1. Abstract

Metropolitan Transportation Commission (“MTC”) has contracted with Adhara Systems, Inc. (“Adhara”) for “Item 3: Condition Assessment” task (“Project”) of its StreetSaver® Technical Support Services Agreement with City of Salinas, CA (“City”). The City uses StreetSaver® Online Pavement Management System (“PMS”) developed by MTC. Prior to the Project, MTC developed inventory database and GIS through “Item 1: Data Conversion” and “Item 2: GIS Mapping Integration and Linkage” tasks.

The City manages 1651 sections, 290.2 centerline miles (664.7 lane miles, 57.3 million ft²) of road network. The City also has 24 sections, 2.9 centerline miles or 6.1 lane-miles of un-managed sections. Un-managed sections include sections not maintained after creation, sections not surveyed after creation due to being gated or blocked, sections identified as bridge structure, and sections with Gravel surface type. Sections with functional class of NCR (Proposed; Private; Non-County) are not counted in any summary.

Through this Project, Adhara sampled and evaluated 19.5 million ft² of paved road network for total inventory area of 57.3 million ft² of City’s managed network. Resulted sampling rate was 34.1%.

This report analyzes the City’s Budget Needs along with four additional budget scenarios that the City may want to apply to future maintenance and rehabilitation (“M&R”) plans for the next five years.

This report analyzes a budget scenario that will best fit to the City’s needs.

The City reviewed and updated treatment types and its unit costs in the Decision Tree (see Appendix G) and assumed 3.5% inflation rates and 0% interest to determine the City’s Network Replacement Cost and Budget Needs. The City’s Network Replacement Cost was calculated to be \$767.1 million. The Budget Needs analysis determined that \$291.0 million is needed for the City’s M&R over the next five years. This will eliminate Deferred Maintenance of \$137.9 million in FY 2019 defined by the PMS and the City’s network PCI will increase from 54 to 84 by the end of FY 2023.

The City plans to spend \$2.1 million with \$1.6 million of Preventive Maintenance (“PM”) in FY 2019 and annual budget of average \$1.5 million with \$830 thousand of PM for the next five years. With this budget, the current PCI will decrease to 45 in FY 2023 and will result in \$278.3 million in maintenance backlog. In order to maintain the current PCI of 54, the City will need to allocate an average annual

budget of \$7.0 million. Additionally, to increase the current PCI by 5 points from 54 to 59, in the next five years, the City will need to allocate an average of \$12.0 million per year.

This report found that the City needs an annual budget of \$9 million for the next 5 years with 6% PM ratio to increase its network average PCI from 54 to 56 and to maintain the Deferred Maintenance at \$255 million by the end of FY 2023.

2. Purpose

The purpose of this report is to assist the City in utilizing the results of the field survey data and budget options analyzed in the PMS. This report assesses the adequacy of the current budget and identifies a recommended budget scenario that meets the M&R needs recommended by the PMS program. This recommended scenario will improve the City's M&R strategies over the next 5 years and compares this cost to the City's current budget. The following criteria were used in identifying the recommended scenario:

- **PCI value:** Maintain network average PCI at the current value or higher
- **Cost-effectiveness:** Allocate more funds to arterial/collector roads than residential roads with appropriate PM ratio
- **Affordability:** Provide a realistic expenditure plan that can stabilize Deferred Maintenance or minimize increase.

3. Definitions and Assumptions

- Deferred Maintenance:** Dollar amount of maintenance and rehabilitation work that should have been treated, but funding was not allocated.
- Inflation Rate:** 3.5%
- Interest Rate:** 0%
- PCI Treated:** Future PCI value with budget allocation. It shows PCI trends with limited or unlimited budget.
- PCI Untreated:** Future PCI value without budget. It shows PCI trends “what if there is no funding for a certain period of time”.
- Preventive Maintenance (“PM”):** Any treatment that extends pavement life more than five years and is applied to roads with a PCI of 71 or above. Common examples of PM include slurry seal, chip seal, cape seal, etc.
- PM %:** Preventive Maintenance amount vs. total budget. In order to have a balanced budget in budget scenarios, PM % might be varied. Treatment scenario also influence the PM ratio.
- Stop Gap:** Dollar amount of temporary repairs applied to maintain the pavement in a usable condition (e.g. pothole repair). These repairs are temporary and do not extend the pavement life.
- Stop Gap Interval:** Number of years between applications of Stop Gap treatments that are applied to Deferred Maintenance sections. Set to 5 years in this report.
- Surplus PM:** Total amount of budget that is not used after Preventive Maintenance funding is allocated.

4. Network Description

The City's network consists of 293.1 centerline miles, 670.8 lane miles, 57.8 million ft² of street (6.4 million yd²), or 1675 pavement sections. The City's road network includes the un-managed pavement sections, which consists of 2.9 centerline miles (24 sections, 6.1 lane miles, 0.5 million ft², or 55.6 thousand yd²) of roads. **Excluding un-managed sections, the City manages 1651 sections that amount to 290.2 centerline miles, 664.7 lane-miles, or 57.3 million ft² (6.4 million yd²) of road network.**

Table 1 and Figure 1 summarize the network inventory by functional classes. The network breakdown is as follows:

Note: Numbers are rounded up from lower decimal point. Adding up numbers may not match with the numbers in the table.

Functional class	No. of sections	Centerline miles	Area (1,000 yd ²)	% of area (Weight)	Area (1,000,000 ft ²)	Lane miles
Arterial	331	71.5	2,132.8	33.5%	19.2	221.9
Collector	186	42.6	896.0	14.1%	8.1	89.1
Residential	1,131	175.8	3,338.6	52.4%	30.0	353.4
Other	3	0.2	3.8	0.1%	0.0	0.4
Total	1,651	290.2	6,371.2	100.0%	57.3	664.7

Table 1. Summary of the City's Network (Managed Sections Only)

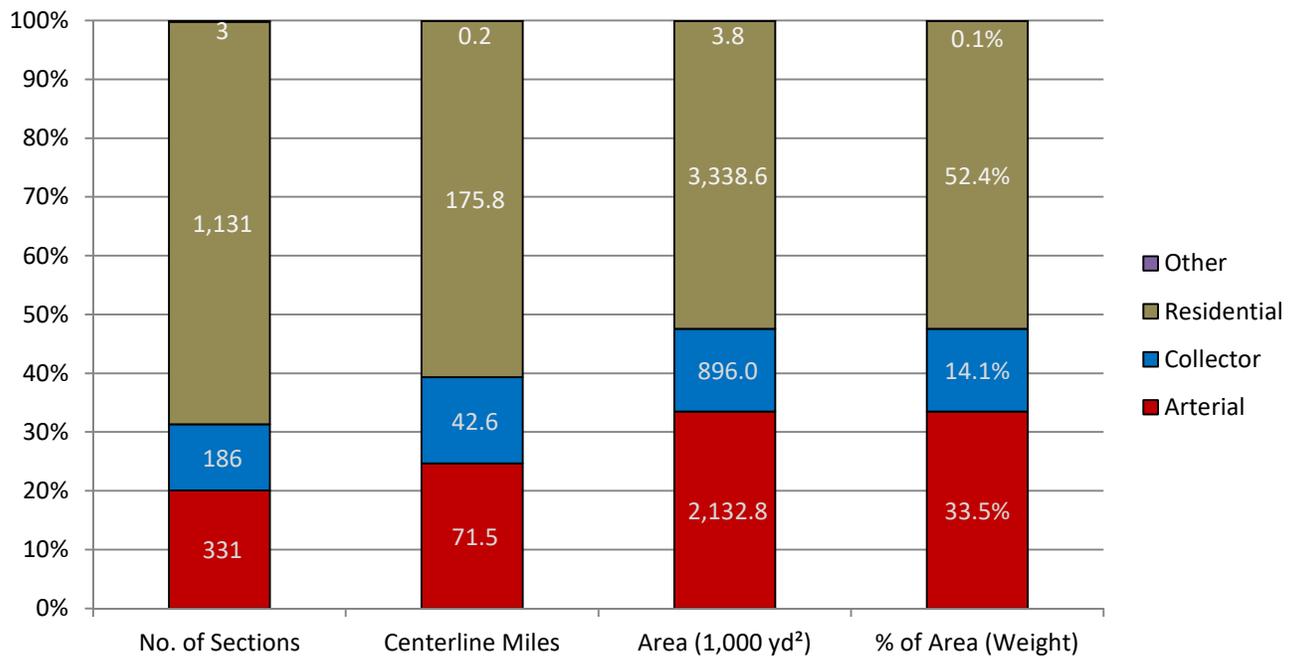

Figure 1. Inventory information and proportions to the road network

5. Current Condition

The current weighted average PCI for the City’s network is 54 as of November 4, 2017, placing the City’s network condition in the “Good” (50<PCI<=70) condition category. The following table and figure show the City’s network statistics in terms of the PCI rating categories. The PCI rating categories are from StreetSaver Online V9.

PCI Ratings	No. of sections	Area (1,000 yd ²)	% in Area
Very Good (70<PCI)	548	1,888.2	29.6%
Good (50<PCI<=70)	371	1,522.7	23.9%
Poor (25<PCI<=50)	511	2,183.7	34.3%
Very Poor (PCI<=25)	221	776.5	12.2%
Total	1,651	6,371.2	100.0%

Table 2. PCI Rating Category for the Entire Network

As the illustration shows, the conditions of 919 out of 1,651 sections, 53.5% in area, are categorized as “Good” or higher; 732 sections, 46.5% in area, are in “Poor” or lower condition.

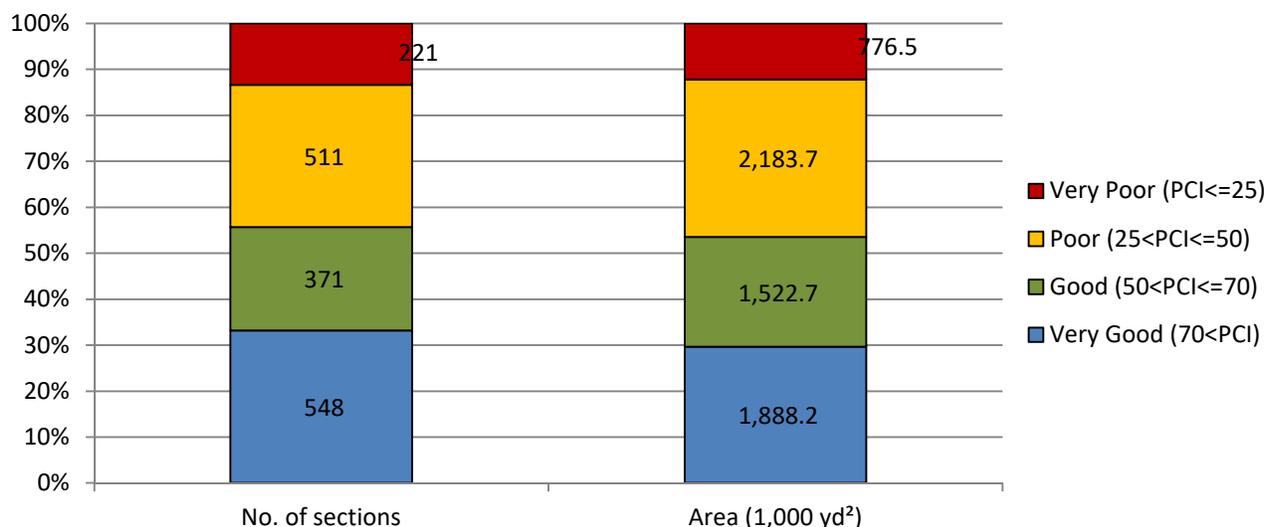

Figure 2. PCI Rating Categories for the Entire Network

The following illustrates the weighted average PCI of the City’s network by functional classes. As shown in Table 3, Arterial and Residential functional classes are in “Good” (50<PCI<= 70) condition and Collector and Other functional classes are in “Poor” (25<PCI<= 50) condition.

Functional Class	No. of Sections	Weighted Average PCI	Centerline miles	Area (1,000 yd ²)	% of Area (Weight)
Arterial	331	56	71.5	2,132.8	33.5%
Collector	186	46	42.6	896.0	14.1%
Residential	1,131	54	175.8	3,338.6	52.4%
Other	3	40	0.2	3.8	0.1%
Total/Average	1,651	54	290.2	6,371.2	100.0%

Table 3. Weighted PCI Average by Functional Classes

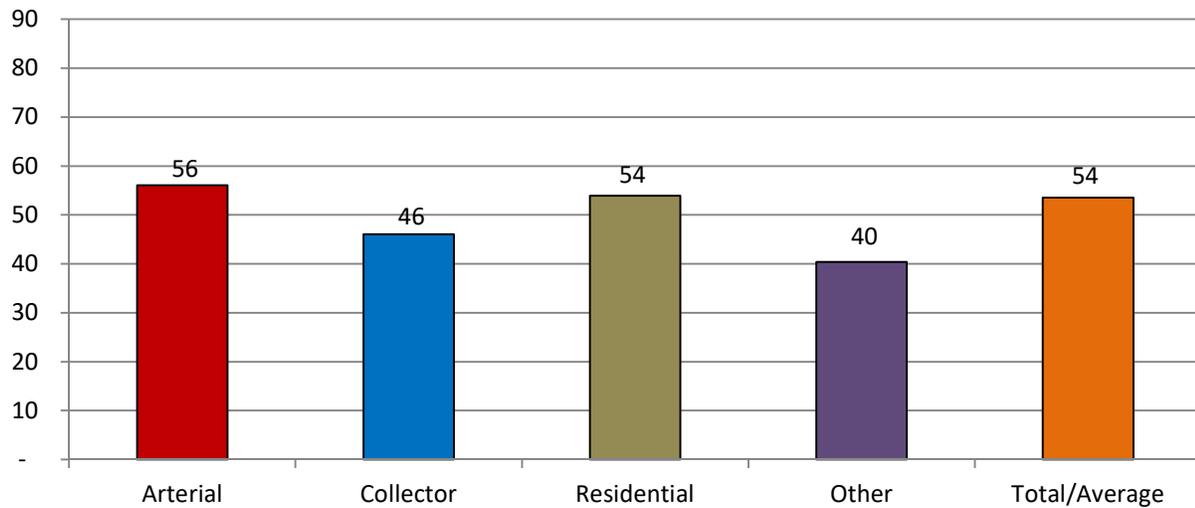

Figure 3. Weighted PCI Average by Functional Classes

6. Budget

For the past 5 fiscal years (FY 2014 – 2018, July 1, 2013 – June 30, 2018) including the current fiscal year, the City spent/funded \$5.04 million, or an average of \$1.01 million a year on roadway M&R, and \$3.73 million or an average of \$750 thousand a year, on Preventive Maintenance. Table 4.1 shows the City’s pavement funding over the past 5 fiscal years.

Funding (FY)	2014	2015	2016	2017	2018	TOTAL (FY 2014 - 2018)
Total M&R (\$ millions)	\$2.00				\$3.04	\$5.04
PM Only (\$ millions)	\$1.20				\$2.53	\$3.73

Table 4.1. Funding amounts for the past 5 years (FY 2014 - 2018)

For the next 5 fiscal years (FY 2019 – 2023), the City is proposing to spend \$7.64 million, or an average of \$1.53 million a year on roadway M&R, and \$4.15 million or an average of \$830 thousand a year, on Preventive Maintenance. This results in an average PM ratio of 54.3%. Table 4.2 shows the City’s proposed pavement funding over the next 5 years.

Funding (FY)	2019	2020	2021	2022	2023	TOTAL (FY 2019 - 2023)
Total M&R (\$ millions)	\$2.07	\$1.44	\$1.44	\$1.34	\$1.34	\$7.64
PM Only (\$ millions)	\$1.63	\$1.03	\$0.50	\$0.50	\$0.50	\$4.15

Table 4.2. Proposed M&R funding amounts for the next 5 years (FY 2019 - 2023)

7. Budget Needs

Based on the principle that it costs less to maintain roads in good condition than bad, the MTC PMS strives to develop a maintenance strategy that will first improve the overall condition of the network, and then sustain it at that level.

The first step is to develop a cost-effective M&R strategy by determining, assuming unlimited resources, the maintenance “needs” of the City’s road network. Using the Budget Needs module, in order to eliminate deferred maintenance every year, maintenance needs over the next five years were estimated at \$291.0 million. If the City follows the strategy recommended by the program, the average network PCI will increase to 84 in FY 2023. If, however, no maintenance is applied over the next five years, roads already distressed will continue to deteriorate and the network PCI will drop to 43. The results

of the Budget Needs analysis are summarized in the table and figure below. Appendix B presents the Budget Needs Report in detail.

FY	2019	2020	2021	2022	2023	Total
Rehab	\$135.3	\$39.0	\$37.6	\$43.8	\$31.5	\$287.3
Preventive Maintenance	\$2.5	\$0.1	\$0.1	\$0.4	\$0.7	\$3.7
Budget	\$137.9	\$39.1	\$37.6	\$44.2	\$32.2	\$291.0
Deferred Maintenance	\$0.0	\$0.0	\$0.0	\$0.0	\$0.0	
Treated PCI	77	78	80	82	84	
Untreated PCI	53	50	48	45	43	

Table 5. Summary of results from Needs Analysis (\$ in million)

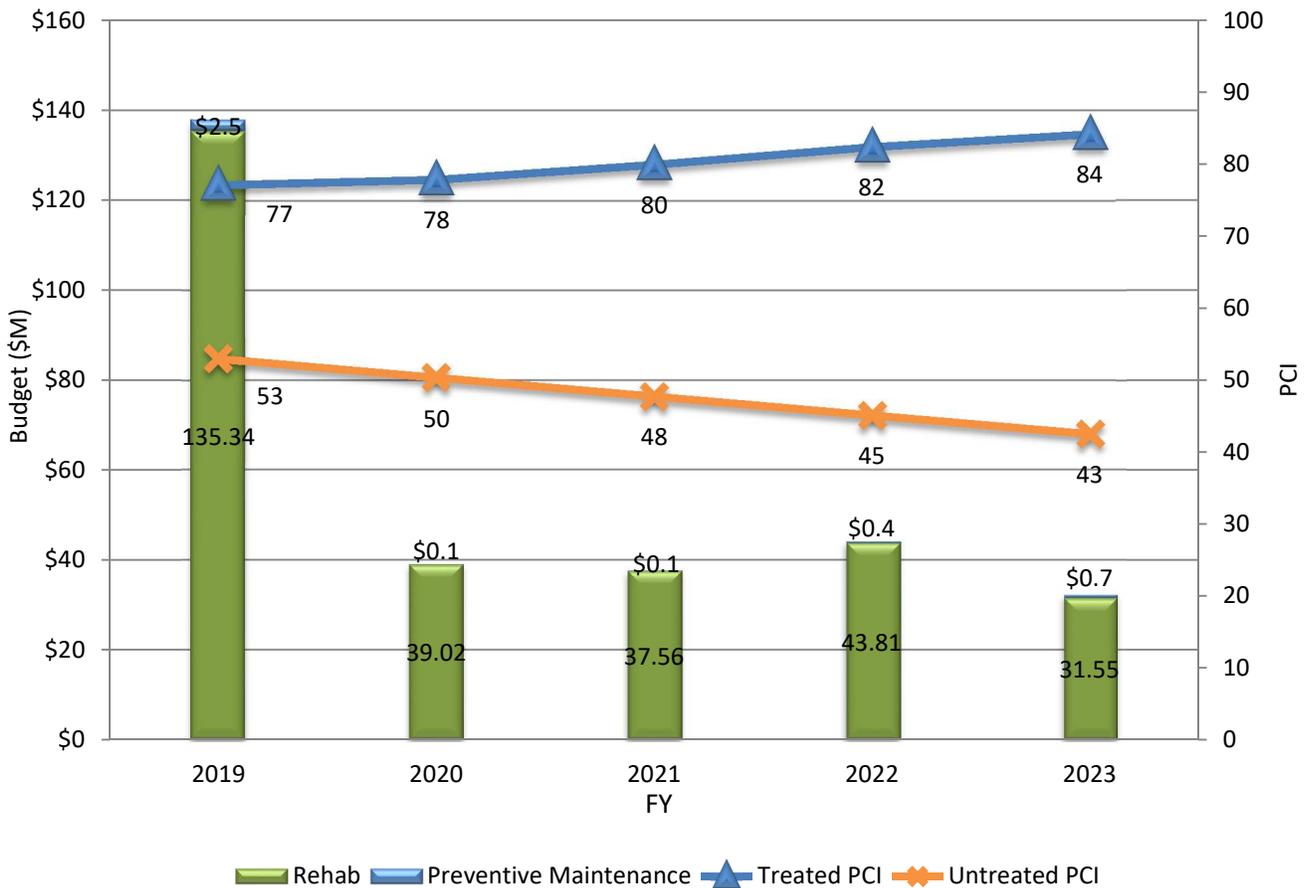

Figure 4. Summary of results from Needs Analysis

8. Budget Scenarios

Having projected the Budget Needs of the City's road network, the next step in developing a cost-effective M&R strategy is to conduct various what-if analyses. The PMS budget scenario module can project the effects of the different scenarios on pavement condition and deferred maintenance. By analyzing the effects on these indicators, the advantages and disadvantages of different funding levels and M&R strategies become clear. The following scenarios were run and analyzed for a five-year period.

Scenario 1 - Unconstrained Budget: In this scenario, the total budget amount for the next five years is defined by the Budget Needs, or where the budget is not constrained. In order to gradually reduce the backlog, as opposed to the heavy front-loading approach by Budget Needs, this scenario distributed the total Budget Needs evenly over the next five years (i.e., Total Budget Needs divided by 5 for an annual budget).

Scenario 2 - Current Budget Level: Current budget of \$1 million per year, with \$300 thousand per year of preventive maintenance applied for the next five years.

Scenario 3 - Maintaining Current PCI: This scenario identifies a budget scenario to maintain the current PCI of 54 over the next five years. StreetSaver's Target Driven Scenario module was utilized to calculate the optimum amount of M&R for this scenario over the next five years.

Scenario 4 - Increasing PCI: This scenario identifies a budget scenario to improve the current PCI by 5 points from 54 to 59 during the five year period. StreetSaver's Target Driven Scenario module was utilized to calculate the optimum amount of M&R for this scenario over the next five years.

8.1 Scenario 1: Unconstrained Budget

This budget scenario distributes Budget Needs, which assumes unlimited resources, over five years to avoid a heavily front-loaded budget plan. The results indicate an estimated annual budget of \$58.2 million will improve the City’s network condition by increasing the network PCI from 54 to 84 and by reducing the maintenance backlog from \$137.9 million, Budget Needs in FY 2019, to \$8.7 million in five years. The following table and figure summarize the results of the Unconstrained Budget scenario analysis. Appendix C-1 presents the detailed results of the Unconstrained Budget scenario analysis.

FY	2019	2020	2021	2022	2023	Total
Rehab	\$57.4	\$57.4	\$57.4	\$57.4	\$57.4	\$287.2
PM + Stop Gap	\$0.8	\$0.8	\$0.8	\$0.8	\$0.8	\$3.8
Budget	\$58.2	\$58.2	\$58.2	\$58.2	\$58.2	\$291.0
Deferred Maintenance	\$80.2	\$63.9	\$45.6	\$33.8	\$8.7	
Treated PCI	67	71	76	80	84	

Table 6. Summary of results for Scenario 1 (Unconstrained, \$ in million)

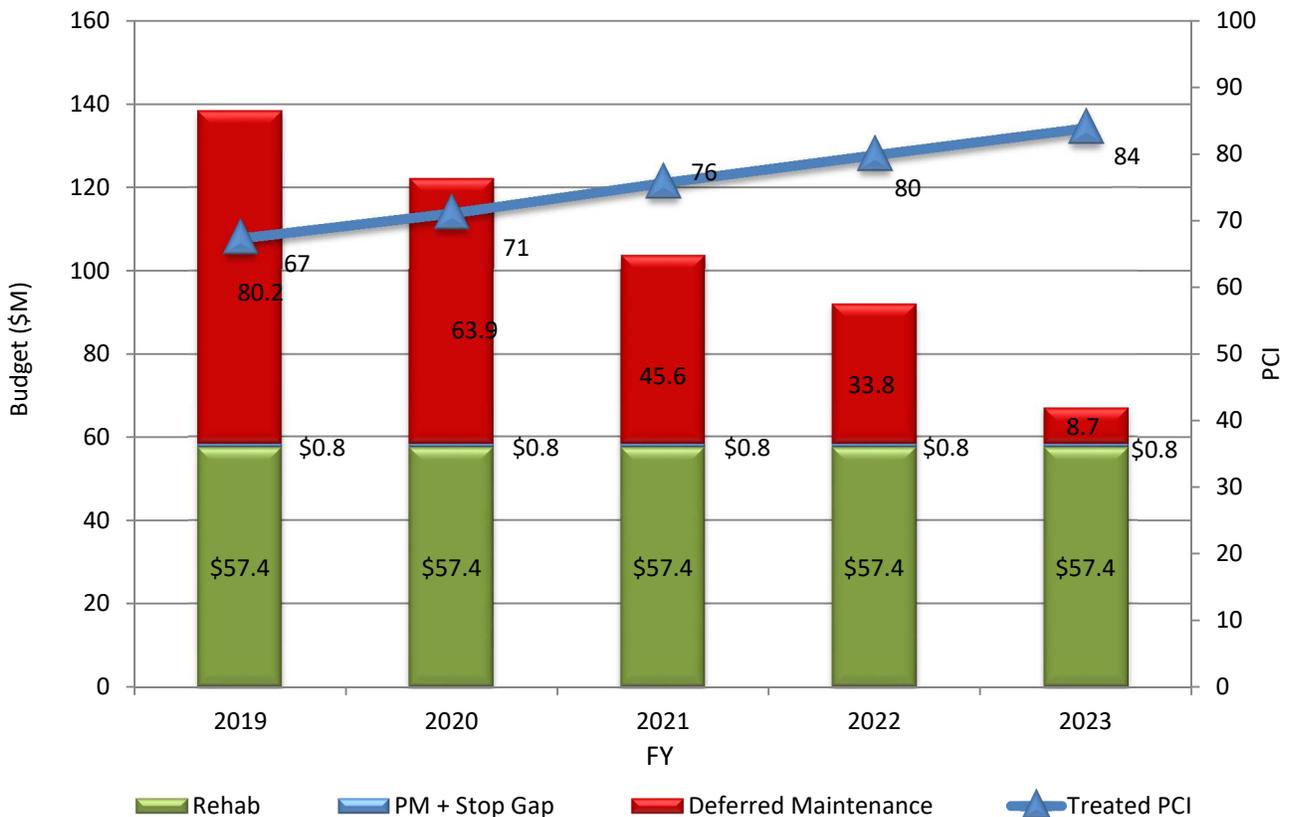

Figure 5. PCI vs. Cost Breakdown for Scenario 1 (Unconstrained)

8.2 Scenario 2: Current Budget Level

The City's planned budget level is \$1.5 million per year, with \$830 thousand of annual budget allocated for PM. The City planned to spend \$2.1 million with \$1.6 million of PM in FY 2019. The results indicate that the network PCI will decrease 9 points from 54 to 45. In addition, the backlog of work will increase from \$137.9 million, Budget Needs in FY 2019, to \$278.3 million at the end of FY 2023. The following table and figure summarize the results of the Current Budget scenario analysis. Appendix C-2 presents the detailed results for the Current Budget scenario analysis.

FY	2019	2020	2021	2022	2023	Total
Rehab	\$0.4	\$0.4	\$0.9	\$0.8	\$0.8	\$3.5
PM + Stop Gap	\$1.6	\$1.0	\$0.5	\$0.5	\$0.5	\$4.2
Budget	\$2.1	\$1.4	\$1.4	\$1.3	\$1.3	\$7.6
Deferred Maintenance	\$136.7	\$165.9	\$197.9	\$238.9	\$278.3	
Treated PCI	54	51	49	47	45	

Table 7. Summary of Results for Scenario 2 (Current Budget Plan, \$ in million)

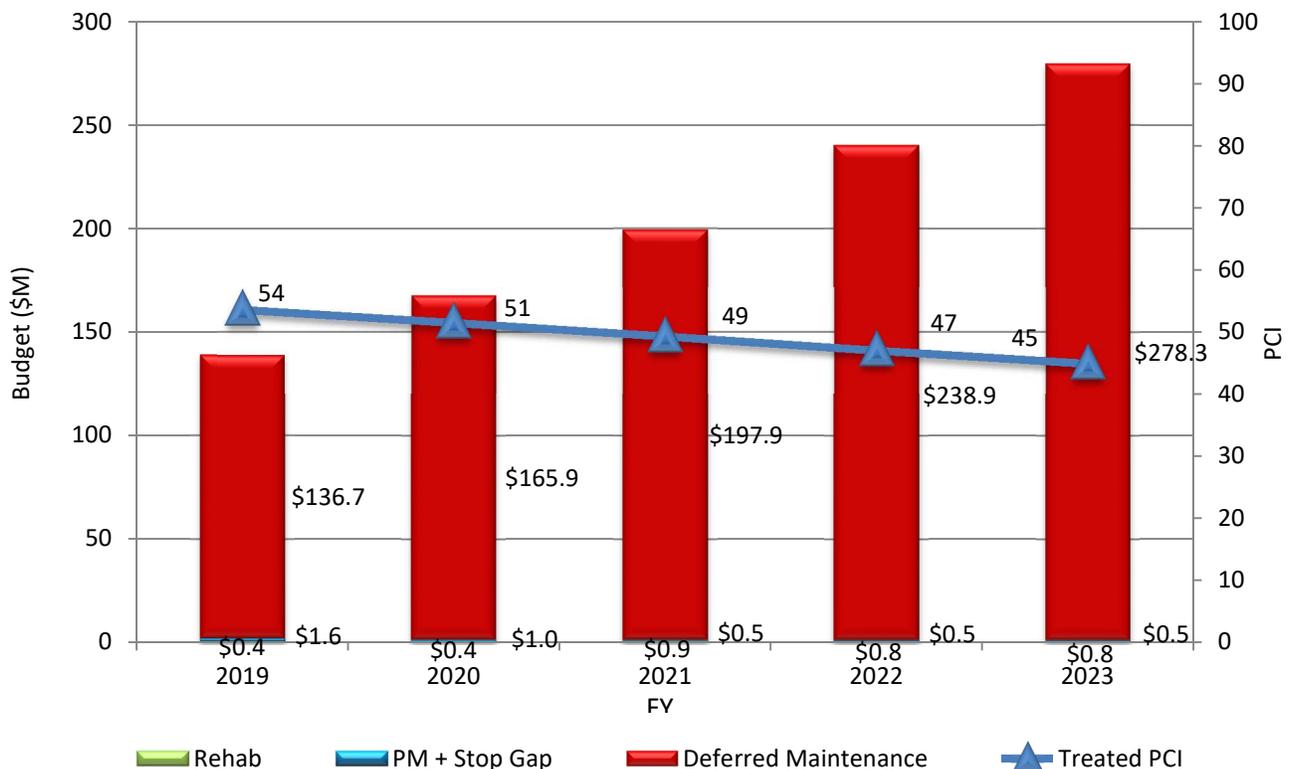

Figure 6. PCI vs. Cost Breakdown for Scenario 2 (Current Budget Plan)

8.3 Scenario 3: Maintaining PCI

In order to maintain the current network PCI of 54, an annual budget of \$7.0 million will need to be allocated, with 7.7% of the budget, or an annual budget of \$544 thousand reserved for PM. With this budget, maintenance backlog will increase from \$137.9 million, Budget Needs in FY 2019, to \$263.5 million during the next five years. In order to find annual budget and PM amount, Target Driven module was used and averaged the total amount for 5 years. The following table and figure below summarize the results of the Maintaining PCI scenario analysis and Appendix C-3 presents the detailed results for the Maintaining PCI scenario analysis.

FY	2019	2020	2021	2022	2023	Total
Rehab	\$6.5	\$6.5	\$6.5	\$6.5	\$6.5	\$32.5
PM + Stop Gap	\$0.5	\$0.5	\$0.5	\$0.5	\$0.5	\$2.7
Budget	\$7.0	\$7.0	\$7.0	\$7.0	\$7.0	\$35.2
Deferred Maintenance	\$131.4	\$156.9	\$186.2	\$227.6	\$263.5	
Treated PCI	55	55	55	54	54	

Table 8. Summary of results for Scenario 3 (Maintaining PCI, \$ in million)

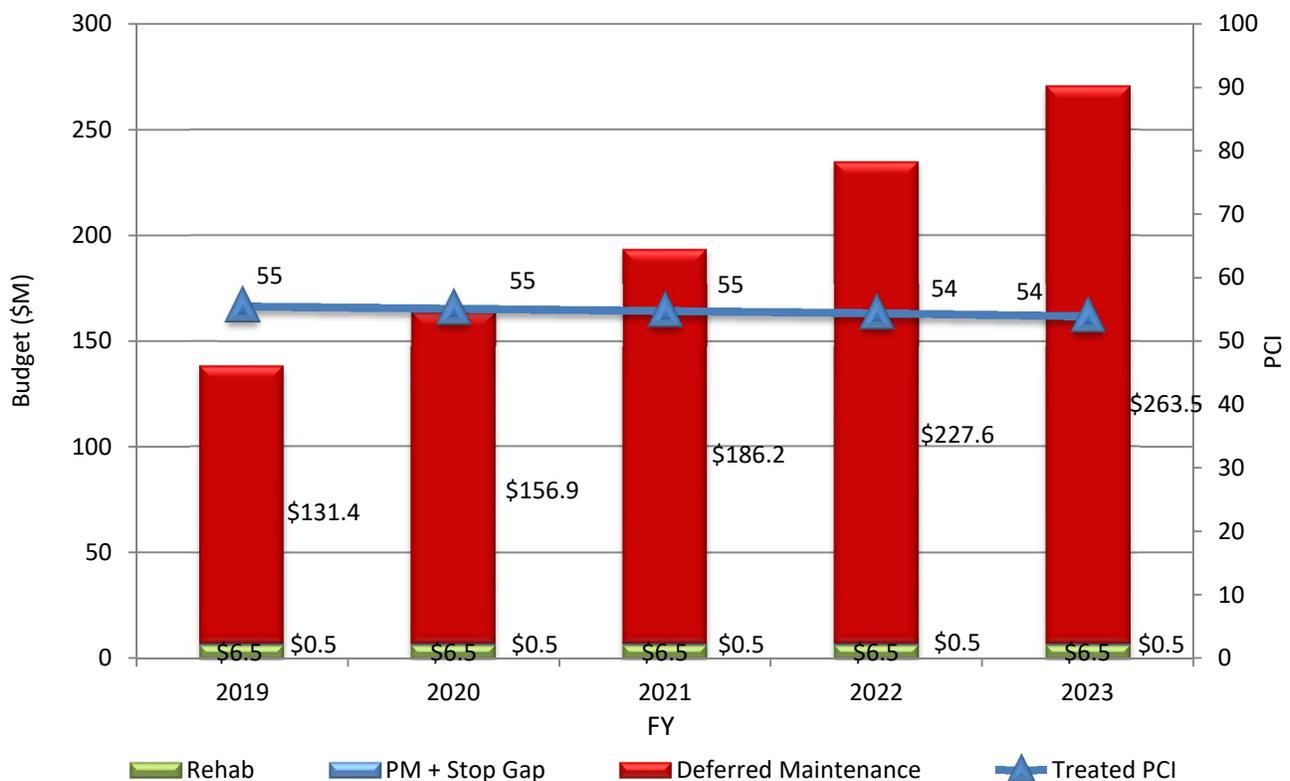

Figure 7. PCI vs. Cost Breakdown for Scenario 3 (Maintaining PCI)

8.4 Scenario 4: Increasing PCI

To increase the current PCI by 5 points from 54 to 59 in the next five year period, an average annual budget of \$12.0 million is needed, with 4.9% of the budget, or an average annual budget of \$585 thousand reserved for PM. The backlog work will increase from \$137.9 million, Budget Needs in FY 2019, to \$246.6 million at the end of FY 2023. In order to find annual budget and PM amount, Target Driven module was used and averaged the total amount for 5 years. The following table and figure summarize the results of the Increasing PCI scenario analysis and Appendix C-4 presents the detailed results for the Increasing PCI scenario analysis.

FY	2019	2020	2021	2022	2023	Total
Rehab	\$11.4	\$11.4	\$11.4	\$11.4	\$11.4	\$57.1
PM + Stop Gap	\$0.6	\$0.6	\$0.6	\$0.6	\$0.6	\$2.9
Budget	\$12.0	\$12.0	\$12.0	\$12.0	\$12.0	\$60.0
Deferred Maintenance	\$126.4	\$150.0	\$174.8	\$212.6	\$246.6	
Treated PCI	57	59	59	59	59	

Table 9. Summary of results for Scenario 4 (Increasing PCI, \$ in million)

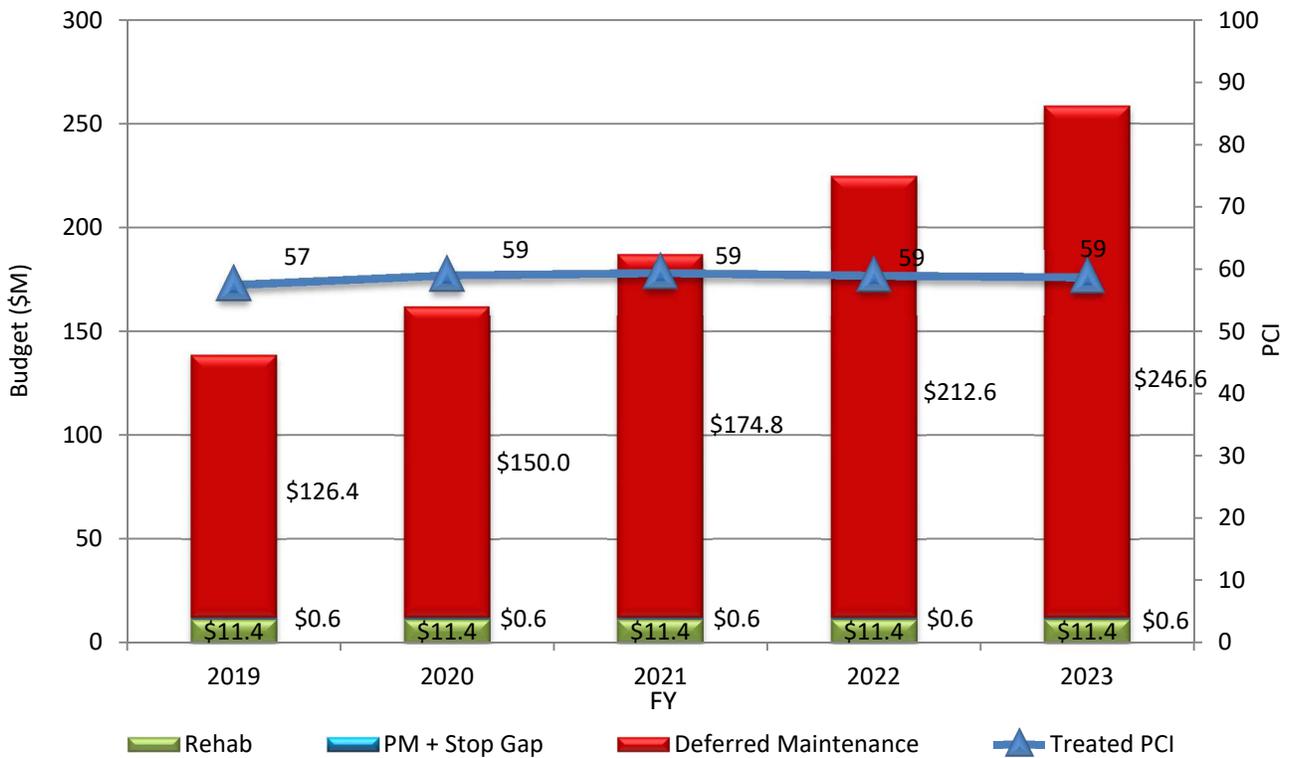

Figure 8. PCI vs. Cost Breakdown for Scenario 4 (Increasing PCI)

9. Budget Analysis Comparison

Each scenario analyzed in the above section has advantages and disadvantages. This section compares the PCI's and Deferred Maintenance backlog costs for each scenario over the next five year period.

Figure 9.1 and 9.2 below illustrate the change in PCI and Maintenance backlog costs over time for the different budget scenarios. The Unconstrained Budget scenario is the ideal strategy to increase the network PCI to 84 and decrease Deferred Maintenance to \$8.7 million. However, an annual budget of \$58.2 million is not realistic considering the current budget plan.

With the Current Budget Plan scenario of \$1.5 million a year, the PCI will decrease from 54 to 45 at the end of the five year period and Deferred Maintenance backlog will increase to \$278.3 million. To maintain the current PCI of 54, the City needs its budget of \$7.0 million a year which makes Deferred Maintenance backlog increase to \$263.5 million. With \$12.0 million a year funding, the City can increase the current PCI by 5 points from 54 to 59 by the end of FY 2023 and increase Deferred Maintenance backlog to \$246.6 million.

One of the objectives of the report is to find an affordable budget plan to stabilize or minimize increase of Maintenance backlog. Unfortunately, Deferred Maintenance backlog might be stabilized with more than the annual budget of \$22 million, which is an unrealistic increase from the current budget plan.

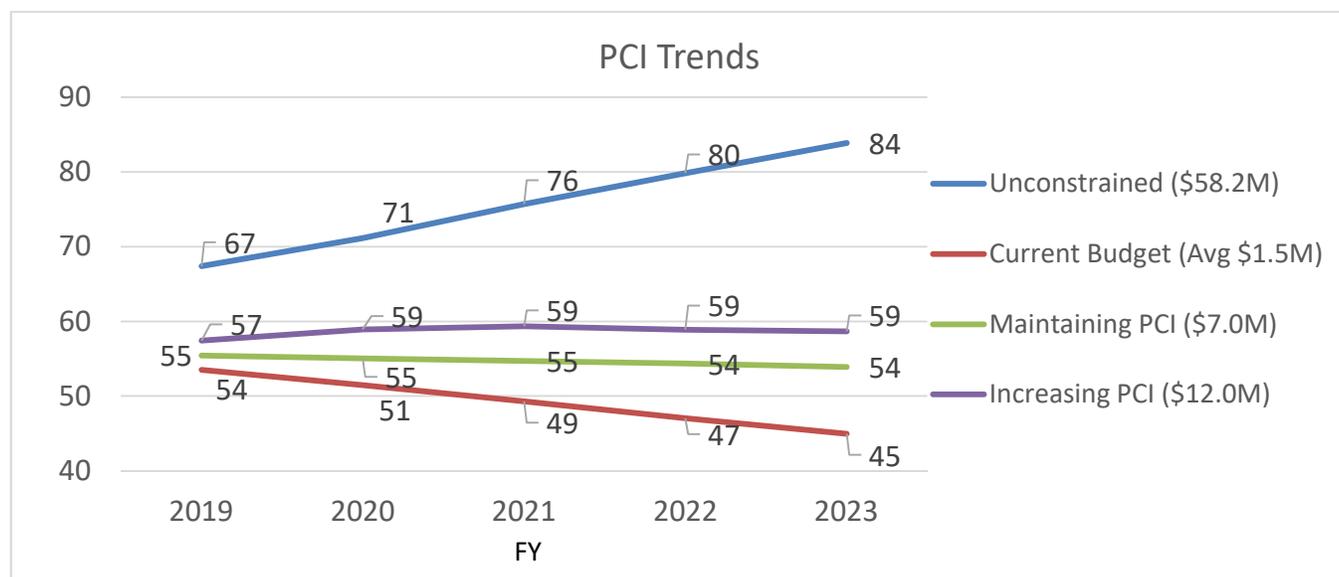

Figure 9.1 PCI Trends by scenarios and years

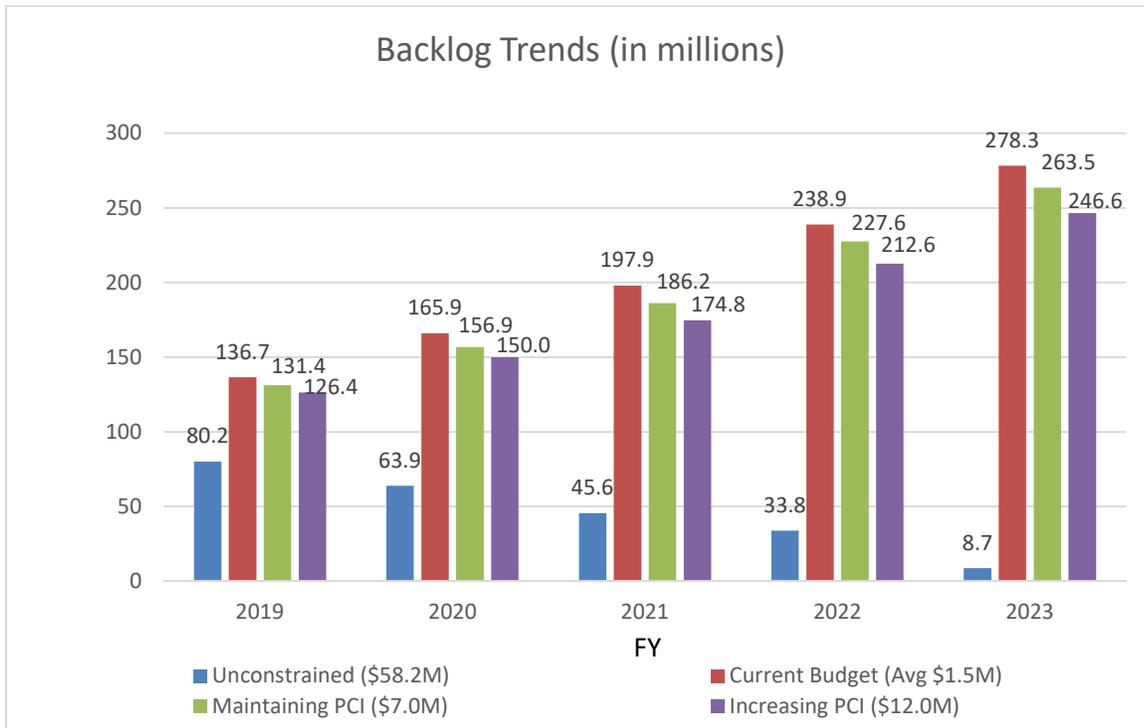

Figure 9.2 Deferred Maintenance Trends by scenarios and years

Figure 10 shows the pavement condition changes under the different scenarios. The stacked columns in the figure compare the contribution of each pavement condition category for the next five year period. As of November 4, 2017, 29.6% of the pavements are in the “Very Good” condition category and 46.5% are in “Poor” and lower condition categories. Under the Unconstrained Budget, majority of the pavement sections (91.3%) will be in the “Very Good” condition category by the end of FY 2023. With the City’s current budget plan, the pavements in the “Poor” and “Very Poor” condition categories will increase to 57.6% and decrease the proportion of the pavements in “Very Good” condition category to 25.7%. Spending an average annual budget of \$7.0 million for the Maintaining PCI scenario will maintain the percentage of pavements in the “Poor” and “Very Poor” condition categories at 45.3%, and will increase the proportion of the “Very Good” conditioned pavements to 47.5%. The Increasing PCI scenario will decrease the percentage of pavements in the “Poor” and “Very Poor” condition categories to 37.3%; and will increase the proportion of the pavements in “Very Good” condition category to 58.5%.

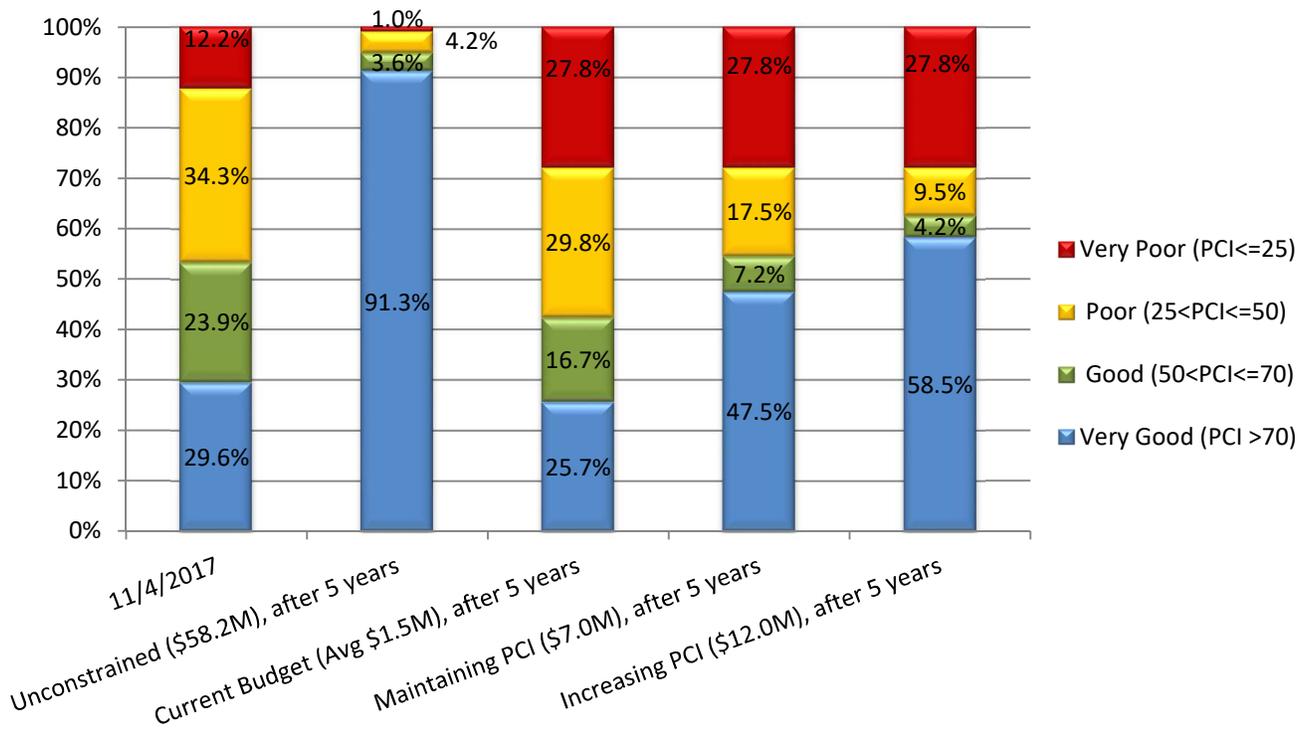

Figure 10. Pavement Condition Changes under scenarios by the end of FY 2023

10. Recommendations

One of the goals in preparing a Budget Options Report is to identify a scenario that can increase overall PCI while sustaining a feasible Budget and Deferred Maintenance over the next five years. As discussed in the Budget Analysis Comparison, continuing the current annual budget level of \$1.5 million will decrease the City’s average network PCI from 54 to 45 and will result in an increased backlog of work to \$278.3 million by the end of the five year period. It is critical for the City to identify the required funding level for pavement M&R which, at minimum, should prevent the current PCI from decreasing. A Recommended Budget Scenario was identified for the City using the following selection criteria:

- Improvement of current PCI by minimum 2 PCI points
- Minimal gap between the Current Budget Level and the recommended budget level

After review, it is found that the City might improve the result with the budget of \$9.0 million. With increased funding, the City’s network PCI can be increased to 56 while maintaining a Deferred Maintenance backlog of approximately \$255.4 million at the end of FY 2023. It satisfies the selection criteria as it increases PCI by two (2) points at the end of the five-year period. Unfortunately, increase of budget is required and maintaining Deferred Maintenance cannot be met due to unrealistic increase of budget as discussed in the last chapter. Appendix D presents the details of the results from the Recommended Budget scenario and Appendix F shows Sections Selected for Treatment in Budget Needs and scenarios, Current Budget Plan and Recommended Budget.

Table 10 and Figure 11 below show the results of the Recommended Budget Scenario by analyzing different budget scenarios. Figure 12 and 13 show the pavement condition and remaining service life changes under the Recommended Budget Scenario.

FY	2019	2020	2021	2022	2023	Total
Rehab	\$8.5	\$8.5	\$8.5	\$8.5	\$8.5	\$42.3
PM + Stop Gap	\$0.5	\$0.5	\$0.5	\$0.5	\$0.5	\$2.7
Budget	\$9.0	\$9.0	\$9.0	\$9.0	\$9.0	\$45.0
Deferred Maintenance	\$129.4	\$153.7	\$181.4	\$221.4	\$255.4	
Treated PCI	56	57	57	56	56	

Table 10. Summary of results for the Recommended Scenario (\$ in million)

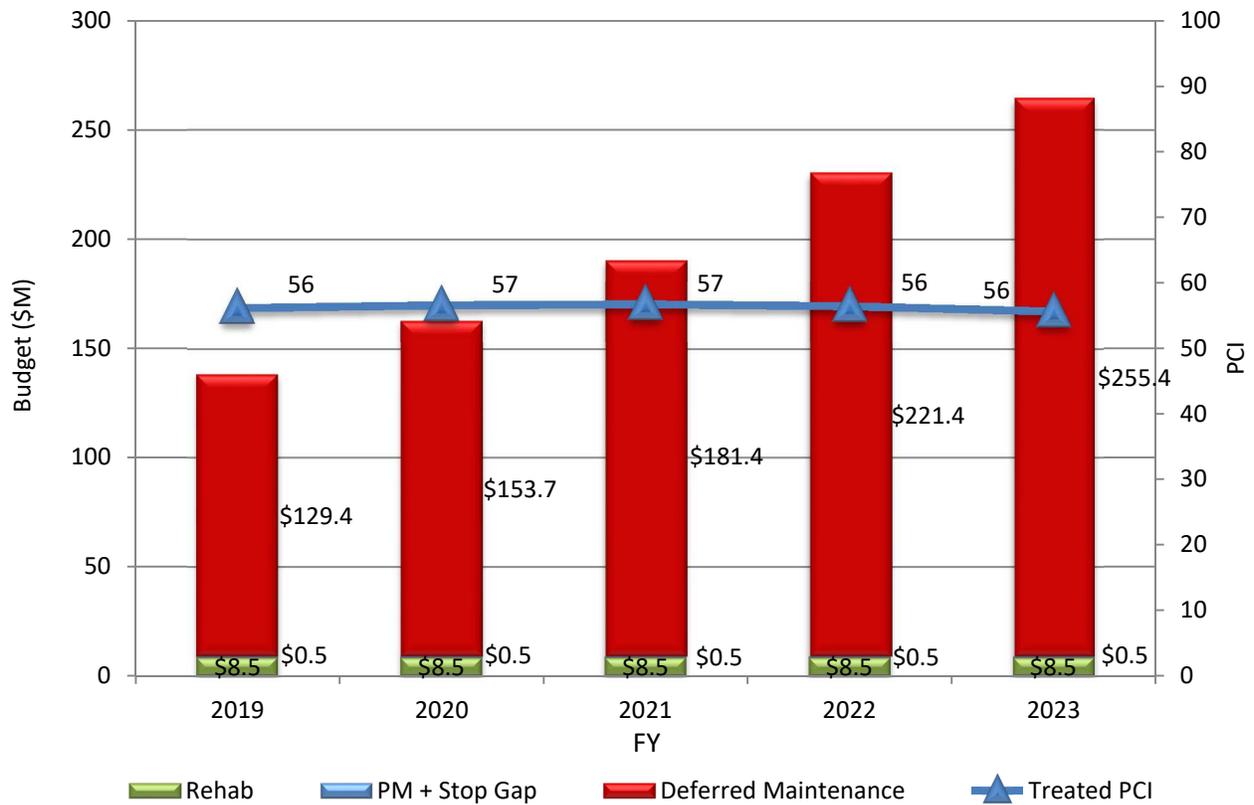

Figure 11. PCI vs. Cost Breakdown for Recommended Scenario

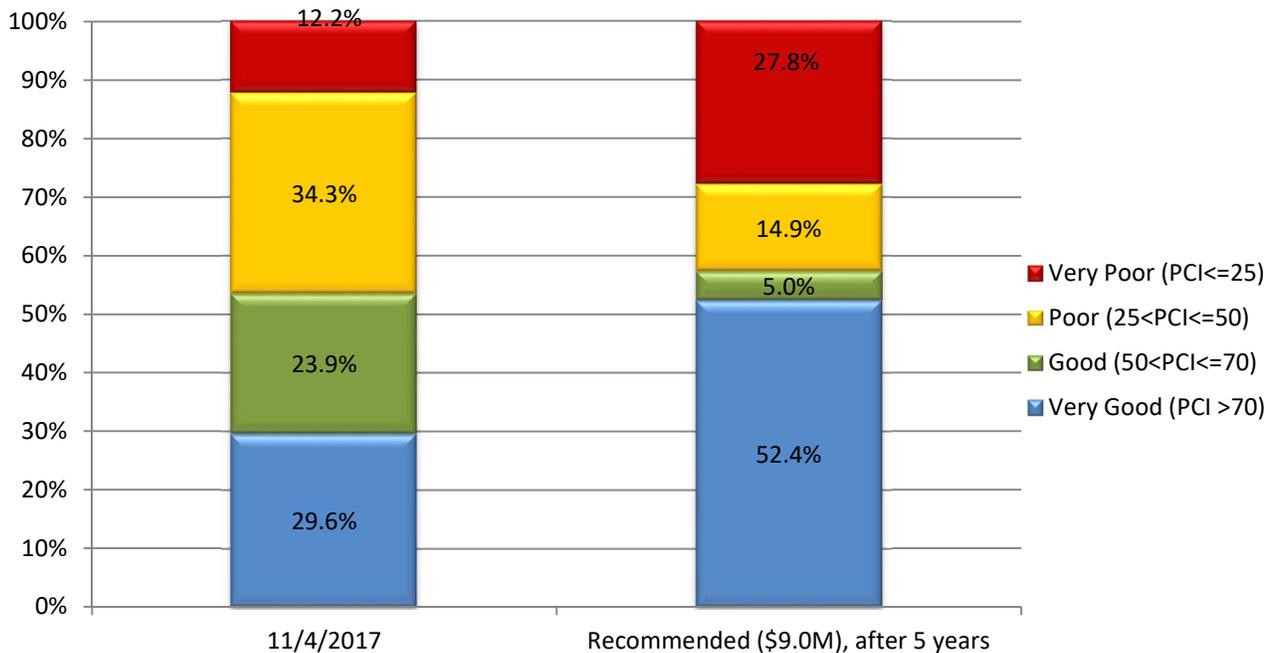

Figure 12. Pavement condition changes for Recommended Scenario

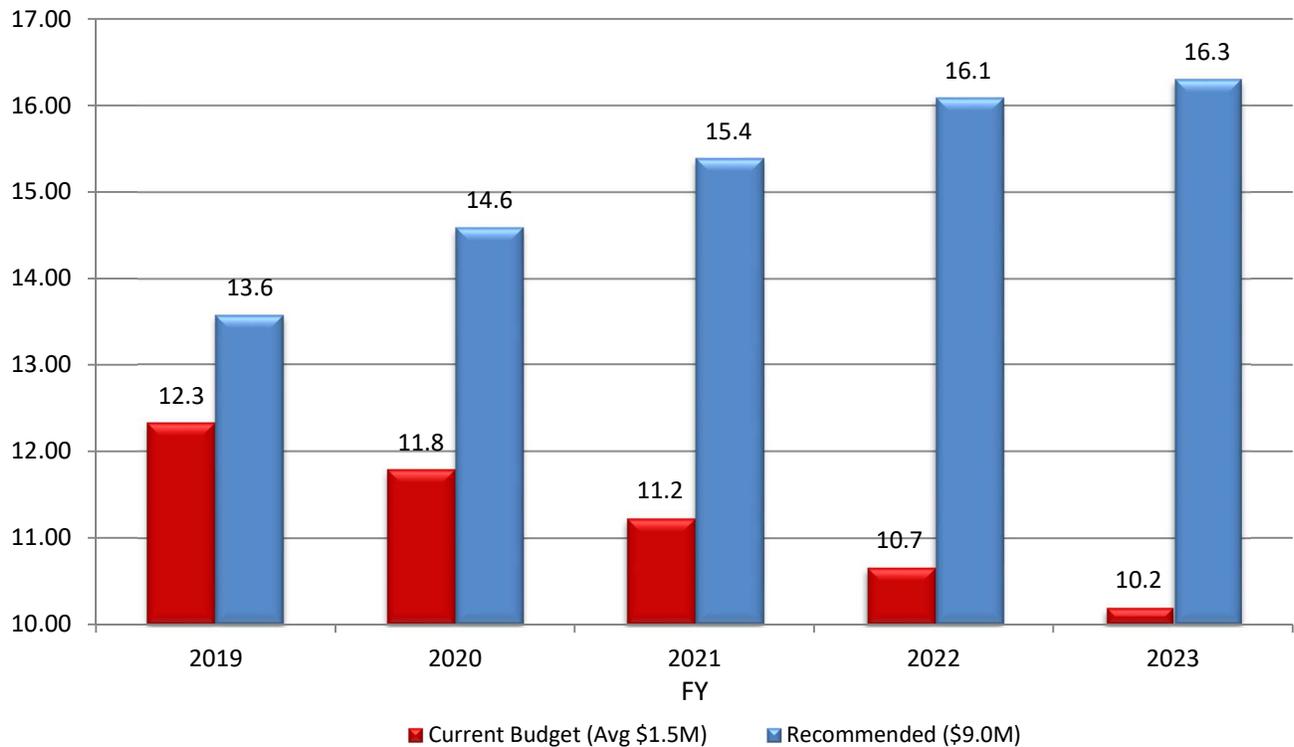

Figure 13. Remaining Service Life of the network changes for Current & Recommended Budget Scenario

In conclusion, it is recommended for the City to increase funding level as shown in table 10. This budget plan increases the current weighted average network PCI from 54 to 56 and maintains Deferred Maintenance at \$255.4 million level by the end FY 2023.

Preventive Maintenance is a cost-efficient approach to preserve pavements because it extends the remaining service life of streets at a lower cost and prevents streets from deteriorating to conditions that require expensive rehabilitation treatments.

Appendix A: Network Summary

	Total Sections	Total Center Miles	Total Lane Miles	PCI
Arterial	331	71.54	221.85	56
