

## Exhibit 1 – Scope of Work eTRAKiT Online Payment Interface

The agency will be integrating eTRAKiT with one of Superior's standard payment processors. Payment processor integration occurs in a redirect method only to remove the need for PCI compliance standards. This will be used for accepting online payments with credit cards.

- Authorize.NET
- USA ePay
- Virtual Merchant
- PayFlowLink (PayPal)
- Cardknox
- CSI (JetPay)

Interface will be available to the eTRAKiT customer during the following access points:

1. Completion of validating application fees for PermitTRAK or ProjectTRAK.
2. Paying outstanding fee balances available from the user's Dashboard.

Requires 2 accounts to be provided by the agency:

1. TEST account for confirming payment transactions. Require TEST eTRAKiT site for testing in the agency's environment (same Web server) to minimize production impact and allow testing before rollout. No work can be conducted until a TEST account is provided.
2. LIVE account to migrate the agency's production system.

Prior to scheduling this integration, the agency will need to provide credentials from the vendor of choice:

- Merchant ID
- PIN
- Username
- Password
