addressed in the 2005 Report on the Attainment of the California Particulate Matter Standards in the Monterey Bay Region (Senate Bill 656 Implementation Plan, dated December 1, 2005).[5] This plan describes the greater

[4] MBUAPCD. August 2008. http://www.mbuapcd.org/mbuapcd/pdf/Planning/2008AirQualityManagementPlan1.pdf. Accessed June 14, 2017.

[5] MBUAPCD. 2005 Report on Attainment of the California Particulate Matter Standards in the Monterey Bay Region. December 2005. http://mbard.org/pdf/358%20(1).pdf.

vulnerability of coastal locations within the NCCAB to PM_{10} standard violations, due largely to the contribution from sea salt. It focuses primarily on controlling particles in fugitive dust and smoke related to combustion, but also addresses NO_X- and ROG-related particulate matter formation.

Rules

The following District Rules and Regulations address direct emissions for PM_{10} from area sources requiring District permits:

- Rule 400 Visible Emissions: Limits opacity for visual emissions to 20%.
- Rule 403, Particulate Matter

3.5.3 - Monterey County General Plan

The 2010 Monterey County General Plan, adopted in October 2010, applies to the inland area of Monterey County, including the Project site. The 2010 Monterey County General Plan presents goals and policies that guide the general distribution and intensity of land uses, including residential, agricultural, commercial and industrial, public facilities, and open space uses, in the County. The Conservation and Open Space Element includes the following air quality goals and policies that are relevant to the Project.

- **Goal OS-10:** Provide for the protection and enhancement of Monterey County's air quality without constraining routine and ongoing agricultural activities.
- **Policy OS-10.1:** Land use policy and development decisions shall be consistent with the natural limitations of the County's air basins.
- **Policy OS-10.6:** The Monterey Bay Unified Air Pollution Control District's air pollution control strategies, air quality monitoring, and enforcement activities shall be supported.
- **Policy OS-10.7:** Use of the best available technology for reducing air pollution emissions shall be encouraged
- **Policy OS-10.9:** The County of Monterey shall require that future development implement applicable MBARD control measures…The County will require that future construction operate and implement MBUPACD control measures to ensure that construction-related PM_{10} and NO_x emissions do not exceed the MBARD's daily thresholds.

3.6 - Thresholds of Significance

CEQA gives lead agencies discretion on how to determine if a particular environmental impact is considered significant. Ultimately, formulation of a standard or "threshold" of significance requires the lead agency to make a policy judgment about where the line should be drawn distinguishing adverse impacts it considers significant from those that are not deemed significant. This judgment must, however, be based on scientific information and other factual data to the extent possible. (CEQA Guidelines Section 15064(b)).

Pursuant to the MBARD 2008 Guidelines, implementation of the proposed Project would be considered significant if it would exceed any of the following criteria in Table 6.

Table 6: MBARD Thresholds of Significance

Pollutant	Construction-related Thresholds Emissions (pounds/day)	Operational Thresholds (pounds/day)
Criteria Air Pollutants		
ROG	NA	137
NO_X	NA	137
PM_{10}	82	82 (on-site)
SO_X	NA	137
CO	NA	550
Health Risks and Hazards for Sensitive Receptors		
Excess Cancer Risk	10 per one million	10 per one million
Chronic or Acute Hazard Index	1	1

Notes:
ROG = reactive organic gases, NO_x = nitrogen oxides, PM_{10} = course particulate matter or particulates with an aerodynamic diameter of 10 µm or less, and SO_X= sulfur oxides
NA = not applicable

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 4: MODELING PARAMETERS AND ASSUMPTIONS FOR CONSTRUCTION AND OPERATION EMISSIONS

4.1 - Model Selection and Guidance

The California Emissions Estimator Model (CalEEMod) version 2016.3.2 was used to estimate the Project's construction and operation-related air pollutant emissions. CalEEMod was developed in cooperation with air districts throughout the State. CalEEMod is designed as a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant emissions associated with construction and operation from a variety of land uses.

4.2 - Construction

Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation, and prevailing weather conditions. Construction emissions result from on-site and off-site activities. On-site emissions principally consist of exhaust emissions from heavy-duty construction equipment and motor vehicle operation, and fugitive dust (mainly PM_{10}) from disturbed soil. Additionally, paving operations and application of architectural coatings would release volatile organic compounds (VOC) emissions. Off-site emissions are from motor vehicle exhaust from delivery vehicles, worker traffic, and road dust (mainly PM_{10}).

The activity for construction equipment is based on the hours of operation, horsepower of the engine, and load factors of the equipment. The load factor is the average power of a given piece of equipment while in operation compared with its maximum rated horsepower. A load factor of 1.0 indicates that a piece of equipment continually operates at its maximum operating capacity.

The total construction area would be 6.8 acres. Up to 4 percent of the floor space (4,700 sq.ft.) was assumed to be occupied by support office space which is categorized as general office space. The remaining floor area (113,900 sq.ft.) was modeled as light industrial space. The remaining area was assumed to be non-asphalt surfaces.

The construction equipment assumed for the Project is shown in the CalEEMod output contained in Appendix A. The CalEEMod default construction duration and equipment fleet mix was used in the analysis. It should be noted that default assumptions tend to result in more conservative estimates of emissions in order to avoid underestimating emissions when project-specific information is not available.

Construction was modeled to begin as early as September 2018 to meet the 2020 operation plan. Construction activities were assumed to occur 5 days per week throughout the construction period. The CalEEMod default construction schedule used to model construction emissions is shown in Table 7 below.

Table 7: Project Construction Schedule

Construction Phase	Project Construction Schedule		Working Days
	Start Date	End Date	
Demolition	9/3/2018	9/28/2018	20
Site Preparation	9/29/2018	10/12/2018	10
Grading	10/13/2018	11/9/2018	20
Building Construction	11/10/2018	9/27/2019	230
Paving	9/28/2019	10/25/2019	20
Architectural Coating	10/26/2019	11/22/2019	20
Source: FirstCarbon Solutions and CalEEMod			

Construction Equipment Emission Factors

CalEEMod contains a default inventory of construction equipment based on the size and types of land uses to be developed. For each construction phases, CalEEMod can estimate the number of equipment, their age, their horsepower, and equipment tier from which rates of emissions are developed. Table 8 presents the CalEEMod default construction equipment used on the Project.

Table 8: Project Construction Equipment Assumptions

Phase Name	Equipment	Number	Hours per day	Horsepower	Load Factor
Demolition	Excavators	3	8.00	158	0.38
	Concrete/Industrial Saws	1	8.00	81	0.73
	Rubber Tired Dozers	2	8.00	247	0.40
Site preparation	Tractors/Loaders/Backhoes	4	8.00	97	0.37
	Rubber Tired Dozers	3	8.00	247	0.40
Grading	Excavators	1	8.00	158	0.38
	Rubber Tired Dozers	1	8.00	247	0.40
	Graders	1	8.00	187	0.41
	Tractors/Loaders/Backhoes	3	8.00	97	0.37
Building construction	Cranes	1	7.00	231	0.29

Demolition and Grading

The Project includes demolition of an existing, 900-square-foot, one-story building. The Project would balance the soil on-site during grading phase. In others, no soil materials are anticipated to be imported or exported from the project site. Default trip lengths for material delivery trucks and construction workers were used in the modeling analysis.

During demolition and grading activities, fugitive dust would be generated from the movement of materials on the Project site. CalEEMod estimates dust from dozers moving dirt around, dust from graders or scrapers leveling the land, and loading or unloading construction debris and dirt into haul trucks. Each of those activities is calculated differently in CalEEMod based on the number of acres traversed by the grading equipment and amount of building to be demolished.

Construction Off-site Trips

Worker trips are accounted for during the construction phases based on 1.25 trips per piece of equipment (the CalEEMod default). The CalEEMod run used the default worker trip length of 10.8 miles and the default vehicle fleet (LD Mix) for employee trips.

The CalEEMod defaults for vendor trips, trip length, and vehicle fleet (Heavy Duty Truck Mix) were used.

Haul trips are based on the assumption that a truck can handle 20 tons (or 16 cubic yards) of material per load. Assuming one load of material, CalEEMod considers a haul truck importing material will have a return trip with an empty truck (2 trips). Similarly, the haul truck to take material away will have an arrival trip in an empty truck (2 trips). CalEEMod default haul trips for an assumed 900-square-foot building to be demolished were used.

A summary of the construction-related vehicle trips is shown in Table 9. Note that the total number of off-site construction trips would not necessarily occur on the same day since the various construction activities would vary each day.

Table 9: Construction Off-Site Trips

Activity	Construction Trips		
	Worker (per Day)	Vendor (per Day)	Haul (in total)
Demolition—Building	15	0	4
Site Preparation	18	0	0
Grading	15	0	0
Building Construction	124	49	0
Paving	15	0	0
Architectural Coating	25	0	0
Source: FirstCarbon Solutions and CalEEMod, see Appendix A.			

4.3 - Operation

Operational emissions are those emissions that occur during operation of the Project. The major sources are summarized below.

Motor Vehicles

Motor vehicle emissions refer to exhaust and road dust emissions from the automobiles that would travel to and from the Project site. Rodeo Property General Plan Amendment & Rezoning Traffic Impact Analysis prepared by Mott Macdonald (April 2018) utilized the trip rates from the Institute of Transportation Engineers (ITE) publication Trip Generation Manual, 10th Edition. The proposed Project would be served with daily truck deliveries. Trucks would consist of 2-axle, 3-axle, and 4+ axle combination units. Based on studies of truck percentages for high-cube warehouse and light industries, the assumptions for vehicle classification are summarized and shown in Table 10.[6]

Table 10: Vehicle Type Classification

Type	Passenger Vehicle	LHDT 2-Axle	MHDT 3-Axle	HHDT 4+ Axle	Total
General Light Industry	74.4%	8.4%	4.6%	12.6%	100%
Source: San Bernardino County Truck percentages for industrial and warehouse uses.					

The vehicle fleet mix is the mix of motor vehicle classes active during the operation of the Project. Emission factors are assigned to the expected vehicle mix as a function of vehicle class, speed, and fuel use (gasoline and diesel-powered vehicles). The fleet mix for the proposed Project was a combination of CalEEMod default vehicle fleet mix shown in Table 11 (for passenger vehicles) and the vehicle type classifications (for truck deliveries) shown in Table 10.

[6] San Bernardino County Truck Percentage for Industrial and Warehouse Uses. 2003.

Table 11: Vehicle Fleet Mix

Vehicle Type	CalEEMod Default Fleet Mix	Proposed Fleet Mix
LDA	0.533	0.437
LDT1	0.031	0.025
LDT2	0.203	0.166
MDV	0.141	0.116
LHDT[1]	0.025	0.068
LHDT[2]	0.006	0.016
MHD	0.018	0.046
HHDT	0.026	0.126
OBUS	0.004	0.000
UBUS	0.003	0.000
NCT	0.008	0.000
SBUS	0.001	0.000
MH	0.001	0.000

Source:
[1] Default is from CalEEMod General Light Industry Land Use Type, Monterey County
[2] San Bernardino County Truck Percentages for Industrial and Warehouse Uses, 2003.

Architectural Coatings (Painting)

Paints release VOC emissions during application and drying. The buildings in the Project would be periodically repainted as warranted for maintenance needs. Default VOC content coatings were used in the CalEEMod modeling.

Landscape Equipment

CalEEMod estimated the landscaping equipment (leaf blowers, chainsaws, and mowers) using the statewide average of 3 percent electric powered equipment in the model.

4.4 - Health Risk Assessment

A Health Risk Assessment (HRA) is a guide that helps to determine whether current or future exposures to a chemical or substance in the environment could affect the health of a population. Currently the project site does not have a specific development plan. Therefore, a quantitative project-level health risk analysis is not available. A full construction and operation HRA technical study report including methodology and assumptions would be prepared when future site-specific development plans are determined.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 5: AIR QUALITY IMPACT ANALYSIS

This section calculates the expected emissions from construction and operation of the Project as a requisite for assessing the regulatory significance of Project emissions on a regional and localized level.

5.1 - CEQA Guidelines

The CEQA Guidelines define a significant effect on the environment as "a substantial, or potentially substantial, adverse change in the environment." To determine if a Project would have a significant impact on air quality, the type, level, and impact of emissions generated by the Project must be evaluated.

The following air quality significance thresholds are contained in Appendix G of the CEQA Guidelines. A significant impact would occur if the Project would:

a) Conflict with or obstruct implementation of the applicable air quality plan;

b) Violate any air quality standard or contribute substantially to an existing or Projected air quality violation;

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable national or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);

d) Expose sensitive receptors to substantial pollutant concentrations; or

e) Create objectionable odors affecting a substantial number of people.

While the final determination of whether a Project is significant is within the purview of the Lead Agency pursuant to Section 15064(b) of the CEQA Guidelines, MBARD recommends that its quantitative thresholds be used to determine the significance of Project emissions. If the Lead Agency finds that the Project has the potential to exceed these air pollution thresholds, the Project should be considered to have significant air quality impacts.

5.2 - Impact Analysis

Applicable Air Quality Plans

Impact AIR-1:	**The Project would not conflict with or obstruct implementation of the applicable Air Quality Plan.**

Impact Analysis

MBARD prepares air quality plans that include projected emissions inventories and account for emission reductions strategies in order to demonstrate how the region will achieve the ambient air quality standards by the given deadlines. MBARD recommends that Projects consider the following

criteria to determine if a Project would conflict with or obstruct implementation of an applicable air quality plan:

1) Consistent with the AQMP?

The applicable AQMP for the Project is the 2012-2015 Air Quality Management Plan (AQMP), adopted in March 2017. The AQMP uses growth projections from local general plans to project future regional emissions. Thus, if a Project is consistent with the land use designations and growth projections of the applicable general plan, it would also be considered consistent with the regional AQMP.

This City of Salinas General Plan adopted in September 2002, and updated its land use designation in January 2014. The project site is designated in the General Plan as Open Space. The project is a General Plan amendment and Rezone change that would allow development of industrial and commercial uses on site. Furthermore, MBARD considers its thresholds of significance the allowable limit for each project to generate without impeding or conflicting with the AQMP's goal to achieve ambient air quality standards. As shown in Table 12 and Table 13, the project's short-term construction and long-term operational emissions would not exceed regional thresholds. Therefore, the proposed Project would not conflict with or obstruct implementation of the applicable air quality plan. This impact would be less than significant.

2) Emit 137 or more of VOC or NO_X?

As shown in Table 12 and Table 13, the proposed Project construction and operational-related emissions would not exceed the MBARD-recommended regional significance thresholds. Therefore, the Project would not result in a significant impact.

Therefore, considering the consistency with the AQMP and that the Project's construction and operational emissions would not exceed MBARD's thresholds of significance, the Project would not conflict with or obstruct implementation of the applicable air quality plan. The impact would be less than significant.

Level of Significance Before Mitigation

Less than significant impact.

Mitigation Measures

None.

5.3 - Impact Analysis

Potential for Air Quality Standard Violation

Impact AIR-2: **The Project would not violate any air quality standard or contribute substantially to an existing or projected air quality violation.**

Impact Analysis

This impact relates to regional criteria pollutant impacts. The thresholds of significance are considered the allowable limit that each Project can generate without substantially contributing to an existing or Project air quality violation. Based on the nonattainment status of the region with respect to the State particulate matter (PM_{10}), and state and federal for ozone, ozone precursors and particulate matter are of particular concern. The analysis below evaluates the potential for construction and operational activities to generate substantial air quality emissions.

MBARD recommends that Projects consider the following criteria to determine if a Project would violate any air quality standards:

1. Emit 137 or more of VOC or NO_X?
2. Directly emit 550 lbs/day or more of CO?
3. Generate traffic that significantly affects levels of service?
4. Directly emit 82 lbs/day or more of PM_{10}on-site during construction or operation?
5. Generate traffic on unpaved roads of 82 lbs/day or more of PM_{10}?
6. Directly emit 150 lbs/day or more of SO_X?

Construction Emissions

Construction-related emissions were calculated using CalEEMod version 2016.3.2. CalEEMod outputs and assumptions are provided as Appendix A.

During building construction and grading, fugitive dust ($PM_{2.5}$ and PM_{10}) would be generated from these and other related earth-moving activities. The majority of this fugitive dust will remain localized and be deposited near the Project site. Exhaust-related construction emissions would occur from construction equipment, material delivery trucks, haul trucks, and construction worker vehicles. The Project's estimated daily construction emissions are presented in Table 12.

Table 12: Unmitigated Maximum Daily Construction Emissions

Construction Activity	Emission (lbs/day)				
	ROG	NOx	CO	SO_2	PM_{10} (total)
Demolition -2018	3.81	38.48	23.05	0.04	2.09
Site Preparation—2018	4.67	48.30	23.40	0.04	10.86
Grading—2018	2.86	30.76	17.31	0.03	4.62

Table 12 (cont.): Unmitigated Construction Emissions

Construction Activity	Emission (lbs/day)				
	ROG	NOx	CO	SO_2	PM_{10} (total)
Building Construction—2018	3.74	31.14	25.92	0.05	2.92
Building Construction—2019	3.30	28.45	24.51	0.05	2.70

Architectural Coating—2019	86.56	1.96	2.92	0.01	0.34
Maximum daily Emissions (lbs/day)[1]	86.56	48.30	25.92	0.05	10.86
MBARD- 2008 Average Daily Emissions Significance of Thresholds	NA	NA	NA	NA	82
Exceeding thresholds?	NA	NA	NA	NA	**No**

Notes:
ROG = reactive organic gases; NO_X = oxides of nitrogen; CO = carbon monoxide; PM_{10} = particulate matter 10 microns in diameter; $PM_{2.5}$ = particulate matter 2.5 microns in diameter
[1] The daily emissions presented in the table are the maximum of either the summer and winter outputs for each construction phase.
Source: Monterey Bay Air Resources District, 2008

As shown in Table 12, the Project would generate PM_{10} emissions that do not exceed the 82 lbs/day threshold of significance during construction. Therefore, the construction-related emissions would result in a less-than-significant impact.

Operational Emissions

Operational emissions associated with the Project were calculated using CalEEMod. Operational emissions would be generated by area, energy, and mobile sources. Area sources would include activities such as landscape maintenance and occasional architectural coatings. Energy sources would include natural gas combustion for space and water heating. Mobile sources would include vehicle trips associated with employees, and delivery trucks. Table 13 shows the average daily operational emissions of the proposed Project.

Table 13: Average Daily Operational Emissions

Construction Activity	Emission (lbs/day)				
	ROG	NOx	CO	SO_2	PM_{10} (total) On-site
Area	3.08	0.01	0.03	0.00	0.00
Energy	0.09	0.83	0.70	0.01	0.06
Mobile	1.64	18.77	18.57	0.07	3.93
Total daily Emissions (lbs/day)	4.80	19.60	19.30	0.08	3.99

Table 13 (cont.): Daily Operational Emissions

Construction Activity	Emission (lbs/day)				
	ROG	NOx	CO	SO_2	PM_{10} (total) On-site
MBARD—2008 Average Daily Emissions Significance of Thresholds	137	137	550	150	82
Exceeding thresholds?	**No**	**No**	**No**	**No**	**No**

Notes:
ROG = reactive organic gases; NO_X = oxides of nitrogen; CO = carbon monoxide; SO_X= oxides of sulfur; PM_{10} = particulate matter 10 microns in diameter; $PM_{2.5}$ = particulate matter 2.5 microns in diameter
Source: Monterey Bay Air Resources District, 2008

As noted in Table 13, the average daily and annual operational emissions from the Project would not exceed the MBARD operational thresholds for any criteria pollutant. Therefore, the Project-level operational-related emission impact would be less than significant. Thus, criteria 1, 2, 4, and 6 listed above are met.

In addition, there are no unpaved roads anticipated on the project site, therefore, the proposed Project would not generate traffic on unpaved roads. Thus, criterion 5 is also met. Thus, long-term operational emissions would not violate or contribute substantially an existing or projected air quality violation.

Level of Significance Before Mitigation

Less than significant impact.

Mitigation Measures

None.

5.4 - Cumulative Impacts

Impact AIR-3: **The Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).**

Impact Analysis

The Project's construction and operational emissions are below MBARD's Project-level thresholds of significance. The thresholds of significance represent the allowable amount of emissions each Project can generate without generating a cumulatively considerable contribution to regional air quality impacts. As discussed above, the region is nonattainment for state ozone standards, and the state PM_{10} standards. MBARD recommends if the Project emissions which are not consistent with

the AQMP will have a significant cumulative impact unless offset.[7] Therefore, a Project that would not exceed the MBARD thresholds of significance on a Project-level would also not be considered to result in a cumulatively considerable contribution to these regional air quality impacts. Considering this information, the Project's construction and operational emissions would not be considered a cumulatively considerable contribution to the existing regional air quality impacts. This impact would be less than significant.

Level of Significance Before Mitigation

Less than significant impact.

Mitigation Measures

None.

Level of Significance After Mitigation

Less than significant impact.

5.5 - Sensitive Receptors

Impact AIR-4:	**The Project would not expose sensitive receptors to substantial pollutant concentrations.**

Impact Analysis

This discussion addresses whether the Project would expose sensitive receptors to substantial pollutant concentrations of CO or other toxic air contaminants of concern (including diesel particulate matter).

Two scenarios have the potential for exposing sensitive receptors to toxic air contaminants. The first is when a Project includes a new or modified source of toxic air contaminants and would be located near an existing or proposed sensitive receptor. The second scenario involves a residential or other sensitive receptor development locating near an existing or planned source of toxic air contaminants. The MBARD defines a sensitive receptor as:

> Any residence including private homes, condominiums, apartments, and living quarters; education resources such as preschools and kindergarten through grade twelve schools; daycare centers; and health care facilities such as hospitals or retirement and nursing homes.

Existing residences are located close to Project site. The nearest sensitive receptor is approximately 50 feet southwest of the Project site boundary. Therefore, this analysis examines potential exposure of off-site sensitive receptors from development of the Project site.

The health risk significance thresholds adopted for this assessment were derived from the MBARD significance thresholds shown in Table 6.

[7] 2008 MBUAPCD CEQA Guidelines.

CO Hotspot

The CO emissions from traffic generated by the Project are a concern at the local level. Congested intersections can result in high, localized concentrations of CO.

At the time of this analysis, MBARD did not provide a screening threshold to evaluate the potential for CO hot spots. However, the Bay Area Air Quality Management District (BAAQMD) recommends the following screening analysis to determine if a Project has the potential to contribute to a CO hotspot. The screening criteria identify when site-specific CO dispersion modeling is necessary. The Project would result in a less than significant impact to air quality for local CO if the following screening criteria are met:

- The Project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans; or
- The Project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; or
- The Project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).

According to the Traffic Impact Study for the Project, the maximum peak-hour intersection volume would occur at the Sun Street and E Market Street during the AM peak hour. The estimated traffic volume at this intersection would be 40 AM peak-hour trips. Therefore, the maximum hourly traffic volumes with implementation of the Project would be substantially less than the screening threshold. Therefore, the proposed Project would not exceed the CO screening criteria. Accordingly, the Project would have less than significant impact related to CO hot spots.

Construction-Related Health Risk Assessment

MBARD considers projects that would not exceed the regional thresholds of significance during construction to also not result in potential health impacts on sensitive receptors (David Frisbey, Planning and Air Monitoring Manager, MBARD, pers. comm.). As shown in Table 12, the estimated Project-related construction emissions prior to mitigation measures would not exceed MBARD's thresholds of significance. Therefore, the Project's construction-related DPM emissions would likely not result in a significant health risk impact.

Operational-Related Health Risk Assessment

Since a specific development project is not proposed for the site at this time, the DPM emissions from motor vehicle trips and health risk impacts during project operation would be unknown. Therefore, this analysis does not include an operational HRA. A full health risk assessment would be required when future site-specific development details for the site are determined in order to estimate the health impacts on nearby sensitive receptors and ensure Rule 1003 is met.

In addition, Rule 1000 would be applied if project installs any stationary sources.

As discussed above, impacts from CO emissions and construction HRA on nearby sensitive receptors would be less than significant. A full operation HRA would be required once specific development details are determined.

Level of Significance Before Mitigation

Less than significant impact.

Mitigation Measures

None.

5.6 - Objectionable Odors

Impact AIR-5:	**The Project would not create objectionable odors affecting a substantial number of people.**

Impact Analysis

There are two circumstances that have the potential to cause odor impacts:

1) A source of odors is proposed to be located near existing or planned receptors; or
2) A receptor land use is proposed near an existing or planned source of odor.

The MBARD does not provide any specific quantitative threshold or screening threshold to evaluate odor impacts from projects. Therefore, the screening method from nearby Lead Agency, the BAAQMD's CEQA Air Quality Guidelines is used. BAAQMD provides suggested screening distances for a variety of odor-generating land uses and operations. Projects that would site a new receptor farther than the applicable screening distances from an existing odor source would likely not result in a significant odor impact.

Project Analysis

The project is a General Plan amendment and Rezone that would allow development of industrial and commercial uses. The nearest sensitive receptor is approximately 50 feet away southwest of the Project site. Although diesel-fueled vehicles could be considered potential odor sources, it is anticipated that Project-related exhaust emissions would be dispersed along local and regional roadways. On-site diesel emissions would be limited to trucks traveling a short distance to the truck bays and all idling would be subject to ARB's Airborne Toxic Control Measure (ATCM) to Limit Diesel-Fueled Commercial Motor Vehicle Idling, which restricts diesel trucks from idling over 5 minutes when not in operational use. The project would not include any other substantial odor sources. Considering this, and the highly dispersive properties of DPM, it is not anticipated that the Project's operations would result in substantial odor emissions that would affect nearby receptors. Thus, the Project would not expose receptors or its proposed residents to substantial odor emissions during operations.

In addition to Project operations, construction activities would also involve diesel-fueled construction equipment and trucks. Furthermore, VOC emissions would be generated during architectural coating and asphalt paving phases, which could be objectionable odors to some populations. However, such odorous emissions would disperse rapidly from the Project site and would be intermittent during construction activities. Thus, it is highly unlikely that these intermittent odor sources would reach an objectionable level at nearby residences. Construction-related odor impacts would be less than significant.

Level of Significance Before Mitigation

Less than significant impact.

Mitigation Measures

None.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	113.90	1000sqft	2.61	113,900.00	0
General Office Building	4.70	1000sqft	0.11	4,700.00	0
Other Non-Asphalt Surfaces	177.60	1000sqft	4.08	177,600.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.6	**Precipitation Freq (Days)**	55
Climate Zone	4			**Operational Year**	2020
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	491.65	**CH4 Intensity (lb/MWhr)**	0.022	**N2O Intensity (lb/MWhr)**	0.005

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Utilitiy information ajusted based on Renewable Portofolio Standard

Land Use - info from Rodeo GPA TIA 041318. The project site is 6.8 acres. Therefore, the remaining area would be considered as non-asphalt surfaces.

Construction Phase - assume operation year is 2020. CalEEMod default schedule is applied.

Grading - assume balance onsite (old Rodeo project info, GPA does not specify if there would have cut and fill)

Demolition - infro from client RFI response 5/26/2017

Vehicle Trips - Rodeo GPA TIA 041318 ITE 10th edition trip rates.

Fleet Mix - fleet mix adjusted based on CalEEMod default and San Bernadino 2003 study for truck percentages for industrial and warehouse uses

Energy Use -

Construction Off-road Equipment Mitigation -

1.3 User Entered Comments & Non-Default Data

Rodeo GPA - Monterey County, Winter

Project Characteristics - Utilitiy information ajusted based on Renewable Portofolio Standard

Land Use - info from Rodeo GPA TIA 041318. The project site is 6.8 acres. Therefore, the remaining area would be considered as non-asphalt surfaces.

Construction Phase - assume operation year is 2020. CalEEMod default schedule is applied.

Grading - assume balance onsite (old Rodeo project info, GPA does not specify if there would have cut and fill)

Demolition - infro from client RFI response 5/26/2017

Vehicle Trips - Rodeo GPA TIA 041318 ITE 10th edition trip rates.

Fleet Mix - fleet mix adjusted based on CalEEMod default and San Bernadino 2003 study for truck percentages for industrial and warehouse uses

Energy Use -

Construction Off-road Equipment Mitigation -

SECTION 1: INTRODUCTION

At the request of the SyWest Development, FirstCarbon Solutions (FCS) conducted a biological resources assessment for the proposed industrial space in Salinas. The purpose of this biological resources assessment is to describe on-site vegetation communities, identify potentially jurisdictional waters of the U.S., and assess the potential for occurrence of special-status plant and wildlife species within the project site.

1.1 - Project Summary

1.1.1 - Site Location

The Rodeo Property Project is located at 295 Sun Way, south and west of US 101 in the central part of the City of Salinas, Monterey County, California (see Exhibit 1). North and south of the Project site are existing warehouse/light industrial uses. To the north of the Project site is Security Public Storage; to the south at 10 Simas Street is Celebration Church and at 34 Simas Street is a light industrial building containing an ambulance dispatch business and an electrical supply company. To the southwest of the Project at 8 Sun Street is Sun Street Centers Men's Residential Program. Adjacent to and west of the Project is open space; however, there is a mix of land uses further west of the Project, including St. James CME Church located at 285 Calle Cebu, Haciendas Place multi-family residential located at 245 Calle Cebu, and the Rancho Salinas Mobile Park located at 150 Sherwood Drive. The Project site is bounded by Sun Street and Sun Way to the west, US 101 to the east, Security Public Storage to the north, and light industrial uses to the south (see Exhibit 2). The project site is located on the Salinas, California United States Geological Survey 7.5-minute topographic quadrangle, Assessor's Parcel Number 003-212-017-000.

The project site comprises one parcel that consists of semi-developed land equaling a total of approximately 6 acres. The project site currently contains a soccer field, a baseball diamond with associated lighting, a gravel parking lot, gravel walking trail, playground area, and restrooms. The project site has been used recreationally activities and was actively managed (mowed) for recreational purposes.

1.1.2 - Project Description

The project is a General Plan amendment and Rezone that would allow development of industrial and commercial uses on a 6.8-acre site located on Sun Street adjacent to US 101. The proposed land use designation would allow the site to be developed at a floor area ratio of 0.4, which would allow for the development of up to 188,600 square feet of industrial floor space. The site is designated in the General Plan as Open Space. Access to the site is provided via Sun Street and its connections to Calle Cebu and E. Market Street.

SECTION 2: METHODOLOGY

Analysis of the biological resources associated with the project site began with a thorough review of relevant literature followed by a reconnaissance-level field survey. The survey area included the entire project site as well as the immediate vicinity.

The primary objective of the survey was to document existing site conditions and determine the potential presence of special-status biological resources.

For the purpose of this report, special-status species refers to all species formally listed as threatened and/or endangered under Federal Endangered Species Act (ESA) or the California Endangered Species Act (CESA); California Species of Special Concern; designated as Fully Protected by CDFW; given a status of 1A, 1B, or 2 by the California Native Plant Society (CNPS); or designated as special-status by city, county, or other regional planning documents. Federal and state listed threatened and/or endangered species are legally protected under ESA/CESA. The designated special-status species listed by CNPS have no direct legal protection, but they require an analysis of the significance of potential impacts under CEQA guidelines.

2.1 - Literature Review

The literature review provides a baseline from which to evaluate the biological resources potentially occurring on the project site as well as the surrounding area.

2.1.1 - Existing Environmental Documentation

As part of the literature review, an FCS biologist examined existing environmental documentation for the project site and local vicinity. This documentation included literature pertaining to habitat requirements of special-status species potentially occurring near the site; and federal register listings, protocols, and species data provided by the USFWS and CDFW. These and other documents are listed in the references section of this report.

2.1.2 - Topographic Maps and Aerial Photographs

An FCS biologist reviewed current USGS 7.5-minute topographic quadrangle map(s) and aerial photographs as a preliminary analysis of the existing conditions within the project site and immediate vicinity. Information obtained from the review of the topographic maps included elevation range, general watershed information, and potential drainage feature locations (USGS 1986). Aerial photographs provide a perspective of the most current site conditions relative to on-site and off-site land use, plant community locations, and potential locations of wildlife movement corridors.

2.1.3 - Soil Surveys

The United States Department of Agriculture (USDA) has published soil surveys that describe the soil series (a group of soils with similar profiles) occurring within a particular area (USDA 1980). These profiles include major horizons with similar thickness, arrangement, and other important characteristics. These series are further subdivided into soil mapping units that provide specific

information regarding soil characteristics. Many special-status plant species have a limited distribution based exclusively on soil type. Therefore, pertinent USDA soil survey maps were reviewed to determine the existing soil mapping units within the project site and to establish if soil conditions on-site are suitable for any special-status plant species (Soil Survey Staff 2017).

2.1.4 - Special-Status Species Database Search

An FCS biologist compiled a list of threatened, endangered, and otherwise special-status species previously recorded within the general project vicinity. The list was based on a search of the CDFW's California Natural Diversity Database (CNDDB; CDFW 2017), a special-status species and plant community account database, the CNPS's Electronic Inventory (CNPSEI) of Rare and Endangered Vascular Plants of California database (CNPS 2017), and a USFWS Information Planning and Conservation Report Search (USFWS 2017), for the Salinas California USGS 7.5-minute topographic quadrangle maps and nine surrounding topographic quadrangles (Moss Landing, Prunedale, San Juan Bautista, Marina, Natividad, Seaside, Spreckels, and Chualar). The database search results can be found in Appendix A.

The CNDDB Biogeographic Information and Observation System (BIOS 5; CDFW 2017) database was used to determine the distance between known recorded occurrences of special-status species and the project site.

2.1.5 - Trees

Prior to conducting the reconnaissance-level survey, FCS's biologists reviewed any applicable City and County ordinances pertaining to tree preservation and protective measures and their tree replacement conditions or permits required. Species listed in any applicable ordinances identified on-site were noted, and their locations were recorded using a handheld GPS unit and were identified on a topographic map. Any potential tree removal that takes place will have to abide by the regulations set in place by Monterey County and the City of Salinas. Specifically, the proposed project would have to follow:

- Monterey County Municipal Code 21.64.260 regarding the preservation of oak and other protected trees
- Monterey County Municipal Code Chapter 35 regarding the language and definitions for tree and shrub removal
- 2010 Monterey County Zoning Ordinances for tree removal polices
- During the bird nesting season (February 22 through August 1) tree consultants shall identify any nests within 300 feet of the proposed tree removal(s) in the tree assessment. If a nest is found, a County-qualified biologist must conduct a nest survey prior to the approval of the tree removal permit. The biologist's recommendations will be added as condition of approval (See condition list on the back of the Tree Removal Application form).
- If the tree removal report/evaluation indicates any sudden oak death, the proposed removal must be referred to the Ag. Commissioner's Office (Brad Oliver: 759-7332). Do not go any further until written direction is received from the Ag/ Commissioner's Office.

- Proposed tree removal located within the coastal and non-coastal sections of the Del Monte Forest require a report/letter by Pebble Beach Company (Eric Love: 625-8421).

Additionally, any trees where removal is necessary will require the client to submit a city tree permit removal application.

2.1.6 - Jurisdictional Waters and Wetlands

Prior to conducting the reconnaissance-level survey, FCS's biologists reviewed USGS topographic maps and aerial photography to identify any potential natural drainage features and water bodies. In general, all surface drainage features identified as blue-line streams on USGS maps and linear patches of vegetation are expected to exhibit evidence of flows and considered potentially subject to state and federal regulatory authority as "waters of the U.S. and/or State." A preliminary assessment was conducted to determine the location of any existing drainages and limits of project-related grading activities, to aid in determining if a formal delineation of waters of the U.S. or State is necessary.

2.1.7 - Reconnaissance-Level Field Survey

An FCS biologist conducted a field survey on June 7, 2017. The reconnaissance-level survey was conducted on foot during daylight hours. The purpose of the survey was not to extensively search for every species occurring within the project site, but to ascertain general site conditions and identify potentially suitable habitat areas for various special-status plant and wildlife species. Special-status or unusual biological resources identified during the literature review were ground-truthed during the reconnaissance-level survey for mapping accuracy. Special attention was paid to sensitive habitats and areas potentially supporting special-status floral and faunal species.

Plant Species

Common plant species observed during the reconnaissance-level survey were identified by visual characteristics and morphology in the field and recorded in a field notebook. Uncommon and less familiar plants were identified off-site with the use of taxonomical guides, such as Clarke et al. (2007), Hitchcock (1971), McAuley (1996), and Munz (1974). Taxonomic nomenclature used in this study follows Baldwin et al. (2012). Common plant names, when not available from Baldwin et al. (2012), were taken from other regionally specific references.

Wildlife Species

Wildlife species detected during the reconnaissance-level survey by sight, calls, tracks, scat, or other signs were recorded in a field notebook. Notations were made regarding suitable habitat for those special-status species determined to potentially occur within the project site (CDFW 2017). Appropriate field guides were used to assist with species identification during surveys, such as Peterson (2010), Reid (2006), and Stebbins (2003).

Wildlife Movement Corridors

Wildlife movement corridors link areas of suitable wildlife habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbance. Urbanization and the resulting

fragmentation of open space areas create isolated “islands” of wildlife habitat, forming separated populations. Corridors act as an effective link between populations.

The project site was evaluated for evidence of a wildlife movement corridor during the reconnaissance-level survey. The focus of this study was to determine if the change of current land use of the project site may have significant impacts on the regional movement of wildlife. These conclusions are made based on the information compiled during the literature review, including aerial photographs, USGS topographic maps and resource maps for the vicinity, the field survey conducted, and professional knowledge of desired topography and resource requirements for wildlife potentially utilizing the project site and vicinity.

SECTION 3: EXISTING CONDITIONS

An FCS biologist conducted the reconnaissance-level field survey on June 7, 2017 from 12:00 p.m. to 2:00 p.m. (1200 to 1400 hours). Weather conditions during the field survey were partly cloudy with moderate wind gusts and average temperature of 65 degrees Fahrenheit (°F).

3.1 - Environmental Setting

The project site is relatively flat and does not show signs of sloping. The project site overlaps with FEMA's 100-year flood plain, which is described as a flood event that has a 1 percent probability of occurring in any given year.

3.1.1 - Soils

The United States Department of Agriculture, Natural Resources Conservation Service indicates that the vast majority of the project site contains the Clear Lake Clay soil series, with minor components of Pacheco, Mocho, Cropley, and Salinas soil series.

Clear Lake Clay

The Clear Lake series consists of deep, poorly drained soils that formed in fine textured alluvium derived from sandstone and shale. Clear Lake soils are in basins and in swales of drainageways. Slopes are 0 to 2 percent. The mean annual precipitation is about 20 inches and the mean annual air temperature is about 60°F. Used for production of row crops, irrigated, and dry farmed pasture; also used for rangeland (USDA 2017).

Pacheco Silt Loam

The Pacheco series consists of deep, somewhat poorly drained soils that formed in alluvium derived mostly from sedimentary rocks. Pacheco soils are on flood plains and have slopes of 0 to 2 percent. Mean annual precipitation is approximately 16 inches and the mean annual temperature is approximately 58°F. Used for production of small grain field crops and pasture vegetation (USDA 2017).

Mocho Loam

The Mocho series consists of deep, well-drained soils that formed in alluvium derived mostly from sandstone and shale rock sources. Mocho soils are on alluvial fans and have slopes of 0 to 9 percent. The mean annual precipitation approximately about 16 inches and the mean annual air temperature is approximately 59°F. Used for production of field and truck crops; nontilled areas have a cover of naturalized vegetation of annual grasses and forbs (USDA 2017).

Cropley Clay

The Cropley series consists of deep, well-drained soils that formed in alluvium from mixed rock sources. Cropley soils are on alluvial fans, floodplains and in small basins. Slopes range from 0 to 15 percent. The mean annual precipitation is approximately 16 inches and the mean annual

temperature is approximately 60°F. Used for production of row and truck crops and for urban development (USDA 2017).

Salinas Clay Loam

The Salinas series consists of deep, well-drained soils that formed in alluvium weathered from sandstone and shale. Salinas soils are on alluvial plains, fans, and terraces and have slopes of 0 to 9 percent. The mean annual precipitation is approximately 16 inches and the mean annual air temperature is approximately 59 °F. Used for production of truck, field, and forage crops (USDA 2017).

3.1.2 - Biological Communities

The vegetation communities on the project site consist of non-native ruderal (weedy) grass and weeds. The entirety of the project site shows evidence of disturbance. The project site does not contain any sensitive biological communities.

Non-Native Grassland

Non-native ruderal grassland is found throughout the project site with the majority of the site showing evidence of recent mowing.

Non-native grassland is found throughout California and is generally characterized by a dense to sparse cover of non-native, annual grasses often associated with numerous weedy species as well as some native annual forbs (wildflowers), especially in years of ample rain. Seed germination occurs with the onset of fall-winter rains. Some plant growth occurs in winter, but most growth and flowering occurs in the spring. Plants then die in the summer, and persist as seeds in the uppermost layers of soil until the next rainy season. The project site consists of almost entirely of non-native weeds, grasses, with some native weedy forbs. Plants included telegraph weed (*Heterotheca grandiflora*), wild oats (*Avena* spp.), and ripgut brome (*Bromus diandrus*), due to high levels of disturbance on the site and its surrounding areas.

Wildlife species likely to be found in this habitat include mammals such as Botta's pocket gopher (*Thomomys bottae*), house mouse (*Mus musculus*), and deer mouse (*Peromyscus).* Reptiles such as gopher snake (*Pituophis melanoleuces*), western fence lizard (*Scelsporus occidentalis*), and common garter snake (*Thamnophis sirtalis*) may be present. A variety of bird species including lesser goldfinch (*Carduelis psaltria*), house finch (*Carpodacus mexicanus*), house sparrow (*Passer domesticus*), American crow (*Corvus brachyrhychos*), mourning dove (*Zenaida macroura*) and Brewer's blackbird (*Spizella breweri*) are likely to occur in grassland habitats. Aerial foragers, including tree swallow (*Tachycineta bicolor*), cliff swallow (*Petrochelidon pyrrhonota*), barn swallow (*Hirundo rustica*), and whitethroated swift (*Aeronautes saxatilis*) may be present in this area, foraging within this habitat. Raptor species potentially feeding on small mammals within this habitat include red-tailed hawk (*Buteo jamaicensis*) and American kestrel (*Falco sparverius*). Because of high levels of disturbance, the only wildlife species observed on the project site was the American crow.

Disturbed

Vegetation communities characterized as disturbed habitat occur in areas of disturbances such as along roadsides, trails, parking lots, etc. These communities are subjected to ongoing or past human activity (e.g., vehicle activities, recreational activities, mowing). These areas are generally barren or exhibit sparse vegetative cover consisting mainly of ruderal species that typically appear after severe disturbance or clearing. Typical opportunistic weeds that occur in disturbed areas include Russian thistle or "tumbleweed" (*Salsola tragus*), tocalote (*Centaurea melitensis*), and some native weedy forbs such as telegraph weed (*Heterotheca grandiflora*), fascicled tarweed, and non-native annual grasses of this area. Dominant plant species observed in the disturbed areas included telegraph weed (*Heterotheca grandiflora*), wild oat (*Avena fatua*) and annual grass (*Festuca bromoides*).

The vegetation community and land cover types above provide habitat for a variety of wildlife species, briefly described under each community type. Wildlife activity was low during the field survey and consisted primarily of avian species flying over the project site. Wildlife observed during the survey included the American crow.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 4: SENSITIVE BIOLOGICAL RESOURCES

The following section discusses existing conditions and the potential for special-status biological resources to occur within the project site.

4.1 - Special-status Plant Communities

Special-status plant communities are considered sensitive biological resources based on federal, state, or local laws regulating their development, limited distributions, and habitat requirements of special-status plant or wildlife species that occur within them. There are no sensitive plant communities recorded on or near the project site.

4.1.1 - Special-status Plant Species

The CNDDB, CNPS, and background data were reviewed for the Salinas 7.5-minute topographic quadrangle in addition to the nine surrounding topographic quadrangles to identify special-status species that are known to occur in the region, or have the potential to occur on the project site.

Congdon's tarplant (*Centromadia parryi* ssp. *congdonii*) is listed as a California Rare Plant 1B.1 and was found to occur in the surrounding areas near the proposed site. The species does reside in grassland habitats with clay loam soils but due to the highly disturbed nature of the site in addition to the absence of the species during the site survey, it is unlikely for the species to occur within the project boundaries.

A plant's potential to occur on the project site was based on the presence of suitable habitats, soil types, occurrences recorded by the USFWS, CNPS, or CNDDB in the project region. Habitat suitability was determined for 47 special-status plant species within the project site, also listed in Appendix A. Frequent mowing of the project site reduces the potential for disturbance-intolerant perennials to be present, but it is not expected to exclude the presence of some annuals. No special-status species were found during the survey.

4.1.2 - Special-status Wildlife

Wildlife's potential to occur on the project site was based on the presence of suitable habitats, recorded occurrences by CNDDB (CDFW 2017) and known to occur by the Information for Planning and Consultation (IPAC) (USFWS 2017) within Salinas topographic quadrangle (USGS 1986) and the nine surrounding topographical quadrangles. Several species were found to be present in the surrounding area, such as California tiger salamander (*Ambystoma californiense*), California red-legged frog (*Rana draytonii*), and burrowing owl (*Athene cunicularia*), and these species are listed in the special-status species table as well as discussed below.

The California tiger salamander is a federally and locally threatened species that requires seasonal water sources for breeding and nesting. It is generally found nesting in underground refuges. Due to the lack of water onsite, it unlikely for the species to occur within the project boundaries.

The California red-legged frog is a federally threatened species, as well as a California species of special concern, that requires permanent water sources for larval development and appropriate aquatic habitat for estivation. Due to the lack of water onsite, it unlikely for the species to occur within the project boundaries.

The western burrowing owl is a federal species of concern and a California species of special concern. Burrowing owls are year-round residents in the open, dry grasslands of the Central Valley. During fall and winter, local residents may move from nesting areas, and migrants may move in. Burrowing owls nest and take shelter in burrows in the ground: typically, burrows excavated by other species such as ground squirrels. They forage in grasslands and agricultural fields. While there are similar habitat qualities in the area of the proposed site, the high level of disturbance in conjunction with the absence of the species during a site survey precludes the potential presence of the species. It is unlikely for the species to occur within the project boundaries.

Table 1 summarizes the potential for occurrence and rationale for nine special-status wildlife species occurring in the vicinity of the project, based on the database search (Appendix A). The database search revealed a total of 42 special-status wildlife species. All special-status wildlife species that have been determined unlikely to occur on-site, primarily based on the absence of suitable habitat, have also been included in Table 1 to justify their exclusion from further discussion. FCS biologists did not observe special-status species during the field survey.

Table 1: Special-status Wildlife Species Potentially Occurring within the Project Site

Scientific Name Common Name	Status		Habitat Description[3]	Potential to Occur and Rationale	Included in Impact Analysis
	USFWS[1]	CDFW[2]			
Amphibians					
Ambystoma californiense California tiger salamander	FT	ST	Needs underground refuges, especially ground squirrel burrows, and vernal pools or other seasonal water sources for breeding.	Potential to Occur: **unlikely**. The site lacks suitable nesting and foraging habitat due to lack of water on site.	Yes
Rana boylii Foothill yellow-legged frog	—	SSC	Frequents rocky streams and rivers with rocky substrate and open, sunny banks, in forests, chaparral, and woodlands. Sometimes found in isolated pools, vegetated backwaters, and deep, shaded, spring-fed pools.	Potential to Occur**: unlikely**. The site lacks suitable nesting and foraging habitat due to lack of water on site.	No
Rana draytonii California red-legged frog	FT	SSC	Found mainly near ponds in humid forests, woodlands, grasslands, coastal scrub, and streamsides with plant cover. Most common in lowlands or foothills. Frequently found in woods adjacent to streams. Breeding habitat is in permanent or ephemeral water sources; lakes, ponds, reservoirs, slow streams, marshes, bogs, and swamps.	Potential to Occur**: unlikely**. The site lacks suitable nesting and foraging habitat due to lack of water on site.	Yes
Reptiles					
Anniella pulchra nigra Black legless lizard	—	SSC	Occurs in moist warm loose sand or soil with plant cover. Moisture is essential. Occurs in sparsely vegetated areas of beach dunes, chaparral, pine-oak woodlands, desert scrub, sandy washes, and stream terraces with sycamores, cottonwoods, or oaks.	Potential to Occur**: unlikely**. The site lacks suitable nesting habitat due to lack of plant cover and sand.	No
Birds					
Agelaius tricolor Tricolored blackbird	— MBTA	SSC	Highly colonial species, most numerous in Central and San Joaquin Valleys. Found in areas near water, such as freshwater marsh, grasslands, and wetlands. Requires open water, protected nesting substrate, and foraging area with insect prey in the vicinity of the colony.	Potential to Occur**: unlikely**. No nesting habitat is present due to the lack of aquatic vegetation. Furthermore, the site lacks suitable foraging habitat.	No

Table 1 (cont.): Special-status Wildlife Species Potentially Occurring within the Project Site

Scientific Name Common Name	Status		Habitat Description[3]	Potential to Occur and Rationale	Included in Impact Analysis
	USFWS[1]	CDFW[2]			
Athene cunicularia Burrowing owl	— MBTA	SSC FGC	Found in open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. A subterranean nester, dependent upon burrowing mammals, most notably the California ground squirrel	Potential to Occur**: low**. Marginal nesting and foraging habitat is present within the project site. However, high levels of disturbance within the project site reduce the potential of occurrence.	Yes
Eremophila alpestris actia California horned lark	— MBTA	—	Temperate species that prefers large open land devoid of large obstacles such as trees. It can generally be found in fields, prairies, and dry tundra. Also known to inhabit places with widespread lawns, such as airports. They are most often found on the ground.	Potential to Occur**: unlikely**. Marginal nesting and foraging habitat is present within the project site. However, high levels of disturbance and a lack of bare ground within the project site reduce the potential of occurrence.	No
Mammals					
Corynorhinus townsendii Townsend's big-ear bat	—	SSC	Wide ranging habitat. Most western populations live in montane forest with pine, fir, and aspen trees bounded by shrub and grasslands. Roosting sites include caves, cliffs, and rock ledges. Extremely sensitive to human disturbance.	Potential to Occur**: unlikely**. High levels of human disturbance within the project site and its immediate surroundings.	No
Reithrodontomys megalotis distichlis Salinas harvest mouse	—	—	Coastal salt marshes, freshwater wetlands and sandhill grasslands near the seacoast in the vicinity of the Salinas River mouth	Potential to Occur**: unlikely**. The site does not contain suitable habitat.	No

Birds

Marginal foraging habitat is present for one special-status bird potentially occurring on or near the project site, listed below and in Table 1; however, marginal nesting habitat occurs for any of the species within the project site. The property has few shrubs and trees or rodent burrows and shows evidence of high human disturbance.

SECTION 5: CONCLUSIONS AND RECOMMENDATIONS

Complete avoidance of special-status plant and animal species and their associated habitats is the ecologically preferred method for preservation of these resources. However, to meet project goals, avoidance is not always feasible. The following discussion looks at the potential impacts and offers recommendations if needed on avoidance, minimization, and/or compensation measures in compliance with the various laws that regulate natural resources and land use. This information is offered to help the applicant design a development that meets both financial and ecological objectives to the extent possible.

5.1 - Special-status Species

As noted in the discussion above, the project has the potential to support 47 special-status plant species and 42 special-status wildlife species. It also has the potential to support birds and raptors protected under the Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code (FGC).

5.1.1 - Special-status Plants

As discussed in Section 4.1.1, an FCS biologist conducted a field survey on June 7, 2017. As a result of the recurrent mowing of the project site no special-status species were observed and are not expected to be found on site. No significant impacts to special-status plants species is expected due to high levels of disturbance. No mitigation is recommended at this time.

5.1.2 - Special-status Wildlife

Assessment of the potential for each special-status species to occur within the project site was based on known occurrences of the species within the Salinas quadrangle and nine surrounding quadrangles, suitability of habitat within the project site, the field survey completed on June 7, 2017, and professional expertise. Focused surveys are recommended for sensitive wildlife species that are federally or state-listed as endangered or threatened or species of special concern and have potential to occur on the project site.

Special-status Birds and Birds Protected by the MBTA

Three special-status birds were determined to have some potential to occur on the project site. The habitats on the project site provide marginal foraging habitat for all avian species identified as having the potential to occur on the project site, and marginal nesting habitat is present for only a few of the species known to nest in grassland habitats.

Potential impacts could occur to resident and migratory species during project construction, which would render the project temporarily unsuitable for nesting birds because of the noise, vibration, and increased activity levels associated with various construction activities. These activities could potentially subject birds to risk of death or injury, and they are likely to avoid using the area until such construction activities have dissipated or ceased. Relocation, in turn, could cause hunger or stress among individual birds by displacing them into adjacent territories belonging to other

individuals. However, the project is located in a region with abundant access to agricultural fields and operations that provide equal to greater foraging quality for nesting migratory birds.

With the implementation of the following recommendations, any potential impacts on special-status wildlife species, including birds protected by the MBTA, would be avoided.

- Prior to any site-disturbing activities, including grading or woody vegetation and tree removal, the applicant will retain a qualified wildlife biologist to conduct a nesting bird survey to determine if nests are active or occupied on the project site. Any active nests observed on the project site will be avoided until after the nestlings have fledged and left the nest. If avoidance is not feasible, then a biological monitor will be present if construction activities occur during the nesting season. Construction activity within the vicinity of the active nests may only be conducted at the discretion of the biological monitor. If construction activity will likely result in nest failure, the applicant shall consult with CDFW and/or USFWS to determine what mitigation or permitting is required.

The non-native ruderal grassland provides marginal habitat for the burrowing owl. The potential for this species to occur in the project site is considered low to moderate because of regular mowing of the grassland habitat. However, the possibility that burrowing owls will not nest on the project site in the future cannot be ruled out. Therefore, the following conservation measures are recommended:
